Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for LV field switching to a given schedule	**1.1** Switching and work schedules, plans, drawings, workplace procedures and material lists are received, analysed and confirmed by site inspection, as required
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for LV switching are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with

© Commonwealth of Australia, 2025 Powering Skills Organisation

		relevant personnel and in accordance with workplace procedures
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant authority to perform work is obtained in accordance with requirements and workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out LV field switching to a given schedule	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	LV field switching to a given schedule are applied to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.4	Communications with switching control officer, or equivalent, are established and maintained during the isolation operation in accordance with workplace procedures
	2.5	Electrical equipment and associated circuits to be switched, including paralleling, are isolated and proved de-energised using appropriate devices and earthed, as required, in accordance with workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Quality checks of work are undertaken in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		with workplace procedures
3 Complete LV field switching to a given schedule	**3.1**	Completed work is checked against switching schedule for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is cleaned and made safe and surplus materials are returned to storage or disposed of in accordance with workplace procedures
	3.4	Plant, equipment and tools are cleaned, checked and returned to service in accordance with workplace procedures
	3.5	Relevant work permits are signed off in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS43A Perform low voltage field switching operation to a given schedule.

Assessment Requirements for UETTDRIS43 Perform low voltage field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing low voltage (LV) field switching operation to a given schedule using all of the following:
  - approvals/clearances
  - access authority/permits
- using at least two (2) of the following:
  - voltage detectors
  - polarity testers
  - phase rotation indicators
- using at least one (1) of the following:
  - LV links
  - LV bridges
  - LV fuses
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
- requirements for the use of manuals, system diagrams/plans and drawings, including:
  - types, characteristics and capabilities of electrical apparatus
  - use, characteristics and capabilities of specialised tools and testing equipment
  - LV network interconnectors for alternate sources of supply and possible back-feed

© Commonwealth of Australia, 2025 Powering Skills Organisation

- procedures for obtaining correct LV switching authorisation, including:
  - identification of hazards, assessing and controlling risks
  - safety procedures and precautions
  - safe approach distances (SAD)
  - responsibilities and protocols
  - identifying switching resources
  - procedures for obtaining electrical access permits/authorities
  - requirements for team switching
  - procedures for coordination of operations
- techniques in LV system switching, including:
  - isolation procedures and proving dead
  - pre-switching checks
  - switching operational procedures
  - emergency fault procedures
  - energisation procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing low voltage field switching operation to a given schedule
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS44 Perform HV field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to perform high voltage (HV) field switching operation to a given schedule in the electricity supply industry (ESI).

It includes the operation of circuit breakers, isolating devices, communicating with switching control officer or electrical control officer, isolating electrical equipment and line or worksite. It also includes proving area is de-energised and applying earthing equipment, issuing/accepting electrical permits and returning affected line and electrical equipment to service.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to undertake HV switching procedures to a given schedule	**1.1** Switching and work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for HV switching are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant authority is obtained to perform work in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out HV switching procedures to a given schedule	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	HV switching procedures to a given schedule are applied to ensure completion in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Communications with switching control officer are established and maintained throughout the isolation operation in accordance with workplace procedures
	2.5	Electrical equipment, associated circuits, line/network or worksite to be switched, including paralleling, is isolated and proved de-energised using appropriate devices and earthed, where required, in accordance with workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Relevant permits are prepared and issued in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		with workplace procedures
3 Complete HV switching procedures to a given schedule	**3.1**	Completed switching is checked against work schedule and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned and made safe in accordance with workplace procedures
	3.4	Plant, equipment and tools are cleaned, checked and returned to service in accordance with workplace procedures
	3.5	Relevant work permits are signed off, safety devices removed and system re-energised and returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for UETTDRIS44 Perform HV field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing high voltage (HV) field switching operation to a given schedule using the following:
  - approvals/clearances
  - access permits
- using all of the following:
  - HV operating sticks
  - HV operating earths
  - HV detectors
- using at least one (1) of the following specialist tools:
  - HV phasing sticks
  - HV ground mounted equipment isolating handles and earths
- operating switchgear with at least two (2) of the following:
  - HV links
  - air break switches
  - fuses
- using at least three (3) of the following:
  - reclosers
  - ring main units
  - circuit breakers
  - isolators
  - earth switches
  - sectionalisers
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
- requirements for the use of manuals, system diagrams/plans and drawings, including:
  - types, characteristics and capabilities of electrical apparatus
  - use, characteristics and capabilities of specialised tools and testing equipment
  - network interconnectors source of possible backfeed
- role of the HV switching operator
- procedures for obtaining correct HV switching authorisation, including:
  - identification of WHS/OHS hazards, assessing and controlling risks
  - safety procedures and precautions
  - safe approach distances (SAD)
  - responsibilities and protocols
  - identifying switching resources
  - procedures for obtaining electrical access permits/authorities
  - requirements for team switching
  - procedures for coordination of operations
- use and operation of equipment associated with HV overhead and substation equipment, including:
  - test instruments
  - sticks
  - interrupters
  - arc stranglers
- operation of protection systems and substation equipment, such as:
  - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
- types and categories of HV switchgear
- application, function and operating capabilities of switchgear
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV transmission main and working earths
- earthing HV electrical apparatus practices and procedures for access, including:
  - purposes of operational and additional work part - on-site earths
  - factors determining the location and effectiveness of operational earthing
  - acceptable industry procedures
  - personal protective equipment (PPE)
- HV switching techniques, including
  - pre-switching checks
  - switching operational procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - isolation procedures and proving dead/de-energised
  - earthing procedures
  - emergency fault procedures
  - energisation procedures
- application and function of the single wire earth return (SWER) system components, including:
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- operation of HV overhead switching or indicating devices, including:
  - identifying hazards, assessing and controlling risks associated with HV switchgear operation
  - systematic and defensive techniques
  - mobile radio procedures
  - double isolation procedures
  - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
- primary causes, effects and types of HV electrical faults
- HV protection devices, including:
  - main components
  - types
  - categories
  - applications
  - functions
- basic principle of operation of HV system protection devices
- protection coordination and protection - zoning
- HV feeder auto-reclosing suppression, including:
  - function
  - application
- circuit condition requirements and switching considerations when paralleling and separating HV feeders
- operation of HV distribution transformers, including:
  - principle governing factors for transformer ratings
  - protection and alarms
  - operating limitations and the relationship between transformer and HV fuse rating
  - purpose and principle operation of HV distribution transformer tap changers
  - HV distribution transformer and transformer-cable combination switching practices
  - paralleling requirements
  - isolation and earthing procedures for access

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - common distribution transformer and associated electrical apparatus faults
- HV underground switching equipment, such as:
    - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- function of feeder automation system and the main components
- operation procedure for a remote field device from a local control station
- functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
- SCADA system security interlocks and access restrictions
- SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
- function of the main components of a local/remote control system
- operation of a field devices using SCADA systems via a remote access terminal (RAT), dial up voice annunciated system and local control station.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for perform HV field switching operations to a given schedule
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS46 Install and maintain ESI network infrastructure electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation and maintenance of electrical equipment, such as fuse switches, drop out switches, sectionalisers, links, surge arrestors, gas filled and/or oil filled switches, which are relevant to the transmission, distribution and rail networks.

It includes the termination/connection of the equipment in accordance with enterprise requirements, the repair and/or replacement of like-for-like electrical equipment and associated hardware, and sampling of insulating oils. It also encompasses the identification of faults, the relevant pre-commissioning tests involving the equipment/system and the interpretation of these tests against agreed specifications.

It excludes the energisation of the equipment maintained in a highly complex, interdependent and interconnected electricity supply network system, where the effects of unintended consequences on the system are high risk and appropriate personnel effect energisation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

equipment

1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the installation and/or maintenance of network infrastructure electrical equipment are obtained and confirmed for the purposes of the work to be performed

1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures

1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear according to established procedures

1.6 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures

1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE) required for the job are obtained and confirmed in working order

1.8 Relevant personnel at worksite are confirmed current in first aid, pole top rescue and other related work procedures according to requirements

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work, where necessary

1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures

1.12 Road signs, barriers and warning devices are positioned

© Commonwealth of Australia, 2025 Powering Skills Organisation

		in accordance with requirements
2 Carry out installation and maintenance of network infrastructure electrical equipment	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed, and currency according to requirements confirmed
	2.3	Essential knowledge and associated skills are applied in the safe installation of network infrastructure electrical equipment to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.4	Electrical equipment and associated hardware are positioned, secured and terminated/connected in accordance with requirements and established procedures
	2.5	Maintenance, including repair and/or replacement of network infrastructure electrical equipment, is carried out in accordance with the work schedule and requirements/established procedures
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.7	Unplanned events in the installation of electrical equipment (network infrastructure) are undertaken within the scope of established procedures
	2.8	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.9	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the installation and maintenance of network infrastructure electrical equipment	**3.1**	Work undertaken is checked/tested against works schedule for conformance with requirements and anomalies reported in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures

3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

3.5 Relevant work permit(s) are signed off and electrical equipment (network infrastructure) are returned to service in accordance with requirements

3.6 Works completion records, reports, as installed/modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining any three (3) of the following:
  - fuse switches
  - dropout fuses
  - sectionalisers
  - disconnectors
  - links
  - fuses
  - surge arrestors
- installing and maintaining any one (1) of the following:
  - reclosers
  - motorised switches
  - gas filled switches
  - ring main units
  - line fault indicators
  - oil filled switches
  - air break switches
- installing and maintaining any one (1) of the following:
  - transformers
  - reactors
  - regulators
  - capacitors
  - relays
  - line fault indicators

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - with regards to the above incorporate any three (3) of the following:
        - voltage detectors
        - phasing equipment
        - clip-on ammeters
        - insulation resistance testers
        - recording meters
        - earth resistance tester
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
    - calculations involving fractions, decimals, ratios and proportions
    - calculations involving area, volume, mass and density
    - calculations involving transposition and substitution of formulae
    - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
    - identification of basic concepts, principles and applications - application of velocity, acceleration, force, density, torque and pressure
    - applications of the International System of Units (SI) units
    - the relationship between work, power and energy
    - behaviour of object under force - using a block and tackle under load, concept of mechanical advantage, determination of resultant forces, and determining the sag in a catenary conductor and the force applied at each end
    - fundamentals of the basic laws of fluid mechanics
- materials properties encompassing:
    - identification and classification of engineering materials material properties
    - types and applications - properties of tensile strength; effects of temperature on the expansion of metals; ductibility, malleability, work hardening and annealing and the conditions that lead to corrosion; and the properties of timbers
- basic rigging techniques encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches, and relevant certification and licensing (if required)
    - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
    - safe use of rigging equipment, tools and associated equipment - types, techniques and application
    - site inspection procedures - identifying hazards, assessing and controlling risks, and

© Commonwealth of Australia, 2025 Powering Skills Organisation

appropriate sequence of loading and unloading
    - determining the mass and dimensions of load
    - selection and inspection procedures - rigging equipment, materials and tools (natural and synthetic fibre ropes and chains, fittings, winch and capstan), ratings of wire ropes and slings, removing, repairing and replacing of damage parts
    - techniques for assembling and erecting power winches and capstans
    - checking the integrity of support structure - visual inspection of load connections
    - techniques in moving, lifting, shifting, managing and placing loads - use of appropriate communication and signalling methods, codes of practice/compliance, enterprise and Commonwealth/state/territory legislative requirements, weather conditions, erection of safety nets and lines, methods of fixing and anchoring loads, and load stability
- procedures in providing store support encompassing:
    - classification and identification of equipment, components and tools
    - procedures for purchasing/ordering items, removing/dispatching items, stocktaking, security and bookkeeping/record keeping
    - material handling - warehouse/depot storage techniques, handling equipment, pallet lift trucks, forklifts and cable drum handling equipment
    - safety procedures - storage and care of safety equipment, handling hazardous materials, storage of hazardous substances and dangerous goods, and depot safety procedures
    - manufacturer and supplier information, including material safety data sheets (MSDS)
- generation systems encompassing:
    - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
    - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
    - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
    - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
    - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
    - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
    - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
    - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing and maintenance of conductors - types of low voltage (LV) and HV overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; and minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and hardware, methods of stringing, tensioning and termination of LV and HV conductors
- safe working practices and procedures for the installation of overhead distribution conductors encompassing:
  - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWP)
  - requirements of persons prior to making bare-hand contact with dead LV mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedure to attach an on-site earthing device to de-energised LV and HV overhead circuit
- installation of poles and/or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware - types of installation equipment/tools, excavation methods, types of footings/foundations, types of attachments, earthing systems, clearances between conductors, safe methods of erecting and stabling poles and-or structures and cross-arms
  - techniques for maintenance of poles and associated hardware - stabilisation techniques for unstable poles, methods of strengthen poles, maintenance and replacement of HV

© Commonwealth of Australia, 2025 Powering Skills Organisation

insulators and cross-arms

- installation of LV electrical services encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings types of LV overhead services, methods of construction and installation, minimum clearances for overhead services to assets and structures, and types of installation equipment/tools
  - characteristics and applications of different types of cables - cable cross-sectional area of conductors, current rating and fuse type
  - techniques for maintenance of service installations - diagnosis and repair of faults
  - jointing and terminating methods - polymeric heat shrink materials, polymeric tape materials, energised and de-energised cables, connections to fuse boxes and pole top boxes
  - testing and commissioning procedures – inspection, polarity, voltage and phase sequence tests
  - construction types and structures for distribution and sub transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors, - types of LV and HV overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; and minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and hardware, methods of stringing, tensioning and termination of LV and HV conductors
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel; and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures for climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedure used to provide an effective traffic management scheme, and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods; and the precautions for personal protection when fighting small fires

© Commonwealth of Australia, 2025 Powering Skills Organisation

- rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses and developing techniques; involving external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS47 Sample, test, filter and reinstate insulating oil

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to sample, test, filter and reinstate insulating oil in the electricity supply industry (ESI).

It includes despatching oil samples to a laboratory for higher level testing, as required and post operational servicing of equipment and/or plant. It also includes identifying related environmental issues concerning disposing oil safely.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDREL16 Working safely near live electrical apparatus

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to sample, test, filter and reinstate insulating oil	**1.1** Works schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for sampling, testing, filtering and reinstating insulating oil are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.6 Relevant work permits are obtained and signed in accordance with workplace procedures
	1.7 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.11	Traffic management is planned and implemented in accordance with workplace procedures
2 Carry out sampling, testing, filtering and reinstating of insulating oil	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.3	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Sampling, testing, filtering and reinstating of insulating oil are applied to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
	2.5	Sampling, testing, filtering and reinstating of the insulating oil is performed in accordance with work schedules, job requirements and workplace procedures
	2.6	Unplanned events in the filtering, sampling and testing of insulating oil are responded to in accordance with workplace procedures
	2.7	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.8	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete the sampling, testing, filtering and reinstating of insulating oil	**3.10**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required

3.3 Worksite is cleaned and confirmed safe in accordance with workplace procedures

3.4 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage or disposed of in accordance with workplace procedures

3.5 Relevant work permits are signed off and equipment is returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS47A Sample, test, filter and reinstate insulating oil.

Assessment Requirements for UETTDRIS47 Sample, test, filter and reinstate insulating oil

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- sampling, testing, filtering and reinstating insulating oil on at least two (2) of the following pieces of equipment:
  - transformer (tx) main tank
  - tx tap changer
  - switchgear
  - cable
  - reactor
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- filtering and sampling of insulating oil, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with filtering and sampling - safe handling procedures; personal hygiene, storage and disposal procedures; WHS/OHS hazards and precautions, including use of appropriate personal protective equipment (PPE); environmental procedures and effects of contaminates
  - properties of insulating oil - dielectric strength, moisture content, acidity and sludge
  - locations where insulating oil is used - transformer, switchgear and oil filled cable
  - filtering equipment – types, cleaning procedures and method of use
  - techniques in filtering and sampling insulating oil - methods of sampling, methods of filtering, testing procedures on site and analysing oil effectiveness
  - frequency of testing

© Commonwealth of Australia, 2025 Powering Skills Organisation

- testing of insulating oil, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with testing, such as precautions during testing and types of testing equipment
  - techniques in testing insulating oil - electric strength, water content, dielectric dissipation, resistivity and acidity
  - dissolved gas analysis (DGA)
- powerline safety practices, including:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedure of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; d emergency procedures for the rescue of an electric shock victim, including cardio pulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- material handling and the environment, including:
  - methods of obtaining updated environmental information and data sheets on the proper use and handling of equipment and materials
  - environmental standards, codes, environmental legislation, WHS/OHS legislation, hazardous substances/dangerous goods regulations, supply authority regulations and/or enterprise requirements applicable environmental care when handling materials, including provision of manufacturer and supplier information such as material safety data sheets (MSDS)
  - types and application of PPE used for hazards substances and dangerous goods
  - techniques in handling equipment to eliminate/reduce risks to the environment from spillages of oils, herbicides, pesticides and chemicals from equipment, such as vehicle

© Commonwealth of Australia, 2025 Powering Skills Organisation

loading crane, chainsaw, enterprise vehicles and explosive power tools
    - procedures for handling and control of spillages of herbicides
    - methods of disposing and storage of herbicides, pesticides and chemicals
    - methods of cleaning mobile plant, equipment and tools
    - recording of data
- environmental issues when undertaking sampling and filtering of oil, including:
    - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the work to be undertaken
    - methods of obtaining updated environmental information and data sheets on the proper use and handling of oil used on transformers and switchgear, including provision of MSDS
    - techniques in filtering and sampling oil to eliminate/reduce risks to the environment from spillages
    - safety procedures and equipment for handling and control of the oil
    - methods of disposing and storage of the oil
    - methods of cleaning equipment, tools and equipment
    - emergency procedures for spillages of oil to reduce risks to the environment - methods of cleaning up excessive spillages, methods of protection to surrounding environment, procedures for notification of relevant personnel and authorities, and recording procedures
    - polychlorinated biphenyl (PCB) contamination, handling and disposal procedures
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants, including:
    - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
    - identification of environmental issues associated with the handling and disposing of insulation materials
    - safety precautions when handling and disposing of heat dissipation materials
    - safe working practices
    - WHS/OHS hazards and precautions
    - identification of hazards, assessing and controlling risks
    - types, selection, maintenance and uses of PPE
    - permit to work systems and isolation procedures
    - types and function of specialised equipment
    - safe working practices when using specialised equipment
    - emergency response and rescue, including first aid
    - techniques in the handling and disposing of insulation materials - PCB, asbestos, insulating oil and SF6 gas
- enterprise-specific policies and procedure instructions, including:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- rules and regulations
- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, complaint and issues procedures
- overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion

- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
  - WHS/OHS records, including audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and/specific enterprise regulations pertaining to the use and care of specialised tools - voltage detectors; polarity testers and phase rotation
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storage of specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance and care and storage of specialised tools
  - identifying WHS/OHS hazards, assessing and controlling risks associated with their use

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques for the safe use of specialised power tools
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substation work, including responsibilities about the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - rescue of personnel from energised conductors, emergency descent from an EWP and/or rescue from confined spaces
  - enterprise requirements - safe access and authorisation to work procedures; use of mobile extendable equipment on or near energised HV conductors; emergency response procedures; hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction; and dangers of near approach to energised conductors.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS48 Develop high voltage switching schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the preparation of a basic switching schedule for interconnected high voltage (HV) network plant. It includes planning basic outages and taking into account loading of network components. It also includes the calculation of network loading conditions to ensure the network is operating within designed parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS44 Perform HV field switching operation to a given schedule

Transmission Overhead Pathway Group

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRTP26 Install transmission structures and associated hardware
UETTDRTP27 Maintain transmission structures and associated hardware
UETTDRTP29 Install and maintain transmission overhead conductors and cables
Distribution Overhead Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDRDP12 Maintain overhead energised low voltage conductors and cables
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRIS56 Install and maintain low voltage overhead services
Rail Traction Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRRT21 Install traction overhead wiring systems
UETTDRRT22 Maintain traction overhead wiring systems
UETTDRRT23 Install rail traction bonds
UETTDRRT27 Install overhead traction components and equipment
UETTDRRT28 Maintain overhead traction components and equipment
Distribution Cable Jointing Pathway Group
UETTDRCJ21 Lay ESI electrical cables
UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables
UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to develop HV switching schedules	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4 Relevant requirements and established procedures for the work are communicated to all personnel and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		identified for all worksites
	1.5	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE) required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
	1.10	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
2 Carry out the development of HV switching schedules	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
	2.3	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.4	Development of HV switching schedules is carried out in accordance with the work schedule and requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and/or established procedures
	2.5	Essential knowledge and associated skills are applied in the safe development of HV switching schedules to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete development of HV switching schedules	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Relevant work permits are signed off and plant is returned to service and client/customer advised in accordance with requirements
	3.4	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRIS48 Develop high voltage switching schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining all the following:
  - approvals/clearances
  - access authorities
- completing at least one (1) of the following:
  - development of an interconnected switching schedule
  - development of a radial switching schedule
- completing all of the following:
  - planning of loading of network components, including standby generation
  - evaluating load parameters and effects on system, including paralleling and off-loading
  - identifying unexpected sources of energisation, e.g. – generators and uninterruptible power supply (UPS)
  - implementing earthing procedures to reduce induced voltages
  - authorising issuance of work permits
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment - high voltage (HV) and low voltage (LV) equipment
  - characteristics, capabilities and application of powerline electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - safety precautions with regards to using electrical equipment
  - techniques in pre-use inspection on the serviceability of electrical equipment
  - techniques in the general maintenance, care and storage of electrical equipment
  - identifying hazards, assessing and controlling risks associated with the use of electrical equipment
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedure for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE) and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
  - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components
  - circuit arrangement

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
  - function of feeder automation system and the main components
  - operation procedure for a remote field device from a local control station
  - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
  - SCADA system security interlocks and access restrictions
  - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
  - function of the main components of a local/remote control system
  - operation of a field devices using SCADA systems via a RAT, dial up voice annunciated system and local control station
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits, and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits, hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - HV switchgear – types, categories, application and operating capabilities

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air breaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing; and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched, points of isolation and earthing locations (safety and working earths), and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings encompassing:
    - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS49 Develop low voltage switching schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the preparation of a basic switching schedule for low voltage (LV) network. It includes planning basic outages and taking into account loading of network components. It also includes the calculation of network loading conditions to ensure the network is operating within design parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS43 Perform low voltage field switching operation to a given schedule

Transmission Overhead Pathway Group

UETTDREL11 Apply sustainable energy and environmental procedures

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to develop LV switching schedules	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.4 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.5 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.6 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.7 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.8 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
2 Carry out the development of LV switching schedules	**2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.3 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.4 Development of LV switching schedules is carried out in accordance with the work schedule and requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and/or established procedures
	2.5	Essential knowledge and associated skills are applied in the safe development of LV switching schedules to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete development of LV switching schedules	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Relevant work permits) are signed off and plant is returned to service and client/customer advised in accordance with requirements
	3.3	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.4	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRIS49 Develop low voltage switching schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining all the following:
  - approvals/clearances
  - access authorities
- completing the following:
  - development of LV switching schedule to enterprise requirements
- completing all the following:
  - planning of loading of network components, including standby generation
  - evaluating load parameters and effects on system, including paralleling and off-loading
  - identifying unexpected sources of energisation, e.g. – generators, uninterruptible power supply (UPS) and solar
  - implementing earthing procedures to reduce induced voltages
  - authorising issuance of work-permits
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment - high voltage (HV) and low voltage (LV) equipment
  - characteristics, capabilities and application of powerline electrical equipment
  - safety precautions with regards to using electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - techniques in pre-use inspection on the serviceability of electrical equipment
    - techniques in the general maintenance, care and storage of electrical equipment
    - identifying hazards, and assessing and controlling risks associated with the use of electrical equipment
- installation of switchgear and associated equipment encompassing:
    - types and function of various switchgear - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types switchgear, installation procedures, earthing and requirements and techniques
    - types of equipment - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
    - installation procedures for switchgear and equipment - standards, codes, legislation, supply authority regulations and/or enterprise requirements, assembly and erecting procedures, earthing requirements and techniques, and pole mounted locations
    - maintenance procedures for switchgear and equipment - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures,
    - testing and commissioning - ESI standards and procedures
- LV switching principles encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
    - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
    - personnel protective equipment (PPE) for LV switching
- LV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of LV systems and equipment to be switched
    - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
    - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- LV overhead and substation switching principles encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

applicable to LV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments; purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing
  - LV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a LV switching instruction encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator
  - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue

© Commonwealth of Australia, 2025 Powering Skills Organisation

management, and training and competency development - understanding and promotion

- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS50 Coordinate power system permit procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the coordination of work procedures that require the issue of electrical permits to work and other permits for working on major parts of the electrical network. It encompasses the analysis and coordination of all work activities planned to be undertaken within more or less the same time timeframe to ensure that the organisation's work safety and statutory requirements are complied with; the extent of power interruption, and hence inconvenience to customers, is minimised; and the effective utilisation of available resources, both from the organisation and from its contractors to ensure all planned activities are completed in a timely manner to specified standards and requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

Transmission Overhead Pathway Group

UETTDREL11 Apply sustainable energy and environmental procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS44 Perform HV field switching operation to a given schedule
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRTP26 Install transmission structures and associated hardware
UETTDRTP27 Maintain transmission structures and associated hardware
UETTDRTP29 Install and maintain transmission overhead conductors and cables
Distribution Overhead Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDRDP12 Maintain overhead energised low voltage conductors and cables
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS43 Perform low voltage field switching operation to a given schedule
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRIS56 Install and maintain low voltage overhead services
Rail Traction Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRRT21 Install traction overhead wiring systems
UETTDRRT22 Maintain traction overhead wiring systems
UETTDRRT23 Install rail traction bonds
UETTDRRT27 Install overhead traction components and equipment
UETTDRRT28 Maintain overhead traction components and equipment
UETTDRRT30 Perform to a given schedule rail traction switching operations
Distribution Cable Jointing Pathway Group
UETTDRCJ21 Lay ESI electrical cables
UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables
UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to coordinate permit procedures	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.4	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.5	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.6	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and applied in the coordination of permit procedures according to established procedures
	1.7	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.8	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
2 Carry out the coordination of permit procedures	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.3	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		requirements and/or established procedures
	2.4	Coordination of permit procedures is carried out in accordance with the work schedule and requirements and/or established procedures
	2.5	Essential knowledge and associated skills are applied in the safe coordination of permit procedures to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality like outcome is achieved for the client/customer and to a community/industry standard
3 Complete the coordination of permit procedures	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Relevant work permits are signed off and plant is returned to service and client/customer advised in accordance with requirements
	3.3	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.4	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS50A Coordinate power system permit procedures.

Assessment Requirements for UETTDRIS50 Coordinate power system permit procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all the following:
  - developing a permit schedule and/or permit issuing procedures
  - facilitating and coordinating the delivery and issuing of permits
- gathering, collating and confirming data on different worksites relevant to:
  - electrical network diagrams for the specific worksite
  - earth permits
  - safe working area
  - work to be carried out in confined space or in hazardous environment
  - specific outsourcing procedures
  - specific hazard identification
  - risk classification and management procedures
  - regulatory requirements, such as WHS/OHS and electrical safety
- completing all the following:
  - receiving and coordinating the cancellation of permits in readiness for restoration
  - conducting audits permit correctness procedures
- conducting at least two (2) of the following:
  - issuing other work permits, such as working in confined space, as required
  - coordinating permits
  - engaging and briefing contractors on electrical and other work permits
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

© Commonwealth of Australia, 2025 Powering Skills Organisation

the requirements of the elements and performance criteria and include knowledge of:

- coordinating access authority procedures encompassing:
  - specific-enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements, such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, as required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- high voltage (HV) switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits, and purpose and procedures for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters, arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of "operational" and additional work part "on-site" earths, factors determining the location

© Commonwealth of Australia, 2025 Powering Skills Organisation

and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE) and HV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV distribution transformer principles encompassing:
    - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms; operating limitations and the relationship between transformer and HV fuse rating; purpose and principle operation of HV distribution transformer tap changers; HV distribution transformer and transformer - cable combination switching practices; paralleling requirements, isolation and earthing procedures for access; common distribution transformer and associated electrical apparatus faults
    - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
    - application and function of SWER system components
    - circuit arrangement
    - principle of operation
    - hazards and procedures associated with faulty SWER earth systems
    - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
    - function of feeder automation system and the main components
    - operation procedure for a remote field device from a local control station
    - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
    - SCADA system security interlocks and access restrictions
    - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
    - function of the main components of a local/remote control system
    - operation of a field devices using SCADA systems via a AT, dial up voice annunciated system and local control station
- HV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of HV systems and equipment to be switched
    - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching

© Commonwealth of Australia, 2025 Powering Skills Organisation

resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
    - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, emergency fault procedures and energisation procedures
- LV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of LV systems and equipment to be switched
    - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
    - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
    - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
    - role and responsibilities of the HV switching operator
    - operational forms, access authorities and permits and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits and hazard/risk assessments; purpose and procedurse for operational forms, access authorities and hazard/risk assessments
    - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
    - HV switchgear – types, categories, application and operating capabilities
    - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks switches, disconnects, live line clamps, phasing sticks and phasing tester
    - operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
    - restrictions pertaining to HV switching equipment
    - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing and HV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks

© Commonwealth of Australia, 2025 Powering Skills Organisation

associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures

- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to low voltage overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments, purpose and procedures for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing
  - LV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths) and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- preparation of a LV switching instruction encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings encompassing:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instruction/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution

© Commonwealth of Australia, 2025 Powering Skills Organisation

system symbols and feeder plans, and processes of updating switching diagrams.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS51 Coordinate and direct power system switching schedules

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the coordination and direction of switching the high voltage (HV) and low voltage (LV) system. It includes coordinating switching between operating authorities and HV customers. It also includes the direction of switching on the HV and LV electrical network.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to coordinate and direct switching schedules	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures
	1.3	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.5	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
2 Carry out coordinate and direct switching schedules	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		immediate authorised personnel for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	Coordination and direction of switching schedules are carried out in accordance with the work schedule and requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied in the safe coordination and direction of switching schedules to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete coordinate and direct switching schedules	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Relevant work permits are signed off and electrical plant is returned to service and client/customer advised in accordance with requirements
	3.4	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining all the following:
  - approvals/clearances
  - access permits
- demonstrating all of the following:
  - switching direction
  - switching coordination
  - autonomy of working with network control
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment - high voltage (HV) and low voltage (LV) equipment
  - characteristics, capabilities and application of powerline electrical equipment
  - safety precautions with regards to using electrical equipment
  - techniques in pre-use inspection on the serviceability of electrical equipment
  - techniques in the general maintenance, care and storage of electrical equipment
  - identifying hazards, and assessing and controlling risks associated with the use of electrical equipment
- installation of switchgear and associated equipment encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types and function of various switchgear - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types of switchgear, installation procedures, earthing, and requirements and techniques
  - types of equipment - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment - standards, codes, legislation, supply authority regulations and/or enterprise requirements, assembly and erecting procedures, earthing requirements and techniques, and pole mounted locations
  - maintenance procedures for switchgear and equipment - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures,
  - testing and commissioning - ESI standards and procedures
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permits, operational procedures and earthing procedures
  - personnel protective equipment (PPE) for LV switching
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedures for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of "operational" and additional work part "on-site" earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, PPE and HV switching techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV distribution transformer principles encompassing:
    - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
    - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
    - application and function of SWER system components
    - circuit arrangement
    - principle of operation
    - hazards and procedures associated with faulty SWER earth systems
    - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
    - function of feeder automation system and the main components
    - operation procedure for a remote field device from a local control station
    - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
    - SCADA system security interlocks and access restrictions
    - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
    - function of the main components of a local/remote control system
    - operation of a field devices using SCADA systems via a RAT, dial up voice annunciated system and local control station
- HV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of HV systems and equipment to be switched
    - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, emergency fault procedures and energisation procedures
- LV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of LV systems and equipment to be switched
    - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
    - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
    - specific enterprise processes, policies and procedures to be followed
    - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
    - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
    - techniques in the effective utilisation of available resources
    - techniques in the coordination and directing of switching schedules instructions
    - relationship between the operating authorities and HV customers and operating agreements
    - techniques in coordinating and directing HV and LV switching of electrical networks
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
    - responsibilities of the switching operator
    - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
    - techniques in gathering, collating and confirming data on switching procedures
- HV overhead and substation switching principles encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- role and responsibilities of the HV switching operator
- operational forms, access authorities and permits and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits and hazard/risk assessments; purpose and procedure for operational forms, access authorities and hazard/risk assessments
- use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
- HV switchgear – types, categories, application and operating capabilities
- operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
- operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures

- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to LV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments; purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - LV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths); and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- preparation of a LV switching instruction encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator
  - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader

© Commonwealth of Australia, 2025 Powering Skills Organisation

programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings encompassing:
    - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS52 Install and maintain poles, structures and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain poles, structures and associated hardware in the electricity supply industry (ESI).

It includes the installation of poles and/or structures and associated hardware, (excluding towers), which may consist of wood, steel, concrete or composite type material.

It also covers the fixing and/or securing of associated hardware as well as the repair and replacement of poles and/or structures.

It includes identifying and implementing a suitable traffic management plan.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

Competency Field

Industry Specific Cross Discipline

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation and maintenance of poles, structures and associated hardware	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of poles and/or structures and associated hardware are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

2 Carry out installation and maintenance of poles and/or structures and associated hardware	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Installation of poles and/or structures and associated hardware are completed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Poles and/or structures and associated hardware to be installed are stabilised in accordance with workplace procedures
	2.5	Installation is assembled in accordance with construction plans, drawings and workplace procedures
	2.6	Maintenance, including repair and/or replacement of poles and/or structures, is performed in accordance with work schedule, job requirements and workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation and maintenance of poles, structures and associated hardware	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and poles and/or structures and their associated hardware are returned to

© Commonwealth of Australia, 2025 Powering Skills Organisation

service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS52A Install and maintain poles, structures and associated hardware.

Assessment Requirements for UETTDRIS52 Install and maintain poles, structures and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing at least one (1) of the following pole type and structures:
  - wood pole/structure
  - steel pole/structure
  - concrete pole/structure
  - composite pole/structure
- installing at least three (3) of the following associated hardware:
  - insulators
  - cross-arm braces
  - cross-arms
  - pole steps
  - shackle straps
  - earth leads
  - traction supports
  - traction registration
  - bonding
- using at least one (1) of the following pole stabilisation methods:
  - baulking
  - stays
  - concreting including foundation
- installing poles and structures using at least one (1) of the following:
  - crane
  - auger/erector
  - ‘A’ frame

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - lifting beam
  - pole pikes
  - helicopter lift
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
  - characteristics and applications of different types of poles and associated hardware
- techniques for installing poles and associated hardware, including:
  - types of installation equipment/tools
  - excavation methods
  - types of footings/foundations
  - types of attachments
  - earthing systems
  - clearances between conductors
  - safe methods of erecting and stabling poles and/or structures and cross-arms
- techniques for maintenance of poles and associated hardware, including:
  - stabilisation techniques for unstable poles
  - methods of strengthen poles
  - maintenance and replacement of high voltage insulators and cross arms
- traffic management, such as:
  - purpose of traffic management and a power worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
- procedures for purchasing/ordering items, removing/dispatching items, stocktaking and record keeping.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining poles, structures and associated hardware
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS53 Install and maintain power system public lighting

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install, maintain, and repair power systems public lighting in the electricity supply industry (ESI).

It includes inspecting, testing and commissioning the system associated with street lighting circuit, the associated hardware, and the earthing system.

Maintenance may include work on energised low voltage (LV) overhead or underground public lighting systems, diagnosis of faults, updating relevant system data and or public lighting maintenance records. Installation will include the installation of, the associated hardware and components and, the wiring and earthing system.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

Transmission Overhead Pathway Group
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRTP26 Install transmission structures and associated hardware
UETTDRTP27 Maintain transmission structures and associated hardware
UETTDRTP29 Install and maintain transmission overhead conductors and cables
Distribution Overhead Pathway Group
UETTDRDP12 Maintain overhead energised low voltage conductors and cables
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRIS56 Install and maintain low voltage overhead services
Rail Traction Pathway Group
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRRT21 Install traction overhead wiring systems
UETTDRRT22 Maintain traction overhead wiring systems
UETTDRRT23 Install rail traction bonds
UETTDRRT27 Install overhead traction components and equipment
UETTDRRT28 Maintain overhead traction components and equipment
Distribution Cable Jointing Pathway Group
UETTDRCJ21 Lay ESI electrical cables
UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables
UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS55 Install and maintain low voltage underground services

Competency Field

Assessment Requirements for UETTDRIS53 Install and maintain power system public lighting

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining public lighting poles/columns at least one (1) of the following:
  - wood
  - concrete
  - steel
  - composite
- installing or and maintaining public lighting lanterns/luminaires, including at least two (2) of the following:
  - high pressure mercury vapour
  - low pressure and high pressure sodium vapour
  - fluorescent
  - quartz-halogen
- using specialist testing equipment, including at least three (3) of the following:
  - voltage detectors*
  - insulation resistance testers
  - clamp-on ammeters
  - continuity testers
  - fault indicators
  - (* must use)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- standards, codes, legislation, supply authority regulations, local government and/or enterprise requirements pertaining to the installation and maintenance of public lighting systems and associated equipment
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
  - street lighting circuits
  - earthing system
- types of tools and equipment used for installation and maintenance
- types and function of lanterns/luminaires/lamps, control equipment, poles and associated hardware used for street lighting, such as:
  - high pressure mercury vapour, low pressure and high pressure sodium vapour, fluorescent, quartz-halogen, wood, concrete, steel, composite, choke boxes, photo-electric cells, time switches and contactor boxes
- types of lighting systems, including:
  - overhead and underground street lighting systems
  - controlling and switching of lighting systems
- techniques for the installation of street lighting systems
- techniques for the maintenance of street lighting systems, such as:
  - diagnosing of faults; removing, repairing, replacing and cleaning of public lighting and associated hardware
- application of specific testing equipment, such as:
  - voltage detectors, insulation resistance testers, clamp-on ammeters, continuity testers and fault indictors
- techniques for the inspection, testing and commissioning of street lighting systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining power system public lighting

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain overhead conductors and cables used on poles and structures (excluding towers) in the electricity supply industry (ESI).

It includes stringing, tensioning and terminating of conductors/cables, cleaning de-energised insulators, securing conductors to insulators or supports and undertaking electrical connections.

It also includes maintenance work associated with diagnosing faults, conducting visual inspections, confirming phasing, completing workplace tests, isolating systems and circuits, issuing/accepting electrical access permits and updating system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation and maintenance of overhead conductors and cables used on poles and/or structures	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of overhead conductors and cables used on poles and/or structures are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied

© Commonwealth of Australia, 2025 Powering Skills Organisation

		in accordance with workplace procedures
2 Carry out installation and maintenance of overhead conductors and cables used on poles and/or structures	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Electrical systems and circuits are checked and isolated in accordance with job requirements, work permits and workplace procedures
	2.4	Installation and maintenance of overhead conductors and cables used on poles and/or structures are completed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.5	Overhead conductor/cables are strung, tensioned and terminated in accordance with workplace procedures
	2.6	Insulators are cleaned and conductors, anti-vibration devices and spaces/spreaders are secured in accordance with workplace procedures
	2.7	Electrical connections are made in accordance with job requirements and workplace procedures
	2.8	Maintenance, including repair and/or replacement of overhead conductors and cables used on poles and/or structures, is carried out in accordance with work schedule, job requirements and workplace procedures
	2.9	Unplanned events are responded to in accordance with workplace procedures
	2.10	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation and maintenance of overhead conductors and cables used on poles and/or structures	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures

3.4 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and overhead conductors and cables used on poles and/or structures are returned to service in accordance with workplace procedures

3.6 Conductors/cables are tested and commissioned in accordance with job requirements and workplace procedures

3.7 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS54A Install and maintain poles, structures and overhead conductors and cables.

Assessment Requirements for UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining poles, structures and overhead conductors and cables using at least two (2) of the following:
  - copper
  - aluminium
  - steel
  - low voltage (LV) aerial bundled cable (ABC)
  - aluminium/steel reinforced
  - high voltage (HV) ABC
  - HV insulated unscreened conductor (IUC)
  - pilot
- using at least two (2) of the following height access methods:
  - elevated work platform (EWP)
  - portable platform
  - ladder
- using at least three (3) of the following types of stringing equipment:
  - tension equipment*
  - cable drum stands
  - cable trailers
  - ropes
  - rollers
  - sheaves
  - stockings
  - stringing equipment
  - swivels

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - winches
  - (* must do one)
- using at least two (2) of the following types of testing and recording equipment:
  - voltage indicators *
  - phasing sticks
  - fault indicators
  - field intensity meter
  - operating rods
  - (*must do)
- using at least one (1) of the following types of stringing methods:
  - lay-out (stringing method)
  - pull through (stringing method)
  - pilot rope (stringing method)
- using at least one (1) of the following tensioning methods:
  - dynamometer
  - site board
  - beat (wave sagging)
  - abney level
  - theodolite
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
- safe work practices, including:
  - requirements to enable safe working on conductive poles
  - procedures to attach on site earthing devices to de-energised LV and HV circuits
- requirements for the use of overhead line construction manuals, system diagrams/plans and drawings, including:
  - material lists
  - conductor size, type and route length
- constructions types and structures for distribution and sub-transmission lines
- types, sizes and characterises of overhead conductors
- resources for the stringing and maintenance of conductors, including:
  - types of LV and HV overhead electrical conductor connections
  - causes and effects of poor electrical connections
  - reasons for and methods used to maintain standard phase sequencing

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - removing, repairing and replacing damaged conductors
  - minimum clearances between overhead conductors and LV and HV structures
- techniques for conductor installation, including:
  - types and application of tools, equipment and hardware
  - methods of stringing, tensioning and termination of LV and HV conductors.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining poles, structures and overhead conductors and cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS55 Install and maintain low voltage underground services

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain low voltage (LV) underground services in the electricity supply industry (ESI).

It includes the installation, maintenance and connection of low voltage underground service lines and associated equipment between the connection point and the point of supply.

It also includes the repair and replacement of service cables, service fuses and the replacement and repair of service hardware and the identification and rectification of faults. It also covers insulation, voltage, phase rotation and polarity testing.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

Assessment Requirements for UETTDRIS55 Install and maintain low voltage underground services

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- connecting low voltage (LV) underground services to at least two (2) of the following:
  - underground pillar/pit connection (single phase)
  - underground pillar/pit connection (three phase*)
  - underground to overhead connection
  - (* must do)
- installing LV underground service protection devices, including at least one (1) of the following:
  - fuse units
  - circuit breakers
  - service links
- testing of LV underground service connections, including at least four (4) of the following:
  - polarity test *
  - phase rotation test
  - continuity test
  - voltage test
  - insulation resistance test
  - (* must do)
- installing LV underground service cables using at least one (1) of the following:
  - aluminium LV cable
  - cross-linked polyethylene (XLPE) cable
  - copper LV cable
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
  - types of LV underground services
  - methods of construction and installation
  - minimum depths for underground services to be buried and proximity to other assets and structures
- installation equipment/tools, including:
  - equipment and tools for underground service installation
  - fittings and hardware for underground service installation
- methods of laying cables, including:
  - conduits and sand and slabbing
- characteristics and applications of different types of cables, including:
  - cable cross-sectional area of conductors
  - current rating and fuse types and ratings
- techniques for maintenance of service installations, including:
  - diagnosis and repair of faults
- jointing and terminating methods, including:
  - polymeric heat-shrink materials
  - polymeric tape materials
  - insulated piercing connectors (IPCs)
  - energised and de-energised cables
  - connections to point of entry, fuse boxes, pillars and pits
- testing and commissioning procedures, including:
  - pre-energising tests - insulation resistance and continuity test
  - inspection
  - equipment functionality tests
  - polarity, voltage and phase sequence tests
  - neutral and phase identification tests
  - neutral integrity tests
  - meter function test
  - testing check forms
- connection principles, including:
  - purpose and function of multiple earth neutral (MEN) system
  - types of connection faults
  - causes and effects of incorrect and poor electrical connections

© Commonwealth of Australia, 2025 Powering Skills Organisation

- principles of loop impedance
- reasons for and methods used to maintain standard phase sequencing
- purpose and operation of service fusing
- use of independent earth for testing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining LV underground services
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

3.4 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and the LV overhead services and associated equipment are returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS56A Install and maintain low voltage overhead services.

Assessment Requirements for UETTDRIS56 Install and maintain low voltage overhead services

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- connecting low voltage (LV) overhead service cables, including at least two (2) of the following:
  - overhead service line (three phase) *
  - overhead service line (single phase)
  - overhead service line (two phase)
  - (* must do)
- installing LV overhead service protection devices, including at least one (1) of the following:
  - service fuse
  - circuit breakers (pole)
  - service link
- conducting tests of LV overhead service connections, including all of the following:
  - polarity test *
  - phase rotation test
  - continuity test
  - voltage test
  - (* must do)
- connecting LV overhead services to at least one (1) of the following overhead distribution conductor types:
  - aluminium LV mains
  - copper LV mains
  - LV aerial bundled cable (ABC) mains
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
  - types of LV overhead services
  - methods of construction and installation
  - minimum clearances for overhead services to assets and structures
  - ground clearances for overhead services
  - maximum span lengths and tensions for overhead services
  - customer poles
- installation equipment/tools, including:
  - equipment and tools for overhead service installation
  - fittings and hardware for overhead service installation
- characteristics and applications of different types of cables, including:
  - cable cross-sectional area of conductors
  - current rating and fuse types and ratings
- stringing and terminating methods, including:
  - energised and de-energised cables
  - connections to point of attachment, fuse boxes and pole top boxes
  - termination at customer pole
- connection of overhead services, including:
  - types of overhead service connections
  - live LV work principles
- techniques for maintenance of overhead service installations, including:
  - diagnosis and repair of faults
  - removing, repairing and replacing damaged overhead services
  - removing and replacing pole type fuses
- testing and commissioning procedures, including:
  - inspection
  - equipment functionality tests
  - continuity tests
  - polarity, voltage and phase sequence tests
  - neutral and phase identification tests
  - neutral integrity tests
  - meter function test
  - testing check forms
- connection principles, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- purpose and function of the multiple earth neutral (MEN) system
- types of connection faults
- causes and effects of incorrect and poor electrical connections
- principles of loop impedance
- reasons for and methods used to maintain standard phase sequencing
- purpose and operation of service fusing
- use of independent earth for testing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining LV overhead services
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS57 Conduct visual checking and treatment of power system poles and structures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to conduct visual checking and treatment of power system poles and structures in the electricity supply industry (ESI).

It includes testing or examining at eye level to below ground, checking above ground of crossarms and attached hardware with the use of binoculars to determine the integrity of poles, structures and attached hardware. It also includes completing inspection reports and updating workplace records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

Transmission Overhead Pathway Group

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRTP26 Install transmission structures and associated hardware

UETTDRTP27 Maintain transmission structures and associated hardware

UETTDRTP29 Install and maintain transmission overhead conductors and cables

UETTDRTP30 Inspect transmission overhead structures and electrical apparatus

Distribution Overhead Pathway Group

UETTDRDP11 Inspect overhead poles-structures and electrical apparatus

UETTDRDP12 Maintain overhead energised low voltage conductors and cables

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS56 Install and maintain low voltage overhead services

Rail Traction Pathway Group

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRRT21 Install traction overhead wiring systems

UETTDRRT22 Maintain traction overhead wiring systems

UETTDRRT23 Install rail traction bonds

UETTDRRT27 Install overhead traction components and equipment

UETTDRRT28 Maintain overhead traction components and equipment

Distribution Cable Jointing Pathway Group

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDRDP11 Inspect overhead poles-structures and electrical apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to perform visual checking and treatment of poles and structures	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the visual checking and treatment of poles and structures are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out visual checking and treatment of poles	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to

© Commonwealth of Australia, 2025 Powering Skills Organisation

and structures		reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Visual checking and treatment of poles and structures to ensure completion are performed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.4	Visual checking, by testing or examining pole and/or structures from eye level to below ground, is conducted in accordance with job requirements and workplace procedures
	2.5	Defective or suspect poles are identified for repair or replacement in accordance with workplace procedures
	2.6	Treatment of poles and/or structures is performed in accordance with work schedule, job requirements and workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete the visual checking and treatment of poles and structures	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and poles and structures are returned to service in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS57A Conduct visual checking and treatment of power system poles and structures.

Assessment Requirements for UETTDRIS57 Conduct visual checking and treatment of power system poles and structures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- checking visually at least one (1) of the following types of poles:
  - wood
  - steel
  - concrete
  - composite
- testing power systems poles and structure using at least one (1) of the following:
  - stress tester
  - drill test
  - non-intrusive test
- conducting maintenance of power systems poles and structures using at least one (1) of the following:
  - chemical treatment
  - re-butting
  - nailing
  - welding
  - stays/guys
- completing all of the following:
  - recording
  - reporting
- visually checking hardware attached to poles and structures, including at least two (2) of the following:
  - cross-arms
  - insulators
  - surge arrestors

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - support brackets
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements
- chemical treatment principles, including:
  - types of chemical used to treat timber
  - regulations and procedures in handling and transporting chemicals safely
  - application procedures of chemicals to wood
- deterioration prevention techniques, including:
  - relationship between steel, concrete and wood
  - inspection procedures for deterioration
  - deterioration prevention procedures in steel, concrete and wood
  - procedures for the repair of deterioration in steel, concrete and wood.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for conducting visual checks and treatments of power system poles and structures
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS58 Locate faults in power system underground power cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to locate faults in power system underground power cables in the electricity supply industry (ESI).

It includes diagnosis and detecting the location of faults in underground power cables. It includes obtaining the required access to test or equivalent permit, setting up the fault location test equipment and following the procedure to carry out the cable fault location test plan.

It also includes interpreting test results, documenting the fault location and likely cause, and listing recommendations for correcting the cable fault to meet client requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to locate faults in underground power cables	**1.1** Work schedules, including cable specifications and standards, cable route data, history, characteristics, drawings, plans, requirements, workplace procedures and material lists, are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for locating faults in underground power cables are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Equipment, tools and personal protective equipment required (PPE) for work are identified, obtained and confirmed in working order

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.8 Test equipment is assembled and checked for calibration status in accordance with workplace procedures
	1.9 Cable fault location test procedures/plans are prepared and range of tests required is determined in accordance with job requirements and workplace procedures
	1.10 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.11 Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out location of faults in underground power cables	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents of accidents in accordance with workplace procedures
	2.2 Requirements for lifting, climbing, working at heights and use of power tools/equipment are followed in accordance with workplace procedures
	2.3 Locating faults in underground power cables is performed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4 Cable is tested to determine location relevant faults in accordance with job requirements and workplace procedures
	2.5 Unplanned events in the location of faults in underground power cables are responded to in accordance with workplace procedures
	2.6 Quality checks of work are undertaken in accordance with workplace procedures
3 Complete location of faults in underground power cables	**3.1** Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3 Worksite is cleaned and made safe in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.4 Tools, equipment and surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and cable/site is returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRIS58 Locate faults in power system underground power cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- locating faults in power system underground power cables using at least three (3) of the following:
  - time domain reflectometry (TDR)
  - pool of potential in earth (POPIE)
  - differential TDR radar
  - current impulse
  - Murray loop
  - Varley loop
  - radio detection
  - capacitance/inductance
  - continuity tests
  - insulation tests
  - voltage detection
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of underground cable, including:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safety precautions specific to the installation of underground cable - excavation and trench safety regulations, gas detection procedures, working in confined spaces, personal

© Commonwealth of Australia, 2025 Powering Skills Organisation

protective equipment (PPE), hazards for the use of liquid petroleum gas (LPG), equipment for jointing of underground cable, gas bottle testing procedures, permit to work systems and isolation procedures
    - trench excavation and reinstatement procedures
    - installation of underground cable procedures - types of tools and equipment, methods of installing conduits, methods of installing cables and sealing cable ends (direct buried, ducts cleated and racked)
    - procedures for the safe use of LPG equipment for cable jointing
- location of cable faults in underground power cables, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements
    - types of faults
    - methods of locating faults - Murray loop test, Fisher connection of Murray loop, modified Fisher connection, Varley loop test, TDR, differential TDR radar, digital arc reflection, differential digital arc reflection, current impulse test, differential current impulse, decay, differential decay, POPIE, radio detection, capacitance inductance test, pending faults (thermography and cable/joint temperature measurement), cable location devices/equipment and methods (signal generator/receiver, phasing methods using ‘megger’, current injection and cable stabbing techniques), and cable identification
    - low voltage (LV) energised working practices - regulations, working methods, insulating glove, bare hand, work procedures and specialist equipment
    - safety precautions specific to working near conductors - safe working practices and procedures, working in confined spaces, permit to work systems and isolation procedures
- jointing and termination of LV polymeric cable, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of LV polymeric cables
    - types of cables - single core, multi-core and cross-linked polyethylene (XLPE) insulation
    - methods of cable handling - direct laid cables, duct laid cables, solid laid cables, cables supported in cleats or hangers, corrosion protection and minimum bending radius of cables
    - methods of cable sealing - shorting of cables cores, core of un-terminated cables, methods of protection from corrosion, polymeric sheathed cables sealing with mastic lined, and heat shrink caps buried sealed ends
    - types of jointing tools - general hand tools and compression tools
    - techniques in the use of LPG - safety precautions, PPE, and general maintenance and repair
    - safety precautions when cable jointing - working in confined spaces; permit to work systems and isolation procedures; and emergency rescue/response, including first aid
- LV polymeric cable jointing principles; including:
    - techniques in jointing LV XLPE cables - straight through joint, jointing different types of cable and service and street light cable joints
    - techniques in terminating LV XLPE - pole top terminations, substation terminations, distribution pillar/column/cubicle terminations and service and street light cable terminations
    - techniques in repairing LV XLPE cable - different types of damage, repairs to sheath and

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - repairs to cores
    - methods of testing cable after jointing
- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of high voltage (HV) underground polymeric cables
- HV underground polymeric cables requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
    - characteristics of different types of cables and components
    - purpose of stress control
    - applications of various tools and equipment for HV jointing
- procedure for isolating HV underground polymeric cables, including:
    - method for proving safe to work
    - earthing procedures
- techniques in jointing HV underground polymeric cables, including:
    - short circuit cores and seal cable
    - straight through
    - trifurcating
- techniques in HV underground polymeric cable terminations, including:
    - pole top termination
    - substation/switchgear termination
    - aerial bundled cable (ABC) termination
    - telcon termination
- procedures for repairing HV underground polymeric cables, including:
    - location of faults
    - types of damage
    - techniques to repairs to sheath
    - techniques to repairs to core
- jointing LV paper lead/lead type cables, including:
    - requirements for the use of enterprise manuals, system diagrams/plans and drawings
    - types of tools and equipment
    - types of LV cables
    - structure of LV PLY cables
    - techniques for lead wiping
    - technique for preparing and jointing LV lead sheathed paper insulated cables
    - installation methods of LV straight joint
    - inspection and repair procedures to outer sheath of lead sheathed LV cable
    - techniques in terminating LV lead sheathed paper insulated cables
    - methods of testing cable after jointing
- HV paper lead cable jointing principles, including:
    - requirements for the use of enterprise manuals, system diagrams/plans and drawings
    - types of tools and equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types of HV cables
  - structure of HV cables
  - technique for the installation of transition joint between XLPE and lead sheathed paper insulated cables
  - technique for the jointing, terminating and repairing of HV paper lead insulated cables
  - methods of testing cable after jointing
- underground cables construction and types, including:
  - safety precautions specific to handling underground cables
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types and applications of underground cables
  - construction types and structures of underground cables
  - characteristics of different types of underground cables
  - ratings
- aluminium and lead cable sheathed jointing procedures, including:
  - safety precautions specific to handling and jointing underground aluminium and lead cable, including provision of WHS/OHS information, such as material safety data sheets (MSDS)
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - construction and structure(s) of aluminium and lead cable underground cables
  - characteristics of aluminium and lead cable
  - ratings
  - techniques in the jointing of aluminium and lead sheathed cable
  - methods of testing cable after jointing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for locating faults in power system underground power cables
- applicable documentation, including workplace procedures, relevant industry standards,

UETTDRIS59 Conduct high potential testing of power system underground power cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to conduct high potential testing of power system underground power cables in the electricity supply industry (ESI).

It includes obtaining the required access to test or equivalent permit, setting up the fault location test equipment and following the procedure to carry out the cable test plan. It also includes interpreting test results, documenting the actual testing, and listing recommendations to meet client requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to conduct high potential testing	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for high potential testing are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Equipment, tools and personal protective equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

		(PPE) required for work are identified, obtained and confirmed in working order
	1.8	Clients/customers are provided with alternative options within scope, acceptable cost and job requirements
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Perform high potential testing	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents of accidents in accordance with workplace procedures
	2.2	First aid, pole top rescue and other related work procedures are performed in accordance with job requirements and workplace procedures
	2.3	Requirements for lifting, climbing, working at heights and use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Remedial actions are taken to overcome shortfalls in work schedule in accordance with job requirements and workplace procedures
	2.5	High potential testing is performed in accordance with work schedules, job requirements and workplace procedures
	2.6	High potential testing is performed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.7	Solutions used to solve problems are applied in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete high potential testing	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required

3.3 Worksite is cleaned and made safe in accordance with workplace procedures

3.4 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and underground cables are returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS59A Conduct high potential testing of power system underground power cables.

Links

Assessment Requirements for UETTDRIS59 Conduct high potential testing of power system underground power cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- testing to be conducted on:
  - high voltage (HV) distribution cable
  - HV transmission cable
- using at least one (1) of the following:
  - HV polymeric
  - HV paper insulated
  - oil filled
  - gas filled
- using at least four (4) of the following:
  - phasing instruments*
  - direct current (d.c.) high potential tester*
  - voltage detectors
  - insulation testers*
  - continuity testers
  - cable identification instrument
  - (*must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of underground cable, including:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and

© Commonwealth of Australia, 2025 Powering Skills Organisation

drawings
    - safety precautions specific to the installation of underground cable - excavation and trench safety regulations, gas detection procedures, working in confined spaces, personal protective equipment (PPE), hazards for the use of liquid petroleum gas (LPG), equipment for jointing of underground cables, gas bottle testing procedures, permit to work systems and isolation procedures
    - trench excavation and reinstatement procedures
    - installation of underground cable procedures - types of tools and equipment, methods of installing conduits, and methods of installing cables and sealing cable ends (direct buried, ducts cleated and racked)
    - procedures for the safe use of LPG equipment for cable jointing
- location of cable faults in underground power cables, including:
    - standards, codes, legislation, supply authority regulations and or enterprise requirements
    - types of faults
    - methods of locating faults - Murray loop test, Fisher connection of Murray loop, modified Fisher connection, Varley loop test, time domain reflectometer (TDR), differential TDR radar, digital arc reflection, differential digital arc reflection, current impulse test, differential current impulse, decay, differential decay, pool of potential in earth (POPIE), radio detection, capacitance inductance test, pending faults (thermography and cable/joint temperature measurement); cable location devices/equipment and methods (signal generator/receiver, phasing methods using ‘megger’, current injection, cable stabbing techniques); and cable identification
    - low voltage (LV) energised working practices: - regulations, working methods, insulating glove, bare hand, work procedures and specialist equipment
    - safety precautions specific to working near conductors - safe working practices and procedures, working in confined spaces, permit to work systems and isolation procedures
- jointing and termination of LV polymeric cable, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of LV polymeric cables
    - types of cables - single core, multi-core and cross-linked polyethylene (XLPE) insulation
    - methods of cable handling - direct laid cables, duct laid cables, solid laid cables, cables supported in cleats or hangers, corrosion protection and minimum bending radius of cables
    - methods of cable sealing - shorting of cables cores, core of un-terminated cables, methods of protection from corrosion, polymeric sheathed cables sealing with mastic lined, and heat shrink caps buried sealed ends
    - types of jointing tools - general hand tools and compression tools
    - techniques in the use of LPG - safety precautions, PPE, general maintenance and repair
    - safety precautions when cable jointing - working in confined spaces; permit to work systems and isolation procedures; and emergency rescue/response, including first aid
- LV polymeric cable jointing principles, including:
    - techniques in jointing LV XLPE cables - straight through joint, jointing different types of cable and service and street light cable joints
    - techniques in terminating LV XLPE - pole top terminations, substation terminations,

© Commonwealth of Australia, 2025 Powering Skills Organisation

distribution pillar /column/cubicle terminations, and service and street light cable terminations
    - techniques in repairing LV XLPE cables - different types of damage, repairs to sheath and repairs to cores
    - methods of testing cable after jointing
- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of HV underground polymeric cables
- HV underground polymeric cables requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
    - characteristics of different types of cables and components
    - purpose of stress control
    - applications of various tools and equipment for HV jointing
- procedure for isolating HV underground polymeric cables, including:
    - method for proving safe to work
    - earthing procedures
- techniques in jointing HV underground polymeric cable, including:
    - short circuit cores and seal cable
    - straight through
    - trifurcating
- techniques in HV underground polymeric cable terminations, including:
    - pole top termination
    - substation/switchgear termination
    - aerial bundled cable (ABC) termination
    - telcon termination
- procedures for repairing HV underground polymeric cables, including:
    - location of faults
    - types of damage
    - techniques to repairs to sheath
    - techniques to repairs to core
- jointing LV paper lead/lead type cables, including:
    - requirements for the use of enterprise manuals, system diagrams/plans and drawings
    - types of tools and equipment
    - types of LV cables
    - structure of LV PLY cables
    - techniques for lead wiping
    - technique for preparing and jointing LV lead sheathed paper insulated cables
    - installation methods of LV straight joint
    - inspection and repair procedures to outer sheath of lead sheathed LV cable
    - techniques in terminating LV lead sheathed paper insulated cables
    - methods of testing cable after jointing

© Commonwealth of Australia, 2025 Powering Skills Organisation

- HV paper lead cable jointing principles, including:
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types of tools and equipment
  - types of HV cables
  - structure of HV cables
  - technique for the installation of transition joint between XLPE and lead sheathed paper insulated cables
  - technique for the jointing, terminating and repairing of HV paper lead insulated cables
  - methods of testing cable after jointing
- underground cables construction and types, including:
  - safety precautions specific to handling underground cables
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types and applications of underground cables
  - construction types and structures of underground cables
  - characteristics of different types of underground cables
  - ratings
- aluminium and lead cable sheathed jointing procedures, including:
  - safety precautions specific to handling and jointing underground aluminium and lead cable, including provision of WHS/OHS information, such as material safety data sheets (MSDS)
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - construction and structure(s) of aluminium and lead cable underground cables
  - characteristics of aluminium and lead cable
  - ratings
  - techniques in the jointing of aluminium and lead sheathed cable
  - methods of testing cable after jointing
- LV switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible backfeed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - PPE for LV switching.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for conducting high potential testing of power system underground power cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS60 Install and replace power system energy meters and associated equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and replace power system energy meters and associated equipment in the electricity supply industry (ESI).

It includes the installation and replacement of whole current energy meters and associated equipment, the identification of faults and returning to service. It also covers normal functions of the meters and associated equipment in accordance with workplace procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

Distribution Overhead Pathway Group

UETTDRDP12 Maintain overhead energised low voltage conductors and cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS56 Install and maintain low voltage overhead services

Distribution Cable Jointing Pathway Group

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Electrotechnology Electrician Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation and replacement of energy meters and associated equipment	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and replacement of energy meters and associated equipment are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.8 Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out the installation and replacement of energy meters and associated	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace

equipment		procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Installation and replacement of energy meters and associated equipment are performed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Installation and/or replacement of energy meters and associated equipment is performed, including required wiring, testing, programming and sealing of meters and associated equipment, in accordance with job requirements and workplace procedures
	2.5	Unplanned events are responded to in accordance with workplace procedures
	2.6	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete the installation and replacement of energy meters and associated equipment	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETTDRIS60 Install and replace power system energy meters and associated equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing whole current energy meters on at least (1) one of the following types of meters:
  - induction disk energy meter
  - electronic energy meters
  - maximum demand meters
  - electronic summators
- installing associated metering equipment, including at least one (1) of the following:
  - service fuses
  - service links
  - meter boards
  - meter panels
- installing associated metering equipment, including at least one (1) of the following:
  - time switches
  - frequency injection relays
  - controlled output meters
  - contactors
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cable protection and support methods and accessories, including:
  - requirements to protect and support cables adequately - protection against mechanical damage, protection from adverse temperatures and corrosion, and protection from

© Commonwealth of Australia, 2025 Powering Skills Organisation

magnetic field that may affect the performance of the cable
    - cable support and protection devices, accessories and typical applications - metallic and non-metallic conduits, duct and trunking, cable ladder and tray, cable clips and ties and related accessories
    - installation techniques - cable installation equipment, cable drawing and hauling techniques
- types of cables used in electrotechnology and their application, including:
    - structural components of cables and their purpose - conductors and conductor material, insulation, sheathings and servings
    - application of various cables types
    - cable varieties - single cables, flexible cables, flexible cords, shielded cables, armoured cables, ribbon cables, other similar and like cables
    - typical characteristics and use of power circuit cables and control circuit cables
- installing cables in buildings, structures and premises, including:
    - building construction method and construction sequence
    - typical cable routes through buildings, structures and premises
    - building codes affecting the installation of cables in buildings, structures and premises - limitation of penetration structural elements and maintenance of fire protection interiority
    - cable segregation requirements
- basic cable and conductor terminations, including:
    - insulation removal and replacement
    - conductor handling and cable terminations - general aspects and soldering involving pins on electronic components and stranded conductors carrying current up to 25 amperes, application of connecting devices for conductors and terminals, continuity through connections and insulation resistance testing, and stress release on cables/conductors
- power cable and conductor terminations, including:
    - types of cable glands and their application - glands for circular sheathed cables, steel wire armoured (SWA) cables and mineral-insulated metal-sheathed (MIMS) cables
    - cable termination techniques
    - terminal types and applications
    - conductor termination techniques - need for sound termination, consequences of poor conductor termination, conductor and terminal preparation
- telecommunication cable and conductor terminations, including:
    - approved termination devices and sockets
    - special termination tools and their use
    - cable colour coding up to 100 pair indoor and outdoor cable
    - end-to-end testing
    - methods of terminating cables - cables less than twenty pair, twenty pair cable and greater
    - cable labelling devices
    - colour coding of cables, sockets and termination modules and standard connectors used with twisted pair, optical fibre and coaxial cables
- terminating cable and conductor used in electronic equipment, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - cable and conductor types and characteristics - insulated wire, harness wiring, high performance cables (transmission performance parameters and electrical characteristics), such as:
    - unshielded twisted pair (UTP), foil twisted pair (FTP) and shielded twisted pair (STP)
  - coaxial cables types and characteristics - qualshield, trishield coaxial and armour plated coaxial cables
  - cable anchoring and support methods
  - termination methods
- installation of metering and control equipment, including:
  - standards, codes, legislation, supply authority regulations and or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment
  - types of meters - kilowatt-hour meters single and polyphase, demand meters, recording meters and electronic recording metering systems summators
  - installation and removal methods - direct connection and plug in method, enterprise specific
  - types of associated equipment and accessories - meter boards, service fuse, links, contactors, time switch, audio frequency injection relay
  - testing procedures - safety testing, polarity testing
- powerline safety practices, including:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel; and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods; and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and ; emergency procedures for the rescue of an electric shock victim, including cardio pulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation

© Commonwealth of Australia, 2025 Powering Skills Organisation

with network operations and equipment; and requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and replacing power system energy meters and associated equipment
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS61 Install mobile generation set for synchronised LV Genset

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install mobile generation set for synchronised low voltage (LV) Genset in the electricity supply industry (ESI).

It includes installing temporary portable generation sets to LV distribution assets to maintain supply. It also includes operating, connecting and disconnecting generators and estimating LV load and selecting the appropriate generator for required outcome.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to install mobile generation set for synchronised LV Genset	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), policies and procedures related to the work are used and actioned to ensure safe systems of work are followed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Clients/customers are provided with alternative options within scope, acceptable cost and job requirements
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out the installation of mobile generation set for synchronised LV Genset	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	First aid and other related work procedures are performed in accordance with job requirements and/or workplace procedures
	2.3	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Remedial actions are taken to overcome shortfalls in work schedule in accordance with job requirements and workplace procedures
	2.5	The installation of mobile generation set for synchronised LV genset is carried out in accordance with the work schedule, job requirements and workplace procedures
	2.6	Installation of mobile generation set for synchronised

© Commonwealth of Australia, 2025 Powering Skills Organisation

		LV Genset is completed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.7	Solutions used to solve problems are identified and actioned in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation of mobile generation set for synchronised LV Genset	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and synchronised LV Genset apparatus is returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS61A Install mobile generation set for

© Commonwealth of Australia, 2025 Powering Skills Organisation

synchronised LV Genset.

Assessment Requirements for UETTDRIS61 Install mobile generation set for synchronised LV Genset

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- operating a generator
- connecting a generator
- disconnecting a generator
- completing all of the following:
  - the synchronising of generator control systems onto the network without interruption to supply
  - the synchronising of generator control systems off the network without interruption to supply
- estimating low voltage (LV) load of the generator
- assessing the appropriateness of the generator
- operating a generator in parallel to a single LV job
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safety precautions specific to installing mobile generators, including:
  - safe working practices and procedures
  - techniques in connecting, operating and disconnecting generators
  - types of tools and equipment
  - safe use of tools and equipment
- techniques in the installation of Gensets, including:
  - the synchronising of generator control systems onto and off the network without

© Commonwealth of Australia, 2025 Powering Skills Organisation

interruption to supply
    - estimation of LV load
    - assessing the appropriateness of the generator
- operating a generator in parallel to a single LV job, including:
    - overhead systems
    - indoor systems
    - customer installations
    - kiosk substations
    - LV genset and control system to LV distribution assets.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing mobile generation sets for synchronised LV Genset
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor the power system organisational work health and safety (WHS)/occupational health and safety (OHS) policies, procedures and programs in the electricity supply industry (ESI).

It includes participative arrangements for management of organisational WHS/OHS policies procedures, programs and issues. It also includes disseminating information on hazards and risk assessments to meet WHS/OHS standards; collating work group input; and, implementing workplace procedures for resolving WHS/OHS issues.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETTDREL16 Working safely near live electrical apparatus

Competency Field

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to implement and monitor organisational WHS/OHS policies, procedures and programs	**1.1** Relevant workplace documentation is identified, analysed and work preparation required for planning and coordination determined
	1.2 Relevant requirements and workplace procedures are communicated to all personnel and identified for all worksites
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures are prioritised, implemented and monitored to ensure work safe systems are followed in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for efficient and effective outcome following consultation with relevant personnel for completion within agreed timeframes, to standard and in accordance with workplace procedures
	1.5 Risk control measures are identified, prioritised, implemented and evaluated in accordance with work schedule
	1.6 Relevant work permits are confirmed and signed in accordance with requirements and/or workplace procedures
	1.7 Resources, personnel, equipment, tools and personal protective equipment (PPE) required for the job are identified, scheduled, coordinated and confirmed in safe and technical working order
	1.8 Potential issues in communicating with relevant person/s, authorities, clients and land owners are identified, resolved and work activities planned and coordinated
	1.9 Worksite is prepared in accordance with the work schedule to minimise WHS/OHS risk, damage to property, commerce and individuals in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.10 Personnel and contractors participating in work are fully briefed and responsibilities authorised and coordinated in accordance with workplace procedures
	1.11 Traffic management plan is confirmed as being applied in accordance with workplace procedure
2 Carry out the implementation and monitoring of organisational WHS/OHS policies, procedures and programs	**2.1** WHS/OHS and sustainable energy principles and practices are implemented and monitored to reduce workplace incidents and minimise waste in accordance with job requirements and workplace procedures
	2.2 Relevant worksite personnel are confirmed current in first aid and rescue-related work in accordance with job requirements and workplace procedures
	2.3 Lifting, climbing, working in confined spaces, working at heights, using power tools and equipment techniques and practices are followed safely in accordance with requirements and workplace procedures
	2.4 Hazard warnings and safety signs are recognised, hazards assessed, WHS/OHS risk control measures implemented and monitored and/or appropriate authorities consulted, as required, in accordance with requirements and workplace procedures
	2.5 Remedial actions are taken to overcome shortfalls encountered in the work schedule in accordance with job requirements and workplace procedures
	2.6 Participative arrangements for the systematic management of WHS/OHS policies, procedures, programs and issues are implemented and monitored in accordance with work schedule, job requirements and workplace procedures
	2.7 Participative arrangements for the systematic management of WHS/OHS policies, procedures, programs and issues are implemented and monitored to ensure completion in agreed timeframe, to quality standards with a minimum of waste in accordance with job requirements
	2.8 Solutions to non-routine problems are identified and applied in accordance with requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.9	Quality of work checks are undertaken in accordance with job requirements and workplace procedures and to a community/industry standard
3 Complete implementation and monitoring of organisational WHS/OHS policies, procedures and programs	**3.1**	Work is checked against work schedule for conformance with job requirements, anomalies reported and solutions identified in accordance with workplace procedures
	3.2	Accidents, incidents and/or injuries are reported in accordance with requirements and workplace procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permit/s are signed off, work completed/returned to service and client/customer advised in accordance with job requirements
	3.6	Work completion records, reports and information are confirmed, processed and relevant person/s notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS62A Implement and monitor the power system organisational OHS policies, procedures and programs.

Assessment Requirements for UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- implementing and monitoring the power system organisational WHS/OHS policies, procedures and programs using all of the following:
  - relevant WHS/OHS Acts
  - regulations
  - codes of practice
- demonstrating all of the following:
  - application of organisation management systems and procedures to WHS/OHS
  - organisation’s procedures for maintaining WHS/OHS records
- performing all of the following applications of risk management procedures:
  - undertake hazard identification
  - risk assessment and risk control in accordance with the hierarchy of control
  - application of the characteristics of the workforce impacting on the management of WHS/OHS
- demonstrating all of the following implementation and monitoring procedures:
  - provision of relevant information to the workgroup about WHS/OHS and the organisation's WHS/OHS policies, procedures and programs
  - participative arrangements for the management of WHS/OHS
  - organisation's procedures for identifying hazards and assessing risks
  - organisation's procedures for controlling risks
  - organisation's procedures for dealing with hazardous events
  - organisation’s procedure for providing WHS/OHS training
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025
Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working practices and procedures for the installation of overhead distribution conductors, including:
  - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWP)
  - requirements of persons prior to making bare hand contact with dead low voltage (LV) mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and high voltage (HV) apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedure to attach an on-site earthing device to de-energised LV and HV overhead circuit
- powerline safety practices, including:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel; and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles; including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods; and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- implementation and monitoring requirements for powerline safety, including:
  - identification of relevant legislation, codes and government guidelines for the

© Commonwealth of Australia, 2025
Powering Skills Organisation

implementation and monitoring of WHS/OHS in the workplace - Commonwealth/state/territory legislation relevant to the workplace and the meaning of general duty of care under WHS/OHS legislation and common law

- workplace WHS/OHS enterprise plan - responsibilities of each member of the work team, review process for changing/improving WHS/OHS safety plan, and standing instructions for the systematic management of WHS/OHS in the workplace
- relationship between the WHS/OHS committee and employees - methods used to collate and distribute/disseminate WHS/OHS information; staff development activities and legislation requirements with regards to WHS/OHS training; methods of addressing barriers, such as literacy and cultural differences; and provisions relating to WHS/OHS issue resolution
- hazards associated with powerline industry - identification of hazards in the workplace, processes used and contributing factors to a hazardous situation, assessment of risks and control of WHS/OHS risks (risk management), the hierarchy of control and monitoring of risk control measures
- risk assessment and its management in powerline industry - principles and purposes of risk management; processes for conducting risk assessment, including, risk analysis and risk evaluation activities for selecting and implementing appropriate options for eliminating or minimising risk
- maintenance strategies for WHS/OHS programs - developing processes for promoting, maintaining and improving WHS/OHS in the workplace; identifying techniques for evaluating and reviewing WHS/OHS education and training programs; elements of an effective WHS/OHS management system; and WHS/OHS consultation and accident/incident investigations

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations, induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprises-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol

© Commonwealth of Australia, 2025
Powering Skills Organisation

  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records, manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor the power system environmental and sustainable energy management policies and procedures in the electricity supply industry (ESI).

It includes collecting, interpreting and applying environmental management information, identifying environmental impacts, assessing risks and establishing best practice procedures for implementation of management plans to ensure compliance. It also includes monitoring policies and plans and developing modifications as part of the review process.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Electrotechnology Pathway Unit Group

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Electricity supply industry (ESI) - time-domain reflectometer (TDR) Pathway Unit Group

UETTDREL11 Apply sustainable energy and environmental procedures

Competency Field

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to implement and monitor environmental and sustainable energy management policies and procedures	**1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.3 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.4 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.5 Relevant work permits are obtained, understood and signed onto in accordance with workplace procedures
	1.6 Plant, equipment, tools and personal protective equipment required for work is identified, obtained and confirmed in working order
	1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required
	1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10 Traffic management is planned and implemented in accordance with workplace procedures
2 Carry out the implementation and monitoring of	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

	environmental and sustainable energy management policies and procedures	workplace procedures
		2.2 First Aid, pole top rescue and other related work procedures are performed in accordance with job requirements and/or workplace procedures
		2.3 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
		2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks and risk control measures are implemented, preventative action taken and monitored and/or appropriate authorities consulted, where necessary, in accordance with requirements and workplace procedures
		2.5 Remedial actions are taken to overcome shortfalls encountered in the work schedule in accordance with job requirements and workplace procedures
		2.6 Environmental and sustainable energy management policies and procedures are implemented and monitored in accordance with work schedules, job requirements and workplace procedures
		2.7 Environmental and sustainable energy management policies and procedures are implemented and monitored to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
		2.8 Solutions to non-routine problems are identified and actioned in accordance with workplace procedures
		2.9 Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3	**Complete the implementation and monitoring of environmental and sustainable energy management policies and procedures**	**3.1** Work is checked against work schedule for conformance with job requirements, anomalies reported and solutions identified in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Accidents, incidents and/or injuries are reported in accordance with requirements and workplace procedures

3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures

3.4 Tools, equipment and surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permit/s are signed off, work completed/returned to service and client/customer advised in accordance with job requirements

3.6 Work completion records, reports and information are confirmed, processed and relevant person/s notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS63A Implement and monitor the power system environmental and sustainable energy management policies and procedures.

Assessment Requirements for UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- gathering environmental management information
- implementing and monitoring environmental and sustainable energy policies and plans
- identifying environmental impacts and assess risks
- implementing and monitoring the procedures for quantifying environmental impacts and controlling risks
- implementing and monitoring procedures for dealing with environmental incidents
- maintaining environmental records, reports and plans
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental fundamentals, including:
  - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the control of environment associated with the worksite - relevant federal legislation, relevant state/territory legislation, relevant local government by-laws, relevant government or quasi government policies and regulations, and relevant community planning and development agreements (include land care agreements)
  - employer and employee responsibilities
  - methods of obtaining information on environmental issues and updates
  - methods of identifying environmental impacts from work-related activities
  - meaning of environmental terms - identification, assessment and control of risks,

© Commonwealth of Australia, 2025
Powering Skills Organisation

compliance, best practice and sustainable energy
    - procedures for implementing management plans to ensure compliance
- implementation and monitoring requirements for the impact of powerline installations and operation on the environment and/or the area surrounding the powerline and/or equipment, including:
    - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of environmental impact factors in the workplace and areas of power distribution or transmission - Commonwealth/state/territory legislation relevant to the workplace and the Environment Protection Act legislation and common law
    - identification, assessment, control and monitoring of the hazards to the environment associated with the powerline industry
    - workplace environment quality standards enterprise plan - setting of acceptable emission level limits from power plant equipment; impact of the enterprise activities on air, water quality and nature; impact and level of emissions from power plant, power distribution and transmission equipment; and network infrastructure (noise generation, noxious gas emissions, greenhouse gas production, electromagnetic emissions, electromagnetic field strength, oil leakage and insulation breakdown products)
    - provision of manufacturer and supplier information, such as material safety data sheets (MSDS)
    - gathering of environment management information
    - maintenance of environmental records
    - risk assessment and its management in powerline industry
    - maintenance strategies for environment protection programs - developing processes for promoting, maintaining and improving environmental impact in the workplace; identifying techniques for evaluating and reviewing environment protection education and training programs; elements of an effective environment protection management system; and Environment Protection Authority (EPA) consultation and accident/incident investigations
- implementation and monitoring requirements for the management of sustainable energy in powerline installations and operation of plant and equipment, including:
    - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of sustainable energy principles in the workplace, and power distribution and transmission networks - Commonwealth/state/territory legislation, legislation relevant to the workplace, Environment Protection Act legislation, local government by-laws, community planning and development agreements (i.e. land care agreements)
    - monitoring and reporting procedures for enterprise-specific policy implementation on sustainable energy issues, including the gathering of energy consumption and loss information
    - ongoing development of energy conservation policies - procedures for quantifying energy usage and wastage, energy usage auditing procedures, planning of energy conservation methods, and monitoring and review processes
    - resource availability planning for policy implementation
    - techniques in managing documentation - information on applicable sustainable energy

© Commonwealth of Australia, 2025 Powering Skills Organisation

laws or other requirements; complaint records; training records; process information; process operational log books; inspection, maintenance and calibration records; relevant contractor and supplier information; incident reports; and information on emergency preparedness and response

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as MSDS; registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise policies and procedures in maintaining the operation of plant, equipment and powerline installations using sustainable energy principles, including:
  - overview of sustainable energy technologies – solar, wind, biomass and CO2 generation
  - economic benefits of sustainable energy initiatives

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relationship between greenhouse effect and sustainable energy
- types of renewable energy technology suitable for use in Australia - photovoltaic, solar thermal, wind energy conversion, biomass, wind/tidal and gas thermal
- relationship between safe building design and energy efficiency - building aspect, insulation, ventilation, glazing, passive solar design and shading
- techniques in selecting control devices
- components within a lighting system
- energy efficient lighting products, design and installation
- use of natural light
- automated lighting control systems
- assessment of requirements and selection of system
- techniques in selecting control devices
- components within a heating, ventilation and air conditioning (HVAC) and refrigeration control system
- energy efficient refrigerants
- detection systems to control air flow
- energy star ratings for coefficient of performance
- energy control systems
- advantages of evaporative air conditioners in dry climates
- assessment of requirements and selection of system.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS64 Install mobile generation set for synchronised HV Genset

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers installation of temporary portable generation sets to high voltage (HV) distribution assets thereby maintaining supply in accordance with industry regulations and established procedures. It encompasses the operation, connection and disconnection of a temporary portable generator and includes the estimation of HV load and assessing the appropriateness of the generator for the required outcome and networking of generators.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

Transmission Overhead Pathway Group

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS44 Perform HV field switching operation to a given schedule
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRTP26 Install transmission structures and associated hardware
UETTDRTP27 Maintain transmission structures and associated hardware
UETTDRTP29 Install and maintain transmission overhead conductors and cables
Distribution Overhead Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDRDP12 Maintain overhead energised low voltage conductors and cables
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS43 Perform low voltage field switching operation to a given schedule
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRIS56 Install and maintain low voltage overhead services
Rail Traction Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRRT21 Install traction overhead wiring systems
UETTDRRT22 Maintain traction overhead wiring systems
UETTDRRT23 Install rail traction bonds
UETTDRRT27 Install overhead traction components and equipment
UETTDRRT28 Maintain overhead traction components and equipment
UETTDRRT30 Perform to a given schedule rail traction switching operations
Distribution Cable Jointing Pathway Group
UETTDRCJ21 Lay ESI electrical cables
UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables
UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS43 Perform low voltage field switching operation to a given schedule

UETTDRIS55 Install and maintain low voltage underground services

Electrical Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRSB39 Perform power system substation switching operation to a given schedule

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to install mobile generation set for synchronised HV genset	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with

© Commonwealth of Australia, 2025 Powering Skills Organisation

others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures

1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures

1.4 Relevant requirements and established procedures for the work are to all personnel and identified for all worksites

1.5 WHS/OHS policies and procedures related to the work are identified to ensure safe systems of work are followed

1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order

1.8 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work

1.10 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures

1.11 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

1.12 Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

2	**Carry out the installation of mobile generation set for synchronised HV genset**	**2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
		2.2 First aid and other related work procedures are performed according to requirements and/or established procedures
		2.3 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
		2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
		2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
		2.6 Installation of mobile generation set for synchronised HV genset is carried out in accordance with the work schedule and requirements and/or established procedures
		2.7 Essential knowledge and associated skills are applied in the safe installation of mobile generation set for synchronised HV genset to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
		2.8 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
		2.9 Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3	**Complete the installation of mobile generation set for synchronised HV genset**	**3.1** Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures

3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures

3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

3.5 Relevant work permits are signed off and synchronised HV genset apparatus is returned to service and client/customer advised in accordance with requirements

3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS64A Install mobile generation set for synchronised HV Genset.

Assessment Requirements for UETTDRIS64 Install mobile generation set for synchronised HV Genset

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all of the following:
  - autonomous installation of a mobile generator set for synchronised high voltage (HV) genset incorporating operation, connection and disconnection of the generator
  - evaluating load characteristics associated with networking of generators
  - synchronisation of the generator control systems onto and off the network without interruption to supply
  - estimation of HV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single HV job
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of a HV mobile generation encompassing:
  - safety precautions specific to installing mobile generators - safe working policies, practices and procedures; techniques in connecting, operating and disconnecting generators; types of tools and equipment; and safe use of tools and equipment
  - techniques in the installation of generator sets - the connection of generator onto and off the network without interruption to supply and estimation of HV load
  - assessing the appropriateness of the generator
- HV generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working

© Commonwealth of Australia, 2025 Powering Skills Organisation

policies, practices and procedures; and synchronising procedures
    - techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of HV load and assessing the appropriateness of the generator
    - operating a generator in parallel to a single HV job - overhead systems, indoor systems, customer installations and kiosk substations
    - HV generator set and control system to HV distribution assets
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements the procedures used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses, developing techniques, involvement of external emergency services, and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
    - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances, determining system requirements, aircrew familiarisation with network operations and equipment, and requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so;

© Commonwealth of Australia, 2025 Powering Skills Organisation

where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS65 Contribute to coordinated HV live working

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit specifies the outcomes required of live line working team members to work effectively as a cohesive team to ensure safety of all team members and the community when undertaking high voltage (HV) live line work. It includes the pre-work briefing on tasks to be undertaken, roles of individual team members, identification of possible hazards, risk management analysis and implementation of palliative measures to control or mitigate the risk to acceptable levels. It also encompasses the monitoring of work performance to ensure safety, and the post-work debriefing to identify areas for continuous improvement.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1 Plan to contribute to a coordinated HV live line work team

1.1 Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination by the team

1.2 Relevant requirements and established procedures for the work are communicated to all team members and identified for all worksites

1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the working on HV live lines are obtained and confirmed for the purposes of the work to be performed and discussed among all team members

1.4 Work is prioritised and sequenced following consultation with all team members to ensure safe systems of work are followed for completion within acceptable timeframes and in accordance with established procedures

1.5 WHS/OHS and live line work hazards are identified, risk assessments conducted and control measures identified, prioritised, implemented and documented against the work schedule, including the checking of site weather and environmental conditions, to ensure that live line work can be undertaken safely

1.6 Relevant live line work permits or authority for live line work are secured to coordinate the performance of work by the team according to requirements and/or established procedures

1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order

1.8 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry

© Commonwealth of Australia, 2025 Powering Skills Organisation

		out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	All team members to be engaged in the work discuss and agree, without ambiguity, on their respective roles, and possible role changes during the course of work
	1.12	Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
2 Carry out the contribution to coordinated HV live line work	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures, in particular, established live line working procedures are strictly adhered to
	2.2	First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices, where applicable, are safely exercised according to requirements
	2.4	Live line permits and other provisions for live line work are in place, as required, in accordance with requirements and established procedures
	2.5	Essential knowledge and associated skills are applied in the safe contribution to coordinated HV live line work to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Work is undertaken on HV live line in a team environment work according to the work schedule and requirements/established procedures
	2.7	Work is shared among all team members in a coordinated manner as discussed and agreed during pre-work briefing
	2.8	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks discussed with

© Commonwealth of Australia, 2025 Powering Skills Organisation

		team members and reported to immediate authorised personnel for directions according to established procedures
	2.9	Unplanned events in the maintenance of HV live line work are discussed among all team members and appropriate actions undertaken accordingly
	2.10	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.11	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete the contribution to coordinated HV live line work	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off and HV live line work is returned to service and client/customer advised in accordance with requirements
	3.6	Works completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified
	3.7	Aspects of work schedule are discussed/identified via feedback with fellow team members and information on improvement forwarded to appropriate personnel according to established procedures

Assessment Requirements for UETTDRIS65 Contribute to coordinated HV live working

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- facilitating communication/consultation processes in a high voltage (HV) live line work team environment
- contributing to pre-work briefings and securing of live line permits or authority to work in a HV live line work team environment
- implementing WHS/OHS policies and procedures in a HV live line work team environment
- contributing to the work schedule in a HV live line work team environment
- contributing to feedback consultation on improving safe working in a HV live line work team environment
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical safe working practices encompassing:
  - risk management and assessment of risk - principle and purpose of risk management and processes for conducting a risk assessment
  - hazards associated with low voltage (LV), extra-low voltage (ELV) and high currents - arrangement of power distribution and circuits in an electrical installation, parts of an electrical system and equipment that operate at LV and ELV, and parts of an electrical system and equipment where high currents are likely
  - risks and control measures associated with HV - parts of an electrical system and equipment that operate at HV, the terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of HV, and control measures used for dealing with the hazards of HV
  - optical fibre safety - coherent optical sources and joining procedures, and laser safety

© Commonwealth of Australia, 2025 Powering Skills Organisation

class 3a devices or their replacement
    - risks and control measures associated with LV - risks associated with modifying electrical installations; fault finding, maintenance and repair; control measures before, during and after working on electrical installations, circuits or equipment; isolation and tagging-off procedures; risks and restrictions in live work, and control measures for live work
    - risks and control measures associated with harmful dusts and airborne contaminants - thermal insulation, fibrous cement materials, and asbestos and other fibre reinforced switchboard materials
    - safety, selection, use, maintenance and care of test equipment - safety characteristics of electrical testing devices, safe use of electrical testing device, and checks and storage methods for maintaining the safety of testing devices
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, the procedure used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses, developing techniques, involvement of external emergency services, and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
    - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- principles of statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
    - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing

© Commonwealth of Australia, 2025 Powering Skills Organisation

rules

- working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker encompassing:
  - standards, guidelines/codes of practice, state/territory/local government legislation, supply authority regulations and/or enterprise requirements, including relevant certification and licensing applicable to working safely up to the defined "safe working zone" near energised electrical apparatus, including electrical powerlines, for non-electrical worker
  - definitions of terminologies - ‘safe working zone’ ‘risk assessment’, ‘safe approach distances zones’, ‘safe working distances’.’ work permits’, access authorisation permits’, ‘technical standards’ ‘isolation procedures’ and 'compliance requirements’
  - WHS/OHS policies and procedures for working safely - emergency response and first aid procedures, such as CPR; roles and responsibilities of employers, employees and other parties under WHS/OHS legislation; personal protective equipment (PPE); identifying hazards; assessing and controlling WHS/OHS risks; first aid procedures; duties of a safety observer; working at heights/confined spaces; permit to work systems and isolation procedures
  - safe application of different types of tools and equipment
  - operation of mobile plant and machinery, such as elevated work platform (EWP) near live electrical apparatus
  - electricity supply infrastructure assets and voltages
  - techniques and precautions in undertaking different work functions and working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker - work functions, such as vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing;

© Commonwealth of Australia, 2025 Powering Skills Organisation

and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific specialised tools encompassing:
    - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools - voltage detectors, polarity testers and phase rotation
    - characteristics, capabilities and application of specialised tools for a particular job
    - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
    - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
    - techniques in pre-use inspection on the serviceability of specialised tools
    - techniques in the selection, use, maintenance, care and storage of specialised tools
    - identifying WHS/OHS hazards, assessing and controlling risks associated with their use
    - techniques for the safe use of specialised power tools
- enterprise-specific HV live line teamwork encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV live lines
    - safety precautions working on energised live lines when working in teams - live line minimum approach distances for person and plant; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE; live line access authority/permit system; disabling auto-reclosing function; ensuring functioning of fault current protective devices and checking integrity of insulation prior to work commencement
    - types and functions of specialised live line working equipment and tools and inspection techniques prior to use
    - safe working policies, procedures and practices when using and operating specialised equipment and tools
    - methods of using specialised equipment and tools
    - use of safety observers
    - emergency response and rescue, including first aid
    - relationship and responsibilities of each team member - roles of individuals in the team, contribution to joint outcome, goals/plans and objectives of the team
    - work team communication - techniques in effective communication, techniques in effective teamwork and dangers of ineffective teamwork.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS66 Manage an electricity power system WHS/OHS management system

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

The unit covers establishing, maintaining and managing systematic approaches to managing work health and safety (WHS)/occupational health and safety (OHS)in the electricity supply industry. It requires application in a management context in terms of responsibility to ensure that the workplace is, as far as practicable, safe and without risk to employees, clients and other present visitors.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to manage an ESI	**1.1** Purpose of the WHS/OHS management system is

© Commonwealth of Australia, 2025 Powering Skills Organisation

WHS/OHS management system		established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.2	Legislative requirements and established procedures on policies and specifications for the WHS/OHS management system are obtained or established with appropriate personnel
	1.3	Procedures and processes for identifying hazards, assessing and controlling risks, as well as dealing with hazardous events are established
	1.4	Work roles and tasks are allocated according to requirements and individuals' competencies
	1.5	Work is prioritised and sequenced for the most efficient outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
	1.6	Appropriate participative processes with employees and their representatives are established and maintained in accordance with relevant industry standards consistent with enterprise procedures
	1.7	Issues raised through participation and consultation are dealt with and resolved promptly and effectively in accordance with procedures for issues resolution
	1.8	Information is provided to employees about the outcome of participation and consultation in a manner accessible to employees
2 Manage an ESI WHS/OHS management system	**2.1**	WHS/OHS management systems decisions are made on the basis of safety and effective outcomes according to requirements and established procedures
	2.2	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.3	Work teams are arranged to ensure planned goals are met according to established procedures
	2.4	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.5	Quality of work is monitored against personal performance agreement and established organisational and professional standards
	2.6	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
	2.7	Workplace procedures for hazard identification, assessment and control of risks, and dealing with hazardous events are developed
	2.8	Manage and maintain WHS/OHS procedures and processes for dealing with hazardous events are managed and maintained according to requirements and established procedures
	2.9	Identification of all hazards at the planning, design and evaluation stages of any changes in the workplace are addressed to ensure that new hazards are not created by the proposed changes
	2.10	Procedures for selection and implementation of risk control measures are developed and maintained in accordance with the hierarchy of control
	2.11	Inadequacies in existing control measures are identified in accordance with the hierarchy of control and provide promptly resources enabling implementation of new measures
3 Complete the management of an ESI WHS/OHS management system	**3.1**	Final inspections of the WHS/OHS management systems are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and completion documents are finalised
	3.3	Reports and completion documents are submitted to relevant personnel for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of the WHS/OHS management systems documents are issued and records are updated in accordance with established procedures
	3.5	WHS/OHS training needs are identified and a WHS/OHS induction and training program developed to fulfil employee's WHS/OHS training needs as a part of

© Commonwealth of Australia, 2025 Powering Skills Organisation

the enterprise general training program

3.6 Training management system(s) are maintained so that individual employee's WHS/OHS training needs are easily identified, training attendance monitored and non-attendance followed up

3.7 Monitoring systems for keeping WHS/OHS records to meet regulatory requirements are maintained according to WHS/OHS legislative arrangements, including identification of patterns of occupational injury and disease within area of managerial responsibility

3.8 WHS/OHS system, including policies, procedures and programs, is assessed according to organisational aims with respect to WHS/OHS

3.9 Recommendations and improvements to the WHS/OHS system are developed, documented and implemented to ensure effectiveness according to established procedures

3.10 Compliance with WHS/OHS legislative requirements and established procedures is assessed to ensure that legal WHS/OHS standards are maintained as a minimum

3.11 Appropriate personnel are notified on the outcomes of the evaluation(s) and recommendations and completion documents are finalised/commissioned according to established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS66A Manage an electricity power system OHS

Assessment Requirements for UETTDRIS66 Manage an electricity power system WHS/OHS management system

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing WHS/OHS policies and procedures
- implementing WHS/OHS policies and procedures
- maintaining WHS/OHS policies and procedures
- reporting on the principles and practices of the management of WHS/OHS, including hierarchy of control, risk management and the impact of the characteristics and composition of the workforce
- managing a system approach to WHS/OHS
- managing organisational procedures for maintaining WHS/OHS records
- developing and implementing organisational procedures for identifying hazards and assessing risks
- developing and implementing organisational procedures for controlling risks
- developing and implementing organisational procedures for dealing with hazardous events
- analysing and managing risk assessment and risk control in accordance with the hierarchy of control in the workplace
- designing and implementing appropriate WHS/OHS management systems
- investigating WHS/OHS training requirements, incidents and accidents with recommendations on action plan
- providing and making readily available relevant information to the workgroup about WHS/OHS and the organisation's WHS/OHS policies, procedures and programs on an ongoing basis
- developing and conducting two (2) information/training sessions on current WHS/OHS issues for the workforce
- dealing with unplanned events on at least one occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working practices and procedures for the installation of overhead distribution conductors encompassing:
  - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWP)
  - requirements of persons prior to making bare-hand contact with dead low voltage (LV) mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and high voltage (HV) apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedures to attach an on-site earthing device to de-energised LV and HV overhead circuit
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel; and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements, and the practical procedure of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires, general fire prevention methods, and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses and developing techniques; involvement of external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances, determining system requirements, aircrew familiarisation with network operations and equipment, and requirements for effective communications operations for aerial work
- implementation and monitoring requirements for powerline safety encompassing:
  - identification of relevant legislation, codes and government guidelines for the

© Commonwealth of Australia, 2025 Powering Skills Organisation

implementation and monitoring of WHS/OHS in the workplace - Commonwealth/state/territory legislation relevant to the workplace and the meaning of general duty of care under WHS/OHS legislation and common law
    - workplace WHS/OHS enterprise plan - responsibilities of each member of the work team, and review process for changing/improving WHS/OHS safety plan/standing instructions for the systematic management of WHS/OHS in the workplace
    - relationship between the WHS/OHS committee and employees - methods used to collate and distribute/disseminate WHS/OHS information, staff development activities and legislation requirements with regards to WHS/OHS training, methods of addressing barriers such as literacy and cultural differences, and provisions relating to WHS/OHS issue resolution
    - hazards associated with powerline industry - identification of hazards in the workplace, processes used and contributing factors to a hazardous situation, assessment of risks and control of WHS/OHS risks (risk management), the hierarchy of control and monitoring of risk control measures
    - risk assessment and its management in powerline industry - principles and purposes of risk management; processes for conducting risk assessment, including, risk analysis and risk evaluation activities for selecting and implementing appropriate options for eliminating or minimising risk
    - maintenance strategies for WHS/OHS programs - developing processes for promoting, maintaining and improving WHS/OHS in the workplace; and identifying techniques for the evaluating and reviewing WHS/OHS education and training programs and elements of an effective WHS/OHS management system; and WHS/OHS consultation and accident/incident investigations
- enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when deal with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; emergency response, rescue, evacuation and first aid procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
- WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, training as part of broader programs, such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS), registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS67 Solve problems in energy supply network equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to solve problems in energy supply network equipment in the electricity supply industry (ESI).

It includes determining correct operation of energy supply network electrical equipment and providing solutions. It also includes working safely, reading circuit and reticulation diagrams, applying problem solving processes from measurements and completing the necessary documentation.

The application of the skills and knowledge described in this unit may require a licence to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to solve problems in energy supply network equipment	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 Extent of work to be undertaken is determined from reports and/or discussions with relevant person/s
	1.3 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.4 Materials required for work are determined in accordance with workplace procedures
	1.5 Tools, equipment and testing devices required to take measurements are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Solve problems in energy supply network equipment	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in accordance with WHS/OHS requirements and, when necessary, conducted in accordance with workplace safety procedures
	2.3 Circuits/machines/plant are isolated, where necessary, in accordance with WHS/OHS requirements and workplace procedures
	2.4 Safety hazards resulting from reports and risk control measures devised and implemented in consultation with appropriate personnel
	2.5 Problem solving of energy network equipment is approached methodically using measured and calculated

© Commonwealth of Australia, 2025 Powering Skills Organisation

		values of circuit/apparatus parameters
	2.6	Circuit/apparatus components are dismantled, where necessary, and parts stored to protect them against loss or damage
	2.7	Circuits/components are rechecked and their operational status is confirmed
	2.8	Materials/replacement parts required to solve problems are sourced and obtained in accordance with workplace procedures
	2.9	Effectiveness of the repair is tested in accordance with workplace procedures
	2.10	Apparatus is reassembled, tested and prepared for return to service
	2.11	Unplanned events are dealt with safely and with the approval of relevant personnel
	2.12	Problem-solving activities are completed without damage to apparatus, circuits, the surrounding environment or services applying sustainable energy practices
3 Complete and report on problem solving in energy supply network equipment	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares
	3.3	Maintenance work activities are documented in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS67A Solve problems in energy supply network equipment.

Assessment Requirements for UETTDRIS67 Solve problems in energy supply network equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- solving problems in energy supply network equipment, including:
  - determining the operating parameters of existing energy supply equipment
  - envisaging the likely extent of work from reports and discussions with appropriate personnel
  - using methodical problem-solving techniques
  - solving problems efficiently
  - altering an existing energy supply equipment to comply with specified operating parameters
  - developing energy supply equipment to comply with a specified function and operating parameters
  - determining conditions causing an existing energy supply equipment to be unsafe
  - completing documentation correctly
- solving problems in energy supply network equipment on at least one (1) of the following energy supply network systems:
  - distribution overhead system
  - distribution underground system
  - transmission overhead system
  - transmission underground system
- using at least three (3) of the following distribution/transmission equipment:
  - voltage regulation equipment
  - on load tap changers
  - energy metering
  - demand meters
  - load control

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - current transformers
  - potential transformers
- dealing with unplanned events on at least one (1) occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- generation, including:
  - primary energy sources
  - power stations
  - power station output
  - acts and legislation relating to generation
  - renewable energy sources and techniques
- transmission, including:
  - system requirements
  - principal components of a power system
  - voltage levels
  - grid systems
  - acts/legislation relating to transmission
  - future trends
- distribution, including:
  - high voltage (HV) distribution systems
  - medium/low voltage (LV) distribution systems
  - radial feeders
  - parallel feeders
  - ring main feeders
  - acts/legislation relating to distribution
- substations, including:
  - purpose
  - location
  - layout
- overhead and underground systems, including:
  - relative merits
  - applications

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - planning
  - installation
- power distribution system electrical characteristics, including:
  - transmission and distribution systems
  - inductance, capacitance and resistance
- voltage problems in a power distribution system, including:
  - LV
  - unbalanced voltages
  - voltage rises
- voltage regulation, including:
  - autotransformers with on-load tap changer (OLTC)
  - transformers with OLTC
  - static capacitors
  - load control
- control of OLTC, including:
  - regulation relays
  - control circuits
  - line drop compensation
- power distribution system faults, including:
  - type/classification of fault
  - typical causes/effects of faults
  - three phase symmetrical fault levels
  - fault level limitation
- voltage surges in a power distribution system, including:
  - lightning surges
  - switching surges
  - typical surge levels
  - surge impedance, typical values
  - significance of the system surge impedance
- metering and metered quantities, including:
  - purpose
  - energy
  - maximum demand
  - accuracy classes for metering systems
- energy and demand meters, including:
  - construction
  - operation
  - adjustments
  - testing
- metering circuits, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - direct metering
  - instrument transformer metering
- electronic metering systems and recording meters, including:
  - types
  - applications
  - connections
- load control, including:
  - purpose
  - methods.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers determining correct operation of energy supply network protection equipment and systems and providing solutions as they apply to energy supply network protection. It encompasses working safely, reading circuit and reticulation diagrams, applying logical problem-solving processes from measurements and completing the necessary documentation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to solve problems in energy supply network protection equipment and systems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 The likely extent of work to be undertaken is envisaged from reports and/or discussions with appropriate personnel
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures
	1.6 Tools, equipment and testing devices needed to take measurements are obtained in accordance with established procedures and checked for correct operation and safety
2 Solve problems in energy supply network protection equipment and systems	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS requirements and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4	Safety hazards resulting from the reports identified and risk control measures devised and implemented in consultation with appropriate personnel
	2.5	Problem solving is approached methodically drawing on knowledge of energy supply network protection equipment and systems using measured and calculated values of circuit/apparatus parameters
	2.6	Circuit/apparatus/system components are dismantled, where necessary, and parts stored to protect them against loss or damage
	2.7	Circuits/components/systems are rechecked and their operational status is confirmed
	2.8	Materials/replacement parts required to solve problems are sourced and obtained in accordance with established procedures
	2.9	Effectiveness of the repair is tested in accordance with established procedures
	2.10	Apparatus is reassembled, finally tested and prepared for return to service
	2.11	Unexpected situations are dealt with safely and with the approval of authorised personnel
	2.12	Problem-solving activities are carried out without damage to apparatus, circuits the surrounding environment or services using sustainable energy practices
3 Complete and report problem solving in energy supply network protection equipment and systems	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares
	3.3	Maintenance work activities are documented in accordance with established procedures

Assessment Requirements for UETTDRIS68 Solve problems in energy supply network protection equipment and systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- solving problems in energy supply network equipment including all of the following:
  - determining the operating parameters of existing energy supply protection equipment and systems
  - envisaging the likely extent of work from reports and discussions with appropriate personnel
  - using methodical problem-solving techniques
  - solving problems efficiently
  - altering an existing energy supply protection equipment to comply with specified operating parameters
  - developing energy supply protection equipment to comply with a specified function and operating parameters
  - determining conditions causing an existing energy supply protection equipment to be unsafe
  - completing documentation correctly
- solving problems in energy supply network systems including at least one (1) of the following:
  - distribution overhead system
  - distribution underground system
  - transmission overhead system
  - transmission underground system
- solving problems in energy supply protection equipment and systems including at least two (2) of the following:
  - over-current protection
  - earth fault protection
  - differential protection

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - oil and gas devices
  - busbar protection
  - surge protection
  - conventional relays
  - electronic relays
  - reclosers/sectionalisers
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protection fundamentals encompassing:
  - purpose of protection
  - features of a protection scheme
- instrument transformers for protection encompassing:
  - operating principles
  - applications of current transformers
  - applications of voltage transformers
- feeder protection encompassing:
  - fuse protection
  - overcurrent and earth fault
  - sensitive earth fault
  - unit schemes
  - distance protection
  - trip/close sequences for feeders
  - recloser/sectionaliser systems
- transformer protection encompassing:
  - overheating protection
  - overcurrent protection
  - restricted earth fault protection
  - differential protection
  - oil and gas devices
- busbar protection encompassing:
  - types of fault
  - requirements of busbar protection
  - system protection
  - frame-earth protection
- surge protection encompassing:
  - voltage surges

© Commonwealth of Australia, 2025 Powering Skills Organisation

- surge diverters
- arcing horns.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers diagnosing and rectifying faults in apparatus in energy supply and distribution systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of energy supply apparatus to logical fault-finding processes, implementing fault rectification, safety and functional testing, and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

Competency Field

Industry Specific Cross Discipline

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to diagnose and rectify faults	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 Established WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
	1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the worksite
	1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety
2 Diagnose and rectify faults	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS requirements and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4	Logical diagnostic methods are applied to diagnose energy supply apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements
	2.5	Suspected fault scenarios are tested as being the source of system problems
	2.6	Causes of faults are identified and appropriately competent person/s engaged to rectify the fault where it is outside the scope of the control system
	2.7	Faults in apparatus components are rectified to raise energy supply apparatus to its operation standard
	2.8	Apparatus is tested to verify that it operates as intended and to specified requirements
	2.9	Decisions for dealing with unexpected situations are made from discussions with appropriate personnel and job specifications and requirements
	2.10	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
	2.11	Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
3 Complete and report fault diagnosis and rectification activities	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Worksite is made safe in accordance with established safety procedures
	3.3	Rectification of faults is documented in accordance with established procedures
	3.4	Appropriate person/s is notified in accordance with established procedures that the system faults have been rectified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS69A Diagnose and rectify faults in energy supply apparatus.

Assessment Requirements for UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in energy supply apparatus, including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- control of voltage encompassing:
  - conditions leading to voltage collapse and system disintegration
  - effects on the system of high voltage (HV)/low voltage (LV)
  - voltage control devices - voltage regulators applied to generators and synchronous phase modifiers; electromagnetic voltage regulators; series and parallel capacitors; on-load tap changers (OLTC) transformers and static VAR compensations (SVCs), such as saturated reactor (SR) compensations, thyristor controlled reactor (TCR) compensators, combined

© Commonwealth of Australia, 2025 Powering Skills Organisation

TCR/TSCs and the production of wave-form distorting harmonics and control devices

- the importance of the location in the system of voltage control devices
- the use of graphical methods to calculate the size of VAR regulating plant
- control of power encompassing:
  - base load and spinning reserve
  - regulating machines
  - rapid start plant
  - phase shifting transformers and various forms of load shedding
  - principles and practices of automated control of individual machines
  - stations and transmission/tie-line elements
  - synchronising power
- the relationship between power and frequency encompassing:
  - limiting values
  - machine stabilising - steam by-pass, rapid valving, slip stabilisers and over speed limiting
  - use of single pole generator CB's
  - use of machine AVR's as angular stabilisers
  - damped and un-damped system oscillations
  - relationship between fault clearance times and system stability
  - calculation of critical clearance angles based on equal area criteria
- types of communication systems encompassing:
  - telephone, power line carrier, dedicated cable, microwave links and fibre optics
  - quantities and signals to be communicated
  - advantages and disadvantages of the various systems
  - equipment requirements
- transient over-voltages in power systems encompassing:
  - switching and lightning over-voltages and their effect on different plant items
  - transient over-voltage control and reduction using surge diverters, shield wires and CB control
  - insulation systems, insulation coordination, insulation grading in plant items, bushings and capacitor bushings
- factors leading to the generation of corona encompassing:
  - consequences of corona
  - reduction of corona
  - conductor bundling, grading rings and conductor surface treatment
- power system protection encompassing:
  - location of CT's in major plant items
  - earthing principles and devices
  - fault current control/limitation using neutral earthing compensators (NEC's), neutral point earth impedances, high conductivity shield wires and parallel feed interlocking
  - application of different types of protection.

Assessment Requirements for UETTDRIS70 Diagnose and rectify faults in electrical energy distribution systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in electrical energy distribution systems including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- distribution system overview encompassing:
  - regulatory conditions of supply and utilisation
  - compliance with Australian Standards
  - reticulation system, including overhead/underground, urban/rural, high voltage (HV) customers and high-rise building systems
  - methods used to ensure continuity of supply

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types of substations in current use
  - systems of distribution used, (primary and secondary)
  - voltage levels, power factor, wave-form distortion and transient loading
  - supply quality
  - load curve profiles (residential/industrial/commercial)
  - types of feeders
  - distribution systems (urban, rural single-phase systems, single wire earth return (SWER), spur, parallel and ring systems)
- overhead lines and installation encompassing:
  - industry and safety regulations
  - overhead conductors
  - conductor material
  - current rating factors (heating, voltage drops and power losses)
  - aerial bundled cables (HV and low voltage (LV))
  - covered conductors - characteristics of lines and cables, including the calculation of R, X and B for different arrangements of conductor; typical values for actual lines; transposition; models based on line length; voltage and line regulation
  - overhead line poles
  - types (wood, concrete and steel)
  - installation of poles (tooling, rake, life, labelling and sinking)
  - maintenance of poles (above and below ground)
  - pole strength and loads
  - crossarms
  - types and standard sizes
  - insulators
  - insulation types
  - types (pin, suspension or disc and shackle)
  - creepage and necessary clearances
  - arcing horns and insulator mounting
  - structure types
  - mechanical properties (working strength, maximum tension and limiting size)
  - interpretation of stringing charts
  - determination of sag (by calculations or measurement and/or tension measurement)
  - sight and wave sagging, and sag correction
  - stays
  - components and anchorage
- use of design schedules encompassing:
  - sample design problems - common design practice line, voltage, structure types used, line deviation, span sag, cross-arms, insulators and stays, wind loading and line deviation loading basic surveying

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - measurement of levels, deviation angle and compass bearings
  - perform survey of short distribution line extension of produce field notes
- underground cables encompassing:
  - cable types, ratings, core material, design considerations, cable dielectrics, insulating materials and abbreviations, electric stress, cable voltage drop and voltage drop calculations, cable termination, joints and installation
  - induction and eddy currents
  - cable testing and cable fault location
  - cable drawing
- voltage regulations of feeders and associated equipment encompassing:
  - terminology used - distribution system, service line, customer's terminals, customer voltage, utilisation voltage, base voltage, voltage variation and bandwidth
  - voltage limits and effects of voltage variation
  - causes of variation - inductance, capacitance and reactance of distribution lines, and transformers
  - methods of voltage control - off-load, on-load tap changers, voltage regulating relays, line drop compensation and different types of voltage regulators
  - voltage profiles - principles, effect on voltage profiles, limits of voltage, voltage drops due to LV mains transformers, tap-settings feeder and service lines
  - determining voltage drops for components within the profile
- control of voltage - conditions leading to voltage collapse and system disintegration; effects on the system of HV/LV; and voltage control devices encompassing:
  - voltage regulators applied to generators and synchronous phase modifiers
  - electromagnetic voltage regulators
  - series and parallel capacitors
  - on-load tap changer (OLTC) transformers and static VAR compensations (SVCs)
- range of devices covered by SVCs encompassing:
  - saturated reactor (SR) compensations
  - thyristor controlled reactor (TCR) compensators
  - combined TCR/TSCs
  - production of wave-form distorting harmonics and control devices
- importance of the location in the system of voltage control devices
- types of communication systems encompassing:
  - telephone, power line carrier, dedicated cable, micro-wave links and fibre optics
  - quantities and signals to be communicated
  - advantages and disadvantages of the various systems
  - equipment requirements
- transient over-voltages in power systems encompassing:
  - switching and lightning over-voltages and their effect on different plant items
  - transient over-voltage control and reduction using surge diverters, shield wires and CB control

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - insulation systems, insulation coordination, insulation grading in plant items, bushings and capacitor bushings
- the principles of operation, voltage and current range, breaking capacity and field of use of circuit breakers - bulk oil, small oil volume, air break, vacuum and SF6 (double pressure and puffer types)
- the types of isolators in use, such as duo-roll, blade and scissor type
- circuit breaker auxiliary systems encompassing:
  - direct current (d.c.) systems, including battery types, charging and protection systems and earth fault detection systems
  - SF6 conditioning, storage and handling systems.

Assessment Requirements for UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in electrical energy supply transmission systems, including:
  - applying logical diagnostic methods
  - using fault scenarios to test the source of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- overview of the transmission system encompassing:
  - lines, buses, transformers and cables; line/bus layouts, including single and double switching, breaker and a half systems and high voltage (HV) crossing methods
- the principles involved in HV alternating current (a.c.) transmission encompassing:
  - tower types and configurations; choice of towers or poles (economic and environmental); insulator types and configuration; types of conductors, their configuration and standard nomenclature; typical line spacing and ground clearances; line ratings based on ambient

© Commonwealth of Australia, 2025 Powering Skills Organisation

temperature; conductor terminating and clamping equipment, including vibration damping principles and equipment

- principles involved in direct current (d.c.) transmission encompassing:
  - the economics, harmonic generation, VAR requirements and protection difficulties; types of connections and transformer requirements; advantages and disadvantages of d.c. transmission; typical overseas systems and likely (future) use in Australia
- the principles of operation, voltage and current range, breaking capacity and field of use of the following types of circuit breakers
  - bulk oil
  - small oil volume
  - air break
  - air blast
  - air puffer
  - vacuum and
  - SF6 (double pressure and puffer types)
- the types of isolators in use, such as duo-roll, blade and scissor type
- circuit breaker auxiliary systems encompassing:
  - high pressure air systems, and air storage and handling processes
  - d.c. systems, including battery types, charging and protection systems and earth fault detection systems
  - SF6 conditioning, storage and handling system
- the characteristics of lines and cables encompassing:
  - the calculation of R, X and B for different arrangements of conductor; typical values for actual lines; transposition; models based on line length; voltage and line regulation; the transmission of power (P) and VARs (Q)
- control of voltage - conditions leading to voltage collapse and system disintegration, effects on the system of high voltage (HV)/low voltage (LV), and voltage control devices including:
  - voltage regulators applied to generators and synchronous phase modifiers
  - electromagnetic voltage regulators
  - series and parallel capacitors
  - on-load tap changer (OLTC) transformers and static VAR compensations (SVCs)
- range of devices covered by SVCs, including:
  - saturated reactor (SR)compensations
  - thyristor controlled reactor (TCR) compensators
  - combined TCR/TSCs
  - production of wave-form distorting harmonics and control devices
- importance of the location in the system of voltage control devices
- use of graphical methods to calculate the size of VAR regulating plant
- types of communication systems including:
  - telephone, power line carrier, dedicated cable, micro-wave links and fibre optics; quantities and signals to be communicated; Advantages and disadvantages of the various

© Commonwealth of Australia, 2025 Powering Skills Organisation

systems and equipment requirements

- transient over-voltages in power systems, including:
  - switching and lightning over-voltages and their effect on different plant items; transient over-voltage control and reduction using surge diverters, shield wires and CB control; insulation systems, insulation coordination, insulation grading in plant items, and bushings and capacitor bushings
- factors leading to the generation of corona encompassing:
  - consequences of corona; reduction of corona, including conductor bundling, grading rings and conductor surface treatment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS72 Diagnose and rectify faults in distributed generation systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers diagnosing and rectifying faults in distributed generation systems. The unit encompasses applying safe working practices; interpreting diagrams and technical data; applying knowledge of energy supply and reticulation systems to logical fault-finding processes; implementing fault rectification, safety and functional testing; and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to diagnose and rectify faults	**1.1** work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 Established WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
	1.4 The extent of faults is determined from reports and other documentation and from discussions with appropriate personnel
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the worksite
	1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety
2 Diagnose and rectify faults	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.3	Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance WHS/OHS requirements and procedures
	2.4	Logical diagnostic methods are applied to diagnose distributed generation system faults employing measurements and estimations of system operating parameters referenced to system operational requirements
	2.5	Suspected fault scenarios are tested as being the source of system problems
	2.6	Causes of faults are identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the control system
	2.7	Faults in the system components are rectified to raise distributed generation system to its operation standard
	2.8	System is tested to verify that it operates as intended and to specified requirements
	2.9	Decisions for dealing with unexpected situations are made from discussions with appropriate personnel and job specifications and requirements
	2.10	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
	2.11	Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
3 Complete and report fault diagnosis and rectification activities	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Worksite is made safe in accordance with established safety procedures
	3.3	Rectification of faults is documented in accordance with established procedures
	3.4	Appropriate person/s is notified in accordance with established procedures that the system faults have been rectified

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS72A Diagnose and rectify faults in distributed generation systems.

Links

Assessment Requirements for UETTDRIS72 Diagnose and rectify faults in distributed generation systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in distributed generation systems including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS safety management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS

© Commonwealth of Australia, 2025 Powering Skills Organisation

management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management systems
  - analysis of relevant data and evaluation of WHS/OHS system effectiveness
  - assess resources to establish and maintain WHS/OHS management systems
- distributive generation systems encompassing:
  - concept and application
  - anti-islanding control and protection
  - system monitoring and load management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS73 Develop engineering solutions for energy supply power transformer problems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers developing engineering solutions to resolve problems with energy supply system protection. It encompasses working safely, applying extensive knowledge of energy supply power transformer operation and their application, gathering and analysing data, applying problem-solving techniques, and developing and documenting solutions and alternatives.

Typical transformer problems are those encountered in meeting performance requirements and compliance standards, revising a transformer operating parameters and dealing with transformer malfunctions

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Distribution Pathway Unit Group

UETTDRIS70 Diagnose and rectify faults in electrical energy distribution systems

Transmission Pathway Unit Group

UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems

Distributed Generation Pathway Unit Group

UETTDRIS72 Diagnose and rectify faults in distributed generation systems

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to develop engineering solution for energy supply power transformer problems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for a given work area are identified, obtained and understood
	1.2 Established WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 The extent of the transformer problem is determined from performance specifications and situation reports and in consultation with relevant personnel
	1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Effective strategies are formed to ensure solution development and implementation is carried out efficiently
2 Develop engineering solutions for energy supply power transformer problems	**2.1**	WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2	Knowledge of supply power transformer arrangements, operation, device characteristics and applications are applied to developing solutions to supply power transformer problems
	2.3	Parameters, specifications and performance requirements in relation to each transformer problem are obtained in accordance with established procedures
	2.4	Approaches to resolving supply power transformer problems are analysed to provide most effective solutions
	2.5	Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policies
	2.6	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3 Test, document and implement engineering solution for energy supply power transformer problems	**3.1**	Solutions to transformer problems are tested to determine their effectiveness and modified where necessary
	3.2	Adopted solutions are documented, including instruction for their implementation that incorporates risk control measures to be followed
	3.3	Appropriately competent and qualified person/s) required to implement solutions to supply power transformer problems is coordinated in accordance with regulatory requirements and enterprise policy
	3.4	Justification for solutions used to solve supply power transformer problems is documented for inclusion in work/project development records in accordance with professional standards

© Commonwealth of Australia, 2025 Powering Skills Organisation

Note: A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRIS73 Develop engineering solutions for energy supply power transformer problems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing engineering solutions for energy supply power transformer, including:
  - understanding the extent of the transformer problems
  - forming effective strategies for solution development and implementation
  - obtaining transformer parameters, specifications and performance requirements appropriate to each problem
  - testing and finding solutions to transformer problems
  - documenting instruction for implementation of solutions that incorporate risk control measure to be followed
  - documenting justification of solutions implemented in accordance with professional standards
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transformer construction and operating principles encompassing:
  - various types of lamination style and core construction used in single phase, three phase, double wound and auto transformers
  - different winding styles/types used in transformers

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - how input current is limited on no-load and how power is transferred from primary to secondary when a load is connected
  - using the transformation ratio to determine an unknown quantity of V, I and VA
  - significance of nameplate data items
  - operation of a transformer under load/no-load conditions
  - the reason any particular type of transformer is used in a specific application
  - safety features specified in regulatory standards with respect to transformers
  - safety features specified in regulatory standards with respect to isolating transformers
  - basic insulation resistance, continuity and winding identification tests
- transformer parameters encompassing:
  - the percentage impedance of a transformer by test
  - percentage impedance of a transformer by calculation
  - the equivalent circuit of a transformer
  - calculation of voltage regulation
  - losses that occur in a transformer
  - tests to determine losses
  - efficiency and state typical values
  - the all-day efficiency of a transformer
- cooling methods encompassing:
  - methods of natural and forced cooling
  - properties of transformer oil
  - tests performed on transformer oil
  - auxiliary equipment
  - the purpose and operation of the types of auxiliary equipment used on transformers - bushings, explosion vents, surge diverters, tap changers, conservator, breathers and desiccants, gas relays and temperature indicators
- instrument transformers encompassing:
  - construction of current transformers
  - uses and ratings of current transformers
  - construction of voltage transformers
  - uses and ratings of voltage transformers
  - safety techniques when using instrument transformers
- transformer connections encompassing:
  - vector group of a transformer from a connection diagram
  - connections of a three phase transformer to create a particular vector group
  - reasons for using the different vector groups
  - purpose of tertiary windings
  - consequences/effect of an incorrect connection
- parallel operation encompassing:
  - polarity markings for the windings of a transformer

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - conditions/restrictions for parallel operation of transformers
  - calculation of loading on transformers operating in parallel
  - connection of transformers in parallel to supply a common load
  - the consequences/effect of an incorrect connection
- harmonics in transformers encompassing:
  - how harmonics are generated in transformers
  - problems caused by harmonics in transformers
  - measurement of the harmonics in a transformer
  - methods/equipment used to overcome harmonics in transformers
- high voltage (HV) isolation encompassing:
  - the term HV
  - procedures for isolating HV apparatus
  - regulations with respect to access permits
  - clearances to be observed with respect to HV up to 33 kV
  - the term ‘step’ and ‘touch’ potential.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

Assessment Requirements for UETTDRIS74 Develop engineering solutions for energy supply system protection problems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing engineering solutions for energy supply system protection, including:
  - understanding the extent of the protection problem
  - forming effective strategies for solution development and implementation
  - obtaining protection parameters, specifications and performance requirements appropriate to each problem
  - testing and solutions to protection problems
  - documenting instructions for implementation of solutions that incorporate risk control measure to be followed
  - documenting justification of solutions implemented in accordance with professional standards
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protection scheme requirements encompassing:
  - requirements of a protection scheme - relationship to primary system design, purpose of protection, safety of persons, protection of plant, system instability, system break up, loss of customers, loss of revenue, protection zones, restricted schemes, unrestricted schemes,

© Commonwealth of Australia, 2025 Powering Skills Organisation

duplicate protection, local backup protection, remote backup protection, selectivity, discrimination, stability, sensitivity and reliability
    - components of a protection scheme - current transformers, potential transformers, summation current transformers, interposing transformers, multi-tapped transformers, all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor based relays, gas relays, thermal sensors, hardwired communication, powerline carriers systems, microwave systems, fibre optic systems, need for isolation and need for interfacing
    - protection applied to buses - overload, differential, earth leakage, structure leakage, combined schemes and protection overlap
    - protection applied to transformers - biased differential, gas, winding temperature and oil temperature
    - protection applied to single/radial lines - overcurrent, earth leakage, slow earth leakage, distance, auto reclose, sectionalising and over voltage
    - protection applied to interconnected lines - overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance and offset
- discrete protection systems encompassing:
    - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
    - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, CT summation, time graded discrimination and backup protection
    - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- interdependent protection systems encompassing:
    - overcurrent and earth leakage intertripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
    - pilot wire, phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
    - load shedding, voltage control, parallel operation and load rejection
    - CB failure protection
    - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking
- complex protection systems encompassing:
    - distance - characteristics, electromechanical, electronic, impedance, mho, offset mho, switched schemes, non-switched schemes, blocking schemes and bus zone
    - differential, transformer differential, bus overcurrent - principles, feeder protection, transformer protection, bias systems, harmonic restraint, CT connections, bus protection, low impedance schemes, high impedance schemes, bus overcurrent schemes, generator protection, CT connections, special considerations and digital systems
    - types of revenue metering
    - applications of supervisory control and data acquisition (SCADA)

© Commonwealth of Australia, 2025 Powering Skills Organisation

- complex protection systems for communications
- harmonic control
- point on wave switching.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS81 Install telecommunications infrastructure on electricity supply industry assets

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation of telecommunications infrastructure equipment within the communications corridor, such as cables, cable support and termination enclosures, which are relevant to the transmission of data. It includes the termination/connection of the telecommunication equipment in accordance with enterprise requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for the installation of telecommunications infrastructure equipment	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received
	1.2 Relevant requirements and established procedures for the work are communicated to relevant personnel and identified for the worksite
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the installation of telecommunications infrastructure equipment are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced following consultation with supervisor for completion within acceptable timeframes and in accordance with established procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored according to established procedures
	1.6 Relevant work permits are received to access and perform work according to requirements and/or established procedures
	1.7 Resources, including equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.8 Relevant personnel at worksite are confirmed with currency in first aid, pole top rescue and other related work procedures according to requirements
	1.9 Site is prepared in accordance with established procedures to minimise risk and damage to property, commerce and individuals
2 Carry out installation of telecommunications	**2.1** WHS/OHS and sustainable energy principles and practices to reduce waste are monitored and followed in

© Commonwealth of Australia, 2025 Powering Skills Organisation

infrastructure equipment		accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working at heights, and use of power tools/equipment, techniques and practices are safely followed
	2.3	Essential knowledge and associated skills are applied to the safe installation of telecommunications infrastructure equipment to ensure completion in an agreed timeframe, to quality standards with a minimum of waste according to requirements
	2.4	Telecommunications infrastructure equipment and associated hardware are positioned, secured and terminated/connected in accordance with requirements and established procedures
	2.5	Telecommunications infrastructure equipment and associated hardware are maintained in accordance with requirements and established procedures
	2.6	Unplanned events in the installation of telecommunications infrastructure equipment are resolved and dealt with
	2.7	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.8	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the installation of telecommunications infrastructure equipment	**3.1**	Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.6	Work completion records, reports, as installed/modified drawings and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS81A Install telecommunications infrastructure on electricity supply industry assets.

Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7

Assessment Requirements for UETTDRIS81 Install telecommunications infrastructure on electricity supply industry assets

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing telecommunications infrastructure on electricity supply industry assets using any two (2) of the following:
  - cable support
  - support brackets
  - junction boxes
  - enclosures
- using any two (2) of the following:
  - ribbon optical fibre cable
  - single mode optical fibre cable
  - multi-mode optical fibre cable
  - structured aerial cabling
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- telecommunication network drawings and plans
- WHS/OHS specific requirements for telecommunication networks encompassing:
  - aerial safety equipment
  - procedures to applying pole top rescue
- hazard identification associated with telecommunication networks equipment encompassing:
  - working at heights

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - checking exposed metal for potential differences
  - hazard and control measures in aerial cabling working environment
  - soundness of pole for aerial cabling
  - hazards associated with working with optical fibre
- aerial construction methods and regulations
- telecommunication network cables encompassing:
  - types of cables
  - cable colour coding for outdoor cable
  - colour coding of cables and termination modules and standard connectors used with twisted pair, optical fibre and coaxial cables
  - cable labelling devices
- cables protect and support requirements encompassing:
  - protection against mechanical damage
  - protection from adverse temperatures and corrosion protection from magnetic field that may affect the performance of the cable
  - cable support and protection devices, accessories and typical applications (metallic and non-metallic conduits, duct and trunking, cable ladder and tray, cable clips and ties and related accessories)
- installation techniques encompassing:
  - cable installation equipment
  - cable drawing and hauling techniques
- insulation removal and replacement
- conductor handling and cable terminations encompassing:
  - application of connecting devices for conductors and terminals
  - stress release on cables/conductors
  - methods of terminating cables (cables less than twenty pair, twenty pair cable and greater)
  - joining of aerial cables
- operating principles of fibre optic cable transmission encompassing:
  - types of optical fibre types available for telecommunications voice and data transmission
  - difference between multi-mode and single mode transmission
  - advantages of optical fibre cable compared to other cables
  - applications of optical fibre cables
  - requirements of optical fibre cables as specified in current standards
- installation techniques for optical fibre cables encompassing:
  - regulations, standards and codes applicable to optical fibre installation
  - bending radii and hauling requirements
  - cable support and securing mechanisms
  - safety precautions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS99 Test and verify distribution remote area installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to test and verify distribution remote area installations in the electricity supply industry (ESI).

It includes inspection and testing to verify whether a distribution remote area installation is safe and complies with all requirements. It also includes working safely, visual inspections, mandatory, optional and functional test procedures, identifying non-compliance defects and mandatory reporting requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE103A Solve problems in ELV single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEK101A Maintain safety and tidiness of remote area power supply systems

UEENEEK102A Work safely with remote area power supply systems

UEENEEK116A Maintain and repair remote area power generation facilities

UEENEEK120A Maintain operation of remote area power generation plant

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS32 Solve electrical problems in remote community network apparatus

UETTDRIS33 Solve electrical problems in remote community network systems

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to visually inspect, test and verify remote area distribution installation	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for accessing, testing and verification of overhead distribution installations are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		obtained and confirmed in working order
	1.8	Specialist test and measurement equipment for testing and verification of overhead distribution installations are obtained, confirmed in working order and calibrated in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out visual inspection, testing and verification of remote area distribution installation	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Testing and verification of overhead distribution installations are completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.4	Remote area distribution installations and associated hardware are visually inspected and confirmed as positioned, secured and terminated/connected in accordance with job requirements and workplace procedures
	2.5	Energised tests and/or measurements, as required to verify remote area distribution installations, are determined in accordance with job requirements and workplace procedures
	2.6	Remote area distribution installations are checked for suitability and compliance with workplace procedures and relevant electrical network supply industry standards
	2.7	Remote area distribution installation protection methods and devices are validated as meeting workplace procedures and relevant electrical distribution protection industry standards

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.8	Remote area distribution installation switchgear is validated as being appropriately rated and meeting functional requirements of workplace procedures and relevant electrical distribution network protection industry standards
	2.9	Remote area distribution installations earthing system and multiple earth neutral (MEN) system components are verified as correctly installed and conforming to workplace procedures and relevant electrical distribution network standards
	2.10	Mandatory testing of the distribution network system phasing, phase rotation, polarity, voltage and neutral conductors is undertaken and conforms to network construction standards
	2.11	Quality checks of work are undertaken in accordance with workplace procedures
3 Report inspection and test findings	**3.1**	WHS/OHS risk control work completion measures and procedures are followed
	3.2	Completed work is checked against work plan, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.3	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.4	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.5	Non-compliance defects are identified, corrected and/or reported in accordance with workplace procedures
	3.6	Recommendations for rectifying defects are made in accordance with workplace procedures
	3.7	Mandatory documentation is completed in accordance with workplace procedures
	3.8	Tools, equipment and surplus resources are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.9	Relevant work permits are signed off and electrical equipment (network infrastructure) returned to service in

© Commonwealth of Australia, 2025 Powering Skills Organisation

accordance with workplace procedures

3.10 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS99A Test and Verify Distribution Remote Area Installations.

Assessment Requirements for UETTDRIS99 Test and verify distribution remote area installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- inspecting overhead distribution poles and structures
- using testing/measuring devices, including at least three (3) of the following:
  - voltage detector*
  - clamp-on ammeter
  - multimeter
  - polarity tester
  - insulation resistance tester
  - phase sequence indicator*
  - earth resistance tester
  - recording meters
  - (*must do)
- completing distribution tests, including at least three (3) of the following:
  - distribution network voltage test*
  - neutral identification test*
  - earthing system resistance test
  - distribution system load current test
  - multiple earth neutral (MEN) system loop impedance test/continuity test
  - phase sequence test
  - (*must do)
- inspecting overhead installations from at least two (2) of the following:
  - elevated work platform (EWP)
  - ladder
  - portable platform

© Commonwealth of Australia, 2025 Powering Skills Organisation

- using specialised protection equipment, including at least two (2) of the following:
  - insulating mats
  - temporary bridging device
  - insulating gloves
  - ladder/pole shrouds
  - equipotential bonding
  - earthing and short circuiting
- inspecting protection/switchgear equipment, including any one of the following:
  - fuse switches
  - dropout fuses
  - disconnectors
  - links fuses
  - surge arrestors
- inspecting overhead conductors, including any one of the following:
  - open wire overhead conductor
  - aerial bundled cable (ABC)/covered conductor type (CCT*)
  - low voltage (LV) services
  - (*must do)
- inspecting hardware attached to poles and structures, including any one of the following:
  - underground/overhead transition points
  - transformers
  - reactors
  - regulators.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislated regulations, including:
  - legislation and regulations that require installations and equipment to be tested to ensure they are safe
  - the person/bodies responsible for the various aspects of ensuring distribution overhead installations are safe
  - results of tests that show a distribution remote area installation is safe for connection to the supply
  - results of periodic inspection and tests that show construction site wiring and equipment is safe to use
  - results of periodic inspection and tests that show the distribution remote area installations electrical equipment are safe to use
- testing installations, including:
  - distribution system phasing, phase rotation and polarity is correct and conforms to

© Commonwealth of Australia, 2025 Powering Skills Organisation

network construction standards
  - electrical distribution network voltage levels comply with network supply standards
  - potential present upon distribution network neutral conductors conform to network supply standards
  - insulation resistance is adequate
  - earthing system and MEN system components are verified as correctly installed
- documentation, including:
  - results of tests conducted on a distribution remote area installation in accordance with work requirements and ensuring the distribution installation is safe
  - documents of periodic inspection and testing of distribution remote area installation and equipment in accordance with requirements
  - non-compliances and defects reported in accordance with established procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for testing and verifying distribution remote area installations
- applicable documentation, including workplace procedures, network construction standards, network supply standards, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRF01 Apply ESI safety rules, codes of practice and procedures for work on or near electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the knowledge and application of electricity supply industry (ESI) safety rules and codes of practice for work on or near electrical apparatus. It includes the application of relevant state and territory safety rules, codes of practice and enterprise-based procedures and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Competency Field

Refresher Training

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1	**Prepare to apply ESI safety rules, codes of practice and procedures for work on or near electrical apparatus**	**1.1** Relevant safety rules, codes of practice and procedures are identified and obtained
		1.2 Hazards and risk control measures for specific work functions/areas are identified and obtained
		1.3 The requirement for access authority/work permits required for work are identified and obtained from appropriate personnel according to established procedures
		1.4 Safety systems and equipment for work are prepared and placed to minimise and control hazards in accordance with established procedures
2	**Carry out application of ESI safety rules, codes of practice and procedures for work on or near electrical apparatus**	**2.1** Workplace procedures and work instructions for controlling risk are followed
		2.2 Safety rules, codes of practice and workplace procedures for induction to a worksite, are followed
		2.3 Specific workplace systems and equipment isolation procedures are followed
		2.4 Restricted workplace areas are identified, including ingress and egress procedures
		2.5 Emergency procedures are identified, including assembly areas, and communication systems, including audible alarms and processes, according to established procedures
3	**Complete the application of ESI safety rules, codes of practice and procedures for work on or near electrical apparatus**	**3.1** Processes for completing work are applied, and access authority/work permits, where required, are completed in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

UETTDRRF02 Perform pole top rescue

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the performance of pole top rescue procedures as an emergency procedure required in the workplace. It specifies the mandatory requirements of rescue from a pole top and how they apply in the context of transmission, distribution and rail work functions. It encompasses responsibilities for rescue, health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

UETTDRRF03 Perform EWP rescue

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the performance of rescue procedures from an elevated work platform (EWP) in the workplace. It specifies the mandatory requirements of rescue from a raised EWP by a work party member on the ground and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- identifying operational instructions and confirming the function of emergency equipment to facilitate rescue from an incident on an elevated work platform (EWP)
- accessing controls and lowering the EWP in accordance with mobile equipment instructions/workplace procedures
- removing the victim from the EWP to the ground in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures for the EWP rescue of a victim encompassing:
  - inspection of rescue equipment
  - assessing hazards to rescuer, victim and others
  - isolation procedures, where appropriate
  - safe approach distances (SAD) appropriate to EWP rescue
  - involvement of external emergency services
  - emergency retrieval systems
- emergency procedures required to undertake EWP rescue of a victim encompassing:
  - placement of rescue equipment
  - controlling hazards to rescuer, victim and others
  - maintaining SAD appropriate to EWP rescue
  - practical steps in rescuing a person
  - removing victim to safe location/place of safety.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing EWP rescue
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRF04 Perform tower rescue

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the performance of rescue procedures from an electricity supply industry (ESI) tower in the workplace. It specifies the mandatory requirements of rescue from an ESI tower and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

HLTAID001 Provide cardiopulmonary resuscitation

Competency Field

UETTDRRF06 Perform rescue from a live LV panel

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the performance of rescue procedures from live low voltage (LV) apparatus, not including overhead lines and underground cables in the workplace. It specifies the mandatory requirements of rescue from a live LV panel and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

UETTDRRF08 Perform EWP controlled descent escape

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the performance of elevated work platform (EWP) controlled descent escape procedures in the workplace. It specifies the mandatory requirements for self-rescue from a raised EWP and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Assessment Requirements for UETTDRRF08 Perform EWP controlled descent escape

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- accessing, inspecting, securing and attaching emergency descent equipment to self in accordance with workplace procedures
- evacuating the elevated work platform (EWP) and descending to the ground in accordance with workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for EWP controlled descent escape encompassing:
  - inspection of rescue equipment
  - assessing hazards to self and others
  - involvement of external emergency services as appropriate
  - safe approach distances (SAD) appropriate to EWP controlled descent escape
- procedures required for EWP controlled descent escape encompassing:
  - fitting of rescue equipment
  - controlling hazards to self and others
  - maintaining SAD for an EWP controlled descent escape
  - removing self to safe location/place of safety

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

UETTDRRF09 Apply access procedures to work on or near electrical network infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the performance of the procedures to gain access for work on or near electrical network infrastructure in the context of transmission, distribution or rail work functions. It encompasses responsibilities for safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under sate and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Assessment Requirements for UETTDRRF09 Apply access procedures to work on or near electrical network infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- following workplace procedures for signing on to and off from an access authority/work permit.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working on or near electrical network infrastructure encompassing:
  - rules/codes of practice for work on or near electrical hazards and risk control measures for specific work areas and work activities
  - documentation, roles, responsibilities and procedures for a permit to work system
  - access authority/work permit document for a specific work activity according to established procedures
  - safe approach distances (SAD) and safety measures applicable to the work activity according to established procedures
  - sign on and sign off procedures for an access authority/work permit document
  - workplace procedures to cancel or suspend an access authority/work permit document
  - workplace communication procedures to confirm work is completed or suspended
  - workplace procedures for signing on to a specific role/function identified on an access authority/work permit
- skills required to work on or near electrical network infrastructure encompassing:
  - sign on and sign off an access authority/work permit document in accordance with workplace procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for applying access procedures to work on or near electrical network infrastructures
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRF10 Provide first aid in an ESI environment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the provision of first aid in an electricity supply industry (ESI) environment. It includes the recognition and provision of an initial response where first aid is required in emergency situations by providing essential first aid using basic life support measures according to established workplace first aid policies and procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

HLTAID001 Provide cardiopulmonary resuscitation

Competency Field

Refresher Training

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to provide first aid in an ESI environment	**1.1** Physical hazards and risks to personal and others' health and safety are identified according to established

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures
	1.2	The situation is assessed and actions required decided
	1.3	Assistance is sought from others, if required
2 Carry out the provision of first aid in an ESI environment	**2.1**	The victim's physical condition and visible vital signs are assessed
	2.2	First aid is provided to stabilise the victim's condition in accordance with recognised first aid procedures
	2.3	Available first aid equipment is used as appropriate
	2.4	Emergency services appropriate to the situation are notified
	2.5	Information about the victim's condition is conveyed accurately and clearly to emergency services personnel or health professionals
3 Complete provision of first aid in an ESI environment	**3.1**	Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRF10B Provide first aid in an ESI environment.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- checking site for danger to self, victim and others
- completing the management of electrical burns plus one other of the following:
    - bites or stings
    - shock
    - bleeding
    - electrical shock
- monitoring and managing victim
- raising alarm with emergency services.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of:

- provision of first aid in an emergency situation encompassing:
    - assessing hazards to rescuer, victim and others
    - involvement of external emergency services
    - the treatment of electrical burns, shock, bites, stings, bleeding and electric shock
- skills required to provide first aid in an emergency situation encompassing:
    - controlling hazards to rescuer, victim and others
    - use of available first aid equipment and resources
    - injury management using first aid principles.

UETTDRRF11 Testing of connections to low voltage electricity networks

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the performance of testing of connections to low voltage (LV) electricity networks according to AS 4741-2010 Testing of connections to electricity networks. It specifies the mandatory requirements for testing when connecting and/or reconnecting a customer's installation to an electricity supply network.

It encompasses the minimum principles and tests required to confirm that the LV supply connections are correct,

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Assessment Requirements for UETTDRRF11 Testing of connections to low voltage electricity networks

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- preparing and using of test equipment
- preparing and correctly using personal protective equipment (PPE)
- testing of single phase and multi-phase connections to network operator's procedures
- documenting test results to network operator's procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- low voltage (LV) testing of network connections encompassing:
  - selection and inspection of test equipment relevant for the testing procedures
  - acceptable neutral voltage criteria
  - polarity testing
  - neutral integrity testing
  - phase rotation testing
  - phasing confirmation
  - corrective actions to network operator's procedures
  - recording and reporting results to network operator's procedures
- skills required to test LV network connection encompassing:
  - preparation and use of test equipment
  - preparation and correct use of PPE
  - testing of single phase and multi-phase connections to network operator's procedures
  - documenting test results to network operator's procedures.

UETTDRRT21 Install traction overhead wiring systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install traction overhead wiring systems in the electricity supply industry (ESI).

It includes undertaking safe working practices on or about the running line/track, preparing for profiling including isolating systems and circuits for safe working in accordance with work plans. It also includes identifying and implementing road/rail management plans, procedures of issuing/accepting electrical permits, confirming equipment and associated hardware is correctly installed, prior to service and updating installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

© Commonwealth of Australia, 2025 Powering Skills Organisation

Competency Field

Rail Traction

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install overhead traction wiring systems	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation of overhead traction wiring systems are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained to access rail corridor and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with track protection officer and/or network control officer and workplace procedures
	1.9	Road/rail management plan is identified and implemented in accordance with workplace procedures
	1.10	Environmental constraints applicable to work are identified and control measures applied
2 Installation of overhead traction wiring systems	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Systems and circuits are checked and isolated and proved safe to work and in accordance with job requirements, work permits and workplace procedures
	2.4	Installation of overhead traction wiring systems is completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.5	Overhead traction wiring systems, including cables, fittings, traction conductors and associated equipment, are installed in accordance with work schedule, job requirements and workplace procedures
	2.6	Profiling is completed in accordance with workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation of overhead traction wiring systems	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in

© Commonwealth of Australia, 2025 Powering Skills Organisation

accordance with workplace procedures, as required

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures

3.4 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and the overhead traction wiring system is returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT21A Install traction overhead wiring systems.

Assessment Requirements for UETTDRRT21 Install traction overhead wiring systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using at least four (4) of the following types of system equipment and fittings:
  - support structure
  - span
  - section insulator
  - neutral section
  - midpoint anchor
  - support equipment
  - tension regulators
  - stay/guy wire
  - tramway support network
- using at least two (2) of the following types of traction conductors and cables:
  - catenary
  - dropper
  - contact/trolley*
  - feeder
  - earth conductor
  - drape/potential jumper
  - (*must do)
- operating from at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)
  - ladder
  - mobile platform
- obtaining relevant equipment, tools and personal protective equipment (PPE) required for installing traction overhead wiring systems, including using at least two (2) of the following:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - tensioning equipment*
  - specialised tools
  - ropes
  - geometry profiling equipment
  - (*must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical wiring system components - earth wires, feeder wire, return conductor, insulators, catenary wire, contact/trolley wire, droppers, tensioning equipment, current collectors, tram support networks, tram fittings and bridge/tunnel fittings
- electrical traction circuits, including:
  - types
  - applications
- relationship of the components, apparatus and the conductors to the operation of the traction system
- effective current collection and wire interface
- effective registration in the traction power system
- profiling overhead traction wire methods, including:
  - factors that impact on current collectors
  - methods to achieving smooth current collector transitions and interfaces
- dynamic and static forces, including:
  - types that effect traction systems
  - effects on effective registration
  - techniques to minimise the adverse effects
- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to the electrical traction
- electrical traction voltage and current circuit paths, including:
  - transmission distribution voltages
  - traction supply system and voltages
  - return and stay current paths, including electrolysis
- relationship of sectioning, section insulator and overlaps/air gaps in a traction power system
- traction power system components, including:
  - function of transformer/rectifiers
  - configuration and purpose of traction overhead wiring systems
  - function of isolators/switches
  - function of the circuit breaker
- reliability and security of traction supply.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing traction overhead wiring systems
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT22 Maintain traction overhead wiring systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain traction overhead wiring systems in the electricity supply industry (ESI).

It includes maintaining and repairing overhead traction wiring systems on or about the running line/track and preparing for stringing and profiling, including isolating systems and circuits for safe working. It also includes diagnosing faults, modifying and adjusting to appropriate standards, identifying and implementing road/rail management plans, issuing/accepting electrical permits, recommissioning tests to ensure integrity of traction system prior to returning to service and updating system data and/or maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Assessment Requirements for UETTDRRT22 Maintain traction overhead wiring systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using at least four (4) of the following types of system equipment and fittings:
  - support structure
  - span
  - section insulator
  - neutral section
  - midpoint anchor
  - support equipment
  - tension regulators
  - stay/guy wire
  - tramway support network
- using at least two (2) of the following types of traction conductors and cables:
  - catenary
  - dropper
  - contact/trolley*
  - feeder
  - earth conductor
  - drape/potential jumper
  - (* must do)
- operating form at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)
  - ladder
  - mobile platform
- obtaining equipment, tools and personal protective equipment (PPE) required for overhead rail traction wiring systems, including using at least two (2) of the following types of tools

© Commonwealth of Australia, 2025 Powering Skills Organisation

and equipment:
  - tensioning equipment*
  - specialised tools
  - ropes
  - geometry profiling equipment
  - (* must do)
- dealing with unplanned events on at least (1) one occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical wiring system components, including:
  - catenary wire, contact/trolley wire, droppers, feeder wire, return conductor, insulators, surge arresters, cantilevers, tensioning equipment, tram support network, tram fittings, bridge/tunnel fittings and current collectors
- electrical traction circuits, including:
  - types
  - applications
- relationship of the components, apparatus and conductors to the operation of the traction system
- effective current collection and wire interface
- effective registration in the traction power system
- dynamic and static forces, including:
  - types that effect traction systems
  - effects on effective registration
  - techniques to minimise adverse effects
- safe and effective use of repair and maintenance tools, equipment and machinery
- maintenance of overhead traction wiring systems, including:
  - types of equipment and components
  - types and function of tools and equipment
  - maintenance/repair procedures
  - inspection and recording procedures
- diagnosis and correction of simple faults in specific overhead wiring systems, including:
  - types and causes
  - determination of appropriate corrective actions
  - repair and replace procedures for overhead wiring systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for maintaining traction overhead wiring systems
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT23 Install rail traction bonds

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install rail traction bonds in the electricity supply industry (ESI).

It includes the installation of temporary and permanent traction bonds, bonding cables and using safe working practices on or about the running line/track. It also includes isolating systems and circuits for safe working in accordance with work plans, identifying and implementing traffic management plans, issuing/accepting electrical permits, checks to confirm bonds, bonding cables and associated hardware have been correctly installed and are in a safe condition to test prior to putting into service, undertaking pre-commissioning tests and updating installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS52 Install and maintain poles, structures and associated hardware

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

Competency Field

Rail Traction

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install traction bonds	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation of traction bonds are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained to access rail corridor, understood and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with track protection officer and/or network control officer and workplace procedures
	1.9 Traffic management plan is confirmed as being applied in accordance with workplace procedures
	1.10 Environmental constraints applicable to work are identified and control measures applied
2 Perform installation of traction bonds	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2 Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3 Systems and circuits are checked, isolated and proved safe to work on in accordance with workplace procedures
	2.4 Installation of traction bonds and bonding cables are completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.5 Cable and surrounds, including rail and other surfaces, are prepared for jointing and terminating in accordance with workplace procedures
	2.6 Traction bonds are installed and tested in accordance with job requirements and workplace procedures
	2.7 Unplanned events are responded to in accordance with workplace procedures
	2.8 Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation of traction bonds	**3.1** Completed work is checked and tested against works schedule, construction plans and drawings for compliance and anomalies reported in accordance with workplace procedures
	3.2 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.3 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures

3.4 Relevant work permits are signed off and, the system that has undergone the installation of a traction bond/s is returned to service in accordance with workplace procedures

3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT23A Install rail traction bonds.

Assessment Requirements for UETTDRRT23 Install rail traction bonds

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing rail traction bonds on at least two (2) of the following types of connecting bond cables and components, including:
  - covered or bare aluminium bonds
  - copper bonds
  - steel bonds
  - steel rail
- obtaining equipment, tools and personal protective equipment (PPE) required for installing rail traction bonds that includes using at least three (3) of the following types of tools and equipment:
  - bonding specific tools
  - crimping devices
  - thermal moulds
  - rail drill
  - bonding fittings
  - explosive power tools
  - portable hand tools
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- traction bond and cables, including:
  - permanent bonding methods

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - applications for permanent bonding
  - components of permanent bonds
  - interface between traction and signalling circuits
- safe working procedures/practices when carrying out permanent bonding, including:
  - PPE
  - electrical and visual testing using PPE
- installation of temporary traction bonds and cables, including:
  - types and purpose of tools and equipment
  - installation and removal methods
  - testing for electrical integrity of bonds and cables
- installation of permanent traction bonds and cables, including:
  - types and purposes of tools and equipment
  - installation and removal methods
  - testing for electrical integrity of bond, cables and equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing rail traction bonds
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT24 Maintain rail traction bonds

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain rail traction bonds in the electricity supply industry (ESI).

It includes maintaining and repairing temporary and permanent traction bonds, bonding cables and using safe working practices on or about the running line/track. It also includes isolating systems and circuits in accordance with work plans, identifying and implementing traffic management plans, issuing/accepting electrical permits, inspecting and checking equipment and associated hardware are in a safe condition to test and/or return to service, recommissioning tests to ensure integrity of bonding system prior to return to service and updating of system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

		signed in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with track protection officer and/or network control officer and workplace procedures
	1.9	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.10	Traffic management plan is identified and implemented in accordance with workplace procedures
	1.11	Environmental constraints applicable to work are identified and control measures applied
2 Perform maintenance of traction bonds	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Systems and circuits are checked, isolated and proved safe to work on in accordance with workplace procedures
	2.4	Maintenance and repair of traction bonds and bonding cables are completed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.5	Cable and surrounds, including rail and other surfaces, are prepared for jointing and terminating in accordance with workplace procedures
	2.6	Maintenance testing is performed in accordance with the work schedule, job requirements and workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete maintenance of traction bonds	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.3	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.4	Relevant work permits are signed off and the system that has undergone the maintenance of a traction bond/s is returned to service in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT24A Maintain rail traction bonds.

Assessment Requirements for UETTDRRT24 Maintain rail traction bonds

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and correcting simple faults in traction bonds that includes at least two (2) of the following types of connecting bond cables and components:
  - covered or bare aluminium bonds
  - copper bonds
  - steel bonds
  - steel rail
- maintaining and repairing traction bonds that includes at least three (3) of the following types of connecting bond cables and components:
  - bonding specific tools
  - crimping devices
  - thermal moulds
  - rail drill
  - bonding fittings
  - explosive power tools
  - portable hand tools
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- traction bond and cables, including:
  - temporary and permanent bonding methods
  - applications for temporary and permanent bonding

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - components of temporary and permanent bonds
  - interface between traction and signalling circuits
- safe working procedures/practices when carrying out temporary and permanent bonding, including:
  - personnel protective equipment (PPE)
  - electrical and visual testing using PPE
- installation and removal of temporary traction bonds and cables, including:
  - types and purpose of tools and equipment
  - installation and removal methods
  - testing for electrical integrity of bonds and cables
- maintenance of traction bond, including:
  - types and components
  - types and function of tools and equipment
  - maintenance/repair procedures
  - inspection and recording procedures
- diagnosis and correction of simple faults in specific traction bonds, including:
  - types and causes
  - determination of appropriate corrective actions
  - repair and replace procedures
- installation and removal of permanent traction bonds and cables, including:
  - types and purposes of tools and equipment
  - installation and removal methods
  - testing for electrical integrity of bond, cables and equipment
- maintenance and repair of permanent traction bonds, cables and equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in

UETTDRRT25 Install overhead rail traction configurations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install overhead rail traction configurations in the electricity supply industry (ESI).

It includes installation of overlaps, cross-overs, turnouts and crossing configurations by using safe working practices on or about the running line/track. It also includes isolating systems and circuits, identifying and implementing traffic management plans, issuing/accepting electrical permits inspection and checks to confirm equipment and associated hardware have been correctly installed in a safe condition to test prior to putting into service, pre-commissioning tests and updating installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Assessment Requirements for UETTDRRT25 Install overhead rail traction configurations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using at least three (3) of the following types of system configurations:
  - overlap
  - cross-over
  - turnout crossings
  - train/tram crossing
- operating from at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)
  - road/rail traction height access equipment
  - ladders
- obtaining equipment, tools and personal protective equipment (PPE) required for installing overhead rail traction configurations that includes at least two (2) of the following types of height and stagger measuring equipment:
  - height gauge
  - stagger gauge
  - cant gauge
- isolating systems and circuits that includes at least one (1) of the following types of testing equipment for overhead traction conductor configurations:
  - voltage detector (low voltage (LV) or high voltage (HV))
  - voltmeter
  - insulation resistance tester
  - field intensity tester
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- traction configuration principles, including:
  - types
  - purpose
  - assemblies
  - sub-assemblies
  - components
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
  - types of components
  - types and function of tools and equipment
- installation of traction configurations, including:
  - installation methods
  - measurement of tolerances
  - recording of tolerances.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing overhead rail traction configurations
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT26 Maintain overhead rail traction configurations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain overhead rail traction configurations in the electricity supply industry (ESI).

It includes maintaining and repairing overlaps, cross-overs, turnouts and crossings whilst using safe working practices on or about running line/track. It also includes repairing and/or replacing electrical equipment and associated hardware, identifying and implementing traffic management plans, issuing/accepting electrical permits, isolation of systems and circuits, inspection and checks to confirm equipment and associated hardware are in a safe condition to test and/or return to service, re-commissioning tests to ensure the integrity of the traction system prior to return to service and updating of system data and/or maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

		workplace procedures
	1.6	Relevant work permits are obtained to access rail corridor, understood and signed in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
	1.10	Environmental constraints applicable to work are identified and control measures applied
2 Perform maintenance of overhead traction configurations	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Systems and circuits are checked, isolated and proved safe to work on in accordance with workplace procedures
	2.4	Maintenance of overhead traction configurations is completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.5	Electrical equipment and associated hardware are tested in accordance with job requirements and workplace procedures
	2.6	Maintenance, including repair and/or replacement of overhead traction configurations, is completed in accordance with work schedule, job requirements and workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete maintenance of overhead traction configurations	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.3	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.4	Relevant work permits are signed off after final inspections and recommissioning checks and the system is energised, tested and returned to service in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT26A Maintain overhead rail traction configurations.

Assessment Requirements for UETTDRRT26 Maintain overhead rail traction configurations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining equipment, tools and personal protective equipment (PPE) required for maintaining overhead rail traction configurations that includes at least three (3) of the following types of height and stagger measuring equipment:
  - overlap
  - cross-over
  - turnout crossings
  - train/tram crossing
- using at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)
  - road/rail traction height access equipment, such as ladders
- obtaining equipment, tools and PPE required for maintaining overhead rail traction configurations that includes at least two (2) of the following types of height and stagger measuring equipment:
  - height gauge
  - stagger gauge
  - cant gauge
- isolating systems and circuits that includes at least one (1) of the following types of testing equipment for overhead traction conductor configurations:
  - voltage detector (low voltage (LV) or high voltage (HV))
  - voltmeter
  - insulation resistance tester
  - field intensity tester
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- traction configuration principles, including:
  - types
  - purpose
  - assemblies
  - sub-assemblies
  - components
- maintenance of traction configurations, including:
  - types of components
  - types and function of tools and equipment
  - maintenance/repair procedures
  - inspection and recording procedures
- diagnosis and correction of simple faults in specific traction configurations, including:
  - types and causes
  - determination of appropriate corrective actions
  - repair and replace procedures for components of specific configurations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for maintaining overhead rail traction configurations
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT27 Install overhead traction components and equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install overhead traction components and equipment in the electricity supply industry (ESI).

It includes installing associated hardware whilst undertaking safe working practices on or about the running line/track, isolating systems and circuits, identifying and implementing road/rail management plans and issuing/accepting electrical permits.

It also includes inspecting and checking to confirm equipment, components and associated hardware have been correctly installed in accordance with design and are in a safe condition to test prior to putting into service, undertaking pre-commissioning tests to ensure integrity of traction system prior to putting back into service and updating installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

Competency Field

Rail Traction

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation of overhead traction equipment/components	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation of overhead traction equipment/components are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained to access rail corridor, understood and signed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with track protection officer and/or network control officer and workplace procedures
	1.9	Road/rail management plan is identified and implemented in accordance with workplace procedures
	1.10	Environmental constraints applicable to work are identified and control measures applied
2 Perform installation of overhead traction equipment/components	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Systems and circuits are checked, isolated and proved safe to work on in accordance with workplace procedures
	2.4	Installation of overhead traction equipment/components are completed in agreed timeframes, to quality standards and with minimum of waste in accordance with job requirements and workplace procedures
	2.5	Electrical components/equipment and associated hardware are positioned, secured and terminated/connected in accordance with job requirements and workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation of overhead traction equipment/components	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures

3.3 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures

3.4 Relevant work permits are signed off and overhead traction equipment/components are commissioned in accordance with workplace procedures

3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT27A Install overhead traction components and equipment.

Assessment Requirements for UETTDRRT27 Install overhead traction components and equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using at least two (2) of the following types of equipment:
  - fuse switches
  - dropout fuses
  - section insulators
  - switches/isolators
  - links
  - fuses
  - surge diverters
  - transformers
- using at least five (5) of the following types of components:
  - cantilever hardware
  - head span
  - neutral sections
  - pull offs
  - registration fittings
  - steady span
  - tension regulators
  - cross spans
  - tramway support network
  - pendulum
- using at least two (2) of the following types of fittings:
  - preformed fittings
  - compression fittings

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - wedge fittings
  - bolted splices
- using at least three (3) of the following types of connecting components:
  - feeders
  - dissimilar conductors
  - lugs
  - bolted clamp
  - drapes/potential jumper
  - droppers
- obtaining equipment, tools and personal protective equipment (PPE) required for installing overhead traction components and equipment that includes at least two (2) of the following types of tools and equipment:
  - voltage detectors
  - micrometer/gauge
  - tension wrench
  - dynamometer
  - specialised tools
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- types and purpose of overhead traction equipment, including:
  - switches/isolators, fuse switches, links, section insulators, and fuses
- types and purpose of overhead components, including:
  - cantilever hardware, droppers, bay components, portal hardware, head span hardware, section insulators, neutral sections, registration fittings, steady span, tension regulators and cross spans
- types of conductors used for overheads wiring, such as hard-drawn; cadmium copper (CAD); and tin-bearing copper, aluminium, steel and other alloyed conductors
- types of traction wire support structures that may consist of portals, cantilevers, drop pieces, head spans, cross spans and pull-offs
- types and purpose of ancillary equipment including:
  - surge arresters, booster and auxiliary transformers
- methods for installing conductors, such as:
  - preformed fittings
  - compression fittings
  - wedged fittings
  - bolted splices
  - lugs

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - bolted clamps
- methods for installing components, such as:
    - feeders
    - droppers
    - dissimilar conductors
    - jumpers
    - surge arresters
- use of plant and equipment for installation work, such as:
    - elevated work platforms (EWP)
    - ladders
    - works trains
    - rail-mounted overhead wiring equipment/vehicles
    - road/rail height access machinery/vehicles
    - voltage detectors
    - micrometer/gauges
    - tension wrenches
    - dynamometers
    - other specialised tools.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

UETTDRRT28 Maintain overhead traction components and equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain and repair overhead traction electrical equipment, components and associated hardware in the electricity supply industry (ESI).

It includes repairing or replacing electrical components/equipment and associated hardware, undertaking safe working practices on or about the running line/track, isolation of systems and circuits for safe working, identifying and implementing road/rail management plans, and issuing/accepting electrical permits. It also includes inspecting and checking equipment, components and associated hardware are in a safe condition to test and/or return to service, re-commissioning tests of electrical equipment, components and associated hardware and updating of system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

UETTDRRT29 Operate rail road traction height access equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to operate rail road traction height access equipment in the electricity supply industry (ESI).

It includes operating and using road rail traction height access equipment to install and maintain overhead traction systems. It also includes performing pre-operational inspection, servicing of plant/equipment, undertaking safe working practices on or about the running line/track, isolation of systems and circuits for safe working in accordance with work plans and identifying and implementing traffic management plans.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all the following:
  - log books
  - work plan
- operating from at least one (1) of the following:
  - elevated work platform (EWP) in the performance of work associated with rail traction
  - road rail platform vehicle in the performance of work associated with rail traction
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- operator requirements, including:
  - pre-operational checks
  - recording procedures e.g. logbook
- road/rail traction height access equipment operation, including:
  - equipment characteristics, capabilities and limitations
  - prestart requirements
  - operation procedure
  - basic problem-solving equipment faults
  - safe working procedures when mechanical failure occurs
  - use of appropriate communication systems
  - permit to work systems and isolation procedures
- safe working and safety requirements when using road/rail traction height access equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- procedures for effective traffic management
- electrical safety requirements prior to operating equipment under live overhead equipment and adjacent to or in the vicinity of live overhead equipment
- emergency procedures in the event of an electrical incident/accident
- emergency procedures in the event of a safe working/road traffic incident/accident
- WHS/OHS and Environment Protection Authority (EPA) requirements in the context of Commonwealth/state/territory legislative requirements
- Procedures for rescuing a person from height access equipment, including:
  - methods for rescuing a person
  - methods for rescuing a person from a disabled height access equipment
  - methods for rescuing an incapacitated person from a height access equipment
  - methods for rescuing a person in contact with live overhead equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment currently used in industry for operating rail road traction height access equipment
- applicable documentation including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT30 Perform to a given schedule rail traction switching operations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to perform to a given schedule rail traction switching operations in the electricity supply industry (ESI).

It includes operating circuit breaking and isolation devices associated with energy reticulation systems/networks and applying to rail systems in field situations. It also includes procedures for communicating with the switching control officer or electrical control officer, isolating electrical equipment and the line/network or worksite, proving the area is de-energised and earthed or rail-connected, issuing/accepting or holding of electrical permits and returning affected circuits to service.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS52 Install and maintain poles, structures and associated hardware

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRRT21 Install traction overhead wiring systems

UETTDRRT22 Maintain traction overhead wiring systems

UETTDRRT27 Install overhead traction components and equipment

UETTDRRT28 Maintain overhead traction components and equipment

Competency Field

Rail Traction

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for rail traction switching operations to a given schedule	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for rail traction switching operations to a given schedule are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained to access rail corridor and perform work in accordance with job

© Commonwealth of Australia, 2025 Powering Skills Organisation

		requirements and/or workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
	1.8	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required
	1.9	Modifications to the scheduled which may be required after assessing the worksite is communicated to appropriate personnel for formal approval
	1.10	Worksite is prepared to minimise risk, damage to property, assets and individuals in accordance with track protection officer and/or network control officer and workplace procedures
	1.11	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.12	Traffic management plan is identified and implemented in accordance with workplace procedures
2 Carry out rail traction switching operations to a given schedule	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Switching of rail traction operations are completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.4	Communications with switching control officer are established and maintained during isolation operation in accordance with workplace procedures
	2.5	Electrical equipment, associated circuits, line/network or worksite is isolated and proven de-energised using appropriate testing devices and earthed or rail connected, where required, in accordance with requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Solutions used to solve problems are applied in accordance with workplace procedures
	2.7	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete rail traction switching operations to a given schedule	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off, safety devices removed, and the system made ready to be re-energised and returned to service in accordance with workplace procedures
	3.6	Work completion records, reports, as installed modified drawings, documentation and information are finalised, processed and relevant personnel and authorities notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT30A Perform to a given schedule rail traction switching operations.

Assessment Requirements for UETTDRRT30 Perform to a given schedule rail traction switching operations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- checking all of the following:
  - approvals/clearances
  - electrical/access permits
- using at least one (1) of the following types of testing equipment for performing overhead traction switching:
  - voltage detectors
  - field intensity meter
  - polarity testers
  - phase rotation indicators
- performing rail traction switching operations to given schedule which includes switching at least one (1) of the following types of switches for overhead traction switching:
  - high voltage (HV)/low voltage (LV) circuit breakers
  - HV/LV switches
  - HV/LV isolators
  - HV/LV links
  - HV/LV bridges
  - HV/LV fuses
- using all of the following:
  - portable earthing/rail-connecting equipment
  - operating rods/sticks
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of overhead distribution conductors, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing and maintenance of conductors - types of LV and HV overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; and minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and hardware
  - methods of stringing, tensioning and termination of LV and HV conductors
- safe working practices and procedures for the installation of overhead distribution conductors, including:
  - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWP)
  - requirements of persons prior to making bare hand contact with dead LV mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedure to attach an on-site earthing device to de-energised LV and HV overhead circuit
- installation of switchgear and associated equipment, including:
  - types and function of various switchgear - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types switchgear, installation procedures, earthing, requirements and techniques
  - types of equipment - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment - standards, codes, legislation, supply authority regulations and/or enterprise requirements, assembly and erecting procedures, earthing requirements and techniques, and pole mounted locations
  - maintenance procedures for switchgear and equipment - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures,
  - testing and commissioning - ESI standards and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- LV switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - personnel protective equipment (PPE) for LV switching.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing to a given schedule rail traction switching operations
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT31 Maintain energised d.c. traction overhead wiring system

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance and repair of energised direct current (d.c.) traction overhead wiring system through the use of insulated ladder and working bare hand or insulated stick.

It includes the verification of the site conditions and the potential hazards, the conformance with and calculation of mechanical loads, the selection of appropriate tools and equipment, and authorised work method. It includes the undertaking of work health and safety (WHS)/occupational health and safety (OHS)and safe working practices to ensure that correct procedures and precautions to working live in accordance with the work plan and enterprise requirements are followed.

It also includes the visual inspection and necessary checks to confirm that overhead wiring components and associated hardware are in a safe condition to test and/or return to service, the recommissioning tests of the components and associated hardware and the updating of system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Pathway 1

Qualified and authorised Rail Traction Lineworker

Pathway 2

BSBLDR403 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS65 Contribute to coordinated HV live working

UETTDRRT21 Install traction overhead wiring systems

UETTDRRT22 Maintain traction overhead wiring systems

UETTDRRT23 Install rail traction bonds

UETTDRRT25 Install overhead rail traction configurations

UETTDRRT26 Maintain overhead rail traction configurations

UETTDRRT27 Install overhead traction components and equipment

UETTDRRT28 Maintain overhead traction components and equipment

UETTDRRT29 Operate rail road traction height access equipment

UETTDRRT99 Test and verify rail traction installations

Competency Field

Rail Traction

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to maintain energised d.c. traction	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site

© Commonwealth of Australia, 2025 Powering Skills Organisation

overhead wiring systems

inspection and the extent of the preparation of the work determined for planning and coordination

1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures

1.3 Risk control measures are identified, prioritised and evaluated against the work schedule

1.4 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures

1.6 Relevant work authority/instructions are secured to coordinate the performance of work according to requirements and/or established procedures

1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order

1.8 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work

1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.12	Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
2 Carry out maintenance of energised d.c. traction overhead wiring systems	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working aloft, and use of tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	Maintenance of energised d.c. traction overhead wiring systems is carried out in accordance with the work schedule and requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied in the safe maintenance of energised d.c. traction overhead wiring systems to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete the maintenance	**3.1**	Work undertaken is checked against works schedule for

© Commonwealth of Australia, 2025 Powering Skills Organisation

of energised d.c. traction overhead wiring systems		conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work authorities/instructions are signed off or returned to client/customer in accordance with requirements
	3.6	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT31A Maintain energised d.c. traction overhead wiring system.

Assessment Requirements for UETTDRRT31 Maintain energised d.c. traction overhead wiring system

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining, repairing or replacing components including at least two (2) of the following:
  - span
  - cross-span
  - headspan
  - section insulator
  - support equipment
  - tramway support network
- maintaining traction components including at least three (3) of the following:
  - catenary
  - dropper
  - contact/trolley
  - feeder/in-span feeder
  - drape/potential jumper
- performing at least two (2) of the following:
  - removal of trapped foreign objects
  - profiling
  - vertical adjustment of contact or trolley wire
- performing work from at least one (1) of the following:
  - insulated elevating work vehicles
  - insulated ladder
  - insulated work platforms
- using materials and equipment including at least two (2) of the following:
  - tensioning equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- insulated sticks
- ropes
- slings and chains
- geometry profiling equipment

- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic rigging techniques encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches and relevant certification and licensing (if required)
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safe use of rigging equipment, tools and associated equipment - types, techniques and application
  - site inspection procedures - identifying hazards, assessing and controlling risks, and appropriate sequence of loading and unloading
  - determining the mass and dimensions of load
  - selection and inspection procedures - rigging equipment, materials and tools (natural and synthetic fibre ropes and chains, fittings, winch and capstan); ratings of wire ropes and slings; removing, repairing and replacing of damage parts
  - techniques for assembling and erecting power winches and capstans
  - checking the integrity of support structure -visual inspection of load connections
  - techniques in moving, lifting, shifting, managing and placing loads - use of appropriate communication and signalling methods, codes of practice/compliance, enterprise and Commonwealth/state/territory legislative requirements, weather conditions, erection of safety nets and lines, methods of fixing and anchoring loads, and load stability
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings - material lists, conductor size, type and route length
  - construction types and structures for distribution and sub-transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing and maintenance of conductors - types of low voltage (LV) and high voltage (HV) overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and

© Commonwealth of Australia, 2025 Powering Skills Organisation

hardware
    - methods of stringing, tensioning and termination of LV and HV conductors
- safe working practices and procedures for the installation of overhead distribution conductors encompassing:
    - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWP)
    - requirements of persons prior to making bare hand contact with dead LV mains and apparatus
    - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
    - safe working practices - requirements to enable safe working on conductive poles, procedures to attach an on-site earthing device to de-energised LV and HV overhead circuit
- safe working on energised LV equipment encompassing:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
    - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
    - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, the procedure used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires, general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures,

© Commonwealth of Australia, 2025 Powering Skills Organisation

establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)

  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permits, operational procedures and earthing procedures
  - PPE for LV switching
- safe working on energised d.c. traction equipment encompassing:
  - Commonwealth/state/territory/local government legislation, standards, codes, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on energised LV d.c. traction overhead conductors and cables - safe approach distances (SAD); safe working practices, instructions and procedures; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessment and control of WHS/OHS risks; types, selection, maintenance, storage and use of PPE; dangers of working in confined spaces and at heights; notification to work systems, safe working policies, procedures and practices when using/operating specialised equipment and tools; and emergency response and rescue, including first aid
  - techniques in installation, maintenance, replacing and repairing of energised d.c. traction overhead conductors, cables and equipment - span, cross-span, head-span, section insulator, support equipment, tramway support network, catenary, dropper, contact/trolley, feeder/in-span feeder and drape/potential jumper
  - techniques in carrying out work on energised d.c. traction overhead conductors, cables and equipment - removing trapped foreign objects, profiling and vertical adjustment of contact or trolley wire
  - techniques in using plant, equipment and/or tools to carry out work on energised d.c. traction overhead conductors, cables and equipment - insulated elevating work vehicles; insulated ladder; insulated work platforms; tensioning equipment; and insulated sticks, ropes, slings and chains
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT32 Maintain energised traction overhead electrical apparatus using stick techniques

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance and repair of energised traction overhead electrical apparatus via the use of approved live line insulated stick techniques.

It includes the verification of site conditions and the potential hazards, the conformance with and calculation of physical loads, the selection of appropriate tools and equipment, and authorised work methods. It encompasses the undertaking of correct procedures and precautions to working live line in accordance with the work plan and enterprise requirements.

It also includes the visual inspection and necessary checks to confirm that the electrical apparatus and components are in a safe condition to test and/or return to service, and the recommissioning tests of the electrical apparatus and components.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Pathway 1

Qualified and authorised Rail Traction Lineworker

Pathway 2

BSBLDR403 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS65 Contribute to coordinated HV live working

UETTDRRT21 Install traction overhead wiring systems

UETTDRRT22 Maintain traction overhead wiring systems

UETTDRRT23 Install rail traction bonds

UETTDRRT25 Install overhead rail traction configurations

UETTDRRT26 Maintain overhead rail traction configurations

UETTDRRT27 Install overhead traction components and equipment

UETTDRRT28 Maintain overhead traction components and equipment

UETTDRRT29 Operate rail road traction height access equipment

UETTDRRT31 Maintain energised d.c. traction overhead wiring system

UETTDRRT99 Test and verify rail traction installations

Competency Field

Rail Traction

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to maintain energised traction overhead electrical apparatus	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work

© Commonwealth of Australia, 2025 Powering Skills Organisation

determined for planning and coordination

1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures

1.3 Calculation of physical loads and authorised work methods are obtained and relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

1.4 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures

1.5 Hazards associated with the work are identified and risk control measures implemented, including the rendering inoperative of automatic reclosing device

1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order

1.8 Relevant personnel at worksite are confirmed current in first aid, cardiopulmonary resuscitation (CPR), pole top and other rescue procedures according to requirements

1.9 Liaison and communication issues with others/ authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work

1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		where applicable, in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
2 Carry out the maintenance of energised traction overhead electrical apparatus	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, CPR, pole top, other rescue procedures and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, and working aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Auto-reclose devices associated with the circuits being worked on are rendered inoperative and necessary work documentation acquired in accordance with enterprise requirements
	2.5	Essential knowledge and associated skills are applied in the safe maintenance of energised traction overhead electrical apparatus to ensure completion within an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.7	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.8	Unplanned events in the maintenance of energised traction overhead electrical apparatus are managed within the scope of established procedures
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

		standard
3 Complete the maintenance of energised traction overhead electrical apparatus	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work documentation is signed off and traction overhead electrical apparatus returned to service, including returning of auto-reclosing device to normal, and client/customer advised in accordance with requirements
	3.6	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT32A Maintain energised traction overhead electrical apparatus using stick techniques.

Assessment Requirements for UETTDRRT32 Maintain energised traction overhead electrical apparatus using stick techniques

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining, repairing or replacing components including at least two (2) of the following:
  - support structures
  - span
  - section insulator
  - neutral section
  - midpoint anchor
  - support equipment
  - tension regulators
- maintaining traction components including at least two (2) of the following:
  - catenary
  - dropper
  - contact feeder
- performing at least one (1) of the following:
  - insulated elevated work platform (EWP)
  - insulated ladder
  - insulated mobile platform
- performing work from at least two (2) of the following:
  - specialised insulated tools
  - insulated sticks
  - tensioning equipment
  - geometry profiling equipment
- using materials and equipment including at least two (2) of the following:
  - air-break switches

© Commonwealth of Australia, 2025 Powering Skills Organisation

- insulators
- surge arrestors
- hardware and fittings

- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic rigging techniques encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches and relevant certification and licensing (if required)
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safe use of rigging equipment, tools and associated equipment - types, techniques and application
  - site inspection procedures - identifying hazards, assessing and controlling risks, and appropriate sequence of loading and unloading
  - determining the mass and dimensions of load
  - selection and inspection procedures - rigging equipment, materials and tools (natural and synthetic fibre ropes and chains, fittings, winch and capstan); ratings of wire ropes and slings; removing, repairing and replacing damaged parts
  - techniques for assembling and erecting power winches and capstans
  - checking the integrity of support structure - visual inspection of load connections
  - techniques in moving, lifting, shifting, managing and placing loads - use of appropriate communication and signalling methods, codes of practice/compliance, enterprise and Commonwealth/state/territory legislative requirements, weather conditions, erection of safety nets and lines, methods of fixing and anchoring loads, and load stability
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing and maintenance of conductors - types of low voltage (LV) and high voltage (HV) overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and hardware

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - methods of stringing, tensioning and termination of LV and HV conductors
- safe working practices and procedures for the installation of overhead distribution conductors encompassing:
    - limits of approach for personnel, vehicles, mobile plant and EWP
    - requirements of persons prior to making bare hand contact with dead LV mains and apparatus
    - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
    - safe working practices - requirements to enable safe working on conductive poles, procedures to attach an on-site earthing device to de-energised LV and HV overhead circuit
- safe working on energised LV equipment encompassing:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
    - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards, assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
    - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, release and rescue procedures for work on or near exposed energised LV conductors
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedure of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, the procedures used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses, developing techniques, involvement of external emergency services, and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock

© Commonwealth of Australia, 2025 Powering Skills Organisation

victim, including cardiopulmonary resuscitation (CPR)
    - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- LV switching principles encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
    - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permits, operational procedures and earthing procedures
    - PPE for LV switching
- safe working on energised direct current (d.c.) traction equipment encompassing:
    - Commonwealth/state/territory/local government legislation, standards, codes, supply authority regulations and/or enterprise requirements
    - safety precautions specific to working on energised LV d.c. traction overhead conductors and cables - safe approach distances (SAD); safe working practices, instructions and procedures; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessment and control of WHS/OHS risks; types, selection, maintenance, storage and use of PPE; dangers of working in confined spaces and at heights; notification to work systems; safe working policies, procedures and practices when using/operating specialised equipment and tools; and emergency response and rescue, including first aid
    - techniques in installation, maintenance, replacing and repairing of energised d.c. traction overhead conductors, cables and equipment - span, cross-span, head-span, section insulator, support equipment, tramway support network, catenary, dropper, contact/trolley, feeder/in-span feeder and drape/potential jumper
    - techniques in carrying out work on energised d.c. traction overhead conductors, cables and equipment - removing trapped foreign objects, profiling and vertical adjustment of contact or trolley wire
    - techniques in using plant, equipment and/or tools to carry out work on energised d.c. traction overhead conductors, cables and equipment - insulated elevating work vehicles; insulated ladders; insulated work platforms; tensioning equipment; and insulated sticks, ropes, slings and chains
- enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used method of replacement responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT33 Maintain energised traction overhead electrical apparatus using glove techniques

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance and repair of energised traction overhead electrical apparatus via the use of approved live line glove and barrier techniques.

It includes the verification of site conditions and the potential hazards, the conformance with and calculation of physical loads, the selection of appropriate tools and equipment, and authorised work methods. It encompasses the undertaking of correct procedures and precautions to working live line in accordance with the work plan and enterprise requirements.

It also includes the visual inspection and necessary checks to confirm that the electrical apparatus and components are in a safe condition to test and/or return to service, and the recommissioning tests of the electrical apparatus and components.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Pathway 1

Qualified and authorised Rail Traction Lineworker

Pathway 2

BSBLDR403 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS65 Contribute to coordinated HV live working

UETTDRRT21 Install traction overhead wiring systems

UETTDRRT22 Maintain traction overhead wiring systems

UETTDRRT23 Install rail traction bonds

UETTDRRT25 Install overhead rail traction configurations

UETTDRRT26 Maintain overhead rail traction configurations

UETTDRRT27 Install overhead traction components and equipment

UETTDRRT28 Maintain overhead traction components and equipment

UETTDRRT29 Operate rail road traction height access equipment

UETTDRRT31 Maintain energised d.c. traction overhead wiring system

UETTDRRT99 Test and verify rail traction installations

Competency Field

Rail Traction

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to maintain energised traction overhead electrical apparatus (glove)	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work

© Commonwealth of Australia, 2025 Powering Skills Organisation

determined for planning and coordination

1.2 Calculation of physical loads and authorised work methods are obtained and relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures

1.4 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures

1.5 Hazards associated with the work are identified and risk control measures implemented, including the rendering inoperative of automatic reclosing device

1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order

1.8 Relevant personnel at worksite are confirmed current in first aid, cardiopulmonary resuscitation (CPR), pole top and other rescue procedures according to requirements

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work

1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		where applicable, in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
2 Carry out the maintenance of energised traction overhead electrical apparatus (glove)	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, CPR, pole top, other rescue procedures and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, and working aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Auto-reclose devices associated with the circuits being worked on are rendered inoperative and necessary work documentation acquired in accordance with enterprise requirements
	2.5	Essential knowledge and associated skills are applied in the safe maintenance of energised traction overhead electrical apparatus to ensure completion within an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.7	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.8	Solutions to non-routine problems are identified and actioned in the maintenance of energised traction overhead electrical apparatus using acquired essential knowledge and associated skills according to requirements and established procedures
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete the maintenance of energised traction overhead electrical apparatus (glove)	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work documentation is signed off and traction overhead electrical apparatus returned to service, including returning of auto-reclosing device to normal, and client/customer advised in accordance with requirements
	3.6	Work completion records, reports, as installed//modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT33A Maintain energised traction overhead electrical apparatus using glove techniques.

Assessment Requirements for UETTDRRT33 Maintain energised traction overhead electrical apparatus using glove techniques

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- operating from at least one (1) of the following:
  - elevated work platform (EWP)
  - insulated ladder
  - insulated mobile platform
- using at least two (2) of the following:
  - specialised tools
  - insulated gloves and barriers
  - tensioning equipment
  - geometry profiling equipment
- using at least two (2) of the following:
  - air-break switches
  - insulators
  - surge arrestors
  - hardware and fittings
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working on energised lines to 33 kV using live line glove and barrier techniques encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on energised lines to 33 kV

© Commonwealth of Australia, 2025 Powering Skills Organisation

(poles) using live line glove and barrier techniques

- safety precautions working on energised lines to 33 kV using live line high voltage (HV) rubber gloving techniques - live line minimum approach distances of persons and plant; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE); live line access authority/permit system; disabling auto-reclosing function; ensuring functioning of fault current protective devices; checking integrity of insulation prior to work commencement; types and function of specialised live line working equipment and tools inspection before use; safe working policies, procedures and practices when using/operating specialised equipment and tools; methods of using specialised equipment and tools; work team communication; use of safety observers; and emergency response and rescue, including first aid
- policies and procedures dealing with general work practices - definitions of terms used, responsibilities of personnel, types of structures from which glove and barrier methods can be performed, types of equipment and their compliance with relevant standards
- relationship between combined glove and barrier and stick methods - conditions under which they can be practiced
- techniques in installing and/or replacing HV insulators when working live line glove and barrier - intermediate insulators, angle insulators, bridging insulators, strain insulators and suspension insulators
- techniques in erecting and/or replacing HV cross-arms when working live line glove and barrier - intermediate, angle, strain, termination and suspension
- techniques in connecting and/or disconnecting HV bridges connections when working live line glove and barrier - strain/Tee bridges, bypass bridges/connections, HV ABC and similar/dissimilar metals
- techniques in the installation and/or maintenance of electrical equipment - air-break switches, gas switches, fuse assemblies, isolators, bird covers, surge diverters and fault indicators
- techniques in erecting and/or removing temporary midspan switching devices
- techniques using live line glove and barrier to erect and/or replace of poles - intermediate, angle and strain
- techniques using live line glove and barrier for the repair and/or replacement of HV conductors/cables
- techniques in repairing and/or replacing HV armour rods and/or line guards
- conversion methods using live line glove and barrier of intermediate construction to strain construction

- working on energised lines to 33 kV (poles) using live line glove and barrier/hot-stick combined encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on energised lines to 33 kV (poles) using live line glove and barrier/hot-stick combined
  - safety precautions working on energised lines to 33 kV using live line glove and barrier/hot-stick combined - live line minimum approach distances of persons and plant; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE; live line access

© Commonwealth of Australia, 2025 Powering Skills Organisation

authority/permit system; disabling auto-reclosing function; ensuring functioning of fault current protective devices; checking integrity of insulation prior to work commencement ;types and function of specialised live line working equipment and tools inspection before use; safe working policies, procedures and practices when using/operating specialised equipment and tools; methods of using specialised equipment; work team communication; use of safety observers; and emergency response and rescue, including first aid

- policies and procedures dealing with general work practices for both glove and barrier/hot-stick combined, - definitions of terms used, responsibilities of personnel, types of structures from which glove and barrier methods can be performed, and types of equipment and their compliance with relevant standards
- relationship between combined glove and barrier/ hot-stick methods - conditions under which they can be practiced
- techniques for installing and/or replacing HV insulators using glove and barrier/hot-stick combined - intermediate insulators, angle insulators, bridging insulators, strain insulators and suspension insulators
- techniques for erecting and/or replacing HV cross-arms using glove and barrier/hot-stick combined - intermediate and angle
- techniques for connecting and/or disconnecting HV bridges connections using glove and barrier/hot-stick combined - strain/Tee bridges, bypass bridges/connections, HV ABC and HV and similar/dissimilar metals
- techniques in the installation and/or maintenance of electrical equipment using hot-stick - air-break switches, gas switches, fuse assemblies, isolators, bird covers, surge diverters and fault indicators
- techniques in the erection and/or replacement of poles - intermediate/suspension, angle, strain and termination
- techniques in repairing and/or replacing HV armour rods and/or line guards and/or conversion methods of intermediate construction to strain in construction
- techniques in the repairing and replacing HV conductors/cables and the identification of equipment used
- techniques in installing and/or maintaining switching devices using glove and barrier

- plant, equipment and tools used for HV live line work encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with plant, equipment and tools used for HV live line work
  - safety precautions when working on plant, equipment and tools using hot-stick combined - safe working clearances; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses (PPE) and authorisation to work systems
  - identification of plant, equipment and tools used for HV live line work – types, applications, construction, characteristics, limitations and safe working load
  - serviceability of plant, equipment and tools used for HV live line work - inspection procedures, testing procedures, maintenance procedures and storage procedures
  - relationship of live line work access authority/permit, disabling auto-reclose function and

© Commonwealth of Australia, 2025 Powering Skills Organisation

ensuring correct functioning of fault current protective devices prior to live line work
  - live line access authorities, disabling auto-reclose function and ensuring fault current protective devices prior to live line work
  - conductor supports – methods, types of equipment, construction, characteristics and limitations
  - techniques in selecting appropriate conductor support methods in accordance with requirements
  - calculation of loads and wind loading on conductors
  - effects of resultant forces when transferring conductor loads
  - rigging procedures for conductor support equipment
- principles of HV encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on or near HV
  - electrical and electrostatic principles related to HV lines - relationship of current, voltage and resistance as related to transmission lines, relationship of phase voltage and respective line voltages
  - production of an electric field – units, effect of distance, potential of an object within the field and the effect of distances to the potential
  - HV insulators - construction of a disc insulator, construction of a polymeric insulator, effects of an electrical field on disc insulators, identification of the number of disc insulators needed for a single line voltage, and performance of a failed disc insulator on the line and the system
  - determining the minimum allowable number of discs per string for each line voltage in the system before bare hand work is to proceed
  - techniques in detecting a failed disc in a string
  - techniques in using appropriate tools and equipment to test a string
  - methods of recording data
  - effects of electrostatic induction on the human body - relationship of the resistance of a human body to different levels of current and voltage, relationship of a human body to an electric field, and effects of electrostatic induction on bare hand work
  - application of Faraday’s cage - effects of a body, advantages, and description of the Faraday’s cage used by bare-hand live-line workers
  - safety precautions working on or near HV electrical apparatus - safe approach distances (SAD) from live line; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE, permit to work systems and isolation procedures
  - types and function of specialised live working equipment
  - safe working policies, procedures and practices when using and operating specialised equipment
  - methods of using specialised equipment
  - emergency response and rescue, including first aid
  - effects of lighting and switching surges on performance of string insulators - health effects to workers

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - methods used to alleviate surges on transmission lines
  - magnetic field - difference between magnetic fields and electrostatic fields; source of magnetic field; techniques in locating, measuring and analysing known sources of magnetic fields; reasons for monitoring magnetic field exposure and techniques used to monitor magnetic fields
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedures for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, PPE and high voltage switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV fault switching principles encompassing:
  - primary causes, effects and types of HV electrical faults
  - HV protection devices - main components, types, categories, applications and functions
  - basic principle of operation of HV system protection devices
  - protection coordination and protection zoning
  - HV feeder auto-reclosing suppression – function and application
  - circuit condition requirements and switching considerations when paralleling and separating HV feeders
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing

© Commonwealth of Australia, 2025 Powering Skills Organisation

procedures for access, common distribution transformer and associated electrical apparatus faults
    - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
    - application and function of SWER system components
    - circuit arrangement
    - principle of operation
    - hazards and procedures associated with faulty SWER earth systems
    - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
    - function of feeder automation system and the main components
    - operation procedure for a remote field device from a local control station
    - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
    - SCADA system security interlocks and access restrictions
    - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
    - function of the main components of a local/remote control system
    - operation of a field devices using SCADA systems via a RAT, dial up voice annunciated system and local control station
- safe working on energised HV alternating current (a.c.) and/or direct current (d.c.) traction equipment encompassing:
    - Commonwealth/state/territory/local government legislation, standards, codes, supply authority regulations and/or enterprise requirements
    - safety precautions specific to working on energised LV d.c. traction overhead conductors and cables - live line minimum approach distances; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of PPE; live line permit system; disabling auto-reclosing function; ensuring functioning of fault current protective devices; checking integrity of insulation prior to work commencement; types and function of specialised live line working equipment and tools inspection before use; safe working practices when using specialised equipment and tools; methods of using specialised equipment; work team communication; use of safety observers; and emergency response and rescue, including first aid
    - techniques in the use of hot-sticks for the maintenance of energised traction overhead apparatus
    - techniques in the use of glove and barrier on energised traction overhead apparatus.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT34 Install and maintain traction network wiring systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation and maintenance of overhead traction wiring systems to ensure proper installation, in particular, the correct registration of the contact wire with respect to the current collectors.

It includes the undertaking of safe working practices on or about the running line/track and the preparation needed for stringing and profiling, including the isolation of systems and circuits for safe working according to work plans, the diagnosis of faults and the modification and re-adjustment to appropriate standards.

It also encompasses the correct positioning of road signs, barriers and/or warning devices, and the procedure of issuing/accepting electrical permits. It also includes the visual and other necessary checks to confirm that equipment and associated hardware have been correctly installed according to design and are in a safe condition to undertake pre-commissioning tests prior to putting into service and updating installation and maintenance data, such as as-built drawings and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRIS67 Solve problems in energy supply network equipment

Competency Field

Rail Traction

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1 Prepare/plan to install and maintain traction network wiring systems	**1.1**	Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3	Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the installation and maintenance of traction network wiring systems are obtained and confirmed for the purposes of the work to be performed and communicated to relevant personnel
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.8	Relevant personnel at worksite are confirmed current in cardiopulmonary resuscitation (CPR), first aid, other rescue procedures and related work procedures according to requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant

© Commonwealth of Australia, 2025 Powering Skills Organisation

		operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures
	1.12	Rail/road signs, barriers and warning devices are positioned in accordance with requirements
	1.13	Environmental constraints applicable to work are identified and control measures applied
2 Carry out the installation and maintenance of traction network wiring systems	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Systems and circuits are isolated, as required, proved safe to work on in accordance with the requirements/permits and established procedures
	2.4	Essential knowledge and associated skills are applied in the safe installation and maintenance of traction network wiring systems to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5	Overhead traction wiring systems, including cables, fittings, traction conductors and associated equipment, are installed according to design, work schedule requirements and established procedures
	2.6	Maintenance, including repair and/or replacement of overhead traction wiring systems, including the modification and re-adjustment of overhead traction conductors is carried out in accordance with the work schedule and requirements/established procedures
	2.7	Profiling is completed according to established procedures
	2.8	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.9 Unplanned events in the installation and maintenance of traction network wiring systems are undertaken within the scope of established procedures
	2.10 Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.11 Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the installation and maintenance of traction network wiring systems	**3.1** Work undertaken is checked against design drawings and work schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
	3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5 Relevant work permits are signed off and the overhead traction network wiring system is returned to service in accordance with requirements
	3.6 Works completion records, reports, as installed/modified drawings and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT34A Install and maintain traction network wiring systems.

Assessment Requirements for UETTDRRT34 Install and maintain traction network wiring systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining at least four (4) of the following:
  - support structure
  - span
  - section insulator
  - neutral section
  - midpoint anchor
  - support equipment
  - tension regulators
  - stay/guy wire
  - tramway support network
- installations must incorporate at least two (2) of the following:
  - catenary
  - dropper
  - contact/trolley*
  - feeder
  - earth conductor
  - drape/potential jumper
  - (*must do)
- performing work from at least one (1) of the following:
  - elevated work platform (EWP)
  - ladder
  - mobile platform
- installations must also incorporate at least two (2) of the following:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - tensioning equipment*
  - specialised tools
  - ropes
  - geometry profiling equipment
  - (*must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to the electrical traction
- electrical traction voltage and current circuit paths encompassing:
  - transmission distribution voltages
  - traction supply system and voltages
  - return and stay current paths, including electrolysis
- relationship of sectioning, section insulator and overlaps/air gaps in a traction power system
- traction power system components encompassing:
  - function of transformer/rectifiers
  - configuration and purpose of traction overhead wiring systems
  - function of isolators/switches
  - function of the circuit breaker
- reliability and security of traction supply
- traction power system electrical protection encompassing:
  - load protection
  - surge protection
  - fault protection
  - electrolytic protection
- impact of electromagnetic forces encompassing:
  - telephone interference
  - effects of television/radio interference
- insulation methods in a traction power system encompassing:
  - types of electrical insulation
  - insulation coordination
  - reason for electrical clearances
- bonding systems - structure bonds, traction bonds/bonding cables and impedance bonds
- ancillary conductors - feeder wires, current return path and other ancillary conductors
- relationship of current and potential drapers/jumpers to the traction power system
- electrical wiring system components - earth wires, feeder wire, return conductor, insulators,

© Commonwealth of Australia, 2025 Powering Skills Organisation

catenary wire, contact/trolley wire, droppers, tensioning equipment, current collectors, tram support networks, tram fittings and bridge/tunnel fittings
- electrical traction circuits encompassing:
  - types
  - applications
- relationship of the components, apparatus and the conductors to the operation of the traction system
- effective current collection and wire interface
- effective registration in the traction power system
- profiling overhead traction wire methods
  - factors that impact on current collectors
  - methods to achieving smooth current collector transitions and interfaces
- dynamic and static forces encompassing:
  - types that effect traction systems
  - effects on effective registration
  - techniques to minimise the adverse effects.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT35 Install and maintain traction network equipment and components

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation and maintenance of the overhead traction electrical equipment and components as well as associated hardware, including ancillary equipment.

It includes the repair or replacement of like-for-like electrical components/equipment and associated hardware and the undertaking of safe working practices on or about the running line/track. It also encompasses the isolation of systems and circuits for safe working according to work plans and the correct positioning of road signs, barriers and/or warning devices and the procedure of issuing/accepting electrical permits.

It also includes the visual inspection and necessary checks to confirm that equipment, components and associated hardware have been correctly installed according to design and are in a safe condition to test prior to putting to service, the undertaking of pre-commissioning tests as required to ensure the integrity of the traction system prior to putting back into service and the updating of installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1 Prepare for the installation and maintenance of traction network equipment/components	**1.1**	Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3	Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the installation and maintenance of overhead traction equipment/components are obtained and confirmed for the purposes of the work to be performed and communicated to relevant personnel
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.8	Relevant personnel at worksite are confirmed current in cardiopulmonary resuscitation (CPR), first aid, and other rescue procedures according to requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant

© Commonwealth of Australia, 2025 Powering Skills Organisation

		operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.12	Rail/road signs, barriers and warning devices are positioned in accordance with requirements
	1.13	Environmental constraints applicable to work are identified and control measures applied
2 Carry out the installation and maintenance of traction network equipment/components	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures
	2.4	Essential knowledge and associated skills are applied in the safe installation of overhead traction equipment/components to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5	Electrical components/equipment and associated hardware are positioned, secured and terminated/connected in accordance with requirements and established procedures
	2.6	Electrical component/equipment and associated hardware is ascertained as operating within normal operating parameters and in accordance with requirements and established procedures
	2.7	Maintenance, including repair and/or replacement of overhead traction equipment/components, is carried out in accordance with the work schedule and requirements/established procedures
	2.8	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according

© Commonwealth of Australia, 2025 Powering Skills Organisation

		to established procedures
	2.9	Unplanned events during the installation of overhead traction equipment/components are responded to within the scope of established procedures
	2.10	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.11	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the installation and maintenance of traction network equipment/components	**3.1**	Work undertaken is checked against design drawings and work schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.3	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.4	Relevant work permits are signed off after final inspections and the system is energised, tested and returned to service in accordance with requirements
	3.5	Work completion records, reports, as installed//modified drawings and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRRT35 Install and maintain traction network equipment and components

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining traction network equipment and components incorporating at least two (2) of the following:
  - fuse switches
  - dropout fuses
  - section insulators
  - switches/isolators
  - links
  - fuses
  - surge diverters
  - transformers
- installing and maintaining traction network equipment and components must incorporate at least five (5) of the following:
  - cantilever hardware
  - head span
  - neutral sections
  - pull offs
  - registration fittings
  - steady span
  - tension regulators
  - cross spans
  - tramway support network
  - pendulum
- incorporating at least two (2) of the following:
  - preformed fittings

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - compression fittings
  - wedge fittings
  - bolted splices
- incorporating at least three (3) of the following:
  - feeders
  - dissimilar conductors
  - lugs
  - bolted clamp
  - drapes/potential jumper
  - droppers
- incorporating at least two (2) of the following:
  - voltage detectors
  - micrometer/gauge
  - tension wrench
  - dynamometer
  - specialised tools
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- overhead traction equipment encompassing:
  - types - switches/isolators, fuse switches, links, section insulators and fuses
  - purpose
- types of overhead traction components encompassing:
  - types - cantilever hardware, droppers, bay components, portal hardware, head span hardware, section insulators, neutral sections, registration fittings, steady span, tension regulators and cross spans
  - purposes
- types of conductors used for overhead wiring encompassing:
  - hard-drawn; computer-aided drafting (CAD); and tin-bearing copper, aluminium, steel and other alloyed conductors
- types of traction wire support structures that may consist of portals, cantilevers, drop pieces, head spans, cross spans and pull-offs
- ancillary equipment encompassing:
  - types - surge arresters, booster and auxiliary transformers
  - purpose
- methods for installing/replacing conductors encompassing:
  - preformed fittings

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - compression fittings
  - wedged fittings
  - bolted splices
  - lugs
  - bolted clamps
- methods for installing/replacing components encompassing:
  - feeders
  - droppers
  - dissimilar conductors
  - jumpers
  - surge arresters
- use of plant and equipment for installation/maintenance work encompassing:
  - elevated work platforms (EWP)
  - ladders
  - works trains
  - rail-mounted overhead wiring equipment/vehicles
  - road/rail height access machinery/vehicles
  - voltage detectors
  - micrometer/gauges
  - tension wrenches
  - dynamometers
  - other specialised tools.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications,

© Commonwealth of Australia, 2025 Powering Skills Organisation

regulations, codes of practice and operation manuals.

UETTDRRT36 Maintain traction network wiring systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance of overhead traction wiring systems to ensure their proper operation, in particular, the correct registration of the contact wire with respect to the current collectors.

It includes the undertaking of safe working practices on or about the running line/track and the preparation needed for stringing and profiling, including the isolation of systems and circuits for safe working according to work plans, the diagnosis of faults and the modification and re-adjustment to appropriate standards.

It also encompasses the correct positioning of road signs, barriers and/or warning devices, and the procedure of issuing/accepting electrical permits. It also includes the visual and other necessary checks to confirm that equipment and associated hardware have been correctly maintained according to design and are in a safe condition to undertake tests prior to putting into service, and updating of maintenance data, such as as-built drawings and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and

© Commonwealth of Australia, 2025 Powering Skills Organisation

circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRIS67 Solve problems in energy supply network equipment

Competency Field

Rail Traction

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to maintain traction network wiring systems	**1.1** Work schedule(s), including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		requirements and established procedures for the maintenance of traction network wiring systems are obtained and confirmed for the purposes of the work to be performed and communicated to relevant personnel
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Hazards are identified; WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.8	Relevant personnel at worksite are confirmed current in cardiopulmonary resuscitation (CPR), first aid, other rescue procedures and related work procedures according to requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures
	1.12	Rail/road signs, barriers and warning devices are positioned in accordance with requirements
	1.13	Environmental constraints applicable to work are identified and control measures applied
2 Carry out the maintenance of traction	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in

© Commonwealth of Australia, 2025 Powering Skills Organisation

network wiring systems		accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures
	2.4	Essential knowledge and associated skills are applied in the safe maintenance of traction network wiring systems to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5	Maintenance, including repair and/or replacement of overhead traction wiring systems, including the modification and re-adjustment of overhead traction conductors is carried out in accordance with the work schedule and requirements/established procedures
	2.6	Profiling is completed according to established procedures
	2.7	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.8	Unplanned events in the maintenance of traction network wiring systems are undertaken within the scope of established procedures
	2.9	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.10	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the maintenance of traction network wiring systems	**3.1**	Work undertaken is checked against design drawings and work schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where

© Commonwealth of Australia, 2025 Powering Skills Organisation

applicable

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures

3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

3.5 Relevant work permits are signed off and the overhead traction network wiring system is returned to service in accordance with requirements

3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT36A Maintain traction network wiring systems.

Assessment Requirements for UETTDRRT36 Maintain traction network wiring systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining associated conductor equipment including at least four (4) of the following:
  - support structure
  - span
  - section insulator
  - neutral section
  - midpoint anchor
  - support equipment
  - tension regulators
  - stay/guy wire
  - tramway support network
- maintaining conductor and support wires including at least two (2) of the following:
  - catenary
  - dropper
  - contact/trolley*
  - feeder
  - earth conductor
  - drape/potential jumper
  - (*must do)
- performing work from at least one (1) of the following:
  - elevated work platform (EWP)
  - ladder
  - mobile platform
- using tools and equipment including at least two (2) of the following:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - tensioning equipment*
  - specialised tools
  - ropes
  - geometry profiling equipment
  - (*must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to the electrical traction
- electrical traction voltage and current circuit paths encompassing:
  - transmission distribution voltages
  - traction supply system and voltages
  - return and stay current paths, including electrolysis
- relationship of sectioning, section insulator and overlaps/air gaps in a traction power system
- traction power system components encompassing:
  - function of transformer/rectifiers
  - configuration and purpose of traction overhead wiring systems
  - function of isolators/switches
  - function of the circuit breaker
  - reliability and security of traction supply
- traction power system electrical protection encompassing:
  - load protection
  - surge protection
  - fault protection
  - electrolytic protection
- impact of electromagnetic forces encompassing:
  - telephone interference
  - effects of television/radio interference
- insulation methods in a traction power system encompassing:
  - types of electrical insulation
  - insulation coordination
  - reason for electrical clearances
- bonding systems - structure bonds, traction bonds/bonding cables and impedance bonds
- ancillary conductors - feeder wires, current return path and other ancillary conductors
- relationship of current and potential drapers/jumpers to the traction power system
- methods to achieving smooth current collector transitions and interfaces

© Commonwealth of Australia, 2025 Powering Skills Organisation

- dynamic and static forces encompassing:
  - types that effect traction systems
  - effects on effective registration
  - techniques to minimise the adverse effects
- overhead traction equipment encompassing:
  - types - switches/isolators, fuse switches, links, section insulators and fuses
  - purpose
- types of overhead traction components encompassing:
  - types - cantilever hardware, droppers, bay components, portal hardware, head span hardware, section insulators, neutral sections, registration fittings, steady span, tension regulators and cross spans
  - purposes
- types of conductors used for overhead wiring encompassing:
  - hard-drawn; computer-aided drafting (CAD); and tin-bearing copper, aluminium, steel and other alloyed conductors
- types of traction wire support structures encompassing:
  - portals, cantilevers, drop pieces, head spans, cross spans and pull-offs
- ancillary equipment encompassing:
  - types - surge arresters, booster and auxiliary transformers
  - purpose
- methods for replacing conductors encompassing:
  - preformed fittings
  - compression fittings
  - wedged fittings
  - bolted splices
  - lugs
  - bolted clamps
- methods for replacing components encompassing:
  - feeders
  - droppers
  - dissimilar conductors
  - jumpers
  - surge arresters
- use of plant and equipment for maintenance work encompassing:
  - EWP
  - ladders
  - works trains
  - rail-mounted overhead wiring equipment/vehicles
  - road/rail height access machinery/vehicles
  - voltage detectors

© Commonwealth of Australia, 2025 Powering Skills Organisation

- micrometer/gauges
- tension wrenches
- dynamometers
- other specialised tools.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRRT37 Maintain traction network equipment and components

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance of overhead traction electrical equipment and components as well as associated hardware, including ancillary equipment.

It includes the repair or replacement of like-for-like electrical components/equipment and associated hardware and the undertaking of safe working practices on or about the running line/track. It also encompasses the isolation of systems and circuits for safe working according to work plans and the correct positioning of road signs, barriers and/or warning devices and the procedure of issuing/accepting electrical permits.

It also includes the visual inspection and necessary checks to confirm that equipment, components and associated hardware are in a safe condition to test prior to putting to service, the undertaking of tests as required to ensure the integrity of the traction system prior to putting back into service, and the updating of maintenance data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

UETTDRRT99 Test and verify rail traction installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to test and verify rail traction installations in the electricity supply industry (ESI).

It includes inspecting, testing and verifying rail traction installations are safe and comply with all requirements. It also includes working safely, carrying out visual inspections and mandatory, optional and functional test procedures, identifying non-compliance defects and mandatory reporting requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to inspect, test and verify rail traction installations	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for accessing, testing and verification of rail traction installations are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained to access rail corridor, understood and signed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Specialist test and measurement equipment for testing and verification of rail traction installations are obtained, inspected, calibrated and confirmed in working order in accordance with workplace procedures
	1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with track protection officer and/or network control officer and workplace procedures
	1.10 Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out visual inspection, test and verification of Rail Traction installation	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2 Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3 Testing and verification of rail traction installations are completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.4 Rail traction installations and associated hardware are visually inspected and confirmed as positioned, secured and terminated/connected in accordance with job requirements and workplace procedures
	2.5 Energised tests and/or measurements, as required, to verify rail traction installations are determined in accordance with WHS/OHS requirements and conducted within workplace safety procedures
	2.6 Rail traction installations are checked for suitability and compliance with organisational construction standards and relevant electrical rail traction network supply standards
	2.7 Rail traction installation protection methods and devices are validated as meeting organisational construction and relevant rail traction network protection standards

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.8	Rail traction installation switchgear is appropriately rated and validated, meeting functional requirements of organisational construction and relevant distribution network protection standards
	2.9	Rail traction installations earthing system and multiple earth neutral (MEN) system components are installed and compliance verified in accordance with workplace construction procedures and distribution network standards
	2.10	Mandatory tests are conducted to verify rail traction installation is in accordance with workplace procedures
	2.11	Solutions used to solve problems are applied in accordance with workplace procedures
	2.12	Quality checks of work are undertaken in accordance with workplace procedures
3 Report inspection and test findings	**3.1**	WHS/OHS risk control work completion measures and procedures are followed
	3.2	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.3	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.4	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.5	Non-compliance defects are identified, corrected and/or reported in accordance with workplace procedures
	3.6	Recommendations for rectifying defects are made in accordance with workplace procedures
	3.7	Mandatory documentation is completed in accordance with workplace procedures
	3.8	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.9	Relevant work permits are signed off and electrical equipment (network infrastructure) returned to service in

© Commonwealth of Australia, 2025 Powering Skills Organisation

accordance with workplace procedures

3.10 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT99A Test and verify rail traction installations.

Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7

Assessment Requirements for UETTDRRT99 Test and verify rail traction installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- checking rail traction installations for suitability using at least two (2) of the following types of inspection techniques:
  - visual*
  - infra-red camera
  - X-ray
  - camera
  - binoculars/telescope
  - (* must do)
- installing at least one (1) of the following alternating current (a.c.) earthing and multiple earth neutral (MEN) or direct current (d.c.) rail connection system components including:
  - pyramid
  - delta pi
  - enterprise specific type
- using at least three (3) of the following:
  - insulators
  - clamps
  - bolts
  - conductor spacers
  - vibration dampers
  - structural components
- solving rail traction installation problems, including at least one (1) of the following types of rail traction conductors:
  - copper
  - aluminium

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - steel
  - aluminium/steel reinforced
- working safely in confined spaces and aloft using at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)
  - portable platform
  - gondola
  - hook ladder*
  - elevated work box
  - (*must do)
- obtaining relevant testing and measurement equipment, tools and personal protective equipment (PPE) required for testing and verifying rail traction installations including:
  - using the following types of testing and earth/bond equipment:
    - voltage/ de-energised indicating device
    - earthing conductors
- completing all the following:
  - reporting procedures
  - reporting outcomes.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislated regulations, including:
  - legislation and regulations that require installations and equipment to be tested to ensure they are safe
  - the person/bodies responsible for the various aspects of ensuring rail traction installations are safe
  - results of tests that show a rail traction installation is safe for connection to the supply
  - results of periodic inspection and tests that show construction site wiring and equipment is safe to use
  - results of periodic inspection and tests that show the rail traction installations electrical equipment are safe to use
- testing installations, including:
  - rail traction system phasing, phase rotation and polarity is correct and conform to network construction standards
  - electrical rail traction network voltage levels comply with network supply standards
  - potential present upon rail traction network neutral conductors conform network supply standards
  - insulation resistance is adequate
  - earthing system and MEN system components are verified as correctly installed

© Commonwealth of Australia, 2025 Powering Skills Organisation

- documentation, including:
  - results of tests conducted on a rail traction installation in accordance with work requirements to ensure the rail traction installation is safe
  - documents of periodic inspection and testing of rail traction installation and equipment in accordance with requirements
  - non-compliances and defects reported in accordance with established procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for testing and verifying rail traction installations
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB21 Diagnose and rectify faults in substation environment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to diagnose and rectify faults in substation in the electricity supply industry (ESI).

It includes identifying and analysing fault conditions including isolating, repairing and restoring substation control circuits.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for fault finding and rectification in power system substation environment	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and monitored in accordance with workplace procedures
	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out fault finding within the substation environment	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions/preventative actions taken in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6 Faults in power system substation are diagnosed and rectified to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.7 Faults are located, identified and affected circuits isolated in accordance with the work schedules, job requirements and workplace procedures
	2.8 Faults in power system substation control circuits are rectified in an agreed timeframe and to workplace quality standards with a minimum of waste
	2.9 Unplanned events in the diagnosis and analysis of faults are responded to in accordance with workplace procedures
	2.10 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills in accordance with requirements
	2.11 Circuit functions are restored in accordance with work schedules, job requirements and workplace procedures
	2.12 Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete fault finding within the substation environment	**3.1** Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2 Safe working documentation is surrendered, and equipment made ready for service in accordance with workplace procedures
	3.3 Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB21A Diagnose and rectify faults in substation environment.

Assessment Requirements for UETTDRSB21 Diagnose and rectify faults in substation environment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults on at least two (2) of the following system faults:
  - high voltage (HV) circuit breaker control system fault
  - transformer control system fault
  - direct current (d.c.) supply systems fault
  - d.c. switchgear and equipment fault
- diagnosing faults using at least three (3) of the following testers:
  - multimeters
  - tong testers
  - insulation resistance/continuity tester
  - low resistance high current tester
  - overload injection tester
  - specialist test equipment
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV0 equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; and types, selection, maintenance and use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records -audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
    - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams,

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans
    - processes of updating switching diagrams
- enterprise-specific specialised tools, including:
    - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors; polarity testers and phase rotation)
    - characteristics, capabilities and application of specialised tools for a particular job
    - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
    - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
    - techniques in pre-use inspection on the serviceability of specialised tools
    - techniques in the selection, use, maintenance, care and storage of specialised tools
    - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
    - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be installed
    - identification of components within the equipment to be installed and associated control housings
    - use, characteristics and capabilities of specialised tools and equipment
    - enterprise-specific policies and procedures for equipment to be installed
    - control equipment and auxiliary relays, flags and alarms
    - techniques in evaluating serviceability of equipment to be installed
    - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
    - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types of enterprise-specific computer software
    - techniques in storing and retrieving data and reports from the computer
    - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
    - calculation of results and data measurements using the computer

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
    - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems, and accumulators
    - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
    - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
    - types of fault conditions - failure to operate, failure in service, = including the appropriate procedures for work on or in service plant/equipment
    - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
    - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures; and the operating principles of these devices and components
    - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
    - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
    - techniques in the use of protective apparatus and apparel for substation work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
    - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
    - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - the rescue of personnel from energised conductors, emergency descent from an EWP, and/or rescue from confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV a.c. and d.c. supply systems, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other appropriate diagrammatic representations
  - LV design specifications, supply requirements, electrical load assessments
  - substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements
  - control equipment and auxiliary relays, flags and alarms
  - common panel layouts
- LV substation switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to LV substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the LV switching operator
  - operational forms, access authorities and permits associated with LV switching - types of operational forms, access authorities and permits, and purpose and procedures for operational forms
  - use, care and operation of equipment associated with LV substation switching
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV substation switching or indicating devices
  - operation of protection systems and substation equipment
  - restrictions pertaining to LV switching equipment
  - earthing LV electrical apparatus practices and procedures for access
  - LV switching techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

- restrictions pertaining to enterprise-specific procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB22 Carry out power systems substation inspection

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to carry out power system substation inspection in the electricity supply industry (ESI).

It includes the security, electrical and environmental inspections of substations, , recording of information and reporting defective/non-compliant conditions in accordance with industry standards and workplace procedures.

The application of the skills and knowledge described in this unit may require a licence to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to carry out substation inspections	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out substation inspections	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired, as appropriate, and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions in accordance with workplace procedures
	2.6	Substation equipment, environmental protection systems and security systems are inspected to comply with job

© Commonwealth of Australia, 2025 Powering Skills Organisation

	requirements and workplace procedures
	2.7 Critical defects are assessed for level of safety/system impact and communicated to appropriate personnel for further action
	2.8 Minor defects and/or non-conformances are rectified in-situ
	2.9 Substation inspections are performed to ensure completion in agreed timeframes, to quality standards and in accordance with workplace procedures
	2.10 Unplanned events are responded to in accordance with workplace procedures
3 Record the outcomes of substation inspections	**3.1** Completed work is checked against works schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2 Safe working documentation is surrendered in accordance with workplace procedures, as required
	3.3 Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4 Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures and appropriate personnel are notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB22A Carry out power systems substation inspection.

Assessment Requirements for UETTDRSB22 Carry out power systems substation inspection

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing substation inspections on at least one (1) of the following:
  - transmission substation
  - distribution substation
  - traction substation
  - zone substation
  - terminal switching stations
- performing substation inspections on all of the following:
  - substation plant and equipment
  - substation environmental systems
  - substation security systems
- performing substation inspection on at least ten (10) of the following:
  - circuit breakers
  - transformers
  - control systems
  - operating mechanism cabinets
  - voltage transformers
  - current transformers
  - surge arrestors
  - capacitor banks
  - static VAR compensator (SVC)
  - synchronous condenser
  - harmonic filters
  - rectifier transformers

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - rectifiers
  - invertors
  - negative reactors
  - energy dissipation resistors
  - disconnectors/isolators
  - earth switches
  - fault throwing switches
  - sectionalisers
  - a.c. and d.c. supply systems
  - control room environments
  - batteries
  - chargers
  - proving de-energised equipment
  - fire systems equipment
  - oil spill equipment
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including a.c., d.c. and combinations of both
  - types of fault conditions - failure to operate, failure in service, including the appropriate procedures for work on in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, overpressure, under pressure, and out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures; and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present

© Commonwealth of Australia, 2025 Powering Skills Organisation

WHS/OHS hazards to persons in the workplace

- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials, oil containment facilities and systems
  - rescue and release procedures - rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB23 Install and maintain substation direct current systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain substation direct current systems in the electricity supply industry (ESI).

It includes installing and maintaining substation direct current (DC) systems such as main batteries, communication batteries, DC lighting systems, battery chargers, uninterrupted power supply (UPS) systems and associated control circuits in accordance with workplace procedures. It also includes diagnosing faults, replacing faulty equipment, conducting pre-commissioning/re-commissioning tests and interpreting test results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to install and/or maintain substation d.c. systems	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out the installation and maintenance of substation d.c. systems	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.6	Substation d.c. systems are installed safely to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.7	Installation of substation d.c. systems is performed in accordance with work schedules, job requirements and workplace procedures
	2.8	Maintenance of substation d.c. systems is performed in

© Commonwealth of Australia, 2025 Powering Skills Organisation

		accordance with work schedules, job requirements and workplace procedures
	2.9	Installation and/or maintenance of substation d.c. systems are completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.10	Unplanned events or conditions are responded to in accordance with workplace procedures
	2.11	Substation d.c. systems are performance tested in accordance with workplace procedures and job specifications
	2.12	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete the installation and maintenance of substation d.c. systems	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and equipment made ready for service in accordance with workplace procedures, if required
	3.3	Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRSB23 Install and maintain substation direct current systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- working on at least one (1) of the following types of batteries:
  - nickel cadmium batteries
  - lead acid batteries
  - gel cell batteries
- working on at least one (1) of the following battery systems:
  - main batteries
  - communication batteries
- working on all of the following equipment:
  - battery chargers
  - d.c. control circuits
- performing at least two (2) of the following types of tests:
  - cell voltage test
  - hydrometer/specific gravity test
  - battery discharge and capacity tests
  - impedance testing
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with

© Commonwealth of Australia, 2025 Powering Skills Organisation

switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
    - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors; polarity testers and phase rotation)
    - characteristics, capabilities and application of specialised tools for a particular job
    - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
    - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
    - techniques in pre-use inspection on the serviceability of specialised tools
    - techniques in the selection, use, maintenance, care and storage of specialised tools
    - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
    - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be installed
    - identification of components within the equipment to be installed and associated control housings
    - use, characteristics and capabilities of specialised tools and equipment
    - enterprise-specific policies and procedures for equipment to be installed
    - control equipment and auxiliary relays, flags and alarms
    - techniques in evaluating serviceability of equipment to be installed
    - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risk, types, selection, maintenance and use of PPE, responsibilities and protocols and safe working clearances
    - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types of enterprise-specific computer software
    - techniques in storing and retrieving data and reports from the computer
    - techniques in using the data management systems in following necessary commands and

© Commonwealth of Australia, 2025 Powering Skills Organisation

protocols in accordance with enterprise-specific procedures
    - calculation of results and data measurements using the computer
    - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
    - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
    - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
    - types of electrical systems, including a.c., d.c. and combinations of both
    - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in-service plant/equipment
    - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
    - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
    - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
    - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
    - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
    - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
    - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP), and any

© Commonwealth of Australia, 2025 Powering Skills Organisation

WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials, and oil containment facilities and systems
  - rescue and release procedures - rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV a.c. and d.c. supply systems, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other appropriate diagrammatic representations
  - LV design specifications, supply requirements and electrical load assessments
  - substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements,
  - control equipment and auxiliary relays, flags and alarms
  - common panel layouts.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB24 Maintain high voltage power system circuit breakers

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain high voltage (HV) power system circuit breakers in the electricity supply industry (ESI).

It includes diagnosing faults, repairing and replacing HV power system circuit breakers components in accordance with workplace procedures. It also includes performing diagnostic checks, pre-commissioning tests and function checks involving circuit breakers and associated control circuits and interpreting these tests against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain HV power system circuit breakers	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks

© Commonwealth of Australia, 2025 Powering Skills Organisation

		assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared in accordance with the work schedule and to minimise risk and damage to property and personnel in accordance with established procedures
2 Carry out maintenance on HV power system circuit breakers	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with established procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Essential knowledge and associated skills are applied for the safe maintenance of HV power system circuit breakers and maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.7	Maintenance of HV power system circuit breakers is performed in accordance with work schedules, job requirements and workplace procedures
	2.8	Maintenance of HV power system circuit breakers is completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.9	Unplanned events or conditions are responded to in accordance with established procedures
3 Complete the maintenance of HV power system circuit breakers	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and HV power system circuit breakers are made ready for service in accordance with workplace procedures
	3.3	Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB24A Maintain high voltage power system circuit breakers.

Assessment Requirements for UETTDRSB24 Maintain high voltage power system circuit breakers

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- working on at least two (2) of the following types of high voltage (HV) power system circuit breakers:
  - bulk oil circuit breakers
  - small oil volume circuit breaker
  - air blast circuit breaker
  - vacuum circuit breaker
  - gas-insulated HV switchgear (GIS) circuit breakers
  - gas circuit breakers
- working on at least two (2) of the following types of operating mechanisms:
  - spring operated mechanism
  - solenoid operated mechanism
  - hydraulic operated mechanism
  - pneumatic operated mechanism
- performing at least three (3) of the following tests:
  - insulation resistance tests
  - contact resistance tests
  - minimum close and open tests (reduced voltage tests)
  - sequence timing tests
  - contact travel/timing test
  - vibration test
  - gas pressure tests
- performing measuring or sampling tests using at least two (2) of the following:
  - gas measuring devices
  - pressure measuring devices

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - sulfur hexafluoride (SF6) gas sampling
  - oil sampling
  - SF6 moisture content (dew point)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- LV switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - PPE for LV switching
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise

© Commonwealth of Australia, 2025 Powering Skills Organisation

regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools

© Commonwealth of Australia, 2025 Powering Skills Organisation

- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives, stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including a.c., d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type,

© Commonwealth of Australia, 2025 Powering Skills Organisation

including:

- types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
- types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
- techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace

- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP), and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV a.c. and d.c. supply systems, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other

© Commonwealth of Australia, 2025 Powering Skills Organisation

appropriate diagrammatic representations
  - LV design specifications, supply requirements, electrical load assessments
  - substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements
  - control equipment and auxiliary relays, flags and alarms
  - common panel layouts
- design principles of hydraulic and pneumatic operating mechanism principles, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, standards, supply authority regulations and-or enterprise requirements
  - control system operating diagrams, including nomenclature, symbols and operating sequences, and units of measurement
  - fundamentals of pressure intensification, forces and energy accumulators
  - applications for substation HV equipment - circuit breaker operating mechanisms, interrupter mechanisms, pumps and compressors, GIS operating mechanisms and transformer cooling systems
  - safety precautions for work on hydraulic and/or pneumatic systems - safe working practices and procedures; identification of hazards, assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- LV substation switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to LV substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the LV switching operator
  - operational forms, access authorities and permits associated with LV switching - types of operational forms, access authorities and permits, purpose and procedures for operational forms, access authorities and permits
  - use, care and operation of equipment associated with LV substation switching
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV substation switching or indicating devices
  - operation of protection systems and substation equipment
  - restrictions pertaining to LV switching equipment
  - earthing LV electrical apparatus practices and procedures for access
  - LV switching techniques
  - restrictions pertaining to enterprise -specific procedures
- circuit breaker operating principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to circuit breakers
  - requirements for the use of manuals, circuit breaker diagrams/plans and drawings

© Commonwealth of Australia, 2025 Powering Skills Organisation

- operation of protection systems and substation equipment associated with circuit breakers
- use, characteristics and capabilities of specialised tools and equipment
- capabilities of operating mechanisms
- capabilities of interrupter chambers
- enterprise-specific policies and procedures for the operation of circuit breakers
- techniques in evaluating serviceability of circuit breaker operation
- control equipment and auxiliary relays, flags and alarms
- safety precautions when constructing circuit breakers - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and access for operating.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB25 Maintain high voltage power and instrument transformers

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain high voltage (HV) power and instrument transformers in the electricity supply industry (ESI).

It includes conducting routine diagnostic tests within agreed specifications and maintaining associated cooling systems, controls, alarm systems and tertiary cabling and/or busbar systems in accordance with workplace procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain HV power and instrument transformers	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and monitored in accordance with workplace procedures
	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out the maintenance of HV power and instrument transformers	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are monitored and preventive action taken and/or appropriate authorities consulted, where necessary, in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	HV power system and instrument transformers are maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.7	Transformers/instrument transformers are isolated and maintained in accordance with manufacturer instructions and workplace procedures
	2.8	Diagnostic measurements are performed and results interpreted, analysed and recorded in accordance with workplace procedures
	2.9	Transformers/instrument transformers are restored in accordance with workplace policies and procedures
	2.10	Unplanned events or conditions are responded to in accordance with workplace procedures
3 Complete the maintenance of HV power and instrument transformers	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and transformer/instrument transformer made ready for service
	3.3	Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

© Commonwealth of Australia, 2025 Powering Skills Organisation

environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB25A Maintain high voltage power and instrument transformers.

Assessment Requirements for UETTDRSB25 Maintain high voltage power and instrument transformers

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least one (1) of the following:
  - power transformer
  - high voltage (HV) reactor
- maintaining at least two (2) of the following:
  - auxiliary transformer
  - current transformer
  - voltage transformer
- performing at least two (2) of the following tests:
  - insulation resistance tests
  - dielectric dissipation factor tests
  - low voltage (LV) excitation checks
  - frequency response analysis
  - recovery voltage measurements
  - ratio checks
  - winding resistance tests
  - oil sampling
  - low resistance, high current connection testing
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised LV equipment, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- LV switching principles including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - PPE for LV switching
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to the WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance including, cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental

© Commonwealth of Australia, 2025 Powering Skills Organisation

monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records

- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including a.c., d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

- substation safety practices including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP), and any OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV AC and DC supply systems including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other appropriate diagrammatic representations
  - LV design specifications, supply requirements and electrical load assessments
  - substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements,
  - control equipment and auxiliary relays, flags and alarms
  - common panel layouts
- design principles of HV insulation systems, including:
  - insulation design principles - common materials used, electrical characteristics, thermal characteristics, uses and applications to substation HV plant and equipment, grading,

construction and cooling
    - common contaminants and their effects - internal contaminants and external contaminants
    - testing and measurement of insulation quality - test types and common measuring instruments and techniques, resistance and resistivity, losses, measurement errors, temperature corrections, and safe work practices related to testing and measurement
    - safety precautions when testing and measuring HV insulation systems - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- principles of power transformer construction and operations, including:
    - transformer types - shell, core, auto, double wound, three phase, single phase and combinations of these types, step up and step-down transformers, transmission and generation types
    - reactor types - shunt and series, applications and design considerations
    - iron circuit characteristics - steel types, losses and techniques used to eliminate excess eddy currents and other circulating currents
    - winding configurations and construction techniques - helical, spiral, disc and interleaved disc types
    - insulation methods and techniques - fully insulated windings and graded insulation techniques, and oil filled and gas filled power transformers
    - transformer and reactor ratings, losses and efficiency - equivalent circuits and vector relationships, and impedance percent
    - nameplate details - basic insulation level (BIL), tapping winding detail, physical layout, cooling ratings and physical details
    - transformer and reactor cooling types and their effects on design and rating
    - transformer and reactor auxiliaries - temperature indicators, over pressure devices and control systems
    - winding configurations - star-star, star-delta, star-zigzag, nomenclature and common methods of diagrammatic representation of winding configuration
    - operating constraints as single units and in parallel
    - tapping windings - placement issues, tapping range, on-load tap changer (OLTC) versus off load tap changer techniques, types in use (high speed resistor, reactor and vacuum types, Jansen mechanisms, dead tank and live tank types), and control system characteristics
    - HV bushing selection – type, insulation system used, rating, BIL, selection criteria and testing considerations
- LV substation switching principles, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to LV substation switching
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
    - role and responsibilities of the LV switching operator
    - operational forms, access authorities and permits associated with LV switching - types of

operational forms, access authorities and permits, purpose and procedure for operational forms, access authorities and permits
- use, care and operation of equipment associated with LV substation switching
- LV switchgear – types, categories, application and operating capabilities
- operation of LV substation switching or indicating devices
- operation of protection systems and substation equipment
- restrictions pertaining to LV switching equipment
- earthing LV electrical apparatus practices and procedures for access
- LV switching techniques
- restrictions pertaining to enterprise-specific procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB26 Install high current d.c. equipment and switchgear

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install high current equipment and switchgear in the electricity supply industry (ESI).

It includes installing direct current (d.c.) switchgear and other equipment, such as rectifier transformers, rectifiers, invertors, isolators and links, harmonic filters, negative reactors and energy dissipation resistors EDR's to ensure correct installation to workplace procedures and industry standards.

It also includes isolating systems and/or circuits for safe working in accordance with work plans, visual inspections and necessary checks to ensure equipment and components have been correctly installed in accordance with design and are in a safe condition for pre-commissioning tests prior to energisation, as well as updating installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to install high current d.c. switchgear and equipment	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out installation of high current d.c. switchgear and equipment	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions in accordance with workplace procedures
	2.6	High current d.c. switchgear and equipment are installed in accordance with work schedules, job requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.7	High current d.c. switchgear and equipment are safely installed to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.8	Unplanned events or conditions are responded to in accordance with workplace procedures
3 Complete installation of high current d.c. switchgear and equipment	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and equipment made ready for service
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB26A Install high current DC equipment and switchgear.

Assessment Requirements for UETTDRSB26 Install high current d.c. equipment and switchgear

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using testing and measuring instruments including all of the following:
  - 1500 V drop out tester
  - ammeter
  - low resistance high current
  - megger tester
  - multimeters
  - voltmeter
- using drawings and diagrams including all of the following:
  - building layouts
  - cable block and schedule diagrams
  - operating and substation arrangement diagrams wiring diagrams
  - schematic drawings
- installing at least six (6) of the following types of equipment:
  - d.c. circuit breakers
  - rectifier transformers
  - rectifiers
  - isolators and links
  - harmonic filters
  - negative reactors
  - energy dissipation resistors
- installing at least ten (10) of the following associated equipment:
  - d.c. feeders
  - surge arresters

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - isolating links
  - busbars
  - cables
  - cable supports
  - pits and enclosures
  - protection/alarm systems
  - control wiring
  - metering
  - supervisory interface
  - cabinets
  - REC
- installing at least three (3) of the following types of protection:
  - buchholz
  - frame leakage
  - overcurrent
  - earth leakage
  - reverse current
  - delta I
  - diode protection
- performing all of the following terminations and alignments:
  - cable terminations
  - busbar termination/joint
  - alignment of electrical contacts of withdrawable equipment
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - methods of obtaining the up-to-date information on enterprise policy and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- substation d.c. circuit breaker principles, including:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the d.c. circuit breakers
  - types of d.c. circuit breakers- self and withdrawable types
  - characteristics of d.c. circuit breakers- purpose of d.c. circuit breakers and application of d.c. circuit breakers
  - principles of operation of different types of d.c. circuit breakers- arc expulsion versus arc containment, latched versus magnetically held, advantages and disadvantages of different types, fixed or withdrawable and protection/diagnostic technology
  - principles of operation of high-speed d.c. circuit breakers– characteristics and calibration
  - how d.c. circuit breakers are designated - feeder, rectifier, EDR, bus-section and negative breakers, auto-reclose or non-auto-reclose type
  - type and function of d.c. circuit breaker peripheral components - delta I relays, busbar, control wiring, trunk and associated plug/receptacle
  - identification, characteristics, application and care of d.c. circuit breaker components - holding coils, closing coils, contactors, resistors, arc chutes, blow-out coils, arcing contacts, main contacts, braids, moving arm, pole face, arcing horns, electronic cards,

© Commonwealth of Australia, 2025 Powering Skills Organisation

dashpots, fingers, diode strings, fuses, insulators, latching mechanisms, motors, wiring and relays
    - characteristics, application and care of hand and specialised tools used on d.c. circuit breakers - combination/multigrips/long nose pliers, side cutters, screwdrivers, wire strippers, crimpers, knife, hacksaw, hammers, mallets, levels, tape measures, spanners, T-wrench, pistol drills, battery drills, heat gun, de-soldering tools and soldering iron/torches, Allen keys, socket spanners, gauges, feeler gauges and specialist tools supplied by the manufacturer
    - characteristics, application and care of test and measurement instruments used on d.c. CB's - multimeters, tong testers, ammeters, voltmeters, ohmmeters, test lamps, high and low voltage insulation resistance/ continuity testers, earth resistance tester, ductor and drop-out test sets
- installation of substation d.c. circuit breakers and associated equipment, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation of substation d.c. circuit breakers
    - safety precautions when installing substation d.c. circuit breakers - safe operation procedures; WH/?OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of PPE; permit to work systems and isolation procedures; safe working practices when using specialised equipment; and emergency response and rescue, including first aid
    - use and interpretation of technical manuals and diagrams - manufacturer/enterprise manuals; block, wiring and schematic diagrams; 1500 V sectioning diagrams; substation HV operating diagrams; substation arrangement diagrams and layout drawings; technical/manufacturer specifications; and maintenance instructions/schedules
    - techniques in the safe installation of d.c. circuit breakers CB's
- LV substation switching principles including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to LV substation switching
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
    - role and responsibilities of the LV switching operator
    - operational forms, access authorities and permits associated with LV switching - types of operational forms, access authorities and permits, purpose and procedures for operational forms, and access authorities and permits
    - use, care and operation of equipment associated with LV substation switching
    - LV switchgear – types, categories, application and operating capabilities
    - operation of LV substation switching or indicating devices
    - operation of protection systems and substation equipment
    - restrictions pertaining to LV switching equipment
    - earthing LV electrical apparatus practices and procedures for access
    - LV switching techniques
    - restrictions pertaining to enterprise-specific procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB27 Maintain high current d.c. equipment and switchgear

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain high current direct current (d.c.) equipment and switchgear in the electricity supply industry (ESI).

It includes maintaining d.c. switchgear and other equipment, such as rectifier transformers, rectifiers, invertors, isolators and links, harmonic filters, negative reactors and energy dissipation resistors (EDR)s. It also includes diagnosing of faults and replacement and repair in accordance to workplace procedures and industry standards, isolating systems and/or circuits for safe work in accordance with work plans, visual inspections and necessary checks to ensure safe energisation, and updating of maintenance data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain high current d.c. switchgear and equipment	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.3	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and in accordance with workplace procedures
	1.4	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others and for completion within acceptable timeframes, to agreed quality standards and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out the maintenance of high current d.c. switchgear and equipment	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions in accordance with workplace procedures
	2.6	Maintenance and repair of high current d.c. switchgear and equipment are maintained and repaired in accordance with works schedules, job requirements and workplace procedures
	2.7	High current d.c. switchgear and equipment are safely maintained to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
	2.8	Unplanned events or conditions are responded to in accordance with workplace procedures
3 Complete the maintenance of high current d.c. switchgear and equipment	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and equipment made ready for service
	3.3	Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB27A Maintain high current DC equipment and switchgear.

Assessment Requirements for UETTDRSB27 Maintain high current d.c. equipment and switchgear

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining high current direct current (d.c) switchgear and equipment using all of the following:
  - multimeters
  - low resistance high current
  - megger tester
  - ammeter
  - voltmeter
  - 1500 V drop out tester
  - wiring diagrams
  - schematic drawings
  - operating and substation arrangement diagrams
  - building layouts
  - cable block and schedule diagrams
- maintaining at least six (6) of the following types of equipment:
  - direct current circuit breakers
  - rectifier transformers
  - rectifiers
  - isolators and links
  - harmonic filters
  - negative reactors
  - energy dissipation resistors
- maintaining at least ten (10) of the following associated equipment:
  - d.c. feeders
  - surge arresters

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - isolating links
  - busbars
  - cables
  - cable supports
  - pits and enclosures
  - protection/alarm systems
  - control wiring
  - metering
  - supervisory interface
  - cabinets
  - REC
- using all of the following:
  - cable terminations
  - busbar termination/joint
  - alignment of electrical contacts of withdrawable equipment
- dealing with unplanned events on at least one occasion

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policy and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue

management, and training and competency development - understanding and promotion

- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with the enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- substation d.c circuit breaker principles, including:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the d.c. circuit breakers
  - types of d.c. circuit breakers - self and withdrawable types
  - characteristics of d.c. circuit breakers - purpose of d.c. circuit breakers and application of d.c. circuit breakers
  - principles of operation of different types of d.c. circuit breakers - arc expulsion versus arc containment, latched versus magnetically held, advantages and disadvantages of different types, fixed or withdrawable and protection/diagnostic technology
  - principles of operation of high-speed d.c. circuit breakers – characteristics and calibration
  - how d.c. circuit breakers are designated - feeder, rectifier, EDR, bus-section and negative breakers, auto-reclose or non-auto-reclose type
  - type and function of d.c. circuit breaker peripheral components - delta I relays, busbar,

© Commonwealth of Australia, 2025 Powering Skills Organisation

control wiring, trunk and associated plug/receptacle

- identification, characteristics, application and care of d.c. circuit breakers components - holding coils, closing coils, contactors, resistors, arc chutes, blow-out coils, arcing contacts, main contacts, braids, moving arm, pole face, arcing horns, electronic cards, dashpots, fingers, diode strings, fuses, insulators, latching mechanisms, motors, wiring and relays
- characteristics, application and care of hand and specialised tools used on d.c. circuit breakers - combination/multigrips/long nose pliers, side cutters, screwdrivers, wire strippers, crimpers, knife, hacksaw, hammers, mallets, levels, tape measures, spanners, T-wrench, pistol drills, battery drills, heat gun, de-soldering tools and soldering iron/torches, Allen keys, socket spanners, gauges, feeler gauges and specialist tools supplied by the manufacturer
- characteristics, application and care of test and measurement instruments used on d.c. circuit breakers - multimeters, tong testers, ammeters, voltmeters, ohmmeters, test lamps, HV and LV insulation resistance/continuity testers, earth resistance tester, ductor and drop-out test sets

- maintenance of substation d.c. circuit breakers and associated equipment, including:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the maintenance of d.c. circuit breakers
  - requirements for the use and interpretation of manuals, system diagrams/plans and drawings - 1500V sectioning diagrams, substation HV operating diagrams, substation arrangement diagrams and layout drawings, technical/manufacture specifications and maintenance instructions/schedules
  - relationship and function of d.c. circuit breaker equipment/component interface - d.c. circuit breaker frame, connection fingers, associated busbar, physical arrangements and clearances
  - safety precautions when undertaking maintenance procedures on d.c. circuit breakers - safe working practices; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of PPE; permit to work systems and isolation procedures; types and function of specialised equipment; safe working practices when using specialised equipment; and emergency response and rescue, including first aid
  - techniques in maintenance of d.c. circuit breakers - closing and opening operations, range settings, adjustments and calibration, spring settings, main contact arrangement and auxiliary contact arrangement, arc chute inspection and procedures, basic fault finding and repair/adjustment techniques, control cards, their uses, application and fault finding, and earthing requirements and techniques
  - techniques in testing and commissioning of d.c. circuit breakers - supply authority regulations and/or enterprise requirements, standards and procedures
- installation of substation d.c. circuit breakers and associated equipment including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation of substation d.c. circuit breakers
  - safety precautions when installing substation d.c. circuit breakers - safe operation procedures; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of PPE; permit to work systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

and isolation procedures; safe working practices when using specialised equipment; and emergency response and rescue, including first aid

- use and interpretation of technical manuals and diagrams - manufacturer/enterprise manuals, block, wiring and schematic diagrams, 1500 V sectioning diagrams, substation HV operating diagrams, substation arrangement diagrams and layout drawings, technical/manufacturer specifications and maintenance instructions/schedules
- techniques in the safe installation of d.c. circuit breakers.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB29 Maintain capacitor bank equipment for voltage regulation

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain capacitor bank equipment for voltage regulation in the electricity supply industry (ESI).

It includes maintaining and repairing substation voltage regulating equipment and is restricted to high voltage (HV) capacitor banks and associated switching reactors and the inspection, recording of information, testing and measurement of the associated control circuits. It also includes the range of acceptance tests and discharge requirements for complete units within a substation in accordance with industry standards and workplace procedures, fault diagnosis and return to service tests and interpretation of test results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain voltage regulating equipment (capacitor banks)	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out the maintenance of voltage regulating equipment (capacitor banks)	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.6	Capacitor bank is isolated, discharged and maintained in accordance with workplace procedures
	2.7	Defective capacitor elements are identified, located and replaced in accordance with manufacturer instructions and workplace procedures
	2.8	Capacitor network is balanced and pre-service tests and measurements completed in accordance with workplace procedures
	2.9	Voltage regulating equipment (capacitor banks) are safely maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.10	Unplanned events are responded to in accordance with workplace procedures
3 Complete the maintenance of voltage regulating	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment (capacitor banks)		anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and the capacitor bank is made ready for service
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB29A Maintain capacitor bank equipment for voltage regulation.

Assessment Requirements for UETTDRSB29 Maintain capacitor bank equipment for voltage regulation

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least one (1) of the following systems:
  - double star neutral current unbalance type
  - voltage unbalance type, single star
- maintaining at least two (2) of the following components:
  - internal discharge resistor cans
  - external resistor type
  - switching reactors
  - neutral unbalance current transformer
- performing at least three (3) of the following types of tests:
  - insulation resistance tests
  - capacitance tests
  - unbalance current/voltage tests
  - primary injection tests
  - high voltage (HV) direct current d.c. withstand tests
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working

© Commonwealth of Australia, 2025 Powering Skills Organisation

practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
    - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when deal with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
    - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and

© Commonwealth of Australia, 2025 Powering Skills Organisation

catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
    - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
    - characteristics, capabilities and application of specialised tools for a particular job
    - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
    - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
    - techniques in pre-use inspection on the serviceability of specialised tools
    - techniques in the selection, use, maintenance, and care and storage of specialised tools
    - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
    - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be installed
    - identification of components within the equipment to be installed and associated control housings
    - use, characteristics and capabilities of specialised tools and equipment
    - enterprise-specific policies and procedures for equipment to be installed
    - control equipment and auxiliary relays, flags and alarms
    - techniques in evaluating serviceability of equipment to be installed
    - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
    - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types of enterprise-specific computer software
    - techniques in storing and retrieving data and reports from the computer
    - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any

© Commonwealth of Australia, 2025 Powering Skills Organisation

WHS/OHS requirements associated with the use of EWPs
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - the rescue procedures for personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- principles of power transformer construction and operations, including:
  - applications of static reactive plant in HV networks, including voltage control, volt-ampere reactive VAR control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB30 Maintain high voltage power system static VAR compensators (SVC)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain high voltage (HV) power system static VAR compensators (SVC) in the electricity supply industry (ESI).

It includes diagnosing faults, replacing and repairing high voltage power system static VAR compensator components. It also includes diagnostic and return to service tests and interpreting tests results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRSB25 Maintain high voltage power and instrument transformers

UETTDRSB29 Maintain capacitor bank equipment for voltage regulation

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain HV power system SVC	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.3	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out maintenance on HV power system SVC	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		immediate authorised personnel for directions in accordance with workplace procedures
	2.6	HV power system SVC are safely maintained and repaired to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
	2.7	Pre-service tests and measurements are conducted in accordance with enterprise procedures
	2.8	Unplanned events or conditions are responded to in accordance with workplace procedures
3 Complete the maintenance of HV power system SVC	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and HV power system SVC is made ready for service
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRSB30 Maintain high voltage power system static VAR compensators (SVC)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least two (2) of the following types of equipment:
  - static VAR compensator (SVC) power transformer
  - SVC auxiliary transformer
  - capacitors
  - reactors
  - cooling equipment
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - low voltage (LV) system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their

© Commonwealth of Australia, 2025 Powering Skills Organisation

use
    - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be installed
    - identification of components within the equipment to be installed and associated control housings
    - use, characteristics and capabilities of specialised tools and equipment
    - enterprise-specific policies and procedures for equipment to be installed
    - control equipment and auxiliary relays, flags and alarms
    - techniques in evaluating serviceability of equipment to be installed
    - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
    - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types of enterprise-specific computer software
    - techniques in storing and retrieving data and reports from the computer
    - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
    - calculation of results and data measurements using the computer
    - techniques in the preparation of preliminary works creation and closure
- principles of power system SVC, including:
    - applications of static reactive plant in HV networks, including voltage control, VAR control and transient response capacity
    - types of static reactive plant, including HV capacitors, HV reactors, SVC and combinations of these
    - operating characteristics and operational constraints, including point on wave switching issues
    - ratings, cooling systems and control systems and ancillary equipment used
    - configurations and system layout, including single star, double star and bridge type
    - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
    - techniques used when balancing elements within static reactive plant
    - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS

© Commonwealth of Australia, 2025 Powering Skills Organisation

risks; types, selection, maintenance and use of PPE.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB31 Maintain high voltage power system synchronous condensers

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain high voltage (HV) power system synchronous condensers in the electricity supply industry (ESI).

It includes diagnosing faults and replacing and repairing high voltage power system synchronous condenser components. It includes diagnostic and pre-commissioning tests involving synchronous condensers and interpreting these tests against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain HV power system synchronous condensers	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and monitored in accordance with workplace procedures
	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out maintenance on HV power system synchronous condensers	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	HV power system synchronous condensers are safely maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.7	Pre-service tests and measurements are conducted in accordance with enterprise procedures
	2.8	Unplanned events or conditions are responded to in accordance with workplace procedures
3 Complete the maintenance of HV power system synchronous condensers	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and the power system synchronous condenser made ready for service
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage or in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB31A Maintain high voltage power system

Assessment Requirements for UETTDRSB31 Maintain high voltage power system synchronous condensers

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least one (1) of the following windings:
  - stator winding
  - rotor winding
- maintaining the following system:
  - cooling system
- maintaining at least one (1) of the following systems:
  - control system
  - alarm system
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- LV switching principles, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - PPE for LV switching
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
    - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
    - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
    - characteristics, capabilities and application of specialised tools for a particular job
    - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
    - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
    - techniques in pre-use inspection on the serviceability of specialised tools
    - techniques in the selection, use, maintenance, and care and storage of specialised tools
    - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
    - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be installed
    - identification of components within the equipment to be installed and associated control housings
    - use, characteristics and capabilities of specialised tools and equipment
    - enterprise-specific policies and procedures for equipment to be installed
    - control equipment and auxiliary relays, flags and alarms
    - techniques in evaluating serviceability of equipment to be installed
    - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
    - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service including the appropriate procedures for work on in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities regarding the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of

© Commonwealth of Australia, 2025 Powering Skills Organisation

extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP), and any WHS/OHS requirements associated with the use of EWPs
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - the rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- synchronous condenser principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to synchronous condensers
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of synchronous condensers installed
  - identification of components within the synchronous condensers and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for synchronous condensers
  - techniques in evaluating serviceability of synchronous condensers operation
  - safety precautions when testing and measuring synchronous condensers - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; safe working clearances and communicating worksite procedures
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB32 Maintain power transformer on load tap changers (OLTC)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain power transformer on load tap changers (OLTC) in the electricity supply industry (ESI).

It includes maintaining, repairing and overhauling substation voltage regulating equipment restricted to resistor and reactor type high speed on load tap changers but does not include the main tank tap selector mechanism. It also includes inspecting, recording of information, testing and measuring of associated control circuits, range of acceptance tests required on installed complete units within the parent power transformer, diagnostic and pre-commissioning checks and tests involving tap changers and interpreting these results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRSB25 Maintain high voltage power and instrument transformers

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to maintain voltage regulating equipment (tap changers)	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are

© Commonwealth of Australia, 2025 Powering Skills Organisation

		identified and communicated with relevant personnel
	1.3	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out the maintenance of voltage regulating equipment (tap changers)	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.6	Oil circuits are isolated and tap changer vessels drained in accordance with workplace and environmental protection procedures
	2.7	Tap changer is withdrawn and maintained in accordance with manufacturer instructions and workplace procedures
	2.8	Pre-service tests and measurements are conducted in accordance with workplace procedures
	2.9	Voltage regulating equipment (tap changers) are safely maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste
	2.10	Unplanned events or conditions are responded to in accordance with workplace procedures
3 Complete the maintenance of voltage regulating equipment (tap changers)	**3.1**	Completed work is checked against works schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and transformer made ready for service
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETTDRSB32 Maintain power transformer on load tap changers (OLTC)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least one (1) of the following systems:
  - high speed resistor type and drive mechanism
  - high speed reactor type and drive mechanism
- maintaining at least two (2) of the following pieces of equipment:
  - live tank diverter switch
  - dead tank diverter switch
  - tap selector
- performing at least three (3) of the following tests:
  - insulation resistance tests
  - transition resistor tests
  - contact resistance tests
  - sequence timing tests
  - ratio checks
  - winding resistance tests
  - oil sampling
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship

© Commonwealth of Australia, 2025 Powering Skills Organisation

- methods of obtaining the up-to-date information on enterprise policies and procedures
- rules and regulations
- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
- overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion

- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - low voltage (LV) system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise

© Commonwealth of Australia, 2025 Powering Skills Organisation

regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
    - characteristics, capabilities and application of specialised tools for a particular job
    - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
    - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and or hiring arrangements
    - techniques in pre-use inspection on the serviceability of specialised tools
    - techniques in the selection, use, maintenance, and care and storage of specialised tools
    - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
    - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be installed
    - identification of components within the equipment to be installed and associated control housings
    - use, characteristics and capabilities of specialised tools and equipment
    - enterprise-specific policies and procedures for equipment to be installed
    - control equipment and auxiliary relays, flags and alarms
    - techniques in evaluating serviceability of equipment to be installed
    - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of (PPE); responsibilities and protocols; and safe working clearances
    - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types of enterprise-specific computer software
    - techniques in storing and retrieving data and reports from the computer
    - techniques in using the data management systems in following necessary commands and protocols in accordance with the enterprise-specific procedures
    - calculation of results and data measurements using the computer
    - techniques in the preparation of preliminary works creation and closure
- principles of power transformer high speed on-load tap changers (OLTC), including:
    - selector types and applications for HV power transformers
    - diverter switch types and applications for HV power transformers, including live tank, dead tank, resistor type, reactor type, vacuum type, pennant flag and pennant cycle

© Commonwealth of Australia, 2025 Powering Skills Organisation

- ratings and construction principles
- operating mechanism types, stored energy systems and associated control systems
- operating principles and operating sequences of selectors and diverters
- measurement requirements, including contacts, differential wear, transition resistors and transient protection devices, rotation lag, out of sequence controls and end-of-life unit and component assessment
- online diagnostic tools and devices
- ancillary equipment, including online filters, over pressure relays and devices
- testing requirements, including cycle timing, differential delay, energy accumulator mechanical and operational tests, and control system functional tests
- safety precautions when testing and maintaining HV power transformer OLTC - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB33 Install high voltage plant and equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install high voltage (HV) plant and equipment in the electricity supply industry (ESI).

It includes conducting pre-commissioning tests within agreed specifications, installing earthing systems, tertiary cabling and/or busbar systems. It does not include associated protection systems.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan the installation of HV plant and equipment	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out the installation of HV plant and equipment	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.6	Earthing requirements are identified and installed or confirmed installed in accordance with workplace procedures
	2.7	Foundations and other appropriate civil works are constructed and/or confirmed ready for the erection of HV plant and equipment
	2.8	HV plant and equipment is erected and associated HV connections, low voltage (LV) controls and supplies are installed in accordance with manufacturer instructions and workplace procedures
	2.9	Remedial actions are taken to overcome shortfalls

© Commonwealth of Australia, 2025 Powering Skills Organisation

		encountered in the work schedule in accordance with job requirements and workplace procedures
	2.10	Pre-commissioning checks are performed and HV plant and equipment made ready for service in accordance with workplace procedures
	2.11	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	2.12	Essential knowledge and associated skills are applied for the safe installation of HV plant and equipment to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
	2.13	Unplanned events or conditions are responded to in accordance with workplace procedures
3 Complete the installation of HV plant and equipment	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered and installed power system HV plant and equipment made ready for service
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified
	3.6	Associated drawings, schematics and diagrams are updated to reflect work as executed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

Assessment Requirements for UETTDRSB33 Install high voltage plant and equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing at least two (2) of the following pieces of equipment:
  - power transformer
  - high voltage (HV) reactor (series or parallel)
  - auxiliary transformer
  - current transformer
  - voltage transformer
  - capacitor bank
  - circuit breaker
  - high current direct current (d.c.) switchgear and/or equipment
- installing at least two (2) of the following pieces of associated equipment:
  - disconnector
  - fault throwing switch
  - earth switch
  - earth grid connections
  - surge arrestor
  - neutral earthing transformer
  - resistor bank
  - busbar
- performing at least three (3) of the following tests:
  - insulation resistance tests
  - dielectric dissipation factor tests
  - low voltage (LV) excitation checks
  - continuity checks

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - ratio checks
  - winding resistance tests
  - gas pressure checks
  - timing checks
  - contact resistance checks
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised LV equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- LV switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - PPE for LV switching
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire=fighting procedures, fatigue

© Commonwealth of Australia, 2025 Powering Skills Organisation

management, and training and competency development - understanding and promotion

- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the

© Commonwealth of Australia, 2025 Powering Skills Organisation

appropriate procedures for work on or in service plant/equipment
    - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
    - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
    - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
    - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
    - techniques in the use of protective apparatus and apparel for substations work, including responsibilities regarding the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
    - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
    - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
    - control of oil spills - identification, use and maintenance of spill oil control equipment and materials, and oil containment facilities and systems
    - rescue and release procedures - the rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
    - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
    - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV a.c. and d.c. supply systems, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other appropriate diagrammatic representations
  - LV design specifications, supply requirements and electrical load assessments
  - substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements
  - control equipment and auxiliary relays, flags and alarms
  - common panel layouts
- design principles of hydraulic and pneumatic operating mechanism principles, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, standards, supply authority regulations and/or enterprise requirements
  - control system operating diagrams, including nomenclature, symbols and operating sequences, and units of measurement
  - fundamentals of pressure intensification, forces and energy accumulators
  - applications for substation HV equipment - circuit breaker operating mechanisms, interrupter mechanisms, pumps and compressors, gas insulated switchgear (GIS) operating mechanisms and transformer cooling systems
  - safety precautions for work on hydraulic and/or pneumatic systems - safe working practices and procedures; identification of hazards, assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- principles of power transformer construction and operations, including:
  - transformer types - shell, core, auto, double wound, three phase, single phase and combinations of these types, step up and step-down transformers, transmission and generation types
  - reactor types - shunt and series, applications and design considerations
  - iron circuit characteristics - steel types, losses and techniques used to eliminate excess eddy currents and other circulating currents
  - winding configurations and construction techniques - helical, spiral, disc and interleaved disc types
  - insulation methods and techniques - fully insulated windings and graded insulation techniques, oil filled and gas filled power transformers
  - transformer and reactor ratings, losses and efficiency - equivalent circuits and vector relationships, and impedance percent
  - nameplate details - basic insulation level (BIL), tapping winding detail, physical layout, cooling ratings and physical details
  - transformer and reactor cooling types and their effects on design and rating
  - transformer and reactor auxiliaries - temperature indicators, over pressure devices and control systems
  - winding configurations - star-star, star-delta, star-zigzag, nomenclature and common

© Commonwealth of Australia, 2025 Powering Skills Organisation

methods of diagrammatic representation of winding configuration
    - operating constraints as single units and in parallel
    - tapping windings - placement issues, tapping range, on-load tap changer (OLTC) versus off load tap changer techniques, types in use (high speed resistor, reactor and vacuum types, Jansen mechanisms, dead tank and live tank types), and control system characteristics
    - HV bushing selection – type, insulation system used, rating, BIL, selection criteria and testing considerations
- circuit breaker operating principles, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to circuit breakers
    - requirements for the use of manuals, circuit breaker diagrams/plans and drawings
    - operation of protection systems and substation equipment associated with circuit breakers
    - use, characteristics and capabilities of specialised tools and equipment
    - capabilities of operating mechanisms
    - capabilities of interrupter chambers
    - enterprise specific policies and procedures for the operation of circuit breakers
    - techniques in evaluating serviceability of circuit breaker operation
    - control equipment and auxiliary relays, flags and alarms
    - safety precautions when constructing circuit breakers - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and access for operating

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB34 Carry out surveys using thermovision techniques

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to carry out surveys using thermovision techniques in the electricity supply industry (ESI).

It includes thermographic inspections of transmission/distribution systems and/or substation equipment. It also includes surveying, inspecting, recording information and reporting of defective/non-compliant conditions in accordance with workplace procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to carry out thermographic surveys	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Equipment, tools and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
	1.8	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out thermographic surveys	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
	2.3	Safe working documentation is acquired, as appropriate, and requirements completed in accordance with workplace procedures
	2.4	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.6	Circuit load conditions are assessed, relevant personnel and/or organisations consulted and appropriate circuit

© Commonwealth of Australia, 2025 Powering Skills Organisation

		adjustments made prior to survey in accordance with workplace procedures
	2.7	Substation equipment and/or transmission/distribution systems are surveyed, joints, connections and components surveyed and assessed in accordance with workplace procedures
	2.8	Non-conformance defects are assessed for level of safety/system impact and communicated to appropriate personnel for further action in accordance with workplace procedures
	2.9	Circuits are restored to pre-survey conditions and appropriate personnel/organisations informed in accordance with workplace procedures
	2.10	Thermographic surveys are performed to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
	2.11	Unplanned events or conditions are responded to in accordance with workplace procedures
3 Record the outcomes of thermographic surveys	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Safe working documentation is surrendered if appropriate
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB34A Carry out surveys using thermovision techniques.

Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7

Assessment Requirements for UETTDRSB34 Carry out surveys using thermovision techniques

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing surveys using thermovision techniques in one (1) of the following substations:
  - transmission substation
  - distribution substation
  - traction substation
  - zone substation
- performing surveys using thermovision techniques on at least one (1) of the following:
  - substation apparatus and equipment
  - transmission/distribution system conlow resistance high currents and components
- performing surveys using thermovision techniques on at least three (3) of the following associated equipment:
  - disconnectors
  - transmission/distribution system conlow resistance high currents
  - mid-span joints
  - bolted palms and connections
  - terminations
  - jumpers
  - pot heads
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise specific policies and procedure instructions, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance including, cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - low voltage (LV) system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
- characteristics, capabilities and application of specialised tools for a particular job
- safety policies, procedures and precautions with regards to using, transporting and storage of specialised tools
- selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
- techniques in pre-use inspection on the serviceability of specialised tools
- techniques in the selection, use, maintenance, and care and storage of specialised tools
- identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
- techniques for the safe use of specialised power tools

- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with the enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions

© Commonwealth of Australia, 2025 Powering Skills Organisation

and systems
    - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
    - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
    - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
    - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in service plant/equipment
    - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
    - types of components - complete unit of plant and/or equipment, replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures and the operating principles of these devices and components
    - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
    - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
    - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
    - techniques in the use of protective apparatus and apparel for substations work, including responsibilities regarding the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
    - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
    - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
    - control of oil spills - identification, use and maintenance of spill oil control equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

and materials; and oil containment facilities and systems
    - rescue and release procedures - the rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
    - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
    - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of HV insulation systems, including:
    - insulation design principles - common materials used, electrical characteristics, thermal characteristics, uses and applications to substation HV plant and equipment, grading, construction and cooling
    - common contaminants and their effects - internal contaminants and external contaminants
    - testing and measurement of insulation quality - test types and common measuring instruments and techniques, resistance and resistivity, losses, measurement errors, temperature corrections, and safe work practices related to testing and measurement
    - safety precautions when testing and measuring HV insulation systems - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use PPE
- principles of power transformer construction and operations, including:
    - transformer types - shell, core, auto, double wound, three phase, single phase and combinations of these types, step up and step-down transformers, transmission and generation types
    - reactor types - shunt and series, applications and design considerations
    - iron circuit characteristics - steel types, losses and techniques used to eliminate excess eddy currents and other circulating currents
    - winding configurations and construction techniques - helical, spiral, disc and interleaved disc types
    - insulation methods and techniques - fully insulated windings and graded insulation techniques, oil filled, and gas filled power transformers
    - transformer and reactor ratings, losses and efficiency - equivalent circuits and vector relationships and impedance percent
    - nameplate details - basic insulation level (BIL), tapping winding detail, physical layout, cooling ratings and physical details
    - transformer and reactor cooling types and their effects on design and rating
    - transformer and reactor auxiliaries - temperature indicators, over pressure devices and control systems
    - winding configurations - star-star, star-delta, star-zigzag, nomenclature and common methods of diagrammatic representation of winding configuration
    - operating constraints as single units and in parallel
    - tapping windings - placement issues, tapping range, on-load tap changer (OLTC) versus off load tap changer techniques, types in use (high speed resistor, reactor and vacuum types, Jansen mechanisms, dead tank and live tank types), and control system

© Commonwealth of Australia, 2025 Powering Skills Organisation

characteristics
    - HV bushing selection – type, insulation system used, rating, BIL, selection criteria and testing considerations
- circuit breaker operating principles, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to circuit breakers
    - requirements for the use of manuals, circuit breaker diagrams/plans and drawings
    - operation of protection systems and substation equipment associated with circuit breakers
    - use, characteristics and capabilities of specialised tools and equipment
    - capabilities of operating mechanisms
    - capabilities of interrupter chambers
    - enterprise-specific policies and procedures for the operation of circuit breakers
    - techniques in evaluating serviceability of circuit breaker operation
    - control equipment and auxiliary relays, flags and alarms
    - safety precautions when constructing circuit breakers - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and access for operating.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB35 Maintain discrete control and protection systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the isolation, inspection, testing, adjustment, repair, refurbishment and/or overhaul and functional checks of discrete protection and control devices. It includes the requirements to prove the functionality of discrete devices, such as direct current (d.c.) supplies, overcurrent, overload, earth fault, transformer temperature controls, alarms and indication circuits.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the maintenance of discrete protection and control devices	**1.1** Work schedules, including drawings, plans, requirements procedures and material lists, are acquired, analysed and the extent of work determined
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		ensure safe systems of work are followed and according to established procedures
	1.4	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to agreed quality standards and in accordance with established policies and procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, acquired and confirmed safe and in technical working order
	1.7	Liaison issues with other personnel and/or authorities are resolved and activities coordinated to facilitate the work
	1.8	Personnel participating in the work, including plant operators and contractors, are fully briefed, their respective responsibilities explained and coordinated, and appropriate authorisation checked in accordance with established procedures
	1.9	Worksite is prepared according to the work schedule and to minimise risk and damage to property and personnel in accordance with established procedures
2 Carry out the maintenance of discrete protection and control devices	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are implemented and monitored in accordance with established procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place according to requirements and established procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with established procedures
	2.4	Lifting, use of power tools/equipment techniques and practices are safely exercised in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.6	Maintenance of discrete protection and control devices is undertaken according to requirements and established procedures
	2.7	Data is analysed and compared with compliance specifications to ensure completion of the maintenance work is within an agreed timeframe and according to requirements
	2.8	Essential knowledge and associated skills are applied for the safe maintenance of discrete protection and control devices to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.9	Unplanned events or conditions are responded to in accordance with established procedures
3 Complete the maintenance of discrete protection and control devices	**3.1**	Final inspections of discrete protection and control devices are undertaken and checked against the work schedule to ensure they comply with all requirements, including all required documentation
	3.2	Anomalies between the work schedule requirements and measured performance are reported and solutions identified in accordance with established procedures
	3.3	Safe working documentation is surrendered and transformer made ready for service
	3.4	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.5	Tools, equipment and any surplus resources and materials are cleaned, checked and returned to storage in accordance with established procedures
	3.6	Required work completion records, reports and/or documentation and information are completed, processed and appropriate personnel notified in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB35A Maintain discrete control and protection systems.

Assessment Requirements for UETTDRSB35 Maintain discrete control and protection systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- undertaking functional checks and testing of discrete control and protection devices including all of the following:
  - isolate discrete protection
  - control and indications
  - overcurrent and earth fault relays
  - direct current (d.c.) supplies
  - trip and control circuits
  - alarms and indications
  - function test of discrete devices
- inspecting discrete control and protection devices including at least three (3) of the following:
  - neutral displacement
  - no-volt changeover
  - discrete auto-reclose
  - d.c. frame leakage
  - oil surge (site maintenance)
  - voltage regulation
  - parallel operation
  - thermal overloads
  - transformer temperature control devices
  - CEL fail
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- principles of isolation and tagging procedures associated with protection testing encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation, maintenance, isolation and tagging procedures
  - requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
  - techniques in documenting isolations
  - techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
  - techniques in the installation and maintenance procedures protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- maintenance procedures associated with discrete protection schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the maintenance procedures
  - requirements for the use of maintenance manuals, system diagrams/plans and drawings
  - techniques in maintenance procedures – planning, policy and testing techniques
  - close out requirements
- relay manufacturer specifications encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of relay manufacturer specifications
  - requirements for the use of relay manufacturer manuals, system diagrams/plans and drawings
  - types, function and characteristics of specific relays - differences between specific relays used for the same functionality
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants, encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
  - identification of environmental issues associated with the handling and disposing of

© Commonwealth of Australia, 2025 Powering Skills Organisation

insulation materials

- safety precautions when handling and disposing of heat dissipation materials - safe working practices; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures; types and function of specialised equipment; safe working practices when using specialised equipment; and emergency response and rescue, including first aid
- techniques in the handling and disposing of insulation materials - polychlorinated biphenyls (PCB), asbestos, insulating Oil and sulfur hexafluoride (SF6) gas.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB36 Commission discrete control and protection systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the commissioning/testing of discrete protection and control systems and includes isolation, inspection, monitoring, testing, adjustment and functional checks on systems, such as overcurrent, overloads, earth fault, alarms and controls.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

		(WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.4	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to agreed quality standards and in accordance with established policies and procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, acquired and confirmed safe and in technical working order
	1.7	Liaison issues with other personnel and/or authorities are resolved and activities coordinated to facilitate the work
	1.8	Personnel participating in the work, including plant operators and contractors, are fully briefed, their respective responsibilities explained and coordinated, and appropriate authorisation checked in accordance with established procedures
	1.9	Worksite is prepared according to the work schedule and to minimise risk and damage to property and personnel in accordance with established procedures
2 Carry out the commissioning/testing of discrete protection and control systems	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are implemented and monitored in accordance with established procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place according to requirements and established procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with established procedures
	2.4	Lifting, use of power tools/equipment techniques and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		practices are safely exercised in accordance with established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.6	Commissioning/testing of discrete protection and control systems is undertaken according to requirements and established procedures
	2.7	Data is analysed and compared with compliance specifications to ensure commissioning/testing of the discrete system is completed within an agreed timeframe and according to requirements
	2.8	Essential knowledge and associated skills are applied for the safe commissioning/testing of discrete protection and control systems to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.9	Unplanned events or conditions are responded to in accordance with established procedures
3 Complete the commissioning/testing of discrete protection and control systems	**3.1**	Final inspections and functional testing of the discrete protection and control systems are completed and checked to ensure compliance with all requirements
	3.2	Anomalies between requirements and measured performance are reported and solutions identified in accordance with established procedures
	3.3	Safe working documentation is surrendered and discrete protection and control systems are made ready for service
	3.4	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.5	Tools, equipment and any surplus resources and materials are cleaned, checked and returned to storage in accordance with established procedures
	3.6	Required work completion records, reports and/or documentation and information are completed, processed and appropriate personnel notified in

accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB36A Commission discrete control and protection systems.

Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7

Assessment Requirements for UETTDRSB36 Commission discrete control and protection systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- undertaking final inspections and functional testing of the discrete protection and control systems including all of the following:
  - isolating protection
  - inspecting controls and alarms with discrete protection and control systems
  - isolating current transformers
  - calibrating discrete protection and control relays
  - carrying out function tests (trips and alarms) on discrete protection and control systems without assistance
  - writing reports on the performance of discrete protection and control systems
- undertaking commissioning and testing of discrete control and protection devices including at least three (3) of the following:
  - overcurrent
  - frame leakage
  - cooling controls
  - buchholz/surge protection
  - direct current (d.c.) supplies control
  - neutral displacement circuit breaker reclose
  - d.c. frame leakage
  - CEL fail
  - earth fault
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- commissioning procedures associated with discrete protection schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy and testing techniques
  - close out requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSB37 Maintain power system distribution field devices

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance of automatic circuit reclosers (ACRs), gas switches, regulators and line capacitors; and communication systems, including mobile phones and trunked mobile radio (TWR). It includes secondary injection, timing and function tests, and proving correct tripping, reclosing and remote operation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

Competency Field

Substation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the maintenance of distribution field devices	**1.1** Work schedules, including drawings, plans, requirements, procedures and material lists, are acquired, analysed and the extent of work determined
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according

© Commonwealth of Australia, 2025 Powering Skills Organisation

		to established procedures
	1.4	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to agreed quality standards and in accordance with established policies and procedures
	1.5	Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
	1.6	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, acquired and confirmed safe and in technical working order
	1.7	Liaison issues with other personnel and/or authorities are resolved and activities coordinated to facilitate the work
	1.8	Personnel participating in the work, including plant operators and contractors, are fully briefed, their respective responsibilities explained and coordinated, and appropriate authorisation checked in accordance with established procedures
	1.9	Worksite is prepared according to the work schedule and to minimise risk and damage to property and personnel in accordance with established procedures
2 Carry out the maintenance of distribution network field devices	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are implemented and monitored in accordance with established procedures
	2.2	Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place according to requirements and established procedures
	2.3	Safe working documentation is acquired and requirements completed in accordance with established procedures
	2.4	Lifting, use of power tools/equipment techniques and practices are safely exercised in accordance with established procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to

Assessment Requirements for UETTDRSB37 Maintain power system distribution field devices

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- undertaking functional checks and testing of power system distribution field devices including all of the following:
  - assembly
  - functional checks
  - applying device settings
  - secondary injections
  - timing
  - remote operations
- maintaining power system distribution field devices including at least three of the following:
  - Automatic circuit reclosers (ACRs)
  - gas switches
  - regulators
  - line capacitors
  - mobile phone systems
  - trunked mobile radio (TMR) systems
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- principles of isolation and tagging procedures associated with protection testing encompassing:
    - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation, maintenance, isolation and tagging procedures
    - requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
    - techniques in documenting isolations
    - techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
    - techniques in the installation and maintenance procedures protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- maintenance procedures associated with discrete protection schemes encompassing:
    - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the maintenance procedures
    - requirements for the use of maintenance manuals, system diagrams/plans and drawings
    - techniques in maintenance procedures – planning, policies and testing techniques
    - close out requirements
- relay manufacturer specifications encompassing:
    - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of relay manufacturer specifications
    - requirements for the use of relay manufacturer manuals, system diagrams/plans and drawings
    - types, function and characteristics of specific relays - differences between specific relays used for the same functionality
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants, encompassing:
    - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
    - identification of environmental issues associated with the handling and disposing of insulation materials
    - safety precautions when handling and disposing of heat dissipation materials - safe working practices; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures; types and function of specialised equipment; safe working practices when using specialised equipment; and emergency response and rescue, including first aid
    - techniques in the handling and disposing of insulation materials - polychlorinated

UETTDRSB38 Commission power system distribution field devices

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the commissioning of automatic circuit reclosers (ACRs), gas switches, regulators and line capacitors; and communication systems, including mobile phones and trunked mobile radio (TMR). It also includes communication with the operating authority, testing, clearing after testing and energising using techniques that are acceptable to the operating authority.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

UETTDRSB39 Perform power system substation switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to perform power system substation switching operation to a given schedule in the electricity supply industry (ESI).

It includes conducting switching operations in a substation in accordance with given instructions, switching schedule and workplace procedures. It also includes operation of substation switching devices such as circuit breakers, air break switches, fuses, reclosers, ring main units and isolators.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for substation switching to given schedule	**1.1** Switching and work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for substation switching are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Hazards are identified, WHS/OHS risks are assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant authority is obtained to access and perform switching in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out substation switching to given schedule	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Substation switching to given schedule are applied to ensure completion in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Communications with switching control officer are established and maintained throughout isolation operation in accordance with workplace procedures
	2.5	Electrical equipment, associated circuits, line/network or worksite to be switched is isolated and checked as de-energised using appropriate devices, earthed, where required, and load transferred in accordance with job requirements and workplace procedures
	2.6	Substation switching to a given schedule is performed in accordance with work schedule, job requirements and workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.8 Relevant work permits are prepared and issued in accordance with workplace procedures
	2.9 Quality checks of work are undertaken in accordance with workplace procedures
3 Complete substation switching to given schedule	**3.1** Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5 Relevant work permits are signed off, safety devices are removed, and the system is re-energised and returned to service in accordance with workplace procedures
	3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB39A Perform power system substation switching operation to a given schedule.

Assessment Requirements for UETTDRSB39 Perform power system substation switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- checking all the following:
  - approvals/clearances
  - access permits
- using all the following:
  - operating sticks
  - operating earths
  - voltage detectors
- using all the following:
  - phasing equipment
  - ground equipment isolating handles and earths
- using at least one (1) of the following:
  - links
  - air break switches
  - fuses
- using at least two (2) of the following:
  - reclosers
  - ring main units
  - circuit breakers
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- installation of switchgear and associated equipment, including:
  - types and function of various switchgear - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types switchgear, installation procedures, earthing, and requirements and techniques
  - types of equipment - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment - standards, codes, legislation, supply authority regulations and/or enterprise requirements, assembly and erecting procedures, earthing requirements and techniques, and pole mounted locations
  - maintenance procedures for switchgear and equipment - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
  - testing and commissioning - ESI standards and procedures
- low voltage (LV) switching principles including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - personnel protective equipment (PPE) for LV switching
- high voltage (HV) switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits, purpose and procedure for operational forms, and access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and

© Commonwealth of Australia, 2025 Powering Skills Organisation

effectiveness of operational earthing, acceptable industry procedures, PPE and HV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV fault switching principles, including:
    - primary causes, effects and types of HV electrical faults
    - HV protection devices - main components, types, categories, applications and functions
    - basic principle of operation of HV system protection devices
    - protection coordination and protection zoning
    - HV feeder auto-reclosing suppression – function and application
    - circuit condition requirements and switching considerations when paralleling and separating HV feeders
- HV distribution transformer principles, including:
    - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer-cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
    - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system, including:
    - application and function of SWER system components
    - circuit arrangement
    - principle of operation
    - hazards and procedures associated with faulty SWER systems
    - procedure to isolate, energise and commission SWER substations
- feeder automation system, including:
    - function of feeder automation system and the main components
    - operation procedure for a remote field device from a local control station
    - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
    - SCADA system security interlocks and access restrictions
    - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
    - function of the main components of a local/remote control system
    - operation of a field devices using SCADA systems via a RAT, dial up annunciated system and local control station
- HV overhead and substation switching principles, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
- requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
- role and responsibilities of the HV switching operator
- operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
- use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
- HV switchgear – types, categories, application and operating capabilities
- operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings, types and applications, protection systems and substation equipment fault levels and settings, and types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
- operating switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry performing power system substation switching operations to a given schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSO32 Manage power systems network faults

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the management of single incident faults on electrical network plant to ensure prompt restoration of supply to affected customers.

Electrical network plant includes feeders, transformers and busbars from transmission to distribution voltages. The unit includes single incident faults ranging from simple (involving a single item and no loss of supply) to complex (involving multiple substations with extensive loss of supply). The unit also encompasses liaison with operating authorities and dispatching and managing field crews, as well as the monitoring of safe access to the network.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRSO41 Manage power systems transmission networks

UETTDRSO48 Respond to discrete and interdependent protection operations

UETTDRSO49 Coordinate power system operations in a regulated energy market

UETTDRSO50 Respond to complex power system protection operations

Generation/Distribution and Sub-transmission Pathway Unit Group

UETTDRSO34 Control power systems generating plant

UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks

Generation/Transmission Pathway Unit Group

UETTDRSO34 Control power systems generating plant

UETTDRSO38 Develop and evaluate power systems transmission switching programs

UETTDRSO47 Coordinate high voltage transmission network

Distribution and Sub-transmission Pathway Unit Group

UETTDRSO35 Manage high voltage distribution and sub-transmission network demand

UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks

Transmission Pathway Unit Group

UETTDRSO38 Develop and evaluate power systems transmission switching programs

UETTDRSO41 Manage power systems transmission networks

UETTDRSO42 Manage power systems transmission network demand

UETTDRSO47 Coordinate high voltage transmission network

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the management of a network fault	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the management of network faults, are reviewed and determined
	1.2 Purpose of the management is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the management of network faults are obtained or established with appropriate personnel
	1.4 Identification and testing procedures are discussed with/directed to appropriate personnel in order to ascertain the occurrence of a network fault
	1.5 Testing parameters are established from organisational established procedures on policies and specifications
	1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
	1.7 Work roles and tasks are allocated according to requirements and individual competencies
	1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.12	Action plan is developed in accordance with requirements and established procedures
2 Carry out the management of a network fault	**2.1**	Action plan is initiated and continually monitored to ensure outcomes are being met
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the network fault solution in accordance with requirements and/or established procedures
	2.3	Network fault management decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Stakeholders/customers are kept informed of current status regarding plan progress and recent developments
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of network fault management procedures is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged, coordinated and evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the management of a network fault	**3.1**	Final inspection of the network is undertaken to ensure it complies with all requirements and report includes all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of network fault management documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO32A Manage power systems network faults.

Assessment Requirements for UETTDRSO32 Manage power systems network faults

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- managing a network fault, including all of the following:
  - identifying a network fault by interpreting available alarms and event data
  - developing a plan to enable management of a network fault
  - implementing plans in order that the network be restored after a fault has occurred
  - effectively liaising with operating authorities and field crews to restore the network after a fault has occurred
  - documenting/debriefing actions upon restoration of the network
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to fault restorations encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to fault restorations
  - requirements for the use of operational manuals, system diagrams/plans and drawings
  - identifying and interpreting enterprise operating procedures
  - techniques in the applying enterprise operating procedures
- use of fault information to analyse and develop optimal network restoration strategies encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations standards, codes and/or enterprise requirements applicable to the analysis of protection targeting

© Commonwealth of Australia, 2025 Powering Skills Organisation

- requirements for the use of operational manuals, system diagrams/plans and drawings
- techniques in the collation of protection data
- techniques in the analysis and assessment of fault information – public, employee and protection equipment
- application methods of fault information to analyse and develop optimal network restoration strategies - public and employee safety, and enterprise reliability guidelines
- resource availability.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.
- relevant modelling tools, drawings, computerised electrical plant control and monitoring facilities

UETTDRSO33 Manage power systems critical events

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the management of critical events, such as simultaneous multiple network faults and storm events of various magnitudes. It includes liaison procedures with multiple operating authorities and dispatching and managing multiple field crews. It also encompasses monitoring of safe access to the network and invoking crisis management procedures and mutual aid plans.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Assessment Requirements for UETTDRSO33 Manage power systems critical events

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- managing a critical event including all of the following:
  - identifying a critical event
  - developing a plan to enable management of a critical event
  - implementing plans in order that the network be restored after the critical event has occurred
  - effectively liaising with operating authorities and field crews to restore the network after a critical event has occurred
  - documenting/debriefing actions upon restoration of the network
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to critical events encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to critical events
  - requirements for the use of operational manuals, system diagrams/plans and drawings
  - identifying and interpreting enterprise operating procedures
  - techniques in applying enterprise operating procedures.

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

UETTDRSO34 Control power systems generating plant

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the control of the generation side of a generation plant. It includes the assessment, evaluation and achievement of the synchronisation requirements to ensure machine and/or system stability during synchronisation. It also includes the control of the generation of electrical energy, the coordination of the generation control and the monitoring of the system/plant.

It also encompasses the analysis of the system/plant faults, the updating of the relevant documentation and the reporting of plant problems, movements, abnormalities and status in accordance with enterprise/site procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRSO48 Respond to discrete and interdependent protection operations

UETTDRSO49 Coordinate power system operations in a regulated energy market

Distribution and Sub-transmission Pathway Unit Group

UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks

Transmission Pathway Unit Group

UETTDRSO38 Develop and evaluate power systems transmission switching programs

UETTDRSO47 Coordinate high voltage transmission network

Competency Field

System Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the control of a generation plant	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the control of the generating plant, are reviewed and determined
	1.2 Purpose of the control is established after data is analysed and expected outcomes of the work are

© Commonwealth of Australia, 2025 Powering Skills Organisation

		confirmed with appropriate personnel
	1.3	Organisational established procedures on policies and specifications for the control of the generating plant are obtained or established with appropriate personnel
	1.4	Testing procedures are discussed with/directed to the appropriate personnel in order to ascertain the project brief
	1.5	Testing parameters are established from organisational established procedures on policies and specifications
	1.6	Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the control of a generation plant	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Decisions for the control of the generating plant are made on the basis of safety and effective outcomes according to requirements and/or established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4	Mathematical and/or engineering models of the control procedures are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of control procedures is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the control of a generation plant	**3.1**	Final review of the control procedures of the generating plant are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of the documents are issued and records are updated in accordance with established

Assessment Requirements for UETTDRSO34 Control power systems generating plant

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- managing an electricity generating plant including all of the following:
  - operating generator and excitation systems
  - controlling and coordinating generation of electrical energy
  - analysing prime mover and alternator faults
  - effectively liaising with operating and regulatory authorities
  - recording events using both written and computerised logging systems
  - documenting/debriefing actions following an event resulting in loss of generation
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to generating plant encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the procedures and work practices relating to generating plant
  - requirements for the use of operational manuals, system diagrams/plans and drawings
  - identifying and interpreting enterprise operating procedures
  - techniques in applying enterprise operating procedures
- voltage control techniques encompassing:
  - conditions leading to voltage collapse
  - effects on system of high voltage (HV) and low voltage (LV)
  - voltage control devices - voltage regulators applied to generators and synchronous phase

© Commonwealth of Australia, 2025 Powering Skills Organisation

modifiers; electromagnetic voltage regulators; series and parallel capacitors; on-load tap changer (OLTC) transformers and static VAR compensators (SVC's), including saturated reactor compensators, thyristor controlled reactor compensators and combined systems
    - production of harmonics and methods of harmonic control
    - location of voltage control devices within the system
- power flow control encompassing:
    - use of system components to control power flow patterns - base load, spinning reserve, regulating machines, rapid start plant, phase shifting transformers and load shedding
    - principles of automated control
    - synchronising power
    - relationship of power and frequency
    - machine stabilisation techniques
    - system oscillations and stability - damped and undamped oscillation, relationship of fault clearance times and system stability, and critical clearance times
- alternators operation and control encompassing:
    - constructional features of alternators - weights, lengths, cooling mediums, cooling systems, prime mover types, prime mover attachment, types of windings and core arrangements
    - principle of operation - induction machines and synchronous machines
    - modes of operation - island and infinite bus operation, running up of prime movers, loading the alternator, requirements for synchronising and methods of synchronising
    - use of reactive capability diagram - related diagram types, current circle diagram, performance chart, capability diagram, values represented, per unit representation, and limits representation and meaning
    - automatic voltage regulators (AVR) - need for voltage control, required attributes of an AVR, range, response time, constraints on AVR capability, desirable attributes of an AVR, power consumption, compensation, rotor stabilisation and automatic changeover systems, input and output requirements and components
    - operation on an infinite bus - definition of infinite bus, power/angle dependence, reactive flow/voltage dependence, power/angle diagram, effect of saliency, transient conditions, practical and theoretical stability limits, voltage dependence of stability, control of reactive flow using AVR and generator transformer tap changer
- prime mover principles encompassing:
    - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the prime movers
    - requirements for the use of operational manuals, system diagrams/plans and drawings
    - types, characterizes and applications of energy sources and conversion systems – wind, steam turbine, gas turbine and diesel.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

UETTDRSO35 Manage high voltage distribution and sub-transmission network demand

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the management of the switching of high voltage (HV) network components with due regard to the loadings and prevailing network constraints and includes scheduling of generators, VAR compensators, load shedding and non-essential loads in response to National Electricity Market Management Company (NEMMCO) or network requirements. It also includes voltage control equipment.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Assessment Requirements for UETTDRSO35 Manage high voltage distribution and sub-transmission network demand

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least three (3) system manipulations that encompass the following:
  - high voltage (HV) sub-transmission distribution network
  - transmission network manipulation to control loading on equipment
  - transformers with HV windings
  - HV busbars
  - HV isolators
  - HV switchgear (applicable to enterprise equipment)
- managing multiple switching instructions
- coordinating the status of access permits/authorities on HV network equipment
- ensuring network plant operates within design and regulatory requirements on a real time basis
- calculating line loading
- preparing and authorising HV distribution switching programs
- demonstrating application of supervisory control and data acquisition (SCADA) or equivalent
- analysing, diagnosing and reporting system failures
- calculating and analysing paralleling conditions on the interconnected HV system as applicable to the entity
- preparing, writing and checking switching sheets to undertake all of the following:
  - managing load
  - managing voltage
  - minimising loss
  - maximising system reliability
  - allowing safe network access for maintenance activities
  - allowing safe network access for construction activities

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - validating fault reports arising from system disturbances
- dealing with unplanned events on at least one (1) occasion,

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to managing network demand encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to managing network demand
  - requirements for the use of demand management manuals, system diagrams/plans and drawings
  - identifying and interpreting enterprise demand management procedures
  - techniques in applying enterprise demand management procedures
- effective management and communication encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to assisting in effective management and communication
  - enterprise operational principles - workplace WHS/OHS enterprise plan, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures
  - relationship between the management and employees - methods used to collate and distribute/disseminate information, responsibilities of each member of the work team, staff development activities and legislation requirements with regard to WHS/OHS training, methods of addressing barriers such as literacy and cultural differences, and provisions relating to WHS/OHS issue resolution
  - techniques associated with organisational policies and procedures related to human resources - relevant awards and certified agreements, legislation impacting on people management, range of support services and expertise available
  - techniques in managing relationships - identifying problems; methods of conflict resolution; methods of consultation, communication, negotiation and mentoring; and strategies for positive feedback
  - techniques in leadership in achieving enterprise strategic and operational plans
  - techniques in managing relationships under stress - stress management
- methodology used in writing enterprise-specific management reports encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the writing enterprise-specific management reports
  - techniques in researching, collating and analysing information for the report - recording, filing, retrieving systems, and storing and retrieving data from computer systems
  - relationship of management reports to enterprise policies and procedures - enterprise

© Commonwealth of Australia, 2025 Powering Skills Organisation

structure and resources, workplace WHS/OHS and risk management enterprise data, financial and operational data, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures

- techniques in writing enterprise-specific management reports - methods used to disseminate information and facilitate enterprise requirements, document proformas, and compliance and legislative requirements to produce effective reports in the appropriate format.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation including, workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

UETTDRSO36 Develop low voltage distribution switching programs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the preparation and/or checking of activities required to place the low voltage (LV) distribution network in a state in which work can safely be performed whilst minimising customer outages. The format is typically a written sequence of switching items in a pre-defined format.

It includes planning outages and taking into account loading of network components. It also includes planning the management of multiple outages on the LV distribution network and the calculation of network loading conditions to ensure the network is operating within designed parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least three (3) switching programs that between them encompass at least seven (7) of the following:
  - a transformer with a low voltage (LV) winding and fixed tap
  - LV busbars
  - LV isolators
  - LHV switchgear (applicable to enterprise equipment)
  - phasing and phase rotation
  - commissioning an item of LV plant
  - a planned interruption to a LV customer
  - installation of a mobile generators
- preparing switching instructions to isolate, test and earth all of the following:
  - all enterprise transformer types with LV windings
  - all enterprise LV busbar types
  - all enterprise LV feeder types
  - all enterprise LV circuit breakers, isolators or switches
- preparing, writing and checking switching sheets to do all of the following:
  - manage load
  - manage voltage
  - minimise losses
  - maximise network reliability
- checking all above types of switching instructions
- coordinating all above types of switching instructions
- calculating plant loading
- applying and administrating supervisory control and data acquisition (SCADA) or

© Commonwealth of Australia, 2025 Powering Skills Organisation

enterprise-specific system
- analysis and diagnosis of system failure
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; and how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- control of generator systems for synchronisation of a LV genset encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator encompassing:
  - safety precautions specific to the synchronisation of gensets - safe working practices and procedures, and synchronising procedures
  - techniques in the installation of gensets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of LV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single LV job - overhead systems, indoor systems, customer installations and kiosk substations
- different types and function of distribution components encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - types, functions and characteristics of distribution components
  - safety policies and procedures precautions related to the handling and installing distribution components
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions

© Commonwealth of Australia, 2025 Powering Skills Organisation

and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
    - techniques in analysing, planning, coordination and organising work for a safe outcome and according to statutory requirements and regulations
    - techniques in the effective utilisation of available resources
    - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
    - techniques in facilitating and coordinating the delivery and issuing of access authorities
    - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite; earth access authorities; safe working area; work to be carried out in confined space or in hazardous environment; specific outsourcing procedures; specific hazard identification, risk classification and management procedures; regulatory requirements, such as WHS/OHS and electrical safety
    - techniques in receiving and coordinating the cancellation of access authorities in readiness for restoration
    - methods of conducting audits on correct access authority procedures
    - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
    - issuing and receipt of operating agreements
- principles of statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on LV
    - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- principles of isolation and tagging procedures associated with protection testing encompassing:
    - Commonwealth/state/territory legislation standards, codes, , supply authority regulations and/or enterprise requirements associated with installation, maintenance, isolation and tagging procedures
    - requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
    - techniques in documenting isolations
    - techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
    - techniques in the installation and maintenance procedures protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- LV switching principles encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
    - requirements for the use of manuals, system diagrams/plans and drawings - types,

© Commonwealth of Australia, 2025 Powering Skills Organisation

characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
    - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
    - personnel protective equipment (PPE) for LV switching
- LV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of LV systems and equipment to be switched
    - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching, and procedures for coordination of operations
    - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- LV overhead and substation switching principles encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to LV overhead and substation switching
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
    - operational forms, access authorities and hazard/risk assessments associated with LV switching - types of operational forms, access authorities and hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
    - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
    - LV switchgear – types, categories, application and operating capabilities
    - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air break switches, disconnects, live line clamps, phasing sticks and phasing tester
    - operation of protection systems and substation equipment - fault levels and settings, types and applications, protection systems and substation equipment fault levels and settings, and types and applications
    - restrictions pertaining to LV switching equipment
    - procedures for the isolation of LV distributions main and working earths
    - earthing LV electrical apparatus practices and procedures for access authority issuing

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - LV switching techniques
    - operating switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a LV switching instruction encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched, isolation points and earthing, and responsibilities of the switching operator
    - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprises-specific WHS/OHS instructions encompassing:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility for maintenance, including cleaning inspection and testing; and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific switching diagrams and drawing encompassing:
    - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and

© Commonwealth of Australia, 2025 Powering Skills Organisation

catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- LV system load calculation principles encompassing:
    - structure of LV systems
    - ratings of LV system components
    - methods of determining load on LV systems
    - records of load on LV systems
    - effect of added load on LV mains - variation of current, voltage and power factor
    - load flow in parallel operation
    - enterprise-specific network coordination tools.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the preparation and/or checking of activities required to place the high voltage (HV) distribution and sub-transmission network in a state in which work can safely be performed whilst minimising customer outages. The format is typically a written sequence of switching items in a pre-defined format.

It includes planning outages and taking into account loading of network components. It also includes planning the management of multiple outages on the HV distribution and sub-transmission network and the calculation of network loading conditions to ensure the network is operating within designed parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Competency Field

System Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the preparation of HV distribution and sub-transmission switching programs	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the preparation of HV distribution and sub-transmission switching system programs, are reviewed and determined
	1.2 Purpose for the preparation of HV distribution and sub-transmission switching programs is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the preparation of HV distribution and sub-transmission switching programs are obtained or established with appropriate personnel
	1.4 Testing/switching procedures are discussed with/directed to the appropriate personnel in order to ascertain the project brief

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Testing/switching parameters are established from organisational established procedures and policies and specifications
	1.6	Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the preparation of HV distribution and sub-transmission switching programs	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Preparation of HV distribution and sub-transmission switching program decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the program is used to analyse the effectiveness of the finished project in accordance with requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of the program is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the preparation of HV distribution and sub-transmission switching programs	**3.1**	Final review of the switching program is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of prepared HV distribution and sub-transmission switching program documents are issued and records are updated in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO37A Develop high voltage distribution and subtransmission switching programs.

Assessment Requirements for UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least three (3) switching programs that between them encompass the following:
  - a transformer with a high voltage (HV) winding and fixed tap
  - a transformer with a HV winding and on-load tap changer (OLTC)
  - HV busbars
  - HV isolators
  - HV switchgear (applicable to enterprise equipment)
  - phasing and phase rotation
  - commissioning an item of HV plant
  - a planned interruption to a HV customer
  - installation of a mobile generators (if applicable to enterprise equipment)
  - placing distribution feeders in parallel where special considerations are required to cope with capacitors, phase shifts between different bulk supply systems, sensitive earth fault protection and single phase switching
- preparing switching instructions to isolate, test and earth all of the following:
  - all enterprise transformer types
  - all enterprise busbar types
  - all enterprise feeder types
  - all enterprise circuit breakers, isolators or switches
- preparing, writing and checking switching sheets to do all of the following:
  - manage load
  - manage voltage
  - minimise losses
  - maximise network reliability

© Commonwealth of Australia, 2025 Powering Skills Organisation

- checking all above types of switching instructions
- coordinating all above types of switching instructions
- calculating plant loading
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; and how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders; and the HV equipment associated with substations
- different types and function of distribution components encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - types, function and characteristics of distribution components
  - safety policies and procedures precautions related to the handling and installing distribution components
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordination and organising work for a safe outcome according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical

© Commonwealth of Australia, 2025 Powering Skills Organisation

network diagrams for the specific worksite; earth access authorities; safe working area; work to be carried out in confined space or in hazardous environment; specific outsourcing procedures; specific hazard identification, risk classification and management procedures; regulatory requirements, such as WHS/OHS and electrical safety
    - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
    - methods of conducting audits on correct access authority procedures
    - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
    - issuing and receipt of operating agreements
- principles of Statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on High Voltage
    - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV switching principles encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
    - role of the HV switching operator
    - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedures for operational forms, access authorities and permits
    - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
    - types and categories of HV switchgear
    - application, function and operating capabilities of switchgear
    - restrictions pertaining to HV switching equipment
    - procedures for the isolation of HV transmission main and working earths
    - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE) and HV switching techniques
    - operating switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV fault switching principles encompassing:
    - primary causes, effects and types of HV electrical faults

© Commonwealth of Australia, 2025 Powering Skills Organisation

- HV protection devices - main components, types, categories, applications and functions
- basic principle of operation of HV system protection devices
- protection, coordination and protection zoning
- HV feeder auto-reclosing suppression encompassing – function and application
- circuit condition requirements and switching considerations when paralleling and separating HV feeders

- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances
  - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits, and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits hazard/risk assessments; purpose and procedures for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - HV switchgear – types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load

© Commonwealth of Australia, 2025 Powering Skills Organisation

switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
    - operation of protection systems and substation equipment - fault levels and settings, types and applications, protection systems and substation equipment fault levels and settings, types and applications
    - restrictions pertaining to HV switching equipment
    - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
    - operating switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths); and responsibilities of the switching operator
    - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures, and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprises-specific WHS/OHS instructions encompassing:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to the WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning inspection and testing; emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader

© Commonwealth of Australia, 2025 Powering Skills Organisation

programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- substation switching practices encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to substation switching
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be switched
    - procedures for obtaining correct HV switching authorisation - identification of hazards and controlling risks, safety procedures and precautions, responsibilities and protocols, and identifying switching resources
    - techniques in HV substation switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and commissioning procedures
    - use, care and operation of equipment associated with HV substation equipment - test instruments and sticks
    - HV switchgear – types, categories, application and operating capabilities
    - basic operation of protection systems
    - restrictions pertaining to HV substation switching equipment
    - restrictions pertaining to enterprise-specific procedures
- transient overvoltage encompassing:
    - causes and effects of transient overvoltage - switching transients and lightning transients, and effects on plant items
    - control techniques and systems - diverters, shield wires and CB arc control
    - insulation systems - insulation coordination and insulation grading
- procedures to undertake a visual inspection of a scheme encompassing:
    - Commonwealth/state/territory legislation standards, codes, , supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
    - requirements for the use of manuals, system diagrams/plans and drawings
    - identify obvious deficiencies in operating to the standard functionality
    - techniques in determining device malfunction
    - techniques in determining wiring defects
- commissioning procedures associated with relevant equipment encompassing:
    - Commonwealth/state/territory legislation standards, codes, , supply authority regulations and/or enterprise requirements associated with the commissioning procedures
    - requirements for the use of commissioning manuals, system diagrams/plans and drawings
    - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements
- effects of harmonics encompassing:
    - characteristics and effects of harmonics on protection device functions/malfunction

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - effects of harmonics on transformers, generators, motors and quality of supply
- different types and function of distribution underground components encompassing:
    - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the use and application of distribution underground components
    - requirements for the use of underground line construction manuals, system diagrams/plans and drawings
    - types, function and characteristics of distribution underground components
    - safety policies, procedures and precautions related to handling and installing distribution underground components
- HV system load calculation principles encompassing:
    - structure of HV systems
    - ratings of HV system components
    - relationship to HV customers
    - methods of determining load on HV systems
    - records of load on HV systems
    - effect of added load on HV feeders - variation of current, voltage, power, reactive power and power factor
    - load flows in parallel or loop operation
    - enterprise-specific network coordination tools.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals

UETTDRSO38 Develop and evaluate power systems transmission switching programs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the development and evaluation of activities required to place the transmission network in a state in which work can safely be performed whilst minimising customer outages. The format is typically a written sequence of switching items in a pre-defined format.

It includes planning for the management of the network and multiple outages. It encompasses the calculation of network loading conditions to ensure the network will operate within design parameters and in compliance with national electricity code.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Competency Field

System Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential	Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Powering Skills Organisation

outcomes.	demonstrate achievement of the element.
1 Plan and coordinate for the preparation of HV transmission switching programs	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the preparation of the switching program, are reviewed and determined
	1.2 Purpose of the switching program is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Established policies, procedures and specifications for the switching program are obtained or established with appropriate personnel
	1.4 Switching procedures are discussed with and/or directed to appropriate personnel in order to ascertain the project brief
	1.5 Switching parameters are ascertained from established policies, procedures and specifications
	1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
	1.7 Work roles and tasks are allocated according to requirements and individual competencies
	1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
	1.9 Liaison and communication issues with other/authorised personnel, authorities and clients are resolved and activities coordinated to carry out work
	1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out and coordinate the preparation of HV transmission switching	**2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

programs		
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Decisions concerning the preparation of the HV transmission switching program are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	The effectiveness of the finished project is analysed in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of the program is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete and coordinate the preparation of HV transmission switching programs	**3.1**	Final review of the switching program is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are

© Commonwealth of Australia, 2025 Powering Skills Organisation

finalised/commissioned

3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval

3.4 Approved copies of switching program documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO38A Develop and evaluate power systems transmission switching programs.

Assessment Requirements for UETTDRSO38 Develop and evaluate power systems transmission switching programs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing and evaluating at least four (4) switching programs that between them integrates all of the following:
  - a transformer with an extra-high voltage (EHV) winding
  - EHV busbars
  - EHV isolators
  - EHV switchgear (applicable to enterprise equipment)
  - phasing and phase rotation
- commissioning a project that includes more than one (1) item of EHV plant that includes a transformer:
  - a planned liaison with a high voltage (HV) customer
  - activities that address the correction of errors in the process
- preparing switching instructions, testing and earthing all of the following:
  - transformer types
  - busbar types
  - transmission line types
  - circuit breakers, isolators or switches
- conducting all of the following:
  - checking switching instructions
  - calculating plant loading
  - managing the development of multiple switching programs
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply system within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the HV equipment associated with substations
- substations and power transformers encompassing:
  - relationship between the substations within an overall power system - purpose and location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - characteristics of a reactors - description and purpose
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordination and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management

© Commonwealth of Australia, 2025 Powering Skills Organisation

procedures, and regulatory requirements, such as WHS/OHS and electrical safety
    - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
    - methods of conducting audits on correct access authority procedures
    - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
    - issue and receipt of operating agreements
- principles of statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
    - particular reference to state and territory regulations regarding - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV switching principles encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
    - role of the HV switching operator
    - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits, purpose and procedure for operational forms, and access authorities and permits
    - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
    - types and categories of HV switchgear
    - application, function and operating capabilities of switchgear
    - restrictions pertaining to HV switching equipment
    - procedures for the isolation of HV transmission main and working earths
    - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE), and HV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV system switching principles, including switching authorisation procedures to an extent indicated by the following aspects:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances (SAD)
  - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - HV switchgear – types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings, types and applications, protection systems and substation equipment fault levels and settings and types and applications
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths); and responsibilities of the

© Commonwealth of Australia, 2025 Powering Skills Organisation

switching operator
    - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific OHS instructions encompassing:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise OHS policies and procedures
    - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- substation switching practices encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to substation switching
    - requirements for the use of manuals, substation diagrams/plans and drawings
    - types, characteristics and capabilities of HV substation equipment to be switched
    - procedures for obtaining correct HV switching authorisation - identification of hazards and controlling risks, safety procedures and precautions, responsibilities and protocols, and identifying switching resources
    - techniques in HV substation switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and commissioning procedures
    - use, care and operation of equipment associated with HV substation equipment - test instruments and sticks

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - HV switchgear – types, categories, application and operating capabilities
  - basic operation of protection systems
  - restrictions pertaining to HV substation switching equipment
  - restrictions pertaining to enterprise-specific procedures
- transient over voltages encompassing:
  - causes and effects of transient over voltages - switching transients and lightning transients, and effects on plant items
  - control techniques and systems - diverters, shield wires and circuit breaker arc control
  - insulation systems - insulation coordination and insulation grading
- commissioning procedures associated with relevant equipment encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and-or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements
- EHV generator control systems encompassing:
  - legislation, standards, codes,3 supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
  - techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of EHV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single EHV job - overhead systems, indoor systems, customer installations and kiosk substations
  - EHV generator set and control system to EHV distribution assets
- different types and function of transmission components encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the use and application of transmission components
  - requirements for the use of transmission line construction manuals, system diagrams/plans and drawings
  - types, function and characteristics of transmission components
  - safety policies and procedures precautions related to the handling and installing transmission components
- EHV system load calculation principles encompassing:
  - structure of EHV transmission systems
  - ratings of EHV system components
  - relationship to EHV customers
  - relationship to generation sources
  - methods of determining load on EHV systems
  - records of load on EHV systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

- effect of added load on EHV transmission systems - variation of current, voltage, power, reactive power and power factor
- load flows in parallel or loop operation
- enterprise-specific network coordination tools.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, computerised electrical plant control and monitoring facilities and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, modelling tools, drawings and operation manuals.

UETTDRSO39 Coordinate low voltage distribution networks

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the monitoring of low voltage (LV) distribution networks in real time. This includes voltage control and monitoring the status of access authorities and ensuring that the network is operated within design parameters at all times. It also includes dispatching and management of field repair crews to respond to and rectify abnormalities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the management of an LV distribution network	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the management of LV distribution network systems, are reviewed and determined
	1.2 Purpose for the management of an LV distribution network is established after data is analysed and expected outcomes of the work are confirmed with the appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the management of an LV distribution network are obtained or established with the appropriate personnel
	1.4 Testing procedures are discussed with/directed to the appropriate personnel in order to ascertain the project brief
	1.5 Testing parameters are established from organisational established procedures on policies and specifications
	1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the management of an LV distribution network	**2.1**	Circuit/systems modelling are used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Management decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the LV distribution network are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within

© Commonwealth of Australia, 2025 Powering Skills Organisation

	an agreed timeframe according to requirements
	2.7 Testing of the LV distribution network is undertaken according to requirements and established procedures
	2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the management of an LV distribution network	**3.1** Final review of the management procedures of the LV distribution network are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4 Approved copies of the managed LV distribution network documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO39A Coordinate low voltage distribution networks.

Assessment Requirements for UETTDRSO39 Coordinate low voltage distribution networks

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating on at least three (3) occasions the coordinate system manipulations that encompass the following:
  - low voltage (LV) distribution network
  - LV network manipulation to control loading on equipment
  - transformers with LV windings (if applicable to enterprise equipment)
  - LV busbars
  - LV isolators
  - LV switchgear (applicable to enterprise equipment)
- completing all of the following:
  - writing switching instructions
  - checking switching instructions
  - coordinating switching instructions
  - calculating plant loading
  - preparing and authorising LV distribution switching programs
  - monitoring switching progress
  - monitoring the status of access permits/authorities on LV network equipment
  - ensuring network plant operates within design and regulatory requirements on a real time basis
  - dispatching and communicating with field crews to respond/rectify system abnormalities
  - applying and administrating supervisory control and data acquisition (SCADA) (if applicable to enterprise equipment)
  - analysing and diagnosing system failures
  - calculating and analysing paralleling conditions on the interconnected LV system
- monitoring and managing switching to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - manage load
  - manage voltage
  - minimise loss
  - maximise system reliability
  - allow safe network access for maintenance activities
  - allow safe network access for construction activities
  - validating fault reports arising from system disturbances
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements, such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- LV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and high voltage (HV) customers and operating agreements
  - techniques in coordinating and directing HV and LV switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to LV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments, purpose and procedure for operational forms, and access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air break switches, disconnects, live line clamps, phasing

© Commonwealth of Australia, 2025 Powering Skills Organisation

sticks and phasing tester
    - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
    - restrictions pertaining to LV switching equipment
    - procedures for the isolation of LV distributions main and working earths
    - earthing LV electrical apparatus practices and procedures for access authority issuing
    - LV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a LV switching instruction encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator
    - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the monitoring of high voltage (HV) distribution and sub-transmission networks in real time. This includes voltage control and monitoring the status of access authorities and ensuring that the network is operated within design parameters at all times. It also includes dispatching and coordination of field repair crews to respond to and rectify abnormalities and liaison with other electrical authorities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS policies,

© Commonwealth of Australia, 2025 Powering Skills Organisation

procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

Competency Field

System Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the coordination of HV distribution and sub-transmission network	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the coordination of HV distribution and sub-transmission network, are reviewed and determined
	1.2 Purpose of the coordination of the network is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the coordination of the network are obtained or established with appropriate personnel
	1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
	1.5 Testing parameters are established from organisational established procedures on policies and specifications
	1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the coordination of HV distribution and sub-transmission network	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Coordination decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the coordination process are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within

© Commonwealth of Australia, 2025 Powering Skills Organisation

		an agreed timeframe according to requirements
	2.7	Testing of coordination process is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the coordination of HV distribution and sub-transmission network	**3.1**	Final review of the coordination processes is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of coordination documents are issued, and records updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO40A Coordinate high voltage distribution and sub-transmission networks.

Assessment Requirements for UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating on at least three (3) occasions the coordination of system manipulations that encompass:
  - high voltage (HV) sub-transmission and distribution network
  - HV sub-transmission and distribution network manipulation to control loading on equipment
  - transformers with HV windings (if applicable to enterprise equipment
  - HV busbars
  - HV isolators
  - HV switchgear (applicable to enterprise equipment)
- completing all of the following:
  - writing switching instructions
  - checking switching instructions
  - coordinating switching instructions
  - calculating plant loading
  - preparing and authorising HV sub-transmission and distribution switching program
  - monitoring switching progress
  - monitoring the status of access permits/authorities on HV network equipment
  - ensuring network plant operates within design and regulatory requirements on a real time basis
  - dispatching and communicating with field crews to respond/rectify system abnormalities
  - applying and administrating supervisory control and data acquisition (SCADA) (if applicable to enterprise equipment)
  - analysing and diagnosing system failures
  - calculating and analysing paralleling conditions on the interconnected HV system

© Commonwealth of Australia, 2025 Powering Skills Organisation

- monitoring and managing switching to:
  - manage load
  - manage voltage
  - minimise loss
  - maximise system reliability
  - allow safe network access for maintenance activities
  - allow safe network access for construction activities
  - validating fault reports arising from system disturbances
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements, such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances (SAD)
  - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers, and operating agreements
  - techniques in coordinating and directing HV and low voltage (LV) switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment -

© Commonwealth of Australia, 2025 Powering Skills Organisation

test instruments, sticks, interrupters and arc stranglers
  - HV switchgear – types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths); and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards,

UETTDRSO41 Manage power systems transmission networks

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the monitoring of extra high voltage (EHV) transmission networks in real time. This includes voltage control and monitoring the status of access authorities and ensuring that the network is operated within design parameters at all times. It also includes dispatching and management of field repair crews to respond to and rectify abnormalities and liaison with other electrical authorities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRSO48 Respond to discrete and interdependent protection operations

UETTDRSO49 Coordinate power system operations in a regulated energy market

Distribution and Sub-transmission Pathway Unit Group

UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks

Transmission Pathway Unit Group

UETTDRSO38 Develop and evaluate power systems transmission switching programs

UETTDRSO47 Coordinate high voltage transmission network

Competency Field

System Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the management of transmission networks	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the management of transmission network systems, are reviewed and determined
	1.2 Purpose of the management of the transmission networks is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the management of transmission

© Commonwealth of Australia, 2025 Powering Skills Organisation

networks are obtained or established with appropriate personnel

1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief

1.5 Testing parameters are established from organisational established procedures on policies and specifications

1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

1.7 Work roles and tasks are allocated according to requirements and individual competencies

1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work

1.10 Risk control measures are identified, prioritised and evaluated against the work schedule

1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

2 Carry out the management of transmission networks

2.1 Circuit/systems modelling is used to evaluate alternative proposals as per established procedures

2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures

2.3 Management decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures

2.4 Mathematical and/or engineering models of the transmission network are used to analyse the

Assessment Requirements for UETTDRSO41 Manage power systems transmission networks

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating on at least three (3) occasions the management of system manipulations encompassing:
  - extra high voltage (EHV) transmission network
  - EHV network manipulation to control loading on equipment
  - transformers with EHV windings (if applicable to enterprise equipment)
  - EHV busbars
  - EHV isolators
  - EHV switchgear (applicable to enterprise equipment)
- undertaking all of the following:
  - writing switching instructions
  - checking switching instructions
  - coordinating switching instructions
  - calculating plant loading
  - preparing and authorising EHV switching programs
  - monitoring switching progress
  - monitoring the status of access permits/authorities on EHV network equipment
  - ensuring network plant operates within design and regulatory requirements on a real time basis
  - dispatching and communicating with field crews to respond/rectify system abnormalities
  - applying and administrating of supervisory control and data acquisition (SCADA) (if applicable to enterprise equipment)
  - analysing and diagnosing system failures
  - calculating and analysing network conditions on the interconnected EHV system
- monitoring and managing switching to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- manage load
- manage voltage
- minimise loss
- maximise system reliability
- allow safe network access for maintenance activities
- allow safe network access for construction activities
- validating fault reports arising from system disturbances

- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- high voltage (HV) system switching principles, including switching authorisation procedures, to encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances
  - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers, and operating agreements
  - techniques in coordinating and directing HV and low voltage (LV) switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment -

© Commonwealth of Australia, 2025 Powering Skills Organisation

test instruments, sticks, interrupters and arc stranglers
  - HV switchgear – types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched, points of isolation and earthing locations (safety and working earths), and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering, and alarm equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards,

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

UETTDRSO42 Manage power systems transmission network demand

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This units covers the management of the switching of transmission network components with due regard to the loadings and prevailing network constraints, including scheduling of generators, Volt Ampere Reactive (VAR) compensators, load shedding and non-essential loads in response to National Market Management Company (NEMMCO) or network requirements. It also includes voltage and frequency controls.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRSO41 Manage power systems transmission networks

UETTDRSO48 Respond to discrete and interdependent protection operations

UETTDRSO49 Coordinate power system operations in a regulated energy market

Distribution and Sub-transmission Pathway Unit Group

UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks

Transmission Pathway Unit Group

UETTDRSO38 Develop and evaluate power systems transmission switching programs

UETTDRSO47 Coordinate high voltage transmission network

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the management of transmission network demand	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the management of transmission network demand systems, are reviewed and determined
	1.2 Purpose of the management of transmission network demand is established after data is analysed and expected outcomes of the work are confirmed with

© Commonwealth of Australia, 2025 Powering Skills Organisation

		appropriate personnel
	1.3	Organisational established procedures on policies and specifications for the management of transmission network demand are obtained or established with appropriate personnel
	1.4	Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
	1.5	Testing parameters are established from organisational established procedures on policies and specifications
	1.6	Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the management of transmission network demand	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in according with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.3	Management decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the transmission network demand are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of management process is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the management of transmission network demand	**3.1**	Final review of management process is undertaken to ensure they comply with all requirements and include all specifications and documentation needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where

Assessment Requirements for UETTDRSO42 Manage power systems transmission network demand

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least three (3) system manipulations encompassing:
  - extra high voltage (EHV) transmission network
  - transmission network manipulation to control loading on equipment
  - transformers with EHV windings
  - EHV busbars
  - EHV isolators
  - EHV switchgear (applicable to enterprise equipment)
  - dispatch of static/synchronous VAR compensation (if applicable to enterprise)
  - dispatch of generation (if applicable to enterprise)
- undertaking all of the following:
  - writing switching instructions
  - analysing and reviewing switching instructions
  - managing multiple switching instructions
  - calculating line loading
  - preparing and authorising EHV transmission switching programs
  - demonstrating application and administration of supervisory control and data acquisition (SCADA) or equivalent
  - analysing and diagnosing of system failure
  - calculating and analysing transmission line conditions on the interconnected EHV system
- preparing, writing and checking switching sheets to:
  - manage load
  - manage voltage
  - minimise loss
  - maximise system reliability

© Commonwealth of Australia, 2025 Powering Skills Organisation

- allow safe network access for maintenance activities
- allow safe network access for construction activities
- validating fault reports arising from system disturbances
- dispatch static/synchronous VAR compensation (if applicable to enterprise)
- dispatch generation (if applicable to enterprise)

- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to managing network demand encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to managing network demand
  - requirements for the use of demand management manuals, system diagrams/plans and drawings
  - identify and interpret enterprise demand management procedures
  - techniques in applying enterprise demand management procedures
- effective management and communication encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to assisting in effective management and communication
  - enterprise operational principles - workplace WHS/OHS enterprise plan, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures
  - relationship between the management and employees - methods used to collate and distribute/disseminate information, responsibilities of each member of the work team, staff development activities and legislation requirements with regard to WHS/OHS training, methods of addressing barriers, such as literacy and cultural differences, and provisions relating to WHS/OHS issue resolution
  - techniques associated with organisational policies and procedures related to human resources - relevant awards and certified agreements, legislation impacting on people management, and range of support services and expertise available
  - techniques in managing relationships - identifying problems; methods of conflict resolution; methods of consultation, communication, negotiation and mentoring; and strategies for positive feedback
  - techniques in leadership in achieving enterprise strategic and operational plans
  - techniques in managing relationships under stress - stress management
- methodology used in writing enterprise-specific management reports encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the writing

© Commonwealth of Australia, 2025 Powering Skills Organisation

enterprise-specific management reports

- techniques in researching, collating and analysing information for the report - recording, filing, retrieving systems, and storing and retrieving data from computer systems
- relationship of management reports to enterprise policies and procedures - enterprise structure and resources, workplace WHS/OHS and risk management enterprise data, financial and operational data, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures
- techniques in writing enterprise-specific management reports - methods used to disseminate information and facilitate enterprise requirements, document proformas, and compliance and legislative requirements to produce effective reports in the appropriate format.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, computerised electrical plant control and monitoring facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, relevant network modelling tools, drawings, operational event data, codes of practice and operation manuals.

UETTDRSO43 Coordinate low voltage distribution network demand

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the coordination of the switching of low voltage (LV) distribution network components with due regard to the loadings and prevailing network constraints, including scheduling of generators, Volt Ampere Reactive (VAR) compensators, load shedding and non-essential loads in response to National Electricity Market Management Company (NEMMCO) or network requirements. It also includes voltage control equipment.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the coordination of LV distribution network demand	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the coordination of LV distribution network demand systems, are reviewed and determined
	1.2 Purpose of the coordination of the network demand is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the coordination of the network demand are obtained or established with appropriate personnel
	1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
	1.5 Testing parameters are established from organisational established procedures on policies and specifications
	1.6 Equipment/tools and personal protective equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

		(PPE) are selected based on specified performance criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the coordination of LV distribution network demand	**2.1**	Circuit/systems modelling are used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Coordination decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the coordination process are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of the coordination process is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the coordination of LV distribution network demand	**3.1**	Final review of the coordination process is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of managed LV distribution network demand documents are issues and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETTDRSO43 Coordinate low voltage distribution network demand

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least three (3) coordination of multiple simultaneous system manipulations that encompass the following:
  - low voltage (LV) distribution network
  - LV network manipulation to control loading on equipment
  - transformers with LV windings (if applicable to enterprise equipment)
  - LV busbars
  - LV isolators
  - LV switchgear (applicable to enterprise equipment)
- coordinating LV distribution network demand including all of the following:
  - writing switching instructions
  - checking and review switching instructions
  - coordinating multiple simultaneous switching instructions
  - confirming line loading
  - preparing and authorising LV distribution switching programs
  - coordinating multiple switching processes
  - coordinating the status of all access permits/authorities on LV network equipment relevant to the scope
  - ensuring network plant operates within design and regulatory requirements on a real time basis
  - applying and administrating of supervisory control and data acquisition (SCADA) or equivalent
  - analysing, diagnosing and reporting of system failure
  - calculating and analysing paralleling conditions on the interconnected LV system
- allowing safe network access for maintenance activities, including preparing, writing and

© Commonwealth of Australia, 2025 Powering Skills Organisation

checking switching sheets to:

- manage load
- manage voltage
- minimise loss
- maximise system reliability
- allow safe network access for maintenance activities
- allow safe network access for construction activities
- validating fault reports arising from system disturbances

- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to managing network demand encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to managing network demand
  - requirements for the use of demand management manuals, system diagrams/plans and drawings
  - identifying and interpreting enterprise demand management procedures
  - techniques in the applying enterprise demand management procedures
- effective management and communication encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes supply authority regulations and/or enterprise requirements applicable to assisting in effective management and communication
  - enterprise operational principles - workplace WHS/OHS enterprise plan, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures
  - relationship between the management and employees - methods used to collate and distribute/disseminate information, responsibilities of each member of the work team, staff development activities and legislation requirements with regard to WHS/OHS training, methods of addressing barriers such as literacy and cultural differences, and provisions relating to WHS/OHS issue resolution
  - techniques associated with organisational policies and procedures related to human resources - relevant awards and certified agreements, legislation impacting on people management, and range of support services and expertise available
  - techniques in managing relationships - identifying problems; methods of conflict resolution; methods of consultation, communication, negotiation and mentoring; and strategies for positive feedback
  - techniques in leadership in achieving enterprise strategic and operational plans

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in managing relationships under stress - stress management
- methodology used in writing enterprise-specific management reports encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the writing enterprise-specific management reports
  - techniques in researching, collating and analysing information for the report - recording, filing, retrieving systems; and storing and retrieving data from computer systems
  - relationship of management reports to enterprise policies and procedures - enterprise structure and resources, workplace WHS/OHS and risk management enterprise data, financial and operational data, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures
  - techniques in writing enterprise-specific management reports - methods used to disseminate information and facilitate enterprise requirements, document proformas, and compliance and legislative requirements to produce effective reports in the appropriate format.

UETTDRSO44 Develop crisis power systems management plans

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the preparation of crisis management plans, which can be implemented following the loss of one or more items of plant. This unit involves the activities associated with the assessment of risk, the probability of failure, the consequences of failure and the plant and/or network loads that will result according to established enterprise procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

		out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the development of crisis management plans	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Development of crisis management plan decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the development are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of crisis development plans is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the development of crisis management plans	**3.1**	Final review of the crisis management plans is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of the developed crisis management plan documents are issued and records updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO44A Develop crisis power systems management plans.

Assessment Requirements for UETTDRSO44 Develop crisis power systems management plans

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing crisis management plans, including all of the following:
  - identifying a crisis event
  - developing a plan to manage a crisis
  - formulating plans in order that the network be restored during and after the crisis
  - effectively liaising with operating authorities and field crews to develop and formulate achievable crisis management plans
  - documenting/debriefing actions that are required following an end of crisis situation
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to critical events encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to critical events
  - requirements for the use of operational manuals, system diagrams/plans and drawings
  - identifying and interpreting enterprise operating procedures
  - techniques in the applying enterprise operating procedures
- methodology in analysing network event records encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the analysis of critical events
  - requirements for the use of critical event data, manuals, system diagrams/plans and

© Commonwealth of Australia, 2025 Powering Skills Organisation

drawings
    - sources of critical event data
    - analyse and assess network event records and relevant data - the use of event records and data to analyse and develop optimal network restoration strategies taking into account public and employee safety, enterprise reliability guidelines and resource availability
    - safety policies, procedures and precautions related to critical events - WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE); checking integrity of the system for minimum disruption; effective communication methods and chain of command; and emergency response and rescue, including first aid procedures
- preparation of policies and procedures encompassing:
    - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the preparation of policies and procedures
    - types of standard forms, documentation and data
    - techniques in disseminating policies and procedures
    - techniques in undertaking approval processes.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering, and alarm equipment, computerised electrical plant control and monitoring facilities, and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, relevant network drawings, operational event data, crisis management procedures and operation manuals.

UETTDRSO45 Operate and monitor system SCADA equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the skills and knowledge to operate, monitor and control high voltage (HV) apparatus on the network via supervisory control and data acquisition (SCADA) control.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UETTDREL15 Respond to power systems technical enquiries and requests

Competency Field

System Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and prepare for the operation, monitoring and control of system equipment	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the preparation of the switching program, are reviewed

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and determined
	1.2	System requirements are established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3	System and associated equipment operational prerequisites are identified and established in accordance with manufacturer and/or enterprise/site procedures
	1.4	System monitoring and control procedures are discussed with and/or directed to appropriate personnel in order to ascertain the project brief
	1.5	Operational parameters are ascertained from established policies, procedures and specifications
	1.6	Work roles and tasks are allocated according to requirements and individual competencies
	1.7	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.8	Liaison and communication issues with others/authorised personnel, authorities and clients are resolved and activities coordinated to carry out work
	1.9	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.10	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out and coordinate the operation, monitoring and control of system equipment	**2.1**	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.2	Decisions concerning the operation, monitoring and control of system equipment are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.3	The effectiveness of the finished project is analysed in accordance with requirements and established

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures
	2.4	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.5	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.6	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.7	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.8	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete the operation, monitoring and control of system equipment	**3.1**	Final review of the operation, monitoring and control of system equipment is undertaken to ensure it complies with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO45A Operate and monitor system SCADA equipment.

Assessment Requirements for UETTDRSO45 Operate and monitor system SCADA equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements , including the use of risk control measures
- applying sustainable energy principles and practices
- performing on at least three (3) occasions the following:
  - evidence of switching programs involving the operation and monitoring of system equipment via supervisory control and data acquisition (SCADA)
- performing on at least two (2) occasions the following:
  - evidence of unplanned switching events involving the operation and monitoring of system equipment via SCADA
- demonstrating the following:
  - extracting data used in the analysis of network loading trends
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- SCADA systems encompassing:
  - SCADA system features and applications - industries in which SCADA systems are used, associate benefits of the package, features and facilities of different SCADA packages, and hardware requirements
  - reading mimics and animated graphics
  - trending - analysis of process to select data, viewing data and graphical representation of selected information, trend graphs and data matching
  - alarm logging - analysing select data, and corrective action of alarm status
- personal computer operating systems encompassing:
  - basic function, components and concepts

© Commonwealth of Australia, 2025 Powering Skills Organisation

- operating systems in use
- system installation and configuration

- computers applications encompassing:
  - application software types
  - configurations and preferences
  - use of particular software packages - word processor, spreadsheet, database, presentation software, web/document publisher, computer-aided drafting (CAD)/drawing packages, email client and business management
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders, and the HV equipment associated with substations
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing ;and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- power distribution network documentation encompassing:
    - requirements for the use of manuals, system diagrams/plans and drawings; and for plans, such as work method statements for the control of WHS/OHS risks
    - types and application of power distribution network documentation drawings and documents - wiring and schematic diagrams, drawings and switching symbols, mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different diagrams and documentation on low voltage (LV) and high voltage (HV) systems - overhead distribution extensions, underground distribution extensions, distribution substations and street lighting systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, and SCADA equipment currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, relevant modelling tools, drawings and operation manuals.

UETTDRSO46 Monitor and control the field staff activities

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the monitoring of permit to work requests, dispatching personnel, responding to alarms, travel and activity monitoring of field personnel, monitoring work activities of field personnel against work schedule.

It also includes contingency skills, response to third-party enquiries, out of hour, response to man down alarm, tracking of field personnel (remote area), monitoring activities on system equipment, monitoring availability of assets (maintain a log), monitor equipment status, coordinating field activities, controlling and authorising field works, and preparing incident reports.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

To minimise incidents related to safe systems of work, entry into this unit requires at a minimum that an individual has demonstrated or possesses relevant technical engineering discipline competencies of at least AQF level 3. It is intended that an individual will be expected to perform with a large degree of autonomy in decision making, whilst in an individual environment.

This may include immediate response to protect human life, adverse effect on safety, security of supply or the integrity of the assets.

NOTE: Typically the following disciplines provide direct entry; electrical or instrumentation, fitting and turning or mechanical trade.

Where an individual does not possess or demonstrate the requisite entry requirement, an equivalent bridging program should be used to ensure equivalence of entry.

Competency Field

System Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the monitoring and controlling of field activities	**1.1** Work schedules, plans, requirements and established procedures are detailed and analysed and, if necessary, the extent of the preparation of the work determined for planning and coordination
	1.2 Shift handover detail is received, understood and confirmed according to established procedures
	1.3 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.4 Risk control measures for identified hazards are prioritised, implemented and evaluated against the work schedule
	1.5 Salient system constraints are communicated to relevant persons and identified for worksites in accordance with established procedures
	1.6 Operational and commercial requirements are communicated to stakeholders in accordance with established procedures
	1.7 Work health and safety (WHS)/occupational health and safety (OHS), environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
	1.8 Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
	1.9 Liaison and communication with authorised personnel, authorities, clients and land owners is performed/actioned and activities are coordinated to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		carry out work
2 Undertake monitoring and controlling of field activities	**2.1**	WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards
	2.2	Work is performed and coordinated in accordance with work schedules and established procedures
	2.3	WHS/OHS risks are monitored and action taken according to established procedures
	2.4	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and established procedures
	2.5	Essential knowledge and associated skills are applied in an agreed timeframe and to quality standards efficiently according to requirements and established procedures
	2.6	Solutions to non-routine problems are identified and actioned using essential knowledge and associated skills according to requirements
	2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer to community and industry standards
3 Complete monitoring and controlling of field activities	**3.1**	Work undertaken is checked against work schedule for conformance with requirements and anomalies are reported and solutions identified in accordance with established procedures
	3.2	Relevant work permit(s) and field activities are signed off and the status of plant, equipment and personnel movements recorded and handover procedures are conducted in accordance with established procedures
	3.3	Shift handover detail is relayed and confirmed according to established procedures
	3.4	Work completion records, reports, documentation and information is confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

Assessment Requirements for UETTDRSO46 Monitor and control the field staff activities

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all the following:
  - evaluating, responding to and reporting threats to systems operation/security
  - identifying and reporting abnormal conditions of the network
  - using relevant field permit to work systems
  - responding correctly to alarms
  - monitoring field work activities
  - communicating effectively in the workplace
  - operating communications equipment
  - interpreting technical drawings and symbols
  - following emergency response procedures
  - utilising relevant WHS/OHS legislation, regulations, codes of practice, policies and procedures
  - applying planning skills
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- personal computer operating systems encompassing:
  - basic function, components and concepts
  - operating systems in use
  - system installation and configuration
- transmission, distribution and rail systems encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements such WHS/OHS and electrical safety
  - techniques in receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- implementation and monitoring requirements for the impact of powerline installations and operation on the environment and/or the area surrounding the powerline and/or equipment encompassing:
  - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of environmental impact factors in the workplace and areas of power distribution or transmission - Commonwealth/state/territory legislation relevant to the workplace and the Environment Protection Act legislation and common law
  - identification, assessment, control and monitoring of the hazards to the environment

© Commonwealth of Australia, 2025 Powering Skills Organisation

associated with the powerline industry
    - workplace environment quality standards enterprise plan - setting of acceptable emission level limits from power plant equipment, impact of the enterprise activities on air and water quality, nature, impact and level of emissions from power plant, power distribution and transmission equipment and network infrastructure (noise generation, noxious gas emissions, greenhouse gas production, electromagnetic emissions, electromagnetic field strength, oil leakage and insulation breakdown products)
    - provision of manufacturer and supplier information, such as material safety data sheets (MSDS)
    - gathering of environment management information
    - maintenance of environmental records
    - risk assessment and its management in powerline industry
    - maintenance strategies for environment protection programs - developing processes for promoting, maintaining and improving environmental impact in the workplace; and identifying techniques for evaluating and reviewing environment protection education and training programs and elements of an effective environment protection management system; Environment Protection Authority (EPA) consultation and accident/incident investigations
- principles of statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
    - particular reference to state and territory regulations regarding - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV system switching principles, including switching authorisation procedures encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of HV systems and equipment to be switched
    - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances (SAD)
    - responsibilities and protocols for identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
    - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- low voltage (LV) system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers, and operating agreements
  - techniques in coordinating and directing HV and LV switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits; hazard/risk assessments, purpose and procedure for operational forms; access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - HV switchgear – types, categories, application and operating capabilities

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to LV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, airbreak switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing
  - LV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records, manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- effective management and communication encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to assisting in effective management and communication
  - enterprise operational principles - workplace WHS/OHS enterprise plan, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures
  - relationship between the management and employees - methods used to collate and distribute/disseminate information, responsibilities of each member of the work team, staff development activities and legislation requirements with regard to WHS/OHS training, methods of addressing barriers such as literacy and cultural differences, and provisions relating to WHS/OHS issue resolution
  - techniques associated with organisational policies and procedures related to human resources - relevant awards and certified agreements, legislation impacting on people management, and range of support services and expertise available
  - techniques in managing relationships - identifying problems; methods of conflict resolution; methods of consultation, communication, negotiation and mentoring; and strategies for positive feedback
  - techniques in leadership in achieving enterprise strategic and operational plans

© Commonwealth of Australia, 2025 Powering Skills Organisation

- techniques in managing relationships under stress - stress management.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRSO47 Coordinate high voltage transmission network

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the monitoring of high voltage (HV) transmission networks in real time. This includes power quality, alarm interpretation, facilitating and monitoring the status of access authorities and ensuring that the network is operated within design parameters at all times. It also includes dispatching and coordination of field repair crews to respond to and rectify abnormalities and liaise with other electrical authorities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies,

procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRSO38 Develop and evaluate power systems transmission switching programs

Competency Field

System Operations

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the coordination of HV transmission networks	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the coordination of HV transmission networks, are reviewed and determined
	1.2 Purpose of the coordination of the network is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the coordination of the network are obtained or established with appropriate personnel
	1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
	1.5 Testing parameters are established from organisational established procedures and policies and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.6	Work roles and tasks are allocated according to requirements and individual competencies
	1.7	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.8	Liaison and communication issues with other authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.9	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.10	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the coordination of HV transmission networks	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Coordination decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the coordination process are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative actions can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of coordination process is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the coordination of HV transmission networks	**3.1**	Final review of the coordination processes is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of coordination documents are issued and records are updated in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO47A Coordinate high voltage transmission network.

Assessment Requirements for UETTDRSO47 Coordinate high voltage transmission network

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating on at least three (3) occasions the coordination of system manipulations that encompass:
  - high voltage (HV) sub-transmission and distribution network
  - HV sub-transmission and distribution network manipulation to control loading on equipment
  - transformers with HV windings (if applicable to enterprise equipment
  - HV busbars
  - HV isolators
  - HV switchgear (applicable to enterprise equipment)
- coordinating a HV transmission network, including all of the following:
  - writing switching instructions
  - checking switching instructions
  - coordinating switching instructions
  - calculating plant loading
  - preparing and authorising HV sub-transmission and distribution switching programs
  - monitoring switching progress
  - monitoring the status of access permits/authorities on HV network equipment
  - ensuring network plant operates within design and regulatory requirements on a real time basis
  - dispatching and communicating with field crews to respond/rectify system abnormalities
  - applying and administrating of supervisory control and data acquisition (SCADA) (if applicable to enterprise equipment)
  - analysing and diagnosing system failures
  - calculating and analysing paralleling conditions on the interconnected HV system

© Commonwealth of Australia, 2025 Powering Skills Organisation

- allowing safe network access for maintenance activities, including monitoring and managing switching, to:
  - manage load
  - manage voltage
  - minimise loss
  - maximise system reliability
  - allow safe network access for maintenance activities
  - allow safe network access for construction activities
  - validating fault reports arising from system disturbances
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- HV fault switching principles encompassing:
  - primary causes, effects and types of HV electrical faults
  - HV protection devices - main components, types, categories, applications and functions
  - basic principle of operation of HV system protection devices
  - protection coordination and protection zoning
  - HV feeder auto-reclosing suppression encompassing – function and application
  - circuit condition requirements and switching considerations when paralleling and separating HV feeders
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers, and operating agreements
  - techniques in coordinating and directing HV and low voltage (LV) switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- alternating current (a.c.) transmission system components encompassing:
  - support structures and reasons for selection
  - insulators and reasons for selection
  - conductors and reasons for selection
  - vibration management systems and principles
  - line ratings based on voltage, span, tension and temperature
- a.c. transmission line models encompassing:
  - types of transmission line models based on line length
  - calculation of voltage drop, line regulation and transmission efficiency
  - load sharing between lines
- basic design features and characteristics of transmission structures and associated equipment and/or components encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing of poles/structures and associated equipment and or components
  - transmission systems principles – terminologies, primary and secondary, voltage levels and types of lines
  - characteristics of structure - types of structure (towers and poles, concrete and steel), characteristics of types of structures, installation methods and maintenance techniques
  - characteristics of associated equipment used on structures – insulators and earthing (overhead earth and communication lines).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards,

UETTDRSO48 Respond to discrete and interdependent protection operations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the coordination of response to discrete and interdependent protection operations due to system faults.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

		the work/testing required
	1.5	Testing parameters are ascertained from established policies, procedures and specifications
	1.6	Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities and clients are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Need for relevant work permits is identified to coordinate the performance of work according to requirements and/or established procedures
	1.12	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	1.13	Strategic plans are developed incorporating organisational initiatives in accordance with established procedures
2 Carry out response to discrete/interdependent protection operations	**2.1**	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.2	Decisions concerning the response to protection operations are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.3	Stakeholders/customers are kept informed of current status regarding plan progress and recent developments

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.5	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the work within an agreed timeframe according to requirements
	2.6	Testing of the decision to be implemented is undertaken according to requirements and established procedures
	2.7	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.8	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.9	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete the response to discrete/interdependent protection operations	**3.1**	Final review of the switching program is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the work
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents (electronic/paper) are finalised/commissioned
	3.3	Reports and/or completion documents (electronic/paper) are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of switching program documents (electronic/paper) are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETTDRSO48 Respond to discrete and interdependent protection operations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing and evaluating, on at least three (3) occasions, all of the following:
  - identifying discrete/interdependent relay operations by interpreting available alarms and event data
  - analysing and diagnosing system failures
  - evaluating responses to discrete/interdependent relay operations
  - describing control and alarms associated with discrete/interdependent protection systems
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- substations and power transformers encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers; operation under load/no-load conditions; types and basic operation of tap changing switches, including solid state types; and efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - characteristics of a reactors - description and purpose
- HV fault switching principles encompassing:
  - primary causes, effects and types of HV electrical faults
  - HV protection devices - main components, types, categories, applications and functions
  - basic principle of operation of HV system protection devices
  - protection coordination and protection zoning
  - HV feeder auto-reclosing suppression encompassing – function and application
  - circuit condition requirements and switching considerations when paralleling and separating HV feeders
- detailed operation and setting of discrete protection systems encompassing:
  - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
  - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, CT summation, time graded discrimination and backup protection
  - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- detailed operation of interdependent protection systems encompassing:
  - overcurrent and earth leakage schemes, including intertripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
  - pilot wire and phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
  - load shedding, voltage control, parallel operation and load rejection
  - busbar protection and circuit breaker failure protection
  - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

UETTDRSO49 Coordinate power system operations in a regulated energy market

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the coordination of system operations in a regulated energy market. It includes the relevant application of knowledge of the National Electricity Market (NEM), the practices and rules used in facilitating the coordination of operations in a regulated energy market.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing on at least three (3) occasions the following:
  - dispatching energy to the electricity market
  - responding to electricity market fluctuations/demands
  - manipulating the system to ensure reliable operation in response to electricity market requirements
- demonstrating knowledge of all the following:
  - principals and objectives of the electricity market
  - the role of ancillary services in the operation of the electricity market
  - service provider obligations in the electricity market
  - connection and access requirements to the electricity market
  - analysis of pricing concepts
  - contractual obligations
  - scheduling of generation assets
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - the purpose and features of typical types of co-generation systems
- enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific procedures and work practices relating to managing network demand encompassing:
    - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to managing network demand
    - requirements for the use of demand management manuals, system diagrams/plans and drawings
    - identifying and interpreting enterprise demand management procedures
    - techniques in applying enterprise demand management procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, relevant modelling tools, drawings and operation manuals.

UETTDRSO50 Respond to complex power system protection operations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the coordination of response to complex protection operations due to system faults. It includes planning, carrying out and completing the response to complex protection operations.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRSO41 Manage power systems transmission networks

UETTDRSO48 Respond to discrete and interdependent protection operations

UETTDRSO49 Coordinate power system operations in a regulated energy market

Generation/Distribution and Sub-transmission Pathway Unit Group

UETTDRSO34 Control power systems generating plant

UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks

Generation/Transmission Pathway Unit Group

UETTDRSO34 Control power systems generating plant

UETTDRSO38 Develop and evaluate power systems transmission switching programs

UETTDRSO47 Coordinate high voltage transmission network

Distribution and Sub-transmission Pathway Unit Group

UETTDRSO35 Manage high voltage distribution and sub-transmission network demand

UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs

UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks

Transmission Pathway Unit Group

UETTDRSO38 Develop and evaluate power systems transmission switching programs

UETTDRSO41 Manage power systems transmission networks

UETTDRSO42 Manage power systems transmission network demand

UETTDRSO47 Coordinate high voltage transmission network

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan response to complex protection operations	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the preparation of response to complex protection operations, are reviewed and determined
	1.2 Purpose of the response is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Established policies, procedures and specifications for the response are obtained or established with appropriate personnel
	1.4 Response to complex protection operations are discussed with and/or directed to appropriate personnel in order to ascertain the scope of the work/testing required
	1.5 Testing parameters are ascertained from established policies, procedures and specifications
	1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
	1.7 Work roles and tasks are allocated according to requirements and individual competencies
	1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9 Liaison and communication issues with others/authorised personnel, authorities and clients are resolved and activities coordinated to carry out work
	1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11 Need for relevant work permits is identified to coordinate the performance of work according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		requirements and/or established procedures
	1.12	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
2 Carry out response to complex protection operations	**2.1**	Strategic plans are developed incorporating organisational initiatives as per established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Decisions concerning the response to complex protection operations are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Stakeholders/customers are kept informed of current status regarding plan progress and recent developments
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the work within an agreed timeframe according to requirements
	2.7	Testing of the decision to be implemented is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards

© Commonwealth of Australia, 2025 Powering Skills Organisation

3 Complete the response to complex protection operations	**3.1**	Final review of the response to complex protection operation is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the work
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents (electronic/paper) are finalised/commissioned
	3.3	Reports and/or completion documents (electronic/paper) are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of the response to complex protection operation documents (electronic/paper) are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO50A Respond to complex power system protection operations.

Assessment Requirements for UETTDRSO50 Respond to complex power system protection operations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing and evaluating, on at least three (3) occasions, all of the following:
  - identifying complex relay operations by interpreting available alarms and event data
  - analysing and diagnosing system failures
  - evaluating response to complex relay operations
- describing the following:
  - describing control and alarms associated with complex protection systems
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protection system types encompassing:
  - requirements of a protection scheme - relationship to primary system design, purpose of protection, safety of persons, protection of plant, system instability, system break up, loss of customers, loss of revenue, protection zones, restricted schemes, unrestricted schemes, duplicate protection, local backup protection, remote backup protection, selectivity, discrimination, stability, sensitivity and reliability
  - components of a protection scheme - current transformers, potential transformers, summation current transformers, interposing transformers, multi-tapped transformers, all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor based relays, gas relays, thermal sensors, hardwired communication, powerline carriers systems, microwave systems, fibre optic systems, need for isolation and need for interfacing
  - protection applied to buses - overload, differential, earth leakage, structure leakage,

© Commonwealth of Australia, 2025 Powering Skills Organisation

combined schemes and protection overlap
  - protection applied to transformers - biased differential, gas, winding temperature and oil temperature
  - protection applied to single/radial lines - overcurrent, earth leakage, slow earth leakage, distance, auto-reclose, sectionalising and over voltage
  - protection applied to interconnected lines - overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance and offset
- use of fault information to analyse and develop optimal network restoration strategies encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the analysis of protection targeting
  - requirements for the use of operational manuals, system diagrams/plans and drawings
  - techniques in the collation of protection data
  - techniques in the analyse and assessment of fault information – public, employee and protection equipment
  - application methods of fault information to analyse and develop optimal network restoration strategies - public and employee safety, and enterprise reliability guidelines
  - resource availability.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, relevant modelling tools, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, drawings and operation manuals.

UETTDRSO51 Manage network systems power flows

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the management of electrical network active and reactive power flows ensuring the network is operated within design parameters at all times. The electrical network includes feeders from distribution to transmission voltages, substation and generation assets that can influence power flows.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to manage network power flows	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence preparation of any network power flow management decisions, are reviewed and determined
	1.2 Purpose of the management is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established policies, procedures and specifications for the management of network power flows are obtained or established with appropriate personnel
	1.4 Network power flow management decisions are discussed with and/or directed to appropriate personnel in order to ascertain the system conditions
	1.5 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
	1.6 Work roles and tasks are allocated according to requirements and individual competencies
	1.7 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.8 Liaison and communication issues with others/authorised personnel, authorities and clients are resolved and activities coordinated to carry out work
	1.9 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.10 Need for relevant operating procedures are identified to manage the performance of the network according to requirements and/or established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.11 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
2 Carry out and management network power flow	**2.1** Strategic plans are developed incorporating organisational initiatives in accordance with established procedures
	2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3 Management decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4 Stakeholders/customers are kept informed of current status regarding plan progress and recent developments
	2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the work within an agreed timeframe according to requirements
	2.7 Testing of management decisions is undertaken according to requirements and established procedures
	2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete the management of network power flow	**3.1** Final review of management decisions is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete

Assessment Requirements for UETTDRSO51 Manage network systems power flows

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing and evaluating, on at least three (3) occasions, network manipulations that encompass the following:
  - maximising system reliability
  - managing voltage
  - minimising loss
  - controlling load
  - dispatching of static/synchronous Volt Ampere Reactive (VAR) compensation (if applicable to enterprise)
  - dispatching of generation (if applicable to enterprise)
- applying calculations and analysing the following:
  - transmission line conditions on the interconnected extra high voltage (EHV) system
  - distribution and sub-transmission line conditions on an interconnected system
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to managing network demand encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to managing network demand
  - requirements for the use of network demand management manuals, system diagrams/plans and drawings

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - identifying and interpreting enterprise demand management procedures
  - techniques in applying enterprise demand management procedures
- voltage control techniques encompassing:
  - conditions leading to voltage collapse
  - effects on system of high voltage (HV) and low voltage (LV)
  - voltage control devices - voltage regulators applied to generators and synchronous phase modifiers; electromagnetic voltage regulators; series and parallel capacitors; on-load tap changer (OLTC) transformers; and static VAR compensators (SVC), such as SVC saturated reactor compensators, thyristor controlled reactor compensators and combined systems
  - production of harmonics and methods of harmonic control
  - location of voltage control devices within the system
- power flow control encompassing:
  - use of system components to control power flow patterns - base load, spinning reserve, regulating machines, rapid start plant, phase shifting transformers and load shedding
  - principles of automated control
  - synchronising power
  - relationship of power and frequency
  - machine stabilisation techniques
  - system oscillations and stability - damped and undamped oscillation, relationship of fault clearance times and system stability, and critical clearance times
- alternator operation and control encompassing:
  - constructional features of alternators - weights, lengths, lengths, cooling mediums, cooling systems, prime mover types, prime mover attachment, types of windings and core arrangements
  - principle of operation - induction machines and synchronous machines
  - modes of operation - island and infinite bus operation, running up of prime movers, loading the alternator, requirements for synchronising and methods of synchronising
  - use of reactive capability diagram - related diagram types, current circle diagram, performance chart, capability diagram, values represented, per unit representation, and limits representation and meaning
  - automatic voltage regulators - need for voltage control, required attributes of an AVR, range, response time, constraints on AVR capability, desirable attributes of an AVR, power consumption, compensation, rotor stabilisation, automatic changeover systems, and input and output requirements and components
  - operation on an infinite bus - definition of infinite bus, power/angle dependence, reactive flow/voltage dependence, power/angle diagram, effect of saliency, transient conditions, practical and theoretical stability limits, voltage dependence of stability, control of reactive flow using AVR and generator transformer tap changer
- EHV generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working

© Commonwealth of Australia, 2025 Powering Skills Organisation

policies, practices and procedures; and synchronising procedures
- techniques in the installation of generator set control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of EHV load and assessing the appropriateness of the generator
- operating a generator in parallel to a single EHV job - overhead systems, indoor systems, customer installations and kiosk substations
- EHV generator set and control system to EHV distribution assets.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, modelling tools, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, relevant drawings, and operation manuals.

UETTDRTP22 Establish and reinstate a power systems transmission structure work site

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the operation/maintenance of support plant and equipment and tools used for excavation work associated with foundations and footings for the construction of transmission towers. It also covers the preparation of the worksite and the reinstatement of the ground surface. Scope of maintenance includes visual inspection, lubrication, gland nipping, draining of water taps, degreasing and replacing gaskets. Use of relevant personal protective equipment (PPE) is also required.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures

Competency Field

Transmission

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to establish and/or restore a transmission tower worksite schedule of work	**1.1** Work instructions are identified, received and confirmed
	1.2 Relevant requirements, specifications and priorities are set in accordance with procedures to establish and confirm the work schedule
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures to be followed for the work to be performed are received and confirmed
	1.4 Suggestions to assist with the establishing/restoration of the worksite are made to others involved in the work
	1.5 Hazards are identified, WHS/OHS risks assessed and emergency exits kept clear according to given instructions and established procedures
	1.6 Scope of responsibility under the relevant work permit, where appropriate, are received and confirmed with relevant personnel according to requirements and established procedures
	1.7 Resources, including equipment, tools, drawings, notices and PPE, required for the job are identified and checked for working order according to established procedures
	1.8 Relevant responsibilities associated with first aid and other related work safety procedures at the worksite are checked and confirmed in accordance with requirements and established procedures to ensure safety measures are followed in the instance of an incident
	1.9 Client issues are referred to appropriate personnel in accordance with industry//community standards
	1.10 Site preparation is confirmed according to given instructions, as is the site safety plan and the work schedule for a quality outcome and to minimise risk and damage to property, commerce and individuals in

© Commonwealth of Australia, 2025 Powering Skills Organisation

		accordance with established procedures
	1.11	Road signs, barriers and warning devices are correctly positioned in accordance with given instructions and requirements
2 Establish and/or restore the worksite schedule of work	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste associated with establishing/restoring the worksite and/or using of plant and equipment are followed in accordance with given instructions, requirements and/or established procedures
	2.2	Site hazards, such as lifting, climbing, working in confined spaces and/or aloft, and use of power tools/equipment, techniques and practices, are safely followed in accordance with given instructions and according to requirements
	2.3	Operational knowledge for establishing/restoration of the worksite and for operating support plant and equipment is confirmed to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements and established procedures
	2.4	Establishing/restoring the worksite and operating support plant and equipment is used safely and carried out in accordance with given instructions and established procedures to ensure all process aspects of the work are confirmed
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
	2.6	Non-routine events are referred to immediate authorised personnel for directions according to established procedures
	2.7	Problems associated with establishing/restoring the worksite and the operation of support plant and equipment are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.8	Ongoing checks of quality of the work are undertaken

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and work is completed within an allocated timeframe in accordance with given instructions and established procedures
3 Review and document establishment and/or restoration of worksite schedule of work	**3.1**	Work undertaken is checked against work schedule and anomalies reported to authorised persons in accordance with established procedures
	3.2	Accidents and/or incidents are actioned and reported to authorised personnel in accordance with established procedures
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Appropriate personnel are notified of work completion according to established procedures
	3.6	Work completion records and report forms/data sheets are completed accurately in accordance with given instructions and established procedures
	3.7	Performance feedback is sought to confirm outcomes are in agreement with work requirements and specifications

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTP22A Establish and reinstate a power systems transmission structure work site.

Assessment Requirements for UETTDRTP22 Establish and reinstate a power systems transmission structure work site

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using plans, drawings, maps/work schedules to define work to be completed, indicating WHS/OHS and environmental issues/hazards
- verifying qualifications to operate machinery and perform machinery daily log checks
- submitting Dial Before You dig application forms
- verifying understanding of material safety data sheets (MSDS) and work permits
- undertaking appropriate traffic control management
- verifying an understanding of working safely with hazardous materials and equipment, safe manual handling techniques and correct use of personal protective equipment (PPE)
- operating safely at least five (5) of the following types of equipment/tools:
  - small generator sets
  - welding units
  - air compressors and hoses
  - pneumatic and/or electric hammers
  - rollers and compactors
  - concrete and ceramic cutters
  - pumps
  - post hole diggers
  - drills
- operating at least one (1) of the following pieces of equipment:
  - back hoes
  - earth drilling rigs
  - trench excavators
  - heavy vehicles
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hand tools and their use encompassing:
  - hand tools for cutting, shaping, drilling, threading, tapping and finishing metallic and non-metallic components - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, and care and maintenance of hand tools
  - tools for measuring and marking out - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, and care and maintenance of hand tools
  - tools for dismantling and assembling electrical and electronic components - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, and care and maintenance of hand tools
- fixed and portable tools and their use encompassing:
  - fixed power tools for cutting, shaping, drilling and finishing metallic and non-metallic components - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, and care and maintenance of fixed power tools
  - portable power tools for cutting, shaping, drilling and structural components - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, care and maintenance of fixed power tools, and requirements for use on construction sites
- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications - properties of tensile strength; effects of temperature on the expansion of metals; ductibility, malleability, work hardening and annealing; and the conditions that lead to corrosion and the properties of timbers
- requirements for the use of enterprise vehicles, such as trucks and four-wheel drives encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with safe use of enterprise vehicles, including relevant certification and licensing, such as motor cars, light and heavy commercial trucks, heavy truck/trailer combination and four-wheel drive vehicles
  - compliance with regulations associated with the securing of loads prior for transportation
- requirements for the use of chainsaws, including relevant certification and licensing, encompassing:
  - safety precautions, requirements and responsibilities
  - selection and use of appropriate PPE
  - chainsaw operation - parts and function of components and ancillary equipment, pre-operational checks, starting procedures and safe use of chainsaw under load
  - safe transporting and storage procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP23 Erect power systems transmission structures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the erection of towers, in sections or in parts, in accordance with construction plans and specifications. It includes the correct positioning of road signs, barriers and/or warning devices; the inspection and confirmation that excavation/foundation construction is in accordance with the work order; and the identification of potential hazards and safety risks with recommendations for preventative action being referred to appropriate authorities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures

Competency Field

Transmission

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential	Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1 Prepare to erect transmission towers	**1.1** Work instructions are received and confirmed
	1.2 Relevant requirements and established procedures to be followed for the work to be performed are discussed with all personnel to establish and confirm the work schedule
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures to be followed for the work to be performed are received and confirmed
	1.4 Suggestions to assist in meeting erection of towers outcomes are made to others involved in the work
	1.5 Hazards are identified, WHS/OHS risks assessed and emergency exits kept clear according to given instructions and established procedures
	1.6 Scope of responsibility under the relevant work permit are received and confirmed with relevant personnel according to requirements and established procedures
	1.7 Resources, including, equipment, tools and personnel protective equipment (PPE), required for the job are obtained and confirmed safe and in working order according to established procedures
	1.8 Relevant responsibility associated with first aid, tower/pole top rescue and/or other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures to ensure safety measures are followed in the instance of an incident
	1.9 Client issues are referred to appropriate personnel in accordance with industry//community standards
	1.10 Site is prepared according to given instructions and the work schedule for a quality outcome and to minimise risk and damage to property, commerce and individuals in accordance and established procedures
	1.11 Road signs, barriers and warning devices are positioned in accordance with given instructions and requirements
2 Carry out the erection of	**2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and

transmission towers		minimise waste are followed in accordance with given instructions, requirements and/or established procedures
	2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed in accordance with given instructions and according to requirements confirmed to eliminate the prospects of incidents
	2.3	Operational knowledge for the operation of support plant and equipment used for the erection of towers to be applied to the work is confirmed to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements and established procedures
	2.4	Operation of support plant and equipment used for the erection of towers is carried out in accordance with given instructions and established routines/procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
	2.6	Non-routine events are referred to immediate authorised personnel for directions according to established procedures
	2.7	Problems associated with operation of support plant and equipment used for the erection of towers are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.8	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete the erection of transmission towers	**3.1**	Work undertaken is checked against work schedule and anomalies reported to authorised personnel in accordance with established procedures
	3.2	Accidents and/or incidents are actioned and reported to authorised personnel in accordance with established procedures
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with given instructions and established

Assessment Requirements for UETTDRTP23 Erect power systems transmission structures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- erecting at least one (1) of the following transmission structure types:
  - pyramid
  - delta
  - pi
  - enterprise-specific types
- installing at least one (1) of the following foundation types:
  - mass concrete
  - caisson or pile-based
  - screw-anchor
  - bored
- using at least one (1) of the following methods of erecting a transmission structure:
  - crane
  - gin pole
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hand tools and their use encompassing:
  - hand tools for cutting, shaping, drilling, threading, tapping and finishing metallic and non-metallic components - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, and care and maintenance of hand tools

  - tools for measuring and marking out - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, and care and maintenance of hand tools
  - tools for dismantling and assembling electrical and electronic components - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, and care and maintenance of hand tools
- fixed and portable tools and their use encompassing:
  - fixed power tools for cutting, shaping, drilling and finishing metallic and non-metallic components - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, and care and maintenance of fixed power tools
  - portable power tools for cutting, shaping, drilling and structural components - types of tools and their purpose, techniques for the correct and safe use of these tools, hazards associated with their use, care and maintenance of fixed power tools, and requirements for use on construction sites
- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications - properties of tensile strength; effects of temperature on the expansion of metals; ductibility, malleability, work hardening and annealing; and the conditions that lead to corrosion and the properties of timbers
- transmission structures and hardware encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - types of structures
  - types and function of associated hardware/equipment and insulators
  - types of conductors
  - location of transmissions structures
  - other equipment used on transmission structures, e.g. aircraft warning devices
  - voltages on transmission structures
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

Assessment Requirements for UETTDRTP24 Erect power systems transmission structure hardware

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- erecting hardware on at least one (1) of the following structures:
  - pyramid
  - delta
  - pi
  - enterprise-specific types
- erecting at least one (1) of the following pieces of hardware:
  - insulators
  - bolts
  - clamps
- erecting transmission hardware using at least one (1) of the following methods:
  - crane
  - gin pole
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- requirements for the use of enterprise vehicles, such as trucks and four-wheel drives, encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with safe use of enterprise vehicles, including relevant certification and licensing, such as motor cars, light and heavy commercial trucks, heavy truck/trailer combination and four-wheel drive vehicles

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - compliance with regulations associated with the securing of loads prior to transportation
- generation systems encompassing:
    - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
    - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
    - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
    - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
    - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems; and radial, parallel and ring main feeders
    - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
    - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders; and the high voltage (HV) equipment associated with substations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP25 Pre-tension stringing overhead transmission conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the stringing of overhead conductors and cables with no electrical connections being made. It includes the preparation of the site, the pre-positioning of conductors and fitting of conductor/cable stringing equipment, where appropriate, and the cleaning of insulators in accordance with work orders.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Assessment Requirements for UETTDRTP25 Pre-tension stringing overhead transmission conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing stringing with at least two (2) of the following conductor types:
  - copper
  - aluminium
  - steel
  - aluminium/steel reinforced
  - high voltage (HV) ABC
  - High Voltage Insulated Unscreened Conductor (HV IUC)
- performing pre-tension stringing of overhead transmission conductors and cables using any one (1) of the following types of equipment:
  - elevated work platform (EWP)
  - winches/capstans
  - tension equipment
  - stringing equipment
  - cable trailers
  - cable drum stands
  - ropes
  - rollers
  - sheaves
  - stockings
  - swivels
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- stringing installation overhead transmission conductors and cables encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to stringing conductors and cables
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings, and material lists
  - conductor size, type and route length
  - constructions types and structures for transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing of conductors, - personal protective equipment (PPE), plant, tools and equipment
  - techniques in stringing conductors - safe working practices, method of conductor support, consideration for the environment, location/positioning of the conductor/cable, types and application of tools, and equipment and hardware
  - methods of stringing conductors.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP26 Install transmission structures and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install transmission structures and associated hardware in the electricity supply industry (ESI).

It includes preparing to install and installing transmission structures, and associated hardware in accordance with construction plans, drawings and workplace procedures. It also includes updating system data, records and completing relevant documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

Competency Field

Transmission

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install transmission structures and associated hardware	**1.1** Works schedule, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for erecting towers and associated hardware are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks are assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are confirmed and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out the erection of transmission towers and associated hardware	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2 Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are

© Commonwealth of Australia, 2025 Powering Skills Organisation

		followed in accordance with workplace procedures
	2.3	Transmission structures and associated hardware are assembled at ground level and erected in accordance with construction plans, drawings and workplace procedures
	2.4	Structure is stabilised in accordance with construction plans, drawings and workplace procedures
	2.5	Unplanned events are responded to in accordance with workplace procedures
	2.6	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation of transmission structures and associated hardware	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and towers and associated hardware are returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTP26A Install transmission structures and associated hardware.

Assessment Requirements for UETTDRTP26 Install transmission structures and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing structures must include at least two (2) of the following types:
  - pyramid
  - delta pi
  - enterprise specific type
- installing hardware must include all of the following:
  - insulators
  - clamps
  - bolts
  - structural components
- performing stabilisation activities must include the following:
  - welding
  - cleaning
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
- types of structures
- types and function of associated hardware/equipment and insulators
- types of conductors
- location of transmissions structures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- other equipment used on transmission structures, e.g. aircraft warning devices
- voltages on transmission structures
- traffic management, such as:
  - purpose of traffic management and a power worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, the procedures used to provide an effective traffic management scheme and the use of a two-way radio
- classification and identification of equipment, components and tools
- procedures for purchasing/ordering items, removing/dispatching items, stocktaking and record keeping
- safe working practices, including:
  - requirements to enable safe working on conductive poles
  - safe working practices when working with associated hardware/equipment and insulators
  - precautions of voltages on transmission structures
  - safe working practices when using specialised equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for the installation of transmission structures and associated hardware
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP27 Maintain transmission structures and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance of non-energised, pyramid, delta, Pi or enterprise-specific transmission towers and associated hardware. It includes the repair and/or replacement of components in accordance with construction plans, specifications, work orders and standing enterprise requirements. Maintenance also involves cleaning and welding. The updating of system data, records and/or completion of relevant documentation in accordance with enterprise requirements also forms part of this competency.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to maintain transmission towers and associated hardware	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the maintenance of towers and associated hardware are obtained and confirmed for the purposes of the work to be performed and communicated to relevant personnel
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
	1.6 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.7 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
	1.8 Relevant personnel at worksite are confirmed current in first aid, pole tower/top rescue and other related work procedures according to requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary
	1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures
	1.12 Traffic management plan is identified and implemented
2 Carry out the maintenance of transmission towers and associated hardware	**2.1** WHS/OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2 Towers and associated hardware to be maintained are stabilised according to requirements
	2.3 Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and currency according to requirements confirmed
	2.4 Essential knowledge and associated skills are applied in the safe maintenance of towers and associated hardware to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.6 Maintenance, including repair and/or replacement of towers, is carried out in accordance with the work schedule and requirements/established procedures
	2.7 Unplanned events in the maintenance of towers and associated hardware are undertaken within the scope of established procedures
	2.8 Known solutions to a variety of problems are applied

© Commonwealth of Australia, 2025 Powering Skills Organisation

		using acquired essential knowledge and associated skills
	2.9	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the maintenance of transmission towers and associated hardware	**3.1**	Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures
	3.5	Relevant work permits are signed off and towers and associated hardware are returned to service in accordance with requirements
	3.6	Work completion records, reports, as installed//modified drawings and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTP27A Maintain transmission structures and associated hardware.

Assessment Requirements for UETTDRTP27 Maintain transmission structures and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining transmission structures including any one (1) of the following:
  - pyramid
  - delta pi
  - enterprise-specific type
- removing, repairing or replacing transmission associated hardware including at least two (2) of the following:
  - insulators
  - clamps
  - bolts
  - structural components
- undertaking maintenance of transmission structures and associated hardware including at least one (1) of the following:
  - welding
  - cleaning
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for gaining access permits
- reasons for gaining access
- types of maintenance procedures on transmission structures encompassing:
  - procedure to follow for inspection/patrols according to the transmission apply authority

© Commonwealth of Australia, 2025 Powering Skills Organisation

- erecting and removing of transmission equipment and hardware from a tower encompassing:
  - climbing procedures
  - square rigging principles
  - calculation of forces at work within a given square rigging system
  - construction of a square rigging system
  - procedures for changing insulators, such as:
    - vertical angle suspension, strain insulator, post insulator (horizontal or vertical) and bridge insulator, and calculation of conductor forces
- installation of temporary work platforms encompassing:
  - types and function of installation tools and equipment
  - precautions and work methods to follow
  - procedures for installations of temporary work platforms
- installation of conductor protective hardware encompassing:
  - types and selection of common dampers, tools and equipment
  - control of Aeolian vibration
  - procedures for the installation of dampers onto conductors
- dead line insulator washing encompassing:
  - supply authority regulations
  - procedure for washing de-energised transmission lines.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for maintaining transmission structures and associated hardware
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP28 Set-up and install transmission structure stubs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the utilisation of geographical maps and site surveys to set out, excavate, prepare, align and install the foundation footings of a transmission tower and establish the tower stubs to ground level for the erection of transmission towers. Survey processes and operation of survey equipment is associated with this unit.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETTDREL16 Working safely near live electrical apparatus

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1 Prepare for the setting of a transmission tower stub	**1.1**	Work schedule), including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection
	1.2	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3	Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for construction activities are obtained and confirmed for the purposes of the work to be performed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear according to established procedures
	1.6	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.7	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
	1.8	Relevant personnel at worksite are confirmed current in first aid, rescue and other related work procedures according to requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		in accordance with established procedures
	1.12	Traffic management plan is identified and implemented, where appropriate
2 Carry out the setting of a transmission tower stub	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
	2.3	Lifting, climbing, working in excavations and use of power tools/equipment, techniques and practices are safely followed, and currency according to requirements confirmed
	2.4	Essential knowledge and associated skills are applied in the survey and establishment of tower stubs to ensure completion in an agreed timeframe, and to quality standards with a minimum of waste according to requirements
	2.5	Unplanned events in the establishment of tower stubs are undertaken within the scope of established procedures
	2.6	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.7	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the setting of a transmission tower stub	**3.1**	Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and

Assessment Requirements for UETTDRTP28 Set-up and install transmission structure stubs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating all of the following:
  - survey techniques
  - setting out and pegging excavation markers
  - establishing the tower stub to ground level
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications - application of velocity, acceleration, force, density, torque and pressure
  - applications of the International System of Units (SI) units
  - the relationship between work, power and energy
  - behaviour of object under force - using a block and tackle under load, concept of mechanical advantage, determination of resultant forces and determining the sag in a catenary conductor and the force applied at each end
  - fundamentals of the basic laws of fluid mechanics

© Commonwealth of Australia, 2025 Powering Skills Organisation

- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications - properties of tensile strength, effects of temperature on the expansion of metals, ductibility, malleability, work hardening and annealing and the conditions that lead to corrosion and the properties of timbers
- operation of elevated work platform (EWP) encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with EWP, including relevant certification and licensing - safe working clearances; safe operation procedures and the mandatory wearing of harness/attachment requirements; safety observers; inspection and testing procedures prior to use, set-up, operation and shutdown procedures for an EWP
  - emergency procedures for an EWP - escape procedures for an EWP, rescuing procedures and mechanical failure procedures
  - types of EWP insulated/uninsulated
- operation and maintenance of mobile plant, tools and equipment encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with portable hydraulic equipment and portable pneumatic equipment, including relevant certification and licensing - safe working clearances, safe operation procedures and safety observers
  - inspection and testing procedures prior to use
  - set-up, operation and shutdown procedures
  - permit to work systems and isolation procedures
- requirements for the use of enterprise vehicles, such as trucks and four-wheel drive vehicles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with safe use of enterprise vehicles, including relevant certification and licensing, such as motor cars, light and heavy commercial trucks, heavy truck/trailer combination and four-wheel drive vehicles
  - compliance with regulations associated with the securing of loads prior to transportation
- requirements for the use of chainsaws, including relevant certification and licensing, encompassing:
  - safety precautions, requirements and responsibilities
  - selection and use of appropriate personal protective equipment (PPE)
  - chainsaw operation - parts and function of components and ancillary equipment, pre-operational checks, starting procedures and safe use of chainsaw under load
  - safe transporting and storage procedures
- procedure in providing store support encompassing:
  - classification and identification of equipment, components and tools
  - procedures for purchasing/ordering items, removing/dispatching items, stocktaking, security and bookkeeping/record keeping
  - material handling - warehouse/depot storage techniques, handling equipment, pallet lift trucks, forklifts and cable drum handling equipment
  - safety procedures - storage and care of safety equipment, handling hazardous materials,

© Commonwealth of Australia, 2025 Powering Skills Organisation

storage of hazardous substances and dangerous goods, and depot safety procedures
    - manufacturer and supplier information, including material safety data sheets (MSDS)
- filtering and sampling of insulating oil encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with filtering and sampling - safe handling procedures; personal hygiene; storage and disposal procedures; WHS/OHS hazards and precautions, including use of appropriate PPE; environmental procedures and effects of contaminates
    - properties of insulating oil - dielectric strength, moisture content, acidity and sludge
    - locations where insulating oil is used - transformer, switchgear and oil filled cable
    - filtering equipment – types, cleaning procedures and method of use
    - techniques in filtering and sampling insulating oil - methods of sampling, methods of filtering, testing procedures on site and analysing oil effectiveness
    - frequency of testing
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedure of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques, involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
    - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment and requirements for effective communications operations for aerial work
- environmental fundamentals encompassing:
    - environmental standards, codes, environmental legislation, supply authority regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

and/or enterprise requirements applicable to the control of environment associated with the worksite - relevant federal legislation, relevant state/territory legislation, relevant local government by-laws, relevant government or quasi government policies and regulations, and relevant community planning and development agreements (including land care agreements)
    - employer and employee responsibilities
    - methods of obtaining information on environmental issues and updates
    - methods of identifying environmental impacts from work-related activities
    - meaning of environmental terms - identification, assessment and control of risks, compliance, best practice and sustainable energy
    - procedures in implementing management plans to ensure compliance
- material handling and the environment encompassing:
    - methods of obtaining updated environmental information and data sheets on the proper use and handling of equipment and materials
    - environmental standards, codes, environmental legislation, WHS/OHS legislation, hazardous substances/dangerous goods regulations, supply authority regulations and/or enterprise requirements; and applicable environmental care when handling materials, including provision of manufacturer and supplier information, such as MSDS
    - types and application of PPE used for hazards substances and dangerous goods
    - techniques in handling equipment to eliminate/reduce risks to the environment from spillages of oils, herbicides, pesticides and chemicals from equipment such as vehicle loading crane, chainsaws, enterprise vehicles and explosive power tools
    - procedures for handling and control of spillages of herbicides
    - methods of disposing and storage of herbicides, pesticides and chemicals
    - methods of cleaning mobile plant, equipment and tools
    - recording of data
- principles of surveying encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to surveying in the ESI
    - survey principles and measurement of ground levels, deviation angles and compass bearings
    - basic survey of short distribution line extension.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic

© Commonwealth of Australia, 2025 Powering Skills Organisation

and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP29 Install and maintain transmission overhead conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain transmission overhead conductors and cables in the electricity supply industry (ESI).

It includes installing and maintaining overhead conductors and cables used on towers including stringing, tensioning and terminating of conductor/cable while de-energised, securing conductor to the insulators or supports and performing the electrical connections. It also includes maintenance work associated with phasing, completing workplace tests, isolating systems and circuits, accepting/issuing electrical permits and updating of system data/maintenance records.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRTP26 Install transmission structures and associated hardware

UETTDRTP27 Maintain transmission structures and associated hardware

Competency Field

Transmission

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation and maintenance of overhead conductors and cables used on towers	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of overhead conductors and cables used on towers are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks are assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are confirmed and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

2 Carry out installation and maintenance of overhead conductors and cables used on towers	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Systems and circuits are isolated and proved safe to work in accordance with job requirements, work permits and workplace procedures
	2.4	Installation and maintenance of overhead conductors and cables are completed in agreed timeframes, to quality standards and with minimum waste in accordance with requirements
	2.5	Overhead conductor/cables are strung, tensioned and terminated in accordance with workplace procedures
	2.6	Conductors, anti-vibration devices and spaces/spreaders are secured in accordance with workplace procedures
	2.7	Electrical connections are made in accordance with the workplace procedures
	2.8	Maintenance, including repair and/or replacement of overhead conductors and cables, is performed in accordance with workplace procedures
	2.9	Unplanned events are responded to in accordance with workplace procedures
	2.10	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation and maintenance of overhead conductors and cables used on towers	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials

© Commonwealth of Australia, 2025 Powering Skills Organisation

are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and overhead conductors and cables used on towers are returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTP29A Install and maintain transmission overhead conductors and cables.

Assessment Requirements for UETTDRTP29 Install and maintain transmission overhead conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using at least one (1) of the following:
  - copper
  - aluminium
  - steel
  - composite
  - aluminium/steel reinforced
  - pilot
- operating from at least two (2) of the following:
  - elevated work platform (EWP)
  - portable platform
  - gondola
  - hook ladder*
  - elevated work box (EWB)
  - (*must do)
- using at least five (5) of the following:
  - winches*
  - tension equipment*
  - stringing equipment
  - cable trailers
  - crimping equipment *
  - pre-formed splices
  - hardware
  - cable drum stands

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - ropes
  - rollers/ sheaves
  - comealongs
  - swivels
  - (*must do)
- using at least two (2) of the following:
  - voltage/de-energised indicating device
  - field intensity meter
  - operating rods
  - (*must do)
- using at least one (1) of the following:
  - dynamometer
  - site board
  - abney level
  - sag chart*
  - theodolite
  - (*must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- limits of approach for personnel, vehicles, mobile plant and (EWP)
- requirements of persons prior to making bare hand contact with dead low voltage (LV)mains and apparatus
- requirements of relevant electrical access permits necessary to allow work to be performed on LV and high voltage (HV)apparatus
- safe working practices, including:
  - requirements to enable safe working on conductive poles
  - procedures to attach an on-site earthing device to de-energised LV and HV overhead circuit
  - safe working practices when working with associated hardware/equipment and insulators
  - precautions of voltages on transmission structures
  - dangers when working at heights
  - identification of hazards, assessing and controlling risks
  - types, selection, maintenance and uses of personnel protective equipment (PPE)
  - permit to work systems and isolation procedures
  - safe working practices when using specialised equipment
  - emergency response and rescue procedures, including first.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining transmission overhead conductors and cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP30 Inspect transmission overhead structures and electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the inspection requirements of overhead structures, such as towers and electrical apparatus. Overhead structures include towers and overhead conductors and/or cables, including underground and overhead transition points, electrical equipment, hardware and/or earthing systems. It also includes the completion of inspection reports and other relevant documentation in accordance with requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

Competency Field

Transmission

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for the inspection of overhead structures and electrical apparatus used on towers	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the inspection of overhead structures and electrical apparatus used on towers are obtained and understood for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
	1.6 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
	1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and obtained and confirmed safe and in working order
	1.8 Relevant personnel at worksite are confirmed current in first aid, tower/pole top rescue and other related work procedures according to requirements
	1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures
	1.12 Traffic management plan is identified and implemented
2 Carry out inspection of overhead structures and electrical apparatus used on towers	**2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed and currency according to requirements confirmed
	2.3 Essential knowledge and associated kills are applied in the safe inspection of overhead structures and electrical apparatus used on towers to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.4 Inspection of overhead structures and electrical apparatus used on towers is carried out in accordance with the work schedule and requirements/established procedures
	2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.6 Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.7 Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the inspection of overhead structures and electrical apparatus used on towers	**3.1** Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures

3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

3.5 Relevant work permits are signed off and overhead structures and electrical apparatus used on towers are returned to service in accordance with requirements

3.6 Work completion records, reports, as installed//modified drawings and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTP30A Inspect transmission overhead structures and electrical apparatus.

Assessment Requirements for UETTDRTP30 Inspect transmission overhead structures and electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- undertaking inspections of poles – structures and electrical apparatus including at least three (3) of the following inspection methods:
  - towers
  - overhead conductors/cables
  - structural fittings
  - electrical equipment
  - hardware
  - earthing systems
- undertaking inspections using at least two (2) of the following:
  - visual*
  - infra-red camera
  - X-ray
  - camera
  - binoculars/telescope
  - (* must do)
- complying with all of the following:
  - reporting procedures
  - reporting outcomes
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- standards, codes, legislation, supply authority regulations and/or enterprise requirements
- characteristics of materials used for transmission structures within the electrical transmission system encompassing:
  - faults that occur that influence the integrity of the structure
- deterioration of assets encompassing:
  - relationship between steel, concrete and other materials
  - deterioration in steel and concrete
  - inspection procedures for deterioration
- clearances and safety procedures
- ground line inspection procedures of electrical transmission lines encompassing:
  - requirements for inspection of transmission lines and insulators
  - use of specific equipment during inspection
  - techniques in transmission line inspection
- overhead line inspection procedures of electrical transmission lines encompassing:
  - methods and requirements for overhead line inspection on electrical structures
  - clearances for overhead conductors, cables and structures
  - techniques used to obtain close inspection of transmission lines
  - use of specific equipment and testing inspection
  - methods of recording data.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for inspecting transmission overhead structures and electrical apparatus
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP31 Maintain energised transmission lines using high voltage live work stick method

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain energised transmission lines using high voltage (HV) live work stick method in the electricity supply industry (ESI).

It includes maintaining live work using stick techniques, including verifying site conditions and potential hazards, the conformation and calculation of physical loads and selecting appropriate and authorised work methods. It also includes preparing and cleaning of specialist materials and tools in accordance with authorised technical instructions, undertaking occupational health and safety (WHS)/occupational health and safety (OHS), safe working practices, rendering inoperative the automatic re-closing device including its restoration in accordance with work plan, and procedures for issuing/accepting live work authorities/permits and/or relevant work documentation.

The application of the skills and knowledge described in this unit may require a licence to operate specific pieces of equipment such as elevated work platforms.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Pathway 1

Certificate III Transmission overhead powerline worker or a qualified transmission powerline worker.

Pathway 2

BSBLDR403 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS65 Contribute to coordinated HV live working

UETTDRTP26 Install transmission structures and associated hardware

UETTDRTP27 Maintain transmission structures and associated hardware

UETTDRTP29 Install and maintain transmission overhead conductors and cables

UETTDRTP30 Inspect transmission overhead structures and electrical apparatus

UETTDRTP99 Test and verify transmission overhead installations

Competency Field

Transmission

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain energised transmission lines using HV live work stick method	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for completion within

© Commonwealth of Australia, 2025 Powering Skills Organisation

		acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.6	Relevant work permits are obtained and signed in accordance with workplace procedures
	1.7	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Relevant personnel at worksite are confirmed current in first aid, cardiopulmonary resuscitation (CPR) and other rescue procedures in accordance with job requirements and/or workplace procedures
	1.9	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required
	1.10	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.11	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.12	Traffic management is planned and implemented in accordance with workplace procedures
2 Carry out the maintenance of energised transmission lines using HV live work stick method	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	First aid, CPR and other rescue procedures are performed in accordance with job requirements and/or workplace procedures
	2.3	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		immediate authorised personnel for directions in accordance with established procedures
	2.5	Auto-reclose devices and associated circuits are rendered inoperative and necessary work documentation obtained in accordance with workplace procedures
	2.6	Remedial actions are taken to overcome shortfalls encountered in the work schedule in accordance with job requirements and workplace procedures
	2.7	Maintenance of energised HV overhead electrical transmission apparatus is performed in accordance with work schedules, job requirements and workplace procedures
	2.8	Energised HV overhead electrical transmission apparatus is maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.9	Solutions to non-routine problems are identified and actioned in accordance with workplace procedures
	2.10	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete the maintenance of energised transmission lines using HV live work stick method	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and client/customer advised in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Assessment Requirements for UETTDRTP31 Maintain energised transmission lines using high voltage live work stick method

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- accessing work zone using at least two (2) of the following methods:
  - ladder access
  - elevated work platform (EWP) access
  - elevated work box (EWB) access
  - structure access
- completing all the following:
  - electrical integrity of insulators
  - replacing strain insulators
  - replacing suspension insulators
- performing at least three (3) of the following live work tasks:
  - replacing/installing vibration dampers
  - repairing/replacing conductor spacers
  - repairing/replacing conductor fittings and hardware
  - applying pre-formed helical fittings
  - installing/removing vibration meters
  - replacing cross-arms
  - replacing poles
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Commonwealth/state/territory legislation, standards, codes, supply authority regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

and/or enterprise requirements associated with working on energised lines for voltages from 66 kV up to 500 kV utilising live work stick method

- relationship and responsibilities of each team member encompassing:
  - roles of the individual in the team
  - contribution to joint outcomes
  - goals/plans and objectives of the team
  - team communication
  - effective teamwork
- safety precautions for working on energised lines encompassing:
  - live work minimum approach distances for persons and plant
  - calculation of forces supported by live working equipment
  - identification of WHS/OHS hazards, and assessing and controlling risks
  - types, selection, maintenance, storage and uses of personnel protective equipment (PPE) required for live stick work
  - types and functions, safe working policies, procedures and practices for use of specialised live work plant, equipment and tools
  - emergency response and rescue procedures
- electrical and electrostatic principles encompassing:
  - relationship of the resistance of a human body to different levels of current and voltage
  - relationship of a human body to an electric field
  - effects of electrostatic induction for live stick work
  - relationship of phase voltage and respective line voltages
  - effect of distance
  - potential of an object within the field and the effect of distances to the potential
- high voltage (HV) feeder auto-reclosing suppression encompassing:
  - function
  - application
  - live work access authority/permit systems
- selection care, use and maintenance of sticks for live work encompassing:
  - care of live work sticks
  - use and load limitations of live work sticks
  - cleaning live work sticks
  - restoring gloss surfaces of live work sticks
  - repairing small ruptures of live work sticks
  - repairing broken fittings of live work sticks
- selection, care, use and maintenance of ropes for live work encompassing:
  - identification of ropes used for live stick work
  - characteristics
  - types
  - application

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - restrictions
  - storage
  - transport
  - cleaning
  - labelling
  - testing
  - recording
  - techniques in splicing
  - determining suitability of the rope for continued use
- live stick work techniques performed in accordance with enterprise requirements encompassing:
  - connecting and/or disconnecting HV bypass bridges
  - erecting and using boom pole and insulator cradle
  - erecting and/or replacing structures and poles
  - installing and/or replacing HV cross-arms
  - installing and/or replacing HV suspension insulators
  - installing and/or replacing HV strain insulators
  - installing and/or replacing suspension clamp unit
  - installing and/or replacing fittings and hardware to conductors
  - installing and/or replacing vibration dampers
  - installing and/or replacing preformed repair rods
- checking electrical integrity of insulators prior to work encompassing:
  - visual and audible assessment
  - test for disc voltage difference
  - plot data
  - assess data
  - determining condition of an insulator string
- rigging procedures for live work encompassing
  - identification of rigging points on structures
  - selection and positioning of rigging equipment on structures
  - selection and operation of rope tackles
- safety observer principles and responsibilities encompassing:
  - areas of responsibility
  - supervisor skills
  - protocols and procedures
  - specific duties of a safety observer
  - techniques in observing others in the safe performance of their work
  - minimum approach distances for personnel and hand-held tools
  - special limits of approach.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP32 Maintain energised transmission lines using high voltage live work bare hand method

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain energised transmission lines using high voltage (HV) live work Barehand method in the electricity supply industry (ESI).

It includes maintaining. live work using Barehand method, verifying site conditions and potential hazards, conformation and calculation of physical loads and selection of appropriate and authorised work methods. It also includes preparing and cleaning specialist material and tools in accordance with authorised technical instructions, undertaking of work health and safety (WHS)/occupational health safety (OHS), safe working practices and rendering inoperative the automatic re-closing device including its restoration in accordance with the work plan and procedures for issuing/accepting live work authorities/permits and/or relevant work documents.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Pathway 1

Qualified and authorised Transmission Lineworker

Pathway 2

BSBLDR403 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to maintain energised transmission lines using HV live work bare hand method	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for completion within

© Commonwealth of Australia, 2025 Powering Skills Organisation

		acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.6	Relevant work permits are obtained and signed in accordance with workplace procedures
	1.7	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Relevant personnel at worksite are confirmed current in first aid, cardiopulmonary resuscitation (CPR) and other rescue procedures in accordance with job requirements and/or workplace procedures
	1.9	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required
	1.10	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.11	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.12	Traffic management is planned and implemented in accordance with workplace procedures
2 Perform maintenance of transmission lines using HV live work bare hand method	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	First aid, CPR and other rescue procedures are performed in accordance with job requirements and/or workplace procedures
	2.3	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Auto-reclose devices and associated circuits are rendered inoperative and necessary work documentation

© Commonwealth of Australia, 2025 Powering Skills Organisation

		obtained in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.6	Remedial actions are taken to overcome shortfalls encountered in the work schedule in accordance with job requirements and workplace procedures
	2.7	Maintenance of energised HV overhead electrical transmission apparatus is performed in accordance with work schedules, job requirements and workplace procedures
	2.8	Energised HV overhead electrical transmission apparatus is maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.9	Solutions to non-routine problems are identified and actioned using in accordance with workplace procedures
	2.10	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete the maintenance of transmission lines using HV live work bare hand method	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/workplace procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and client/customer advised in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Assessment Requirements for UETTDRTP32 Maintain energised transmission lines using high voltage live work bare hand method

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- accessing work zone using at least one (1) of the following methods:
  - ladder access
  - elevated work platform (EWP) access
  - elevated work box (EWB) access
  - rope access
- performing at least five (5) of the following live work tasks:
  - replacing strain insulators
  - replacing suspension insulators
  - replacing/connecting bridge/bonding connections
  - replacing vibration dampers
  - repairing/replacing conductor spacers
  - repairing/replacing conductor joints
  - repairing conductors
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on energised lines for voltages up to and including 500 kV utilising the live bare hand work method
- relationship and responsibilities of each team member, including:
  - role of the individual in the team

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - contribution to joint outcomes
  - goals/plans and objectives of the team
  - work team communication
  - effective teamwork
- safety precautions for working on energised lines, including:
  - live work minimum approach distances for persons and plant
  - calculation of forces supported by live working equipment
  - identification of WHS/OHS hazards, and assessing and controlling the risks
  - types, selection, maintenance, storage and uses of personnel protective equipment (PPE), including the faraday suit
  - types and functions, safe working policies, procedures and practices for use of specialised live work plant, equipment and tools
  - emergency response and rescue procedures
- electrical and electrostatic principles, including:
  - relationship of the resistance of a human body to different levels of current and voltage
  - relationship of a human body in an electric field
  - effects of electrostatic induction for live bare hand work
  - relationship of phase voltage and respective line voltages
  - effect of distance to voltage
  - potential of a conductive object within a field
- high voltage (HV) feeder auto-reclosing suppression, including:
  - function
  - application
  - live work access authority/permit systems
- live bare hand work techniques performed in accordance with enterprise requirements, including:
  - fitting and testing a faraday suit
  - erecting and using an insulated ladder
  - erecting and using a boom pole and insulator cradle
  - installing and/or replacing HV suspension insulators
  - installing and/or replacing HV strain insulators
  - installing and/or replacing suspension clamp units
  - installing and/or replacing fittings and hardware to conductors
  - installing and/or replacing vibration dampers
  - installing and/or replacing conductor spacers
  - installing and/or replacing preformed repair rods
  - installing and/or replacing HV cross-arms
  - connecting and/or disconnecting HV bypass bridges
- selection, care, use and maintenance of ropes for live work, including:
  - identification of ropes used for live bare hand work

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - characteristics
  - application
  - restrictions
  - precautions
  - storage
  - transport
  - cleaning and caring
  - labelling
  - testing
  - records
  - techniques in splicing
  - determining suitability of the rope for continued use
- selection care, use and maintenance of sticks for live work, including:
  - care of live work sticks
  - use and load limitations of live work sticks
  - cleaning live work sticks
  - restoring gloss surfaces of live work sticks
  - repairing small ruptures of live work sticks
  - repairing broken fittings of live work sticks
- checking integrity of insulators prior to work, including:
  - visual and audible assessment
  - check disc voltage difference
  - plot data
  - assess data
  - determine condition of insulator string
- rigging procedures for live bare hand work, including
  - identification of rigging points on structures
  - selection and positioning of rigging equipment on structures
  - selection of and operation of rope tackles
- safety observer principles and responsibilities, including:
  - areas of responsibility
  - supervisor skills
  - protocols and procedures
  - specific duties of a safety observer
  - techniques in observing others in the safe performance of their work
  - minimum approach distances for personnel and hand-held tools
  - special limits of approach.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP33 Maintain energised transmission lines using bare hand technique on a helicopter platform

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance of energised high voltage (HV) transmission overhead electrical apparatus, i.e. live line work using bare hand techniques from a helicopter platform. It includes the verification of site conditions and potential hazards, the conformation and calculation of physical loads and the selection of appropriate and authorised work methods. It includes the preparation and cleaning of specialist material and tools in accordance with authorised technical instructions.

It also encompasses the undertaking of work health and safety (WHS)/occupational health and safety (OHS)and safe working practices and the rendering inoperative of the automatic re-closing device, including its restoration in accordance with the work plan and the procedure of issuing/accepting electrical access permits and/or relevant work document.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Pathway 1

Qualified and authorised Transmission Lineworker

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to maintain energised lines (transmission) using bare hand technique from a helicopter platform	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a

© Commonwealth of Australia, 2025 Powering Skills Organisation

		quality standard and in accordance with established procedures
	1.3	Risk control measures are identified, prioritised and evaluated against the work method
	1.4	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Relevant personnel at worksite are confirmed current in first aid, cardiopulmonary resuscitation (CPR) and other rescue procedures according to requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and instructed in respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
2 Carry out the maintenance of energised	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and

© Commonwealth of Australia, 2025 Powering Skills Organisation

lines (transmission) using bare hand technique from a helicopter platform		minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, CPR, other rescue procedures and related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting and tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	Maintenance of energised high voltage (HV) overhead electrical transmission apparatus is carried out in accordance with the work schedule and requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied in the safe maintenance of energised HV overhead electrical transmission apparatus to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete the maintenance of energised lines (transmission) using bare hand technique from a helicopter platform	**3.1**	Work is checked against schedule for conformance and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures

3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

3.5 Relevant work permits (live line) are signed off and client/customer advised in accordance with requirements

3.6 Works completion records, reports, as installed//modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTP33A Maintain energised transmission lines using Barehand technique on a helicopter platform.

Assessment Requirements for UETTDRTP33 Maintain energised transmission lines using bare hand technique on a helicopter platform

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- working safely from a helicopter platform including all of the following:
  - usage of a helicopter
  - usage of a platform
- performing at least one (1) of the following:
  - replacing/connecting bridge/bonding connections
  - replacing vibration damper
  - repairing/replacing conductor spacers
  - repairing/replacing conductor joint
  - repairing conductor
  - applying helical splice
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working on energised lines at or above 132 kV using live line bare hand techniques from a helicopter platform encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements associated with extra high voltage (EHV) live line bare hand work form a helicopter platform
  - safety precautions when working on helicopters - live line minimum approach distances, including safe approach for selected helicopter type(s); WHS/OHS hazards and

© Commonwealth of Australia, 2025 Powering Skills Organisation

precautions; determination of helicopter platform for task and working environment (i.e. network and relevant aircraft authority); identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE); live line access authority/permit systems; disabling auto-reclosing function; ensuring functioning of fault current protective devices; checking integrity of insulation prior to work commencement; types and function of specialised live working equipment and tools; safe working policies, procedures and practices when using/operating specialised equipment and tools; methods of using specialised equipment and tools; work team communication; use of safety observers; pilot briefing requirements; emergency response and rescue, including first aid; techniques for working bare hand on live line EHV from a helicopter platform; aircraft operations induction, including flight plan clearances, systems, equipment and communication requirements; types and functions of aerial attachment equipment, including appropriate testing, rating and certification

  - aircrew familiarisation with live-line systems operations and equipment requirements
- principles of high voltage (HV) encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on or near HV
  - electrical and electrostatic principles related to HV lines - relationship of current, voltage and resistance as related to transmission lines; and relationship of phase voltage and respective line voltages
  - production of an electric field – units, effect of distance, potential of an object within the field and the effect of distances to the potential
  - HV insulators - construction of a disc insulator, construction of a polymeric insulator, effects of an electrical field on disc insulators, identification of the number of disc insulators needed for a single line voltage, performance of a failed disc insulator on the line and the system, determining the minimum allowable number of discs per string for each line voltage in the system before bare hand work is to proceed, techniques in detecting a failed disc in a string, techniques in using appropriate tools and equipment to test a string, and methods of recording data
  - effects of electrostatic induction on the human body - relationship of the resistance of a human body to different levels of current and voltage, relationship of a human body to an electric field, and effects of electrostatic induction on bare hand work
  - application of Faraday's cage - effects of a body, advantages, description of the Faraday's cage used by bare hand live-line workers
  - safety precautions working on or near HV electrical apparatus - safe approach distances (SAD) from live line; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE; permit to work systems and isolation procedures; types and function of specialised live working equipment; safe working policies, procedures and practices when using and operating specialised equipment; methods of using specialised equipment; and emergency response and rescue, including first aid
  - effects of lighting and switching surges on performance of string insulators - health effects to workers, and methods used to alleviate surges on transmission lines
  - magnetic field - difference between magnetic fields and electrostatic fields; source of magnetic field; techniques in locating, measuring and analysing known sources of

© Commonwealth of Australia, 2025 Powering Skills Organisation

magnetic fields; reasons for monitoring magnetic field exposure and techniques used to monitor magnetic fields

- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedure used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP34 Install/maintain overhead transmission network infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the erection of non-energised, pyramid, delta, Pi or enterprise-specific transmission towers and associated hardware and includes installation and maintenance of poles and/or structures and associated hardware and the installation and maintenance of overhead conductors and cables used on towers. It encompasses the erection of components in accordance with construction plans, specifications, work orders and standing enterprise requirements. Erection also involves cleaning and welding.

It also encompasses maintenance work associated with the diagnosing of faults, the conducting of visual inspections, the confirmation of phasing and the completion of other enterprise tests on overhead conductors and cables. It also encompasses confirming isolation of systems and circuits, and accepting/issuing electrical permits. The updating of system data, records and/or completion of relevant documentation in accordance with enterprise requirements also forms part of this competency.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and

© Commonwealth of Australia, 2025 Powering Skills Organisation

circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRIS67 Solve problems in energy supply network equipment

	1.12	Traffic management plan is identified and implemented
2 Carry out the installation and maintenance of transmission network infrastructure	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and currency according to requirements confirmed
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures
	2.4	Essential knowledge and associated skills are applied in the safe installation and maintenance of transmission network infrastructure to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5	Poles and/or structures and their associated hardware to be installed are stabilised according to requirements
	2.6	Installation of poles and/or structures is carried out in accordance with the work schedule and requirements/established procedures
	2.7	Towers and associated hardware to be erected are stabilised according to requirements
	2.8	Maintenance, including repair and/or replacement of poles and/or structures, is carried out in accordance with the work schedule and requirements/established procedures
	2.9	Overhead conductor/cables are strung, tensioned and terminated in accordance with requirements/established procedures
	2.10	Conductors and anti-vibration devices, spaces/spreaders are secured in accordance with established procedures
	2.11	Electrical connections are made in accordance with requirements/established procedures
	2.12	Maintenance, including repair and/or replacement of

© Commonwealth of Australia, 2025 Powering Skills Organisation

		overhead conductors and cables used on towers, is carried out in accordance with the work schedule and requirements/established procedures
	2.13	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
	2.14	Erection of towers and associated hardware is carried out in accordance with the work schedule and requirements/established procedures
	2.15	Unplanned events in the erection of towers and associated hardware are undertaken within the scope of established procedures
	2.16	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.17	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the installation and maintenance of transmission network infrastructure	**3.1**	Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures
	3.5	Relevant work permits are signed off and the transmission network infrastructure is returned to service in accordance with requirements
	3.6	Works completion records, reports, as installed/modified drawings and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTP34A Install/maintain overhead transmission network infrastructure.

Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7

Assessment Requirements for UETTDRTP34 Install/maintain overhead transmission network infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining at least one (1) of the following:
  - wood pole/structure
  - steel pole/structure
  - concrete pole/structure
  - composite pole/structure
- incorporating at least three (3) of the following hardware:
  - insulators
  - cross-arm braces
  - crossarms
  - pole steps
  - shackle straps
  - earth leads
  - traction supports
  - traction registration
  - bonding
- incorporating at least one (1) of the following xxx:
  - baulking
  - stays
  - concreting including foundation
- incorporating at least one (1) of the following xxx:
  - crane
  - auger/erector
  - ‘A’ frame

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - lifting beam
  - pole pikes
  - helicopter lift
- erecting any one (1) of the following towers:
  - pyramid
  - delta pi
  - enterprise-specific type
- incorporating at least two (2) of the following:
  - insulators
  - clamps
  - bolts
  - structural components
- using at least one (1) of the following methods:
  - welding
  - cleaning
- installing and maintaining at least one (1) of the following conductor types:
  - copper
  - aluminium
  - steel
  - composite
  - aluminium/steel reinforced
  - pilot
- incorporating at least two (2) of the following access equipment:
  - elevated work platform (EWP)
  - portable platform
  - gondola
  - hook ladder*
  - elevated work box
  - (*must do)
- incorporating at least five (5) of the following:
  - winches*
  - tension equipment*
  - stringing equipment
  - cable trailers
  - crimping equipment *
  - pre-formed splices
  - hardware
  - cable drum stands
  - ropes

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - rollers/ sheaves
  - comealongs
  - swivels
  - (*must do)
- incorporating at least two (2) of the following:
  - voltage/de-energised indicating device
  - field intensity meter
  - operating rods
  - (*must do)
- incorporating at least one (1) of the following methods to tension overhead conductors:
  - dynamometer
  - site board
  - abney level
  - sag chart*
  - theodolite
  - (*must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications - application of velocity, acceleration, force, density, torque and pressure
  - applications of the International System of Units (SI) units
  - the relationship between work, power and energy
  - behaviour of object under force - using a block and tackle under load, concept of mechanical advantage, determination of resultant forces and determining the sag in a catenary conductor and the force applied at each end
  - fundamentals of the basic laws of fluid mechanics
- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications - properties of tensile strength; effects of temperature on the expansion of metals; ductibility, malleability, work hardening and annealing; and the

© Commonwealth of Australia, 2025 Powering Skills Organisation

conditions that lead to corrosion and the properties of timbers

- basic rigging techniques encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches and relevant certification and licensing (if required)
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safe use of rigging equipment, tools and associated equipment - types, techniques and application
  - site inspection procedures - identifying hazards, assessing and controlling risks, appropriate sequence of loading and unloading
  - determining the mass and dimensions of load
  - selection and inspection procedures - rigging equipment, materials and tools (natural and synthetic fibre ropes and chains, fittings, winch and capstan); ratings of wire ropes and slings; removing, repairing and replacing damaged parts
  - techniques for assembling and erecting power winches and capstans
  - checking the integrity of support structure - visual inspection of load connections
  - techniques in moving, lifting, shifting, managing and placing loads - use of appropriate communication and signalling methods; codes of practice/compliance, enterprise and Commonwealth/state/territory legislative requirements; weather conditions; erection of safety nets and lines; methods of fixing and anchoring loads; and load stability
- procedures in providing store support encompassing:
  - classification and identification of equipment, components and tools
  - procedures for purchasing/ordering items, removing/dispatching items, stocktaking, security and bookkeeping/record keeping
  - material handling - warehouse/depot storage techniques, handling equipment, pallet lift trucks and forklifts, and cable drum handling equipment
  - safety procedures - storage and care of safety equipment, handling hazardous materials, storage of hazardous substances and dangerous goods, and depot safety procedures
  - manufacturer and supplier information, including material safety data sheets (MSDS)
- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems; and radial, parallel and ring main feeders

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the HV equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- installation of poles and or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware - types of installation equipment/tools, excavation methods, types of footings/foundations, types of attachments, earthing systems, and clearances between conductors
  - safe methods of erecting and stabling poles and/or structures and cross-arms
  - techniques for maintenance of poles and associated hardware - stabilisation techniques for unstable poles
  - methods of strengthen poles, maintenance and replacement of high voltage (HV) insulators and cross-arms
- transmission structures and hardware encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - types of structures
  - types and function of associated hardware/equipment and insulators
  - types of conductors
  - location of transmissions structures
  - other equipment used on transmission structures, e.g. aircraft warning devices
- procedures for routine maintenance on transmission structures and hardware encompassing:
  - procedures for gaining access permits
  - reasons for gaining access

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types of maintenance procedures on transmission structures - procedure to follow for inspection/patrols according to the transmission supply authority
  - erecting and removing of transmission equipment and hardware from a tower - climbing procedures, square rigging principles, calculation of forces at work within a given square rigging system, and construction of a square rigging system
  - procedures for changing insulators - vertical angle suspension, strain insulator, post insulator (horizontal or vertical) and bridge insulator, and calculation of conductor forces
  - installation of temporary work platforms - types and function of installation tools and equipment, precautions and work methods to follow, and procedures for installations of temporary work platforms
  - installation of conductor protective hardware - types and selection of common dampers, tools and equipment, control of Aeolian vibration and procedures for the installation of dampers onto conductors
  - dead line insulator washing - supply authority regulations, and procedures for washing de-energised transmission lines
- procedures for installation and maintenance on transmission lines, structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of transmission lines and associated equipment
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings - minimum construction clearances for transmission lines and sag/tension requirements
  - construction types and structures used in transmission lines
  - types, sizes and characteristics of transmission conductors - aluminium conductors, steel reinforced and earthing conductors
  - types of electrical connections used to connect transmission conductors - compression termination and bolted termination
  - causes and effects of poor electrical connections
  - types and application of specialised tools, equipment and hardware for the stringing of transmission conductors
  - techniques for stringing, tensioning and terminating transmission conductors
  - techniques for installation of associated hardware used on transmission towers
  - techniques for maintenance of damage transmission conductors - repair and replacement
- safe working practices and procedures for the installation of overhead transmission conductors encompassing:
  - limits of approach for personnel, vehicles, mobile plant and EWP
  - requirements of persons prior to making bare hand contact with dead low voltage (LV) mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
  - safe working practices - requirements to enable safe working on conductive poles; procedures to attach an on-site earthing device to de-energised LV and HV overhead circuit; safe working practices when working with associated hardware/equipment and

© Commonwealth of Australia, 2025 Powering Skills Organisation

insulators; precautions of voltages on transmission structures; dangers when working at heights; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures; and safe working practices when using specialised equipment
    - emergency response and rescue, including first aid
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedures used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
    - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic

© Commonwealth of Australia, 2025 Powering Skills Organisation

and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP35 Install/maintain transmission network infrastructure electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance of non-energised, pyramid, delta, Pi or enterprise-specific transmission towers and associated hardware and the inspection requirements of overhead structures, such as towers and electrical apparatus. Overhead structures include towers and overhead conductors and/or cables, including underground and overhead transition points, electrical equipment, hardware and/or earthing systems.

This unit encompasses the repair and/or replacement of components in accordance with construction plans, specifications, work orders and standing enterprise requirements. Maintenance also involves cleaning and welding. The updating of system data, records and/or completion of relevant documentation in accordance with enterprise requirements also forms part of this competency.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRTP34 Install/maintain overhead transmission network infrastructure

Competency Field

Transmission

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to install and maintain transmission network infrastructure	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by

© Commonwealth of Australia, 2025 Powering Skills Organisation

electrical equipment

site inspection

1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the installation and maintenance of transmission network infrastructure electrical equipment are obtained and confirmed for the purposes of the work to be performed and communicated to relevant personnel

1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures

1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures

1.6 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order

1.7 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures

1.8 Relevant personnel at worksite are confirmed current in first aid, tower/pole top rescue and other related work procedures according to requirements

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary

1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.12	Traffic management plan is identified and implemented
2 Carry out the installation and maintenance of transmission network infrastructure electrical equipment	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2	Towers and associated hardware to be erected are stabilised according to requirements
	2.3	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and currency according to requirements confirmed
	2.4	Essential knowledge and associated skills are applied in the safe installation and maintenance of transmission network infrastructure electrical equipment to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.6	Inspection of overhead structures and electrical apparatus used on towers is carried out in accordance with the work schedule and requirements/established procedures
	2.7	Maintenance, including repair and/or replacement of towers, is carried out in accordance with the work schedule and requirements/established procedures
	2.8	Unplanned events in the erection of towers and associated hardware are undertaken within the scope of established procedures
	2.9	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.10	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the installation and maintenance of	**3.1**	Work undertaken is checked against work schedule for conformance with requirements and anomalies reported

Assessment Requirements for UETTDRTP35 Install/maintain transmission network infrastructure electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining any one (1) of the following types of towers:
  - pyramid
  - delta pi
  - enterprise-specific type
- incorporating at least two (2) of the following:
  - insulators
  - clamps
  - bolts
  - structural components
- incorporating at least one (1) of the following maintenance tasks:
  - welding
  - cleaning
- inspecting at least four (4) of the following:
  - towers
  - overhead conductors/cables
  - structural fittings
  - electrical equipment
  - hardware
  - earthing systems
- incorporating at least two (2) of the following:
  - visual*
  - infra-red camera
  - X-ray

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - camera
  - binoculars/telescope
  - (* must do)
- incorporating all the following:
  - reporting procedures
  - reporting outcomes
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for routine maintenance on transmission structures and hardware encompassing:
  - procedures for gaining access permits
  - reasons for gaining access
  - types of maintenance procedures on transmission structures - procedure to follow for inspection/patrols according to the transmission supply authority
  - erecting and removing of transmission equipment and hardware from a tower - climbing procedures, square rigging principles, calculation of forces at work within a given square rigging system and construction of a square rigging system
  - procedures for changing insulators - vertical angle suspension, strain insulator, post insulator (horizontal or vertical) and bridge insulator, and calculation of conductor forces
  - installation of temporary work platforms - types and function of installation tools and equipment, precautions and work methods to follow, and procedures for installations of temporary work platforms
  - installation of conductor protective hardware - types and selection of common dampers, tools and equipment; control of Aeolian vibration and procedures for the installation of dampers onto conductors
  - dead line insulator washing - supply authority regulations, and procedures for washing de-energised transmission lines
- inspection of towers and structures used for transmission lines encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - characteristics of materials used for towers structures within the electrical transmission system - faults that occur that influence the integrity of the structure
  - deterioration prevention techniques - relationship between steel and other materials, inspection procedures for deterioration and deterioration prevention procedures in steel
  - procedures for the repair of deterioration in steel
- inspection of transmission lines encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - clearances and safety procedures
  - ground line inspection procedures of electrical transmission lines - requirements for inspection of transmission lines and insulators, use of specific equipment and testing

© Commonwealth of Australia, 2025 Powering Skills Organisation

devices during testing/inspection, techniques in transmission line inspection and methods of recording data
    - overhead line inspection procedures of electrical transmission lines - methods and requirements for overhead line inspection on electrical structures, clearances for overhead conductors, cables and structures, techniques used to obtain close inspection of transmission lines, and use of specific equipment and testing devices during testing/inspection
    - methods of recording data
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires, general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
    - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

© Commonwealth of Australia, 2025 Powering Skills Organisation

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTP99 Test and verify transmission overhead installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to test and verify transmission overhead installations in the electricity supply industry (ESI).

It includes visual inspection and verification of maintenance requirements of de-energised transmission towers and associated hardware. It also includes repairing and replacing components in accordance with construction plans, specifications, work orders and workplace procedures, updating system data and records and completing relevant documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRTP26 Install transmission structures and associated hardware

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRTP27 Maintain transmission structures and associated hardware

UETTDRTP29 Install and maintain transmission overhead conductors and cables

UETTDRTP30 Inspect transmission overhead structures and electrical apparatus

Competency Field

Transmission

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to inspect, verify and replace or repair overhead transmission installations	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for accessing transmission overhead installations are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks are assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are confirmed and signed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Inspect, verify and replace or repair overhead transmission installations	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Testing and verifying transmission of overhead installations is completed in agreed timeframes and to quality standards with a minimum of waste in accordance with workplace procedures
	2.4	Overhead transmission installations are confirmed as de-energised and able to be earthed in accordance with workplace earthing procedures
	2.5	Overhead transmission installations and associated hardware are visually inspected and confirmed as positioned, secured and terminated/connected in accordance with job requirements and workplace procedures
	2.6	Overhead transmission installations are checked for suitability and compliance with workplace construction standards and relevant electrical network supply industry standards
	2.7	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete inspection, verification and replacement or repair of overhead transmission installations	**3.1**	WHS/OHS risk control work completion measures and procedures are followed

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

3.3 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required

3.4 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures

3.5 Non-compliance defects are identified, corrected and/or reported in accordance with workplace procedures

3.6 Recommendations for rectifying defects are made in accordance with workplace procedures

3.7 Mandatory documentation is completed in accordance with workplace procedures

3.8 Tools, equipment and surplus resources and materials are, where appropriate cleaned, checked and returned to storage in accordance with workplace procedures

3.9 Relevant work permits are signed off and electrical equipment (network infrastructure) are returned to service in accordance with workplace procedures

3.10 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTP99A Test and verify transmission overhead

Assessment Requirements for UETTDRTP99 Test and verify transmission overhead installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using at least two (2) of the following methods:
  - visual*
  - infra-red camera
  - X-ray
  - camera
  - binoculars/telescope
  - (* must do)
- inspecting structures including at least one (1) of the following:
  - pyramid
  - delta pi
  - enterprise specific type
- installing associated hardware including at least three (3) of the following:
  - insulators
  - clamps
  - bolts
  - conductor spacers
  - vibration dampers
  - structural components
- inspecting conductors including at least one (1) of the following:
  - copper
  - aluminium
  - steel
  - aluminium/steel reinforced

© Commonwealth of Australia, 2025 Powering Skills Organisation

- undertaking work activities from at least two of the following:
  - elevated work platform (EWP)
  - portable platform
  - gondola
  - hook ladder*
  - elevated work box (EWB)
  - (*must do)
- using specialised equipment including all of the following:
  - voltage/de-energised indicating device
  - earthing conductors
- complying with all of the following:
  - reporting procedures
  - reporting outcomes

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislated regulations, including:
  - legislation and regulations that require installations and equipment to be inspected and tested to ensure they are safe
  - the person/bodies responsible for the various aspects of ensuring transmission overhead installations are safe
  - results of inspections and tests that show transmission overhead installation is safe for connection to the supply
  - results of periodic inspection and tests that show construction and installation of equipment is safe to use
  - results of periodic inspection and tests that show the transmission overhead installations electrical equipment are safe to use
- testing installations, including:
  - transmission system phasing is correct and conforms to network construction standards
  - electrical transmission network voltage levels comply with network supply standards
  - potential present upon transmission network neutral conductors conforms network supply standards
  - insulation resistance is adequate
  - transmission earthing system components are verified as correctly installed
- documentation, including:
  - results of inspections and tests conducted on a transmission overhead installation are in accordance with work requirements and ensure the transmission overhead installation is safe
  - documents of periodic inspection and testing of transmission overhead installation and

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment in accordance with requirements
- non-compliances and defects reported in accordance with established procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for testing and verifying transmission overhead installations
- network constructions and network supply standards
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTS21 Maintain interdependent network protection and control systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance of network protection and control in interdependent situations and includes isolation, inspection, monitoring, testing, adjustment, and repair, refurbishment and/or overhaul and functional checks of interdependent network protection and control systems. It includes the requirements to prove the functionality of interdependent and discrete schemes, such as circuit breaker fail, master controlled earth fault, inter-tripping, blocking, synchronising, pilot wire, phase comparison, load shedding, voltage control, parallel operation and load rejection.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRTS29 Develop power systems secondary isolation instructional documents

Competency Field

Testing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the maintenance of network protection and control systems (interdependent)	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the maintenance of network protection and control systems (interdependent), are reviewed and determined
	1.2 Purpose of the maintenance of network protection and control systems (interdependent) is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the maintenance of network protection and control systems (interdependent) are obtained or established with appropriate personnel
	1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
	1.5 Testing parameters are established from organisational

© Commonwealth of Australia, 2025 Powering Skills Organisation

		established procedures on policies and specifications
	1.6	Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the maintenance of network protection and control systems (interdependent)	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Maintenance of network protection and control systems (interdependent) decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the scheme are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate

© Commonwealth of Australia, 2025 Powering Skills Organisation

		authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of network protection and control systems (interdependent) is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the maintenance of network protection and control systems (interdependent)	**3.1**	Final inspections of the network protection and control systems (interdependent) are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of the maintenance of network protection and control systems (interdependent) documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

Assessment Requirements for UETTDRTS21 Maintain interdependent network protection and control systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirement, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating five (5) times, each of the following activities:
  - isolating protection, control and alarms associated with interdependent protection and control schemes
  - carrying out function tests (trips and alarms) on interdependent protection and control schemes
  - writing reports on performance of interdependent protection and control schemes
  - isolating ‘in service’ current transformers
- dealing with unplanned events on at least one (1) occasion

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)
  - particular reference to state and territory regulations regarding - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- electrical equipment associated with protection and control schemes encompassing:
  - types and applications of electrical equipment – characteristics, capabilities (schemes: overcurrent, frame leakage, cooling, buchholz, direct current (d.c.) supplies, restricted earth, sensitive earth fault, circuit breaker fail, reclose, d.c. frame leakage, CEL fail, under frequency load shed and earth fault)
- principles of isolation and tagging procedures associated with protection testing

© Commonwealth of Australia, 2025 Powering Skills Organisation

encompassing:

- standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation, maintenance, isolation and tagging procedures
- requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
- techniques in documenting isolations
- techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- techniques in the installation and maintenance procedures protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards

- maintenance and commissioning procedures associated with discrete protection schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the maintenance and commissioning procedures
  - requirements for the use of maintenance and commissioning manuals, system diagrams/plans and drawings
  - techniques in maintenance and commissioning procedures – planning, policy and testing techniques
  - close out requirements
- relay manufacturer specifications encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of relay manufacturer specifications
  - requirements for the use of relay manufacturer manuals, system diagrams/plans and drawings
  - types, function and characteristics of specific relays - differences between specific relays used for the same functionality
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
  - identification of environmental issues associated with the handling and disposing of insulation materials
  - safety precautions when handling and disposing of heat dissipation materials - safe working practices; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures; types and function of specialised equipment; safe working practices when using specialised equipment; and emergency response and rescue, including first aid

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in the handling and disposing of insulation materials - polychlorinated bi-phenyls (PCB's), asbestos, insulating oil and sulfur hexafluoride (SF6) gas
- procedures to undertake a visual inspection of a scheme encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
  - requirements for the use of manuals, system diagrams/plans and drawings
  - identifying obvious deficiencies in operating to the standard functionality
  - techniques in determining relay malfunction - targeting
  - techniques in determining wiring defects
- operation and maintenance procedures associated with discrete protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with operating procedures
  - requirements for the use of operating manuals, system diagrams/plans and drawings
  - techniques - gas collection and analysis, bleeding and resetting, calibration, operational and sensitivity checks, and trip and alarm checks
  - surge relay types and uses, including transformer main tanks and diverter switch chambers
- measurements and the interpretation and analysis of those measurements related to the plant and/or equipment type encompassing:
  - type of measurements - timing, current, voltage, capacitance, inductance, impedance, phase angle, phase shift, resistance, dielectric dissipation factor, frequency, polarisation index, ratio, vector group and temperature
  - interpretation and analysis the use of techniques - digital comparison of data, extrapolation, use of graphs and charts, statistics and tables, mathematical calculation of expected values and comparison with manufacturers data and measurements
  - techniques in the processes involved in follow-up actions and recommendations resulting from analysis and interpretation of results and measurements
- infra-red imaging principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to Infrared Imaging
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for infra-red imaging reporting
  - techniques in evaluating serviceability of circuit breaker operation
  - procedures for obtaining correct HV switchyard arrangements - identification of hazards and controlling risks, safety procedures and precautions, responsibilities and protocols, and identifying switching resources
  - safety precautions when testing and measuring equipment with infra-red imaging - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and

© Commonwealth of Australia, 2025 Powering Skills Organisation

protocols

- commissioning procedures associated with distribution protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy and testing techniques
  - close out requirements
- operation and maintenance procedures associated with voltage regulation schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the operating procedures
  - requirements for the use of operating manuals, system diagrams/plans and drawings
  - principles of operation and operating sequences - voltage control, VAR control, live bus/dead bus synchronising checks, tap changer principles, requirements for parallel operations, settings and grading
  - techniques associated with isolation requirements, enterprise maintenance requirements, setting checks, low voltage (LV) injections and electrical measurements
  - ancillary equipment - transducers, buswire schemes, tap position indicators, local/remote control systems and alarm systems
  - voltage regulation scheme types - electromechanical, micro-processor or combinations of both
- types and applications of test equipment encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of electrical and/or electronic test equipment
  - types and applications of test equipment used on discrete protection scheme
  - techniques in the use of test equipment - electronic test equipment (Doble and Ohmnicrome), gas injection equipment, manufacturer test equipment, multimeters, phase angle meters and, meggers
- electrical equipment associated with distribution field device protection and control schemes encompassing:
  - types and applications of electrical equipment – characteristics, capabilities (schemes: automatic circuit reclosers (ACR), gas switches, secondary injection tests, primary injection tests, trunked mobile radio (TMR), supervisory control and data acquisition (SCADA), remote control, overcurrent, earth fault, sensitive earth fault, inverse time curves, definite time curves, tripping, reclose, direct current (d.c) supplies, and alternating current (a.c.) supplies and alarms)
- circuit breaker auxiliary systems encompassing:
  - types and characteristics of high-pressure air systems, including air storage and air handling processes
  - types and characteristics of d.c. systems, including battery types, charging systems and protection systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types and characteristics of special ambient gas (SF6) systems, including gas conditioning, storage and handling systems
  - types and characteristics of vacuum interrupters
  - types and characteristics of oil filled and oil handling
- detailed operation and setting of discrete protection systems encompassing:
  - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
  - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, CT summation, time graded discrimination and backup protection
  - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- detailed operation of interdependent protection systems encompassing:
  - overcurrent and earth leakage schemes, including inter-tripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
  - pilot wire and phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
  - load shedding, voltage control, parallel operation and load rejection
  - busbar protection and circuit breaker failure protection
  - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking
- procedures for the location and rectification of faults in electrical equipment up to 1000 volts a.c. and or 1500 volts d.c. encompassing:
  - relationship of WHS/OHS to the location and rectification of faults in electrical equipment - acts and regulations, identification of personal safety, workplace hazards, working with electrically operated tools and equipment, emergency first aid/resuscitation, rescue from a live electrical situation, and enterprise policies and procedures
  - types of drawings - differentiation between symptoms, faults and causes in malfunctioning equipment, fault-finding techniques and procedures
  - fundamental electrical concepts - effects of current; practical resistors; sources of electromagnetic field; series, parallel and series-parallel circuits; electrical measurement; capacitors; inductors and magnetism
  - fundamentals of general appliances - basic principles of appliances (non-mathematical), appliance identification, appliance ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in appliances and fault-finding procedures (prescriptive)
  - fundamentals of single phase induction motors - basic principles of operation (non-mathematical); motor identification; motor ratings; basic principles of operation of control equipment and protection devices; fault conditions and symptoms; safe isolation procedures; test equipment; safe testing procedures, including continuity; fault types in phase splitting and universal type motors; and fault-finding procedures (prescriptive)
  - fundamentals of three phase induction motors - basic principles of operation

© Commonwealth of Australia, 2025 Powering Skills Organisation

(non-mathematical), motor identification, motor ratings, motor starter principles, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, safe testing procedures and fault-finding procedures (prescriptive)

  - fundamentals of single and three phase electrical heaters - basic principles of operation, types of electrical heaters, electrical heater identification, electrical heater ratings, basic principles of operation of control and protection devices, fault conditions and symptoms, safe testing procedures and fault-finding procedures (prescriptive)
- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000 volts a.c. and or 1500 volts d.c. encompassing:
  - safe electrical work practices and procedures according to standards such as AS/NZ 4836:2001 Safe working on or near low-voltage electrical installations and equipment, or equivalent
  - safe use of tools and plant
  - safe use of ladders and elevated work platforms (EWP)
  - safe use of PPE
  - hazards in the (electrical) work environment - shock hazards, fire hazards, chemical hazards and other hazardous areas
  - special situations
  - procedures for dealing with fires associated with electrical equipment
  - procedures for dealing with PCBs
  - electric shock victim rescue methods and procedures - basic first aid treatment for shock, burns and bleeding
  - purpose of each procedure and application - expired air resuscitation (EAR), external cardiac-compression (ECC), cardiopulmonary resuscitation (CPR), combined application of EAR and ECC (purpose of each procedure and application)
  - components of a basic electrical circuit(s) – source, control, protection and load
  - types of circuit diagrams – symbols, conventions, interpretations and free sketches
  - types of circuit connections and functions - open circuit, closed circuit and short circuit
  - techniques in basic electrical measurement - use of multimeters; use of ammeter; use of voltage measuring and indicating devices; testing of measuring instruments; care of measuring instruments; voltage, current and resistance measurement; estimating values of voltage, current and resistance; and using Ohms law
  - fundamental principles of electrical concepts - effects of current; practical resistors; sources of electromagnetic field; simple practical circuit; series, parallel and series-parallel circuits; electrical measurement; capacitors; inductors and magnetism
  - techniques in insulation resistance measurement and requirements
  - earthing principles and systems
- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000 volts a.c. and or 1500 volts d.c. encompassing:
  - methods for testing insulation resistance - continuity of prospective earthing conductor, continuity between exposed conductive parts and the earthing system
  - methods of recognising acceptable test results for compliance with safety requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

- methods of recognising unacceptable test results requiring an appropriate qualified person for further investigation
- cable types and conductor termination methods and techniques - conductors solid, stranded and flexible, and colour codes
- single and three phase systems and loads - number of active and live conductors required, line and phase voltage, and typical loads
- identification and rating of general appliances
- single phase induction motors - motor identification, motor ratings and direction of rotation
- three phase induction motors - motor identification, motor ratings and direction of rotation
- single and three phase heaters - types of heaters, heater identification and heater ratings
- electrical distribution arrangement - power systems within premises, purpose of switchboards/distribution boards (residual current devices and EL circuit breakers)
- circuit isolation and protection devices
- isolation procedures - work clearance, testing for voltage, lock-off and tagging, techniques in isolation and tagging, regulation, codes of practice and procedures
- disconnection procedures, practices and requirements
- types of replacement equipment
- methods of ensuring equipment is safe to connect to supply
- methods of reconnection procedures, practices and requirements
- methods of return equipment to service

- effects of harmonics encompassing:
  - characteristics and effects of harmonics on protection device functions/malfunction
  - effects of harmonics on transformers, generators, motors and quality of supply.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in

© Commonwealth of Australia, 2025 Powering Skills Organisation

industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals
- working at realistic heights above ground i.e. above 3 metres, in limited spaces, with different structural/construction types and methods and in a variety of environments.

UETTDRTS22 Commission interdependent network protection and control systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the commissioning of network protection and control systems in interdependent situations and includes isolation, inspection, monitoring, testing, adjustment, and repair, refurbishment and/or overhaul and functional checks. It also includes schemes, such as circuit breaker fail, master controlled earth fault, impedance and differential relays, inter-tripping, blocking, synchronising, pilot wire, phase comparison, load shedding, voltage control, parallel operation and load rejection. This includes commissioning of discrete and interdependent schemes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the commissioning of network protection and control systems (interdependent)	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the commissioning of network protection and control systems (interdependent), are reviewed and determined
	1.2 Purpose of the commissioning of network protection and control systems (interdependent) is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the commissioning of network protection and control systems (interdependent) are obtained or established with appropriate personnel
	1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Testing parameters are established from organisational established procedures and policies and specifications
	1.6	Equipment/tools and personal protective equipment (PPE) is selected based on specified performance criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the commissioning of network protection and control systems (interdependent)	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals as per established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Commissioning of network protection and control systems (interdependent) decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the schemes are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of network protection and control systems (interdependent) is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the commissioning of network protection and control systems (interdependent)	**3.1**	Final inspections of the network protection and control systems (interdependent) are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of the commissioning of network protection and control systems (interdependent) documents are issued and records are updated in accordance with established procedures

Assessment Requirements for UETTDRTS22 Commission interdependent network protection and control systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating commissioning of a protection and control system involving at least five (5) of the following:
  - circuit breaker fail protection
  - master controlled earth fault
  - inter-tripping
  - blocking
  - synchronising
  - pilot wire
  - phase comparison
  - load shedding
  - voltage control protection
  - frame leakage
  - delta current
  - reverse power
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- commissioning procedures associated with discrete protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements
- principles of power transformer construction and operations encompassing:
  - applications of static reactive plant in high voltage (HV) networks, including voltage control, voltage-ampere reactive (VAR) control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals
- working at realistic heights above ground i.e. above 3 metres, in limited spaces, with different structural/construction types and method and in a variety of environments.

UETTDRTS23 Conduct evaluation of power system substation faults

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the procedure in evaluating power system incidents by following a process of downloading event and disturbance record information from protection relays. This includes interpreting items, such as alarms, relay targets, relay settings, event records, disturbance records and sequence of events records. It also encompasses the evaluation and/or investigation of relay operation, relay schemes functionality and relay settings.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Assessment Requirements for UETTDRTS23 Conduct evaluation of power system substation faults

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least two (2) downloads from protection relays or recording equipment from each of the following:
  - relay panel
  - remote location
- developing five (5) evaluation reports on power system events, including all of the following:
  - interpretation of targets in a substation
  - interpretation of fault reports
  - interpretation of downloaded event data
  - development of valid conclusions and recommendations
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management

© Commonwealth of Australia, 2025 Powering Skills Organisation

systems
    - analysis of relevant data and evaluation of WHS/OHS system effectiveness
    - assess resources to establish and maintain WHS/OHS management systems
- power distribution network documentation encompassing:
    - requirements for the use of manuals, system diagrams/plans and drawings and for plans, such as work method statements for the control of WHS/OHS risks
    - types and application of power distribution network documentation drawings and documents - wiring and schematic diagrams, drawings and switching symbols, mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different diagrams and documentation on low voltage (LV) and high voltage (HV) systems - overhead distribution extensions, underground distribution extensions, distribution substations and street lighting systems
- measurements and the interpretation and analysis of those measurements related to the plant and/or equipment type encompassing:
    - type of measurements - timing, current, voltage, capacitance, inductance, impedance, phase angle, phase shift, resistance, dielectric dissipation factor, frequency, polarisation index, ratio, vector group and temperature
    - interpretation and analysis of the use of techniques - digital comparison of data, extrapolation, use of graphs and charts, statistics and tables, mathematical calculation of expected values and comparison with manufacturer data and measurements
    - techniques in the processes involved in follow-up actions and recommendations resulting from analysis and interpretation of results and measurements
- system components and layouts encompassing:
    - distribution system layouts - overhead/underground, urban/rural, HV customers, high rise building systems, three phase lines, single phase lines, single wire earth return (SWER) systems, spur, parallel and ring systems, and typical substation types
    - transmission system layouts - lines, buses, transformers and cables; line/bus layouts, including single, double, ring and breaker and half systems, and HV crossing methods
- calculation of fault levels encompassing:
    - calculation of fault levels in symmetrical and asymmetrical fault conditions - types of faults, interconnected and radial systems, symmetrical components, representation of voltages and currents, sequence impedances of system plant, calculation/determination of sequence impedance networks, determination of operative sequence impedances, fault or arc impedances and first approximation techniques
    - interrupting device capabilities - determination of fault current breaking capability and let through energy capability of fuses and circuit breakers, direct current (d.c.) offset and transient condition effects
- protection system types encompassing:
    - requirements of a protection scheme - relationship to primary system design, purpose of protection, safety of persons, protection of plant, system instability, system break up, loss of customers, loss of revenue, protection zones, restricted schemes, unrestricted schemes, duplicate protection, local backup protection, remote backup protection, selectivity, discrimination, stability, sensitivity and reliability

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - components of a protection scheme - current transformers, potential transformers, summation current transformers, interposing transformers, multi-tapped transformers, all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor based relays, gas relays, thermal sensors, hardwired communication, powerline carriers systems, microwave systems, fibre optic systems, need for isolation and need for interfacing
  - protection applied to buses - overload, differential, earth leakage, structure leakage, combined schemes and protection overlap
  - protection applied to transformers - biased differential, gas, winding temperature and oil temperature
  - protection applied to single/radial lines - overcurrent, earth leakage, slow earth leakage, distance, auto reclose, sectionalising and over voltage
  - protection applied to interconnected lines - overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance and offset
- detailed operation and setting of discrete protection systems encompassing:
  - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
  - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, current transformer (CT) summation, time graded discrimination and backup protection
  - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- detailed operation of interdependent protection systems encompassing:
  - overcurrent and earth leakage schemes, including inter-tripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
  - pilot wire, phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
  - load shedding, voltage control, parallel operation and load rejection
  - busbar protection and circuit breaker failure protection
  - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking
- detailed operation of complex protection systems encompassing:
  - distance - characteristics, electromechanical, electronic, impedance, mho, offset mho, switched schemes, non-switched schemes, blocking schemes and bus zone
  - differential, transformer differential and bus overcurrent - principles, feeder protection, transformer protection, bias systems, harmonic restraint, CT connections, bus protection, low impedance schemes, high impedance schemes, bus overcurrent schemes, generator protection, CT connections, special considerations and digital systems
  - types of revenue metering
  - applications of supervisory control and data acquisition (SCADA)
  - complex protection systems for communications

© Commonwealth of Australia, 2025 Powering Skills Organisation

- harmonic control
- point on wave switching.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals
- working at realistic heights above ground i.e. above 3 metres, in limited spaces, with different structural/construction types and method and in a variety of environments.

UETTDRTS24 Design testing and commissioning procedures for field devices and substations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the testing and commissioning procedures for new substation and field devices in accordance with design. This will involve analysis of settings, and a thorough understanding of the circuit design, which will involve covering areas such as metering, communication circuits and supervisory control and data acquisition (SCADA).

It also includes the procedures needed to enable proof of correct operation of all circuits to design specifications. It also encompasses the need for supplying accurate communication in the format that is acceptable to the operating or testing authority.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Protection Relays and Meters Pathway Unit Group

UETTDRTS28 Repair, test and calibrate protection relays and meters

Metering Pathway Unit Group

UETTDRTS25 Maintain and test and metering schemes

UETTDRTS26 Commission power systems metering schemes

UETTDRTS29 Develop power systems secondary isolation instructional documents

Primary Plant Pathway Unit Group

UETTDRTS29 Develop power systems secondary isolation instructional documents

UETTDRTS32 Conduct evaluation of power systems primary plant

Protection Systems Pathway Unit Group

UETTDRTS21 Maintain interdependent network protection and control systems

UETTDRTS29 Develop power systems secondary isolation instructional documents

UETTDRTS35 Maintain complex network protection and control systems

Assessment Requirements for UETTDRTS24 Design testing and commissioning procedures for field devices and substations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing testing and commission procedures for at least three (3) of the following substation equipment:
  - bus protection
  - feeder/line protection
  - transformer protection
  - earth fault protection
  - backup protection
  - metering schemes
  - communication and supervisory control and data acquisition (SCADA) schemes
- developing testing and commissioning procedures for at least two (2) of the following field devices:
  - regulators
  - automatic circuit reclosers (ACR)/gas switch
  - line capacitors
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker

© Commonwealth of Australia, 2025 Powering Skills Organisation

- requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
- requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
- traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
- control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
- rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances, determining system requirements, aircrew familiarisation with network operations and equipment, and requirements for effective communications operations for aerial work

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- electrical equipment associated with protection and control schemes encompassing:
  - types and applications of electrical equipment – characteristics, capabilities (schemes: overcurrent, frame leakage, cooling, buchholz, direct current (d.c.) supplies, restricted earth, sensitive earth fault, circuit breaker fail, reclose, d.c. frame leakage, CEL fail, under frequency load shed and earth fault)
- principles of isolation and tagging procedures associated with protection testing encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation, maintenance, isolation and tagging procedures
  - requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
  - techniques in documenting isolations
  - techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise

© Commonwealth of Australia, 2025 Powering Skills Organisation

standards
    - techniques in the installation and maintenance procedures for protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- maintenance and commissioning procedures associated with discrete protection schemes encompassing:
    - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with maintenance and commissioning procedures
    - requirements for the use of maintenance and commissioning manuals, system diagrams/plans and drawings
    - techniques in maintenance and commissioning procedures – planning, policy and testing techniques
    - close out requirements
- relay manufacturer specifications encompassing:
    - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of relay manufacturer specifications
    - requirements for the use of relay manufacturer manuals, system diagrams/plans and drawings
    - types, function and characteristics of specific relays - differences between specific relays used for the same functionality
- procedure to undertake a visual inspection of a scheme encompassing:
    - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
    - requirements for the use of manuals, system diagrams/plans and drawings
    - identifying obvious deficiencies in operating to the standard functionality
    - techniques in determining relay malfunction - targeting
    - techniques in determining wiring defects
- operation and maintenance procedures associated with discrete protection and control systems encompassing:
    - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with operating procedures
    - requirements for the use of operating manuals, system diagrams/plans and drawings
    - techniques - gas collection and analysis, bleeding and resetting, calibration, operational and sensitivity checks, and trip and alarm checks
    - surge relay types and uses, including transformer main tanks and diverter switch chambers
- measurements and the interpretation and analysis of those measurements related to the plant and/or equipment type encompassing:
    - type of measurements - timing, current, voltage, capacitance, inductance, impedance, phase angle, phase shift, resistance, dielectric dissipation factor, frequency, polarisation index, ratio, vector group and temperature

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - interpretation and analysis the use of techniques - digital comparison of data, extrapolation, use of graphs and charts, statistics and tables, mathematical calculation of expected values and comparison with manufacturer data and measurements
  - techniques in the processes involved in follow-up actions and recommendations resulting from analysis and interpretation of results and measurements
- substation safety practices encompassing:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures; plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - the rescue personnel from energised conductors, emergency descent from an EWP and/or rescue from confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of HV insulation systems encompassing:
  - insulation design principles - common materials used, electrical characteristics, thermal characteristics, uses and applications to substation HV plant and equipment, grading, construction and cooling
  - common contaminants and their effects - internal contaminants and external contaminants
  - testing and measurement of insulation quality - test types and common measuring instruments and techniques, resistance and resistivity, losses, measurement errors, temperature corrections and safe work practices related to testing and measurement
  - safety precautions when testing and measuring HV insulation systems - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)

© Commonwealth of Australia, 2025 Powering Skills Organisation

- principles of power transformer construction and operations encompassing:
  - transformer types - shell, core, auto, double wound, three phase, single phase and combinations of these types, step up and step down transformers, transmission and generation types
  - reactor types - shunt and series, applications and design considerations
  - iron circuit characteristics - steel types, losses and techniques used to eliminate excess eddy currents and other circulating currents
  - winding configurations and construction techniques - helical, spiral, disc and interleaved disc types
  - insulation methods and techniques - fully insulated windings and graded insulation techniques, oil filled and gas filled power transformers
  - transformer and reactor ratings, losses and efficiency - equivalent circuits and vector relationships, and impedance percent
  - nameplate details - BIL, tapping winding detail, physical layout, cooling ratings and physical details
  - transformer and reactor cooling types and their effects on design and rating
  - transformer and reactor auxiliaries - temperature indicators, over pressure devices and control systems
  - winding configurations - star-star, star-delta, star-zigzag, nomenclature and common methods of diagrammatic representation of winding configuration
  - operating constraints as single units and in parallel
  - tapping windings - placement issues, tapping range, on-load tap changer (OLTC) versus off load tap changer techniques, types in use (high speed resistor, reactor and vacuum types, Jansen mechanisms, dead tank and live tank types) and control system characteristics
  - HV bushing selection – type, insulation system used, rating, BIL, selection criteria and testing considerations
- principles of power transformer construction and operations encompassing:
  - applications of static reactive plant in HV networks, including voltage control, VAR control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators (SVC) and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- principles of power transformer high speed OLTC encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - selector types and applications for HV power transformers
  - diverter switch types and applications for HV power transformers, including live tank, dead tank, resistor type, reactor type, vacuum type, pennant flag and pennant cycle
  - ratings and construction principles
  - operating mechanism types, stored energy systems and associated control systems
  - operating principles and operating sequences of selectors and diverters
  - measurement requirements, including contacts, differential wear, transition resistors and transient protection devices, rotation lag, out of sequence controls and end-of-life unit and component assessment
  - online diagnostic tools and devices
  - ancillary equipment, including online filters, over pressure relays and devices
  - testing requirements, including cycle timing, differential delay, energy accumulator mechanical and operational tests and control system functional tests
  - safety precautions when testing and maintaining HV power transformer OLTC - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- operation and maintenance procedures associated with voltage regulation schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the operating procedures
  - requirements for the use of operating manuals, system diagrams/plans and drawings
  - principles of operation and operating sequences - voltage control, VAR control, live bus/dead bus synchronising checks, tap changer principles, requirements for parallel operations, settings and grading
  - techniques associated with - isolation requirements, enterprise maintenance requirements, setting checks, low voltage (LV) injections and electrical measurements
  - ancillary equipment, including transducers, buswire schemes, tap position indicators, local/remote control systems and alarm systems
  - voltage regulation scheme types, including electromechanical, micro-processor or combinations of both
- types and applications of test equipment encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of electrical and/or electronic test equipment
  - types and applications of test equipment used on discrete protection scheme
  - techniques in the use of test equipment - electronic test equipment (Doble and Ohmnicrome), gas injection equipment, manufacturer test equipment, multimeters, phase angle meters and meggers
- voltage control techniques encompassing:
  - conditions leading to voltage collapse
  - effects on system of HV and LV
  - voltage control devices - voltage regulators applied to generators and synchronous phase modifiers, electromagnetic voltage regulators; series and parallel capacitors; OLTC

© Commonwealth of Australia, 2025 Powering Skills Organisation

transformers; and SVC, such as saturated reactor compensators, thyristor controlled reactor compensators and combined systems
    - production of harmonics and methods of harmonic control
    - location of voltage control devices within the system
- transient over voltages encompassing:
    - causes and effects of transient over voltages - switching transients and lightning transients, and effects on plant items
    - control techniques and systems - surge diverters, shield wires and circuit breaker arc control
    - insulation systems - insulation systems, insulation coordination and insulation grading
- procedure to undertake a visual inspection of a scheme encompassing:
    - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
    - requirements for the use of manuals, system diagrams/plans and drawings
    - identifying obvious deficiencies in operating to the standard functionality
    - techniques in determining device malfunction
    - techniques in determining wiring defects
- commissioning procedures associated with relevant equipment encompassing:
    - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
    - requirements for the use of commissioning manuals, system diagrams/plans and drawings
    - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements
- detailed operation and setting of discrete protection systems encompassing:
    - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
    - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, CT summation, time graded discrimination and backup protection
    - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- detailed operation of interdependent protection systems encompassing:
    - overcurrent and earth leakage schemes, including inter-tripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
    - pilot wire, phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
    - load shedding, voltage control, parallel operation and load rejection
    - busbar protection and circuit breaker failure protection
    - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking
- detailed operation of metering devices and principles encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - common circuit configurations
  - meters and measurement principles
  - instrument transformer application
  - testing of metering systems and devices
  - implications of market operation
- detailed operation of fundamental test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurement of voltage, current, power, resistance, insulation resistance, impedance and phase sequence and the use of oscilloscopes
- detailed operation of protection test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurement of timing, voltage, current, resistance, inductance, capacitance, impedance, frequency, phase angle, phase difference and the use of primary, secondary and gas injection equipment
- detailed operation of metering test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurements of, voltage, current, power, reactive power, phase angle, resistance, inductance, capacitance, impedance, frequency, harmonics and the use of transient and data logging devices
- detailed operation of field device test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurements of voltage, current, power, reactive power, phase angle, resistance, inductance, capacitance, impedance, frequency, harmonics and the use of transient and data logging devices
- procedure for the systematic fault isolation through the application of diagnostic techniques encompassing:
  - principles of analytical questioning
  - techniques in drawing valid conclusions from first observations
  - concepts of broad first-line testing
  - consideration of/responsibility for avoidance of further damage
  - interpretation of specific test results - cause/effect
  - techniques for isolation to appropriate level - half-split, module/function isolation (kernel

© Commonwealth of Australia, 2025 Powering Skills Organisation

technique), substitution, diagnostic software, requirements for the use of manuals, system diagrams/plans, drawings, handbooks, specifications and fault pathways
- software/firmware functions awareness
- factors affecting field versus workshop repair costs
- scheduling minor/major repair activities and downtime
- implications of temporary repairs
- use of system knowledge and history
- data interpretation - expected versus actual
- feedback to design/production/installation processes
- subsystems and system structures
- system signals/status indicators
- known failure modes and trends
- action threshold warnings versus catastrophic failure
- component ratings/upgrades
- disassembly/reassembly techniques and care
- relative costs of repair and replacement - remaining life, ongoing maintenance, additional benefits of replacement equipment, e.g. improved productivity and quality.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTS25 Maintain and test and metering schemes

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the testing of metering schemes and includes isolation, inspection, monitoring, testing, adjustment; and repair, refurbishment and/or overhaul and functional checks on schemes, including ammeters, voltmeters, wattmeters, volt-ampere reactive (VAR) meters and energy metering. It also includes the understanding of the purpose of the testing so as to prove accuracy and suitability of the metering for the required task.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies,

© Commonwealth of Australia, 2025 Powering Skills Organisation

procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRTS29 Develop power systems secondary isolation instructional documents

Competency Field

Testing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the testing and maintenance of metering schemes	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the testing and maintenance of metering schemes, are reviewed and determined
	1.2 Purpose of the testing and maintenance of metering schemes is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the testing and maintenance of metering schemes are obtained or established with appropriate personnel
	1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
	1.5 Testing parameters are established from organisational established procedures on policies and specifications
	1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the testing and maintenance of metering schemes	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Testing and maintenance of metering schemes decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical/engineering models of the testing and maintenance of metering schemes are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within

© Commonwealth of Australia, 2025 Powering Skills Organisation

		an agreed timeframe according to requirements
	2.7	Testing and maintenance of metering schemes is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the testing and maintenance of metering schemes	**3.1**	Final inspections of the testing and maintenance of metering schemes are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of the testing and maintenance of metering schemes documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS25A Maintain and test and metering schemes.

Assessment Requirements for UETTDRTS25 Maintain and test and metering schemes

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating, on at least three (3) occasions, testing accuracy to established plans of at least three (3) schemes using the following equipment:
  - ammeter
  - voltmeter
  - wattmeter
  - VAR meter
  - energy meter*
  - (*Must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- procedure to undertake a visual inspection of a scheme encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
  - requirements for the use of manuals, system diagrams/plans and drawings
  - identifying obvious deficiencies in operating to the standard functionality

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in determining device malfunction
  - techniques in determining wiring defects
- procedures for the location and rectification of faults in electrical equipment up to 1000 volts alternating current (a.c.) and/or 1500 volts direct current (d.c.) encompassing:
  - relationship of WHS/OHS to the location and rectification of faults in electrical equipment - acts and regulations, identification of personal safety, workplace hazards, working with electrically operated tools and equipment, emergency first aid/resuscitation, rescue from a live electrical situation, and enterprise policies and procedures
  - types of drawings - differentiation between symptoms, faults and causes in malfunctioning equipment, and fault-finding techniques and procedures
  - fundamental electrical concepts - effects of current, practical resistors, sources of electromagnetic field, series, parallel and series-parallel circuits, electrical measurement, capacitors, inductors and magnetism
  - fundamentals of general appliances - basic principles of appliances (non-mathematical), appliance identification, appliance ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in appliances and fault-finding procedures (prescriptive)
  - fundamentals of single phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in phase splitting and universal type motors, and fault-finding procedures (prescriptive)
  - fundamentals of three phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, motor starter principles, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, safe testing procedures and fault-finding procedures (prescriptive)
  - fundamentals of single and three phase electrical heaters - basic principles of operation, types of electrical heaters, electrical heater identification, electrical heater ratings, basic principles of operation of control and protection devices, fault conditions and symptoms, safe testing procedures and fault-finding procedures (prescriptive)
- detailed operation of metering devices and principles encompassing:
  - common circuit configurations
  - meters and measurement principles
  - instrument transformer application
  - testing of metering systems and devices
  - implications of market operation
- detailed operation of metering test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurements of voltage, current, power, reactive power, phase angle, resistance, inductance, capacitance, impedance, frequency,

© Commonwealth of Australia, 2025 Powering Skills Organisation

harmonics and the use of transient and data logging devices

- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000 volts a.c. and/or 1500 volts d.c. encompassing:
  - safe electrical work practices and procedures according to standards such as AS/NZ 4836:2001 Safe working on low-voltage electrical installations and equipment, or equivalent
  - safe use of tools and plant
  - safe use of ladders and elevated work platforms (EWP)
  - safe use of personal protective equipment (PPE)
  - hazards in the (electrical) work environment - shock hazards, fire hazards, chemical hazards other hazardous areas
  - special situations
  - procedures for dealing with fires associated with electrical equipment
  - procedures for dealing with polychlorinated biphenyl (PCB)
  - electric shock victim rescue methods and procedures - basic first aid treatment for shock, burns and bleeding
  - purpose of each procedure and application - expired air resuscitation (EAR), external cardiac-compression (ECC), cardiopulmonary resuscitation (CPR) and combined application of EAR and ECC (purpose of each procedure and application)
  - components of a basic electrical circuit(s) – source, control, protection and load
  - types of circuit diagrams – symbols, conventions, interpretations and free sketches
  - types of circuit connections and functions - open circuit, closed circuit and short circuit
  - techniques in basic electrical measurement - use of multimeters; use of ammeter; use of voltage measuring and indicating devices; testing of measuring instruments; care of measuring instruments; voltage, current and resistance measurement; estimating values of voltage, current and resistance; and using Ohms law
  - fundamental principles of electrical concepts - effects of current; practical resistors; sources of EMF; simple practical circuit; series, parallel and series-parallel circuits; electrical measurement; capacitors; inductors and magnetism
  - techniques in insulation resistance measurement and requirements
  - earthing principles and systems
- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000 volts a.c. and/or 1500 volts d.c. encompassing:
  - methods for testing insulation resistance - continuity of prospective earthing conductor, and continuity between exposed conductive parts and the earthing system
  - methods of recognising acceptable test results for compliance with safety requirements
  - methods of recognising unacceptable test results requiring an appropriate qualified person to further investigate
  - cable types and conductor termination methods and techniques - conductors solid, stranded and flexible, and colour codes
  - single and three phase systems and loads - number of active and live conductors required, line and phase voltage and typical loads
  - identification and rating of general appliances

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - single phase induction motors - motor identification, motor ratings and direction of rotation
  - three phase induction motors - motor identification, motor ratings and direction of rotation
  - single and three phase heaters - types of heaters, heater identification and heater ratings
  - electrical distribution arrangement - power systems within premises, and purpose of switchboards/distribution boards (residual current devices and earth-leakage circuit breaker (ELCBs))
  - circuit isolation and protection devices
  - isolation procedures - work clearance, testing for voltage, lock-off and tagging, techniques in isolation and tagging, regulations, codes of practice and procedures
  - disconnection procedures, practices and requirements
  - types of replacement equipment
  - methods of ensuring equipment is safe to connect to supply
  - methods of reconnection procedures, practices and requirements
  - methods of return equipment to service
- effects of harmonics encompassing:
  - characteristics and effects of harmonics on protection device functions/malfunction
  - effects of harmonics on transformers, generators, motors and quality of supply
- procedures for the systematic fault isolation through the application of diagnostic techniques encompassing:
  - principles of analytical questioning
  - techniques in drawing valid conclusions from first observations
  - concepts of broad first-line testing
  - consideration of/responsibility for, avoidance of further damage
  - interpretation of specific test results - cause/effect
  - techniques for isolation to appropriate level - half-split, module/function isolation (kernel technique), substitution; diagnostic software; requirements for the use of manuals, system diagrams/plans, drawings and handbooks; and specifications and fault pathways
  - software/firmware functions awareness
  - factors affecting field versus workshop repair costs
  - scheduling minor/major repair activities and downtime
  - implications of temporary repairs
  - use of system knowledge and history
  - data interpretation, expected versus actual
  - feedback to design/production/installation processes
  - subsystems and system structures
  - system signals/status indicators
  - known failure modes and trends
  - action threshold warnings versus catastrophic failure
  - component ratings/upgrades

© Commonwealth of Australia, 2025 Powering Skills Organisation

- disassembly/reassembly techniques and care
- relative costs of repair and replacement - remaining life, ongoing maintenance, and additional benefits of replacement equipment, e.g. improved productivity and quality.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTS26 Commission power systems metering schemes

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the commissioning of metering schemes and includes isolation, inspection, monitoring, testing and adjustment; and repair, refurbishment and/or overhaul and function checks on schemes including ammeters, voltmeters, wattmeters, volt-ampere reactive (VAR) meters and energy metering. It also includes an emphasis on ensuring that the metering is connected into the power system safely and correctly and that it returns valid information.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies,

procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRTS25 Maintain and test and metering schemes

UETTDRTS29 Develop power systems secondary isolation instructional documents

Competency Field

Testing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the commissioning of metering schemes	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the commissioning of metering schemes, are reviewed and determined
	1.2 Purpose of the commissioning of metering schemes is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the commissioning of metering schemes are obtained or established with appropriate personnel
	1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
	1.5 Testing parameters are established from organisational established procedures on policies and specifications
	1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		criteria and established procedures
	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the commissioning of metering schemes	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Commissioning of metering scheme decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical/engineering models of the commissioning of metering schemes are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within

© Commonwealth of Australia, 2025 Powering Skills Organisation

	an agreed timeframe according to requirements
	2.7 Testing of the commissioning of metering schemes is undertaken according to requirements and established procedures
	2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the commissioning of metering schemes	**3.1** Final inspections of the commissioning of metering schemes are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4 Approved copies of the commissioning of metering schemes documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS26A Commission power systems metering schemes.

Assessment Requirements for UETTDRTS26 Commission power systems metering schemes

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating commissioning metering schemes, on at least three (3) occasions, testing accuracy to established plans of at least three (3) schemes using the following equipment
  - ammeter
  - voltmeter
  - wattmeter
  - VAR meter
  - energy meter*
  - (*Must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of metering and control equipment encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment
  - types of meters - kilowatt-hour meters single and polyphase, demand meters, recording meters and electronic recording metering system summators
  - installation and removal methods - direct connection and plug in method, and enterprise specific
  - types of associated equipment and accessories - meter boards, service fuse, links, contactors, time switch and audio frequency injection relay
  - testing procedures - safety testing and polarity testing

© Commonwealth of Australia, 2025 Powering Skills Organisation

- commissioning procedures associated with relevant equipment encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTS27 Perform accuracy checks on power systems instrument transformers

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers undertaking accuracy checks on instrument transformers and includes proving their functionality. It also includes both current and voltage instrument transformers having various operating principles, which are designed for metering, protection, monitoring or control usage. It also encompasses tasks associated with the isolation from other secondary circuits, inspection, measurement of excitation curves, measurement of phase and ratio errors and comparison of results with previous historical results and/or published specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

Assessment Requirements for UETTDRTS27 Perform accuracy checks on power systems instrument transformers

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing five (5) accuracy checks on instrument transformers and incorporating all of the following:
  - isolation from other secondary circuits
  - inspection
  - measurement of excitation curves
- measuring phase and ratio errors on all of the following:
  - current transformers
  - voltage transformers
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - analysis of relevant data and evaluation of WHS/OHS system effectiveness
  - assess resources to establish and maintain WHS/OHS management systems
- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, Safety procedures and precautions, safe approach distances
  - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- low voltage (LV) system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorization - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permit authorities, requirements for team switching and procedures for coordination of operations

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- detailed operation of instrument transformers encompassing:
    - voltage and current transformer principles and terminology
    - types and classes of current transformers
    - constructions of current transformers
    - characteristics of current transformers
    - testing of current transformers
    - types and categories of voltage transformers
    - constructions of voltage transformers
    - characteristics of voltage transformers
    - testing of voltage transformers
- protection schemes encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
    - types of protection schemes - reasons for use, application of protection zones around system elements and degree of protection
    - types of feeder protection equipment - overcurrent protection inverse time-current operating characteristics
    - operation of over current protection equipment used on distribution systems
    - operation of automatic circuit reclosers (ACR) and their time-current characteristics
    - types and characteristics of overcurrent relays
    - coordination methods of a distribution feeder protection scheme
    - earth fault protection used on a distribution feeder
    - operation of a single wire earth return (SWER) system
- extra high voltage (EHV) generator control systems encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
    - safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
    - techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of EHV load and assessing the appropriateness of the generator
    - operating a generator in parallel to a single EHV job - overhead systems, indoor systems, customer installations and kiosk substations
    - EHV generator set and control system to EHV distribution assets.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTS28 Repair, test and calibrate protection relays and meters

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the repair, calibration and testing of various types of protection relays. These can include electromechanical, analogue, digital electronic and numerical devices. It also involves finding and replacing faulty components, testing to manufacturer or user specifications and proving all functions of the devices under test.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Assessment Requirements for UETTDRTS28 Repair, test and calibrate protection relays and meters

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using all of the following simple protection schemes:
  - auxiliary
  - overcurrent
  - timers
  - voltage
- using at least three (3) of the following intermediate protection devices:
  - inverse time delay overcurrent
  - voltage regulating relays
  - differential
  - pilot wire
- using at least two (2) of the following advanced protection schemes:
  - multi-zone impedance
  - multi-function feeder protection
  - phase comparison
  - digital current differential
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for the location and rectification of faults in electrical equipment up to 1000 volts alternating current (a.c.) and/or 1500 volts direct current (d.c.) encompassing:
  - relationship of WHS/OHS to the location and rectification of faults in electrical

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment - acts and regulations, identification of personal safety, workplace hazards, working with electrically operated tools and equipment, emergency first aid/resuscitation, rescue from a live electrical situation, and enterprise policies and procedures
    - types of drawings - differentiation between symptoms, faults and causes in malfunctioning equipment, fault-finding techniques and procedures
    - fundamental electrical concepts - effects of current, practical resistors, sources of electromagnetic field, series, parallel and series-parallel circuits, electrical measurement, capacitors, inductors and magnetism
    - fundamentals of general appliances - basic principles of appliances (non-mathematical), appliance identification, appliance ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in appliances and fault-finding procedures (prescriptive)
    - fundamentals of single phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in phase splitting and universal type motors and fault-finding procedures (prescriptive)
    - fundamentals of three phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, motor starter principles, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, safe testing procedures and fault-finding procedures (prescriptive)
    - fundamentals of single and three phase electrical heaters - basic principles of operation, types of electrical heaters, electrical heater identification, electrical heater ratings, basic principles of operation of control and protection devices, fault conditions and symptoms, safe testing procedures and fault-finding procedures (prescriptive)
- detailed operation of metering devices and principles encompassing:
    - common circuit configurations
    - meters and measurement principles
    - instrument transformer application
    - testing of metering systems and devices
    - implications of market operation
- detailed operation of fundamental test equipment encompassing:
    - care and safe use
    - operating principles
    - comparison of different operating principle meters used for the same purpose
    - accuracy and loading effects of meters - measurement of voltage, current, power, resistance, insulation resistance, impedance and phase sequence, and the use of oscilloscopes
- detailed operation of protection test equipment encompassing:
    - care and safe use
    - operating principles

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurement of timing, voltage, current, resistance, inductance, capacitance, impedance, frequency, phase angle, phase difference, and the use of primary, secondary and gas injection equipment
- protection schemes encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
  - types of protection schemes - reasons for use, application of protection zones around system elements and degree of protection
  - types of feeder protection equipment - overcurrent protection inverse time-current operating characteristics
  - operation of overcurrent protection equipment used on distribution systems
  - operation of automatic circuit reclosers (ACR) and their time-current characteristics
  - types and characteristics of over-current relays
  - coordination methods of a distribution feeder protection scheme
  - earth fault protection used on a distribution feeder
  - operation of a single wire earth return (SWER) system.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRTS29 Develop power systems secondary isolation instructional documents

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the skills needed to develop secondary isolations. This will involve analysis of tripping and a thorough understanding of secondary voltage and current, direct current (d.c.), alarm, metering and communication circuits. It also involves accurate communication of this information in a format acceptable to the operating or testing authority.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies,

procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Competency Field

Testing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for the development of secondary isolation instructional documents	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the development of secondary isolation instructional documents, are reviewed and determined
	1.2 Purpose of the development of secondary isolation instructional documents is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the development of secondary isolation instructional documents are obtained or established with appropriate personnel
	1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
	1.5 Testing parameters are established from organisational established procedures and policies and specifications
	1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Work roles and tasks are allocated according to requirements and individual competencies
	1.8	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.11	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
2 Carry out the development of secondary isolation instructional documents	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Development of secondary isolation instructional document decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical and/or engineering models of the development of secondary isolation instructional documents are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Testing of the development of secondary isolation instructional documents is undertaken according to requirements and established procedures
	2.8	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
	2.9	Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
	2.10	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.11	Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
3 Complete the development of secondary isolation instructional documents	**3.1**	Final inspections of the development of secondary isolation instructional documents are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of the development of secondary isolation instructional documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETTDRTS29 Develop power systems secondary isolation instructional documents

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing secondary isolation instructional documents for at least four (4) of the following substation equipment:
  - bus protection
  - high impedance bus protection
  - feeder/line protection
  - transformer protection
  - earth fault protection
  - backup protection
  - pilot wire protection
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management

© Commonwealth of Australia, 2025 Powering Skills Organisation

systems
    - analysis of relevant data and evaluation of WHS/OHS system effectiveness
    - assess resources to establish and maintain WHS/OHS management systems
- generation systems encompassing:
    - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
    - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
    - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
    - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
    - characteristics of a transmission, distribution and rail system - principal components, typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
    - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
    - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
    - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
    - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
    - auxiliary equipment used on transformers - function and basic operation of equipment
    - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
    - description, purpose and characteristics of a reactors
- HV generator control systems encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
    - safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
    - techniques in the installation of generator sets control systems - synchronising of generator control systems onto and off the network without interruption to supply, estimation of HV load and assessing the appropriateness of the generator
    - operating a generator in parallel to a single HV job - overhead systems, indoor systems,

© Commonwealth of Australia, 2025 Powering Skills Organisation

customer installations and kiosk substations
    - HV generator set and control system to HV distribution assets
- electrical equipment fundamentals used in the powerline industry encompassing:
    - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment (HV and low voltage (LV) equipment)
    - characteristics, capabilities and application of powerline electrical equipment
    - safety precautions with regards to using electrical equipment
    - techniques in pre-use inspection on the serviceability of electrical equipment
    - techniques in the general maintenance, care and storage of electrical equipment
    - identifying hazards, assessing and controlling risks associated with the use of electrical equipment
- coordinating access authority procedures encompassing:
    - specific enterprise processes, policies and procedures to be followed
    - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
    - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
    - techniques in the effective utilisation of available resources
    - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
    - techniques in facilitating and coordinating the delivery and issuing of access authorities
    - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements, such as WHS/OHS and electrical safety
    - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
    - methods of conducting audits on correct access authority procedures
    - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
    - issue and receipt of operating agreements
- HV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of HV systems and equipment to be switched
    - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions,

© Commonwealth of Australia, 2025 Powering Skills Organisation

and safe approach distances (SAD)
    - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
    - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- LV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of LV systems and equipment to be switched
    - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permit authorities, requirements for team switching and procedures for coordination of operations
    - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- secondary switching/isolation principles and sheet preparation encompassing:
    - techniques in performing and demonstrating correct sequence of isolation and/or restoration - communications with appropriate authorities, ensuring adequate protection remains in service to provide plant protection, reading and interpreting drawings for switching/isolating, and sheet/instruction preparation
- protection schemes encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
    - types of protection schemes - reasons for use, application of protection zones around system elements and degree of protection
    - types of feeder protection equipment - overcurrent protection inverse time-current operating characteristics
    - operation of overcurrent protection equipment used on distribution systems
    - operation of automatic circuit reclosers (ACR) and their time-current characteristics
    - types and characteristics of overcurrent relays
    - coordination methods of a distribution feeder protection scheme
    - earth fault protection used on a distribution feeder
    - operation of a single wire earth return (SWER) system
- extra high voltage (EHV) generator control systems encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator

© Commonwealth of Australia, 2025 Powering Skills Organisation

- safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
- techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of EHV load and assessing the appropriateness of the generator
- operating a generator in parallel to a single EHV job - overhead systems, indoor systems, customer installations and kiosk substations
- EHV generator set and control system to EHV distribution assets.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.
