Australian Government

UET Transmission, Distribution and Rail Sector

Release: 1.2

CONTENTS

UET20319 Certificate II in ESI - Powerline Vegetation Control 20
UET20419 Certificate II in Transmission Structure and Line Assembly....26
UET20519 Certificate II in National Broadband Network Cabling (Electricity Supply Industry Assets) 29
UET20619 Certificate II in ESI - Asset Inspection 33
UET30519 Certificate III in ESI - Power Systems - Transmission Overhead....37
UET30619 Certificate III in ESI - Power Systems - Distribution Overhead....67
UET30719 Certificate III in ESI - Power Systems - Rail Traction....100
UET30819 Certificate III in ESI - Power Systems - Distribution Cable Jointing....134
UET30919 Certificate III in ESI - Remote Community Utilities Worker 172
UET40419 Certificate IV in ESI - Network Systems 188
UET40519 Certificate IV in ESI - Power Systems Substations 265
UET40619 Certificate IV in ESI - Power Systems Network Infrastructure....298
UET50219 Diploma of ESI - Power Systems 344
UET50319 Diploma of ESI - Power Systems Operations 380
UET60219 Advanced Diploma of ESI - Power Systems 416
UETTDRCJ21 Lay ESI electrical cables 466
Assessment Requirements for UETTDRCJ21 Lay ESI electrical cables....470
UETTDRCJ22 Install and maintain de-energised low voltage underground paper insulated cables 474
Assessment Requirements for UETTDRCJ22 Install and maintain de-energised low voltage underground paper insulated cables....478
UETTDRCJ23 Install and maintain de-energised high voltage underground paper insulated cables 481
Assessment Requirements for UETTDRCJ23 Install and maintain de-energised high voltage underground paper insulated cables....485
UETTDRCJ24 Joint and maintain energised low voltage underground paper insulated cables....488
Assessment Requirements for UETTDRCJ24 Joint and maintain energised low voltage underground paper insulated cables....492
UETTDRCJ25 Perform straight through high voltage paper insulated to polymeric transition joint....495
Assessment Requirements for UETTDRCJ25 Perform straight through high voltage paper insulated to polymeric transition joint....499
UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables....501
Assessment Requirements for UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables 505
UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables....508
Assessment Requirements for UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables 512
UETTDRCJ28 Joint and maintain energised low voltage underground polymeric cables515
Assessment Requirements for UETTDRCJ28 Joint and maintain energised low voltage underground polymeric cables 520
UETTDRCJ29 Install gas and oil filled specialised underground cables 523
Assessment Requirements for UETTDRCJ29 Install gas and oil filled specialised underground cables 528
UETTDRCJ30 Maintain gas and oil filled specialised underground cables 532

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Requirements for UETTDRCJ30 Maintain gas and oil filled specialised underground cables 537
UETTDRCJ31 Install and maintain polymeric specialised underground cables 540
Assessment Requirements for UETTDRCJ31 Install and maintain polymeric specialised underground cables 545
UETTDRCJ32 Install and maintain gas and oil pressure systems for specialised underground cables 549
Assessment Requirements for UETTDRCJ32 Install and maintain gas and oil pressure systems for specialised underground cables 554
UETTDRCJ33 Install and maintain network infrastructure LV underground cables 559
Assessment Requirements for UETTDRCJ33 Install and maintain network infrastructure LV underground cables 564
UETTDRCJ34 Install and maintain network infrastructure HV underground cables 570
Assessment Requirements for UETTDRCJ34 Install and maintain network infrastructure HV underground cables 576
UETTDRCJ99 Test and verify distribution cable jointing installations 580
Assessment Requirements for UETTDRCJ99 Test and verify distribution cable jointing installations 585
UETTDRDP11 Inspect overhead poles-structures and electrical apparatus 588
Assessment Requirements for UETTDRDP11 Inspect overhead poles-structures and electrical apparatus 592
UETTDRDP12 Maintain overhead energised low voltage conductors and cables 595
Assessment Requirements for UETTDRDP12 Maintain overhead energised low voltage conductors and cables 599
UETTDRDP13 Maintain energised HV distribution overhead electrical apparatus (stick) 602
Assessment Requirements for UETTDRDP13 Maintain energised HV distribution overhead electrical apparatus (stick) 607
UETTDRDP14 Maintain energised HV distribution overhead electrical apparatus (glove) 611
Assessment Requirements for UETTDRDP14 Maintain energised HV distribution overhead electrical apparatus (glove) 616
UETTDRDP15 Inspect, maintain and restore energised low voltage overhead distribution network infrastructure 621
Assessment Requirements for UETTDRDP15 Inspect, maintain and restore energised low voltage overhead distribution network infrastructure 627
UETTDRDP99 Test and verify distribution overhead installations 633
Assessment Requirements for UETTDRDP99 Test and verify distribution overhead installations 638
UETTDRDS31 Draft and layout a power system overhead distribution extension 641
Assessment Requirements for UETTDRDS31 Draft and layout a power system overhead distribution extension 646
UETTDRDS32 Draft and layout a power system underground distribution extension 651
Assessment Requirements for UETTDRDS32 Draft and layout a power system underground distribution extension 656
UETTDRDS33 Draft and layout a power system street lighting system 660
Assessment Requirements for UETTDRDS33 Draft and layout a power system street lighting system 665
UETTDRDS34 Draft and layout a power system distribution substation minor upgrade 672
Assessment Requirements for UETTDRDS34 Draft and layout a power system distribution substation minor upgrade 677
UETTDRDS35 Design overhead distribution power systems 682
Assessment Requirements for UETTDRDS35 Design overhead distribution power systems 687
UETTDRDS36 Design underground distribution power systems 694

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Requirements for UETTDRDS36 Design underground distribution power systems 699
UETTDRDS37 Design power system distribution substations 704
Assessment Requirements for UETTDRDS37 Design power system distribution substations 709
UETTDRDS38 Design power system public lighting systems 715
Assessment Requirements for UETTDRDS38 Design power system public lighting systems 720
UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure 725
Assessment Requirements for UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure 729
UETTDRDS42 Investigate quality of power systems supply issues 738
Assessment Requirements for UETTDRDS42 Investigate quality of power systems supply issues 743
UETTDRDS43 Develop high voltage and low voltage distribution protection systems 745
Assessment Requirements for UETTDRDS43 Develop high voltage and low voltage distribution protection systems 750
UETTDRDS45 Organise and implement ESI line and easement surveys 755
Assessment Requirements for UETTDRDS45 Organise and implement ESI line and easement surveys 760
UETTDRDS46 Develop planned power systems outage strategies 763
Assessment Requirements for UETTDRDS46 Develop planned power systems outage strategies 767
UETTDRDS50 Design customer power system substations 773
Assessment Requirements for UETTDRDS50 Design customer power system substations 778
UETTDREL11 Apply sustainable energy and environmental procedures 782
Assessment Requirements for UETTDREL11 Apply sustainable energy and environmental procedures 786
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus 789
Assessment Requirements for UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus 793
UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures 797
Assessment Requirements for UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures 802
UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker 806
Assessment Requirements for UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker 810
UETTDREL15 Respond to power systems technical enquiries and requests 814
Assessment Requirements for UETTDREL15 Respond to power systems technical enquiries and requests 818
UETTDREL16 Working safely near live electrical apparatus 823
Assessment Requirements for UETTDREL16 Working safely near live electrical apparatus 826
UETTDREL17 Operate asset inspection machinery and equipment near live electrical apparatus 830
Assessment Requirements for UETTDREL17 Operate asset inspection machinery and equipment near live electrical apparatus 835
UETTDREL18 Inspect and treat poles and inspect electrical apparatus 838
Assessment Requirements for UETTDREL18 Inspect and treat poles and inspect electrical apparatus 843

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL19 Identify and interpret characteristics of electrical apparatus associated with power industry assets 846
Assessment Requirements for UETTDREL19 Identify and interpret characteristics of electrical apparatus associated with power industry assets 851
UETTDREL20 Undertake minor vegetation control and routine minor maintenance of poles and electrical apparatus 854
Assessment Requirements for UETTDREL20 Undertake minor vegetation control and routine minor maintenance of poles and electrical apparatus 859
UETTDREL21 Operate specialised data information equipment near live electrical apparatus 862
Assessment Requirements for UETTDREL21 Operate specialised data information equipment near live electrical apparatus 867
UETTDRIS32 Solve electrical problems in remote community network apparatus 870
Assessment Requirements for UETTDRIS32 Solve electrical problems in remote community network apparatus 873
UETTDRIS33 Solve electrical problems in remote community network systems 879
Assessment Requirements for UETTDRIS33 Solve electrical problems in remote community network systems 882
UETTDRIS34 Install and replace energy meters and associated equipment in remote communities 887
Assessment Requirements for UETTDRIS34 Install and replace energy meters and associated equipment in remote communities 891
UETTDRIS35 Perform remote community network field switching to a given schedule . 894
Assessment Requirements for UETTDRIS35 Perform remote community network field switching to a given schedule 898
UETTDRIS36 Install and maintain low voltage services in remote communities (overhead) 902
Assessment Requirements for UETTDRIS36 Install and maintain low voltage services in remote communities (overhead) 907
UETTDRIS37 Install and maintain low voltage services in remote communities (underground) 910
Assessment Requirements for UETTDRIS37 Install and maintain low voltage services in remote communities (underground) 914
UETTDRIS38 Install and maintain public lighting systems in remote communities 917
Assessment Requirements for UETTDRIS38 Install and maintain public lighting systems in remote communities 921
UETTDRIS41 Install network infrastructure electrical equipment 924
Assessment Requirements for UETTDRIS41 Install network infrastructure electrical equipment 929
UETTDRIS42 Maintain network infrastructure electrical equipment 932
Assessment Requirements for UETTDRIS42 Maintain network infrastructure electrical equipment 937
UETTDRIS43 Perform low voltage field switching operation to a given schedule 940
Assessment Requirements for UETTDRIS43 Perform low voltage field switching operation to a given schedule 945
UETTDRIS44 Perform HV field switching operation to a given schedule 947
Assessment Requirements for UETTDRIS44 Perform HV field switching operation to a given schedule 952
UETTDRIS46 Install and maintain ESI network infrastructure electrical equipment 956
Assessment Requirements for UETTDRIS46 Install and maintain ESI network infrastructure electrical equipment 961
UETTDRIS47 Sample, test, filter and reinstate insulating oil 967
Assessment Requirements for UETTDRIS47 Sample, test, filter and reinstate insulating oil 971

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS48 Develop high voltage switching schedule 977
Assessment Requirements for UETTDRIS48 Develop high voltage switching schedule ... 983
UETTDRIS49 Develop low voltage switching schedule 989
Assessment Requirements for UETTDRIS49 Develop low voltage switching schedule 995
UETTDRIS50 Coordinate power system permit procedures 1000
Assessment Requirements for UETTDRIS50 Coordinate power system permit procedures 1006
UETTDRIS51 Coordinate and direct power system switching schedules 1013
Assessment Requirements for UETTDRIS51 Coordinate and direct power system switching schedules 1019
UETTDRIS52 Install and maintain poles, structures and associated hardware 1027
Assessment Requirements for UETTDRIS52 Install and maintain poles, structures and associated hardware 1031
UETTDRIS53 Install and maintain power system public lighting 1034
Assessment Requirements for UETTDRIS53 Install and maintain power system public lighting 1039
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables 1042
Assessment Requirements for UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables 1046
UETTDRIS55 Install and maintain low voltage underground services 1049
Assessment Requirements for UETTDRIS55 Install and maintain low voltage underground services 1054
UETTDRIS56 Install and maintain low voltage overhead services 1057
Assessment Requirements for UETTDRIS56 Install and maintain low voltage overhead services 1062
UETTDRIS57 Conduct visual checking and treatment of power system poles and structures 1065
Assessment Requirements for UETTDRIS57 Conduct visual checking and treatment of power system poles and structures 1070
UETTDRIS58 Locate faults in power system underground power cables 1073
Assessment Requirements for UETTDRIS58 Locate faults in power system underground power cables 1077
UETTDRIS59 Conduct high potential testing of power system underground power cables 1082
Assessment Requirements for UETTDRIS59 Conduct high potential testing of power system underground power cables 1086
UETTDRIS60 Install and replace power system energy meters and associated equipment 1091
Assessment Requirements for UETTDRIS60 Install and replace power system energy meters and associated equipment 1096
UETTDRIS61 Install mobile generation set for synchronised LV Genset 1100
Assessment Requirements for UETTDRIS61 Install mobile generation set for synchronised LV Genset 1106
UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs 1108
Assessment Requirements for UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs 1113
UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures 1117
Assessment Requirements for UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures 1121
UETTDRIS64 Install mobile generation set for synchronised HV Genset 1126
Assessment Requirements for UETTDRIS64 Install mobile generation set for synchronised HV Genset 1132
UETTDRIS65 Contribute to coordinated HV live working 1135
Assessment Requirements for UETTDRIS65 Contribute to coordinated HV live working 1140

UETTDRIS67 Solve problems in energy supply network equipment....1145
Assessment Requirements for UETTDRIS67 Solve problems in energy supply network equipment....1149
UETTDRIS68 Solve problems in energy supply network protection equipment and systems....1153
Assessment Requirements for UETTDRIS68 Solve problems in energy supply network protection equipment and systems....1157
UETTDRIS69 Diagnose and rectify faults in energy supply apparatus....1160
Assessment Requirements for UETTDRIS69 Diagnose and rectify faults in energy supply apparatus....1164
UETTDRIS70 Diagnose and rectify faults in electrical energy distribution systems....1167
Assessment Requirements for UETTDRIS70 Diagnose and rectify faults in electrical energy distribution systems....1171
UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems1175
Assessment Requirements for UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems....1179
UETTDRIS72 Diagnose and rectify faults in distributed generation systems....1182
Assessment Requirements for UETTDRIS72 Diagnose and rectify faults in distributed generation systems....1186
UETTDRIS73 Develop engineering solutions for energy supply power transformer problems....1188
Assessment Requirements for UETTDRIS73 Develop engineering solutions for energy supply power transformer problems....1192
UETTDRIS74 Develop engineering solutions for energy supply system protection problems....1195
Assessment Requirements for UETTDRIS74 Develop engineering solutions for energy supply system protection problems....1199
UETTDRIS81 Install telecommunications infrastructure on electricity supply industry assets....1202
Assessment Requirements for UETTDRIS81 Install telecommunications infrastructure on electricity supply industry assets....1206
UETTDRIS99 Test and verify distribution remote area installations....1209
Assessment Requirements for UETTDRIS99 Test and verify distribution remote area installations....1214
UETTDRRF01 Apply ESI safety rules, codes of practice and procedures for work on or near electrical apparatus....1217
Assessment Requirements for UETTDRRF01 Apply ESI safety rules, codes of practice and procedures for work on or near electrical apparatus....1220
UETTDRRF02 Perform pole top rescue....1222
Assessment Requirements for UETTDRRF02 Perform pole top rescue....1225
UETTDRRF03 Perform EWP rescue....1227
Assessment Requirements for UETTDRRF03 Perform EWP rescue....1230
UETTDRRF04 Perform tower rescue....1232
Assessment Requirements for UETTDRRF04 Perform tower rescue....1235
UETTDRRF05 Perform rescue from switchyard structures at heights....1237
Assessment Requirements for UETTDRRF05 Perform rescue from switchyard structures at heights....1240
UETTDRRF06 Perform rescue from a live LV panel....1242
Assessment Requirements for UETTDRRF06 Perform rescue from a live LV panel....1245
UETTDRRF07 Perform cable pit/trench/excavation rescue....1247
Assessment Requirements for UETTDRRF07 Perform cable pit/trench/excavation rescue1250
UETTDRRF08 Perform EWP controlled descent escape....1252
Assessment Requirements for UETTDRRF08 Perform EWP controlled descent escape1254

UETTDRRF09 Apply access procedures to work on or near electrical network infrastructure 1256
Assessment Requirements for UETTDRRF09 Apply access procedures to work on or near electrical network infrastructure 1259
UETTDRRF10 Provide first aid in an ESI environment 1261
Assessment Requirements for UETTDRRF10 Provide first aid in an ESI environment 1264
UETTDRRF11 Testing of connections to low voltage electricity networks 1266
Assessment Requirements for UETTDRRF11 Testing of connections to low voltage electricity networks 1268
UETTDRRT21 Install traction overhead wiring systems 1270
Assessment Requirements for UETTDRRT21 Install traction overhead wiring systems 1274
UETTDRRT22 Maintain traction overhead wiring systems 1277
Assessment Requirements for UETTDRRT22 Maintain traction overhead wiring systems 1281
UETTDRRT23 Install rail traction bonds 1284
Assessment Requirements for UETTDRRT23 Install rail traction bonds 1288
UETTDRRT24 Maintain rail traction bonds 1290
Assessment Requirements for UETTDRRT24 Maintain rail traction bonds 1294
UETTDRRT25 Install overhead rail traction configurations 1297
Assessment Requirements for UETTDRRT25 Install overhead rail traction configurations 1301
UETTDRRT26 Maintain overhead rail traction configurations 1304
Assessment Requirements for UETTDRRT26 Maintain overhead rail traction configurations 1308
UETTDRRT27 Install overhead traction components and equipment 1311
Assessment Requirements for UETTDRRT27 Install overhead traction components and equipment 1315
UETTDRRT28 Maintain overhead traction components and equipment 1319
Assessment Requirements for UETTDRRT28 Maintain overhead traction components and equipment 1323
UETTDRRT29 Operate rail road traction height access equipment 1327
Assessment Requirements for UETTDRRT29 Operate rail road traction height access equipment 1331
UETTDRRT30 Perform to a given schedule rail traction switching operations 1333
Assessment Requirements for UETTDRRT30 Perform to a given schedule rail traction switching operations 1338
UETTDRRT31 Maintain energised d.c. traction overhead wiring system 1341
Assessment Requirements for UETTDRRT31 Maintain energised d.c. traction overhead wiring system 1346
UETTDRRT32 Maintain energised traction overhead electrical apparatus using stick techniques 1352
Assessment Requirements for UETTDRRT32 Maintain energised traction overhead electrical apparatus using stick techniques 1358
UETTDRRT33 Maintain energised traction overhead electrical apparatus using glove techniques 1364
Assessment Requirements for UETTDRRT33 Maintain energised traction overhead electrical apparatus using glove techniques 1370
UETTDRRT99 Test and verify rail traction installations 1377
Assessment Requirements for UETTDRRT99 Test and verify rail traction installations 1382
UETTDRSB21 Diagnose and rectify faults in substation environment 1385
Assessment Requirements for UETTDRSB21 Diagnose and rectify faults in substation environment 1390
UETTDRSB22 Carry out power systems substation inspection 1396
Assessment Requirements for UETTDRSB22 Carry out power systems substation inspection 1401

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRSB23 Install and maintain substation direct current systems 1406
Assessment Requirements for UETTDRSB23 Install and maintain substation direct current systems 1411
UETTDRSB24 Maintain high voltage power system circuit breakers 1417
Assessment Requirements for UETTDRSB24 Maintain high voltage power system circuit breakers 1422
UETTDRSB25 Maintain high voltage power and instrument transformers 1429
Assessment Requirements for UETTDRSB25 Maintain high voltage power and instrument transformers 1434
UETTDRSB26 Install high current d.c. equipment and switchgear 1441
Assessment Requirements for UETTDRSB26 Install high current d.c. equipment and switchgear 1446
UETTDRSB27 Maintain high current d.c. equipment and switchgear 1452
Assessment Requirements for UETTDRSB27 Maintain high current d.c. equipment and switchgear 1457
UETTDRSB29 Maintain capacitor bank equipment for voltage regulation 1463
Assessment Requirements for UETTDRSB29 Maintain capacitor bank equipment for voltage regulation 1467
UETTDRSB30 Maintain high voltage power system static VAR compensators (SVC) .. 1473
Assessment Requirements for UETTDRSB30 Maintain high voltage power system static VAR compensators (SVC) 1478
UETTDRSB31 Maintain high voltage power system synchronous condensers 1482
Assessment Requirements for UETTDRSB31 Maintain high voltage power system synchronous condensers 1487
UETTDRSB32 Maintain power transformer on load tap changers (OLTC) 1493
Assessment Requirements for UETTDRSB32 Maintain power transformer on load tap changers (OLTC) 1498
UETTDRSB33 Install high voltage plant and equipment 1502
Assessment Requirements for UETTDRSB33 Install high voltage plant and equipment 1507
UETTDRSB34 Carry out surveys using thermovision techniques 1515
Assessment Requirements for UETTDRSB34 Carry out surveys using thermovision techniques 1520
UETTDRSB35 Maintain discrete control and protection systems 1526
Assessment Requirements for UETTDRSB35 Maintain discrete control and protection systems 1531
UETTDRSB36 Commission discrete control and protection systems 1534
Assessment Requirements for UETTDRSB36 Commission discrete control and protection systems 1539
UETTDRSB37 Maintain power system distribution field devices 1541
Assessment Requirements for UETTDRSB37 Maintain power system distribution field devices 1546
UETTDRSB38 Commission power system distribution field devices 1549
Assessment Requirements for UETTDRSB38 Commission power system distribution field devices 1554
UETTDRSB39 Perform power system substation switching operation to a given schedule 1556
Assessment Requirements for UETTDRSB39 Perform power system substation switching operation to a given schedule 1562
UETTDRSO32 Manage power systems network faults 1567
Assessment Requirements for UETTDRSO32 Manage power systems network faults .. 1572
UETTDRSO35 Manage high voltage distribution and sub-transmission network demand 1574
Assessment Requirements for UETTDRSO35 Manage high voltage distribution and sub-transmission network demand 1579
UETTDRSO36 Develop low voltage distribution switching programs 1582

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Requirements for UETTDRSO36 Develop low voltage distribution switching programs....1587
UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs....1593
Assessment Requirements for UETTDRSO37 Develop high voltage distribution and sub-transmission switching programs....1598
UETTDRSO38 Develop and evaluate power systems transmission switching programs1606
Assessment Requirements for UETTDRSO38 Develop and evaluate power systems transmission switching programs....1611
UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks ..1618
Assessment Requirements for UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks....1623
UETTDRSO41 Manage power systems transmission networks....1628
Assessment Requirements for UETTDRSO41 Manage power systems transmission networks....1633
UETTDRSO45 Operate and monitor system SCADA equipment....1638
Assessment Requirements for UETTDRSO45 Operate and monitor system SCADA equipment....1642
UETTDRSO46 Monitor and control the field staff activities....1645
Assessment Requirements for UETTDRSO46 Monitor and control the field staff activities1649
UETTDRSO47 Coordinate high voltage transmission network....1656
Assessment Requirements for UETTDRSO47 Coordinate high voltage transmission network....1661
UETTDRSO48 Respond to discrete and interdependent protection operations....1665
Assessment Requirements for UETTDRSO48 Respond to discrete and interdependent protection operations....1670
UETTDRSO49 Coordinate power system operations in a regulated energy market....1673
Assessment Requirements for UETTDRSO49 Coordinate power system operations in a regulated energy market....1678
UETTDRSO50 Respond to complex power system protection operations....1681
Assessment Requirements for UETTDRSO50 Respond to complex power system protection operations....1686
UETTDRTP22 Establish and reinstate a power systems transmission structure work site1689
Assessment Requirements for UETTDRTP22 Establish and reinstate a power systems transmission structure work site....1694
UETTDRTP23 Erect power systems transmission structures....1697
Assessment Requirements for UETTDRTP23 Erect power systems transmission structures....1701
UETTDRTP24 Erect power systems transmission structure hardware....1704
Assessment Requirements for UETTDRTP24 Erect power systems transmission structure hardware....1708
UETTDRTP25 Pre-tension stringing overhead transmission conductors and cables....1711
Assessment Requirements for UETTDRTP25 Pre-tension stringing overhead transmission conductors and cables....1715
UETTDRTP26 Install transmission structures and associated hardware....1717
Assessment Requirements for UETTDRTP26 Install transmission structures and associated hardware....1721
UETTDRTP27 Maintain transmission structures and associated hardware....1723
Assessment Requirements for UETTDRTP27 Maintain transmission structures and associated hardware....1728
UETTDRTP28 Set-up and install transmission structure stubs....1731
Assessment Requirements for UETTDRTP28 Set-up and install transmission structure stubs....1735

UET20319 Certificate II in ESI - Powerline Vegetation Control

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a Powerline Vegetation Control Worker.

This qualification covers competencies for the operational role of planning and carrying out vegetation control at and above ground level near live electrical apparatus. It also includes complying with relevant legislation, applicable industry guidelines, codes of practices or other related requirements for safe work and access near live electrical and mechanical apparatus.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **360 weighting points** comprising:

240 core weighting points listed below; **plus**

120 general elective weighting points from the general elective units listed below.

Choose a total of 120 **weighting points** elective units from the list below, of which between 0 and 70 **weighting points** can be taken from Group A; and **between 50 and 120 weighting points** taken from Group B. You may select all your elective from this group.

Up to 70 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide (link below), if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

Core units		**Weighting Points**
AHCMOM213	Operate and maintain chainsaws	20
UEENEEE101A	Apply Occupational Health and Safety regulations, codes and practices in the workplace	20
UETTDREL13	Comply with sustainability, environmental and incidental response policies and procedures	40
UETTDREL14	Working safely near live electrical apparatus as a non-electrical worker	40
UETTDRVC23	Plan the removal of vegetation up to vegetation exclusion zone near live electrical apparatus Common Unit Group ∟UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace ∟UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures ∟UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker	60
UETTDRVC27	Monitor safety compliance of vegetation control work in an ESI environment Common Unit Group ∟UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace ∟UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures ∟UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker ∟UETTDRVC23 Plan the removal of vegetation up to vegetation exclusion zone near live electrical apparatus	60

Group A: Imported and common elective units		**Weighting Points**
AHCARB312	Use standard climbing techniques to access trees ∟AHCARB311 Tie, dress, set and finish arborist knots	20
AHCCHM201	Apply chemicals under supervision	30

© Commonwealth of Australia, 2025 Powering Skills Organisation

AHCMOM304	Operate machinery and equipment	40
AHCPCM201	Recognise plants	40
AHCPCM203	Fell small trees ∟AHCMOM213 Operate and maintain chainsaws	30
FWPHAR2206	Operate a mobile chipper/mulcher	20
TLILIC0005	Licence to operate a boom-type elevating work platform (boom length 11 metres or more)	40

Group B: Qualification elective units		**Weighting Points**
UETTDRVC21	Use climbing techniques to cut vegetation above ground near live electrical apparatus Common Unit Group ∟UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace ∟UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures ∟UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker ∟UETTDRVC23 Plan the removal of vegetation up to vegetation exclusion zone near live electrical apparatus ∟UETTDRVC27 Monitor safety compliance of vegetation control work in an ESI environment ∟UETTDRVC33 Apply pruning techniques to vegetation control near live electrical apparatus ∟UETTDRVC34 Undertake release and rescue from a tree near live electrical apparatus	30
UETTDRVC24	Assess vegetation and recommend control measures in an ESI environment Common Unit Group ∟UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace ∟UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures ∟UETTDREL14 Working safely near live electrical	80

UET20419 Certificate II in Transmission Structure and Line Assembly

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a Transmission Line Assembly Worker.

This qualification covers assembling transmission towers and structures. It also includes stringing transmission overhead conductors prior to being tensioned.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

^ From 1 July 2022 the elective units HLTAID001, HLTAID003 must no longer be delivered and will be replaced in the Packaging Rules by the unit HLTAID009, HLTAID011 - for more information see: https://asqa.gov.au/news-events/news/reminder-about-superseded-hlt-first-aid-units

Entry Requirements

There are no entry requirements for this qualification.

Packaging Rules

A total of **360 weighting points** comprising:

160 core weighting points listed below; **plus**

200 general elective weighting points from the general elective units listed below.

Choose a total of 200 **weighting points** elective units from the list below, of which between 0 and 60 **weighting points** can be taken from Group A; and between 140 and 200 **weighting points** taken from Group B. You may select all your elective from this group.

Up to 60 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution

UET20519 Certificate II in National Broadband Network Cabling (Electricity Supply Industry Assets)

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to install and maintain National Broadband Network (NBN) cabling on the electricity supply industry (ESI) assets.

This qualification covers the installation and maintenance of the NBN network communications cabling infrastructure following prescribed routines.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

^ From 1 July 2022 the elective unit HLTAID001 must no longer be delivered and will be replaced in the Packaging Rules by the unit HLTAID009 - for more information see: https://asqa.gov.au/news-events/news/reminder-about-superseded-hlt-first-aid-units

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

UET20619 Certificate II in ESI - Asset Inspection

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as an Asset Inspector.

This qualification covers safely complying with relevant legislation, industry standards, codes of practice or other related requirements while inspecting and reporting on the status of distribution assets, including poles and structures, cables, overhead conductors, public lighting, security fencing and gates, insulators and transformers. It includes minor maintenance and weed control.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **360 weighting points** comprising:

220 core weighting points listed below; **plus**

140 general elective weighting points from the general elective units listed below.

UET30519 Certificate III in ESI - Power Systems - Transmission Overhead

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skill and knowledge to work in the electricity supply industry (ESI) as an as an Overhead Transmission Linesperson.

This qualification covers work on transmission overhead powerlines, such as the erection of towers, poles, structures and associated hardware, and the installation and maintenance of conductors and cables. It also includes inspection procedures for overhead structures and electrical apparatus.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1060 weighting points** comprising:

840 core weighting points listed below; **plus**

UET30619 Certificate III in ESI - Power Systems - Distribution Overhead

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as an Overhead Distribution Linesperson.

This qualification covers work on distribution overhead powerlines, including installation, maintenance and inspection of poles, structures and associated hardware. It also includes installation and maintenance of electrical equipment, conductors and cables used in the powerline industry and the use of support plant and equipment to undertake these tasks and environmental requirements.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1060 weighting points** comprising:

920 core weighting points listed below; **plus**

140 general elective weighting points from the general elective units listed below.

Choose a total of 140 **weighting points** elective units from the list below, of which between 0 and 70 **weighting points** can be taken from Group A; and between 80 and 140 **weighting points** taken from Group B. You may select all your elective from this group.

Up to 60 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed

© Commonwealth of Australia, 2025 Powering Skills Organisation

weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

UET30719 Certificate III in ESI - Power Systems - Rail Traction

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work in the electrical supply industry (ESI) as a Rail Traction Powerline Worker.

This qualification covers the installation, maintenance and inspection of overhead poles/structures, conductors, cables and rail traction wiring systems, including associated equipment used on these structures in the rail traction industry. It also includes the maintenance of bonds and the operation of rail traction height access equipment.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1060 weighting points** comprising:

870 core weighting points listed below; **plus**

190 general elective weighting points from the general elective units listed below.

Choose a minimum of 190 **weighting points** elective units from the list below, of which between 0 and 70 **weighting points** can be taken from Group A; and between 120 and 190 **weighting points** from Group B. You may select all your elective from this group.

Up to 70 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification, their weighting will be 10 points.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

UET30819 Certificate III in ESI - Power Systems - Distribution Cable Jointing

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skill and knowledge to work in the electricity supply industry (ESI) as a Cable Jointer.

This qualification covers the laying, installation and maintenance of de-energised low voltage (LV) and high voltage (HV) underground polymeric cables and installation and maintenance of electrical equipment and jointing and maintaining energised LV underground paper insulated and polymeric cables. There are options for skills to be obtained for energised cables and/or LV and HV paper insulated cables.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1060 weighting points** comprising:

800 core weighting points listed below; **plus**

260 general elective weighting points from the general elective units listed below.

Choose a total of 260 **weighting points** elective units from the list below, of which between 0 and 70 **weighting points** can be taken from Group A; and between 190 and 260 **weighting points** from Group B. You may select all your elective from this group.

Up to 70 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

UET30919 Certificate III in ESI - Remote Community Utilities Worker

Modification History

Release 1. This is the first release of this qualification in the UEE Electrotechnology Training Package

Qualification Description

This qualification provides the skill and knowledge to work in the electricity supply industry (ESI) as a Remote Community Utilities Worker.

This qualification covers inspecting and maintaining essential public utilities (excluding mine sites) within very remote communities. All work on essential electrical utilities will be undertaken in non-energised (dead) environments other than for testing purposes. The use of support plant and equipment to perform these tasks and environmental requirements also play a part in this job function.

Very Remote Communities: Means a community with restricted access and very little accessibility of goods, services and opportunities for social interaction. Supporting information on the classification of a very remote community can be defined using the latest version of Accessibility/Remoteness Index of Australia (ARIA).

Non-energised (dead): Means prior to the commencement of work, all electrical apparatus is to be isolated. That is for high voltage (HV) (short-circuited and earthed) and for low voltage (LV) (short-circuited to the neutral).

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of 1060 weighting points comprising:

700 core weighting points listed below; **plus**

360 general elective weighting points from the general elective units listed below.

Choose a total of 360 **weighting points** elective units from the list below, of which between 0

© Commonwealth of Australia, 2025 Powering Skills Organisation

and 180 **weighting points** can be taken from Group A; and between 180 and 360 **weighting points** from Group B. You may select all your elective from this group.

Up to 180 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

UET40419 Certificate IV in ESI - Network Systems

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work on network systems in the electricity supply industry (ESI).

This qualification covers work on the network systems in the specific fields of live line transmission, live line distribution, live line rail traction and/or installation and maintenance of specialised underground cables. These roles may lead or supervise work teams and work in transmission, distribution, rail or cable jointing.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

UET40519 Certificate IV in ESI - Power Systems Substations

Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work in power system substations in the electricity supply industry (ESI).

This qualification covers selecting, installing, setting up, testing, fault finding, repairing and maintaining electrical systems and equipment in buildings and premises. It also provides a career in installation and maintenance of substations, such as the maintenance of high voltage (HV) power system, including circuit breakers and transformers. It includes substation switching, inspection and diagnosing and rectifying faults. Options are available for skills to be obtained in high current direct current (d.c.) switchgear and equipment, installation of HV plant and equipment and/or the maintenance and commissioning of discrete protection and control systems.

It includes the Electrical Regulatory Authorities Council (ERAC) requirements for an 'Electrician's licence'. Competency development activities in this qualification are subject to regulations directly related to licencing.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1280 weighting points** comprising:

1030 core weighting points listed below; **plus**

250 general elective weighting points from the general elective units listed below.

Choose a total of 250 **weighting points** elective units from the list below, of which between 0 and 50 **weighting points** can be taken from Group A; between 0 and 120 **weighting points** can be taken from Group B; and between 130 and 250 **weighting points** taken from Group C. You may select all your electives from this group.

Up to 50 weighting points of the general elective units Group A may be selected, with

© Commonwealth of Australia, 2025 Powering Skills Organisation

appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

	∟UEENEEG109A Develop and connect electrical control circuits Conditions: Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian State or Territory meet the requirements of this unit and its prerequisite requirements. A 'licensed electrician' applying for an 'electrical contractors licence' may be required to undertake this unit to demonstrate their currency with verification of compliance requirements. In this case they are deemed to have met the prerequisites for this unit provided that: they hold a current 'electricians licence' or its equivalent issued in an Australian State or Territory and have recently been in permanent employment as a licensed electrician sufficient to evidence current knowledge of applicable standards and regulations.

UET40619 Certificate IV in ESI - Power Systems Network Infrastructure

Modification History

Release 2. Removed deleted units UETTDRRT34, UETTDRRT35, UETTDRRT36 and UETTDRRT37 from the qualification due to zero enrolments.

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work on power system network infrastructure in the electricity supply industry (ESI).

This qualification covers the selection, installation, set up, testing, fault finding, repair and maintenance of electrical systems and equipment in buildings and premises. It includes skills and knowledge needed for a career in installation and maintenance of network infrastructure in the transmission, distribution or rail traction in the electricity supply industry.

It includes Electrical Regulatory Authorities Council (ERAC) requirements for an Electrician's licence. Competency development activities in this qualification are subject to regulations directly related to licencing.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1280 weighting points** comprising:

940 core weighting points listed below; **plus**

340 general elective weighting points from the general elective units listed below.

Choose a total of 340 **weighting points** elective units from the list below, of which between 0 and 50 **weighting points** can be taken from Group A; between 0 and 140 **weighting points** can be taken from Group B; and between 200 and 340 **weighting points** taken from Group C. You may select all your electives from this group.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Up to 50 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

	∟UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits ∟UEENEEG109A Develop and connect electrical control circuits Conditions: Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian State or Territory meet the requirements of this unit and its prerequisite requirements. A 'licensed electrician' applying for an 'electrical contractors licence' may be required to undertake this unit to demonstrate their currency with verification of compliance requirements. In this case they are deemed to have met the prerequisites for this unit provided that: they hold a current 'electricians licence' or its equivalent issued in an Australian State or Territory and have recently been in permanent employment as a licensed electrician sufficient to evidence current knowledge of applicable standards and regulations.

UET50219 Diploma of ESI - Power Systems

Modification History

Release 2. Removed deleted units UETTDRDS44, UETTDRDS49, UETTDRIS66, UETTDRSO39 and UETTDRSO43 from the qualification due to zero enrolments.

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a High Voltage (HV) Substation Project Manager or a Senior Systems Operator (ESI) or a Power Systems Technical Officer.

This qualification covers overseeing the construction of electrical substations and related projects within the ESI. It also includes managing personnel, the business aspects of projects and giving specialist advice to deal with day-to-day issues and problems.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1600 weighting points** comprising:

700 core weighting points listed below; **plus**

900 general elective weighting points from the general elective units listed below.

Choose a total of 900 **weighting points** elective units from the list below, of which between 0 and 270 **weighting points** can be taken from Group A; between 0 and 400 **weighting points** can be taken from Group B; between 0 and 200 **weighting points** can be taken from Group C and between 140 and 900 **weighting points** taken from Group D. You may select all your electives from this group.

Up to 270 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution

© Commonwealth of Australia, 2025 Powering Skills Organisation

and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

	technical engineering discipline competencies of at least AQF level 3. It is intended that an individual will be expected to perform with a large degree of autonomy in decision-making, whilst in an individual environment. This may include immediate response to protect human life, adverse effect on safety, security of supply or the integrity of the assets. NOTE: Typically the following disciplines provide direct entry; electrical or instrumentation, fitting and turning or mechanical trade. Where an individual does not possess or demonstrate the requisite entry requirement, an equivalent bridging program shall be used to ensure equivalence of entry.

UET50319 Diploma of ESI - Power Systems Operations

Modification History

Release 2. Removed deleted units UETTDRDS44, UETTDRDS49, UETTDRIS66, UETTDRSO39 and UETTDRSO43 from the qualification due to zero enrolments.

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a Power Systems Technical Officer, a High Voltage (HV) Substation Project Manager or a Senior Systems Operator.

This qualification covers designing new overhead and underground powerline systems, overseeing the construction of electrical substations and related projects. These roles may also manage personnel, the business aspects of projects and give specialist advice to deal with day-to-day issues and problems.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **1600 weighting points** comprising:

850 core weighting points listed below; **plus**

750 general elective weighting points from the general elective units listed below.

Choose a total of 750 **weighting points** elective units from the list below, of which between 0 and 270 **weighting points** can be taken from Group A; between 0 and 360 **weighting points** can be taken from Group B; between 0 and 200 **weighting points** can be taken from Group C and between 190 and 750 **weighting points** taken from Group D. You may select all your electives from this group.

Up to 270 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the

© Commonwealth of Australia, 2025 Powering Skills Organisation

qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

	To minimise incidents related to safe systems of work, entry into this unit requires at a minimum that an individual has demonstrated or possesses relevant technical engineering discipline competencies of at least AQF level 3. It is intended that an individual will be expected to perform with a large degree of autonomy in decision-making, whilst in an individual environment.	
	This may include immediate response to protect human life, adverse effect on safety, security of supply or the integrity of the assets.	
	NOTE: Typically the following disciplines provide direct entry; electrical or instrumentation, fitting and turning or mechanical trade.	
	Where an individual does not possess or demonstrate the requisite entry requirement, an equivalent bridging program shall be used to ensure equivalence of entry.

UET60219 Advanced Diploma of ESI - Power Systems

Modification History

Release 2. Removed deleted units UETTDRDS40, UETTDRDS41, UETTDRDS44, UETTDRDS47, UETTDRDS48, UETTDRDS49, UETTDRDS51, UETTDRDS52, UETTDRDS53, UETTDRDS54, UETTDRDS55, UETTDRDS56, UETTDRDS57, UETTDRDS58, UETTDRIS66, UETTDRSO33, UETTDRSO34, UETTDRSO39, UETTDRSO42, UETTDRSO43, UETTDRSO44 and UETTDRSO51 from the qualification due to zero enrolments.

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package

Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a Power System Senior Technical Officer or a Power Distribution System Engineer.

This qualification covers high-level managerial, design, testing and system operation functions in the transmission and distribution sectors of the ESI. These roles may also install, commission, maintain, diagnose and repair the hardware and software of complex power system protection, control and metering systems.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

Entry Requirements

There are no entry requirements for this qualification

Packaging Rules

A total of **2160 weighting points** comprising:

820 core weighting points listed below; **plus**

1340 general elective weighting points from the general elective units listed below.

Choose a total of 1340 **weighting points** elective units from the list below, of which between 0 and 360 **weighting points** can be taken from Group A; between 0 and 400 **weighting points** can be taken from Group B; between 0 and 200 **weighting points** can be taken from Group C, between 140 and 900 **weighting points** can be taken from Group D and between 440 and 1200

© Commonwealth of Australia, 2025 Powering Skills Organisation

weighting points taken from Group E.

Up to 360 weighting points of the general elective units Group A may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

	To minimise incidents related to safe systems of work, entry into this unit requires at a minimum that an individual has demonstrated or possesses relevant technical engineering discipline competencies of at least AQF level 3. It is intended that an individual will be expected to perform with a large degree of autonomy in decision-making, whilst in an individual environment.	
	This may include immediate response to protect human life, adverse effect on safety, security of supply or the integrity of the assets.	
	NOTE: Typically the following disciplines provide direct entry; electrical or instrumentation, fitting and turning or mechanical trade.	

© Commonwealth of Australia, 2025 Powering Skills Organisation

	Where an individual does not possess or demonstrate the requisite entry requirement, an equivalent bridging program shall be used to ensure equivalence of entry.

UETTDRCJ21 Lay ESI electrical cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to lay electrical supply industry (ESI) electrical cables.

It includes the direct laying of cables in trenches, on trays/racks, in troughs and/or in conduit or ducts. It also includes cable pulling methods, pulling tensions, minimum bending radii, reduction of frictional forces, use of supporting plant (e.g. dynamometers, rigging and winches), working on fire rated cable (FRC), polyvinyl chloride (PVC), air conditioning (A/C) ducted systems and using plant and equipment for laying and sealing ESI electrical cables.

The application of the skills and knowledge described in this unit may require a licence to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

Competency Field

Cable Jointing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to lay ESI electrical cables	**1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the laying of electrical cables are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 WHS/OHS and environmental hazards are identified, WHS/OHS risks are assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant permits are confirmed and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Work site is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out the laying of ESI electrical cables	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2 Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.3	Electrical cables are laid and sealed in accordance with workplace procedures
	2.4	Unplanned events are responded to in accordance with workplace procedures
	2.5	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete laying of ESI electrical cables	**3.1**	Completed work is checked against work plan, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ21A Lay ESI electrical cables.

Assessment Requirements for UETTDRCJ21 Lay ESI electrical cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- laying at least one (1) of the following:
  - high voltage (HV) polymeric
  - HV paper insulated
- laying at least one (1) of the following:
  - low voltage (LV) polymeric
  - LV paper insulated
- laying at least one (1) of the following:
  - direct lay
  - on racks
  - in conduits
- performing at least one (1) of the following cable pulling methods:
  - stocking pulling
  - bond pulling
  - armour pulling
  - nose pull attachments
- performing at least two (2) of the following cable sealing methods:
  - heat shrinkable
  - pre-stretched materials
  - tin/lead wiping
  - pre-moulded components
- using at least one (1) of the following cable cutting tools:
  - hydraulic cutters
  - electric reciprocating

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - motorised
  - hand tools
- using at least four (4) of the following:
  - drum jacks
  - winches
  - spindles
  - capstans
  - bollards
  - cable trailers
  - rollers
  - lubricants
  - ropes
  - bell mouths
  - draw wires/rods
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
- safety precautions specific to the installation of underground cables encompassing:
  - excavation and trench safety regulations
  - gas detection procedures
  - working in confined spaces
  - personal protective equipment (PPE)
  - hazards for the use of liquid petroleum gas (LPG) equipment for jointing of underground cables
  - gas bottle testing procedures
  - permit to work systems and isolation procedures
  - trench excavation and reinstatement procedures
  - confined space rescue, including:
    - planning and identifying rescue procedures
    - establishing rescue responses and techniques
    - involvement of external emergency services
    - emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- installation of underground cable procedures encompassing:
  - types of tools and equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- methods of cable handling encompassing:
  - direct laid cables
  - duct laid cables
  - solid laid cables
  - cables supported in cleats or hangers
  - corrosion protection
  - minimum bending radius of cables
- methods of cable sealing encompassing:
  - shorting of cables cores
  - core of unterminated cables
  - methods of protection from corrosion
  - polymeric sheathed cables sealing with mastic lined
  - heat shrink caps buried sealed ends
- methods of installing conduits
- procedures for the safe use of LPG equipment for cable jointing
- traffic management, including:
  - purpose of traffic management
  - responsibilities in accordance with relevant statutory requirements
  - electricity supply industry (ESI) requirements
  - procedure used to provide an effective traffic management scheme
  - use of a two-way radio
- procedures for purchasing/ordering items, removing/dispatching items, stocktaking and record keeping
- safety precautions specific to handling underground cables
- requirements for the use of enterprise manuals, system diagrams/plans and drawings
- types and applications of underground cables
- construction types and structures of underground cables
- characteristics of different types of underground cables
- ratings.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

© Commonwealth of Australia, 2025 Powering Skills Organisation

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for laying ESI electrical cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ22 Install and maintain de-energised low voltage underground paper insulated cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain de-energised low voltage (LV) underground paper insulated cables in the electricity supply industry (ESI).

It includes jointing and terminating cables using a range of equipment, tools and materials. It also includes testing, isolating, obtaining electrical access permits and completing relevant documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Competency Field

Cable Jointing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to joint and maintain de-energised LV underground paper insulated cables	**1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of de-energised LV underground paper insulated cables are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 WHS/OHS and environmental hazards are identified, risks are assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are confirmed and signed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out installation and maintenance of de-energised LV underground paper insulated cables	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Cables are tested in accordance with workplace procedures
	2.4	Cables are prepared for jointing, terminating or maintaining in accordance with construction drawings, manufacturer instructions and workplace procedures
	2.5	Cables are jointed, terminated or maintained in accordance with construction drawings, manufacturer instructions and workplace procedures
	2.6	De-energised LV underground paper insulated cables are maintained, repaired or replaced in accordance with job schedule, work requirements and workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete the installation and maintenance of de-energised LV underground paper insulated cables	**3.1**	Completed work is checked against work plan, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures as required

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures

3.4 Tools, equipment and surplus resources are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with workplace procedures

3.5 Relevant work permits are signed off and LV underground paper insulated cables are returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ22A Install and maintain de-energised low voltage underground paper insulated cables.

Assessment Requirements for UETTDRCJ22 Install and maintain de-energised low voltage underground paper insulated cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing at least one (1) of the following:
  - low voltage (LV) paper/lead sheathed
  - LV paper/aluminium sheathed
- completing at least two (2) of the following cable joints:
  - tee-off joints
  - straight through joints
  - parallel branch joints
  - parallel joints
- completing at least two (2) of the following cable terminations:
  - transformers
  - LV switchboards
  - pillars/turrets
  - lighting columns
  - ring main units
  - chamber substations
  - underground overhead terminations
  - circuit breakers
- using at least one (1) of the following:
  - busbar/termination boxes
  - links/fuses
  - disconnect boxes
  - termination boxes
  - control gear

© Commonwealth of Australia, 2025 Powering Skills Organisation

- using at least one (1) of the following:
  - resin filled boxes
  - polymeric tape
  - heat shrink
  - ‘slip-on’ moulds
  - pre-stretched polymeric
  - compound filled boxes
- using at least one (1) of the following cable conductor connection methods:
  - compression lugs
  - soldered lugs
  - mechanical connectors
- using at least one (1) of the following:
  - voltage detectors
  - insulation resistance testers
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safety precautions specific to handling and jointing underground aluminium and lead cable, including provision of WHS/OHS information, such as material safety data sheets (MSDS)
- requirements for the use of enterprise manuals, system diagrams/plans and drawings
- construction and structure(s) of aluminium and lead cable underground cables
- characteristics of aluminium and lead cable
- ratings
- techniques in the jointing of aluminium and lead sheathed cable
- methods of testing cable after jointing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining de-energised LV underground paper insulated cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ23 Install and maintain de-energised high voltage underground paper insulated cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain de-energised high voltage (HV) underground paper insulated cables in the electricity supply industry (ESI).

It includes completing and updating system data/maintenance records of de-energised HV underground paper insulated cables, jointing, terminating, repairing and replacing cables. It also includes isolating cables, issuing permits and undertaking pre-commissioning tests.

De-energised means separated from all sources of supply but not necessarily isolated, earthed, discharged or out of commission.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

Assessment Requirements for UETTDRCJ23 Install and maintain de-energised high voltage underground paper insulated cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using at least one (1) of the following:
  - paper/lead sheathed
  - high voltage (HV) paper/aluminium sheathed
- using at least one (1) of the following:
  - straight through joint
  - parallel branch joint
- completing at least one (1) of the following:
  - transformers
  - ring main units
  - chamber substations
- installing at least one (1) of the following:
  - busbar/termination boxes
  - links/fuses
  - termination boxes
  - control gear
- installing at least two (2) of the following:
  - resin filled boxes
  - polymeric tape
  - heat shrink
  - 'slip-on’ moulds
  - pre-stretched polymeric
  - compound filled boxes
- completing at least two (2) of the following:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - lugs and ferrules
  - compression joints
  - soldered joints
  - mechanical connectors
- using all of the following:
  - cable identification devices
  - cable spiking devices
- using all of the following:
  - insulation resistance testers
  - moisture testing equipment
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- requirements for the use of enterprise manuals, system diagrams/plans and drawings
- types of tools and equipment
- types of HV cables
- structure of HV cables
- techniques for the jointing, terminating and repairing of HV paper insulated cables
- methods of testing cables after jointing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining de-energised HV underground paper insulated cables
- applicable documentation, including workplace procedures, relevant industry standards,

UETTDRCJ24 Joint and maintain energised low voltage underground paper insulated cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to joint and maintain energised low voltage (LV) underground paper insulated cables in the electricity supply industry (ESI).

It includes jointing and terminating energised cables using a range of specialised equipment and tools. It also includes the testing of cables before and after jointing and terminating, obtaining relevant permits and preparing relevant work documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply work health and safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS41 Install network infrastructure electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Competency Field

Cable Jointing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to joint and maintain LV underground paper insulated cables	**1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the jointing and maintenance of energised LV underground paper insulated cables are obtained and confirmed for the purposes of the work to be performed and
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 WHS/OHS and environmental hazards are identified, risks are assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		obtained and confirmed in working order
	1.8	Work site is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
2 Carry out jointing and maintenance of energised LV underground paper insulated cables	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents of accidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Cables are tested in accordance with workplace procedures
	2.4	Cables are prepared for jointing, terminating or maintaining in accordance with construction drawings, manufacturer instructions and workplace procedures
	2.5	Cables are jointed, terminated and maintained in accordance with construction drawings, manufacturer instructions and workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete jointing and maintenance of energised LV underground paper insulated cables	**3.1**	Completed work is checked against work plan, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with workplace procedures
	3.4	Relevant work permits are signed off and energised LV underground paper insulated cables are returned to service in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ24A Joint and maintain energised low voltage underground paper insulated cables.

Assessment Requirements for UETTDRCJ24 Joint and maintain energised low voltage underground paper insulated cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using at least one (1) of the following:
  - low voltage (LV) paper/lead
  - LV paper/aluminium
- completing at least two (2) of the following cable joints:
  - tee-off joints
  - straight through joints
  - parallel branch
- completing at least one (1) of the following cable terminations:
  - transformers
  - LV switchboards
  - pillars/turrets
  - lighting columns
  - ring main units
  - chamber substations
  - busbar/termination boxes
  - links
  - termination boxes
  - control gear
- installing at least one (1) of the following:
  - resin filled boxes
  - compound filled boxes
  - polymeric tape
  - heat shrink

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - ‘slip-on’ moulds
  - pre-stretched polymeric
- using at least two (2) of the following:
  - compression joints
  - soldered joints
  - mechanical connectors
  - soldered lugs
  - compression lugs
- using all of the following:
  - voltage detecting instruments
  - insulation resistance testers
  - cable identification equipment
  - moisture testing equipment
  - phase rotation instruments
  - specialised live working equipment/tools
- use all of the following:
  - temporary earth bonding/bridging
  - insulating covers/matting
  - insulating tooling/gloves
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, Commonwealth, state/territory/local government legislation, supply authority regulations and/or enterprise requirements
- safety precautions specific to working on or near energised low voltage conductors encompassing:
  - safe working practices and procedures
  - identification of hazards, assessment and control of WHS/OHS risks
  - types, selection, maintenance and use of personal protective equipment (PPE)
- work on or near energised LV paper lead cables encompassing:
  - types and function of specialised tools
  - safe working practices when using specialised tools
  - methods of using specialised tools
  - safe procedures for work on panels and in cubicles on or near energised LV paper lead cables.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for jointing and maintaining energised LV underground paper insulated cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ25 Perform straight through high voltage paper insulated to polymeric transition joint

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to perform straight through high voltage (HV) paper insulated cable to polymeric transition joint cable in the electricity supply industry (ESI).

It includes the formation of a HV/low voltage (LV) transition joint(s) from paper insulated to polymeric cable on belted and screened cables, the determination of electrical values of belt papers and core insulation, protection of core and belt papers prior to setting, core setting, termination of belt papers, construction of bell mouth and moisture testing.

It also includes isolation of systems and circuits, the procedures of issuing/accepting electrical access permits, undertaking pre-commissioning and/or re-commissioning tests and updating system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104 Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Competency Field

Cable Jointing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to joint HV paper insulated cables to HV polymeric cables	**1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the formation of a paper insulated to polymeric transition joint are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 WHS/OHS and environmental hazards are identified, risks are assessed and control measures identified in

© Commonwealth of Australia, 2025 Powering Skills Organisation

		accordance with workplace procedures
	1.6	Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out jointing of HV paper insulated cable to HV polymeric cable	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents of accidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with workplace procedures
	2.4	Cables are prepared for jointing, terminating or maintaining in accordance with construction drawings, manufacturer instructions and workplace procedures
	2.5	Cables are jointed, terminated or maintained in accordance with construction drawings, manufacturer instructions and workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete jointing of HV paper insulated cable to HV polymeric cable	**3.1**	Completed work is checked against work plan, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in

© Commonwealth of Australia, 2025 Powering Skills Organisation

accordance with workplace procedures, as required

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures

3.4 Tools, equipment and surplus resources are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and HV/LV underground paper insulated/polymeric cables are returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ25A Perform straight through high voltage paper insulated to polymeric transition joint.

Assessment Requirements for UETTDRCJ25 Perform straight through high voltage paper insulated to polymeric transition joint

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing at least two (2) of the following:
  - high voltage (HV) polymeric to PLY
  - HV polymeric to paper/Al sheathed
  - low voltage (LV) transition
- completing at least two (2) of the following:
  - straight through joint
  - straight through trifurcating joint
  - parallel branch joint
  - parallel trifurcating transition
  - parallel transition
- using at least two (2) of the following:
  - polymeric tape
  - heat shrink
  - ‘slip-on’ moulds
  - pre-stretched polymeric resin
- using at least two (2) of the following cable conductor connection methods:
  - compression joints
  - soldered joints
  - mechanical connectors
  - welding conductors
  - insulating piercing connectors
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safety precautions specific to handling and jointing underground aluminium and lead cables, including provision of WHS/OHS information, such as material safety data sheets (MSDS)
- requirements for the use of enterprise manuals, system diagrams/plans and drawings
- types of tools and equipment
- techniques for the jointing of transition joint between cross-linked polyethylene (XLPE) and lead sheathed, paper insulated cables
- methods of testing cable after jointing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing straight through jointing of HV paper insulated to polymeric transition joints
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain de-energised low voltage (LV) underground polymeric cables in the electricity supply industry (ESI).

It includes jointing, terminating, repairing and replacing cables using a range of equipment, tools and materials. It also includes the isolation of systems and circuits, issuing/accepting electrical access permits, undertaking pre-commissioning and/or re-commissioning tests and updating system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Assessment Requirements for UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining the following:
  - low voltage (LV) polymeric cable
- completing at least two (2) of the following:
  - tee-off joints
  - straight through joints
  - parallel branch joints
  - parallel joints
- installing at least one (1) of the following:
  - transformers
  - LV switchboards
  - pillars/turrets
  - lighting columns
  - ring main units
  - chamber substations
- using terminating substation equipment on at least two (2) of the following:
  - busbar/termination boxes
  - links/fuses
  - disconnect boxes
  - termination boxes
  - control gear
  - underground/overhead terminations
  - circuit breakers
- using at least one (1) of the following terminating materials:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - resin filled boxes
  - compound filled boxes
  - polymeric tape
  - heat shrink
  - 'slip-on’ moulds
  - pre-stretched polymeric
- use at least one (1) of the following cable conductor connection methods:
  - compression lugs
  - welded connections
  - mechanical connectors
  - insulation piercing connectors
- using all of the following:
  - insulation resistance testers
  - voltage detectors
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of LV polymeric cables
- types of jointing tools
- techniques in the use of liquid petroleum gas (LPG) encompassing:
  - safety precautions
  - personal protective equipment (PPE)
  - general maintenance and repair
- techniques in jointing LV cross-linked polyethylene (XLPE) cables encompassing:
  - straight through joint
  - jointing different types of cable
  - service and street light cable joints
- techniques in terminating LV XLPE encompassing:
  - pole top terminations
  - substation terminations
  - distribution pillar/column/cubicle terminations
  - service and street light cable terminations
- techniques in repairing LV XLPE cable encompassing:
  - different types of damage
  - repairs to sheath
  - repairs to cores

© Commonwealth of Australia, 2025 Powering Skills Organisation

- methods of testing cable after jointing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining de-energised LV underground polymeric cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install and maintain de-energised HV underground polymeric cables	**1.1** Work plan, construction plans, drawings, workplace procedures and material lists are received, confirmed and communicated with relevant personnel
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of de-energised HV underground polymeric cables are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 WHS/OHS and environmental hazards are identified, WHS/OHS risks are assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are confirmed and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

2 Carry out the installation and maintenance of de-energised HV underground polymeric cables	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with workplace procedures
	2.4	De-energised HV underground polymeric cables are installed in accordance with the work schedule and workplace procedures
	2.5	Maintenance, including repair and/or replacement of de-energised HV underground polymeric cables is carried out in accordance with the work schedule and workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation and maintenance of de-energised HV underground polymeric cables	**3.1**	Completed work is checked against work plan, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and HV underground polymeric cables are returned to service in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining the following:
  - high voltage (HV) polymeric cables
- performing at least two (2) of the following cable joints:
  - tee-off joints
  - straight through joint
  - parallel branch joint
  - parallel joint
- completing cable terminations on distribution network equipment on at least one (1) of the following:
  - transformers
  - ring main units
  - chamber substations
- using at least one (1) of the following terminating substation equipment:
  - busbar/termination boxes
  - links/fuses
  - termination boxes
  - control gear
  - circuit breakers
- using at least two (2) of the following:
  - resin filled boxes
  - compound filled boxes
  - polymeric tape
  - heat shrink
  - ‘slip-on’ moulds

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - pre-stretched polymeric
- using all of the following:
    - insulation resistance testers
    - voltage detectors
- using all of the following:
    - cable identification devices
    - cable spiking devices
- using at least two (2) of the following:
    - mechanical connectors
    - compression connectors
    - lugs
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of HV underground polymeric cables
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings encompassing:
    - characteristics of different types of cables and components
    - purpose of stress control
- applications of various tools and equipment for HV jointing
- procedures for isolating HV underground cables encompassing:
    - method for proving safe to work
- earthing procedures
- techniques in jointing HV underground polymeric cable, encompassing:
    - short circuit cores and seal cable
    - straight through
    - trifurcating
- techniques in HV terminations encompassing:
    - pole top termination
    - substation/switchgear termination
    - ABC termination
    - telcon termination
- procedures for repairing HV underground cables encompassing:
    - location of faults
    - types of damage
    - techniques to repairs to sheath

© Commonwealth of Australia, 2025 Powering Skills Organisation

- techniques to repairs to core.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining de-energised HV underground polymeric cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ28 Joint and maintain energised low voltage underground polymeric cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to joint and maintain energised low voltage (LV) underground polymeric cables in the electricity supply industry (ESI).

It includes jointing and terminating energised cables using a range of specialised live working equipment, tools and devices, issuing and/or accepting electrical access permits and/or relevant working documentation, and undertaking authorised cable testing procedures.

It also includes the pre-commissioning and/or re-commissioning tests and updating system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply work health and safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Competency Field

Cable Jointing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to joint and maintain energised LV underground polymeric cables	**1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the jointing and maintenance of energised LV underground polymeric cables are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 WHS/OHS and environmental hazards are identified, risks are assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are confirmed and signed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Specialist equipment for live working is inspected and confirmed in working order as per requirements and established procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out jointing and maintenance of energised LV underground polymeric cables	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Jointing and maintenance of energised LV underground polymeric cables is completed safely, in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Cables are prepared for jointing, terminating or maintaining in accordance with construction drawings, manufacturer instructions and workplace procedures
	2.5	Authorised cable testing procedures and fault identification and location processes are implemented in accordance with requirements and workplace procedures
	2.6	Maintenance, including repair and/or replacement of energised LV underground polymeric cables is carried out in accordance with work schedule, requirements and workplace procedures
	2.7	Cables are jointed, terminated or maintained in accordance with construction drawings, manufacturer instructions and workplace procedures
	2.8	Unplanned events are responded to in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.9	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete jointing and maintenance of energised LV underground polymeric cables	**3.1**	Completed work is checked against work plan, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources are, where appropriate cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and LV underground polymeric cables are returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ28A Joint and maintain energised low voltage underground polymeric cables.

Assessment Requirements for UETTDRCJ28 Joint and maintain energised low voltage underground polymeric cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- jointing and maintaining all of the following:
  - low voltage (LV) polymeric cables
- performing at least two (2) of the following cable joints:
  - tee-off joints
  - straight through joints
  - parallel branch joints
  - parallel joints
- installing at least one (1) of the following:
  - transformers
  - LV switchboards
  - pillars/turrets
  - lighting columns
  - ring main units
  - chamber substations
- installing at least one (1) of the following:
  - busbar/termination boxes
  - links/fuses
  - termination boxes
  - control gear
- using at least one (1) of the following:
  - resin filled boxes
  - polymeric tape
  - heat shrink

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - ‘slip-on’ moulds
  - pre-stretched polymeric
- using at least two (2) of the following cable conductor connection methods:
  - compression joints/lugs
  - insulation piercing connectors
  - mechanical connectors
- using all of the following:
  - voltage detecting instruments
  - insulation resistance testers
  - cable identification equipment
  - phase rotation instruments
  - specialised live working equipment/tools
- using all of the following:
  - temporary earth bonding/bridging
  - insulating covers/matting
  - insulating tooling/gloves
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, Commonwealth, state/territory/local government legislation, supply authority regulations and/or enterprise requirements
- safety precautions specific to working on or near energised LV conductors encompassing:
  - safe working practices and procedures
  - identification of hazards, assessment and control of WHS/OHS risks
  - types, selection, maintenance and use of personal protective equipment (PPE)
- work on or near energised LV polymeric cables encompassing:
  - types and function of specialised tools
  - safe working practices when using specialised tools
  - methods of using specialised tools
  - safe procedures for work on panels and in cubicles on or near energised LV polymeric cables.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

© Commonwealth of Australia, 2025 Powering Skills Organisation

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for jointing and maintaining energised LV underground polymeric cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ29 Install gas and oil filled specialised underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation, jointing and termination of oil and gas filled specialised underground cables from 33 kV and higher. It includes the laying of the specialised underground ground cable, the preparation of the cables and phasing out jointing and terminating and the preparation of the cable jointing bay. It also encompasses the relevant safety procedures to ensure installation of the specialised cable is undertaken according to established enterprise requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ23 Install and maintain de-energised high voltage underground paper insulated cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to install oil and gas filled specialised underground cables	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.4 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.5 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks

© Commonwealth of Australia, 2025 Powering Skills Organisation

		assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
2 Carry out the installation of oil and gas filled specialised underground cables	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and

© Commonwealth of Australia, 2025 Powering Skills Organisation

practices are safely exercised according to requirements

2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures

2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures

2.6 Installation of oil and gas filled specialised underground cables is carried out in accordance with the work schedule and requirements and/or established procedures

2.7 Essential knowledge and associated skills are applied in the safe installation of oil and gas filled specialised underground cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements

2.8 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements

2.9 Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard

3 Complete the installation of oil and gas filled specialised underground cables

3.1 Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures

3.2 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures

3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures

3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

3.5 Relevant work permit(s) are signed off and underground cables are returned to service and advised to

© Commonwealth of Australia, 2025 Powering Skills Organisation

client/customer in accordance with requirements

3.6 Work completion records, reports, as installed/modified drawing(s) and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ29A Install gas and oil filled specialised underground cables.

Assessment Requirements for UETTDRCJ29 Install gas and oil filled specialised underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing the following pressurised 33 kV and above cable types:
  - oil filled cables
  - gas filled cables
- using all of the following equipment:
  - specialised cable installation equipment
  - winches
  - caterpillars
  - rollers
  - bond lines
  - drum jacks
  - cable end caps/nose pull assemblies
- performing at least two (2) of the following jointing methods:
  - straight through joint
  - straight stop joint
  - trifurcating joint
  - splitter joint
  - trifurcating/transition/stop
- performing at least one (1) of the following termination methods:
  - box termination
  - gas filled termination
  - compound filled termination
- performing at least two (2) of the following connectors:
  - welded connectors

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - mechanical connectors
  - compression connectors
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- oil and gas filled specialised underground cable principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the working with oil or gas filled specialised underground cables
  - types of oil or gas filled specialised underground cables - properties of paper insulation, oil and nitrogen gas, construction, reasons for gas and/or oil filled, characteristics and capabilities of the cable, and pressure/volume characteristics of oil and gas
  - precautions when handling
  - types and functions of tools and equipment used on oil or gas filled specialised underground cables
  - techniques when handling, storing and disposing of oil or gas filled specialised underground cables
- installation of oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the installation of oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE), including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - types, function and serviceability of tools and equipment used for the installation of oil or gas filled specialised underground cables
  - techniques in the safe installation of oil or gas filled specialised underground cables
  - techniques in the safe testing/inspection of the oil or gas filled specialised underground cables to ensure successful installation has occurred
- jointing and terminating oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to jointing and terminating oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE, including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work

© Commonwealth of Australia, 2025 Powering Skills Organisation

systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
    - types, function and serviceability of tools and equipment used for the jointing and terminating of oil or gas filled specialised underground cables
    - techniques in the safe jointing and terminating oil or gas filled specialised underground cables
    - techniques in the safe testing of the oil or gas filled specialised underground cables to ensure successful jointing and/or termination has occurred
- enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal well-being, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records and first aid/medical records
- enterprise-specific technical drawing and documents encompassing:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ30 Maintain gas and oil filled specialised underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the maintenance and repair of oil and gas filled specialised underground cables 33 kV and above. It includes testing, diagnosing faults, repairing and replacing the specialised cables. It also encompasses the processes for preliminary pressure control and leak repair, as well as working under induced voltages, cable identification and cable freezing.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

3 Complete the maintenance of oil and gas filled specialised underground cables	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off and underground cables are returned to service and advised to client/customer in accordance with requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.6 Works completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ30A Maintain gas and oil filled specialised underground cables.

Assessment Requirements for UETTDRCJ30 Maintain gas and oil filled specialised underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing all of the following pressurised 33 kV and above cable types:
  - oil filled cables
  - gas filled cables
- performing at least two (2) of the following jointing methods:
  - straight through joint
  - straight stop joint
  - trifurcating joint
  - splitter joint
  - trifurcating/transition/stop joint
- performing at least one (1) of the following termination methods:
  - air box terminator
  - gas filled terminator
  - compound filled terminator
- connecting cable conductors using at least two (2) of the following:
  - welded connectors
  - mechanical connectors
  - compression connectors
- using specialist testing devices including all of the following:
  - voltage detectors
  - cable identification equipment and spiking
  - insulation resistance testers
- using/applying all of the following equipment and materials:
  - leak repair and pressure control cable freezing equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - pressure control tapes
  - fittings and seals
- undertaking preparation for cable freezing, preliminary pressure control and leak repair activities
- using cable terminating materials including at least two of the following:
  - paper tape
  - polymeric tape
  - heat shrink
  - slip-on moulds
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the maintenance of oil or gas filled specialised underground cables
- safety precautions of working with oil or gas filled specialised underground cables encompassing:
  - safe operation procedures
  - WHS/OHS hazards and precautions
  - dangers of working in confined spaces
  - identification of WHS/OHS hazards, and assessing and controlling risks
  - types, selection, maintenance, storage and uses of personnel protective equipment (PPE), including intrinsically safe equipment for use in confined and hazardous environments
  - permit/authorisation to work systems and isolation procedures
  - safe working policies, procedures and practices when using/operating specialised equipment
  - emergency response and rescue, including first aid
- safe storage and disposal of oil or gas filled specialised underground cables and associated equipment and components; types, function and serviceability of tools and equipment used for the maintenance of oil or gas filled specialised underground cables; and techniques in the safe maintenance of oil or gas filled specialised underground cables
- techniques in the safe testing/inspection of the oil or gas filled specialised underground cables to ensure successful maintenance has occurred.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

© Commonwealth of Australia, 2025 Powering Skills Organisation

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ31 Install and maintain polymeric specialised underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation, maintenance and repair of polymeric specialised underground cables, including cross-linked polyethylene (XLPE) and ethylene propylene rubber (EPR) above 33 kV. It includes jointing and terminating, as well as working under induced voltages and undertaking the relevant tests required for jointing. It also encompasses the preparation of the cable jointing bay, the preparation of cables and phasing out, cable identification and spiking, and the treatment/handling of, but not jointing fibre optical cables.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ23 Install and maintain de-energised high voltage underground paper insulated cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRCJ99 Test and verify distribution cable jointing installations

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Competency Field

Cable Jointing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to install and maintain polymeric specialised underground cables	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.4 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures
	1.5	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
2 Carry out the installation and maintenance of polymeric specialised underground cables	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	Installation and\or maintenance of polymeric specialised underground cables is carried out in accordance with the work schedule and requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied in the safe installation and/or maintenance of polymeric specialised underground cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete the installation and maintenance of polymeric specialised underground cables	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off and underground cables are returned to service and advised to

© Commonwealth of Australia, 2025 Powering Skills Organisation

client/customer in accordance with requirements

3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ31A Install and maintain polymeric specialised underground cables.

Assessment Requirements for UETTDRCJ31 Install and maintain polymeric specialised underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining at least one (1) of the following specialised 33 kV and above cable types:
  - cross-linked polyethylene (XLPE) cables
  - ethylene propylene rubber (EPR) cables
- undertaking jointing and terminating including all of the following:
  - straight through joints
  - terminations
- using at least three (3) of the following specialised cable installation equipment:
  - winches
  - caterpillars
  - rollers
  - bond lines
  - nose pull devices
  - drum jacks
- connecting cable conductors using at least two (2) of the following:
  - compression lugs
  - welded connections
  - mechanical connectors
- using cable terminating materials including at least two (2) of the following:
  - compound and resin filled boxes
  - air boxes
  - gas filled boxes
  - polymeric tape
  - polymeric heat shrink

© Commonwealth of Australia, 2025 Powering Skills Organisation

- slip-on moulds
- pre-stretched polymeric materials

- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- polymeric specialised underground cables principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the working with polymeric specialised underground cables
  - types of polymeric specialised underground cables – construction, characteristics and capabilities of the polymeric specialised cable, pressure/volume characteristics of oil and gas, and precautions when handling
  - types and functions of tools and equipment used on polymeric specialised underground cables
  - techniques when handling polymeric specialised underground cables
- installation and maintenance of polymeric specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of polymeric specialised underground cables
  - safety precautions of working with polymeric specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE); authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - types, function and serviceability of tools and equipment used for the installation of polymeric specialised underground cables
  - techniques in the safe installation of polymeric specialised underground cables
  - techniques in the safe maintenance of polymeric specialised underground cables
  - techniques in the safe testing/inspection of the polymeric specialised underground cables to ensure successful installation and/or maintenance has occurred
- jointing and termination of polymeric specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the working with polymeric specialised underground cables
  - safety precautions of working with polymeric specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE; authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue including,

© Commonwealth of Australia, 2025 Powering Skills Organisation

first aid
    - types, function and serviceability of tools and equipment used for the jointing and terminating of polymeric specialised underground cables
    - techniques in the safe jointing and terminating polymeric specialised underground cables
    - techniques in the safe testing of the polymeric specialised underground cables to ensure successful jointing and/or termination has occurred
- enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - firefighting procedures, fatigue management, training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records = audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents encompassing:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ32 Install and maintain gas and oil pressure systems for specialised underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation, maintenance and repair of oil and gas pressure systems for specialised underground cables. It includes the undertaking of pressure control activities, the installation of gauges, oil tanks and gas cubicles. It also includes knowledge of oil route profiles as well as the operation of pressure equipment for jointing works, and the repairing and replacing of pressure systems. It also encompasses the procedures associated with performing accessory impregnation, oil flow testing, the processes for oil degasification and performing leak location of pressure systems.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ23 Install and maintain de-energised high voltage underground paper insulated cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDRCJ99 Test and verify distribution cable jointing installations

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Competency Field

Cable Jointing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to install and maintain oil and gas pressure systems for specialised underground cables	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained, analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
2 Carry out the installation and maintenance of oil and gas pressure systems for specialised underground cables	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, rescue and other related work procedures are performed according to requirements and/or established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.3	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	Installation and/or maintenance of oil and gas pressure systems for specialised underground cables are carried out in accordance with the work schedule and requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied in the safe installation and/or maintenance of oil and gas pressure systems for specialised underground cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete the installation and maintenance of oil and gas pressure systems for specialised underground cables	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and

Assessment Requirements for UETTDRCJ32 Install and maintain gas and oil pressure systems for specialised underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining oil and gas filled pressure systems
- using all of the following oil and gas processing and control equipment:
  - gas analyser/detector
  - cable freezing equipment
  - accessory impregnation equipment
  - oil degasification plant
  - manometers
  - flow boards
  - vacuum pumps
  - site bottles
  - gas cylinders
  - liquid nitrogen cylinders
  - pressure/vacuum meters
  - oil evacuation pumps
  - oil and gas piping equipment
  - oil sampling equipment
- using all of the following gas processing and control equipment:
  - gas control cubicles
  - oil control cubicles
  - oil degasification units
  - oil pressure tanks
- undertaking jointing and terminating of oil or gas filled specialised underground cables
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the working with oil or gas filled specialised underground cables
  - types of oil or gas filled specialised underground cables - properties of paper insulation, oil and nitrogen gas, construction, reasons for gas and/or oil filled, characteristics and capabilities of the cable, pressure/volume characteristics of oil and gas, and precautions when handling
  - types and functions of tools and equipment used on oil or gas filled specialised underground cables
  - techniques when handling, storing and disposing of oil or gas filled specialised underground cables
- installation of oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the installation of oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE),including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - types, function and serviceability of tools and equipment used for the installation of oil or gas filled specialised underground cables
  - techniques in the safe installation of oil or gas filled specialised underground cables
  - techniques in the safe testing/inspection of the oil or gas filled specialised underground cables to ensure successful installation has occurred
- jointing and termination of oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to working with oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE, including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - types, function and serviceability of tools and equipment used for the jointing and terminating of oil or gas filled specialised underground cables

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in the safe jointing and terminating oil or gas filled specialised underground cables
  - techniques in the safe testing of the oil or gas filled specialised underground cables to ensure successful jointing and/or termination has occurred
- maintenance of oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the maintenance of oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE, including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - safe storage and disposal of oil or gas filled specialised underground cables and associated equipment and components;
  - types, function and serviceability of tools and equipment used for the maintenance of oil or gas filled specialised underground cables
  - techniques in the safe maintenance of oil or gas filled specialised underground cables
  - techniques in the safe testing/inspection of the oil or gas filled specialised underground cables to ensure successful maintenance has occurred
- oil and gas pressurised systems for specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of oil and gas pressurised systems
  - safe storage and disposal of oil or gas pressurised equipment and associated components
  - requirements for the use of manuals, system diagrams/plans, drawings, charts and layouts
  - characteristics, application and care of hand and specialised tools
  - techniques in determining route profiles and access locations
  - pressure system characteristics for oil filled and gas filled cables
  - techniques in the safe installation of oil and gas pressurised systems
  - techniques in the safe maintenance of oil and gas pressurised systems
  - techniques in the safe use of tools and equipment in the process of installation and maintenance of oil and gas pressurised systems - gas analyser/detector, manometers, flow boards, cable freezing equipment, accessory impregnation equipment, oil degasification plant, manometers, flow boards, vacuum pumps, site bottles, gas cylinders, pressure/vacuum meters, oil evacuation pumps, RGP equipment, oil sampling equipment, gas control cubicles, oil control cubicles, cable joints and terminations, oil degasification units and oil pressure tanks
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS): registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ33 Install and maintain network infrastructure LV underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation and maintenance of de-energised low voltage (LV) underground cables and covers the laying of cables as well as the jointing, terminating, repair and replacement of cables. It also includes direct laying of cables in trenches, on racks, in troughs and/or in conduit or ducts; and the isolation of systems and circuits, the procedure of issuing/accepting electrical access permits, the undertaking of pre-commissioning and/or recommissioning tests and the updating of system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS46 Install and maintain ESI network infrastructure electrical equipment

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Competency Field

Cable Jointing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for the laying, installation and maintenance of underground cables	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		identified for all worksites
	1.3	Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the laying, installing and maintenance of LV underground cables are obtained and confirmed for the purposes of the work to be performed and communicated
	1.4	Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
	1.6	Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.8	Relevant personnel at worksite are confirmed current in first aid and other related work procedures according to requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work where necessary
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
	1.12	Road signs, barriers and warning devices are positioned in accordance with requirements
2 Carry out the laying, installation and maintenance of LV	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in

© Commonwealth of Australia, 2025 Powering Skills Organisation

underground cables		accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working in confined spaces and working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures
	2.4	Essential knowledge and associated skills are applied for the safe installation and maintenance of LV underground cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5	Electrical cables are laid in accordance with the work schedule and requirements/established procedures
	2.6	De-energised LV underground cables are installed according to the work schedule and requirements/established procedures
	2.7	Maintenance, including repair and/or replacement of de-energised LV underground cables, is carried out in accordance with the work schedule and requirements/established procedures
	2.8	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.9	Unplanned events in the laying, installing and carrying out the maintenance of LV underground cables are undertaken within the scope of established procedures
	2.10	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.11	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the laying, installation and maintenance of LV underground cables	**3.1**	Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures

3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

3.5 Relevant work permits are signed off and LV underground cables are returned to service in accordance with requirements

3.6 Works completion records, reports, drawings and/or documentation and information are finalised and processed, and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ33A Install and maintain network infrastructure LV underground cables.

Assessment Requirements for UETTDRCJ33 Install and maintain network infrastructure LV underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- laying at least one (1) of the following low voltage (LV) cable types:
  - LV polymeric
  - LV paper insulated
- laying LV cables using at least one (1) of the following installation types:
  - direct lay
  - on racks
  - in conduits
- laying LV cables using at least one (1) of the following cable pulling methods:
  - stocking pulling
  - bond pulling
  - armour pulling
  - nose pull attachments
- sealing LV cables using at least two (2) of the following cable sealing methods:
  - heat shrinkable
  - pre-stretched materials
  - tin/lead wiping
  - pre-moulded components
- cutting LV cables using at least one (1) of the following cable cutting methods:
  - hydraulic cutters
  - electric reciprocating
  - motorised
  - hand tools
- laying LV cables using at least four (4) of the following supporting plant and equipment:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - drum jacks
  - winches
  - spindles
  - capstans
  - bollards
  - cable trailers
  - rollers
  - lubricants
  - ropes
  - bell mouths
  - draw wires/rods
- joining LV cables using at least two (2) of the following jointing methods:
  - tee-off joints
  - straight through joints
  - parallel branch joints
  - parallel joints
- terminating LV cables in/on at least two (2) of the following locations:
  - transformers
  - LV switchboards
  - pillars/turrets
  - lighting columns
  - ring main units
  - chamber substations
- terminating LV cables using at least two (2) of the following types of equipment:
  - busbar/termination boxes
  - links/fuses
  - disconnect boxes
  - termination boxes
  - control gear
  - underground/overhead terminations
  - circuit breakers
- jointing and terminating LV cables using at least one (1) of the following material types:
  - resin filled boxes
  - compound filled boxes
  - polymeric tape
  - heat shrink
  - 'slip-on’ moulds
  - pre-stretched polymeric
- terminating LV cables using at least one (1) of the following connectors:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - compression lugs
  - welded connections
  - mechanical connectors
  - insulation piercing connectors
- testing LV cables using all of the following testing and recording equipment:
  - insulation resistance testers
  - voltage detectors
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the HV equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of high voltage (HV) equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers; operation under load/no-load conditions; types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different

© Commonwealth of Australia, 2025 Powering Skills Organisation

types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors

  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedure used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires, general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- procedures in providing store support encompassing:
  - classification and identification of equipment, components and tools
  - procedures for purchasing/ordering items, removing/dispatching items, stocktaking, security and bookkeeping/record keeping
  - material handling - warehouse/depot storage techniques, handling equipment, pallet lift trucks and forklifts
  - cable drum handling equipment
  - safety procedures - storage and care of safety equipment; handling hazardous materials; storage of hazardous substances and dangerous goods; depot safety procedures; manufacturer and supplier information, including material safety data sheets (MSDS)
- installation of underground cable encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safety precautions specific to the installation of underground cable - excavation and trench safety regulations, gas detection procedures, working in confined spaces, personal protective equipment (PPE), hazards for the use of liquid petroleum gas (LPG) equipment for jointing of underground cable, gas bottle testing procedures, permit to work systems and isolation procedures
  - trench excavation and reinstatement procedures
  - installation of underground cable procedures - types of tools and equipment, methods of installing conduits, methods of installing cables and sealing cable ends (direct buried,

© Commonwealth of Australia, 2025 Powering Skills Organisation

ducts cleated and racked)
    - procedures for the safe use of LPG equipment for cable jointing
- LV polymeric cable jointing principles encompassing:
    - techniques in jointing LV cross-linked polyethylene (XLPE) cables - straight through joint, jointing different types of cable and service and street light cable joints
    - techniques in terminating LV XLPE - pole top terminations, substation terminations, distribution pillar /column/cubicle terminations and service and street light cable terminations
    - techniques in repairing LV XLPE cable - different types of damage, repairs to sheath and repairs to cores
    - methods of testing cable after jointing
- jointing and termination of LV polymeric cable encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of LV polymeric cables
    - types of cables - single core, multi-core and XLPE insulation
    - methods of cable handling - direct laid cables, duct laid cables, solid laid cables and cables supported in cleats or hangers
    - corrosion protection
    - minimum bending radius of cables
    - methods of cable sealing - shorting of cables cores and core of un-terminated cables
    - methods of protection from corrosion
    - polymeric sheathed cables sealing with mastic lined
    - heat shrink caps buried sealed ends
    - types of jointing tools - general hand tools and compression tools
    - techniques in the use of LPG - safety precautions, PPE, general maintenance and repair
    - safety precautions when cable jointing -working in confined spaces; permit to work systems and isolation procedures; and emergency rescue/response, including first aid
- underground cables construction and types encompassing:
    - safety precautions specific to handling underground cables
    - requirements for the use of enterprise manuals, system diagrams/plans and drawings
    - types and applications of underground cables
    - construction types and structures of underground cables
    - characteristics of different types of underground cables
    - ratings.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

© Commonwealth of Australia, 2025 Powering Skills Organisation

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ34 Install and maintain network infrastructure HV underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation and maintenance of de-energised high voltage (HV) underground cables and covers the laying of cables as well as the jointing, terminating, repair and replacement of cables. It includes direct laying of cables in trenches, on racks, in troughs and/or in conduit or ducts, and the isolation of systems and circuits, the procedure of issuing/accepting electrical access permits, the undertaking of pre-commissioning and/or recommissioning tests and the updating of system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare the laying, installation and maintenance of de-energised HV underground cables	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection

© Commonwealth of Australia, 2025 Powering Skills Organisation

1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the laying, installing and maintenance of HV underground cables are obtained and confirmed for the purposes of the work to be performed and communicated to relevant personnel

1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures

1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures

1.6 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures

1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order

1.8 Relevant personnel at worksite are confirmed current in first aid and other related work procedures according to requirements

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work, where necessary

1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures

1.12 Road signs, barriers and warning devices are positioned in accordance with requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

2 Carry out the laying, installation and maintenance of HV underground cables	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures
	2.4	Essential knowledge and associated skills are applied in the safe installation and maintenance of HV underground polymeric cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5	Electrical cables are laid in accordance with the work schedule and requirements/established procedures
	2.6	De-energised HV underground cables are installed according to the work schedule and requirements/established procedures
	2.7	Maintenance, including repair and/or replacement of de-energised HV underground cables, is carried out in accordance with the work schedule and requirements/established procedures
	2.8	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.9	Unplanned events in the installation and maintenance of HV underground cables are undertaken within the scope of established procedures
	2.10	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.11	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the laying,	**3.1**	Work undertaken is checked against work schedule for

© Commonwealth of Australia, 2025 Powering Skills Organisation

installation and maintenance of HV underground cables		conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off and HV underground cables are returned to service in accordance with requirements
	3.6	Works completion records, reports, as installed/modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ34A Install and maintain network infrastructure HV underground cables.

Assessment Requirements for UETTDRCJ34 Install and maintain network infrastructure HV underground cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- laying at least one (1) of the following cable types:
  - high voltage (HV) polymeric
  - HV paper insulated
- laying HV cables using at least one (1) of the following installation methods:
  - direct lay
  - on racks
  - in conduits
- laying HV cables using at least one (1) cable pulling method of the following:
  - stocking pulling
  - bond pulling
  - armour pulling
  - nose pull attachments
- sealing HV cables using at least two (2) of the following cable sealing methods:
  - heat shrinkable
  - pre-stretched materials
  - tin/lead wiping
  - pre-moulded components
- cutting HV cables using at least one (1) of the following cable cutting methods:
  - hydraulic cutters
  - electric reciprocating
  - motorised
  - hand tools
- laying HV cables using at least four (4) of the following supporting plant and equipment:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - drum jacks
    - winches
    - spindles
    - capstans
    - bollards
    - cable trailers
    - rollers
    - lubricants
    - ropes
    - bell mouths
    - draw wires/rods
- joining HV cables using at least two (2) of the following jointing methods:
    - tee-off joints
    - straight through joint
    - parallel branch joint
    - parallel joint
- incorporating at least one (1) of the following:
    - transformers
    - ring main units
    - chamber substations
- incorporating at least one (1) of the following:
    - busbar/termination boxes
    - links/Fuses
    - termination boxes
    - control gear
    - circuit breakers
- jointing and terminating HV cables using at least two (2) of the following material types:
    - resin filled boxes
    - compound filled boxes
    - polymeric tape
    - heat shrink
    - ‘slip-on’ moulds
    - pre-stretched polymeric
- testing HV cables using all the following testing and recording equipment:
    - insulation resistance testers
    - voltage detectors
- incorporating all the following:
    - cable identification devices
    - cable spiking devices

© Commonwealth of Australia, 2025 Powering Skills Organisation

- incorporating at least two (2) of the following:
  - mechanical connectors
  - compression connectors
  - lugs
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of HV underground polymeric cables
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings encompassing:
  - characteristics of different types of cables and components
  - purpose of stress control
  - applications of various tools and equipment for HV jointing
- procedure for isolating HV underground cables encompassing:
  - method for proving safe to work
  - earthing procedures
- techniques in jointing HV underground polymeric cable encompassing:
  - short circuit cores and seal cable
  - straight through
  - trifurcating
- techniques in HV terminations encompassing:
  - pole top termination
  - substation/switchgear termination
  - ABC termination
  - telcon termination
- procedures for repairing HV underground cables encompassing:
  - location of faults
  - types of damage
  - techniques to repairs to sheath
  - techniques to repairs to core.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

© Commonwealth of Australia, 2025 Powering Skills Organisation

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRCJ99 Test and verify distribution cable jointing installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to test and verify distribution cable jointing installations in the electricity supply industry (ESI).

It includes the installation and maintenance of de-energised high voltage (HV) and low voltage (LV) underground polymeric cables including underground services, network infrastructure and jointing, terminating and repairing cables. It also includes working safely, conducting visual inspections and mandatory and functional test procedures, identifying non-compliance defects and completing mandatory reporting requirements

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Competency Field

Cable Jointing

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to test and verify underground distribution cable installation	**1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation of electrical equipment (network infrastructure) are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 WHS/OHS and environmental hazards are identified, WHS/OHS risks are assessed and control measures identified in accordance with workplace procedures following consultation with relevant personnel
	1.6 Relevant work permits are confirmed and signed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out jointing LV and HV underground polymeric cables and LV services	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Systems and circuits are isolated as required, proved safe to work on in accordance with workplace procedures
	2.4	Inspection, testing and verification of LV and HV underground polymeric cables is completed safely, in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.5	LV and HV underground polymeric cables and associated equipment are installed and terminated/connected in accordance with work schedule, requirements and workplace procedures
	2.6	Maintenance, including repair and/or replacement of LV and HV underground polymeric cables is carried out in accordance with work schedule, requirements and workplace procedures
	2.7	Underground cable installations and associated hardware are visually inspected and confirmed as positioned, secured and terminated/connected in accordance with requirements and workplace procedures
	2.8	Tests and/or measurements to verify cable jointing installations are determined and conducted in accordance with WHS/OHS requirements and workplace safety procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.9	Unplanned events are responded to in accordance with workplace procedures
	2.10	Quality checks of work are undertaken in accordance with instructions and workplace procedures
3 Complete jointing LV and HV underground polymeric cables and LV services	**3.1**	Completed work is checked against work plan, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources are, where appropriate, are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and cables are returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ99A Test and verify distribution cable jointing installations.

Assessment Requirements for UETTDRCJ99 Test and verify distribution cable jointing installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- testing and verifying all of the following:
  - low voltage (LV) polymeric cables
  - high voltage (HV) polymeric cables
- using at least two (2) of the following:
  - tee-off joints
  - straight through joints
  - parallel branch joints
  - parallel joints
  - trifurcating joint
- using at least two (2) of the following:
  - pillars (single phase)
  - pillars (three phase)
  - lighting pillar standards
  - LV switchboards
  - substations
  - underground/overhead terminations
- using at least one (1) of the following:
  - transformers
  - switchgear
  - ring main units
- using at least one (1) of the following cable sealing methods:
  - resin filled boxes
  - compound filled boxes

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - polymeric tape
  - heat shrink
  - 'slip-on' moulds
- using at least one (1) of the following cable conductor connection methods:
  - compression lugs
  - mechanical connectors
  - insulation piercing connectors
  - lugs
- performing at least four (4) of the following cable tests:
  - polarity test*
  - phase rotation test
  - continuity test
  - voltage test
  - insulation resistance test
  - (*must do)
- using all of the following:
  - cable ID devices
  - cable spiking devices.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislated regulations encompassing:
  - legislation and regulations that require distribution cable jointing installations and equipment to be tested to ensure they are safe
  - the person/bodies responsible for the various aspects of ensuring distribution cable jointing installations are safe
  - results of tests that show a distribution cable jointing installation is safe for connection to the supply
  - results of periodic inspection and tests that show wiring and equipment is safe to use
  - results of periodic inspection and tests that show the distribution cable jointing installations electrical equipment is safe to use
- testing installations encompassing:
  - distribution cable jointing system phasing, phase rotation and polarity is correct and conforms to network construction standards
  - installation resistance is adequate
  - cable identification
- documentation encompassing:
  - results of tests conducted on a distribution cable jointing installation in accordance with work package requirements and to ensure the distribution cable jointing installation is

© Commonwealth of Australia, 2025 Powering Skills Organisation

safe
    - documents of periodic inspection and testing of distribution cable jointing installation and equipment in accordance with requirements
- techniques in the installation and maintenance of network infrastructure
- techniques in jointing, terminating and maintenance encompassing:
    - HV polymeric cables
    - LV polymeric cables
    - underground services.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for testing and verifying distribution cable jointing installations
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDP11 Inspect overhead poles-structures and electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to inspect overhead poles-structures and electrical apparatus in the electricity supply industry (ESI).

It includes inspection of overhead conductors and/or cables, underground and overhead transition points, pole-mounted transformers, switchgear, hardware and/or earthing systems. It also includes the completion of inspection reports and other relevant documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

Assessment Requirements for UETTDRDP11 Inspect overhead poles-structures and electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- inspecting any three (3) of the following items on each occasion:
  - poles and structures
  - overhead conductors/cables
  - underground/overhead transition points
  - electrical equipment
  - hardware
  - earthing systems
- undertaking inspections using at least one (1) of the following:
  - ground
  - vehicle
  - helicopter
  - fixed wing
- undertaking inspections using at least two (2) of the following inspection methods:
  - visual*
  - infra-red camera
  - X-ray
  - camera
  - (*must Do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- standards, codes, legislation, supply authority regulations and/or enterprise requirements
- characteristics of wood used for structures within the electrical distribution system encompassing:
  - relationship between timber and water
  - faults that occur that influence the integrity of the structure
  - effects of fungal activity
  - effects of termite and borer activity
  - effects of dry rot
- deterioration of assets encompassing:
  - relationship between steel, concrete and wood
  - deterioration in steel and concrete
  - inspection procedures for deterioration
- overhead line inspection procedures of electrical distribution structures encompassing:
  - methods and requirements for overhead line inspection on electrical distribution structures
  - clearances for overhead conductors, cables and structures
  - use of specific equipment during inspection
  - methods of recording data
- underground cable inspection procedures in the electrical distribution system encompassing:
  - state/territory and industry policies and regulations
  - methods and requirements for inspection of underground cable terminations.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for inspecting overhead poles-structures and electrical apparatus
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDP12 Maintain overhead energised low voltage conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain overhead energised low voltage (LV) conductors and cables in the electricity supply industry (ESI).

It includes verification of site conditions and potential hazards, selecting appropriate and authorised work methods using specialised equipment and the diagnosis of faults. It also includes undertaking electrical tests and updating system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for maintenance of overhead energised LV conductors and cables	**1.1** Work plan, construction plans, drawings, workplace procedures and material lists are received, confirmed and communicated with relevant personnel
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the maintenance of overhead energised LV conductors and cables are obtained and confirmed for the purposes of the work to be performed
	1.4 Physical loads and calculations are confirmed in accordance with workplace procedures
	1.5 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.6 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.7 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.8 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.9	Specialist equipment for live work is inspected and confirmed in working order in accordance with workplace procedures
	1.10	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.11	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Conduct maintenance of overhead energised LV conductors and cables	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Overhead energised LV conductors and cables are maintained in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Maintenance, repair and/or replacement of poles and/or structures is performed in accordance with job schedule, work requirements and workplace procedures
	2.5	Unplanned events in the maintenance of overhead energised LV conductors and cab are responded to in accordance with workplace procedures
	2.6	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete maintenance of overhead energised LV conductors and cables	**3.1**	Completed work is checked against work plan, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources are, where appropriate, cleaned, checked and returned to storage in

Assessment Requirements for UETTDRDP12 Maintain overhead energised low voltage conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining energised overhead low voltage (LV) conductors and cables on at least two (2) of the following:
  - copper
  - aluminium
  - aluminium/steel reinforced
  - steel
  - pilot
- performing work on energised overhead LV conductors and cables from at least two (2) of the following:
  - elevated work platform (EWP)
  - ladder
  - portable platform
- using specialist live working equipment, including all of the following:
  - insulating mats/sleeves
  - temporary bridging device
  - insulating gloves
  - insulated cable tensioning devices
  - ladder/pole shrouds
  - equipotential bonding
- using specialist testing equipment, including at least three (3) of the following:
  - voltage detector*
  - clamp-on ammeter
  - polarity tester
  - insulation resistance tester

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - phase sequence indicator
  - recording meters
  - (*must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
- safety precautions specific to working on or near energised LV conductors, including:
  - safe working practices and procedures
  - identification of hazards, assessment and control of WHS/OHS risks
  - types, selection, maintenance and use of personal protective equipment (PPE)
- work on or near energised LV conductors, including:
  - types and function of specialised tools
  - safe working practices when using specialised tools
  - methods of using specialised tools.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for maintaining overhead energised LV conductors and cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals

UETTDRDP13 Maintain energised HV distribution overhead electrical apparatus (stick)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain energised high voltage (HV) distribution overhead electrical apparatus using the stick method in the electricity supply industry (ESI).

It includes maintaining electrical apparatus using HV live line sticks, verifying site conditions and potential hazards, confirming and calculating physical loads and selecting appropriate authorised work methods.

It also includes preparing and cleaning specialist material and tools in accordance with authorised technical instructions; undertaking legislative and safe working practices; rendering inoperative automatic re-closing devices, including its restoration in accordance with the work plan; and issuing/accepting electrical access permits and/or relevant working documents.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Pathway 1

Qualified and authorised Distribution Lineworker

Pathway 2

BSBLDR403 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRDP11 Inspect overhead poles-structures and electrical apparatus

UETTDRDP12 Maintain overhead energised low voltage conductors and cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS65 Contribute to coordinated HV live working

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain energised HV distribution overhead electrical apparatus (stick)	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.3 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.4 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and monitored in accordance with workplace procedures
	1.5	Relevant work permits are obtained and signed in accordance with workplace procedures
	1.6	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.10	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out maintenance of energised HV distribution overhead electrical apparatus (stick)	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Emergency response procedures are performed in accordance with job requirements and/or workplace procedures
	2.3	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Auto-reclose devices and associated circuits are rendered inoperative and necessary work documentation obtained in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.6	Remedial actions are taken to overcome shortfalls encountered in the work schedule in accordance with job requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.7	Maintenance of energised HV overhead electrical apparatus is performed in accordance with works schedules, job requirements and workplace procedures
	2.8	Energised HV overhead electrical apparatus are safely installed and maintained in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.9	Solutions to unplanned events/problems are identified and actioned in accordance with workplace procedures and approval of authorised personnel
	2.10	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete maintenance of energised HV distribution overhead electrical apparatus (stick)	**3.1**	Completed work is checked against works schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and energised HV apparatus is returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDP13A Maintain energised HV distribution overhead electrical apparatus (stick).

Assessment Requirements for UETTDRDP13 Maintain energised HV distribution overhead electrical apparatus (stick)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all of the following:
  - installing/replacing structures
  - installing/replacing hardware (e.g. cross-arm and insulator)
  - repairing conductors
  - installing/replacing/connecting bridge/bonding connections
- completing at least two (2) of the following:
  - installing/replacing pole mounted reclosers
  - installing/repairing/replacing air brake switches
  - installing/repairing/replacing high voltage (HV) links/disconnects
  - installing/removing temporary HV links/HV fuses
  - washing insulators
  - installing/repairing/replacing expulsion drop-out fuses
  - installing/replacing lightning arrestors
  - installing/replacing vibration dampers or aircraft warning markers
- using at least two (2) of the following access equipment:
  - elevated work platform (EWP)
  - ladder
  - pole platform
  - insulated structure
- using at least one (1) of the following testing and recording devices:
  - voltage detector
  - leakage detector
  - insulation test equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation and regulations, including:
  - legislation, standards and codes
  - supply authority regulations
  - industry guidelines and enterprise requirements
- safety precautions for HV live work up to and including 132 kV (poles) utilising live HV stick method, including:
  - minimum approach distances
  - WHS/OHS hazard and precautions
  - assessing and controlling risks
  - effects of excessive conductor temperature on insulating equipment
  - personnel protective equipment (PPE)
  - integrity of insulation
  - emergency response, first aid and rescue
- policies and procedures for live HV stick method up to and including 132 kV, including:
  - policies, procedures and practices
  - definition of terms
  - responsibilities of personnel
  - types of structures
  - types of equipment and compliance
- stick techniques up to and including 132 kV, including:
  - HV insulators
  - HV crossarms
  - HV bridge connections
  - installation and maintenance of equipment
  - temporary midspan switching devices
  - erection and replacement of poles
  - replacement of conductors and cables
  - HV armour rods and line guards
  - conversion intermediate to strain construction
  - switching devices
- safety precautions for plant, equipment and tools, including:
  - safe working clearances
  - identification of WHS/OHS hazards
  - assessing and controlling risks and hazards

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - PPE
- identification and serviceability of plant, equipment and tools, including:
    - identification of plant, equipment and tools
    - serviceability of plant equipment and tools
- operational use of plant, equipment and tools, including:
    - conductor supports
    - selecting conductor support method
    - calculation of loads
    - effects of secondary loading
    - effects of resultant forces
    - conductor support rigging procedures
- electrical and electrostatic principles, including:
    - relationship with current, voltage and resistance as related to distribution lines
    - phase voltage and respective line voltages
    - production of an electric field
- HV insulation including:
    - construction of insulators
    - checking integrity of insulation prior to work commencement
    - effects of electrical fields on insulators
    - number of disc insulators needed
    - performance of a failed insulator on the line and system
    - minimum number of discs per string
    - detecting failed insulators
- electrostatic induction on the human body, including effects
- switching surges and magnetic fields, including:
    - lightning and switching surges
    - magnetic fields
- HV switching fundamentals, including:
    - manuals system diagrams/plans and drawings
    - HV live work access authority/permit system
    - fault current protection devices
    - disabling auto-reclose function
    - network interconnectors
    - test instruments
    - types of switchgear
    - HV electrical faults
    - types
    - causes
    - effects
- HV single wire earth return (SWER) system, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - components
  - circuit arrangement
  - operation principles
  - faulty SWER earth system
- safety observer principles, including:
  - duties
  - techniques
  - minimum approach distances (MAD)
  - minimum safe working distance from vegetation
- teamwork HV live work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDP14 Maintain energised HV distribution overhead electrical apparatus (glove)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain energised high voltage (HV) overhead electrical apparatus (glove) in the electricity supply industry (ESI).

It includes maintaining electrical apparatus using HV live line glove and barrier methods and verifying site conditions and potential hazards, confirming and calculating physical loads and the selection of appropriate and authorised work methods. It also includes preparing and cleaning specialist materials and tools in accordance with authorised technical instructions; undertaking legislative and safe working practices; rendering inoperative automatic re-closing devices, including restoration in accordance with work plans; and issuing/accepting electrical access permits and/or relevant working documents.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Pathway 1

Qualified and authorised Distribution Lineworker

Pathway 2

BSBLDR403 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRDP11 Inspect overhead poles-structures and electrical apparatus

UETTDRDP12 Maintain overhead energised low voltage conductors and cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS65 Contribute to coordinated HV live working

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to maintain energised HV distribution overhead electrical apparatus (glove and barrier)	**1.1** Works schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
	1.2 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.3 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4 Job requirements and workplace procedures are identified and communicated with relevant personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS)risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.6	Relevant work permits are obtained and signed in accordance with workplace procedures
	1.7	Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Clients/customers are provided with solutions within scope of specifications, costings and job requirements
	1.9	Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required
	1.10	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.11	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.12	Traffic management is planned and implemented in accordance with workplace procedures
2 Carry out maintenance of energised HV distribution overhead electrical apparatus (glove and barrier)	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Emergency response procedures are performed in accordance with job requirements and/or workplace procedures
	2.3	Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Auto-reclose devices and associated circuits are rendered inoperative and necessary work documentation obtained in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised and

Assessment Requirements for UETTDRDP14 Maintain energised HV distribution overhead electrical apparatus (glove)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing all of the following:
  - installing/replacing structures
  - installing/replacing hardware (e.g. cross-arm and insulator)
  - repairing conductors
  - installing/replacing/connecting bridge/bonding connections
- performing at least two (2) of the following:
  - installing/replacing pole mounted reclosers
  - installing/repairing/replacing air brake switches
  - installing/repairing/replacing high voltage (HV) links/disconnects
  - installing/removing temporary HV links/HV fuses
  - installing/repairing/replacing expulsion drop-out fuses
  - installing/replacing lightning arrestors
  - installing/replacing vibration dampers or aircraft warning markers
- performing work from at least two (2) of the following:
  - elevated work platform (EWP)
  - ladder
  - pole platform
  - insulated structured
- using at least one (1) of the following:
  - voltage detector
  - leakage detector
  - insulation test equipment
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation and regulations, including:
  - legislation, standards and codes
  - supply authority regulations
  - industry guidelines and enterprise requirements
- safety precautions for HV live work associated to glove and barrier, including:
  - minimum approach distances
  - WHS/OHS hazard and precautions
  - assessing and controlling risks
  - personnel protective equipment (PPE)
  - HV live work access
  - auto-reclose function
  - fault current protective devices
  - integrity of insulation
  - specialised equipment and tools
  - inspection of equipment and tools
  - use of specialised equipment and tools
  - work team communication
  - use of safety observers
  - emergency response, first aid and rescue
- policies and procedures for glove and barrier work up to and including 33 kV, including:
  - policies, procedures and practices
  - definition of terms
  - responsibilities of personnel
  - types of structures
  - types of equipment and compliance
- glove and barrier techniques up to and including 33 kV, including:
  - HV insulators
  - HV cross-arms
  - HV bridge connections
  - installation and maintenance of equipment
  - temporary midspan switching devices
  - erection and replacement of poles
  - replacement of conductors and cables
  - HV armour rods and line guards
  - conversion intermediate to strain construction
  - switching devices

outage requests
    - fault current protection devices - main and backup devices, components, types, categories, applications, functions, principle of operation, coordination, zoning, auto-reclosing suppression, paralleling and separating, and ring verses radial feeders
    - disabling auto-reclose function
    - network interconnectors
    - test instruments
    - types and categories of switchgear - application, function and operating capabilities; and restrictions
    - operating switching apparatus - identifying hazards, assessing risks, systematic and defensive techniques, mobile radio and double insulation
    - HV electrical faults - types, causes and effects
- HV single wire earth return (SWER) system, including:
    - components
    - circuit arrangement
    - operation principles
    - faulty SWER earth system
    - SWER substations
- safety observer principles, including:
    - duties
    - techniques
    - minimum approach distances (MAD)
    - minimum safe working distance from vegetation
- feeder automation system, including:
    - function
    - main components
    - field devices
    - supervisory control and data acquisition (SCADA) systems, interlocks and operation
- SCADA systems, including:
    - function and main components
    - security interlocks and access restrictions
    - switching apparatus and retrieving data operation
    - field devices operation
- teamwork HV live work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

UETTDRDP15 Inspect, maintain and restore energised low voltage overhead distribution network infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the inspection of overhead structures, such as poles and/or other structures other than towers, and the maintenance of overhead energised low voltage (LV) conductors and cables. It includes the conducting of LV switching operations involving the operation of circuit breaking and isolation devices from a given switching schedule in accordance with enterprise procedures. It covers LV distribution systems in field situations but also includes paralleling in accordance with the switching schedule.

It also includes inspection of electrical apparatus, such as overhead conductors and or cables, underground and overhead transition points, electrical equipment, such as pole-mounted transformers, switchgear, hardware and/or earthing systems. It encompasses the completion of inspection reports and other relevant documentation in accordance with requirements.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS46 Install and maintain ESI network infrastructure electrical equipment

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETTDRIS67 Solve problems in energy supply network equipment

Competency Field

Distribution

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for the inspection, maintenance and restoration of overhead	**1.1** Works schedule(s), including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by

© Commonwealth of Australia, 2025 Powering Skills Organisation

distribution network infrastructure	site inspection
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the inspection of overhead structures and electrical apparatus used on poles and/or structures, the maintenance of overhead energised LV conductors and cables and LV switching, are obtained and confirmed for the purposes of the work to be performed and communicated
	1.4 Physical loads and calculations are confirmed according to requirements using essential knowledge and appropriate skill
	1.5 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.6 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear according to established procedures
	1.7 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
	1.8 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.9 Specialist equipment for live work is inspected and confined in working order in accordance with requirements and established procedures
	1.10 Relevant personnel at worksite are confirmed current in first aid, pole top rescue and other related work procedures according to requirements
	1.11 Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are

© Commonwealth of Australia, 2025 Powering Skills Organisation

		resolved to carry out work where necessary
	1.12	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.13	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures
	1.14	Traffic management plan is identified and implemented
2 Carry out inspection, maintenance and restoration of overhead distribution network infrastructure	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed, and currency according to requirements confirmed
	2.3	Essential knowledge and associated skills are applied in the safe maintenance and restoration of overhead distribution network infrastructure to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.4	Inspection of overhead structures and electrical apparatus used on poles and/or structures is carried out in accordance with the work schedule and requirements/established procedures
	2.5	Maintenance, including repair and/or replacement of poles and/or structures, is carried out in accordance with the work schedule and requirements/established procedures
	2.6	Communications with Switching Control Officer are established and maintained throughout the isolation operation according to established procedures
	2.7	Electrical equipment and associated circuits line/network or worksite to be switched, including paralleling, is isolated and proved de-energised using appropriate devices and earthed, where required, according to requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.8	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.9	Unplanned events during the inspection, maintenance or switching procedures are undertaken within the scope of established procedures
	2.10	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.11	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the inspection, maintenance and restoration of overhead distribution network infrastructure	**3.1**	Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures
	3.5	Relevant work permits are signed off and overhead structures and electrical apparatus used on poles and/or structures are returned to service in accordance with requirements
	3.6	Works completion records, reports, as installed/modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETTDRDP15 Inspect, maintain and restore energised low voltage overhead distribution network infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- inspecting three (3) of the following overhead structures and electrical apparatus:
  - poles and structures
  - overhead conductors/cables
  - underground/overhead transition points
  - electrical equipment
  - hardware
  - earthing systems
- conducting inspections using at least one (1) of the following:
  - ground
  - vehicle
  - helicopter
  - fixed wing
- using at least two (2) of the following inspection techniques:
  - visual*
  - infra-red camera
  - X-ray
  - camera
  - (*must do)
- maintaining at least two (2) of the following overhead energised low voltage (LV) conductors and cables:
  - copper
  - aluminium

© Commonwealth of Australia, 2025
Powering Skills Organisation

  - aluminium steel
  - steel
  - pilot
- using at least two (2) of the following access equipment:
  - elevated work platform (EWP)
  - ladder
  - portable platform
- using all of the following live LV working equipment:
  - insulating mats/sleeves
  - temporary bridging device
  - insulating gloves
  - insulated cable tensioning devices
  - ladder/pole shrouds
  - equipotential bonding
- using at least three (3) of the following testing and recording devices:
  - voltage detector*
  - clamp-on ammeter
  - polarity tester
  - insulation resistance tester
  - phase sequence indicator
  - recording meters
  - (*must do)
- performing LV switching to a given schedule and incorporating all of the following:
  - approvals/clearances
  - access authority/permits
- incorporating two (2) of the following:
  - voltage detectors
  - polarities testers
  - phase rotation indicators
- operating at least one (1) of the following switchgear types:
  - LV links
  - LV bridges
  - LV fuses
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- powerline safety practices encompassing:

© Commonwealth of Australia, 2025
Powering Skills Organisation

- protective apparatus and apparel for linework:
  - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel
  - types of protective apparatus and apparel used for the line worker
- requirements for the use of ladders:
  - carrying, erecting, collapsing and lowering different types of extension ladders against a standing pole
  - maintenance checks on different types of ladders
  - renewal of extension ropes
  - safety issues relating to clearances from overhead conductors
- requirements for climbing and working aloft:
  - methods used to identify a pole is safe to climb
  - methods used to inspect a line worker's body belt
  - application of knots and hitches appropriate to the requirements of a line worker
  - height safety principles, including personal fall protection, prevention and related requirements
  - practical procedures of climbing an overhead structure and fitting a pole chair
- traffic management:
  - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry requirements
  - procedures used to provide an effective traffic management scheme and the use of a two-way radio
- control of small fires:
  - identification, selection and operation of the appropriate extinguishing mediums for various types of fires
  - general fire prevention methods
  - precautions for personal protection when fighting small fires
- rescue victims from heights and confined spaces:
  - planning, identifying and establishing procedures and responses
  - developing techniques
  - involvement of external emergency services
  - emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework:
  - planning, establishing and implementing relevant aviation authority clearances
  - determining system requirements
  - aircrew familiarisation with network operations and equipment
  - requirements for effective communications operations for aerial work
- LV - energised LV equipment working practices for substations encompassing:
  - standards, codes, Commonwealth, state/territory/local government legislation, supply authority regulations and/or enterprise requirements

© Commonwealth of Australia, 2025
Powering Skills Organisation

- safety precautions specific to working on or near energised LV conductors:
  - safe working practices and procedures
  - identification of hazards
  - assessment and control of WHS/OHS risks
  - types, selection, maintenance and use of personal protective equipment (PPE)
- work on or near energised LV conductors:
  - types and function of specialised tools
  - safe working practices when using specialised tools
  - methods of using specialised tools
  - safe procedures for work on panels and in cubicles on or near energised LV conductors
  - release and rescue procedures for work on or near exposed energised LV conductors
- poles and structures inspection principles encompassing:
  - standards, codes, legislation, supply authority regulations and or enterprise requirements
  - characteristics of wood used for structures within the electrical distribution system:
    - relationship between timber and water
    - faults that occur that influence the integrity of the structure
    - effects of fungal activity, termite and borer activity and dry rot
  - chemical treatment principles:
    - types of chemical used to treat timber
    - regulations and procedures in handling and transporting chemicals safely
    - application procedures of chemicals to wood
  - deterioration prevention techniques:
    - relationship between steel, concrete and wood
    - inspection procedures for deterioration
    - deterioration prevention procedures in steel, concrete and wood
    - procedures for the repair of deterioration in steel, concrete and wood
- powerline inspection principles encompassing:
  - standards, codes, legislation, supply authority regulations and or enterprise requirements
  - ground line inspection procedures of electrical distribution structures:
    - requirements for pole inspection on electrical distribution structures
    - use of specific equipment and testing devices during testing/inspection
    - methods of recording data
  - overhead line inspection procedures of electrical distribution structures:
    - methods and requirements for overhead line inspection on electrical distribution structures
    - clearances for overhead conductors, cables and structures
    - use of specific equipment and testing devices during testing/inspection
    - methods of recording data
  - underground cable inspection procedures in the electrical distribution system:

© Commonwealth of Australia, 2025
Powering Skills Organisation

- state/territory industry policy and regulations
- methods and requirements for line inspection on underground cable terminations

- installation of switchgear and associated equipment encompassing:
  - types and function of various switchgear:
    - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches and circuit breakers
    - operating characteristics, advantages and disadvantages of different types of switchgear
    - installation procedures, earthing, requirements and techniques
  - types of equipment:
    - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements
    - assembly and erecting procedures
    - earthing requirements and techniques
    - pole mounted locations
  - maintenance procedures for switchgear and equipment:
    - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
  - testing and commissioning:
    - electricity supply industry standards and procedures
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings:
    - types, characteristics and capabilities of electrical apparatus
    - use, characteristics and capabilities of specialised tools and testing equipment
    - LV network interconnectors source of possible backfeed
  - LV switching techniques:
    - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures, earthing procedures
  - personnel protective equipment (PPE) for LV switching.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

© Commonwealth of Australia, 2025
Powering Skills Organisation

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDP99 Test and verify distribution overhead installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to test and verify distribution overhead installations in the electricity supply industry (ESI).

It includes inspecting and testing processes necessary for verifying overhead distribution installations. It also includes using safe work practices and compliance with all requirements of visual inspections, mandatory, optional and functional test procedures, identifying non-compliance defects and reporting requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRDP11 Inspect overhead poles-structures and electrical apparatus

UETTDRDP12 Maintain overhead energised low voltage conductors and cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS41 Install network infrastructure electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS56 Install and maintain low voltage overhead services

Competency Field

Distribution

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to inspect, test and verify overhead distribution installation	**1.1** Works schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for accessing, testing and verifying overhead distribution installations are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Specialist test and measurement equipment for testing and verification of overhead distribution installations are obtained, inspected and confirmed in working order and calibrated in accordance with requirements and workplace procedures
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.11	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out inspection, testing and verification of overhead distribution installation	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Inspection, safe access, testing and verification of overhead distribution installations are completed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Overhead distribution installations and associated hardware are visually inspected, positioned, secured and terminated/connected in accordance with workplace procedures
	2.5	Energised tests and/or measurements to verify overhead distribution installations are determined in accordance with workplace safety procedures and relevant industry standards, as required
	2.6	Overhead distribution installations are checked for suitability and conformance with workplace procedures and relevant electrical network supply industry

© Commonwealth of Australia, 2025 Powering Skills Organisation

		standards
	2.7	Overhead distribution installation protection methods and devices are validated in accordance with workplace procedures and relevant distribution network protection industry standards
	2.8	Overhead distribution installation switchgear is validated in accordance with workplace procedures and relevant distribution network protection industry standards
	2.9	Overhead distribution installations earthing systems and multiple earth neutral (MEN) system components are verified as correctly installed and conforming to workplace procedures and relevant distribution network industry standards
	2.10	Mandatory tests are conducted to verify overhead distribution installation system voltage, phasing, phase rotation, polarity and neutral potential comply with relevant industry standards
	2.11	Solutions used to solve overhead distribution installation problems are applied in accordance with workplace procedures
	2.12	Quality checks of work are undertaken in accordance with workplace procedures
3 Report inspection and test findings	**3.1**	Hazards are identified, risks assessed and control measures implemented
	3.2	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.3	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.4	Worksite is rehabilitated, cleaned up and made safe and in accordance with workplace procedures
	3.5	Non-compliance defects are identified, corrected and/or reported in accordance with workplace procedures
	3.6	Recommendations for rectifying defects are made in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.7 Mandatory documentation is completed in accordance with workplace procedures and relevant industry standards

3.8 Tools, equipment and surplus resources are, where appropriate, cleaned, checked and returned in accordance with workplace procedures

3.9 Relevant work permits are signed off and electrical equipment (network infrastructure) are returned to service in accordance with workplace procedures

3.10 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDP99A Test and verify distribution overhead installations.

Assessment Requirements for UETTDRDP99 Test and verify distribution overhead installations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using inspection methods, including at least two (2) of the following:
  - visual*
  - infra-red camera
  - X-Ray
  - camera
  - binoculars/telescope
  - (* must do)
- inspecting structures, including any one (1) of the following:
  - pyramid
  - delta pi
  - enterprise specific type
- installing associated hardware, including at least three (3) of the following:
  - insulators
  - clamps
  - bolts
  - conductor spacers
  - vibration dampers
  - structural components
- inspecting conductors, including at least one (1) of the following:
  - copper
  - aluminium
  - steel
  - aluminium/steel reinforced

© Commonwealth of Australia, 2025 Powering Skills Organisation

- inspecting overhead installations from at least two (2) of the following:
  - elevated work platform (EWP)*
  - portable platform
  - gondola
  - hook ladder
  - elevated work box
  - (*must do)
- using specialist equipment, including all of the following:
  - voltage/de-energised indicating device
  - earthing conductors
- complying with all of the following:
  - reporting procedures
  - reporting outcomes.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislated regulations, including:
  - legislation and regulations that require installations and equipment to be tested to ensure they are safe
  - the person/bodies responsible for the various aspects of ensuring distribution overhead installations are safe
  - results of tests that show a distribution overhead installation is safe for connection to the supply
  - results of periodic inspection and tests that show construction site wiring and equipment is safe to use
  - results of periodic inspection and tests that show the distribution overhead installations electrical equipment are safe to use
- testing installations, including:
  - distribution system phasing, phase rotation and polarity is correct and conforms to network construction standards
- documentation, including:
  - results of tests conducted on a distribution overhead installation in accordance with work requirements and ensure the distribution overhead installation is safe
  - documents of periodic inspection and testing of distribution overhead installation and equipment in accordance with requirement
  - non-compliances and defects reported in accordance with established procedures.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for testing and verifying distribution overhead installations
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS31 Draft and layout a power system overhead distribution extension

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the planning and layout of one or two pole minor overhead distribution extensions, including estimating of the costs and/or resources for the work to be undertaken. It also encompasses on-the-job design, surveying techniques and layout to the field locations in accordance with enterprise requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to draft and layout an overhead distribution extension	**1.1** Works schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.5 Hazards are identified, work health and safety (WHS/occupational health and safety (OHS) risks are assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the

© Commonwealth of Australia, 2025 Powering Skills Organisation

		job are identified, scheduled and coordinated, and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned in accordance with requirements
2 Carry out drafting and layout of an overhead distribution extension	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised person/s for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	The drafting and layout of an overhead distribution extension is carried out in accordance with the work

© Commonwealth of Australia, 2025 Powering Skills Organisation

		schedule and requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied for the drafting and layout of an overhead distribution extension to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete drafting and layout of an overhead distribution extension	**3.1**	Work undertaken is checked against works schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off and the job is returned to service and advised to client/customer in accordance with requirements
	3.6	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETTDRDS31 Draft and layout a power system overhead distribution extension

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- drafting at least one (1) of the following:
  - a low voltage (LV) single phase distribution extension plan/layout
  - an LV multi-phase distribution extension plan/layout
- laying out at least one (1) of the following:
  - a high voltage (HV) single phase distribution extension
  - a HV multi-phase distribution extension
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
    - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing and maintenance of conductors:
    - types of LV and HV overhead electrical conductor connections
    - causes and effects of poor electrical connections
    - reasons for and methods used to maintain standard phase sequencing

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - removing, repairing and replacing of damage conductors
        - minimum clearances between overhead conductors and LV and HV structures
    - techniques for conductor installation:
        - types and application of tools, equipment and hardware
        - methods of stringing, tensioning and termination of LV and HV conductors
- installation of poles and or structures and hardware encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
    - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
        - characteristics and applications of different types of poles and associated hardware
    - techniques for installing poles and associated hardware:
        - types of installation equipment/tools
        - excavation methods
        - types of footings/foundations
        - types of attachments, earthing systems, clearances between conductors, safe methods of erecting and stabling poles and/or structures and cross-arms
    - techniques for maintenance of poles and associated hardware:
        - stabilisation techniques for unstable poles
        - methods of strengthen poles
        - maintenance and replacement of HV insulators and cross arms
- different types and function of distribution components encompassing:
    - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
    - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
    - types, function and characteristics of distribution components
    - safety policies, procedures and precautions related to the handling and installing of distribution components
- enterprise-specific switching diagrams and drawing encompassing:
    - types and application of enterprise-specific switching drawings and documents:
        - wiring and schematic diagrams and switching symbols
    - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams:
        - LV system switching diagrams
        - direct current (d.c.) traction supply sectioning diagrams
        - HV transmission and distribution system symbols and feeder plans
        - processes of updating switching diagrams
- power distribution network documentation encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - requirements for the use of manuals, system diagrams/plans and drawings, and for plans such as work method statements for the control of WHS/OHS risks
  - types and application of power distribution network documentation drawings and documents:
    - wiring and schematic diagrams
    - drawings and switching symbols
    - mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different diagrams and documentation on LV and HV systems:
    - overhead distribution extensions
    - underground distribution extensions
    - distribution substations
    - street lighting systems
- layout principles for overhead distribution encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to overhead distribution layout
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings, and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components, such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length -
  - resources needed for the stringing and maintenance of conductors
  - types of low LV and HV overhead electrical conductor connections
  - minimum clearances between overhead conductors and LV and HV structures
  - estimation of the duration of overhead distribution extension project
- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the surveying for an overhead and underground extension
  - techniques in measuring heights and distances
  - techniques in taking bearings angles of deviation using a compass
  - techniques in using a clinometer
  - techniques in recording and storage of data
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings

© Commonwealth of Australia, 2025 Powering Skills Organisation

- techniques in plotting long spans:
  - measuring stick, clinometer, trundle wheel and tapes
  - correction for sloping ground
  - distance across objects and range rods
- techniques in pegging pole positions:
  - foot path alignments
  - types of pegs, pegs of other authorities and locating survey pegs
- fundamentals of computer-aided drafting (CAD) for drafting and layout of distribution extension and upgrades encompassing:
  - Commonwealth, sate/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the drafting and layouts of distribution extensions and upgrades
  - types of computer hardware and software, tools and equipment for the production of a draft and layout of distribution extension and or upgrade
  - techniques in storing and retrieving programs and files from the computer
  - identification and methods of retrieving and manipulating digital symbols, designs, layouts, fonts and graphs stored in the computer
  - techniques in using the CAD package in following necessary commands and protocols in accordance with the operating instructions of the CAD software manufacturer, such as:
    - using file structure, menu utilisation, system library usage, data banking, achieving, file management and maintenance procedures
  - calculation of dimensions and drafting measurements using the computer
  - techniques in the preparation of preliminary sketches using the computer
  - techniques in using 2-D computer graphics system and associated equipment to produce a distribution extension and/or upgrade draft or layout
  - techniques to diagnosing basic faults in computer operation
  - requirements for aerial linework:
    - planning, establishing and implementing relevant aviation authority clearances
    - determining system requirements
    - aircrew familiarisation with network operations and equipment
    - requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic

© Commonwealth of Australia, 2025 Powering Skills Organisation

and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry to draft and layout an overhead distribution extension
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS32 Draft and layout a power system underground distribution extension

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the planning and layout of minor high voltage (HV) and low voltage (LV) underground distribution extensions, including the estimating of the costs and/or resources for the work to be undertaken. It also encompasses on-the-job design, surveying techniques, the pegging and/or marking out of the trench position, the pit/pillar position and the cable position according to the work order and enterprise requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to draft and layout an underground distribution extension	**1.1** Works schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.5 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the

© Commonwealth of Australia, 2025 Powering Skills Organisation

		job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned in accordance with requirements
2 Carry out drafting and layout of an underground distribution extension	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	The drafting and layout of an underground distribution extension is carried out in accordance with the work

© Commonwealth of Australia, 2025 Powering Skills Organisation

		schedule and requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied for drafting and layout of an underground distribution extension to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete drafting and layout of an underground distribution extension	**3.1**	Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off and the job is returned to service and advised to client/customer in accordance with requirements
	3.6	Works completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS32A Draft and layout a power system underground distribution extension.

Assessment Requirements for UETTDRDS32 Draft and layout a power system underground distribution extension

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- drafting at least one (1) of the following:
  - high voltage (HV) multi-phase underground distribution extension plan/layout
  - a low voltage (LV) multi-phase underground distribution extension plan/layout
- laying out at least one (1) of the following:
  - a LV multi-phase underground distribution extension
  - a HV multi-phase underground distribution extension
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of underground cable encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safety precautions specific to the installation of underground cables:
    - excavation and trench safety regulations
    - gas detection procedures
    - working in confined spaces
    - personal protective equipment (PPE)
    - hazards for the use of liquid petroleum gas (LPG) equipment for jointing of underground cables
    - gas bottle testing procedures
    - permit to work systems and isolation procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - trench excavation and reinstatement procedures
    - installation of underground cable procedures:
        - types of tools and equipment
        - methods of installing conduits
        - methods of installing cables and sealing cable ends (direct buried, ducts cleated and racked)
    - procedures for the safe use of LPG equipment for cable jointing
- construction and types of underground cables encompassing:
    - safety precautions specific to handling underground cables
    - requirements for the use of enterprise manuals, system diagrams/plans and drawings
    - types and applications of underground cables
    - construction types and structures of underground cables
    - characteristics of different types of underground cables
    - ratings
- enterprise-specific switching diagrams and drawing encompassing:
    - types and application of enterprise-specific switching drawings and documents:
        - wiring and schematic diagrams and switching symbols
        - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams:
        - LV system switching diagrams
        - direct current (DC) traction supply sectioning diagrams
        - HV transmission and distribution system symbols and feeder plans
        - processes of updating switching diagrams
- power distribution network documentation encompassing:
    - requirements for the use of manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
    - types and application of power distribution network documentation drawings and documents:
        - wiring and schematic diagrams, drawings and switching symbols, mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different diagrams and documentation on LV and HV systems:
        - overhead distribution extensions
        - underground distribution extensions
        - distribution substations
        - street lighting systems
- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the

© Commonwealth of Australia, 2025 Powering Skills Organisation

surveying for an overhead and underground extension
    - techniques in measuring heights and distances
    - techniques in taking bearings angles of deviation using a compass
    - techniques in using a clinometer
    - techniques in recording and storage of data
    - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
    - techniques in plotting long spans:
        - measuring stick, clinometer, trundle wheel and tapes
        - correction for sloping ground
        - distance across objects and range rods
    - techniques in pegging pole positions:
        - foot path alignments, types of pegs, pegs of other authorities and locating survey pegs
- fundamentals of computer-aided drafting (CAD) for drafting and layout of distribution extension and upgrades encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the drafting and layouts of distribution extensions and upgrades
    - types of computer hardware and software, tools and equipment for the production of a draft and layout of distribution extension and or upgrade
    - techniques in storing and retrieving programs and files from the computer
    - identification and methods of retrieving and manipulating digital symbols, designs, layouts, fonts and graphs stored in the computer
    - techniques in using the CAD package in following necessary commands and protocols in accordance with the operating instructions of the CAD software manufacturer, such as:
        - using file structure, menu utilisation, system library usage, data banking, achieving, file management and maintenance procedures
    - calculation of dimensions and drafting measurements using the computer
    - techniques in the preparation of preliminary sketches using the computer
    - techniques in using 2-D computer graphics system and associated equipment to produce a distribution extension and/or upgrade draft or layout
    - techniques to diagnosing basic faults in computer operation
- layout principles for underground mains distribution extension encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to underground mains distribution extension
    - requirements for the use of underground mains construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
    - methods in determining material, equipment and tool lists:
        - components types and quantity required
        - spacing of components and equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - costings of items and components
- purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
- determination of conductor size, type and route length
- resources needed for the laying of conductors
- determining the appropriate excavation for the location
- determining the size and depth of excavation
- determining the trench and pit layout procedures
- minimum clearances between conductors
- estimation of the duration of underground distribution extension project.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS33 Draft and layout a power system street lighting system

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the planning and layout of street lighting systems. It includes the conduction of site inspections to confirm and/or modify a street lighting system layout, estimation of costs and resources for the work order, and the pegging out of the poles/underground cables according to the work order and to optimise visibility and minimise traffic hazards. It also encompasses the provision of advice on conditions of supply and permits and the communication and coordination needed to be undertaken with the relevant authorities and clients.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

Assessment Requirements for UETTDRDS33 Draft and layout a power system street lighting system

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- producing all of the following:
  - preliminary plan for a street lighting system
  - a layout of a street lighting system
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
    - material lists, conductor size, type and route length
  - construction types and structures for distribution and sub-transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing and maintenance of conductors:
    - types of low voltage (LV) and high voltage (HV) overhead electrical conductor connections
    - causes and effects of poor electrical connections
    - reasons for and methods used to maintain standard phase sequencing
    - removing, repairing and replacing of damage conductors
    - minimum clearances between overhead conductors and LV and HV structures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- techniques for conductor installation:
  - types and application of tools, equipment and hardware
  - methods of stringing, tensioning and termination of LV and HV conductors
- installation of poles and/or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
    - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware:
    - types of installation equipment/tools
    - excavation methods
    - types of footings/foundations
    - types of attachments
    - earthing systems
    - clearances between conductors
    - safe methods of erecting and stabling poles and/or structures and cross-arms
  - techniques for maintenance of poles and associated hardware:
    - stabilisation techniques for unstable poles
    - methods of strengthen poles
    - maintenance and replacement of HV insulators and cross-arms
- procedures for installation and maintenance on public lighting structures and associated equipment encompassing:
  - standards, codes, legislation, supply authority regulations, local government and/or enterprise requirements pertaining to the installation and maintenance of public lighting systems and associated equipment
  - safety precautions specific to working on street lighting:
    - safe working practices and procedures
    - safe clearances from LV and HV mains
    - working at heights, working in confined spaces, permit to work systems and isolation procedures, emergency response and rescue, including first aid
  - basic public lighting principles:
    - electromagnetic spectrum
    - principles of colour
    - behaviour of light
    - factors that affect illumination
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
    - street lighting circuits
    - earthing system
  - types of tools and equipment used for installation and maintenance

© Commonwealth of Australia, 2025 Powering Skills Organisation

- types and function of lanterns/luminaires/lamps, control equipment, poles and associated hardware used for street lighting:
  - high pressure mercury vapour, low pressure and high pressure sodium vapour, fluorescent, quartz-halogen, wood, concrete, steel, composite, choke boxes, photo-electric cells, time switches and contactor boxes
- types of lighting systems:
  - overhead and underground street lighting systems
  - controlling and switching of lighting systems
- techniques for the installation of street lighting systems
- techniques for the maintenance of street lighting systems:
  - diagnosing of faults
  - removing, repairing, replacing and cleaning of public lighting and associated hardware
- application of specific testing equipment:
  - voltage detectors, insulation resistance testers, clamp-on ammeters, continuity testers and fault indictors
- techniques for the inspection, testing and commissioning of street lighting systems

- different types and functions of distribution components encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - types, function and characteristics of distribution components
  - safety policies, procedures and precautions related to the handling and installing of distribution components
- enterprise-specific switching diagrams and drawings encompassing:
  - types and application of enterprise-specific switching drawings and documents:
    - wiring and schematic diagrams and switching symbols
    - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams:
  - LV system switching diagrams
  - direct current (DC) traction supply sectioning diagrams
  - HV transmission and distribution system symbols and feeder plans
  - processes of updating switching diagrams
- power distribution network documentation encompassing:
  - requirements for the use of manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - types and application of power distribution network documentation drawings and documents:
    - wiring and schematic diagrams

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - drawings and switching symbols
    - mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different diagrams and documentation on LV and HV systems:
    - overhead distribution extensions
    - underground distribution extensions
    - distribution substations
    - street lighting systems
- layout principles for overhead distribution encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to overhead distribution layout
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components, such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length -
  - resources needed for the stringing and maintenance of conductors
  - types of LV and HV overhead electrical conductor connections
  - minimum clearances between overhead conductors and LV and/HV structures
  - estimation of the duration of overhead distribution extension project
- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the surveying for an overhead and underground extension
  - techniques in measuring heights and distances
  - techniques in taking bearings angles of deviation using a compass
  - techniques in using a clinometer
  - techniques in recording and storage of data
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - techniques in plotting long spans:
    - measuring stick, clinometer, trundle wheel and tapes
    - correction for sloping ground
    - distance across objects and range rods

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - techniques in pegging pole positions:
        - foot path alignments, types of pegs, pegs of other authorities and locating survey pegs
- fundamentals of computer-aided drafting (CAD) for drafting and layout of distribution extension and upgrades encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the drafting and layouts of distribution extensions and upgrades
    - types of computer hardware and software, tools and equipment for the production of a draft and layout of distribution extension and or upgrade
    - techniques in storing and retrieving programs and files from the computer
    - identification and methods of retrieving and manipulating digital symbols, designs, layouts, fonts and graphs stored in the computer
    - techniques in using the CAD package in following necessary commands and protocols in accordance with the operating instructions of the CAD software manufacturer, such as:
        - using file structure, menu utilisation, system library usage, data banking, achieving, file management and maintenance procedures
    - calculation of dimensions and drafting measurements using the computer
    - techniques in the preparation of preliminary sketches using the computer
    - techniques in using 2-D computer graphics system and associated equipment to produce a distribution extension and/or upgrade draft or layout
    - techniques to diagnosing basic faults in computer operation
- principles to light design layout encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the light design principles
    - requirements for the use of street lighting system construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
    - types of tariffs and charges
    - types of street lighting components:
        - column types, foundations, brackets, luminaries and mounting heights
    - types of electrical street lighting circuits:
        - types of supply, lighting circuit and control circuit
    - fundamentals of lighting production:
        - electromagnetic spectrum
        - visible and non-visible radiation
        - spectral energy distribution
        - infra-red, ultra-violet (UV), radiation safety, incandescence and phosphorescence
        - reflection and refraction
    - fundamentals of lighting concepts:
        - terms and units
        - purpose of reflectors and diffusers

© Commonwealth of Australia, 2025 Powering Skills Organisation

- factors affecting external lighting design
- calculation of light output
- determining illuminance:
  - point to point method
  - lumen method
- determining rated life of luminaries
- fundamentals of street lighting design
- considerations for special lighting situations:
  - security lighting, hazardous street locations and emergency lighting

- principles to layout and draft a street lighting system encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to street lighting system layouts and drafts
  - requirements for the use of street lighting system construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components, such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - determination of street lighting positions for optimum visibility and to minimise traffic hazards
  - techniques in mounting and position of lights
  - resources needed for the installation of street lighting system
  - methods of pegging out of pole positions and/or underground cable positions
  - minimum clearances between overhead conductors and LV/and HV structures
  - estimation of the duration of overhead distribution extension project.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry to undertake drafting and layout of a street lighting system.
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS34 Draft and layout a power system distribution substation minor upgrade

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the drafting and laying out of minor low voltage (LV) distribution substation upgrades, including the estimating of the costs and/or resources for the work to be undertaken. It also encompasses on-the-job design, surveying techniques, the pegging and/or marking out of the trench position, the pit/pillar position and the cable position according to the work order and enterprise requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Competency Field

Design

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to draft and layout a distribution substation upgrade	**1.1** Works schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites
	1.5 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures are prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and in accordance with established procedures
	1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the

© Commonwealth of Australia, 2025 Powering Skills Organisation

		job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned in accordance with requirements
2 Carry out the drafting and layout of a distribution substation upgrade	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	Drafting and layout of a distribution substation upgrade is carried out in accordance with the work schedule and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied in the safe drafting and layout of a distribution substation upgrade to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete the drafting and layout of a distribution substation upgrade	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off and substation equipment, apparatus, wiring and instrumentation are returned to service and advised to client/customer in accordance with requirements
	3.6	Works completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS34A Draft and layout a power system distribution substation minor upgrade.

Assessment Requirements for UETTDRDS34 Draft and layout a power system distribution substation minor upgrade

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- drafting at least one (1) of the following:
  - a multi-phase pole mounted distribution transformer upgrade plan/layout
  - a single-phase pole mounted transformer upgrade plan/layout
- laying out at least one (1) of the following:
  - a multi-phase underground distribution substation upgrade
  - a multi-phase distribution substation or associated equipment upgrade. e.g. substations, transformers, high voltage (HV)/low voltage (LV) switchgear
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
    - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing and maintenance of conductors:
    - types of LV and HV overhead electrical conductor connections
    - causes and effects of poor electrical connections

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - reasons for and methods used to maintain standard phase sequencing
        - removing, repairing and replacing of damage conductors
        - minimum clearances between overhead conductors and LV and HV structures
    - techniques for conductor installation:
        - types and application of tools, equipment and hardware
        - methods of stringing, tensioning and termination of LV and HV conductors
- installation of underground cable encompassing:
    - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
    - safety precautions specific to the installation of underground cable:
        - excavation and trench safety regulations
        - gas detection procedures
        - working in confined spaces
        - personal protective equipment (PPE)
        - hazards for the use of liquid petroleum gas (LPG) equipment for jointing of underground cable
        - gas bottle testing procedures
        - permit to work systems and isolation procedures
    - trench excavation and reinstatement procedures
    - installation of underground cable procedures:
        - types of tools and equipment
        - methods of installing conduits
        - methods of installing cables and sealing cable ends (direct buried, ducts cleated and racked)
    - procedures for the safe use of LPG equipment for cable jointing
- construction and types of underground cables encompassing:
    - safety precautions specific to handling underground cables
    - requirements for the use of enterprise manuals, system diagrams/plans and drawings
    - types and applications of underground cables
    - construction types and structures of underground cables
    - characteristics of different types of underground cables
    - ratings
- enterprise-specific switching diagrams and drawing encompassing:
    - types and application of enterprise-specific switching drawings and documents:
        - wiring and schematic diagrams and switching symbols
        - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams:
        - LV system switching diagrams
        - direct current (DC) traction supply sectioning diagrams

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - HV transmission and distribution system symbols and feeder plans
    - processes of updating switching diagrams
- power distribution network documentation encompassing:
    - requirements for the use of manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
    - types and application of power distribution network documentation drawings and documents:
        - wiring and schematic diagrams, drawings and switching symbols
        - mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different diagrams and documentation on LV and HV systems:
        - overhead distribution extensions
        - underground distribution extensions
        - distribution substations
        - street lighting systems
- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the surveying for an overhead and underground extension
    - techniques in measuring heights and distances
    - techniques in taking bearings angles of deviation using a compass
    - techniques in using a clinometer
    - techniques in recording and storage of data
    - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
    - techniques in plotting long spans:
        - measuring stick, clinometer, trundle wheel and tapes
        - correction for sloping ground
        - distance across objects and range rods
    - techniques in pegging pole positions:
        - foot path alignments, types of pegs, pegs of other authorities and locating survey pegs
- fundamentals of computer-aided drafting (CAD) for drafting and layout of distribution extension and upgrades encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the drafting and layouts of distribution extensions and upgrades
    - types of computer hardware and software, tools and equipment for the production of a draft and layout of distribution extension and/or upgrade
    - techniques in storing and retrieving programs and files from the computer
    - identification and methods of retrieving and manipulating digital symbols, designs, layouts, fonts and graphs stored in the computer

© Commonwealth of Australia, 2025 Powering Skills Organisation

- techniques in using the CAD package in following necessary commands and protocols in accordance with the operating instructions of the CAD software manufacturer, such as:
  - using file structure, menu utilisation, system library usage, data banking, achieving, file management and maintenance procedures
- calculation of dimensions and drafting measurements using the computer
- techniques in the preparation of preliminary sketches using the computer
- techniques in using 2-D computer graphics system and associated equipment to produce a distribution extension and or upgrade draft or layout
- techniques to diagnosing basic faults in computer operation

- layout principles for underground mains distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to underground mains distribution extension
  - requirements for the use of underground mains construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components and equipment
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - resources needed for the laying of conductors
  - determining the appropriate excavation for the location
  - determining the size and depth of excavation
  - determining the trench and pit layout procedures
  - minimum clearances between conductors
  - estimation of the duration of underground distribution extension project
- layout principles for a distribution substation minor upgrade encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to a distribution substation minor upgrade
  - requirements for the use of distribution substation minor upgrade construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components and equipment
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information

© Commonwealth of Australia, 2025 Powering Skills Organisation

- determination of conductor size, type and route length
- resources needed for the laying of conductors, cables and equipment
- determining the appropriate installation sequence
- minimum clearances between conductors and equipment
- estimation of the duration of underground distribution extension project.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry undertake drafting and layout of a distribution substation upgrade
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS35 Design overhead distribution power systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the technical design of overhead distribution and sub-transmission networks to relevant standards, including electrical clearances, electrical and mechanical loadings, earthing, environmental considerations, minor civil aspects and the handling of waterway, railway and other crossings. It also includes the necessary established procedures to ensure the line design conforms to specific organisational technical standards, operational and system planning requirements, and incorporates the principles of safe design.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Pathway Unit Group 1

UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure

UETTDRDS45 Organise and implement ESI line and easement surveys

Pathway Unit Group 2

UETTDRDS43 Develop high voltage and low voltage distribution protection systems

Competency Field

Design

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for and coordinate the safe design of overhead distribution systems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the design of overhead distribution systems, are reviewed and determined
	1.2 Purpose of the design is established and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures, policies and specifications for the design are obtained or established with appropriate personnel
	1.4 Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.6	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.7	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.8	Resources, including personnel, equipment, tools and PPE required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures
2 Carry out and coordinate the safe design of overhead distribution systems	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals as per established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical models of the distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.8	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete and coordinate the safe design of overhead distribution systems	**3.1**	Final inspections of the design are undertaken to ensure they comply with all requirements and include all specifications and documentation needed to complete the design brief
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of design documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS35A Design overhead distribution power systems.

Assessment Requirements for UETTDRDS35 Design overhead distribution power systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) compliant technical designs of an overhead distribution or sub-transmission system with at least one relating to each of the following project types:
  - multi-pole extensions
  - in-line pole relocations
  - multi-circuit overhead lines
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematical techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications:
    - application of velocity, acceleration, force, density, torque and pressure
  - application of the International System of Units (SI) units

© Commonwealth of Australia, 2025 Powering Skills Organisation

- the relationship between work, power and energy
- behaviour of object under force:
  - using a block and tackle under load
  - concept of mechanical advantage
  - determination of resultant forces and determining the sag in a catenary conductor and the force applied at each end
- fundamentals of the basic laws of fluid mechanics

- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications:
    - properties of tensile strength
    - effects of temperature on the expansion of metals
    - ductibility, malleability, work hardening and annealing and the conditions that lead to corrosion and the properties of timbers
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
    - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing and maintenance of conductors:
    - types of low voltage (LV) and high voltage (HV) overhead electrical conductor connections
    - causes and effects of poor electrical connections
    - reasons for and methods used to maintain standard phase sequencing
    - removing, repairing and replacing of damage conductors
    - minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation:
    - types and application of tools, equipment and hardware
    - methods of stringing, tensioning and termination of LV and HV conductors
- installation of poles and/or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
    - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware:
    - types of installation equipment/tools
    - excavation methods

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - types of footings/foundations, types of attachments
        - earthing systems
        - clearances between conductors
        - safe methods of erecting and stabling poles and/or structures and cross-arms
    - techniques for maintenance of poles and associated hardware:
        - stabilisation techniques for unstable poles
        - methods of strengthen poles
        - maintenance and replacement of HV insulators and cross-arms
- installation of metering and control equipment encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment
    - types of meters:
        - kilowatt-hour meters single and polyphase
        - demand meters, recording meters and electronic recording metering systems summators
    - installation and removal methods:
        - direct connection and plug in method
        - enterprise specific
    - types of associated equipment and accessories:
        - meter boards, service fuse, links, contactors, time switch and audio frequency injection relay
    - testing procedures:
        - safety testing
        - polarity testing
- different types and function of distribution components encompassing:
    - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
    - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
    - types, function and characteristics of distribution components
    - safety policies and procedures precautions related to the handling and installing of distribution components
- principles of statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV systems
    - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV single wire earth return (SWER) system encompassing:
    - application and function of SWER system components

© Commonwealth of Australia, 2025 Powering Skills Organisation

- circuit arrangement
- principle of operation
- hazards and procedures associated with faulty SWER earth systems
- procedure to isolate, energise and commission SWER substations

- power distribution network documentation encompassing:
  - requirements for the use of manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - types and application of power distribution network documentation drawings and documents:
    - wiring and schematic diagrams
    - drawings and switching symbols
    - mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different diagrams and documentation on LV and HV systems:
    - overhead distribution extensions
    - underground distribution extensions
    - distribution substations
    - street lighting systems
- layout principles for overhead distribution encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to overhead distribution layout
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists :
    - components types and quantity required
    - spacing of components such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - resources needed for the stringing and maintenance of conductors
  - types of LV and HV overhead electrical conductor connections
  - minimum clearances between overhead conductors and LV and/HV structures
  - estimation of the duration of overhead distribution extension project
- system components and layouts encompassing:
  - distribution system layouts:
    - overhead/underground, urban/rural, HV customers, high rise building systems, three phase lines, single phase lines, SWER systems, spur, parallel and ring systems, typical substation types

© Commonwealth of Australia, 2025 Powering Skills Organisation

- transmission system layouts:
  - lines, buses, transformers and cables, line/bus layouts including single, double, ring and breaker and half systems, and HV crossing methods
- alternating current (AC) transmission system components encompassing:
  - support structures and reasons for selection
  - insulators and reasons for selection
  - conductors and reasons for selection
  - vibration management systems and principles
  - line ratings based on voltage, span, tension and temperature
- AC transmission line electrical parameters encompassing:
  - typical arrangements
  - parameters of significance
  - calculation of line parameters:
    - calculation of resistive, inductive and capacitive values assuming regular transposition and solid conductors
  - comparison with actual values
  - typical parameter values and ratios for different voltage level lines
- AC transmission line models encompassing:
  - types of transmission line models based on line length
  - calculation of voltage drop, line regulation and transmission efficiency
  - load sharing between lines
- basic design features and characteristics of poles/structures and associated equipment and/or components encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing of poles/structures and associated equipment and or components
  - distribution systems principles:
    - terminologies
    - primary and secondary
    - voltage levels
    - supply quality
    - load curve profiles (residential/industrial/commercial)
    - types of feeders
    - urban and rural single-phase systems
    - SWER
  - characteristics of poles:
    - types of poles (wood, concrete and steel)
    - installation methods of poles (tooling, rake, life, labelling and sinking)
    - maintenance techniques of poles (above and below ground pole strength and loads)
  - characteristics of associated equipment used on poles and structures:
    - cross-arms (types and standard sizes)

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - insulators
- basic design features and characteristics of underground cables, lines, poles/structures and associated equipment and/or components encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
    - overhead lines characteristics:
        - type of components
        - characteristics of conductor material
        - mechanical limitations and physical dimensions of lines
        - current rating factors (heating, voltage drops, power losses) of conductors
        - aerial bundled cables (HV and LV)
        - covered conductors
    - characteristics and constructional features of poles and structures:
        - types of poles and structures
        - characteristics of poles/structure materials
        - mechanical limitations of poles/structures
        - footings and additional support techniques
    - characteristics and constructional features of underground cables:
        - underground cables constructional features
        - insulation materials and abbreviations
        - cable dielectrics, electric stress and cable voltage drop
    - calculation of cable voltage drop in relation to length of cable run
    - techniques in reducing electrical stress on cables
    - cable rating factors
    - methods of joining and terminating cables
    - techniques in the installation of cables above and below ground
    - techniques in cable testing and the location of cable faults
    - techniques in cable drawing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

© Commonwealth of Australia, 2025 Powering Skills Organisation

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS36 Design underground distribution power systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the technical design of underground distribution and sub-transmission networks to relevant standards, including cable sizing and locations, soil resistivity and heat dissipation, backfill and trenching details, minor civil aspects and dynamic and cyclic ratings. It also includes the necessary established procedures to ensure the line design conforms to specific organisational technical standards, operational and system planning requirements and encompasses the principles of safe design.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Pathway Unit Group 1

UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure

UETTDRDS45 Organise and implement ESI line and easement surveys

Pathway Unit Group 2

UETTDRDS43 Develop high voltage and low voltage distribution protection systems

Competency Field

Design

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for and coordinate the safe design of underground distribution systems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the design of underground distribution systems, are reviewed and determined
	1.2 Purpose of the design is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures or policies and specifications for the design are obtained or established with appropriate personnel
	1.4 Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
	1.6	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.7	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.8	Resources, including personnel, equipment, tools and PPE required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures
2 Carry out and coordinate the design of underground distribution systems	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical models for the design of the underground distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.8	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete and coordinate the design of underground distribution systems	**3.1**	Final inspections of the design are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of design documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS36A Design underground distribution power

Assessment Requirements for UETTDRDS36 Design underground distribution power systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) technical designs of an underground distribution or sub-transmission network relating to the following project types:
  - residential subdivision developments
  - industrial/commercial subdivision developments
  - alteration to existing assets
  - underground supplies to single customers, including projects requiring substations
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications:
    - Application of velocity, acceleration, force, density, torque and pressure

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applications of the International System of Units (SI) units
- the relationship between work, power and energy
- behaviour of object under force:
  - using a block and tackle under load
  - concept of mechanical advantage
  - determination of resultant forces and determining the sag in a catenary conductor and the force applied at each end
- fundamentals of the basic laws of fluid mechanics

- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications:
    - properties of tensile strength
    - effects of temperature on the expansion of metals
    - ductility, malleability, work hardening and annealing and the conditions that lead to corrosion and the properties of timbers
- installation of underground cable encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safety precautions specific to the installation of underground cable:
    - excavation and trench safety regulations
    - gas detection procedures
    - working in confined spaces
    - personal protective equipment (PPE)
    - hazards for the use of liquid petroleum gas (LPG) equipment for jointing of underground cable
    - gas bottle testing procedures
    - permit to work systems and isolation procedures
  - trench excavation and reinstatement procedures
  - installation of underground cable procedures:
    - types of tools and equipment
    - methods of installing conduits
    - methods of installing cables and sealing cable ends (direct buried, ducts cleated and racked)
  - procedures for the safe use of LPG equipment for cable jointing
- construction and types of underground cables encompassing:
  - safety precautions specific to handling underground cables
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types and applications of underground cables
  - construction types and structures of underground cables
  - characteristics of different types of underground cables

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - ratings
- principles of statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV) systems
    - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- the implementation and monitoring requirements for the impact of powerline installations and operation on the environment and/or the area surrounding the powerline and/or equipment encompassing:
    - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of environmental impact factors in the workplace and areas of power distribution or transmission:
        - Commonwealth/state/territory legislation relevant to the workplace and the Environment Protection Act legislation and common law
    - identification, assessment, control and monitoring of the hazards to the environment associated with the powerline industry
    - workplace environment quality standards enterprise plan:
        - setting of acceptable emission level limits from power plant equipment
        - impact of the enterprise activities on air and water quality
        - nature, impact and level of emissions from power plant, power distribution and transmission equipment and network infrastructure (noise generation, noxious gas emissions, greenhouse gas production, electromagnetic emissions, electromagnetic field strength, oil leakage and insulation breakdown products)
    - provision of manufacturer and supplier information, such as material safety data sheets (MSDS)
    - gathering of environment management information
    - maintenance of environmental records
    - risk assessment and its management in powerline industry
    - maintenance strategies for environment protection programs:
        - developing processes for promoting, maintaining and improving environmental impact in the workplace
        - identifying techniques for evaluating and reviewing environment protection education and training programs and elements of an effective environment protection management system
        - Environment Protection Authority (EPA) consultation and accident/incident investigations
- layout principles for underground mains distribution extension encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to underground mains distribution extension
    - requirements for the use of underground mains construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the

© Commonwealth of Australia, 2025 Powering Skills Organisation

control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components and equipment
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - resources needed for the laying of conductors
  - determining the appropriate excavation for the location
  - determining the size and depth of excavation
  - determining the trench and pit layout procedures
  - minimum clearances between conductors
  - estimation of the duration of underground distribution extension project
- system components and layouts encompassing:
  - distribution system layouts:
    - overhead/underground and/or urban/rural
    - HV customers
    - high rise building systems
    - three phase lines
    - single phase lines
    - single wire earth return (SWER) systems
    - spur, parallel and ring systems
    - typical substation types
  - transmission system layouts:
    - lines, buses, transformers and cables
    - line/bus layouts, including single, double, ring and breaker and half systems
    - HV crossing methods
- basic design features and characteristics of underground cables, lines, poles/structures and associated equipment and/or components encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - overhead lines characteristics:
    - type of components
    - characteristics of conductor material
    - mechanical limitations and physical dimensions of lines
    - current rating factors (heating, voltage drops and power losses) of conductors
    - aerial bundled cables (HV and low voltage (LV)
    - covered conductors
  - characteristics and constructional features of poles and structures:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - types of poles and structures
    - characteristics of poles/structure materials
    - mechanical limitations of poles/structures, footings and additional support techniques
- characteristics and constructional features of underground cables:
    - underground cables constructional features
    - insulation materials and abbreviations
    - cable dielectrics, electric stress and cable voltage drop
- calculation of cable voltage drop in relation to length of cable run
- techniques in reducing electrical stress on cables
- cable rating factors
- methods of joining and terminating cables
- techniques in the installation of cables above and below ground
- techniques in cable testing and the location of cable faults
- techniques in cable drawing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS37 Design power system distribution substations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the technical design of distribution substations to relevant standards and specifications, including earthing, location of substation relevant to load, customer and environmental needs and minor civil aspects. It also includes the necessary established procedures to ensure the substation design conforms to specific organisational technical standards, operational and system planning requirements and encompasses the principles of safe design.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Assessment Requirements for UETTDRDS37 Design power system distribution substations

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) technical designs of a distribution substation relating to at least two of the following project types:
  - multi-transformer substations
  - residential developments
  - industrial/commercial developments
  - alteration to existing assets
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist, which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications:
    - application of velocity, acceleration, force, density, torque and pressure

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applications of the International System of Units (SI) units
- the relationship between work, power and energy
- behaviour of object under force:
  - using a block and tackle under load
  - concept of mechanical advantage
  - determination of resultant forces and determining the sag in a catenary conductor and the force applied at each end
- fundamentals of the basic laws of fluid mechanics

- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications:
    - properties of tensile strength
    - effects of temperature on the expansion of metals
    - ductility, malleability, work hardening and annealing and the conditions that lead to corrosion and the properties of timbers
- generation systems encompassing:
  - methods of generating electricity:
    - types of power stations and reasons for their location
    - layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements:
    - operating speeds for thermal and hydroelectric generating sets
    - typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- substations and power transformers encompassing:
  - relationship between the substations within an overall power system:
    - purpose and location in relation to load centres
    - layout of high voltage (HV) equipment within the substation and auxiliary equipment
  - characteristics of a power transformer:
    - basic construction of distribution transformers
    - operation under load/no load conditions
    - types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers:
    - function and basic operation
  - maintenance of a power transformer:
    - basic connections
    - restrictions to parallel operation
    - problems and remedies associated with harmonics
    - testing and fault-finding procedures
  - characteristics of a :

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - description and purpose
- the installation of metering and control equipment encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment
    - types of meters:
        - kilowatt-hour meters single and polyphase
        - demand meters
        - recording meters and electronic recording metering systems summators
    - installation and removal methods:
        - direct connection and plug in method
        - enterprise specific
    - types of associated equipment and accessories:
        - meter boards, service fuse, links, contactors, time switch and audio frequency injection relay
    - testing procedures:
        - safety and polarity testing
- principles of statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV systems
    - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- the installation of switchgear and associated equipment encompassing:
    - types and function of various switchgear:
        - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches and circuit breakers
        - operating characteristics
        - advantages and disadvantages of different types switchgear
        - installation procedures
        - earthing requirements and techniques
    - types of equipment include:
        - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
    - installation procedures for switchgear and equipment encompassing:
        - standards, codes, legislation, supply authority regulations and/or enterprise requirements
        - assembly and erecting procedures
        - earthing requirements and techniques and pole mounted locations
    - maintenance procedures for switchgear and equipment:
        - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - testing and commissioning:
        - ESI standards and procedures
- HV distribution transformer principles encompassing:
    - operation of HV distribution transformers:
        - principle governing factors for transformer ratings, protection and alarms
        - operating limitations and the relationship between transformer and HV fuse rating
        - purpose and principle operation of HV distribution transformer tap changers
        - HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
    - HV underground switching equipment:
        - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- feeder automation system encompassing:
    - function of feeder automation system and the main components
    - operation procedure for a remote field device from a local control station
    - functions of system control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
    - SCADA system security interlocks and access restrictions
    - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
    - function of the main components of a local/remote control system
    - operation of a field devices using SCADA systems via a RAT, dial up annunciated system and local control station
- environmental fundamentals encompassing:
    - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the control of environment associated with the worksite encompassing, relevant federal legislation, relevant state/territory legislation, relevant local government by-laws, relevant government or quasi government policies and regulations and relevant community planning and development agreements (land care agreements)
    - employer and employee responsibilities
    - methods of obtaining information on environmental issues and updates
    - methods of identifying environmental impacts from work related activities
    - meaning of environmental terms encompassing:
        - identification, assessment and control of risks
        - compliance and best practice and sustainable energy
    - procedures in implementing management plans to ensure compliance
- layout principles for a distribution substation minor upgrade encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to a distribution substation

© Commonwealth of Australia, 2025 Powering Skills Organisation

minor upgrade
  - requirements for the use of distribution substation minor upgrade construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components and equipment
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - resources needed for the laying of conductors, cables and equipment
  - determining the appropriate installation sequence
  - minimum clearances between conductors and equipment
  - estimation of the duration of underground distribution extension project
- fundamentals of distribution transformers encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the safe operation and testing of distribution transformers and auxiliary equipment
  - drawing layouts, conventions and symbols,
    - vector group of transformers
    - three phase transformers
  - construction of a distribution transformer
  - characteristics when operated under load and no-load conditions
  - percentage impedance determinations by test and calculation
  - function and operation of tap charging switches, including solid state tap changing equipment
  - function and operation of transformer auxiliary equipment
  - problems caused by harmonics in transformers
  - methods and equipment used to overcome harmonics in transformers
- testing procedures of distribution transformers encompassing:
  - safety precautions specific to the testing of distribution transformers
  - procedures for safely connecting distribution transformers for testing
  - testing of distribution transformers to determine losses
  - calculation of transformer’s efficiency
  - methods and types of equipment used to cool transformers:
    - properties of transformer oil and tests performed on transformer oil
  - techniques in performing selected tests on transformer oil
  - techniques in performing testing procedures on armer
  - techniques in testing distribution transformers
  - distribution transformer parallel connections:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - conditions and restrictions for parallel operations
  - calculations of loading on transformers operating in parallel
  - connection of transformer in parallel to supply a common load
- distribution earthing system encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to the distribution earthing system
  - reason and types of distribution earthing systems
  - terminologies used in the earth systems including, touch and step potential
  - conditions associated when an active HV conductor fails to earth
  - selection of earthing electrodes and grids
  - determination of the earthing resistance of copper clad rods using earthing monograms.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS38 Design power system public lighting systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the technical design of public lighting systems. This includes pedestrian and traffic route lighting to relevant Australian Standards utilising appropriate software to generate design conformance.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy

© Commonwealth of Australia, 2025 Powering Skills Organisation

management policies & procedures

Pathway Unit Group 1

UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure

UETTDRDS45 Organise and implement ESI line and easement surveys

Pathway Unit Group 2

UETTDRDS43 Develop high voltage and low voltage distribution protection systems

Competency Field

Design

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for and coordinate the safe design of public lighting systems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures which may influence the design of public lighting systems are reviewed and determined
	1.2 Purpose of the design is established and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the design are obtained or established with appropriate personnel
	1.4 Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures
	1.5 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a

© Commonwealth of Australia, 2025 Powering Skills Organisation

		quality standard and in accordance with established procedures
	1.6	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.7	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.8	Resources, including personal, equipment, tools and PPE required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
2 Carry out and coordinate the design of public lighting systems	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical models of the distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given to potential hazards, safety risks and control measures so that monitoring and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.8	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete and coordinate the design of public lighting systems	**3.1**	Final inspections of the design are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the design brief
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of design documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS38A Design power system public lighting systems.

Assessment Requirements for UETTDRDS38 Design power system public lighting systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) technical designs of a public lighting system utilising at least three of the following project types:
  - single light on existing assets
  - main road/minor road schemes
  - intersections
  - traffic management devices
  - alteration to existing assets
  - multi-circuit systems
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- identification of basic concepts, principles and applications:
  - application of velocity, acceleration, force, density, torque and pressure
- applications of the International System of Units (SI) units
- the relationship between work, power and energy
- behaviour of object under force:
  - using a block and tackle under load
  - concept of mechanical advantage
  - determination of resultant forces
  - determining the sag in a catenary conductor and the force applied at each end
- fundamentals of the basic laws of fluid mechanics

- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications:
    - properties of tensile strength
    - effects of temperature on the expansion of metals
    - ductility, malleability, work hardening and annealing and the conditions that lead to corrosion and the properties of timbers
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system:
    - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
  - characteristics of a transmission, distribution and rail system:
    - principal components
    - typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system:
    - advantages/disadvantage
    - applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts:
    - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the HV equipment associated with substations
- procedures for installation and maintenance on public lighting structures and associated equipment encompassing:
  - standards, codes, legislation, supply authority regulations, local government and/or enterprise requirements pertaining to the installation and maintenance of public lighting systems and associated equipment
  - safety precautions specific to working on street lighting:
    - safe working practices and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - safe clearances from low voltage (LV) and high voltage (HV) mains
        - working at heights, working in confined spaces, permit to work systems and isolation procedures
        - emergency response and rescue, including first aid
    - basic public lighting principles:
        - electromagnetic spectrum
        - principles of colour
        - behaviour of light
        - factors that affect illumination
    - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
        - street lighting circuits and earthing system
    - types of tools and equipment used for installation and maintenance
    - types and function of lanterns/luminaires/lamps, control equipment, poles and associated hardware used for street lighting:
        - high pressure mercury vapour, low pressure and high pressure sodium vapour, fluorescent, quartz-halogen, wood, concrete, steel, composite, choke boxes, photo-electric cells, time switches and contactor boxes
    - types of lighting systems:
        - overhead and underground street lighting systems and controlling and switching of lighting systems
    - techniques for the installation of street lighting systems
    - techniques for the maintenance of street lighting systems:
        - diagnosing of faults
        - removing, repairing, replacing and cleaning of public lighting and associated hardware
    - application of specific testing equipment:
        - voltage detectors
        - insulation resistance testers
        - clamp-on ammeters
        - continuity testers
        - fault indictors
    - techniques for the inspection, testing and commissioning of street lighting systems
- principles of statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV systems
    - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- principles of light design layout encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the light design

© Commonwealth of Australia, 2025 Powering Skills Organisation

principles

- requirements for the use of street lighting system construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
- types of tariffs and charges
- types of street lighting components:
  - column types, foundations, brackets, luminaries and mounting heights
- types of electrical street lighting circuits:
  - types of supply
  - lighting circuit and control circuit
- fundamentals of lighting production:
  - electromagnetic spectrum
  - visible and non-visible radiation
  - spectral energy distribution
  - infra-red, ultra-violet, radiation-safety, incandescence and phosphorescence
  - reflection and refraction
- fundamentals of lighting concepts:
  - terms and units and the purpose of reflectors and diffusers
- factors affecting external lighting design
- calculation of light output
- determining illuminance:
  - point to point and lumen method
- determining rated life of luminaries
- fundamentals of street lighting design
- considerations for special lighting situations:
  - security lighting, hazardous street locations and emergency lighting

- principles to layout and draft a street lighting system encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to street lighting system layouts and drafts
  - requirements for the use of street lighting system construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components, such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - determination of street lighting positions for optimum visibility and to minimise traffic

© Commonwealth of Australia, 2025 Powering Skills Organisation

hazards
- techniques in mounting and positioning of lights
- resources needed for the installation of street lighting system
- methods of pegging out of pole positions and/or underground cable positions
- minimum clearances between overhead conductors and LV/and HV structures
- estimation of the duration of overhead distribution extension project.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the preparation of detailed plans to be used during the design phase and preparation of as-built drawings during the construction phase and utilised by network owners as technical reference materials to detail system infrastructure. It includes the use of computer-aided drafting (CAD) or other relevant drafting methods.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- preparing six (6) compliant detailed plans that relate to the following project types:
  - overhead line designs
  - underground line designs
  - distribution substations designs
  - transmission and sub-transmission substation designs
  - public lighting designs
  - zone substation designs
  - customer substation designs
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working safely on or around electrical equipment through the application of risk management principles and control measures for dealing with non-electrical hazards and extra-low voltage (ELV), low voltage (LV) and high voltage (HV) hazards and high current hazards encompassing:
  - risk management and assessment of risk encompassing, principle and purpose of risk management and the processes for conducting a risk assessment
  - hazards associated with LV, ELV and HV:
    - arrangement of power distribution and circuits in an electrical installation
    - parts of an electrical system and equipment that operate at LV and ELV

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - parts of an electrical system and equipment where high currents are likely
  - risks and control measures associated with HV:
    - parts of an electrical system and equipment that operate at HV
    - the terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of HV and control measures used for dealing with the hazards of HV
  - optical fibre safety:
    - coherent optical sources, joining procedures and laser safety class 3a devices or their replacement
  - risks and control measures associated with LV:
    - modifying electrical installations, fault finding, maintenance and repair
    - control measures before, during and after working on electrical installations, circuits or equipment
    - isolation and tagging-off procedures
    - risks and restrictions of live work
    - control measures for live work
  - risks and control measures associated with harmful dusts and airborne contaminants:
    - thermal insulation, fibrous cement materials and asbestos and other fibre reinforced switchboard materials
  - safety, selection, use, maintenance and care of test equipment:
  - safety characteristics of electrical testing devices
  - safe use of electrical testing device
  - checks and storage methods for maintaining the safety of testing devices
- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant health and safety legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management system to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management systems
  - analysis of relevant data and evaluation of WHS/OHS system effectiveness
  - assessing resources to establish and maintain WHS/OHS management systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system:
    - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
  - characteristics of a transmission, distribution and rail system:

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - principal components
        - typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
    - relationship between an overhead and underground supply systems within an overall power system:
        - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
    - single line drawings and layouts:
        - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the HV equipment associated with substations
- installation of overhead distribution conductors encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
    - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
        - material lists, conductor size, type and route length
    - constructions types and structures for distribution and sub-transmission lines
    - types, sizes and characterises of overhead conductors
    - resources for the stringing and maintenance of conductors:
        - types of LV and HV overhead electrical conductor connections
        - causes and effects of poor electrical connections
        - reasons for and methods used to maintain standard phase sequencing, removing, repairing and replacing of damage conductors
        - minimum clearances between overhead conductors and LV and HV structures
    - techniques for conductor installation:
        - types and application of tools, equipment and hardware
        - methods of stringing, tensioning and termination of LV and HV conductors
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework:
        - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders:
        - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole
        - maintenance checks on different types of ladders
        - renewal of extension ropes and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft:
        - methods used to identify a pole is safe to climb
        - methods used to inspect a line worker’s body belt
        - application of knots and hitches appropriate to the requirements of a line worker

© Commonwealth of Australia, 2025 Powering Skills Organisation

- height safety principles, including personal fall protection, prevention and related requirements
- practical procedures of climbing an overhead structure and fitting a pole chair
- traffic management:
  - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry requirements
  - procedures used to provide an effective traffic management scheme and the use of a two-way radio
- control of small fires:
  - identification, selection and operation of the appropriate extinguishing mediums for various types of fires
  - general fire prevention methods
  - precautions for personal protection when fighting small fires
- rescue victims from heights and confined spaces:
  - planning and identifying procedures, and establishing responses and developing techniques
  - involvement of external emergency services
  - emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework:
  - planning, establishing and implementing relevant aviation authority clearances
  - determining system requirements
  - aircrew familiarisation with network operations and equipment
  - requirements for effective communications operations for aerial work

- implementation and monitoring requirements for powerline safety encompassing:
  - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of WHS/OHS in the workplace:
  - Commonwealth/state/territory legislation relevant to the workplace and the meaning of general duty of care under WHS/OHS legislation and common law
  - workplace WHS/OHS enterprise plan:
    - responsibilities of each member of the work team
    - review process for changing/improving WHS/OHS safety plan/standing instructions for the systematic management of WHS/OHS in the workplace
  - relationship between the WHS/OHS committee and employees:
    - methods used to collate and distribute/disseminate WHS/OHS information
    - staff development activities and legislation requirements with regards to WHS/OHS training
    - methods of addressing barriers such as literacy and cultural differences
    - provisions relating to WHS/OHS issue resolution
  - hazards associated with powerline industry:
    - identification of hazards in the workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - processes used and contributing factors to a hazardous situation assessment of risks and control of WHS/OHS risks (risk management),
        - the hierarchy of control and monitoring of risk control measures
    - risk assessment and its management in powerline industry:
        - principles and purposes of risk management
        - processes for conducting risk assessment, including risk analysis and risk evaluation activities for selecting and implementing appropriate options for eliminating or minimising risk
    - maintenance strategies for WHS/OHS programs:
        - developing processes for promoting, maintaining and improving WHS/OHS in the workplace
        - identify techniques for the evaluating and reviewing WHS/OHS education and training programs and elements of an effective WHS/OHS management system
        - WHS/OHS consultation and accident/incident investigations
- principles of safe design encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with safe design principles
    - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
    - application of safe design principles:
        - safe design duty-related information
        - safe design process related information and safe design evaluations
- HV single wire earth return (SWER) system encompassing:
    - application and function of SWER system components
    - circuit arrangement
    - principle of operation
    - hazards and procedures associated with faulty SWER earth systems
    - procedure to isolate, energise and commission SWER substations
- enterprise-specific switching diagrams and drawing encompassing:
    - types and application of enterprise-specific switching drawings and :
        - wiring and schematic diagrams and switching symbols
        - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams:
        - LV system switching diagrams
        - direct current (DC) traction supply sectioning diagrams
        - HV transmission and distribution system symbols and feeder plans
        - processes of updating switching diagrams
- power distribution network documentation encompassing:
    - requirements for the use of manuals, system diagrams/plans and drawings and for plans

© Commonwealth of Australia, 2025 Powering Skills Organisation

such as work method statements for the control of WHS/OHS risks
    - types and application of power distribution network documentation drawings and documents:
        - wiring and schematic diagrams
        - drawings and switching symbols
        - mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different diagrams and documentation on LV and HV systems:
        - overhead distribution extensions
        - underground distribution extensions
        - distribution substations
        - street lighting systems
- system components and layouts encompassing:
    - distribution system layouts:
        - overhead/underground
        - urban/rural
        - HV customers
        - high rise building systems
        - three phase lines and single phase lines
        - SWER systems
        - spur, parallel and ring systems
        - typical substation types
    - transmission system layouts:
        - lines, buses, transformers and cables
        - line/bus layouts, including single, double, ring and breaker, and half systems
        - HV crossing methods
- circuit breaker auxiliary systems encompassing:
    - types and characteristics of high pressure air systems, including air storage and air handling processes
    - types and characteristics of DC systems, including battery types, charging systems and protection systems
    - types and characteristics of special ambient gases (SF6) systems, including gas conditioning, storage and handling systems
    - types and characteristics of vacuum interrupters
    - types and characteristics of oil filled and oil handling
- DC transmission systems encompassing:
    - structure of DC transmission systems
    - types of equipment required for DC transmission systems
    - types of connections used for DC transmission systems
    - principles of control of DC transmission systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - advantages of DC transmission in comparison to alternating current (AC) transmission
  - disadvantages of DC transmission in comparison to AC transmission
- AC transmission line electrical parameters encompassing:
  - typical arrangements
  - parameters of significance
  - calculation of line parameters:
    - calculation of resistive, inductive and capacitive values assuming regular transposition and solid conductors
  - comparison with actual values
  - typical parameter values and ratios for different voltage level lines
- AC transmission line models encompassing:
  - types of transmission line models based on line length
  - calculation of voltage drop, line regulation and transmission efficiency
  - load sharing between lines
- voltage control techniques encompassing:
  - conditions leading to voltage collapse
  - effects on system of HV and LV
  - voltage control devices:
    - voltage regulators applied to generators and synchronous phase modifiers
    - electromagnetic voltage regulators
    - series and parallel capacitors
    - on-load tap changer (OLTC) transformers and static VAR compensators (SVC) SVC's includes saturated reactor compensators; thyristor controlled reactor compensators and combined systems
  - production of harmonics and methods of harmonic control
  - location of voltage control devices within the system
- voltage control devices encompassing:
  - typical devices applications and capacities
  - estimation of rating of VAR regulating devices using graphical techniques
- system components and layouts encompassing:
  - distribution system layouts:
    - overhead/underground
    - urban/rural
    - HV customers
    - high rise building systems
    - three phase lines and single phase lines
    - SWER systems
    - spur, parallel and ring systems
    - typical substation types
  - transmission system layouts:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - lines, buses, transformers and cables
    - line/bus layouts, including single, double, ring and breaker, and half systems
    - HV crossing methods
- corona encompassing:
  - factors leading to the generation of corona:
    - voltage levels
    - conductor spacings, conductor sizes and shaping
    - atmospheric conditions
  - consequences of corona
  - corona reduction:
    - conductor selection
    - conductor bundling
    - conductor surface treatment
    - grading rings
  - internal discharge:
    - causes of internal discharge
    - effects of internal discharge
    - testing techniques
- protection system types encompassing:
  - requirements of a protection scheme:
    - relationship to primary system design
    - purpose of protection, safety of persons and protection of plant
    - system instability
    - system break up
    - loss of customers and loss of revenue
    - protection zones
    - restricted schemes and unrestricted schemes
    - duplicate protection
    - local backup protection and remote backup protection
    - selectivity, discrimination, stability, sensitivity and reliability
  - components of a protection scheme:
    - current transformers, potential transformers, summation current transformers, interposing transformers and multi-tapped transformers
    - all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor-based relays and gas relays
    - thermal sensors
    - hardwired communication
    - powerline carrier systems
    - microwave systems
    - fibre optic systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - need for isolation
    - need for interfacing
- protection applied to buses:
    - overload, differential, earth leakage, structure leakage, combined schemes and protection overlap
- protection applied to transformers:
    - biased differential, gas, winding temperature and oil temperature
- protection applied to single/radial lines:
    - overcurrent, earth leakage, slow earth leakage, distance, auto reclose, sectionalising and over voltage
- protection applied to interconnected lines:
    - overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance and offset.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for detailed construction plans for electrical system infrastructure
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS42 Investigate quality of power systems supply issues

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the technical investigation of quality of supply issues and recommending solutions. Quality of supply issues may include television and radio interference, voltage complaints, harmonics and system irregularities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy

© Commonwealth of Australia, 2025 Powering Skills Organisation

management policies & procedures

UETTDRDS35 Design overhead distribution power systems

UETTDRDS36 Design underground distribution power systems

Pathway Unit Group 1

UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure

UETTDRDS45 Organise and implement ESI line and easement surveys

Pathway Unit Group 2

UETTDRDS43 Develop high voltage and low voltage distribution protection systems

Competency Field

Design

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for and coordinate the investigation of issues in the quality of supply	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the investigation of issues in the quality of supply, are reviewed and determined
	1.2 Purpose of the investigation is established and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the investigation are obtained or established with appropriate personnel
	1.4 Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.6	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.7	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.8	Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned in accordance with requirements
2 Carry out and coordinate the investigation of issues in the quality of supply	**2.1**	Circuit/system modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Investigation decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4	Mathematical models of the quality system are used to analyse the effectiveness of the finished product/service in accordance with requirements and established procedures
	2.5	Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.8	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.9	Testing of supply quality is undertaken according to requirements and established procedures
3 Complete and coordinate the investigation of issues in the quality of supply	**3.1**	Final assessments of the quality of project are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the supply brief
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of quality assessment documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS42A Investigate quality of power systems supply issues.

Assessment Requirements for UETTDRDS42 Investigate quality of power systems supply issues

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) technical solutions to issues relating to the following project types:
  - television and radio interference
  - voltage irregularities in an urban area
  - voltage irregularities in a rural area
  - voltage irregularities affecting an industrial/commercial customer
  - voltage irregularities in an underground area
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- detailed operation of fundamental test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters:
    - measurement of voltage, current, power, resistance, insulation resistance, impedance and phase sequence and the use of oscilloscopes
- detailed operation of field device test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters:

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - measurement of voltage, current, power, reactive power, phase angle, resistance, inductance, capacitance, impedance, frequency, harmonics and the use of transient and data logging devices
- quality of supply measures encompassing:
    - measure, analysis and solutions for the following;
    - voltage variation outside of standards
    - voltage sags and swells
    - repeated fluctuations, impulses and momentary interruptions
    - frequency variation and harmonics - causes, effects and methods of minimisation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry to investigate quality of supply issues
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS43 Develop high voltage and low voltage distribution protection systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the development of appropriate protection systems for high voltage (HV) and low voltage (LV) distribution networks, including calculations of fault levels, selection of appropriate protection devices and automation requirements, and protection coordination schemes. It also includes recommendations to support the calculations and must ensure conformance to specific organisational operational and system planning requirements, and compliance with national or supply authority codes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and coordinate for the development of HV and LV protection systems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the development of HV and LV protection systems, are reviewed and determined
	1.2 Purpose of the development is established and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the development are obtained or established with appropriate personnel
	1.4 Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures
	1.5 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.6 Risk control measures are identified, prioritised and evaluated against the work schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.7	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.8	Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
2 Carry out and coordinate the development of HV and LV protection systems	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical models of the HV and LV protection systems are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.8	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete and coordinate the development of HV and LV protection systems	**3.1**	Final inspections of the system design are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the design brief
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of design documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS43A Develop high voltage and low voltage distribution protection systems.

Assessment Requirements for UETTDRDS43 Develop high voltage and low voltage distribution protection systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- completing at least two (2) designs from two (2) of the following project types:
  - distribution overhead designs
  - distribution underground designs
  - distribution substation designs
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS systems
  - analysis of relevant data and evaluation of WHS/OHS system effectiveness
  - assess resources to establish and maintain WHS/OHS management systems
- principles of safe design encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with safe design principles

© Commonwealth of Australia, 2025 Powering Skills Organisation

- particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- application of safe design principles:
  - safe design duty related information, safe design process related information and safe design evaluations

- installation of switchgear and associated equipment encompassing:
  - types and function of various switchgear:
    - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches and circuit breakers
    - operating characteristics
    - advantages and disadvantages of different types switchgear
    - installation procedures
    - earthing requirements and techniques
  - types of equipment:
    - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements
    - assembly and erecting procedures
    - earthing requirements and techniques and pole mounted locations
  - maintenance procedures for switchgear and equipment:
    - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
  - testing and commissioning:
    - ESI standards and procedures
- electrical equipment associated with distribution field device protection and control schemes encompassing:
  - types and applications of electrical equipment:
  - characteristics and capabilities
  - schemes, automatic circuit reclosers (ACRs), gas switches, secondary injection tests, primary injection tests, TMR radio’s, supervisory control and data acquisition (SCADA), remote control, overcurrent, earth fault, sensitive earth fault, inverse time curves, definite time curves, tripping, reclose, direct current (DC) supplies, alternating current (AC) supplies and alarms
- calculation of fault levels encompassing:
  - calculation of fault levels in symmetrical and asymmetrical fault conditions:
    - types of faults
    - interconnected and radial systems
    - symmetrical components
    - representation of voltages and currents

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - sequence impedances of system plant
        - calculation/determination of sequence impedance networks
        - determination of operative sequence impedances
        - fault or arc impedances
        - first approximation techniques
    - interrupting device capabilities:
        - determination of fault current breaking capability and let through energy capability of fuses and circuit breakers
        - DC offset and transient condition effects
- detailed operation and setting of discrete protection systems encompassing:
    - earth fault protection:
        - master earth leakage schemes
        - sensitive earth fault relays and schemes
        - residual earth fault scheme
        - core balance earth fault scheme
        - frame/structure earth leakage scheme
        - time graded discrimination
        - backup protection
    - overcurrent protection:
        - feeder overcurrent protection
        - instantaneous overcurrent schemes
        - inverse timed overcurrent schemes
        - types and location of components of an overcurrent scheme
        - CT summation
        - time graded discrimination
        - backup protection
    - alarms and controls:
        - auxiliary relays
        - voltage regulating relays
        - line drop compensation
        - gas relay types
        - gas relay scheme operation and setting
        - over temperature schemes
- polyphase systems and its application towards the calculation of circuit conditions encompassing:
    - structure of a three phase system:
        - components, sequence of phases and balanced and unbalanced load conditions
    - calculations of phase and line voltages for a specified phase sequence
    - calculation of voltage, current, power, power factor in a three phase system:
        - balanced three phase systems

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - unbalanced delta connected loads
    - unbalanced four-wire star connected loads
    - unbalanced three-wire star connected loads
    - unbalanced four-wire star connected systems
  - calculation of the neutral displacement voltage in unbalanced three-wire star connected systems
  - selection and connection of meters to confirm calculations
  - control of harmonics:
    - harmonic analysis of non-sinusoidal waves of voltage and current
    - production of harmonics in three phase power systems
    - effects of harmonics on three power systems and loads
    - types of harmonics commonly encountered on three phase power systems
    - identification by observation of harmonic components present in a waveform
  - calculation of effective value of non-sinusoidal waves
  - calculation of current/voltage in a complex load given a voltage/current with a Fourier analysis of up to 3 terms
  - pre-unit system in calculations:
    - reasons for use
    - groups of parameters commonly represented
    - common applications of the per-unit system to represent device specifications
    - applications of per-unit quantities in simple electrical calculations
  - method of symmetrical components:
    - reasons for the use
    - types of components used to represent a three phase system
    - reasons for difference in the impedance of a component to the various symmetrical components and commonly occurring relationships between different sequence impedances for common component groups
- protection schemes encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
  - types of protection schemes:
    - reasons for use
    - application of protection zones around system elements and degree of protection
  - types of feeder protection equipment:
    - overcurrent protection inverse time-current operating characteristics
  - operation of overcurrent protection equipment used on distribution systems
  - operation of ACRs and their time-current characteristics
  - types and characteristics of overcurrent relays
  - coordination methods of a distribution feeder protection scheme
  - earth fault protection used on a distribution feeder

© Commonwealth of Australia, 2025 Powering Skills Organisation

- operation of a single wire earth return (SWER) system.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry of high voltage (HV) and low voltage (LV) distribution protection systems
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS45 Organise and implement ESI line and easement surveys

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the surveying of distribution and sub-transmission lines and easements for activities associated with the design and installation of electrical equipment. This activity encompasses the use of instruments, such as compasses, inclinometer and distance measuring devices, and be in accordance with customer requirements, nominated design specifications and company processes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and coordinate the organisation and implementation of line and easement surveys	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the organisation and implementation of line and easement surveys, are reviewed and determined
	1.2 Purpose of the line and easement surveys is established and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the design are obtained or established with appropriate personnel
	1.4 Equipment/tools and personnel protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures
	1.5 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.6 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.7 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.8 Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		coordinated and confirmed safe and in technical working order
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.12	Positioning of road signs, barriers and warning devices is planned in accordance with requirements
2 Carry out and coordinate the organisation and implementation of line and easement surveys	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Survey project decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical models of the distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.8	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
	2.9	Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
3 Complete and coordinate the organisation and implementation of line and easement surveys	**3.1**	Final assessment of the surveys is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the design brief
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of survey documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS45A Organise and implement ESI line and easement surveys.

Assessment Requirements for UETTDRDS45 Organise and implement ESI line and easement surveys

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) surveys of an overhead network relating to the following project types:
  - multi-pole extensions (distribution and sub-transmission)
  - in-line pole relocations (distribution and sub-transmission)
  - multi-circuit overhead lines (distribution and sub-transmission)
  - underground augmentation project
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the surveying for an overhead and underground extension
  - techniques in measuring heights and distances
  - techniques in taking bearings angles of deviation using a compass
  - techniques in using a clinometer
  - techniques in recording and storage of data

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
    - techniques in plotting long spans:
        - measuring stick, clinometer, trundle wheel and tapes
        - correction for sloping ground
        - distance across objects and range rods
    - techniques in pegging pole positions:
        - foot path alignments, types of pegs, pegs of other authorities and locating survey pegs
- project management encompassing:
    - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements, including relevant certification and licensing applicable to the duties and responsibilities for management of a project
    - analysis functions of project management to determine achievement of project objectives
    - relationship of stakeholders to the project
    - techniques in development of project plan:
        - project integration, scope, timelines, cost, quality, resources, communication/protocol requirements, risk/uncertainties and procurement and contacting
    - relationship between project processes, project life and project phases
    - planning and control procedures, resource management and risk management
    - techniques, methodologies and tools available to project managers
    - types of internal and external environmental factors that may affect the project.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS46 Develop planned power systems outage strategies

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the competency required to assess and manage the impact on the network and customers with regards to planned outages. This includes customer outage times, network and plant loading issues and regulatory requirements. A detailed knowledge of network performance indicators is required.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEED104A Use engineering applications software on personal computers

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Competency Field

Design

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for and coordinate the development of outage strategies	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the outage strategies, are reviewed and determined
	1.2 Purpose of the outage is established and expected outcomes of the work are confirmed with appropriate personnel
	1.3 Organisational established procedures on policies and specifications for the outage are obtained or established with appropriate personnel
	1.4 Equipment/tools and personnel protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures
	1.5 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.6 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.7 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.8 Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised,

© Commonwealth of Australia, 2025 Powering Skills Organisation

		where applicable, in accordance with established procedures
2 Carry out and coordinate the development of outage strategies	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the strategy in accordance with requirements and/or established procedures
	2.3	Strategy decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical models of the outage strategies are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the strategy within an agreed timeframe according to requirements
	2.7	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.8	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete and coordinate the development of outage strategies	**3.1**	Final review of the strategy is undertaken to ensure it complies with all requirements and include all specifications and documentations needed to complete the project
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval

3.4 Approved copies of outage strategy documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRDS46 Develop planned power systems outage strategies

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements including the use of risk control measures
- applying sustainable energy principles and practices
- writing three (3) outage strategies, including at least one (1) of each of the following network types:
  - low voltage (LV) networks
  - high voltage (HV) networks
- each of the above outage strategies must include the following:
  - switching instructions laid out according to enterprise requirements
  - a documented process to indicate methods used to check switching instructions
  - documentation of coordination process of switching schedules
  - documentation of plant loading calculation
  - initiation of customer notifications according to enterprise requirements
  - entry of data for collection of ‘minute of supply’ records into relevant systems
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working safely on or around electrical equipment through the application of risk management principles and control measures for dealing with non-electrical hazards and extra-low voltage (ELV), LV and HV hazards and high current hazards encompassing:
  - risk management and assessment of risk:
    - principle and purpose of risk management and processes for conducting a risk assessment
  - hazards associated with LV, ELV and high currents

© Commonwealth of Australia, 2025 Powering Skills Organisation

- arrangement of power distribution and circuits in an electrical installation
- parts of an electrical system and equipment that operate at LV and ELV
- parts of an electrical system and equipment where high currents are likely
- risks and control measures associated with HV:
  - parts of an electrical system and equipment that operate at HV
  - the terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of HV
  - control measures used for dealing with the hazards of HV
- optical fibre safety:
  - coherent optical sources and joining procedures and laser safety class 3a devices or their replacement
- risks and control measures associated with LV:
  - risks associated with modifying electrical installations, fault finding, maintenance and repair
  - control measures before, during and after working on electrical installations, circuits or equipment
  - isolation and tagging-off procedures
  - risks and restrictions in live work and control measures for live work
- risks and control measures associated with harmful dusts and airborne contaminants:
  - thermal insulation, fibrous cement materials and asbestos and other fibre reinforced switchboard materials
- safety, selection, use, maintenance and care of test equipment:
  - safety characteristics of electrical testing devices
  - safe use of electrical testing device
  - checks and storage methods for maintaining the safety of testing devices
- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management systems
  - analysis of relevant data and evaluation of WHS/OHS system effectiveness
  - assess resources to establish and maintain WHS/OHS management systems
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and c-ordination:
    - clear and concise instructions and information

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - methods for the encouragement of feedback and contributions of information and ideas
    - responsibilities of members of the team
  - techniques in analysing, planning, coordination and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites:
    - electrical network diagrams for the specific worksite
    - earth access authorities
    - safe working area
    - work to be carried out in confined space or in hazardous environment
    - specific outsourcing procedures
    - specific hazard identification, risk classification and management procedures
    - regulatory requirements, such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits:
    - working in confined space, if required
    - coordination of access authorities
    - engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- principles of safe design encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with safe design principles
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
  - application of safe design principles:
    - safe design duty related information, safe design process related information and safe design evaluations
- installation of switchgear and associated equipment encompassing:
  - types and function of various switchgear:
    - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches and circuit breakers
    - operating characteristics
    - advantages and disadvantages of different types switchgear
    - installation procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

        - earthing requirements and techniques
    - types of equipment:
        - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
    - installation procedures for switchgear and equipment:
        - standards, codes, legislation, supply authority regulations and/or enterprise requirements
        - assembly and erecting procedures
        - earthing requirements and techniques and pole mounted locations
    - maintenance procedures for switchgear and equipment:
        - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
    - testing and commissioning:
        - ESI standards and procedures
- LV switching principles encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
    - requirements for the use of manuals, system diagrams/plans and drawings:
        - types, characteristics and capabilities of electrical apparatus
        - use, characteristics and capabilities of specialised tools and testing equipment
        - LV network interconnectors source of possible back-feed
    - LV switching techniques:
        - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures, earthing procedures and personnel protective equipment (PPE) for LV switching
- HV switching principles encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
    - requirements for the use of manuals, system diagrams/plans and drawings:
        - types, characteristics and capabilities of electrical apparatus
        - use, characteristics and capabilities of specialised tools and testing equipment
        - HV network interconnectors source of possible back-feed
    - role of the HV switching operator
    - operational forms, access authorities and permits associated with HV switching:
        - types of operational forms, access authorities and permits
        - purpose and procedure for operational forms, access authorities and permits
    - use and operation of equipment associated with HV overhead and substation equipment:
        - test instruments, sticks, interrupters and arc stranglers
    - types and categories of HV switchgear
    - application, function and operating capabilities of switchgear
    - restrictions pertaining to HV switching equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- procedures for the isolation of HV transmission main and working earths
- earthing HV electrical apparatus practices and procedures for access:
  - purposes of operational and additional work part 'on-site' earths
  - factors determining the location and effectiveness of operational earthing
  - acceptable industry procedures and personal protective equipment (PPE)
- HV switching techniques
- operating switching apparatus:
  - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures

- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings:
    - types, characteristics and capabilities of HV electrical equipment to be switched
    - use and characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching:
    - types of operational forms, access authorities and permits
    - hazard/risk assessments and purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment:
    - test instruments, sticks, interrupters and arc stranglers
  - HV switchgear:
    - types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices:
    - fuses; disconnect fuses
    - load switching
    - live line indicators
    - capacitors
    - reclosers
    - sectionalisers
    - underslung links
    - airbreaks
    - switches
    - disconnects
    - live line clamps
    - phasing sticks
    - phasing tester

© Commonwealth of Australia, 2025 Powering Skills Organisation

- operation of protection systems and substation equipment:
  - fault levels and settings
  - types and applications
  - protection systems and substation equipment fault levels and settings
  - types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths:
  - earthing HV electrical apparatus practices and procedures for access authority issuing
  - HV switching techniques
- operate switching apparatus:
  - identifying hazards, assessing and controlling risks associated with HV switchgear operation
  - systematic and defensive techniques
  - mobile radio procedures
  - double isolation procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry to develop planned outage strategies
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRDS50 Design customer power system substations

Modification History

Release 2. Removed deleted unit UETTDRDS44 and removed Pathway Unit Group 3 due to zero enrolments.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the design of basic primary and secondary plant within a customer substation. Such designs will usually include relay-operated high voltage (HV) switchgear, distribution transformers, low voltage (LV) switchgear, including customer distribution boards. The design may include minor civil engineering aspects and must conform to relevant Australian Standards, safety regulations, environmental standards and customer requirements taking into account costs as an important criterion.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Pathway Unit Group 1

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEE104A Solve problems in d.c. circuits

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure

UETTDRDS45 Organise and implement ESI line and easement surveys

Pathway Unit Group 2

UEENEEE104A Solve problems in d.c. circuits

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDRDS43 Develop high voltage and low voltage distribution protection systems

Competency Field

Design

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan for and coordinate the design of customer substations	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the design of customer substations, are reviewed and determined
	1.2 Purpose of the design is established and expected outcomes of the work are confirmed with appropriate personnel

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.3	Organisational established procedures on policies and specifications for the design are obtained or established with appropriate personnel
	1.4	Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures
	1.5	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.6	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.7	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.8	Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.9	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
2 Carry out and coordinate the design of customer substations	**2.1**	Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
	2.2	WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
	2.3	Substation design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
	2.4	Mathematical models of the customer substation are

© Commonwealth of Australia, 2025 Powering Skills Organisation

		used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
	2.5	Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
	2.6	Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
	2.7	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.8	Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
3 Complete and coordinate the design of customer substations	**3.1**	Final inspections of the design are undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the design brief
	3.2	Appropriate personnel are notified of completion and reports and/or completion documents are finalised
	3.3	Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
	3.4	Approved copies of design documents are issued and records are updated in accordance with established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

© Commonwealth of Australia, 2025 Powering Skills Organisation

environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS50A Design customer power system substations.

Assessment Requirements for UETTDRDS50 Design customer power system substations

Modification History

Release 2. Removed deleted unit UETTDRDS44 and removed Pathway Unit Group 3 due to zero enrolments.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) designs in total drawn from at least two (2) of the following project types:
  - single transformer substations
  - multi-transformer substations
  - upgrade/alteration to existing assets
  - auto-changeover systems
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- substations and power transformers encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of high voltage (HV) equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, testing and fault-finding procedures
  - characteristics of reactors - description and purpose

© Commonwealth of Australia, 2025 Powering Skills Organisation

- installation of metering and control equipment encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment
  - types of meters - kilowatt-hour meters, single and polyphase, demand meters, recording meters and electronic recording metering system summators
  - installation and removal methods - direct connection and plug in method, and enterprise specific
  - types of associated equipment and accessories - meter boards, service fuse, links, contactors, time switch and audio frequency injection relay
  - testing procedures - safety and polarity testing
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
  - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- feeder automation system encompassing:
  - function of feeder automation system and the main components
  - operation procedure for a remote field device from a local control station
  - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
  - SCADA system security interlocks and access restrictions
  - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
  - function of the main components of a local/remote control system
  - operation of a field devices using SCADA systems via a RAT, dial up annunciated system and local control station
- layout principles for a distribution substation minor upgrade encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to a distribution substation minor upgrade
  - requirements for the use of distribution substation minor upgrade construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists - components types and quantity required, spacing of components and equipment, and costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS

© Commonwealth of Australia, 2025 Powering Skills Organisation

hazards, minimise risks and provide residual WHS/OHS risk information
    - determination of conductor size, type and route length
    - resources needed for the laying of conductors, cables and equipment
    - determining the appropriate installation sequence
    - minimum clearances between conductors and equipment
    - estimation of the duration of underground distribution extension project
- fundamentals of distribution transformers encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the safe operation and testing of distribution transformers and auxiliary equipment
    - drawing layouts, conventions and symbols - vector group of transformers and three phase transformers
    - construction of a distribution transformer
    - characteristics when operated under load and no-load conditions
    - percentage impedance determinations by test and calculation
    - function and operation of tap charging switches, including solid state tap changing equipment
    - function and operation of transformer auxiliary equipment
    - problems caused by harmonics in transformers
    - methods and equipment used to overcome harmonics in transformers
- testing procedures of distribution transformers encompassing:
    - safety precautions specific to the testing of distribution transformers
    - procedures for safely connecting distribution transformers for testing
    - testing of distribution transformers to determine losses
    - calculation of transformer efficiency
    - methods and types of equipment used to cool transformers - properties of transformer oil and tests performed on transformer oil
    - techniques in performing selected tests on transformer oil
    - techniques in performing testing procedures on armer
    - techniques in testing distribution transformers
    - distribution transformer parallel connections - conditions and restrictions for parallel operations and calculations of loading on transformers operating in parallel
    - connection of transformer in parallel to supply a common load.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry to design customer substations
- applicable documentation including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL11 Apply sustainable energy and environmental procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to apply sustainable energy and environmental procedures in the electricity supply industry (ESI).

It includes the implementation of environmental procedures to specific projects/sites, the identification of possible environmental risks and impacts, and the undertaking of work in accordance with sustainable energy and energy conservation principles.

It also includes the provision of recycling materials; the recording and reporting of environmental incidents; and the process of reviewing, participating in and contributing to environmental procedures in accordance with the workplace.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Assessment Requirements for UETTDREL11 Apply sustainable energy and environmental procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing environmental management documentation using all of the following:
  - environmental risk assessment
  - legislative requirements
  - sustainable energy principles and practice
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the control of environment associated with the worksite, including:
  - relevant federal legislation
  - relevant state/territory legislation
  - relevant local government by-laws
  - relevant government or quasi government policies and regulations
  - relevant community planning and development agreements - land care agreements
- employer and employee responsibilities
- methods of obtaining information on environmental issues and updates
- methods of identifying environmental impacts from work-related activities
- meaning of environmental terms, including:
  - identification, assessment and control of risks
  - compliance

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - best practice
  - sustainable energy
- procedures in implementing management plans to ensure compliance
- methods of obtaining updated environmental information and data sheets on the proper use and handling of equipment and materials
- WHS/OHS legislation, hazardous substances/dangerous goods regulations; and enterprise requirements applicable to environmental care when handling materials, including provision of manufacturer and supplier information, such as material safety data sheets (MSDS)
- types and application of personal protective equipment (PPE) used for hazards substances and dangerous goods
- techniques in handling equipment to eliminate/reduce risks to the environment from spillages of oils, herbicides, pesticides and chemicals from such equipment, including:
  - vehicle loading crane
  - chainsaw
  - enterprise vehicles
  - explosive power tools
- procedures for handling and control of spillages of herbicides
- methods of disposing and storage of herbicides, pesticides, oils and chemicals
- methods of cleaning mobile plant, equipment and tools
- emergency procedures for spillages of oil to reduce risks to the environment, including:
  - methods of cleaning up excessive spillages
  - methods of protection to surrounding environment
  - procedures for notification of relevant personnel and authorities
  - recording procedures
- recording of data.

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to operate plant and equipment near live electrical conductors and apparatus in the electricity supply industry (ESI).

It includes using relevant plant and equipment, relevant legislation, regulatory requirements for the operation of plant and equipment and conducting operational checks. It also includes, positioning road signs, barriers and/or warning devices and completing log books and job completion documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to operate plant and equipment near energised and exposed electrical conductors/apparatus	**1.1** Works schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and workplace procedures for the operation of plant and equipment near energised and exposed electrical conductors/apparatus are obtained and confirmed for the purposes of the work to be performed and communicated to others
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out the operation of plant and equipment near energised and exposed	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

	electrical conductors/apparatus	procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Plant and equipment near energised and exposed electrical conductors/apparatus are operated to agreed timeframes, to quality standards with a minimum of waste in accordance with workplace procedures
	2.4	Plant and equipment are safely operated near energised and exposed electrical conductors/apparatus in accordance with job requirements, work permits and workplace procedures
	2.5	Unplanned events in the operation of plant and equipment near energised and exposed electrical conductors/apparatus are responded to in accordance with workplace procedures and approval of authorised personnel
	2.6	Quality checks of work are undertaken in accordance with workplace procedures
3	**Complete the operation of plant and equipment near energised and exposed electrical conductors/apparatus**	**3.1** Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is cleaned and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and plant and equipment are checked, returned to service/stored appropriately in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Assessment Requirements for UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using at least four (4) of the following support equipment:
  - portable generators
  - chain saws
  - concrete cutters
  - jack hammers
  - welders
  - compressor
  - crimper-cutters
  - pumps
  - post hole diggers
  - drills
  - friction grip winches
  - pullers
  - block and tackle
- using at least one (1) of the following support equipment:
  - elevated work platform (EWP
  - back hoes
  - self-loading vehicle
  - borer
  - bobcat
  - trench excavators
  - heavy vehicles
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safety precautions, requirements and responsibilities
- selection and use of appropriate personal protective equipment (PPE)
- chain saw operation, including:
  - parts and function of components and ancillary equipment
  - pre-operational checks
  - starting procedures
  - safe use of chain saw under load
  - safe transporting and storage procedures
- standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with (EWP, including relevant certification and licensing, including:
  - safe working clearances
  - safe operation procedures and the mandatory wearing of harness/attachment requirements
  - safety observers
  - inspection and testing procedures prior to use
  - set-up, operation and shutdown procedures for an EWP
- emergency procedures for an EWP, including:
  - escape procedures for an EWP
  - rescuing procedures
  - mechanical failure procedures
- types of EWP - insulated/uninsulated
- standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with safe use of enterprise vehicles, including relevant certification and licensing such as:
  - motor cars
  - light and heavy commercial trucks
  - heavy truck/trailer combination
  - four-wheel drive vehicles
- compliance with regulations associated with the securing of loads prior for transportation
- standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with portable hydraulic equipment and portable pneumatic equipment, including relevant certification and licensing, including:
  - safe working clearances
  - safe operation procedures
  - safety observers
  - inspection and testing procedures prior to use
  - set-up, operation and shutdown procedures
- permit to work systems and isolation procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches and relevant certification and licensing (if required)
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
- safe use of rigging equipment, tools and associated equipment, including:
  - types, techniques and application
  - site inspection procedures
  - identifying hazards, assessing and controlling risks
  - appropriate sequence of loading and unloading
- determining the mass and dimensions of load
- selection and inspection procedures, including:
  - rigging equipment, materials and tools, such as:
    - natural and synthetic fibre ropes and chains, fittings, winch and capstan
  - ratings of wire ropes and slings
  - removing, repairing and replacing of damaged parts
- techniques for assembling and erecting power winches and capstans
- checking the integrity of support structure, and visual inspection of load connections
- techniques in moving, lifting, shifting, managing and placing loads, including:
  - use of appropriate communication and signalling methods
  - codes of practice/compliance
  - enterprise and Commonwealth/state/territory legislative requirements
  - weather conditions
  - erection of safety nets and lines
  - methods of fixing and anchoring loads
  - load stability.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for operating plant and equipment near live electrical conductors and apparatus
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the compliance of environmental and incidental response procedures whilst undertaking tasks in the electricity supply industry (ESI) workplace and refers to relevant legislation, codes and practices and established procedures.

The unit refers to compliance with relevant sections of federal and state/territory work health and safety (WHS)/occupational health and safety (OHS) and Environmental Protection Acts. The checking of plant and equipment should be performed through visual and mechanical checks. The plant and equipment used is that typically used in preparing worksites and compliance with environmental policies and procedures.

Relevant regulations and procedures are referred to, but not limited to, the worksite and the use of plant; machinery/equipment; cleaning materials and aids; equipment operation; personal protective equipment (PPE), including safety boots, eye and ear protection, and safety helmets.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Competency Field

Entry Level Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to comply with environmental and incident response procedures	**1.1** Work instructions are received and confirmed
	1.2 Relevant requirements and established procedures to be followed for the work to be performed are discussed with all personnel to establish and confirm the work schedule
	1.3 WHS/OHS and environmental policies and procedures to be followed for the work to be performed are received and confirmed
	1.4 Suggestions to assist with complying with environmental and incident response procedures are made to others involved in the work
	1.5 Hazards are identified, WHS/OHS risks assessed and emergency exits kept clear according to given instructions and established procedures
	1.6 Scope of responsibility under relevant work permits are received and confirmed according to requirements and established procedures with relevant personnel
	1.7 Resources, including environmental compliance and personal protective equipment (PPE), required for the incident are obtained and in working order according to established procedures
	1.8 Relevant responsibilities associated with first aid and other related work safety procedures at the worksite are confirmed in accordance with requirements and established procedures to ensure safety measures are followed in the instance of an incident
	1.9 Client issues are referred to appropriate personnel in accordance with industry and community standards
	1.10 Site is reviewed according to given instructions and the work schedule for a quality outcome and to minimise risk and damage to property, commerce and individuals

© Commonwealth of Australia, 2025 Powering Skills Organisation

		in accordance with established procedures
	1.11	Road signs, barriers and warning devices are positioned in accordance with requirements
2 Carry out compliance with environmental and incident response procedures	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are followed in accordance with given instructions, requirements and/or established procedures
	2.2	Environmental requirements for the work are mentioned and reviewed and control measures recommended for inclusion in the work process
	2.3	Any environmental incidents and potential problems are referred to appropriate personnel in accordance with established procedures
	2.4	Lifting, climbing, working in confined spaces and/or aloft, and use of power tools, techniques and practices are safely followed in accordance with given instructions and according to requirements to eliminate the prospects of incidents
	2.5	Operational knowledge for compliance with environmental and incident response procedures is confirmed to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements and established procedures
	2.6	Complying with environmental and incident response procedures is carried out in accordance with given instructions and established procedures
	2.7	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.8	Non-routine events are referred to immediate authorised personnel for directions according to established procedures
	2.9	Problems associated with complying with environmental and incident response procedures are dealt with using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.10	Ongoing checks of quality of the work are undertaken in accordance with given instructions and established procedures
3 Complete the compliance with environmental and incident response procedures	**3.1**	Work undertaken is checked against work schedule and anomalies reported to authorised personnel in accordance with established procedures
	3.2	Accidents and incidents are reported to authorised personnel in accordance with established procedures
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Appropriate personnel are notified of work completion according to established procedures
	3.6	Environmental completion records, report forms/data sheets are completed accurately in accordance with given instructions and established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDREL13A Comply with sustainability, environmental and incidental response policies and procedures.

Assessment Requirements for UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all of the following:
  - identifying potential environmental hazards
  - applying environmental legislation and codes of practice
  - implementing control measures to eliminate/reduce environmental hazards/incidents
  - applying incident reporting/recording/investigation procedures
  - maintaining a safe and clean workplace environment
  - applying safe manual handling techniques
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical safe working practices encompassing:
  - risk management and assessment of risk - principle and purpose of risk management, and processes for conducting a risk assessment
  - hazards associated with low voltage (LV) , extra-low voltage (ELV) and high currents - arrangement of power distribution and circuits in electrical installations, parts of an electrical system and equipment that operate at LV and ELV, and parts of an electrical system and equipment where high currents are likely
  - risks and control measures associated with high voltage (HV) - parts of an electrical system and equipment that operate at HV, the terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of HV, and control measures used for dealing with the hazards of HV

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - optical fibre safety - coherent optical sources and joining procedures, and laser safety class 3a devices or their replacement
  - risks and control measures associated with LV - risks associated with modifying electrical installations; fault finding, maintenance and repair; control measures before, during and after working on electrical installations; circuits or equipment; isolation and tagging-off procedures; risks and restrictions in live work and control measures for live work
  - risks and control measures associated with harmful dusts and airborne contaminants - thermal insulation, fibrous cement materials and asbestos, and other fibre reinforced switchboard materials
  - safety, selection, use, maintenance and care of test equipment - safety characteristics of electrical testing devices, safe use of electrical testing device, and checks and storage methods for maintaining the safety of testing devices
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods; and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment and requirements for effective communications operations for aerial work
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - induction into workplace - location of work area and storage area, timetable, uniform, personal well-being, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/ WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS): registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- environmental fundamentals encompassing:
  - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the control of environment associated with the worksite - relevant federal legislation, relevant state/territory legislation, relevant local government by-laws, relevant government or quasi government policies and regulations, and relevant community planning and development agreements (including land care agreements)
  - employer and employee responsibilities
  - methods of obtaining information on environmental issues and updates
  - methods of identifying environmental impacts from work-related activities
  - meaning of environmental terms - identification, assessment and control of risks, compliance, best practice and sustainable energy
  - procedures in implementing management plans to ensure compliance
- material handling and the environment encompassing:
  - methods of obtaining updated environmental information and data sheets on the proper use and handling of equipment and materials
  - environmental standards, codes, environmental legislation, WHS/OHS legislation, hazardous substances/dangerous goods regulations, supply authority regulations and/or enterprise requirements applicable environmental care when handling materials, including provision of manufacturer and supplier information, such as MSDS
  - types and application of PPE used for hazards substances and dangerous goods
  - techniques in handling equipment to eliminate/reduce risks to the environment from

© Commonwealth of Australia, 2025 Powering Skills Organisation

spillages of oils, herbicides, pesticides and chemicals from equipment, such as vehicle loading crane, chainsaw, enterprise vehicles and explosive power tools
- procedures for handling and control of spillages of herbicides
- methods of disposing and storage of herbicides, pesticides and chemicals
- methods of cleaning mobile plant, equipment and tools
- recording of data.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers compliance with working safely up to the defined safe approach distance (SAD) near energised electrical apparatus, including electrical powerlines, for non-electrical workers.

It includes work functions that may be performed, such as vegetation control, scaffolding, rigging, painting and/or any other activity that requires working safely and complying with requirements and/or established procedures near live electrical apparatus by a non-electrical worker. Also included is the preparation of risk assessment control measures that encompass job safety assessment. It does not include any work that is or may be performed by other competent operatives within the defined safe working zone. The defined safe working zone is that so defined by relevant state or territory regulatory agencies/bodies, local government legislation, industry bi-partite bodies, guidelines/codes of practices or other related requirements for safe work and access near live electrical and mechanical apparatus.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Competency Field

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to work safely near live electrical apparatus as non-electrical worker	**1.1** Instructions related to the work to be performed safely near live electrical apparatus as non-electrical worker are received and confirmed
	1.2 Relevant requirements and established procedures to be followed and relevant personnel to be communicated with for the work to be performed are identified
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures to be followed for the work to be performed are received and confirmed
	1.4 Suggestions to assist in meeting the safety requirements for working near live electrical apparatus as a non-electrical worker are made to others involved in the work
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
	1.6 Scope of responsibility and process of relevant work permit(s) issue are identified, received and confirmed according to requirements and established procedures
	1.7 Relevant responsibility associated with first aid, safety observers and/or other related work safety procedures at the worksite are identified in accordance with requirements and established procedures to ensure safety measures are followed in the instance of an incident
	1.8 Processes for identifying and reporting client issues to appropriate personnel are identified in accordance with industry/community standards
	1.9 Site and the work schedule to be prepared are confirmed according to given instructions for a quality outcome and to minimise risk and damage to property, commerce, stock and individuals in accordance and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.10	Electricity infrastructure assets, related voltages and requirements for working safely near live electrical apparatus as non-electrical worker are identified
	1.11	SAD, including any zones thereof that may apply, as defined in industry guidelines, requirements and/or established procedures for the intended work are confirmed
2 Carry out work safely near live electrical apparatus as non-electrical worker	**2.1**	WHS/OHS principles and practices to reduce the incidents of accidents are identified in accordance with given instructions, requirements and/or established procedures
	2.2	Working safely and complying with all safety requirements for working near live electrical apparatus as a non-electrical worker are followed in accordance with given instructions and established routines/procedures
	2.3	Processes for monitoring and reporting/referring hazards and WHS/OHS risks to immediate authorised personnel for directions according to established procedures are followed
	2.4	Non-routine events are referred to immediate authorised personnel for directions according to established procedures
	2.5	Unexpected events associated with working safely near live electrical apparatus as a non-electrical worker are responded to using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
3 Complete work safely near live electrical apparatus as non-electrical worker	**3.1**	Work schedule and anomalies for completion and checking of the work are reported to authorised personnel in accordance with established procedures
	3.2	Processes for reporting to accidents and/or incidents authorised personnel are confirmed in accordance with established procedures
	3.3	Requirements for returning work permits and/or access authorisation permits are confirmed
	3.4	Appropriate personnel are notified of work completion according to established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.5 Works completion records and report forms/data sheets are completed accurately in accordance with given instructions and established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDREL14A Working safely near live electrical apparatus as a non-electrical worker.

Assessment Requirements for UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all of the following:
  - confirming the safe working zone for safe work and access near live electrical apparatus
  - identifying relevant technical standards, acts, regulations and codes/guidelines
  - identifying established (enterprise) procedures
- completing all of the following:
  - confirming the principles of electricity, the three phase power system, electric shock and resuscitation, and power system
  - recognising aerial voltage systems
  - identifying low voltage (LV) aerial circuits
  - identifying high voltage (HV)
- identifying all of the following:
  - procedures in the event of an incident
  - events constituting an incident
  - procedures for responding to incidents
  - hazard and risk assessment procedure
  - conduct worksite hazard assessment
  - confirmation of essential components of hazard assessment checks
  - applying hazard identification in electrical work
  - confirmation of the basic safety principles for work on electrical works
  - hazard identification and risk assessment
  - hazard control
  - risk assessment and management (job safety analysis (JSA)) control
  - the hierarchy of controls, including evaluation, worksite hazard and risk assessment checklist, pre-job hazard assessment check (HAC) items, planned inspection and

© Commonwealth of Australia, 2025 Powering Skills Organisation

pre-work hazard risk assessment form

- identifying all of the following:
  - use of work permits and/or authorisation permits
  - sustainable energy principles and practices
  - possible effects of weather conditions on working near electrical apparatus as a non-electrical worker
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic electrical principles encompassing:
  - fundamental units - basic measurement of units
  - electrical characteristics of material - characteristics of solid materials; insulators; and terms electrical charge, electrical current and electromagnetic forces
  - nature of electrical current and change - basic rules of electrical current flow
  - sources of electricity - basic fundaments of alternating current (a.c.), direct current (d.c.) and single electromagnetic field source (induction)
  - simple circuits - circuit protection devices used on the network; effects of an open circuit, a closed circuit and a short circuit and earthing – using the ground as a form of conductor to return current back to a source
  - resistance - relationship between voltage and current and resistance (Ohms Law)
  - effects of current - physiological effects and protection for physiological effects; basic principle by which electrical current can result in the production of heat, light and electromagnetic fields and typical effects of current
  - three phase and single-phase power systems - star delta configurations, three phase star connections, relationship between line and phase voltages, three phase 4 wire systems - purpose of the neutral
  - consequences of short circuits - arc flash, electricity supply industry (ESI) protection schemes
  - magnetism - magnetic field patterns, concepts of electromagnetism, effects of electromagnetism and magnetic fields around straight conductors
  - hazards encountered in an ESI environment - touch and step potentials, electric shock, fire, chemicals, falls and safe use of tools and equipment
- transmission, distribution and rail power systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall

© Commonwealth of Australia, 2025 Powering Skills Organisation

power system - advantages/disadvantages and applications
    - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the HV equipment associated with substations
- fundamentals for working safely near live electrical apparatus for non-electrical worker encompassing:
    - standards, guidelines/codes of practice, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements, including relevant certification and licensing applicable to working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker
    - definitions of terminologies - ‘safe working zone’, ‘risk assessment’, ‘safe approach distances (SAD) zones’, ‘safe working distances’,’ work permits’, access authorisation permits’, ‘technical standards’, ‘isolation procedures’ and 'compliance requirements’
    - WHS/OHS policies and procedures for working safely - duties of a safety observer, permit to work systems and isolation procedures, safe application of different types of tools and equipment and operation of mobile plant and machinery (e.g. elevated work platform (EWP)) near live electrical apparatus
    - techniques and precautions in undertaking different work functions and working safely up to the defined safe working zone near energised electrical apparatus (including electrical powerlines) for non-electrical worker (work functions that may be performed include vegetation control, scaffolding, rigging, painting and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL15 Respond to power systems technical enquiries and requests

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This Unit covers responding to enquiries of a technical nature using electricity supply industry (ESI) transmission, distribution and rail/tram network requirements, techniques and processes. It includes the relevant application of knowledge of relevant Acts and regulations, codes of practice, guidelines and compliance regimes, and arrangements used to facilitate a response to enquiries or requests. The enquiries may be internal or with customers.

Note: examples include storm codes identification of key equipment, recognition of normal and abnormal industry situations, key processes and systems used in the industry, such as maps and the application of general safety and environmental processes and practices used in the industry.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

		established procedures
	1.10	Electricity infrastructure assets, related voltages and requirements, where applicable, for working safely near live electrical apparatus as non-electrical worker are identified
	1.11	Safe approach distances, including any zones thereof that may apply as defined in industry guidelines, requirements and/or established procedures for the intended work, are confirmed
2 Carry out responses to technical enquiries and requests	**2.1**	WHS/OHS principles and practices to reduce the incidents of accidents are identified in accordance with given instructions, requirements and/or established procedures
	2.2	Enquiries and/or requests are responded to according to requirements and established procedures, and in a timely manner
	2.3	Working safely and complying with all safety requirements for responding to technical enquiries and requests are followed in accordance with given instructions and established routines/procedures
	2.4	Processes for monitoring and reporting/referring hazards and WHS/OHS risks to the immediate authorised personnel for directions according to established procedures are followed
	2.5	Non-routine events are referred to the immediate authorised personnel for directions according to established procedures
	2.6	Essential knowledge and associated skills are applied in the application of responding to technical enquiries and requests to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.7	Unexpected events associated with enquiries and/or requests of a technical nature are responded to using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
3 Complete responses to technical enquiries and	**3.1**	Work schedule and anomalies for completion and checking of the work are reported to authorised

© Commonwealth of Australia, 2025 Powering Skills Organisation

requests		personnel in accordance with established procedures
	3.2	Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures
	3.3	Requirements for returning work permit(s) and/or access authorisation permits, where applicable, are confirmed
	3.4	Appropriate personnel are notified of work completion according to established procedures
	3.5	Works completion records and/or report forms/data sheets are completed accurately in accordance with given instructions and established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDREL15A Respond to power systems technical enquiries and requests.

Assessment Requirements for UETTDREL15 Respond to power systems technical enquiries and requests

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- confirming safe working zone for safe work and access near live electrical and mechanical apparatus
- applying knowledge of relevant acts and regulations, codes of practice, guidelines and compliance regimes, and arrangements used
- identifying established (enterprise) procedures and processes
- confirming the principles of electricity, three phase power system, electric shock and resuscitation, and power system
- recognising aerial voltage systems
- identifying low voltage (LV) networks
- identifying high voltage (HV)networks
- identifying all of the following:
  - procedures in the event of an incident
  - events constituting an incident
  - procedures for responding to incidents
  - hazard and risk assessment general principles and procedures
  - principles for conducting worksite hazard assessment checks, basic safety principles and hazard control measures
- identifying all of the following:
  - purpose and use of work and/or authorisation permits
  - possible effects of weather conditions on working near electrical apparatus as a non-electrical worker
- applying knowledge of critical codes in the industry, e.g. storm code emergencies
- identifying key equipment used in the industry
- recognising normal and abnormal industry situations
- responding to a technical enquiry or request in accordance with established procedures and

© Commonwealth of Australia, 2025 Powering Skills Organisation

timely manner
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- engineering applications of material properties encompassing:
  - identification and classification of engineering materials, including material properties
  - types and applications - properties of tensile strength; effects of temperature on the expansion of metals; ductibility, malleability, work hardening and annealing and the conditions that lead to corrosion; and the properties of timbers
- generation power systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail power systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components, typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- fundamentals for working safely near live electrical apparatus encompassing:
  - standards, guidelines/codes of practice, state/territory/local government legislation, supply authority regulations and/or enterprise requirements, including relevant certification and licensing, applicable to working safely up to the defined safe working zone near energised electrical apparatus (including. electrical powerlines) for non-electrical workers
  - definitions of terminologies - safe working zone risk assessment, safe approach distances zones, safe working distances, work permits, access authorisation permits, technical standards, isolation procedures and compliance requirements
  - WHS/OHS policies and procedures for working safely - emergency response and first aid procedures, such as cardiopulmonary resuscitation (CPR); roles and responsibilities of employers, employees and other parties under WHS/OHS legislation; personal protective equipment (PPE); identifying hazards; assessing and controlling WHS/OHS risks; duties

© Commonwealth of Australia, 2025 Powering Skills Organisation

of a safety observer; working at heights/confined spaces; permit to work systems and isolation procedures; safe application of different types of tools and equipment
    - operation of mobile plant and machinery, such as an elevated work platform (EWP) near live electrical apparatus
    - electricity supply infrastructure assets and voltages
    - techniques and precautions in undertaking different work functions and working safely up to the defined safe working zone near energised electrical apparatus (including electrical powerlines) for non-electrical worker (work functions that may be performed include, vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker)
- enterprise-specific policies, procedures and instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, training and competency development - understanding and promotion
- enterprises-specific WHS/OHS instructions encompassing:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise PPE - type and application, where and when to be used, method of replacement, and responsibility for maintenance, including cleaning, inspection and testing
    - emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents encompassing:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and

© Commonwealth of Australia, 2025 Powering Skills Organisation

diagrams
    - title box - description of parts and version control
- basic network operating principles and parameters encompassing:
    - sources of electricity
    - basic principles of electricity, three phase power system, electric shock and resuscitation, and power system
    - aerial and underground voltage systems
    - LV network systems
    - HV network systems
    - equipment used in a network system
    - multiple earthed neutral (MEN) system
    - hazards and risks in a network system - risk to life, property or commerce, fallen wires/equipment and fires
    - voltage gradients - step potential and touch potential (transferred earth potentials)
- applicable legislation, regulations, standards, industry codes, industry guidelines and policies encompassing:
    - relevant sections of legislation used
    - relevant sections of international or Australian Standards used
    - relevant sections of industry codes used
    - relevant sections of industry guidelines used
    - relevant sections of policies used
    - relevant sections of advisory information used
- incident event procedures
- incidents constituting an event
- incidence response procedures
- general hazard and risk assessment principles and procedures
- principles for conducting worksite hazard assessment checks
- basic safety principles and hazard control measures
- key industry terms and performance indicators and measures used - System Average Interruption Duration Index (SAIDI), System Average Interruption Frequency Index (SAIFI), Momentary Average Interruption Frequency Index (MAIFI), Customer Average Interruption Duration Index (CAIDI), and network owners and operators
- critical industry codes used - storm code emergencies
- key equipment used in the industry - industry-specific equipment, switchgear, transformers, aerial conductors, insulators, poles, mobile plant and mobile equipment
- normal and abnormal industry situations, key processes and systems used in the industry - anomalies report, critical system/network failures/anomalies and key processes and systems used in the industry, e.g. maps, drawings, as well as safety and environment processes and practices; communications systems; fires; automatic switching; emergencies; and security breaches
- techniques and processes for responding to a technical enquiry or request in accordance with established procedures in a timely manner - ethical performance; assessing applications, enquiries or requests; using technology and media, including catalogues to assist

© Commonwealth of Australia, 2025 Powering Skills Organisation

assessments; client quality service; and reflecting on the completed enquiry or request
- enquiries may be internal or with customers encompassing:
  - customer protocols
  - legal requirements and obligations for property access
- relevant heritage and environmental requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL16 Working safely near live electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to work safely near live electrical apparatus in the electricity supply industry (ESI).

It includes compliance with working safely up to the defined safe approach distance near live electrical apparatus for electrical workers. It also includes complying with work requirements and workplace procedures and preparing risk assessment control measures.

It does not include any work that is or may be performed by other competent operatives within the defined safe working zone. The defined safe working zone is defined by regulatory agencies/bodies, relevant legislation, industry standards, guidelines and codes of practice or other related requirements for safe work and access near live electrical and mechanical apparatus.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Competency Field

Entry Level Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential	Performance criteria describe the performance needed to

outcomes.	demonstrate achievement of the element.
1 Prepare to work safely near live electrical apparatus	**1.1** Relevant instructions for work to be performed safely near live electrical apparatus as electrical worker are obtained and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated to relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures are obtained and confirmed for the purposes of the work to be performed
	1.4 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.5 Scope of responsibility and relevant work permits are identified, obtained and confirmed in accordance with job requirements and workplace procedures
	1.6 Client issues are identified and reported to relevant personnel in accordance with workplace procedures
	1.7 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.8 Electricity infrastructure assets, voltages and job requirements for working safely near live electrical apparatus are identified
	1.9 Safe approach distances for work are confirmed as defined by relevant electrical network supply industry standards and workplace procedures
2 Carry out the work safely near live electrical apparatus	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2 Working safely and complying with all safety requirements for working near live electrical apparatus as an electrical worker are followed in accordance with relevant regulations, industry standards, workplace instructions and procedures
	2.3 Unplanned events for working safely near live electrical apparatus are responded to in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

		workplace procedures and approval of authorised person/s
3 Complete work safely near live electrical apparatus as electrical worker	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Relevant work permits are signed off in accordance with workplace procedures
	3.4	Relevant personnel are notified of work completion in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDREL16A Working safely near live electrical apparatus.

Assessment Requirements for UETTDREL16 Working safely near live electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing all of the following:
  - confirming safe working zone for safe work and access near live electrical apparatus
  - identifying relevant technical standards – acts, regulations and codes/guidelines
  - identifying established (enterprise) procedures
- performing all of the following:
  - confirming principles of electricity, three phase power system, electric shock and resuscitation, and power systems
  - recognising of aerial voltage systems
  - identifying of low voltage (LV) aerial circuits
  - identifying high voltage (HV)
- demonstrating all of the following:
  - procedures in the event of an incident
  - events constituting an incident
  - procedures for responding to incidents
  - hazard and risk assessment procedure
  - conduct worksite hazard assessment
  - confirmation of essential components of hazard assessment checks
  - applying hazard identification in electrical work
  - confirmation of the basic safety principles for work on electrical works
  - hazard identification and risk assessment
  - hazard control
  - risk assessment and management control
  - the hierarchy of controls, including evaluation, worksite hazard and risk assessment checklist, pre-job hazard assessment check (HAC) items, planned inspection and

© Commonwealth of Australia, 2025 Powering Skills Organisation

pre-work hazard risk assessment form

- applying all of the following:
  - use of work permits and/or authorisation permits
  - sustainable energy principles and practices
  - possible effects of weather conditions on working near electrical apparatus as an electrical worker
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical safety and principles, including:
  - hazards encountered in an electrical environment and safety procedures for dealing with them - types of hazards (electrical shock, fire from an electrical source, chemical hazards and fall hazards.), factors indicating general unsafe work practices and conditions, and safety practices in the use of common tools and plant
  - rescue techniques and first aid treatment of an electric shock victim - methods to rescue an electrical shock victim in contact with live equipment or conductors; accepted first aid treatment for burns, bleeding and shock; and procedures for conducting expired air resuscitation (EAR) and cardiopulmonary resuscitation (CPR)
  - procedures for dealing with fires and hazardous chemicals associated with electrical equipment - selection and use of different types of equipment used to fight fires associated with electrical equipment, procedures for dealing with a fire associated with electrical equipment, and procedures for dealing with polychlorinated biphenyls (PCB)s
  - basic circuit components and state the function of each - sources of electrical supply, control switches, types and functions of resistive consuming devices, and basic circuit components symbols used in electrical diagrams
  - connection of basic electrical circuits and measurement of circuit parameters - connection of components that make up a single-source single-load circuit, relationship between voltage and current in such circuits, and consequences of a short-circuit and an open-circuit
  - determining voltage, current and resistance - calculation methods and measurement methods
  - cable and conductor terminations to Australian/New Zealand Standards - types of terminations, cable conductor preparation, prepare conductor for termination and termination method (conductor terminations include soldered and pressure types)
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; and how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type

© Commonwealth of Australia, 2025 Powering Skills Organisation

transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- fundamentals for working safely near live electrical apparatus, including:
  - standards, guidelines/codes of practice, state/territory/local government legislation, supply authority regulations and-or enterprise requirements, including relevant certification and licensing applicable to working safely up to the defined safe working zone near energised electrical apparatus (including electrical powerlines) for non-electrical worker
  - definitions of terminologies - ‘safe working zone’ ‘risk assessment’, ‘safe approach distances zones’, ‘safe working distances’.’ work permits’, access authorisation permits’, ‘technical standards’ ‘isolation procedures’ and compliance requirements’
  - WHS/OHS policies and procedures for working safely - emergency response and first aid procedures, such as CPR; roles and responsibilities of employers, employees and other parties under WHS/OHS legislation; personal protective equipment (PPE); identifying hazards; assessing and controlling WHS/OHS risks; first aid procedures; duties of a safety observer; working at heights/confined spaces; permit to work systems and isolation procedures; and safe application of different types of tools and equipment
  - operation of mobile plant and machinery, such as elevated work platforms (EWP) near live electrical apparatus
  - electricity supply infrastructure assets and voltages
  - techniques and precautions in undertaking different work functions and working safely up to the defined safe working zone near energised electrical apparatus (including electrical powerlines) for non-electrical worker - work functions that may be performed, including vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for working safely near live electrical apparatus
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL17 Operate asset inspection machinery and equipment near live electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to operate asset inspection machinery and equipment near live electrical apparatus in the electricity supply industry (ESI).

It includes inspecting and maintaining machinery and equipment, identifying hazards, assessing risks and implementing risk control measures. It also includes complying with relevant regulatory agencies/bodies, legislation, industry guidelines, codes of practice for safe use of machinery and equipment operating near live electrical and mechanical apparatus.

This unit would be applied by asset inspectors engaged in regular and methodical inspection and treatment of poles and inspection of electrical apparatus in the transmission and distribution industry sector.

The application of the skills and knowledge described in this unit may require a license to operate specific pieces of equipment such as elevated work platforms.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures

UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to operate machinery and equipment near live electrical apparatus	**1.1** Relevant work instructions are received and confirmed
	1.2 Job requirements are discussed with relevant personnel and performed in accordance with workplace procedures
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) and environmental workplace procedures are received and confirmed
	1.4 Work is prioritised and sequenced following consultation with relevant personnel for completion within acceptable timeframes and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, as required, to access and perform work in accordance with job requirements and/or workplace procedures
	1.7 Resources including machinery, equipment and personal protective equipment (PPE) required for the job are obtained and confirmed in working order in accordance with workplace procedures
	1.8 Relevant person responsible for first aid and related work safety procedures at the worksite is confirmed in accordance with workplace procedures to ensure safety measures are followed in the instance of an incident
	1.9 Liaison and communication issues with appropriate personnel, authorities, clients and land owners are

© Commonwealth of Australia, 2025 Powering Skills Organisation

		resolved to carry out work, where necessary
	1.10	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.11	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.12	Traffic management is checked as implemented in accordance with workplace procedures
	1.13	Pre-operational checks are undertaken to confirm safe and correct operation of machinery and equipment for safe use near live electrical apparatus in accordance with job requirements and workplace procedures
2 Carry out the operation of machinery and equipment near live electrical apparatus	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents of accidents in accordance with workplace procedures
	2.2	Appropriate machinery and equipment are selected to perform job requirements
	2.3	Machinery and equipment, techniques and practices are followed in accordance with manufacturer instructions and job requirements
	2.4	Machinery and equipment are used near live electrical apparatus in agreed timeframes, to quality standards and with minimum waste
	2.5	Hazard warnings and safety signs are recognised and hazards and identified WHS/OHS risks are reported to immediate appropriate personnel for directions in accordance with workplace procedures
	2.6	Machinery and equipment are safely operated near live electrical apparatus in accordance with work schedule, job requirements, given instructions and workplace procedures
	2.7	Unplanned events are referred to relevant authorised personnel for directions in accordance with workplace procedures
	2.8	Problems associated with the operation of machinery and equipment near live electrical apparatus are attended

© Commonwealth of Australia, 2025 Powering Skills Organisation

		to using acquired known solutions and skills related to routine procedures to ensure work instructions and workplace procedures are met
	2.9	Known solutions to a variety of problems are applied using acquired knowledge and associated skills
	2.10	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete the operation of machinery and equipment near live electrical apparatus	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4	Machinery, equipment, tools and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant person/s is notified of work completion in accordance with workplace procedures
	3.6	Post-operational checks, minor maintenance and/or relevant documentation of machinery and equipment are conducted in accordance with requirements
	3.7	Relevant work permits are signed off in accordance with workplace procedures
	3.8	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

Assessment Requirements for UETTDREL17 Operate asset inspection machinery and equipment near live electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- confirming operational knowledge associated with the operation of control machinery and equipment near live electrical apparatus in all of the following:
  - recognition of aerial voltage systems
  - identification of low voltage (LV) aerial circuits
  - identification of high voltage (HV) aerial circuits
  - safe approach distance so defined by relevant authorities
  - use of technical standards, acts, regulations, codes /guidelines and established/enterprise/asset owner's procedures
  - system control – information required and functions
  - vicinity permit – information required and functions
  - confirm environmental principals and procedures
- confirming safe practices associated with the operation of control machinery and equipment near live electrical apparatus in all of the following:
  - WHS/OHS safety practices and procedures
  - electric shock and resuscitation
  - events constituting an incident
  - procedures in the event of an incident
  - methods of identifying hazards
  - risk assessment procedures
  - selection of the best position for monitoring and controlling work
  - constant analysis
  - decision making relevant to the safety of the work, taking into account prevailing site conditions (lay of the land) and on-going weather conditions

© Commonwealth of Australia, 2025 Powering Skills Organisation

- confirming the safe operation of machinery and equipment in varying conditions and weather near live electrical apparatus and undertaking pre- and post-operational checks and inspections in at least four (4) of the following:
  - chain saws
  - brush cutters
  - power pruners
  - powered drills
  - *augers
  - air compressors
  - generators
  - jack hammers
  - demolition saws
  - measuring devices
  - extendable mounted cameras
  - (* must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- assets inspection safety requirements, including:
  - the legal requirements covering WHS/OHS in the workplace
  - requirements for personal safety in the workplace
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with safe use of enterprise vehicles
  - working safely with electrical tools and equipment near electrical apparatus
  - identification of hazards and risks associated with working on or near live electrical apparatus
  - use and application of personal protective equipment (PPE)
  - safe work practices and procedures
- asset inspection machinery and equipment, including:
  - reading and following information on standard operating procedures (SOPs)
  - following verbal instructions
  - selecting machinery and equipment appropriate to the task
  - identifying machinery and equipment defects
  - maintaining machinery and equipment using appropriate techniques
  - safe use of enterprise vehicles
  - operation of machinery and equipment - pre-operational checks, safe use of machinery and equipment, safe transporting and storage procedures according to manufacturer requirements/standard operating procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- adjustments/alignments to a range of machinery and equipment
- common faults and/or defects found in a range of machinery and equipment
- procedures for marking unsafe or faulty machinery and equipment for repair
- procedures for the safe use of hand and power tools
- routine maintenance requirements of a range of machinery, equipment and hand and power tools
- storage location and procedures for a range of machinery and equipment
- hazards/control measures associated with the use of a range machinery and equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL18 Inspect and treat poles and inspect electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to inspect and treat poles and inspect electrical apparatus in the electricity supply industry (ESI).

It includes testing or examining at eye level to below ground and visually checking above ground of cross-arms, conductors, hardware and equipment attached with the use of the un-aided eye, binoculars and electronic vision equipment to determine the integrity of the poles, structures and hardware attached to them. It also includes completing inspection reports and updating of records to workplace requirements.

This unit would be applied by asset inspectors engaged in regular and methodical inspection and treatment poles and inspection of electrical apparatus in the transmission and distribution industry sector.

The application of the skills and knowledge described in this unit may require a licence to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures

UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker

Competency Field

Entry Level Cross Discipline

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to inspect and treat poles and inspect electrical apparatus	**1.1** Relevant work instructions are received and confirmed
	1.2 Job requirements are discussed with relevant personnel and performed in accordance with workplace procedures
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) and environmental workplace procedures are received and confirmed
	1.4 Work is prioritised and sequenced following consultation with relevant personnel for completion within acceptable timeframes and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, as required, to access and perform work in accordance with job requirements and/or workplace procedures
	1.7 Resources, including equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order in accordance with workplace procedures
	1.8 Relevant person responsible for first aid and/or related work safety procedures at the worksite are confirmed in accordance with workplace procedures to ensure safety measures are followed in the instance of an incident
	1.9 Liaison and communication issues with appropriate personnel, authorities, clients and land owners are resolved to perform work, as required

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.10	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.11	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.12	Traffic management is checked as implemented in accordance with workplace procedures
2 Conduct inspection and treatment of poles and inspect electrical apparatus	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents of accidents in accordance with workplace procedures
	2.2	Tools and equipment are selected appropriate to the task in accordance with job requirements and used to produce desired outcomes
	2.3	Requirements for lifting, climbing, working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Poles and electrical apparatus are inspected and safe treatment of poles and structures are completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.5	Hazard warnings and safety signs are recognised, hazards identified and WHS/OHS risks reported to immediate appropriate personnel for directions in accordance with workplace procedures
	2.6	Visual inspection of poles, overhead structures, conductors, cables and electrical apparatus used on poles/structures is performed in accordance with work schedule and workplace procedures
	2.7	Poles/structures are tested or examined from approximately eye level to below ground in accordance with workplace procedures
	2.8	Visual checks are performed to identify fungal activity, dry rot, termite and borer infestation in accordance with workplace procedures, as required
	2.9	Treatment of poles/structures is performed in

© Commonwealth of Australia, 2025 Powering Skills Organisation

		accordance with work schedule, job requirements and workplace procedures
	2.10	Defective or suspect poles are identified in accordance with workplace procedures
	2.11	Unplanned events are referred to relevant authorised person/s for directions in accordance with workplace procedures
	2.12	Known solutions to a variety of problems are applied using acquired knowledge and associated skills
	2.13	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete the inspection and treatment of poles and inspect electrical apparatus	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is cleaned and confirmed safe in accordance with workplace procedures
	3.4	Tools and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Unsafe or faulty tools are identified and marked for repair in accordance with workplace procedures before, during and after use
	3.6	Relevant work permits are signed off and poles and structures are returned to service in accordance with workplace procedures
	3.7	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDREL18A Inspect and treat poles and inspect electrical apparatus.

Assessment Requirements for UETTDREL18 Inspect and treat poles and inspect electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- inspecting and testing at least four (4) of the following:
  - wood
  - steel
  - concrete
  - composite
  - reinforced poles
- conducting all the following:
  - drill test
  - non-intrusive test
- undertaking all the following activities:
  - chemical treatment
  - reinforcement (remove)
  - fit a sleeve to stays/guys
- inspecting all the following:
  - poles and structures
  - overhead conductors/cables
  - underground/overhead transition points
  - electrical equipment
  - hardware
  - earthing systems
- completing inspection reports and updating records for all of the following:
  - poles and structures
  - overhead conductors/cables

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - underground/overhead transition points
  - electrical equipment
  - hardware
  - earthing systems
- using at least two (2) of the following:
  - un-aided eye
  - binoculars
  - electronic data capture using infra-red and/or digital video camera and/or computer
  - sonic tester
  - drill
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- poles and of electrical apparatus inspection safety requirements, including:
  - working safely with machinery and equipment near live electrical apparatus
  - working safely on or around electrical equipment through the application of risk management principles and control measures
  - selecting and using appropriate personal protective equipment (PPE)
  - implementing emergency procedures for the rescue of an electric shock victim
  - providing emergency first aid for an electric shock victim
  - safe handling and use of chemical treatments
  - visual checking and treatment of poles and structures
  - inspecting of overhead structures and electrical apparatus used on poles and/or structures
  - documenting inspection findings in accordance with enterprise requirements
- inspection of poles and electrical apparatus/equipment, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - characteristics of wood used for structures within the electrical distribution system - relationship between timber and water, faults that occur that influence the integrity of the structure, effects and types of fungal activity, effects of termite and borer activity, and effects of rot
  - deterioration prevention techniques - relationship between steel, concrete and wood; inspection procedures for deterioration; deterioration prevention procedures in steel, concrete and wood; and procedures for the repair of deterioration in steel, concrete and wood
  - ground line inspection procedures of electrical distribution structures - requirements for pole inspection on electrical distribution structures, use of specific equipment and testing devices during testing/inspection, and methods of recording data
  - overhead line inspection procedures of electrical distribution structures - methods and requirements for overhead inspection on electrical distribution structures, including

© Commonwealth of Australia, 2025 Powering Skills Organisation

cables, conductors and apparatus; clearances for overhead conductors; cables and structures; use of specific equipment and testing devices during testing/inspection; and methods of recording data.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL19 Identify and interpret characteristics of electrical apparatus associated with power industry assets

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the identification and interpretation of electrical apparatus associated with asset inspection, including interpreting the operational characteristics of the electrical apparatus, pole top structures, attachments and the relationship of the various equipment, including the association the equipment has in the correct functioning of the distribution and/or transmission system

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to identify and interpret characteristics of electrical apparatus associated with power industry assets	**1.1** Instructions for identifying the electrical apparatus undergoing asset inspection are communicated and confirmed to ensure clear understanding
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the visual checking and treatment of poles and structures, and the inspection of overhead structures and electrical apparatus used on the poles are obtained and confirmed
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored according to established procedures
	1.6 Relevant work permits are obtained, where necessary, to access and perform work according to requirements and/or established procedures
	1.7 Schedule for identifying poles and structures, and the inspection of overhead structures and electrical apparatus, including practices for working safely, are confirmed in accordance with instructions and requirements
	1.8 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.9 Relevant person responsible for first aid and/or related work safety procedures at the worksite are confirmed in

© Commonwealth of Australia, 2025 Powering Skills Organisation

		accordance with established procedures to ensure safety measures are followed in the instance of an incident
	1.10	Liaison and communication issues with appropriate personnel, authorities, clients and land owners are resolved to carry out work where necessary
	1.11	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.12	Personnel participating in the work are fully briefed and respective responsibilities confirmed in accordance with established procedures, where necessary
	1.13	Traffic management plan is identified and road signs, barriers and warning devices positioned in accordance with requirements, where necessary
2 Identify and interpret characteristics of electrical apparatus associated with power industry assets	**2.1**	WHS/OHS and sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and established procedures
	2.2	Tools and equipment are selected appropriate to the task requirements and are used to produce desired outcomes
	2.3	Schedule for identifying poles and structures, and the inspection of overhead structures and electrical apparatus used on the poles are followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste using appropriate technology
	2.4	Essential knowledge and associated skills are applied for the safe identification of electrical apparatus to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.5	Hazard warnings and safety signs are recognised, hazards identified and WHS/OHS risks reported to immediate appropriate personnel for directions according to established procedures
	2.6	Operational characteristics of the electrical apparatus and associated equipment are understood with respect to the primary purpose of the apparatus and associated equipment within the supply system

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.7 Visual checks of the electrical apparatus and associated equipment are performed to identify defective or suspect condition
	2.8 Unplanned events during the identification of electrical apparatus and associated equipment are responded to within the scope of established procedures
	2.9 Known solutions to a variety of problems are applied using acquired knowledge and associated skills
	2.10 Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the identification and interpretation characteristics of electrical apparatus associated with power industry assets	**3.1** Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
	3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4 Tools and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage according to established procedures
	3.5 Unsafe or faulty tools are identified and marked for repair in accordance with established procedures before, during and after use
	3.6 Relevant work permits are signed off and poles and structures are returned to service in accordance with requirements
	3.7 Work completion records, reports and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETTDREL19 Identify and interpret characteristics of electrical apparatus associated with power industry assets

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- confirming operational knowledge associated with the characteristics of electrical apparatus in eight (8) of the following:
  - single wire earth return (SWER)
  - high voltage (HV) overhead conductors and cables
  - low voltage (LV) overhead conductors and cables
  - underground cables (as attached to the poles)
  - overhead transition points and termination hardware
  - vibration mitigation hardware
  - insulators, cross-arms, cross-arm mountings and brackets
  - switches, HV fuses and fuse carriers, surge diverters and auto-reclose devices
  - pole mounted transformers and substations
  - possum guards and earth guards
  - angle of the pole
  - height of conductors
  - public lights, bolts and associated pole fixings
- confirming knowledge associated with the characteristics of at least four (4) of the following:
  - wood pole
  - steel pole
  - concrete pole
  - composite pole
  - reinforced poles
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025
Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical apparatus safety requirements encompassing:
  - working safely with machinery and equipment near live electrical apparatus
  - selecting and using appropriate personal protective equipment (PPE)
  - implementing emergency procedures for the rescue of an electric shock victim
  - providing emergency first aid for an electric shock victim
- inspection of electrical apparatus encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - visual checking of poles and structures
  - identification of electrical apparatus associated with power industry assets within the electrical distribution system - SWER, HV overhead conductors and cables, LV overhead conductors and cables, underground cables (as attached to the poles), overhead transition points and termination hardware, vibration mitigation hardware, insulators, cross-arms, cross-arm mountings and brackets, switches, HV fuses and fuse carriers, surge diverters, auto-reclose devices, pole mounted transformers and substations, possum guards, earth guards, angle of the pole, height of conductors, public lights, bolts and associated pole fixings
  - operational knowledge of the purpose of electrical apparatus associated with power industry assets within the electrical distribution system - SWER, HV overhead conductors and cables, LV overhead conductors and cables, underground cables (as attached to the poles), overhead transition points and termination hardware, vibration mitigation hardware, insulators, cross-arms, cross-arm mountings and brackets, switches, HV fuses and fuse carriers, surge diverters, auto-reclose devices, pole mounted transformers and substations, possum guards, earth guards, angle of the pole, height of conductors, public lights, bolts and associated pole fixings
  - interpretation of the operational characteristics and purpose of electrical apparatus associated with power industry assets
  - documenting inspection findings in accordance with enterprise requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

UETTDREL20 Undertake minor vegetation control and routine minor maintenance of poles and electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers undertaking minor vegetation control and routine minor maintenance of poles and electrical apparatus.

Also included is the preparation of risk assessment control measures that encompass job safety assessment. It also includes compliance with relevant state or territory regulatory agencies/bodies, local government legislation, industry bi-partite bodies, guidelines/codes of practices or other related requirements for safe use of equipment near live electrical and mechanical apparatus

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures

UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker

UETTDREL17 Operate asset inspection machinery and equipment near live electrical apparatus

Competency Field

Entry Level Cross Discipline

Assessment Requirements for UETTDREL20 Undertake minor vegetation control and routine minor maintenance of poles and electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- confirming operational knowledge associated with the use of tools and equipment near live electrical apparatus in all of the following:
  - recognition of aerial voltage systems
  - identification of low voltage (LV) aerial circuits
  - identification of high voltage (HV)
  - voltage aerial circuits
  - safe approach distances (SAD) so defined by relevant authorities
  - use of regulations, codes, guidelines and established enterprise procedures
  - vicinity permit – information required and function
  - environmental principals and procedures
- confirming safe practices associated with the use of hand tools and the operation of vegetation control machinery and equipment near live electrical apparatus in all of the following:
  - WHS/OHS safety practices and procedures
  - electric shock and resuscitation
  - release and rescue
  - events constituting an incident
  - procedures in the event of/responding to incidents
  - methods of identifying hazards
  - risk assessment procedures
  - constant analysis and decision making relevant to the safety of the work, taking into account prevailing site conditions (lay of the land) and ongoing weather conditions
- safely using in varying geographical conditions at least two (2) of the following:

© Commonwealth of Australia, 2025
Powering Skills Organisation

  - chainsaws
  - brush cutters
  - power pruners
  - air compressors
  - generators
  - demolition saws
- safely using in varying conditions and weather all of the following:
  - powered drills
  - augers
  - jack hammers
  - selection of hand tools
- confirming pre- and post-operational checks, inspections and minor maintenance of tools and equipment on at least six (6) of the following:
  - chainsaws
  - brush cutters
  - power pruners
  - powered drills
  - augers
  - air compressors
  - generators
  - jack hammers
  - demolition saws
  - measuring devices
  - extendable mounted cameras
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- poles and electrical apparatus maintenance safety requirements encompassing:
  - WHS/OHS principles
  - requirements for personal safety in the workplace and the selection of personal protective equipment (PPE)
  - selecting and safety operating tools and equipment used in the conduct of minor vegetation control and routine minor maintenance on poles and electrical apparatus
  - selecting and using appropriate PPE
  - emergency first aid for an electric shock victim
  - implementing emergency procedures for the rescue of an electric shock victim
  - providing emergency first aid for an electric shock victim

© Commonwealth of Australia, 2025
Powering Skills Organisation

  - selecting and using Personal Protecting Equipment (PPE)
  - safe use of tools and equipment
  - working safely on and around electrical equipment through the application of risk management principles and control measures
- maintenance of poles and electrical apparatus encompassing:
  - sustainability principles
  - standards, codes, legislation, supply authority regulations and enterprise policies and procedures
  - tools and equipment used
  - maintenance and storage of tools and equipment
  - undertaking pre-operational checks of tools and equipment
  - minor vegetation control
  - undertaking minor vegetation control near live electrical apparatus
  - undertaking routine maintenance of poles and electrical apparatus
  - liaising and communicating with appropriate personnel, authorities, clients and land owners
  - completing of records, reports and documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDREL21 Operate specialised data information equipment near live electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the operation of specialised data information equipment near live electrical apparatus.

Also included is the preparation of risk assessment control measures that encompass job safety assessment.

It also includes compliance with relevant state or territory regulatory agencies/bodies, local government legislation, industry bi-partite bodies, guidelines/codes of practices or other related requirements for safe use of equipment near live electrical apparatus.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures

UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker

Competency Field

Entry Level Cross Discipline

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to operate specialised data information equipment near live electrical apparatus	**1.1** Work instructions are received, analysed and confirmed, as necessary, by site inspection
	1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the operation of specialised data information equipment near live electrical apparatus that are used on the poles are obtained and confirmed
	1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
	1.5 Hazards are identified; WHS/OHS risks assessed and control measures prioritised, implemented and monitored according to established procedures
	1.6 Relevant work permits are obtained, where necessary, to access and perform work according to requirements and/or established procedures
	1.7 Resources, including specialised data information equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
	1.8 Relevant person responsible for first aid and/or related work safety procedures at the worksite are confirmed in accordance with established procedures to ensure safety measures are followed in the instance of an incident
	1.9 Liaison and communication issues with appropriate personnel, clients and land owners are resolved to carry

© Commonwealth of Australia, 2025 Powering Skills Organisation

		out work, where necessary
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	Personnel participating in the work are fully briefed and respective responsibilities confirmed in accordance with established procedures, where necessary
	1.12	Traffic management plan is identified and road signs, barriers and warning devices are positioned in accordance with requirements, where necessary
	1.13	Pre-operational checks are undertaken to confirm safe and correct operation of specialised data information equipment for safe use near live electrical apparatus according to requirements and established procedures
2 Operate specialised data information equipment near live electrical apparatus	**2.1**	WHS/OHS and sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and established procedures
	2.2	Specialised data information equipment is selected appropriate to the task requirements and used to produce desired outcome
	2.3	Lifting and use of tools and equipment, techniques and practices are safely followed in accordance with established procedures and confirmed to eliminate the prospects of incidents
	2.4	Specialised data information equipment, techniques and practices are safely followed in accordance with given instructions and requirements and confirmed to eliminate the prospects of incidents, taking into account prevailing site conditions
	2.5	Hazard warnings and safety signs are recognised, hazards identified and WHS/OHS risks reported to immediate appropriate personnel for directions according to established procedures
	2.6	Specialised data information equipment is safely operated near live electrical apparatus in accordance with the work schedule, requirements, instructions and established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.7	Non-routine events are referred to immediate appropriate personnel for directions according to established procedures
	2.8	Problems associated with the operation of specialised data information equipment near live electrical apparatus is attended to using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
	2.9	Unplanned events during the operation of specialised data information equipment near live electrical apparatus are responded to within the scope of established procedures
	2.10	Known solutions to a variety of problems are applied using acquired knowledge and associated skills
	2.11	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the operation of the specialised data information equipment near live electrical apparatus	**3.1**	Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
	3.4	Specialised data information equipment is cleaned, checked and returned to storage in accordance with established procedures
	3.5	Post-operational checks, minor maintenance and/or relevant documentation of specialised data information equipment is conducted according to requirements
	3.6	Relevant work permits are signed off and poles and structures returned to service in accordance with requirements, where required
	3.7	Work completion records, reports and/or documentation and information are finalised and processed and appropriate personnel notified in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDREL21A Operate specialised data information equipment near live electrical apparatus.

Assessment Requirements for UETTDREL21 Operate specialised data information equipment near live electrical apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- confirming operational knowledge associated with the operation of specialised data information equipment near live electrical apparatus in all of the following:
  - recognition of aerial voltage systems
  - identification of low voltage (LV) aerial circuits
  - identification of high voltage (HV) aerial circuits
  - safe approach distance (SAD) so defined by relevant authorities
  - use of technical standards, acts, regulations, codes, guidelines and established/enterprise/asset owner's procedures
  - vicinity permit – information required and function
- confirming safe practices associated with the operation specialised data information equipment near live electrical apparatus in all the following:
  - WHS/OHS safety practices and procedures
  - electric shock and resuscitation
  - events constituting an incident
  - procedures in the event of/responding to incidents
  - methods of identifying hazards
  - risk assessment procedures
  - constant analysis and decision making relevant to the safety of the work, taking into account prevailing site conditions (lay of the land) and ongoing weather conditions
- confirming the safe deployment in varying conditions, and undertaking pre- and post-operational checks, inspections and minor maintenance of specialised data information equipment in at least three (3) of the following:
  - infra-red and/or digital video camera
  - wireless camera

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - telescopic stick
  - stills digital cameras
  - single lens reflex (SLR) cameras
  - computers/personal digital assistant (PDA)
  - sonic testing devices
  - pneumatic height telescopic cameras
  - laser distance measuring equipment
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- specialised data information equipment safety requirements encompassing:
  - WHS/OHS principles
  - legal requirements covering WHS/OHS in the workplace
  - requirements for personal safety in the workplace
  - working safely on and around electrical equipment through the application of risk management principles and control measures
  - identification of hazards and risks associated with working on/near live electrical apparatus
  - recognising hazards and WHS/OHS risks
  - implementing emergency procedures for the rescue of an electric shock victim
  - providing emergency first aid for an electric shock victim
  - selecting and using personal protective equipment (PPE)
- specialised data information equipment encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise policies and procedures
  - reading and following information on standard operating procedures
  - following verbal instructions
  - identifying specialised data information equipment defects
  - maintaining specialised data information equipment using appropriate techniques
  - safe use of enterprise vehicles
  - operation of specialised data information equipment - pre-operational checks, safe use of specialised data information equipment, safe transporting and storage procedures according to manufacturer/standard operating procedures (SOPs)
  - completing of records, reports and documentation
  - adjustments/alignments to a range of specialised data information equipment
  - routine maintenance requirements of a range of specialised data information equipment
  - safe use of specialised data information equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- maintenance and storage of specialised data information equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS32 Solve electrical problems in remote community network apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to solve electrical problems in remote community network apparatus in the electricity supply industry (ESI).

It includes solving predictable electrical problems on network apparatus in a remote community. It also includes working safely, applying diagnoses and problem-solving procedures; and using voltage, current and resistance measuring devices to provide solutions derived from measurements and calculations to predictable circuit problems

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE103A Solve problems in ELV single path circuits

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Powering Skills Organisation

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to solve electrical problems on remote community network apparatus	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for a given work area are obtained and confirmed
	1.2 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.3 Nature of circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
	1.4 Advice is sought from relevant personnel to ensure work is coordinated effectively with others
	1.5 Materials required for work are identified and obtained in accordance with workplace procedures
	1.6 Plant, equipment, tools, testing devices and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
2 Solve electrical problems on network apparatus in a remote community	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2 Need to test or measure live electrical components is determined in accordance with workplace procedures
	2.3 Circuits are checked and isolated in accordance with job requirements and workplace procedures
	2.4 Established methods are used to solve electrical problems from measured and calculated values as they apply to remote community network apparatus
	2.5 Unplanned events in the solving of electrical problems in remote community network apparatus are responded to in accordance with workplace procedures
	2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services in accordance with sustainable energy practices and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3 Complete work and document problem solving activities	**3.1** WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.2 Worksite is cleaned and made safe in accordance with workplace procedures
	3.3 Justification for solutions used to solve circuit problems is documented in accordance with workplace procedures
	3.4 Work completion is documented and appropriate personnel notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for UETTDRIS32 Solve electrical problems in remote community network apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- applying work procedures and instructions as they apply to risk control measures
- participating in consultation processes, identifying hazards and implementing and monitoring control measures
- preparing to enter the workplace, including the use of work permits and clearances and isolation permissions
- dealing with accidents and emergencies within the scope of responsibility
- altering an existing circuit to comply with specified operating parameters
- providing solutions derived from measurements and calculations to electrical problem in remote communities
- following accepted industry workplace procedures and instructions for remote communities
- determining the correct operation of remote community network systems
- diagnosing and providing solutions as they apply to remote community network systems.
- identifying predictable problems including at least three (3) of the following:
  - hi/low volts
  - high resistance
  - low resistance
  - fault current (fuses)
  - kilowatt hour meter faults (no supply, reverse polarity, etc)
  - streetlight faults
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- parallel circuits, including:
  - schematic diagram of a single-source direct current (d.c.) parallel circuit
  - major components of a parallel circuit (power supply, loads, connecting leads and switch)
  - applications where parallel circuits are used in the remote community electricity supply industry (ESI)
  - characteristics of a parallel circuit (load connection, current paths, voltage drops, power dissipation, and effects of an open circuit in a parallel circuit)
  - relationship between currents entering a junction and currents leaving a junction
  - calculation of the total resistance of a parallel circuit
  - calculation of the total current of a parallel circuit
  - calculation of the total voltage of a parallel circuit
  - setting up and connecting a single-source d.c. parallel circuit
  - resistance, voltage and current measurements in a single-source parallel circuit
  - voltage, current, resistance or power dissipated from measured values of any of these quantities
- series/parallel circuits, including:
  - schematic diagram of a single-source d.c. series/parallel circuit
  - major components of a series/parallel circuit (power supply, loads, connecting leads and switch)
  - applications where series/parallel circuits are used in the remote community ESI
  - characteristics of a series/parallel circuit (load connection, current paths, voltage drops, power dissipation, and effects of an open circuit in a series/parallel circuit)
  - calculation of the total resistance of a series/parallel circuit
  - calculation of the total current of a series/parallel circuit
  - calculation of the total voltage and the individual voltage drops of a series/parallel circuit
  - setting up and connecting a single-source d.c. series/parallel circuit
  - resistance, voltage and current measurements in a single-source d.c. series/parallel circuit
  - voltage, current, resistances or power dissipated from measured values of any two of these quantities
- factors affecting resistance, including:
  - four factors that affect the resistance of a conductor (type of material, length, cross-sectional area and temperature)
  - affect the change in the type of material (resistivity) has on the resistance of a conductor
  - effect the change in length has on the resistance of a conductor
  - effect the change in cross-sectional area has on the resistance of a conductor
  - effects of temperature change on the resistance of various conducting materials
  - effects of resistance on the current-carrying capacity and voltage drop in cables
  - using digital and analogue ohmmeter to measure the change in resistance of different types of conductive materials (copper and aluminium) when those materials undergo a change in type of material length, cross-sectional area and temperature
- effects of meters in a circuit, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- selecting an appropriate meter in terms of units to be measured, range, loading effect, accuracy and safety category of meters for a given application
- instruments used in the field to measure voltage and current, and the typical circumstances in which they are used
- hazards involved in using electrical instruments and the safety control measures that should be taken
- operating characteristics of analogue and digital meters
- correct techniques to read the scale of an analogue meters and how to reduce the 'parallax' error
- types of voltmeters used in the ESI– bench type, clamp meter and multimeter
- purpose and characteristics (internal resistance, range, loading effect and accuracy) of a voltmeter
- types of voltage indicator testers (e.g. LED, neon, solenoid, volt-stick and series tester) and the purpose of each voltage indicator tester
- operation of various voltage indicator testers
- advantages and disadvantages of each voltage indicator tester
- various types of ammeters used in the ESI industry (bench, clamp meter and multimeter)
- the purpose of an ammeter and the correct connection (series) of an ammeter into a circuit
- the reasons why the internal resistance of an ammeter must be extremely low and the dangers and consequences of connecting an ammeter in parallel and/or wrong polarity
- connect an analogue/digital voltmeter into a circuit ensuring the polarities are correct and take various voltage readings
- demonstrate the loading effect of various voltmeters when measuring voltage across various loads
- use a variety of voltage indicator testers to detect the presence of various voltage levels
- connect an analogue/digital ammeter into a circuit ensuring the polarities are correct and take various current readings
- steps and procedures for the safe use, care and storage of electrical instruments

- resistance measurement, including:
  - identification of instruments used in the field to measure resistance (including insulation resistance) and the typical circumstances in which they are used
  - the purpose of an insulation resistance (IR) tester
  - the parts and functions of various analogue and digital IR tester (selector range switch, zero ohms adjustment, battery check function, scale and connecting leads)
  - reasons why the supply must be isolated prior to using the IR tester
  - where and why the continuity test would be used in an ESI systems
  - where and why the insulation resistance test would be used in an ESI system
  - the voltage ranges of an IR tester and where each range may be used. e.g. 250 V d.c, 500 V d.c & 1000 V d.c
  - the AS/NZS 3000:2018 Wiring Rules requirements – continuity test and insulation resistance test
  - the purpose of regular IR tester calibration

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - the correct methods of storing the IR tester after use
  - calibration checks on an IR Tester
  - measurement of low values of resistance using an IR tester continuity functions
  - measurement of high values of resistance using an IR tester insulation resistance function
  - the volt-ammeter (short shunt and long shunt) methods of measuring resistance
  - calculation of resistance values using voltmeter and ammeter reading (long and short shunt connections)
  - measurement of resistance using volt-ammeter methods
- capacitors and capacitance, including:
  - basic construction of standard capacitor, highlighting the plates, dielectric and connecting leads
  - different types of dielectric material and each dielectric's relative permittivity
  - identification of various types of capacitors commonly used in the ESI (fixed value capacitors -stacked plate, rolled, electrolytic, ceramic, mica and variable value capacitors – tuning and trimmer)
  - circuit symbol of various types of capacitors - standard; variable, trimmer and polarised
  - terms: capacitance (C), electric charge (Q) and energy (W)
  - unit of capacitance (Farad), electric charge (Coulomb) and energy (Joule)
  - factors affecting capacitance (the effective area of the plates, the distance between the plates and the type of dielectric) and explain how these factors are present in all circuits to some extent
  - how a capacitor is charged in a d.c. circuit
  - behaviour of a series d.c. circuit containing resistance and capacitance components. - charge and discharge curves
  - the term time constant and its relationship to the charging and discharging of a capacitor
  - calculation of quantities from given information - capacitance (Q = VC); energy (W =½CV2); voltage (V = Q/C)
  - connection of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit
- handling and testing capacitors, including:
  - hazards involved in working with capacitance effects and the safety control measures that should be taken
  - safe handling and the correct methods of discharging various size capacitors
  - dangers of a charged capacitor and the consequences of discharging a capacitor through a person
  - effects of capacitors connected in parallel
  - effects on the total capacitance of capacitors connected in series
  - common faults in capacitors
  - testing of capacitors to determine serviceability
  - application of capacitors in the ESI industry
- magnetism, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- magnetic field pattern of bar and horse-shoe magnets
- magnets attraction and repulsion when brought in contact with each other
- common magnetic and non-magnetic materials and groupings (diamagnetic, paramagnetic and ferromagnetic materials)
- principle of magnetic screening (shielding) and its applications
- practical applications of magnets

- electromagnetism, including:
  - conventions representing direction of current flow in a conductor
  - magnetic field pattern around a single conductor and two adjacent conductors carrying current
  - using the right hand rule to determine the direction of magnetic field around a current carrying conductor
  - direction of force between adjacent current carrying conductors
  - effect of current, length and distance apart on the force between conductors (including forces on bus bars during fault conditions)
  - magnetic field around an electromagnet
  - using the right hand rule to determine the direction of magnetic field around a current carrying coil
  - magnetomotive force (m.m.f.) and its relationship to the number of turns in a coil and the current flowing in the coil
  - practical applications of electromagnets
- electromagnetic induction, including:
  - principle of electromagnetic induction (Faraday's law of electromagnetic induction)
  - applying Fleming's right hand rule to a current-carrying conductor under the influence of a magnetic field
  - calculation of induced electromagnetic force (e.m.f). in a conductor given the conductor length, flux density and velocity of the conductor
  - calculation of induced e.m.f. in a coil given the number of turns in a coil and the rate of change of flux
  - calculation of force on a conductor given the flux density of the magnetic field, length of the conductor and the current being carried by the conductor
  - Lenz's law
  - applications of electromagnetic induction
- inductance, including:
  - construction of an inductor, including a bifilar winding inductor
  - Australian Standard circuit diagram symbol for the four types of inductor
  - effect of physical parameters on the inductance of an inductor
  - common types of inductor cores
  - applications of the different types of inductors
  - definition of terms self-induction, inductance and mutual inductance
  - calculation of value of self-induced e.m.f. in a coil

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - mutual induction occurs between two coils
  - practical applications for the effects of self and mutual induction
  - undesirable effects of self and mutual induction
- magnetic devices, including:
  - construction, operation and applications of relays
  - construction, operation and applications of contactors
  - magnetic methods used to extinguish the arc between opening contacts
  - construction, operation and applications of Hall effect devices
  - construction, operation and application of magnetic sensing devices.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for solving electrical problems in remote community network apparatus
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS33 Solve electrical problems in remote community network systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to solve electrical problems in remote community network systems in the electricity supply industry (ESI).

It includes solving electrical problems on network systems in a remote community, completing work safely, documenting problem-solving activities and providing solutions to predictable problems on remote community network systems. It also includes working safely; diagnosing problems; applying problem-solving procedures; and using voltages, currents and resistance measuring devices to provide solutions derived from measurements and calculations to predictable circuit/systems problems.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE103A Solve problems in ELV single path circuits

UETTDRIS32 Solve electrical problems in remote community network apparatus

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to solve electrical problems on network systems in a remote community	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for work are obtained and confirmed
	1.2 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.3 Circuit problems are obtained from documentation or relevant personnel to determine scope of work
	1.4 Advice is sought from relevant personnel to ensure work is coordinated effectively with others
	1.5 Materials required for work are identified and obtained in accordance with workplace procedures
	1.6 Plant, equipment, tools, testing devices and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
2 Solve electrical problems on network systems in a remote community	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2 Need to test or measure live electrical components is determined in accordance with workplace procedures
	2.3 Circuits are checked and isolated in accordance with job requirements and workplace procedures
	2.4 Electrical system problems are solved from measured and calculated values
	2.5 Unplanned events in solving electrical problems in remote community network systems are responded to in accordance with workplace procedures
	2.6 Problems are solved without damage to apparatus, circuits and systems, the surrounding environment and/or services in accordance with sustainable energy

© Commonwealth of Australia, 2025 Powering Skills Organisation

		practices and workplace procedures
3 Complete work and document problem-solving activities	**3.1**	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.2	Worksite is cleaned and made safe in accordance with workplace procedures
	3.3	Justification for solutions used to solve circuit problems is documented in accordance with workplace procedures
	3.4	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS33A Solve electrical problems in remote community network systems.

Assessment Requirements for UETTDRIS33 Solve electrical problems in remote community network systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- applying work procedures and instructions as they apply to risk control measures
- participation in consultation processes, identifying hazards and implementing and monitoring control measures
- preparing to enter the workplace, including the use of work permits and clearances and isolation permissions
- dealing with accidents and emergencies within the scope of responsibility
- altering an existing circuit to comply with specified operating parameters
- following accepted industry workplace procedures and instructions for remote communities
- determining the correct operation of remote community network systems
- diagnosing and providing solutions as they apply to remote community network systems.
- identifying predictable problems including at least three (3) of the following:
  - hi/low volts
  - high resistance
  - low resistance
  - fault current (fuses)
  - kilowatt hour meter faults (no supply, reverse polarity, etc)
  - streetlight faults
- dealing with unplanned events on at least (1) one occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- alternating current (a.c.) quantities, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - sine, cosine and tangent ratios of a right-angle triangle
  - Pythagoras theorem to a right-angle triangle
  - use of the cathode ray oscilloscope (CRO) to measure direct current (d.c.) and a.c. voltage levels
  - sinusoidal voltage generated by a single turn coil rotated in uniform magnetic fields
  - terms 'period', 'maximum value', 'peak-to-peak value', 'instantaneous value', 'average value', and 'root-mean-square (r.m.s.) value', in relation to a sinusoidal waveform
  - calculation of the instantaneous value of induced voltage of a generated sinusoidal waveform
  - measurement of instantaneous, peak and peak-to-peak values and the period of a sinusoidal waveform
  - calculation of r.m.s. value and frequency of a sinusoidal waveform from values of peak voltage and period
- phasor diagrams, including:
  - purpose of phasor diagrams
  - 'in-phase', 'out-of-phase', 'phase angle' 'lead' and 'lag'
  - phase angle between two or more alternating quantities from a given sinusoidal waveform diagram
  - convention for representing voltage, current and the reference quantity in a phasor diagram
  - drawing phasor diagrams to show the relationship between two or more a.c. values of voltage and/or current
  - determination of phase relationship between two or more sinusoidal waveforms from a given diagram and measurements
- single element a.c. circuits, including:
  - setting up and connecting a single-source resistive a.c. circuit and taking voltage and current measurements to determine the resistance
  - determining the voltage, current resistances from measure of given values of any two of these qualities
  - relationship between voltage drops and current in resistive a.c. circuits
  - applications of resistive a.c. circuits
  - defining ‘inductive reactance’
  - calculation of inductive reactance for a given inductor and the relationship between inductive reactance and frequency
  - applying Ohm’s law to determine voltage, current of inductive reactance in a purely inductive a.c. circuit given any two to these quantities
  - applications of inductive a.c circuits
  - calculation of capacitive reactance
  - applying Ohm’s law to determine voltage, current or capacitive reactance in a purely capacitive a.c circuit given any two of the quantities
  - applications of capacitive a.c circuits
- impedance a.c. circuits, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - impedance and impedance triangle
  - determining the impedance, current and voltages for a series a.c circuit
  - drawing and labelling the impedance triangle for a series resistor–capacitor (RC) circuit
  - examples of capacitive components in power circuits and systems and the effect on the phase relationship between voltage and current
  - drawing the equivalent circuit of a practical inductor
  - examples of inductive components in power circuits and systems and their effect on the phase relationship between voltage and current
- power in an a.c. circuit, including:
  - difference between true power, apparent power and reactive power and the units in which these quantities are measured
  - drawing the power triangle to show the relationships between true power, apparent power and reactive power
  - defining the term power factor and phase angle
  - methods used to measure single phase power, energy and demand
- power factor improvement, including:
  - effects of low power factor
  - requirements for power factor improvement
  - methods used to improve low power factor of an installation
  - local supply authority and AS/NZS 3000:2018 Wiring rules requirements regarding the power factor of an installation and power factor improvement equipment
- harmonics effect in a.c. systems, including:
  - term harmonic in relation to the sinusoidal waveform of an a.c. power system
  - sources in a.c. systems that produce harmonics
  - problems that may arise in a.c. circuits as a result of harmonics and how these are overcome
  - methods and test equipment used to test for harmonics
  - methods used to reduce harmonics in a.c. power system
- three phase systems, including:
  - features of a multiphase system
  - comparison of voltages generated by single and multi-phase alternators
  - reasons for the adoption of three phases for power systems
  - how three phases are generated in a single alternator
  - calculation of root mean square (r.m.s.) value of voltage generated in each phase given the maximum value
  - relationship between the phase voltages generated in a three phase alternator and the conventions for identifying each
  - term phase sequence (also, referred to as phase rotation)
  - determining the phase sequence of a three-phase supply
- three phase star-connections, including:
  - connecting a three-phase star-connection load

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - phase relationship between line and phase voltages and line and phase currents of a star-connected system
  - determining the r.m.s. value of line and phase voltage given any one of these quantities
  - determining the r.m.s. value of line and phase current given any one of these quantities
  - terms balanced load and unbalanced load
  - examples of balanced and unbalanced loads in typical power systems
- three phase four wire systems, including:
  - purpose of the neutral conductor in three phase four wire systems
  - determining the effects of a high impedance in the neutral conductor of a three phase four wire system supplying an unbalanced load where multiple earthed neutral (MEN) earthing is employed
- three phase delta-connections and interconnected systems, including:
  - connecting three phase delta loads
  - phase relationship between line and phase voltages and line and phase currents of a delta-connected system
  - determining the r.m.s. value of line and phase voltage given any one of these quantities
  - determining the r.m.s. value of line and phase current given any one of these quantities
  - limitations and uses of open delta connections
  - example of loads in typical power systems
  - drawing the typical combinations of three phase interconnected systems using star-connections and a delta connection
  - relationship between line and phase voltages and line and phase currents in the typical interconnected systems using star-connections and delta connections
- fault loop impedance, including:
  - term fault loop impedance of an a.c. power system
  - measuring fault loop impedance of typical circuits
  - procedures for testing fault loop impedance.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for solving electrical problems in remote community network systems
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS34 Install and replace energy meters and associated equipment in remote communities

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and replace whole current energy meters and associated equipment in remote communities in the electricity supply industry (ESI).

It includes completing the installation and replacement of whole current energy meters and associated equipment, identifying faults, and ascertaining normal functions of meters and associated equipment.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEK101A Maintain safety and tidiness of remote area power supply systems

UEENEEK102A Work safely with remote area power supply systems

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

Competency Field

Industry Specific Cross Discipline

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation and replacement of energy meters and associated equipment	**1.1** Work plan, construction plans, drawings, workplace procedures and material lists are received, confirmed and communicated with relevant personnel
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for installing and replacing energy meters and associated equipment are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.8 Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out the installation and replacement of energy meters and associated	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment		procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Installation and replacement of whole current energy meters and associated equipment is completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.4	Installation and/or replacement of whole current energy meters and associated equipment is performed, including wiring, testing, programming and sealing of meters and associated equipment in accordance with job requirements and workplace procedures
	2.5	Unplanned events are responded to in accordance with workplace procedures
	2.6	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete the installation and replacement of energy meters and associated equipment	**3.1**	Completed work is checked against works schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS34A Install and replace energy meters and associated equipment in remote communities.

Assessment Requirements for UETTDRIS34 Install and replace energy meters and associated equipment in remote communities

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and replacing any one (1) of the following whole current energy meters and associated equipment:
  - induction disk energy meter
  - electronic energy meters
  - maximum demand meters
  - electronic summators
- installing at least one (1) of the following associated equipment:
  - service fuses
  - service links
  - meter boards
  - meter panels
- installing at least one (1) of the following associated equipment:
  - time switches
  - frequency injection relays
  - controlled output meters
  - contactors
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and replacement of energy meters and associated equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- construction, operation and selection of whole current energy meters (single, polyphase, pre-payment, demand, induction and electronic)
- construction, operation and selection of associated equipment-service protection device, high rupturing capacity (HRC), circuit breaker, meter boards, main switch, meter enclosure and service links
- metering arrangements - direct metering, distributed master metering, multiple master metering, plug-in metering, multiple earth neutral (MEN) system, and typical cable routes through buildings
- cable types and applications -cable construction, sizes and ratings and requirements for protection and supporting cables
- installation tools and equipment required
- installation and removal of energy meters - stripping cable correctly, need for sound terminations, wiring meter position correctly, fitting service protection device (SPD), fitting meter boards and fitting meters
- testing procedures - continuity testing, insulation testing, polarity testing, phase sequence testing, neutral integrity testing and meter functionality testing
- completing energy meter documentation
- customer education on energy meters
- techniques for the maintenance of energy metering (fault finding, fault rectification, meter reading and tariff changes).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and replacing whole current energy meters and associated equipment in remote communities
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS35 Perform remote community network field switching to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to perform remote community network field switching to a given schedule in the electricity supply industry (ESI).

It includes preparing, performing and completing low voltage (LV) field switching to a given schedule, using circuit breaking and isolation devices.

It also includes using LV distribution systems in remote community situations, communicating with relevant personnel, isolating electrical equipment, paralleling circuits, proving the area is de-energised and earthed, issuing/accepting electrical permits and returning affected circuits to service.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

Assessment Requirements for UETTDRIS35 Perform remote community network field switching to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing the following:
  - approvals/clearances
  - access authority/permits
- using any two (2) of the following specialist testing devices:
  - voltage detectors
  - polarity testers
  - phase rotation indicators
- operating low voltage (LV) switchgear, including any one (1) of the following:
  - LV links
  - LV bridges
  - LV fuses
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
- requirements for the use of manuals, system diagrams/plans and drawings, including:
  - types, characteristics and capabilities of electrical apparatus
  - use, characteristics and capabilities of specialised tools and testing equipment
  - LV network interconnectors for alternate sources of supply and possible back-feed
  - high voltage (HV) network interconnectors source of possible back-feed

© Commonwealth of Australia, 2025 Powering Skills Organisation

- procedures for obtaining correct LV switching authorisation, including:
  - identification of hazards, assessing and controlling risks
  - safety procedures and precautions
  - safe approach distances
  - responsibilities and protocols
  - identifying switching resources
  - procedures for obtaining electrical access permits/authorities
  - requirements for team switching
  - procedures for coordination of operations
- techniques in LV system switching, including:
  - isolation procedures and proving dead
  - pre-switching checks
  - switching operational procedures
  - emergency fault procedures
  - energisation procedures
- role of the HV switching operator
- procedures for obtaining correct HV switching authorisation, including:
  - identification of WHS/OHS hazards, and assessing and controlling risks
  - safety procedures and precautions
  - safe approach distances
  - responsibilities and protocols
  - identifying switching resources
  - procedures for obtaining electrical access permits/authorities
  - requirements for team switching
  - procedures for coordination of operations
- use and operation of equipment associated with HV overhead and substation equipment, including:
  - test instruments
  - sticks
  - interrupters
  - arc stranglers
- operation of protection systems and substation equipment, such as:
  - fault levels and settings, types and applications, protection systems and substation equipment fault levels and settings, and types and applications
- types and categories of HV switchgear
- application, function and operating capabilities of switchgear
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV transmission main and working earths
- earthing HV electrical apparatus practices and procedures for access, including:
  - purposes of operational and additional work part - on-site earths

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - factors determining the location and effectiveness of operational earthing
  - acceptable industry procedures
  - personal protective equipment (PPE)
- HV switching techniques, including:
  - pre-switching checks
  - switching operational procedures
  - isolation procedures and proving dead/de-energised
  - earthing procedures
  - emergency fault procedures
  - energisation procedures
- application and function of single wire earth return (SWER) system components, including:
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- operation of HV overhead switching or indicating devices, including:
  - identifying hazards, assessing and controlling risks associated with HV switchgear operation
  - systematic and defensive techniques
  - mobile radio procedures
  - double isolation procedures
  - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks, switches, disconnects, live line clamps, phasing sticks and phasing tester.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for performing remote community network field switching to a given schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS36 Install and maintain low voltage services in remote communities (overhead)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain low voltage (LV) services in remote communities (overhead) in the electricity supply industry (ESI).

It includes the installation, maintenance and connection of LV overhead service lines and associated equipment between the connection point and the point of supply.

It also includes the repair and replacement of service cables, service fuses and the replacement and repair of service hardware, and the identification and rectification of faults. It also covers insulation, voltage, phase rotation and polarity testing.

All installation and maintenance of LV overhead services in remote communities must be undertaken in a non-energised (dead) environment other than for testing purposes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE103A Solve problems in ELV single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEK101A Maintain safety and tidiness of remote area power supply systems

UEENEEK102A Work safely with remote area power supply systems

UEENEEK116A Maintain and repair remote area power generation facilities

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEK120A Maintain operation of remote area power generation plant

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS32 Solve electrical problems in remote community network apparatus

UETTDRIS33 Solve electrical problems in remote community network systems

UETTDRIS99 Test and verify distribution remote area installations

Competency Field

Industry Specific Cross Discipline

Unit Sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install and maintain LV overhead services in remote communities	**1.1** Work plan, construction plans, drawings, workplace procedures and material lists are received, confirmed and communicated with relevant personnel
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of LV overhead services and associated equipment are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified and implemented in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.6	Relevant work permits are obtained and signed in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out installation and maintenance of LV overhead services in remote communities	**2.1**	Implemented hazard control measures are monitored in accordance with workplace procedures
	2.2	WHS/OHS, sustainable energy and environmental principles and practices are applied in accordance with workplace procedures
	2.3	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Remote community electrical network equipment is isolated, proved de-energised and earthing equipment installed, as required, in accordance with workplace procedures
	2.5	LV field switching is performed in accordance with a given schedule and workplace procedures
	2.6	Installation and maintenance of LV overhead services, including mains, are completed in accordance with job requirements, work permits and workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures
	2.8	Earthing equipment is removed and remote community overhead network equipment is re-energised and returned to service in accordance with workplace procedures
	2.9	LV overhead services are tested in accordance with job requirements and workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.10	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation and maintenance of LV overhead services in remote communities	**3.1**	Completed work is checked against works schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents/accidents and injuries are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources are, where appropriate, are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are relinquished and signed off in accordance with workplace procedures
	3.6	Work records, reports and documentation are completed and relevant personnel notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS36A Install and maintain low voltage services in remote communities (overhead).

Assessment Requirements for UETTDRIS36 Install and maintain low voltage services in remote communities (overhead)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- connecting low voltage (LV) overhead, including at least two (2) of the following:
  - overhead service line (three phase) *
  - overhead service line (single phase)
  - overhead service line (two phase)
  - (* must do)
- installing LV overhead associated equipment, including at least one (1) of the following:
  - service fuse
  - circuit breakers (pole)
  - service link
- testing LV overhead service connections, including all the following:
  - polarity test *
  - phase rotation test
  - continuity test
  - voltage test
  - (* must do)
- connecting LV overhead services, including at least one (1) of the following:
  - aluminium LV mains
  - copper LV mains
  - LV aerial bundled cable (ABC) mains
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

© Commonwealth of Australia, 2025 Powering Skills Organisation

the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation, maintenance and connection of LV overhead service lines and associated equipment
- types, sizes and characteristics of LV overhead services -two-core, three-core, four-core, cable cross-sectional area of conductors, current ratings and cable insulation materials
- types and characteristics of LV service associated equipment - connectors, insulation pieing connectors (IPC's), service termination devices, fuse holders, fuses, service poles, point-of-attachment brackets and mains connection boxes
- requirements prior to the installation of overhead service - service documentation, minimum clearances to assets and ground, location of attachments, relevant electrical access permit, maximum span lengths and service cable tension and multiple earth neutral (MEN) system
- types of installation plant, equipment and tools -elevated work platform (EWP), ladders, service cable puller and tension tool, stripping tool, ABC spanner, ABC spreader, spanners and screwdrivers
- installation techniques - methods of stringing, tensioning and terminating, and effect of poor connections
- testing and commissioning overhead services - continuity testing, insulation testing, polarity testing, phase sequencing and neutral integrity testing
- completing enterprise documentation
- techniques for the maintenance of overhead services - inspection, types of faults, diagnosis and repair of faults, and removing and replacing services and fuses.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations for installing and maintaining LV overhead services in remote communities
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining overhead LV services in remote communities
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS37 Install and maintain low voltage services in remote communities (underground)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain low voltage (LV) services in remote communities (underground) in the electricity supply industry (ESI).

It includes installing and maintaining of LV underground services and associated equipment. It also includes completing installation and maintenance of LV underground services and associated equipment; connecting LV underground service lines and associated equipment (between the connection point and the point of supply - customers' premises); repairing and replacing service cables, service fuses and service hardware; identifying and rectifying faults, insulation and voltage; polarity testing and phase rotation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE103A Solve problems in ELV single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEK101A Maintain safety and tidiness of remote area power supply systems

UEENEEK102A Work safely with remote area power supply systems

UEENEEK116A Maintain and repair remote area power generation facilities

© Commonwealth of Australia, 2025 Powering Skills Organisation

UEENEEK120A Maintain operation of remote area power generation plant

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS32 Solve electrical problems in remote community network apparatus

UETTDRIS33 Solve electrical problems in remote community network systems

UETTDRIS99 Test and verify distribution remote area installations

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to install and maintain LV underground services in remote communities	**1.1** Works schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of LV underground services and associated equipment are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.6	Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out installation and maintenance of LV underground services in remote communities	**2.1**	Implemented hazard control measures are monitored in accordance with workplace procedures
	2.2	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.3	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Remote community electrical network equipment is isolated, proved de-energised and earthing equipment installed, as required, in accordance with workplace procedures
	2.5	Installation and maintenance of LV underground services are completed in accordance with job requirements, work permits and workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	LV underground services are tested in accordance with job requirements and workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation and maintenance of LV underground services in	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

remote communities	procedures
	3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4 Tools, equipment and surplus resources are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5 Relevant work permits are relinquished and signed off in accordance with workplace procedures
	3.6 Work records, reports and documentation are completed and relevant personnel notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRIS37 Install and maintain low voltage services in remote communities (underground)

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- connecting low voltage (LV) underground services, including at least two (2) of the following:
  - underground pillar/pit connection (single phase)
  - underground pillar/pit connection (three phase*)
  - underground to overhead connection
  - (* must do)
- installing LV underground service protection devices, including at least one (1) of the following:
  - fuse units
  - circuit breakers
  - service links
- using specialist testing equipment, including at least four (4) of the following:
  - polarity test *
  - phase rotation test
  - continuity test
  - voltage test
  - insulation resistance test
  - (* must do)
- connecting LV underground service protection devices, including at least one (1) of the following:
  - aluminium LV cable
  - cross-linked polyethylene (XLPE) cable
  - copper LV cable
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation, maintenance and connection of LV underground service lines and associated equipment
- types, sizes and characteristics of LV underground services - two-core, three-core, four-core, cable cross-sectional area of conductors, current ratings and cable insulation materials
- types and characteristics of LV service associated equipment - conduit, jointing gloves, cable labelling, pillars and pits
- requirements prior to the installation of underground service - service documentation, minimum depths to assets in ground, relevant electrical access permit and multiple earthed neutral (MEN) system
- types of installation plant, equipment and tools - service cable puller, shovels, stripping tool, aerial bundled cable (ABC) spanner, ABC spreader, spanners and screwdrivers
- installation techniques - methods of laying cable, terminating and effect of poor connections
- testing and commissioning underground services - continuity testing, insulation testing, polarity testing, phase sequencing and neutral integrity testing
- completing enterprise documentation
- techniques for the maintenance of underground services - inspection, types of faults, diagnosis and repair of faults, and removing and replacing services and fuses.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations for installing and maintaining LV underground services in remote communities
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining underground LV services in remote communities
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS38 Install and maintain public lighting systems in remote communities

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain public lighting systems in remote communities in the electricity supply industry (ESI).

It includes completing installation and maintenance of public lighting systems; inspecting, testing and commissioning of the system associated with the street lighting circuit, associated hardware and earthing system; and installing associated hardware, components, wiring and earthing system. Maintenance also includes working on energised LV overhead or underground public lighting systems, including diagnosis of faults and updating relevant system data and/or public lighting maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE103A Solve problems in ELV single path circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEK101A Maintain safety and tidiness of remote area power supply systems

UEENEEK102A Work safely with remote area power supply systems

UEENEEK116A Maintain and repair remote area power generation facilities

UEENEEK120A Maintain operation of remote area power generation plant

Assessment Requirements for UETTDRIS38 Install and maintain public lighting systems in remote communities

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining public lighting systems on poles/columns including at least one (1) of the following:
  - wood
  - concrete
  - steel
  - composite
- installing lanterns/luminaires, including at least two (2) of the following:
  - high pressure mercury vapour
  - low pressure and high pressure sodium vapour
  - fluorescent
  - quartz-halogen
- using specialist testing devices, including at least three (3) of the following:
  - voltage detectors*
  - insulation resistance testers
  - clamp-on ammeters
  - continuity testers
  - fault indicators
  - (* must use)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- standards, codes, legislation, supply authority regulations, local government and/or enterprise requirements pertaining to the installation and maintenance of public lighting systems and associated equipment
- types of lighting systems - overhead and underground
- safety precautions specific to working on street lighting - safe working practices and procedures, working at heights, working in confined spaces, permit to work systems and isolation procedures
- basic public lighting principles - electromagnetic spectrum, principles of colour, behaviour of light and factors that affect illumination
- requirements for the use of enterprise construction manuals, systems, diagrams/plans and drawings - constructing streetlight, street lighting circuits and earthing system
- types of tools and equipment used for installation and maintenance
- types and function of lanterns/luminaries/lamps, control equipment, poles and associated hardware used for street lighting - high pressure mercury vapour, low pressure and high pressure sodium vapour, fluorescent, quartz-halogen, wood, concrete, steel, composite, choke boxes, photo-electric cells, time switches, contactor boxes, brackets and street lights standards
- techniques for the installation of street lighting systems
- techniques for the inspection, testing and commissioning of street lighting systems
- techniques for the maintenance of street lighting systems - diagnosing of faults; removing, repairing, replacement and cleaning of public lighting and associated hardware; and controlling and switching of lighting systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining public lighting systems in remote communities
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS41 Install network infrastructure electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install network infrastructure electrical equipment in the electricity supply industry (ESI).

It includes terminating and/or connecting equipment, conducting relevant pre-commissioning tests involving the equipment/system, and interpreting tests against agreed specifications.

Electrical equipment includes but is not limited to transformers, fuse switches, drop out switches, sectionalisers, links, surge arrestors, gas filled and/or oil filled switches, which are relevant to transmission, distribution and rail networks.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

Assessment Requirements for UETTDRIS41 Install network infrastructure electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing any three (3) of the following:
  - fuse switches
  - dropout fuses
  - sectionalisers
  - disconnectors
  - links
  - fuses
  - surge arrestors
- installing network infrastructure electrical equipment for at least one (1) of the following switchgear types:
  - reclosers
  - motorised switches
  - gas filled switches
  - ring main units
  - line fault indicators
  - oil filled switches
  - air break switches
- installing network infrastructure electrical equipment for at least one (1) of the following equipment types:
  - transformers
  - reactors
  - regulators
  - capacitors
- using specialist testing equipment including at least three (3) of the following:

- voltage detectors
- phasing equipment
- clip-on ammeters
- insulation resistance testers
- recording meters
- earth resistance tester
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relationship between the substations within an overall power system, such as:
  - purpose, location in relation to load centres, layout of high voltage (HV) equipment within the substation and auxiliary equipment
- characteristics of a power transformer, such as:
  - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
- auxiliary equipment used on transformers encompassing:
  - function and basic operation
- maintenance of a power transformer, such as
  - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, testing and fault-finding procedures
- characteristics of a reactor, including:
  - description and purpose
- types and function of various switchgear, such as:
  - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types switchgear, installation procedures, earthing, and requirements and techniques
- types of equipment, such as:
  - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
- installation procedures for switchgear and equipment, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - assembly and erecting procedures
  - earthing requirements and techniques
  - pole mounted locations
- testing and commissioning, including:
  - electricity supply industry (ESI) standards and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Evidence should show demonstrated competency working at heights, in limited spaces, with different structural/construction types and method and in a variety of environments.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for maintaining network infrastructure electrical equipment
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS42 Maintain network infrastructure electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to maintain network infrastructure electrical equipment in the electricity supply industry (ESI).

It includes the maintenance of electrical equipment and associated hardware, including fuse switches, drop out switches, sectionalisers, links, surge arrestors, gas filled and/or oil filled switches that are relevant to transmission, distribution and rail traction networks. It also includes the repair and/or replacement of 'like for like' electrical equipment and associated hardware as well as the termination and/or connection of this equipment according to requirements, and sampling of insulating oils.

It also includes identifying faults, performing pre-commissioning tests involving the equipment/system and the interpretation of these tests against agreed specifications.

It excludes the energisation of the equipment maintained in a highly complex, interdependent and interconnected electricity supply network system, where the effects of unintended consequences on the system are high risk.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for maintenance of network infrastructure electrical equipment	**1.1** Works schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the maintenance of electrical equipment (network infrastructure) are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out maintenance of network infrastructure electrical equipment	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Maintenance of electrical equipment (network infrastructure) is completed in agreed timeframes, to quality standards and with minimum of waste in accordance with workplace procedures
	2.4	Maintenance, including repair and/or replacement of electrical equipment (network infrastructure), is performed in accordance with job schedule, work requirements and workplace procedures
	2.5	Unplanned events are responded to in accordance with workplace procedures
	2.6	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete maintenance of network infrastructure electrical equipment	**3.1**	Work undertaken is checked/tested against works schedule for conformance with requirements and anomalies reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and electrical equipment (network infrastructure) is returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS42A Maintain network infrastructure electrical equipment.

Assessment Requirements for UETTDRIS42 Maintain network infrastructure electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing maintenance of network infrastructure electrical equipment using at least three (3) of the following:
  - fuse switches
  - dropout fuses
  - sectionalisers
  - disconnectors
  - links
  - fuses
  - surge arrestors
- using at least one (1) of the following:
  - reclosers
  - gas filled switches
  - ring main units
  - oil filled switches
  - air break switches
- maintaining network infrastructure electrical equipment for at least one (1) of the following equipment types:
  - transformers
  - reactors
  - regulators
  - capacitors
  - relays
  - line fault indicators
- using specialist testing equipment, including at least three (3) of the following:

  - voltage detectors
  - phasing equipment
  - clip-on ammeters
  - insulation resistance testers
  - recording meters
  - earth resistance testers
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- types and function of various switchgear, such as:
  - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types switchgear, installation procedures, earthing, and requirements and techniques
- types of equipment, such as:
  - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
- maintenance procedures for switchgear and equipment encompassing:
  - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
- testing and commissioning encompassing:
  - ESI standards and procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

UETTDRIS43 Perform low voltage field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to perform low voltage (LV) field switching operation to a given schedule in the electricity supply industry (ESI).

It includes the operation of circuit breaking and isolating devices from a switching schedule, paralleling in accordance with the switching schedule, communicating with the switching control officer or electrical control officer, isolating the electrical equipment and the line or worksite, as well as proving the work area is de-energised and earthed, issuing/accepting electrical permits and returning the affected circuits to service.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Assessment Requirements for UETTDRIS43 Perform low voltage field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing low voltage (LV) field switching operation to a given schedule using all of the following:
  - approvals/clearances
  - access authority/permits
- using at least two (2) of the following:
  - voltage detectors
  - polarity testers
  - phase rotation indicators
- using at least one (1) of the following:
  - LV links
  - LV bridges
  - LV fuses
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
- requirements for the use of manuals, system diagrams/plans and drawings, including:
  - types, characteristics and capabilities of electrical apparatus
  - use, characteristics and capabilities of specialised tools and testing equipment
  - LV network interconnectors for alternate sources of supply and possible back-feed

© Commonwealth of Australia, 2025 Powering Skills Organisation

- procedures for obtaining correct LV switching authorisation, including:
  - identification of hazards, assessing and controlling risks
  - safety procedures and precautions
  - safe approach distances (SAD)
  - responsibilities and protocols
  - identifying switching resources
  - procedures for obtaining electrical access permits/authorities
  - requirements for team switching
  - procedures for coordination of operations
- techniques in LV system switching, including:
  - isolation procedures and proving dead
  - pre-switching checks
  - switching operational procedures
  - emergency fault procedures
  - energisation procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing low voltage field switching operation to a given schedule
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

	1.5	Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant authority is obtained to perform work in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out HV switching procedures to a given schedule	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	HV switching procedures to a given schedule are applied to ensure completion in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Communications with switching control officer are established and maintained throughout the isolation operation in accordance with workplace procedures
	2.5	Electrical equipment, associated circuits, line/network or worksite to be switched, including paralleling, is isolated and proved de-energised using appropriate devices and earthed, where required, in accordance with workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Relevant permits are prepared and issued in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance

© Commonwealth of Australia, 2025 Powering Skills Organisation

		with workplace procedures
3 Complete HV switching procedures to a given schedule	**3.1**	Completed switching is checked against work schedule and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned and made safe in accordance with workplace procedures
	3.4	Plant, equipment and tools are cleaned, checked and returned to service in accordance with workplace procedures
	3.5	Relevant work permits are signed off, safety devices removed and system re-energised and returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS44A Perform HV field switching operation to a given schedule.

Links

Assessment Requirements for UETTDRIS44 Perform HV field switching operation to a given schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing high voltage (HV) field switching operation to a given schedule using the following:
  - approvals/clearances
  - access permits
- using all of the following:
  - HV operating sticks
  - HV operating earths
  - HV detectors
- using at least one (1) of the following specialist tools:
  - HV phasing sticks
  - HV ground mounted equipment isolating handles and earths
- operating switchgear with at least two (2) of the following:
  - HV links
  - air break switches
  - fuses
- using at least three (3) of the following:
  - reclosers
  - ring main units
  - circuit breakers
  - isolators
  - earth switches
  - sectionalisers
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
- requirements for the use of manuals, system diagrams/plans and drawings, including:
  - types, characteristics and capabilities of electrical apparatus
  - use, characteristics and capabilities of specialised tools and testing equipment
  - network interconnectors source of possible backfeed
- role of the HV switching operator
- procedures for obtaining correct HV switching authorisation, including:
  - identification of WHS/OHS hazards, assessing and controlling risks
  - safety procedures and precautions
  - safe approach distances (SAD)
  - responsibilities and protocols
  - identifying switching resources
  - procedures for obtaining electrical access permits/authorities
  - requirements for team switching
  - procedures for coordination of operations
- use and operation of equipment associated with HV overhead and substation equipment, including:
  - test instruments
  - sticks
  - interrupters
  - arc stranglers
- operation of protection systems and substation equipment, such as:
  - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
- types and categories of HV switchgear
- application, function and operating capabilities of switchgear
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV transmission main and working earths
- earthing HV electrical apparatus practices and procedures for access, including:
  - purposes of operational and additional work part - on-site earths
  - factors determining the location and effectiveness of operational earthing
  - acceptable industry procedures
  - personal protective equipment (PPE)
- HV switching techniques, including
  - pre-switching checks
  - switching operational procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - isolation procedures and proving dead/de-energised
  - earthing procedures
  - emergency fault procedures
  - energisation procedures
- application and function of the single wire earth return (SWER) system components, including:
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- operation of HV overhead switching or indicating devices, including:
  - identifying hazards, assessing and controlling risks associated with HV switchgear operation
  - systematic and defensive techniques
  - mobile radio procedures
  - double isolation procedures
  - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
- primary causes, effects and types of HV electrical faults
- HV protection devices, including:
  - main components
  - types
  - categories
  - applications
  - functions
- basic principle of operation of HV system protection devices
- protection coordination and protection - zoning
- HV feeder auto-reclosing suppression, including:
  - function
  - application
- circuit condition requirements and switching considerations when paralleling and separating HV feeders
- operation of HV distribution transformers, including:
  - principle governing factors for transformer ratings
  - protection and alarms
  - operating limitations and the relationship between transformer and HV fuse rating
  - purpose and principle operation of HV distribution transformer tap changers
  - HV distribution transformer and transformer-cable combination switching practices
  - paralleling requirements
  - isolation and earthing procedures for access

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - common distribution transformer and associated electrical apparatus faults
- HV underground switching equipment, such as:
  - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- function of feeder automation system and the main components
- operation procedure for a remote field device from a local control station
- functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
- SCADA system security interlocks and access restrictions
- SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
- function of the main components of a local/remote control system
- operation of a field devices using SCADA systems via a remote access terminal (RAT), dial up voice annunciated system and local control station.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for perform HV field switching operations to a given schedule
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS46 Install and maintain ESI network infrastructure electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the installation and maintenance of electrical equipment, such as fuse switches, drop out switches, sectionalisers, links, surge arrestors, gas filled and/or oil filled switches, which are relevant to the transmission, distribution and rail networks.

It includes the termination/connection of the equipment in accordance with enterprise requirements, the repair and/or replacement of like-for-like electrical equipment and associated hardware, and sampling of insulating oils. It also encompasses the identification of faults, the relevant pre-commissioning tests involving the equipment/system and the interpretation of these tests against agreed specifications.

It excludes the energisation of the equipment maintained in a highly complex, interdependent and interconnected electricity supply network system, where the effects of unintended consequences on the system are high risk and appropriate personnel effect energisation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and

© Commonwealth of Australia, 2025 Powering Skills Organisation

circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Troubleshoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDREL16 Worksafely near live electrical apparatus

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for the installation and maintenance of network infrastructure electrical	**1.1** Works schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment

1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the installation and/or maintenance of network infrastructure electrical equipment are obtained and confirmed for the purposes of the work to be performed

1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures

1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear according to established procedures

1.6 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures

1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE) required for the job are obtained and confirmed in working order

1.8 Relevant personnel at worksite are confirmed current in first aid, pole top rescue and other related work procedures according to requirements

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved to carry out work, where necessary

1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures

1.12 Road signs, barriers and warning devices are positioned

© Commonwealth of Australia, 2025 Powering Skills Organisation

		in accordance with requirements
2 Carry out installation and maintenance of network infrastructure electrical equipment	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
	2.2	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed, and currency according to requirements confirmed
	2.3	Essential knowledge and associated skills are applied in the safe installation of network infrastructure electrical equipment to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.4	Electrical equipment and associated hardware are positioned, secured and terminated/connected in accordance with requirements and established procedures
	2.5	Maintenance, including repair and/or replacement of network infrastructure electrical equipment, is carried out in accordance with the work schedule and requirements/established procedures
	2.6	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.7	Unplanned events in the installation of electrical equipment (network infrastructure) are undertaken within the scope of established procedures
	2.8	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.9	Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures
3 Complete the installation and maintenance of network infrastructure electrical equipment	**3.1**	Work undertaken is checked/tested against works schedule for conformance with requirements and anomalies reported in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures

3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

3.5 Relevant work permit(s) are signed off and electrical equipment (network infrastructure) are returned to service in accordance with requirements

3.6 Works completion records, reports, as installed/modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS46A Install and maintain ESI network infrastructure electrical equipment.

Assessment Requirements for UETTDRIS46 Install and maintain ESI network infrastructure electrical equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining any three (3) of the following:
  - fuse switches
  - dropout fuses
  - sectionalisers
  - disconnectors
  - links
  - fuses
  - surge arrestors
- installing and maintaining any one (1) of the following:
  - reclosers
  - motorised switches
  - gas filled switches
  - ring main units
  - line fault indicators
  - oil filled switches
  - air break switches
- installing and maintaining any one (1) of the following:
  - transformers
  - reactors
  - regulators
  - capacitors
  - relays
  - line fault indicators

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - with regards to the above incorporate any three (3) of the following:
        - voltage detectors
        - phasing equipment
        - clip-on ammeters
        - insulation resistance testers
        - recording meters
        - earth resistance tester
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
    - calculations involving fractions, decimals, ratios and proportions
    - calculations involving area, volume, mass and density
    - calculations involving transposition and substitution of formulae
    - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
    - identification of basic concepts, principles and applications - application of velocity, acceleration, force, density, torque and pressure
    - applications of the International System of Units (SI) units
    - the relationship between work, power and energy
    - behaviour of object under force - using a block and tackle under load, concept of mechanical advantage, determination of resultant forces, and determining the sag in a catenary conductor and the force applied at each end
    - fundamentals of the basic laws of fluid mechanics
- materials properties encompassing:
    - identification and classification of engineering materials material properties
    - types and applications - properties of tensile strength; effects of temperature on the expansion of metals; ductibility, malleability, work hardening and annealing and the conditions that lead to corrosion; and the properties of timbers
- basic rigging techniques encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches, and relevant certification and licensing (if required)
    - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
    - safe use of rigging equipment, tools and associated equipment - types, techniques and application
    - site inspection procedures - identifying hazards, assessing and controlling risks, and

© Commonwealth of Australia, 2025 Powering Skills Organisation

appropriate sequence of loading and unloading
    - determining the mass and dimensions of load
    - selection and inspection procedures - rigging equipment, materials and tools (natural and synthetic fibre ropes and chains, fittings, winch and capstan), ratings of wire ropes and slings, removing, repairing and replacing of damage parts
    - techniques for assembling and erecting power winches and capstans
    - checking the integrity of support structure - visual inspection of load connections
    - techniques in moving, lifting, shifting, managing and placing loads - use of appropriate communication and signalling methods, codes of practice/compliance, enterprise and Commonwealth/state/territory legislative requirements, weather conditions, erection of safety nets and lines, methods of fixing and anchoring loads, and load stability
- procedures in providing store support encompassing:
    - classification and identification of equipment, components and tools
    - procedures for purchasing/ordering items, removing/dispatching items, stocktaking, security and bookkeeping/record keeping
    - material handling - warehouse/depot storage techniques, handling equipment, pallet lift trucks, forklifts and cable drum handling equipment
    - safety procedures - storage and care of safety equipment, handling hazardous materials, storage of hazardous substances and dangerous goods, and depot safety procedures
    - manufacturer and supplier information, including material safety data sheets (MSDS)
- generation systems encompassing:
    - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
    - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
    - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
    - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
    - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
    - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
    - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
    - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub transmission lines
  - types, sizes and characterises of overhead conductors
  - resources for the stringing and maintenance of conductors - types of low voltage (LV) and HV overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; and minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and hardware, methods of stringing, tensioning and termination of LV and HV conductors
- safe working practices and procedures for the installation of overhead distribution conductors encompassing:
  - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWP)
  - requirements of persons prior to making bare-hand contact with dead LV mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedure to attach an on-site earthing device to de-energised LV and HV overhead circuit
- installation of poles and/or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware - types of installation equipment/tools, excavation methods, types of footings/foundations, types of attachments, earthing systems, clearances between conductors, safe methods of erecting and stabling poles and-or structures and cross-arms
  - techniques for maintenance of poles and associated hardware - stabilisation techniques for unstable poles, methods of strengthen poles, maintenance and replacement of HV

© Commonwealth of Australia, 2025 Powering Skills Organisation

insulators and cross-arms

- installation of LV electrical services encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings types of LV overhead services, methods of construction and installation, minimum clearances for overhead services to assets and structures, and types of installation equipment/tools
  - characteristics and applications of different types of cables - cable cross-sectional area of conductors, current rating and fuse type
  - techniques for maintenance of service installations - diagnosis and repair of faults
  - jointing and terminating methods - polymeric heat shrink materials, polymeric tape materials, energised and de-energised cables, connections to fuse boxes and pole top boxes
  - testing and commissioning procedures – inspection, polarity, voltage and phase sequence tests
  - construction types and structures for distribution and sub transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors, - types of LV and HV overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; and minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and hardware, methods of stringing, tensioning and termination of LV and HV conductors
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel; and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures for climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedure used to provide an effective traffic management scheme, and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods; and the precautions for personal protection when fighting small fires

© Commonwealth of Australia, 2025 Powering Skills Organisation

- rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses and developing techniques; involving external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS47 Sample, test, filter and reinstate insulating oil

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to sample, test, filter and reinstate insulating oil in the electricity supply industry (ESI).

It includes despatching oil samples to a laboratory for higher level testing, as required and post operational servicing of equipment and/or plant. It also includes identifying related environmental issues concerning disposing oil safely.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to sample, test, filter and reinstate insulating oil	**1.1** Works schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for sampling, testing, filtering and reinstating insulating oil are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.6 Relevant work permits are obtained and signed in accordance with workplace procedures
	1.7 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.11	Traffic management is planned and implemented in accordance with workplace procedures
2 Carry out sampling, testing, filtering and reinstating of insulating oil	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
	2.2	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
	2.3	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Sampling, testing, filtering and reinstating of insulating oil are applied to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
	2.5	Sampling, testing, filtering and reinstating of the insulating oil is performed in accordance with work schedules, job requirements and workplace procedures
	2.6	Unplanned events in the filtering, sampling and testing of insulating oil are responded to in accordance with workplace procedures
	2.7	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.8	Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3 Complete the sampling, testing, filtering and reinstating of insulating oil	**3.10**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required

3.3 Worksite is cleaned and confirmed safe in accordance with workplace procedures

3.4 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage or disposed of in accordance with workplace procedures

3.5 Relevant work permits are signed off and equipment is returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS47A Sample, test, filter and reinstate insulating oil.

Assessment Requirements for UETTDRIS47 Sample, test, filter and reinstate insulating oil

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- sampling, testing, filtering and reinstating insulating oil on at least two (2) of the following pieces of equipment:
  - transformer (tx) main tank
  - tx tap changer
  - switchgear
  - cable
  - reactor
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- filtering and sampling of insulating oil, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with filtering and sampling - safe handling procedures; personal hygiene, storage and disposal procedures; WHS/OHS hazards and precautions, including use of appropriate personal protective equipment (PPE); environmental procedures and effects of contaminates
  - properties of insulating oil - dielectric strength, moisture content, acidity and sludge
  - locations where insulating oil is used - transformer, switchgear and oil filled cable
  - filtering equipment – types, cleaning procedures and method of use
  - techniques in filtering and sampling insulating oil - methods of sampling, methods of filtering, testing procedures on site and analysing oil effectiveness
  - frequency of testing

© Commonwealth of Australia, 2025 Powering Skills Organisation

- testing of insulating oil, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with testing, such as precautions during testing and types of testing equipment
  - techniques in testing insulating oil - electric strength, water content, dielectric dissipation, resistivity and acidity
  - dissolved gas analysis (DGA)
- powerline safety practices, including:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedure of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; d emergency procedures for the rescue of an electric shock victim, including cardio pulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- material handling and the environment, including:
  - methods of obtaining updated environmental information and data sheets on the proper use and handling of equipment and materials
  - environmental standards, codes, environmental legislation, WHS/OHS legislation, hazardous substances/dangerous goods regulations, supply authority regulations and/or enterprise requirements applicable environmental care when handling materials, including provision of manufacturer and supplier information such as material safety data sheets (MSDS)
  - types and application of PPE used for hazards substances and dangerous goods
  - techniques in handling equipment to eliminate/reduce risks to the environment from spillages of oils, herbicides, pesticides and chemicals from equipment, such as vehicle

© Commonwealth of Australia, 2025 Powering Skills Organisation

loading crane, chainsaw, enterprise vehicles and explosive power tools
    - procedures for handling and control of spillages of herbicides
    - methods of disposing and storage of herbicides, pesticides and chemicals
    - methods of cleaning mobile plant, equipment and tools
    - recording of data
- environmental issues when undertaking sampling and filtering of oil, including:
    - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the work to be undertaken
    - methods of obtaining updated environmental information and data sheets on the proper use and handling of oil used on transformers and switchgear, including provision of MSDS
    - techniques in filtering and sampling oil to eliminate/reduce risks to the environment from spillages
    - safety procedures and equipment for handling and control of the oil
    - methods of disposing and storage of the oil
    - methods of cleaning equipment, tools and equipment
    - emergency procedures for spillages of oil to reduce risks to the environment - methods of cleaning up excessive spillages, methods of protection to surrounding environment, procedures for notification of relevant personnel and authorities, and recording procedures
    - polychlorinated biphenyl (PCB) contamination, handling and disposal procedures
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants, including:
    - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
    - identification of environmental issues associated with the handling and disposing of insulation materials
    - safety precautions when handling and disposing of heat dissipation materials
    - safe working practices
    - WHS/OHS hazards and precautions
    - identification of hazards, assessing and controlling risks
    - types, selection, maintenance and uses of PPE
    - permit to work systems and isolation procedures
    - types and function of specialised equipment
    - safe working practices when using specialised equipment
    - emergency response and rescue, including first aid
    - techniques in the handling and disposing of insulation materials - PCB, asbestos, insulating oil and SF6 gas
- enterprise-specific policies and procedure instructions, including:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

- rules and regulations
- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, complaint and issues procedures
- overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion

- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
  - WHS/OHS records, including audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and/specific enterprise regulations pertaining to the use and care of specialised tools - voltage detectors; polarity testers and phase rotation
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storage of specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance and care and storage of specialised tools
  - identifying WHS/OHS hazards, assessing and controlling risks associated with their use

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques for the safe use of specialised power tools
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substation work, including responsibilities about the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - rescue of personnel from energised conductors, emergency descent from an EWP and/or rescue from confined spaces
  - enterprise requirements - safe access and authorisation to work procedures; use of mobile extendable equipment on or near energised HV conductors; emergency response procedures; hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction; and dangers of near approach to energised conductors.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS48 Develop high voltage switching schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the preparation of a basic switching schedule for interconnected high voltage (HV) network plant. It includes planning basic outages and taking into account loading of network components. It also includes the calculation of network loading conditions to ensure the network is operating within designed parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS44 Perform HV field switching operation to a given schedule

Transmission Overhead Pathway Group

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRTP26 Install transmission structures and associated hardware
UETTDRTP27 Maintain transmission structures and associated hardware
UETTDRTP29 Install and maintain transmission overhead conductors and cables
Distribution Overhead Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDRDP12 Maintain overhead energised low voltage conductors and cables
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRIS56 Install and maintain low voltage overhead services
Rail Traction Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRRT21 Install traction overhead wiring systems
UETTDRRT22 Maintain traction overhead wiring systems
UETTDRRT23 Install rail traction bonds
UETTDRRT27 Install overhead traction components and equipment
UETTDRRT28 Maintain overhead traction components and equipment
Distribution Cable Jointing Pathway Group
UETTDRCJ21 Lay ESI electrical cables
UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables
UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS55 Install and maintain low voltage underground services
Electrical Pathway Group
UEENEEE137A Document and apply measures to control OHS risks associated with

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to develop HV switching schedules	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3 Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4 Relevant requirements and established procedures for the work are communicated to all personnel and

© Commonwealth of Australia, 2025 Powering Skills Organisation

		identified for all worksites
	1.5	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE) required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
	1.10	Liaison and communication issues with other/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
2 Carry out the development of HV switching schedules	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
	2.3	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.4	Development of HV switching schedules is carried out in accordance with the work schedule and requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and/or established procedures
	2.5	Essential knowledge and associated skills are applied in the safe development of HV switching schedules to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete development of HV switching schedules	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Relevant work permits are signed off and plant is returned to service and client/customer advised in accordance with requirements
	3.4	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS48A Develop high voltage switching schedule.

Assessment Requirements for UETTDRIS48 Develop high voltage switching schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining all the following:
  - approvals/clearances
  - access authorities
- completing at least one (1) of the following:
  - development of an interconnected switching schedule
  - development of a radial switching schedule
- completing all of the following:
  - planning of loading of network components, including standby generation
  - evaluating load parameters and effects on system, including paralleling and off-loading
  - identifying unexpected sources of energisation, e.g. – generators and uninterruptible power supply (UPS)
  - implementing earthing procedures to reduce induced voltages
  - authorising issuance of work permits
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment - high voltage (HV) and low voltage (LV) equipment
  - characteristics, capabilities and application of powerline electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - safety precautions with regards to using electrical equipment
  - techniques in pre-use inspection on the serviceability of electrical equipment
  - techniques in the general maintenance, care and storage of electrical equipment
  - identifying hazards, assessing and controlling risks associated with the use of electrical equipment
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedure for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE) and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
  - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components
  - circuit arrangement

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
  - function of feeder automation system and the main components
  - operation procedure for a remote field device from a local control station
  - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
  - SCADA system security interlocks and access restrictions
  - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
  - function of the main components of a local/remote control system
  - operation of a field devices using SCADA systems via a RAT, dial up voice annunciated system and local control station
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits, and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits, hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - HV switchgear – types, categories, application and operating capabilities

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air breaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing; and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched, points of isolation and earthing locations (safety and working earths), and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings encompassing:
    - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS49 Develop low voltage switching schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the preparation of a basic switching schedule for low voltage (LV) network. It includes planning basic outages and taking into account loading of network components. It also includes the calculation of network loading conditions to ensure the network is operating within design parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to develop LV switching schedules	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.4 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.5 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.6 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.7 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.8 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
2 Carry out the development of LV switching schedules	**2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.3 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.4 Development of LV switching schedules is carried out in accordance with the work schedule and requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

		and/or established procedures
	2.5	Essential knowledge and associated skills are applied in the safe development of LV switching schedules to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete development of LV switching schedules	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Relevant work permits) are signed off and plant is returned to service and client/customer advised in accordance with requirements
	3.3	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.4	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRIS49 Develop low voltage switching schedule

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining all the following:
  - approvals/clearances
  - access authorities
- completing the following:
  - development of LV switching schedule to enterprise requirements
- completing all the following:
  - planning of loading of network components, including standby generation
  - evaluating load parameters and effects on system, including paralleling and off-loading
  - identifying unexpected sources of energisation, e.g. – generators, uninterruptible power supply (UPS) and solar
  - implementing earthing procedures to reduce induced voltages
  - authorising issuance of work-permits
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment - high voltage (HV) and low voltage (LV) equipment
  - characteristics, capabilities and application of powerline electrical equipment
  - safety precautions with regards to using electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - techniques in pre-use inspection on the serviceability of electrical equipment
    - techniques in the general maintenance, care and storage of electrical equipment
    - identifying hazards, and assessing and controlling risks associated with the use of electrical equipment
- installation of switchgear and associated equipment encompassing:
    - types and function of various switchgear - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types switchgear, installation procedures, earthing and requirements and techniques
    - types of equipment - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
    - installation procedures for switchgear and equipment - standards, codes, legislation, supply authority regulations and/or enterprise requirements, assembly and erecting procedures, earthing requirements and techniques, and pole mounted locations
    - maintenance procedures for switchgear and equipment - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures,
    - testing and commissioning - ESI standards and procedures
- LV switching principles encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
    - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
    - personnel protective equipment (PPE) for LV switching
- LV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of LV systems and equipment to be switched
    - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
    - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- LV overhead and substation switching principles encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

applicable to LV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments; purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing
  - LV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a LV switching instruction encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator
  - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue

© Commonwealth of Australia, 2025 Powering Skills Organisation

management, and training and competency development - understanding and promotion

- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS50 Coordinate power system permit procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the coordination of work procedures that require the issue of electrical permits to work and other permits for working on major parts of the electrical network. It encompasses the analysis and coordination of all work activities planned to be undertaken within more or less the same time timeframe to ensure that the organisation's work safety and statutory requirements are complied with; the extent of power interruption, and hence inconvenience to customers, is minimised; and the effective utilisation of available resources, both from the organisation and from its contractors to ensure all planned activities are completed in a timely manner to specified standards and requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to coordinate permit procedures	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.2	Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
	1.3	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.4	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.5	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.6	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and applied in the coordination of permit procedures according to established procedures
	1.7	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.8	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
2 Carry out the coordination of permit procedures	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
	2.3	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		requirements and/or established procedures
	2.4	Coordination of permit procedures is carried out in accordance with the work schedule and requirements and/or established procedures
	2.5	Essential knowledge and associated skills are applied in the safe coordination of permit procedures to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.7	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality like outcome is achieved for the client/customer and to a community/industry standard
3 Complete the coordination of permit procedures	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Relevant work permits are signed off and plant is returned to service and client/customer advised in accordance with requirements
	3.3	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.4	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS50A Coordinate power system permit procedures.

Assessment Requirements for UETTDRIS50 Coordinate power system permit procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all the following:
  - developing a permit schedule and/or permit issuing procedures
  - facilitating and coordinating the delivery and issuing of permits
- gathering, collating and confirming data on different worksites relevant to:
  - electrical network diagrams for the specific worksite
  - earth permits
  - safe working area
  - work to be carried out in confined space or in hazardous environment
  - specific outsourcing procedures
  - specific hazard identification
  - risk classification and management procedures
  - regulatory requirements, such as WHS/OHS and electrical safety
- completing all the following:
  - receiving and coordinating the cancellation of permits in readiness for restoration
  - conducting audits permit correctness procedures
- conducting at least two (2) of the following:
  - issuing other work permits, such as working in confined space, as required
  - coordinating permits
  - engaging and briefing contractors on electrical and other work permits
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

© Commonwealth of Australia, 2025 Powering Skills Organisation

the requirements of the elements and performance criteria and include knowledge of:

- coordinating access authority procedures encompassing:
  - specific-enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements, such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, as required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- high voltage (HV) switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits, and purpose and procedures for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters, arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of "operational" and additional work part "on-site" earths, factors determining the location

© Commonwealth of Australia, 2025 Powering Skills Organisation

and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE) and HV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV distribution transformer principles encompassing:
    - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms; operating limitations and the relationship between transformer and HV fuse rating; purpose and principle operation of HV distribution transformer tap changers; HV distribution transformer and transformer - cable combination switching practices; paralleling requirements, isolation and earthing procedures for access; common distribution transformer and associated electrical apparatus faults
    - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
    - application and function of SWER system components
    - circuit arrangement
    - principle of operation
    - hazards and procedures associated with faulty SWER earth systems
    - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
    - function of feeder automation system and the main components
    - operation procedure for a remote field device from a local control station
    - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
    - SCADA system security interlocks and access restrictions
    - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
    - function of the main components of a local/remote control system
    - operation of a field devices using SCADA systems via a AT, dial up voice annunciated system and local control station
- HV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of HV systems and equipment to be switched
    - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching

© Commonwealth of Australia, 2025 Powering Skills Organisation

resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
    - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, emergency fault procedures and energisation procedures
- LV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of LV systems and equipment to be switched
    - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
    - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
    - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
    - role and responsibilities of the HV switching operator
    - operational forms, access authorities and permits and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits and hazard/risk assessments; purpose and procedurse for operational forms, access authorities and hazard/risk assessments
    - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
    - HV switchgear – types, categories, application and operating capabilities
    - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks switches, disconnects, live line clamps, phasing sticks and phasing tester
    - operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
    - restrictions pertaining to HV switching equipment
    - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing and HV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks

© Commonwealth of Australia, 2025 Powering Skills Organisation

associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures

- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to low voltage overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments, purpose and procedures for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing
  - LV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths) and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- preparation of a LV switching instruction encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings encompassing:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instruction/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution

© Commonwealth of Australia, 2025 Powering Skills Organisation

system symbols and feeder plans, and processes of updating switching diagrams.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS51 Coordinate and direct power system switching schedules

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers the coordination and direction of switching the high voltage (HV) and low voltage (LV) system. It includes coordinating switching between operating authorities and HV customers. It also includes the direction of switching on the HV and LV electrical network.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

Transmission Overhead Pathway Group

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDRIS44 Perform HV field switching operation to a given schedule

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRTP26 Install transmission structures and associated hardware
UETTDRTP27 Maintain transmission structures and associated hardware
UETTDRTP29 Install and maintain transmission overhead conductors and cables
Distribution Overhead Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDRDP12 Maintain overhead energised low voltage conductors and cables
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS43 Perform low voltage field switching operation to a given schedule
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRIS56 Install and maintain low voltage overhead services
Rail Traction Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRRT21 Install traction overhead wiring systems
UETTDRRT22 Maintain traction overhead wiring systems
UETTDRRT23 Install rail traction bonds
UETTDRRT27 Install overhead traction components and equipment
UETTDRRT28 Maintain overhead traction components and equipment
UETTDRRT30 Perform to a given schedule rail traction switching operations
Distribution Cable Jointing Pathway Group
UETTDRCJ21 Lay ESI electrical cables
UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables
UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS43 Perform low voltage field switching operation to a given schedule

UETTDRIS55 Install and maintain low voltage underground services

Electrical Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRSB39 Perform power system substation switching operation to a given schedule

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to coordinate and direct switching schedules	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established

© Commonwealth of Australia, 2025 Powering Skills Organisation

		procedures
	1.3	Risk control measures are identified, prioritised and evaluated against the work schedule
	1.4	Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
	1.5	Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
	1.6	Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
	1.7	Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8	Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
	1.9	Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work
2 Carry out coordinate and direct switching schedules	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to

© Commonwealth of Australia, 2025 Powering Skills Organisation

		immediate authorised personnel for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	Coordination and direction of switching schedules are carried out in accordance with the work schedule and requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied in the safe coordination and direction of switching schedules to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete coordinate and direct switching schedules	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Relevant work permits are signed off and electrical plant is returned to service and client/customer advised in accordance with requirements
	3.4	Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS51A Coordinate and direct power system switching schedules.

Assessment Requirements for UETTDRIS51 Coordinate and direct power system switching schedules

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining all the following:
  - approvals/clearances
  - access permits
- demonstrating all of the following:
  - switching direction
  - switching coordination
  - autonomy of working with network control
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment - high voltage (HV) and low voltage (LV) equipment
  - characteristics, capabilities and application of powerline electrical equipment
  - safety precautions with regards to using electrical equipment
  - techniques in pre-use inspection on the serviceability of electrical equipment
  - techniques in the general maintenance, care and storage of electrical equipment
  - identifying hazards, and assessing and controlling risks associated with the use of electrical equipment
- installation of switchgear and associated equipment encompassing:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types and function of various switchgear - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types of switchgear, installation procedures, earthing, and requirements and techniques
  - types of equipment - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment - standards, codes, legislation, supply authority regulations and/or enterprise requirements, assembly and erecting procedures, earthing requirements and techniques, and pole mounted locations
  - maintenance procedures for switchgear and equipment - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures,
  - testing and commissioning - ESI standards and procedures
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permits, operational procedures and earthing procedures
  - personnel protective equipment (PPE) for LV switching
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedures for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of "operational" and additional work part "on-site" earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, PPE and HV switching techniques

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV distribution transformer principles encompassing:
    - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
    - HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
    - application and function of SWER system components
    - circuit arrangement
    - principle of operation
    - hazards and procedures associated with faulty SWER earth systems
    - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
    - function of feeder automation system and the main components
    - operation procedure for a remote field device from a local control station
    - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
    - SCADA system security interlocks and access restrictions
    - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
    - function of the main components of a local/remote control system
    - operation of a field devices using SCADA systems via a RAT, dial up voice annunciated system and local control station
- HV system switching principles, including switching authorisation procedures, encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
    - requirements for the use of manuals, system diagrams/plans and drawings
    - types and characteristics of HV systems and equipment to be switched
    - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, emergency fault procedures and energisation procedures
- LV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers and operating agreements
  - techniques in coordinating and directing HV and LV switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

- role and responsibilities of the HV switching operator
- operational forms, access authorities and permits and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits and hazard/risk assessments; purpose and procedure for operational forms, access authorities and hazard/risk assessments
- use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
- HV switchgear – types, categories, application and operating capabilities
- operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
- operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures

- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to LV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments; purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - LV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
    - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths); and responsibilities of the switching operator
    - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- preparation of a LV switching instruction encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator
    - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader

© Commonwealth of Australia, 2025 Powering Skills Organisation

programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings encompassing:
    - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
    - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS52 Install and maintain poles, structures and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain poles, structures and associated hardware in the electricity supply industry (ESI).

It includes the installation of poles and/or structures and associated hardware, (excluding towers), which may consist of wood, steel, concrete or composite type material.

It also covers the fixing and/or securing of associated hardware as well as the repair and replacement of poles and/or structures.

It includes identifying and implementing a suitable traffic management plan.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE105A Fix and secure electrotechnology equipment

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation and maintenance of poles, structures and associated hardware	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of poles and/or structures and associated hardware are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

2 Carry out installation and maintenance of poles and/or structures and associated hardware	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Installation of poles and/or structures and associated hardware are completed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Poles and/or structures and associated hardware to be installed are stabilised in accordance with workplace procedures
	2.5	Installation is assembled in accordance with construction plans, drawings and workplace procedures
	2.6	Maintenance, including repair and/or replacement of poles and/or structures, is performed in accordance with work schedule, job requirements and workplace procedures
	2.7	Unplanned events are responded to in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation and maintenance of poles, structures and associated hardware	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and poles and/or structures and their associated hardware are returned to

© Commonwealth of Australia, 2025 Powering Skills Organisation

service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS52A Install and maintain poles, structures and associated hardware.

Assessment Requirements for UETTDRIS52 Install and maintain poles, structures and associated hardware

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing at least one (1) of the following pole type and structures:
  - wood pole/structure
  - steel pole/structure
  - concrete pole/structure
  - composite pole/structure
- installing at least three (3) of the following associated hardware:
  - insulators
  - cross-arm braces
  - cross-arms
  - pole steps
  - shackle straps
  - earth leads
  - traction supports
  - traction registration
  - bonding
- using at least one (1) of the following pole stabilisation methods:
  - baulking
  - stays
  - concreting including foundation
- installing poles and structures using at least one (1) of the following:
  - crane
  - auger/erector
  - ‘A’ frame

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - lifting beam
  - pole pikes
  - helicopter lift
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
  - characteristics and applications of different types of poles and associated hardware
- techniques for installing poles and associated hardware, including:
  - types of installation equipment/tools
  - excavation methods
  - types of footings/foundations
  - types of attachments
  - earthing systems
  - clearances between conductors
  - safe methods of erecting and stabling poles and/or structures and cross-arms
- techniques for maintenance of poles and associated hardware, including:
  - stabilisation techniques for unstable poles
  - methods of strengthen poles
  - maintenance and replacement of high voltage insulators and cross arms
- traffic management, such as:
  - purpose of traffic management and a power worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
- procedures for purchasing/ordering items, removing/dispatching items, stocktaking and record keeping.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining poles, structures and associated hardware
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS53 Install and maintain power system public lighting

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install, maintain, and repair power systems public lighting in the electricity supply industry (ESI).

It includes inspecting, testing and commissioning the system associated with street lighting circuit, the associated hardware, and the earthing system.

Maintenance may include work on energised low voltage (LV) overhead or underground public lighting systems, diagnosis of faults, updating relevant system data and or public lighting maintenance records. Installation will include the installation of, the associated hardware and components and, the wiring and earthing system.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

Assessment Requirements for UETTDRIS53 Install and maintain power system public lighting

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining public lighting poles/columns at least one (1) of the following:
  - wood
  - concrete
  - steel
  - composite
- installing or and maintaining public lighting lanterns/luminaires, including at least two (2) of the following:
  - high pressure mercury vapour
  - low pressure and high pressure sodium vapour
  - fluorescent
  - quartz-halogen
- using specialist testing equipment, including at least three (3) of the following:
  - voltage detectors*
  - insulation resistance testers
  - clamp-on ammeters
  - continuity testers
  - fault indicators
  - (* must use)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- standards, codes, legislation, supply authority regulations, local government and/or enterprise requirements pertaining to the installation and maintenance of public lighting systems and associated equipment
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
  - street lighting circuits
  - earthing system
- types of tools and equipment used for installation and maintenance
- types and function of lanterns/luminaires/lamps, control equipment, poles and associated hardware used for street lighting, such as:
  - high pressure mercury vapour, low pressure and high pressure sodium vapour, fluorescent, quartz-halogen, wood, concrete, steel, composite, choke boxes, photo-electric cells, time switches and contactor boxes
- types of lighting systems, including:
  - overhead and underground street lighting systems
  - controlling and switching of lighting systems
- techniques for the installation of street lighting systems
- techniques for the maintenance of street lighting systems, such as:
  - diagnosing of faults; removing, repairing, replacing and cleaning of public lighting and associated hardware
- application of specific testing equipment, such as:
  - voltage detectors, insulation resistance testers, clamp-on ammeters, continuity testers and fault indictors
- techniques for the inspection, testing and commissioning of street lighting systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining power system public lighting

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain overhead conductors and cables used on poles and structures (excluding towers) in the electricity supply industry (ESI).

It includes stringing, tensioning and terminating of conductors/cables, cleaning de-energised insulators, securing conductors to insulators or supports and undertaking electrical connections.

It also includes maintenance work associated with diagnosing faults, conducting visual inspections, confirming phasing, completing workplace tests, isolating systems and circuits, issuing/accepting electrical access permits and updating system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation and maintenance of overhead conductors and cables used on poles and/or structures	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of overhead conductors and cables used on poles and/or structures are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9 Traffic management plan is confirmed as being applied

© Commonwealth of Australia, 2025 Powering Skills Organisation

		in accordance with workplace procedures
2 Carry out installation and maintenance of overhead conductors and cables used on poles and/or structures	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Electrical systems and circuits are checked and isolated in accordance with job requirements, work permits and workplace procedures
	2.4	Installation and maintenance of overhead conductors and cables used on poles and/or structures are completed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.5	Overhead conductor/cables are strung, tensioned and terminated in accordance with workplace procedures
	2.6	Insulators are cleaned and conductors, anti-vibration devices and spaces/spreaders are secured in accordance with workplace procedures
	2.7	Electrical connections are made in accordance with job requirements and workplace procedures
	2.8	Maintenance, including repair and/or replacement of overhead conductors and cables used on poles and/or structures, is carried out in accordance with work schedule, job requirements and workplace procedures
	2.9	Unplanned events are responded to in accordance with workplace procedures
	2.10	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation and maintenance of overhead conductors and cables used on poles and/or structures	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required

3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures

3.4 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and overhead conductors and cables used on poles and/or structures are returned to service in accordance with workplace procedures

3.6 Conductors/cables are tested and commissioned in accordance with job requirements and workplace procedures

3.7 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS54A Install and maintain poles, structures and overhead conductors and cables.

Assessment Requirements for UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining poles, structures and overhead conductors and cables using at least two (2) of the following:
  - copper
  - aluminium
  - steel
  - low voltage (LV) aerial bundled cable (ABC)
  - aluminium/steel reinforced
  - high voltage (HV) ABC
  - HV insulated unscreened conductor (IUC)
  - pilot
- using at least two (2) of the following height access methods:
  - elevated work platform (EWP)
  - portable platform
  - ladder
- using at least three (3) of the following types of stringing equipment:
  - tension equipment*
  - cable drum stands
  - cable trailers
  - ropes
  - rollers
  - sheaves
  - stockings
  - stringing equipment
  - swivels

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - winches
  - (* must do one)
- using at least two (2) of the following types of testing and recording equipment:
  - voltage indicators *
  - phasing sticks
  - fault indicators
  - field intensity meter
  - operating rods
  - (*must do)
- using at least one (1) of the following types of stringing methods:
  - lay-out (stringing method)
  - pull through (stringing method)
  - pilot rope (stringing method)
- using at least one (1) of the following tensioning methods:
  - dynamometer
  - site board
  - beat (wave sagging)
  - abney level
  - theodolite
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
- safe work practices, including:
  - requirements to enable safe working on conductive poles
  - procedures to attach on site earthing devices to de-energised LV and HV circuits
- requirements for the use of overhead line construction manuals, system diagrams/plans and drawings, including:
  - material lists
  - conductor size, type and route length
- constructions types and structures for distribution and sub-transmission lines
- types, sizes and characterises of overhead conductors
- resources for the stringing and maintenance of conductors, including:
  - types of LV and HV overhead electrical conductor connections
  - causes and effects of poor electrical connections
  - reasons for and methods used to maintain standard phase sequencing

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - removing, repairing and replacing damaged conductors
  - minimum clearances between overhead conductors and LV and HV structures
- techniques for conductor installation, including:
  - types and application of tools, equipment and hardware
  - methods of stringing, tensioning and termination of LV and HV conductors.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining poles, structures and overhead conductors and cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS55 Install and maintain low voltage underground services

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain low voltage (LV) underground services in the electricity supply industry (ESI).

It includes the installation, maintenance and connection of low voltage underground service lines and associated equipment between the connection point and the point of supply.

It also includes the repair and replacement of service cables, service fuses and the replacement and repair of service hardware and the identification and rectification of faults. It also covers insulation, voltage, phase rotation and polarity testing.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation and maintenance of LV underground services and associated equipment	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and maintenance of LV underground services and associated equipment are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.5	Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.9	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out installation and maintenance of LV underground services and associated equipment	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Installation and maintenance of LV underground services and associated equipment are performed in agreed timeframes, to quality standards with a minimum of waste in accordance with workplace procedures
	2.4	LV underground services and associated equipment are installed in accordance with job requirements, work permits and workplace procedures
	2.5	Maintenance, including repair and/or replacement of LV services and associated equipment, is assembled in accordance with construction plans, drawings and workplace procedures
	2.6	Unplanned events are responded to in accordance with workplace procedures
	2.7	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation and maintenance of LV	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and

© Commonwealth of Australia, 2025 Powering Skills Organisation

underground services and associated equipment		anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and the LV services and associated equipment are returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS55A Install and maintain low voltage underground services.

Assessment Requirements for UETTDRIS55 Install and maintain low voltage underground services

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- connecting low voltage (LV) underground services to at least two (2) of the following:
  - underground pillar/pit connection (single phase)
  - underground pillar/pit connection (three phase*)
  - underground to overhead connection
  - (* must do)
- installing LV underground service protection devices, including at least one (1) of the following:
  - fuse units
  - circuit breakers
  - service links
- testing of LV underground service connections, including at least four (4) of the following:
  - polarity test *
  - phase rotation test
  - continuity test
  - voltage test
  - insulation resistance test
  - (* must do)
- installing LV underground service cables using at least one (1) of the following:
  - aluminium LV cable
  - cross-linked polyethylene (XLPE) cable
  - copper LV cable
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
  - types of LV underground services
  - methods of construction and installation
  - minimum depths for underground services to be buried and proximity to other assets and structures
- installation equipment/tools, including:
  - equipment and tools for underground service installation
  - fittings and hardware for underground service installation
- methods of laying cables, including:
  - conduits and sand and slabbing
- characteristics and applications of different types of cables, including:
  - cable cross-sectional area of conductors
  - current rating and fuse types and ratings
- techniques for maintenance of service installations, including:
  - diagnosis and repair of faults
- jointing and terminating methods, including:
  - polymeric heat-shrink materials
  - polymeric tape materials
  - insulated piercing connectors (IPCs)
  - energised and de-energised cables
  - connections to point of entry, fuse boxes, pillars and pits
- testing and commissioning procedures, including:
  - pre-energising tests - insulation resistance and continuity test
  - inspection
  - equipment functionality tests
  - polarity, voltage and phase sequence tests
  - neutral and phase identification tests
  - neutral integrity tests
  - meter function test
  - testing check forms
- connection principles, including:
  - purpose and function of multiple earth neutral (MEN) system
  - types of connection faults
  - causes and effects of incorrect and poor electrical connections

© Commonwealth of Australia, 2025 Powering Skills Organisation

- principles of loop impedance
- reasons for and methods used to maintain standard phase sequencing
- purpose and operation of service fusing
- use of independent earth for testing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining LV underground services
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS56 Install and maintain low voltage overhead services

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and maintain low voltage (LV) overhead services in the electricity supply industry (ESI).

It includes the installation and connection of LV overhead service cables and associated equipment, the repair and replacement of service cables, services fuses and service hardware and identifying and rectifying faults. It also includes insulation, voltage, polarity and phase rotation testing.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

Assessment Requirements for UETTDRIS56 Install and maintain low voltage overhead services

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- connecting low voltage (LV) overhead service cables, including at least two (2) of the following:
  - overhead service line (three phase) *
  - overhead service line (single phase)
  - overhead service line (two phase)
  - (* must do)
- installing LV overhead service protection devices, including at least one (1) of the following:
  - service fuse
  - circuit breakers (pole)
  - service link
- conducting tests of LV overhead service connections, including all of the following:
  - polarity test *
  - phase rotation test
  - continuity test
  - voltage test
  - (* must do)
- connecting LV overhead services to at least one (1) of the following overhead distribution conductor types:
  - aluminium LV mains
  - copper LV mains
  - LV aerial bundled cable (ABC) mains
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
  - types of LV overhead services
  - methods of construction and installation
  - minimum clearances for overhead services to assets and structures
  - ground clearances for overhead services
  - maximum span lengths and tensions for overhead services
  - customer poles
- installation equipment/tools, including:
  - equipment and tools for overhead service installation
  - fittings and hardware for overhead service installation
- characteristics and applications of different types of cables, including:
  - cable cross-sectional area of conductors
  - current rating and fuse types and ratings
- stringing and terminating methods, including:
  - energised and de-energised cables
  - connections to point of attachment, fuse boxes and pole top boxes
  - termination at customer pole
- connection of overhead services, including:
  - types of overhead service connections
  - live LV work principles
- techniques for maintenance of overhead service installations, including:
  - diagnosis and repair of faults
  - removing, repairing and replacing damaged overhead services
  - removing and replacing pole type fuses
- testing and commissioning procedures, including:
  - inspection
  - equipment functionality tests
  - continuity tests
  - polarity, voltage and phase sequence tests
  - neutral and phase identification tests
  - neutral integrity tests
  - meter function test
  - testing check forms
- connection principles, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

- purpose and function of the multiple earth neutral (MEN) system
- types of connection faults
- causes and effects of incorrect and poor electrical connections
- principles of loop impedance
- reasons for and methods used to maintain standard phase sequencing
- purpose and operation of service fusing
- use of independent earth for testing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and maintaining LV overhead services
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS57 Conduct visual checking and treatment of power system poles and structures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to conduct visual checking and treatment of power system poles and structures in the electricity supply industry (ESI).

It includes testing or examining at eye level to below ground, checking above ground of crossarms and attached hardware with the use of binoculars to determine the integrity of poles, structures and attached hardware. It also includes completing inspection reports and updating workplace records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- checking visually at least one (1) of the following types of poles:
  - wood
  - steel
  - concrete
  - composite
- testing power systems poles and structure using at least one (1) of the following:
  - stress tester
  - drill test
  - non-intrusive test
- conducting maintenance of power systems poles and structures using at least one (1) of the following:
  - chemical treatment
  - re-butting
  - nailing
  - welding
  - stays/guys
- completing all of the following:
  - recording
  - reporting
- visually checking hardware attached to poles and structures, including at least two (2) of the following:
  - cross-arms
  - insulators
  - surge arrestors

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - support brackets
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements
- chemical treatment principles, including:
  - types of chemical used to treat timber
  - regulations and procedures in handling and transporting chemicals safely
  - application procedures of chemicals to wood
- deterioration prevention techniques, including:
  - relationship between steel, concrete and wood
  - inspection procedures for deterioration
  - deterioration prevention procedures in steel, concrete and wood
  - procedures for the repair of deterioration in steel, concrete and wood.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for conducting visual checks and treatments of power system poles and structures
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS58 Locate faults in power system underground power cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to locate faults in power system underground power cables in the electricity supply industry (ESI).

It includes diagnosis and detecting the location of faults in underground power cables. It includes obtaining the required access to test or equivalent permit, setting up the fault location test equipment and following the procedure to carry out the cable fault location test plan.

It also includes interpreting test results, documenting the fault location and likely cause, and listing recommendations for correcting the cable fault to meet client requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDREL16 Working safely near live electrical apparatus

UETTDRIS41 Install network infrastructure electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to locate faults in underground power cables	**1.1** Work schedules, including cable specifications and standards, cable route data, history, characteristics, drawings, plans, requirements, workplace procedures and material lists, are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for locating faults in underground power cables are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Equipment, tools and personal protective equipment required (PPE) for work are identified, obtained and confirmed in working order

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.8	Test equipment is assembled and checked for calibration status in accordance with workplace procedures
	1.9	Cable fault location test procedures/plans are prepared and range of tests required is determined in accordance with job requirements and workplace procedures
	1.10	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.11	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out location of faults in underground power cables	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents of accidents in accordance with workplace procedures
	2.2	Requirements for lifting, climbing, working at heights and use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Locating faults in underground power cables is performed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Cable is tested to determine location relevant faults in accordance with job requirements and workplace procedures
	2.5	Unplanned events in the location of faults in underground power cables are responded to in accordance with workplace procedures
	2.6	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete location of faults in underground power cables	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is cleaned and made safe in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.4 Tools, equipment and surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and cable/site is returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS58A Locate faults in power system underground power cables.

Assessment Requirements for UETTDRIS58 Locate faults in power system underground power cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- locating faults in power system underground power cables using at least three (3) of the following:
  - time domain reflectometry (TDR)
  - pool of potential in earth (POPIE)
  - differential TDR radar
  - current impulse
  - Murray loop
  - Varley loop
  - radio detection
  - capacitance/inductance
  - continuity tests
  - insulation tests
  - voltage detection
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of underground cable, including:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safety precautions specific to the installation of underground cable - excavation and trench safety regulations, gas detection procedures, working in confined spaces, personal

© Commonwealth of Australia, 2025 Powering Skills Organisation

protective equipment (PPE), hazards for the use of liquid petroleum gas (LPG), equipment for jointing of underground cable, gas bottle testing procedures, permit to work systems and isolation procedures
    - trench excavation and reinstatement procedures
    - installation of underground cable procedures - types of tools and equipment, methods of installing conduits, methods of installing cables and sealing cable ends (direct buried, ducts cleated and racked)
    - procedures for the safe use of LPG equipment for cable jointing
- location of cable faults in underground power cables, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements
    - types of faults
    - methods of locating faults - Murray loop test, Fisher connection of Murray loop, modified Fisher connection, Varley loop test, TDR, differential TDR radar, digital arc reflection, differential digital arc reflection, current impulse test, differential current impulse, decay, differential decay, POPIE, radio detection, capacitance inductance test, pending faults (thermography and cable/joint temperature measurement), cable location devices/equipment and methods (signal generator/receiver, phasing methods using ‘megger’, current injection and cable stabbing techniques), and cable identification
    - low voltage (LV) energised working practices - regulations, working methods, insulating glove, bare hand, work procedures and specialist equipment
    - safety precautions specific to working near conductors - safe working practices and procedures, working in confined spaces, permit to work systems and isolation procedures
- jointing and termination of LV polymeric cable, including:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of LV polymeric cables
    - types of cables - single core, multi-core and cross-linked polyethylene (XLPE) insulation
    - methods of cable handling - direct laid cables, duct laid cables, solid laid cables, cables supported in cleats or hangers, corrosion protection and minimum bending radius of cables
    - methods of cable sealing - shorting of cables cores, core of un-terminated cables, methods of protection from corrosion, polymeric sheathed cables sealing with mastic lined, and heat shrink caps buried sealed ends
    - types of jointing tools - general hand tools and compression tools
    - techniques in the use of LPG - safety precautions, PPE, and general maintenance and repair
    - safety precautions when cable jointing - working in confined spaces; permit to work systems and isolation procedures; and emergency rescue/response, including first aid
- LV polymeric cable jointing principles; including:
    - techniques in jointing LV XLPE cables - straight through joint, jointing different types of cable and service and street light cable joints
    - techniques in terminating LV XLPE - pole top terminations, substation terminations, distribution pillar/column/cubicle terminations and service and street light cable terminations
    - techniques in repairing LV XLPE cable - different types of damage, repairs to sheath and

© Commonwealth of Australia, 2025 Powering Skills Organisation

    - repairs to cores
    - methods of testing cable after jointing
- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of high voltage (HV) underground polymeric cables
- HV underground polymeric cables requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
    - characteristics of different types of cables and components
    - purpose of stress control
    - applications of various tools and equipment for HV jointing
- procedure for isolating HV underground polymeric cables, including:
    - method for proving safe to work
    - earthing procedures
- techniques in jointing HV underground polymeric cables, including:
    - short circuit cores and seal cable
    - straight through
    - trifurcating
- techniques in HV underground polymeric cable terminations, including:
    - pole top termination
    - substation/switchgear termination
    - aerial bundled cable (ABC) termination
    - telcon termination
- procedures for repairing HV underground polymeric cables, including:
    - location of faults
    - types of damage
    - techniques to repairs to sheath
    - techniques to repairs to core
- jointing LV paper lead/lead type cables, including:
    - requirements for the use of enterprise manuals, system diagrams/plans and drawings
    - types of tools and equipment
    - types of LV cables
    - structure of LV PLY cables
    - techniques for lead wiping
    - technique for preparing and jointing LV lead sheathed paper insulated cables
    - installation methods of LV straight joint
    - inspection and repair procedures to outer sheath of lead sheathed LV cable
    - techniques in terminating LV lead sheathed paper insulated cables
    - methods of testing cable after jointing
- HV paper lead cable jointing principles, including:
    - requirements for the use of enterprise manuals, system diagrams/plans and drawings
    - types of tools and equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - types of HV cables
  - structure of HV cables
  - technique for the installation of transition joint between XLPE and lead sheathed paper insulated cables
  - technique for the jointing, terminating and repairing of HV paper lead insulated cables
  - methods of testing cable after jointing
- underground cables construction and types, including:
  - safety precautions specific to handling underground cables
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types and applications of underground cables
  - construction types and structures of underground cables
  - characteristics of different types of underground cables
  - ratings
- aluminium and lead cable sheathed jointing procedures, including:
  - safety precautions specific to handling and jointing underground aluminium and lead cable, including provision of WHS/OHS information, such as material safety data sheets (MSDS)
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - construction and structure(s) of aluminium and lead cable underground cables
  - characteristics of aluminium and lead cable
  - ratings
  - techniques in the jointing of aluminium and lead sheathed cable
  - methods of testing cable after jointing.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for locating faults in power system underground power cables
- applicable documentation, including workplace procedures, relevant industry standards,

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS59 Conduct high potential testing of power system underground power cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to conduct high potential testing of power system underground power cables in the electricity supply industry (ESI).

It includes obtaining the required access to test or equivalent permit, setting up the fault location test equipment and following the procedure to carry out the cable test plan. It also includes interpreting test results, documenting the actual testing, and listing recommendations to meet client requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to conduct high potential testing	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for high potential testing are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7 Equipment, tools and personal protective equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

		(PPE) required for work are identified, obtained and confirmed in working order
	1.8	Clients/customers are provided with alternative options within scope, acceptable cost and job requirements
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Perform high potential testing	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents of accidents in accordance with workplace procedures
	2.2	First aid, pole top rescue and other related work procedures are performed in accordance with job requirements and workplace procedures
	2.3	Requirements for lifting, climbing, working at heights and use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Remedial actions are taken to overcome shortfalls in work schedule in accordance with job requirements and workplace procedures
	2.5	High potential testing is performed in accordance with work schedules, job requirements and workplace procedures
	2.6	High potential testing is performed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
	2.7	Solutions used to solve problems are applied in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete high potential testing	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required

3.3 Worksite is cleaned and made safe in accordance with workplace procedures

3.4 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permits are signed off and underground cables are returned to service in accordance with workplace procedures

3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRIS59 Conduct high potential testing of power system underground power cables

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- testing to be conducted on:
  - high voltage (HV) distribution cable
  - HV transmission cable
- using at least one (1) of the following:
  - HV polymeric
  - HV paper insulated
  - oil filled
  - gas filled
- using at least four (4) of the following:
  - phasing instruments*
  - direct current (d.c.) high potential tester*
  - voltage detectors
  - insulation testers*
  - continuity testers
  - cable identification instrument
  - (*must do)
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of underground cable, including:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and

    - distribution pillar /column/cubicle terminations, and service and street light cable terminations
    - techniques in repairing LV XLPE cables - different types of damage, repairs to sheath and repairs to cores
    - methods of testing cable after jointing
- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of HV underground polymeric cables
- HV underground polymeric cables requirements for the use of enterprise construction manuals, system diagrams/plans and drawings, including:
    - characteristics of different types of cables and components
    - purpose of stress control
    - applications of various tools and equipment for HV jointing
- procedure for isolating HV underground polymeric cables, including:
    - method for proving safe to work
    - earthing procedures
- techniques in jointing HV underground polymeric cable, including:
    - short circuit cores and seal cable
    - straight through
    - trifurcating
- techniques in HV underground polymeric cable terminations, including:
    - pole top termination
    - substation/switchgear termination
    - aerial bundled cable (ABC) termination
    - telcon termination
- procedures for repairing HV underground polymeric cables, including:
    - location of faults
    - types of damage
    - techniques to repairs to sheath
    - techniques to repairs to core
- jointing LV paper lead/lead type cables, including:
    - requirements for the use of enterprise manuals, system diagrams/plans and drawings
    - types of tools and equipment
    - types of LV cables
    - structure of LV PLY cables
    - techniques for lead wiping
    - technique for preparing and jointing LV lead sheathed paper insulated cables
    - installation methods of LV straight joint
    - inspection and repair procedures to outer sheath of lead sheathed LV cable
    - techniques in terminating LV lead sheathed paper insulated cables
    - methods of testing cable after jointing

© Commonwealth of Australia, 2025 Powering Skills Organisation

- HV paper lead cable jointing principles, including:
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types of tools and equipment
  - types of HV cables
  - structure of HV cables
  - technique for the installation of transition joint between XLPE and lead sheathed paper insulated cables
  - technique for the jointing, terminating and repairing of HV paper lead insulated cables
  - methods of testing cable after jointing
- underground cables construction and types, including:
  - safety precautions specific to handling underground cables
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types and applications of underground cables
  - construction types and structures of underground cables
  - characteristics of different types of underground cables
  - ratings
- aluminium and lead cable sheathed jointing procedures, including:
  - safety precautions specific to handling and jointing underground aluminium and lead cable, including provision of WHS/OHS information, such as material safety data sheets (MSDS)
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - construction and structure(s) of aluminium and lead cable underground cables
  - characteristics of aluminium and lead cable
  - ratings
  - techniques in the jointing of aluminium and lead sheathed cable
  - methods of testing cable after jointing
- LV switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible backfeed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - PPE for LV switching.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

© Commonwealth of Australia, 2025 Powering Skills Organisation

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for conducting high potential testing of power system underground power cables
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS60 Install and replace power system energy meters and associated equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install and replace power system energy meters and associated equipment in the electricity supply industry (ESI).

It includes the installation and replacement of whole current energy meters and associated equipment, the identification of faults and returning to service. It also covers normal functions of the meters and associated equipment in accordance with workplace procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

Distribution Overhead Pathway Group

UETTDRDP12 Maintain overhead energised low voltage conductors and cables

UETTDREL11 Apply sustainable energy and environmental procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS52 Install and maintain poles, structures and associated hardware

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables

UETTDRIS56 Install and maintain low voltage overhead services

Distribution Cable Jointing Pathway Group

UETTDRCJ21 Lay ESI electrical cables

UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables

UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDRIS41 Install network infrastructure electrical equipment

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS55 Install and maintain low voltage underground services

Electrotechnology Electrician Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for installation and replacement of energy meters and associated equipment	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), environmental and workplace procedures for the installation and replacement of energy meters and associated equipment are obtained and confirmed for the purposes of the work to be performed
	1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5 Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6 Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.7 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.8 Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out the installation and replacement of energy meters and associated	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace

© Commonwealth of Australia, 2025 Powering Skills Organisation

equipment		procedures
	2.2	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.3	Installation and replacement of energy meters and associated equipment are performed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.4	Installation and/or replacement of energy meters and associated equipment is performed, including required wiring, testing, programming and sealing of meters and associated equipment, in accordance with job requirements and workplace procedures
	2.5	Unplanned events are responded to in accordance with workplace procedures
	2.6	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete the installation and replacement of energy meters and associated equipment	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS60A Install and replace power system energy meters and associated equipment.

Assessment Requirements for UETTDRIS60 Install and replace power system energy meters and associated equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing whole current energy meters on at least (1) one of the following types of meters:
  - induction disk energy meter
  - electronic energy meters
  - maximum demand meters
  - electronic summators
- installing associated metering equipment, including at least one (1) of the following:
  - service fuses
  - service links
  - meter boards
  - meter panels
- installing associated metering equipment, including at least one (1) of the following:
  - time switches
  - frequency injection relays
  - controlled output meters
  - contactors
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- cable protection and support methods and accessories, including:
  - requirements to protect and support cables adequately - protection against mechanical damage, protection from adverse temperatures and corrosion, and protection from

© Commonwealth of Australia, 2025 Powering Skills Organisation

magnetic field that may affect the performance of the cable
    - cable support and protection devices, accessories and typical applications - metallic and non-metallic conduits, duct and trunking, cable ladder and tray, cable clips and ties and related accessories
    - installation techniques - cable installation equipment, cable drawing and hauling techniques
- types of cables used in electrotechnology and their application, including:
    - structural components of cables and their purpose - conductors and conductor material, insulation, sheathings and servings
    - application of various cables types
    - cable varieties - single cables, flexible cables, flexible cords, shielded cables, armoured cables, ribbon cables, other similar and like cables
    - typical characteristics and use of power circuit cables and control circuit cables
- installing cables in buildings, structures and premises, including:
    - building construction method and construction sequence
    - typical cable routes through buildings, structures and premises
    - building codes affecting the installation of cables in buildings, structures and premises - limitation of penetration structural elements and maintenance of fire protection interiority
    - cable segregation requirements
- basic cable and conductor terminations, including:
    - insulation removal and replacement
    - conductor handling and cable terminations - general aspects and soldering involving pins on electronic components and stranded conductors carrying current up to 25 amperes, application of connecting devices for conductors and terminals, continuity through connections and insulation resistance testing, and stress release on cables/conductors
- power cable and conductor terminations, including:
    - types of cable glands and their application - glands for circular sheathed cables, steel wire armoured (SWA) cables and mineral-insulated metal-sheathed (MIMS) cables
    - cable termination techniques
    - terminal types and applications
    - conductor termination techniques - need for sound termination, consequences of poor conductor termination, conductor and terminal preparation
- telecommunication cable and conductor terminations, including:
    - approved termination devices and sockets
    - special termination tools and their use
    - cable colour coding up to 100 pair indoor and outdoor cable
    - end-to-end testing
    - methods of terminating cables - cables less than twenty pair, twenty pair cable and greater
    - cable labelling devices
    - colour coding of cables, sockets and termination modules and standard connectors used with twisted pair, optical fibre and coaxial cables
- terminating cable and conductor used in electronic equipment, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - cable and conductor types and characteristics - insulated wire, harness wiring, high performance cables (transmission performance parameters and electrical characteristics), such as:
    - unshielded twisted pair (UTP), foil twisted pair (FTP) and shielded twisted pair (STP)
  - coaxial cables types and characteristics - qualshield, trishield coaxial and armour plated coaxial cables
  - cable anchoring and support methods
  - termination methods
- installation of metering and control equipment, including:
  - standards, codes, legislation, supply authority regulations and or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment
  - types of meters - kilowatt-hour meters single and polyphase, demand meters, recording meters and electronic recording metering systems summators
  - installation and removal methods - direct connection and plug in method, enterprise specific
  - types of associated equipment and accessories - meter boards, service fuse, links, contactors, time switch, audio frequency injection relay
  - testing procedures - safety testing, polarity testing
- powerline safety practices, including:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel; and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods; and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and ; emergency procedures for the rescue of an electric shock victim, including cardio pulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation

© Commonwealth of Australia, 2025 Powering Skills Organisation

with network operations and equipment; and requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing and replacing power system energy meters and associated equipment
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS61 Install mobile generation set for synchronised LV Genset

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to install mobile generation set for synchronised low voltage (LV) Genset in the electricity supply industry (ESI).

It includes installing temporary portable generation sets to LV distribution assets to maintain supply. It also includes operating, connecting and disconnecting generators and estimating LV load and selecting the appropriate generator for required outcome.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

Transmission Overhead Pathway Group

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRTP26 Install transmission structures and associated hardware
UETTDRTP27 Maintain transmission structures and associated hardware
UETTDRTP29 Install and maintain transmission overhead conductors and cables
Distribution Overhead Pathway Group
UETTDRDP12 Maintain overhead energised low voltage conductors and cables
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRIS56 Install and maintain low voltage overhead services
Rail Traction Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRRT21 Install traction overhead wiring systems
UETTDRRT22 Maintain traction overhead wiring systems
UETTDRRT23 Install rail traction bonds
UETTDRRT27 Install overhead traction components and equipment
UETTDRRT28 Maintain overhead traction components and equipment
Distribution Cable Jointing Pathway Group
UETTDRCJ21 Lay ESI electrical cables
UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables
UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS55 Install and maintain low voltage underground services
Electrotechnology Electrician Pathway Group
UEENEEE137A Document and apply measures to control OHS risks associated with

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to install mobile generation set for synchronised LV Genset	**1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.3 Work health and safety (WHS)/occupational health and safety (OHS), policies and procedures related to the work are used and actioned to ensure safe systems of work are followed.

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.4	Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.5	Hazards are identified, WHS/OHS risks assessed and control measures identified in accordance with workplace procedures
	1.6	Relevant work permits are obtained, understood and signed in accordance with workplace procedures
	1.7	Plant, equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
	1.8	Clients/customers are provided with alternative options within scope, acceptable cost and job requirements
	1.9	Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10	Traffic management plan is confirmed as being applied in accordance with workplace procedures
2 Carry out the installation of mobile generation set for synchronised LV Genset	**2.1**	WHS/OHS, sustainable energy and environmental principles and practices are monitored and followed to reduce incidents in accordance with workplace procedures
	2.2	First aid and other related work procedures are performed in accordance with job requirements and/or workplace procedures
	2.3	Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
	2.4	Remedial actions are taken to overcome shortfalls in work schedule in accordance with job requirements and workplace procedures
	2.5	The installation of mobile generation set for synchronised LV genset is carried out in accordance with the work schedule, job requirements and workplace procedures
	2.6	Installation of mobile generation set for synchronised

© Commonwealth of Australia, 2025 Powering Skills Organisation

		LV Genset is completed in agreed timeframes, to quality standards and with a minimum of waste in accordance with workplace procedures
	2.7	Solutions used to solve problems are identified and actioned in accordance with workplace procedures
	2.8	Quality checks of work are undertaken in accordance with workplace procedures
3 Complete installation of mobile generation set for synchronised LV Genset	**3.1**	Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
	3.2	WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
	3.3	Worksite is rehabilitated, cleaned up and made safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permits are signed off and synchronised LV Genset apparatus is returned to service in accordance with workplace procedures
	3.6	Work records, reports and/or documentation are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRIS61 Install mobile generation set for synchronised LV Genset

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- operating a generator
- connecting a generator
- disconnecting a generator
- completing all of the following:
  - the synchronising of generator control systems onto the network without interruption to supply
  - the synchronising of generator control systems off the network without interruption to supply
- estimating low voltage (LV) load of the generator
- assessing the appropriateness of the generator
- operating a generator in parallel to a single LV job
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safety precautions specific to installing mobile generators, including:
  - safe working practices and procedures
  - techniques in connecting, operating and disconnecting generators
  - types of tools and equipment
  - safe use of tools and equipment
- techniques in the installation of Gensets, including:
  - the synchronising of generator control systems onto and off the network without

© Commonwealth of Australia, 2025 Powering Skills Organisation

interruption to supply
    - estimation of LV load
    - assessing the appropriateness of the generator
- operating a generator in parallel to a single LV job, including:
    - overhead systems
    - indoor systems
    - customer installations
    - kiosk substations
    - LV genset and control system to LV distribution assets.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for installing mobile generation sets for synchronised LV Genset
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor the power system organisational work health and safety (WHS)/occupational health and safety (OHS) policies, procedures and programs in the electricity supply industry (ESI).

It includes participative arrangements for management of organisational WHS/OHS policies procedures, programs and issues. It also includes disseminating information on hazards and risk assessments to meet WHS/OHS standards; collating work group input; and, implementing workplace procedures for resolving WHS/OHS issues.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to implement and monitor organisational WHS/OHS policies, procedures and programs	**1.1** Relevant workplace documentation is identified, analysed and work preparation required for planning and coordination determined
	1.2 Relevant requirements and workplace procedures are communicated to all personnel and identified for all worksites
	1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures are prioritised, implemented and monitored to ensure work safe systems are followed in accordance with workplace procedures
	1.4 Work is prioritised and sequenced for efficient and effective outcome following consultation with relevant personnel for completion within agreed timeframes, to standard and in accordance with workplace procedures
	1.5 Risk control measures are identified, prioritised, implemented and evaluated in accordance with work schedule
	1.6 Relevant work permits are confirmed and signed in accordance with requirements and/or workplace procedures
	1.7 Resources, personnel, equipment, tools and personal protective equipment (PPE) required for the job are identified, scheduled, coordinated and confirmed in safe and technical working order
	1.8 Potential issues in communicating with relevant person/s, authorities, clients and land owners are identified, resolved and work activities planned and coordinated
	1.9 Worksite is prepared in accordance with the work schedule to minimise WHS/OHS risk, damage to property, commerce and individuals in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	1.10 Personnel and contractors participating in work are fully briefed and responsibilities authorised and coordinated in accordance with workplace procedures
	1.11 Traffic management plan is confirmed as being applied in accordance with workplace procedure
2 Carry out the implementation and monitoring of organisational WHS/OHS policies, procedures and programs	**2.1** WHS/OHS and sustainable energy principles and practices are implemented and monitored to reduce workplace incidents and minimise waste in accordance with job requirements and workplace procedures
	2.2 Relevant worksite personnel are confirmed current in first aid and rescue-related work in accordance with job requirements and workplace procedures
	2.3 Lifting, climbing, working in confined spaces, working at heights, using power tools and equipment techniques and practices are followed safely in accordance with requirements and workplace procedures
	2.4 Hazard warnings and safety signs are recognised, hazards assessed, WHS/OHS risk control measures implemented and monitored and/or appropriate authorities consulted, as required, in accordance with requirements and workplace procedures
	2.5 Remedial actions are taken to overcome shortfalls encountered in the work schedule in accordance with job requirements and workplace procedures
	2.6 Participative arrangements for the systematic management of WHS/OHS policies, procedures, programs and issues are implemented and monitored in accordance with work schedule, job requirements and workplace procedures
	2.7 Participative arrangements for the systematic management of WHS/OHS policies, procedures, programs and issues are implemented and monitored to ensure completion in agreed timeframe, to quality standards with a minimum of waste in accordance with job requirements
	2.8 Solutions to non-routine problems are identified and applied in accordance with requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.9	Quality of work checks are undertaken in accordance with job requirements and workplace procedures and to a community/industry standard
3 Complete implementation and monitoring of organisational WHS/OHS policies, procedures and programs	**3.1**	Work is checked against work schedule for conformance with job requirements, anomalies reported and solutions identified in accordance with workplace procedures
	3.2	Accidents, incidents and/or injuries are reported in accordance with requirements and workplace procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
	3.4	Tools, equipment and surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
	3.5	Relevant work permit/s are signed off, work completed/returned to service and client/customer advised in accordance with job requirements
	3.6	Work completion records, reports and information are confirmed, processed and relevant person/s notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for UETTDRIS62 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- implementing and monitoring the power system organisational WHS/OHS policies, procedures and programs using all of the following:
  - relevant WHS/OHS Acts
  - regulations
  - codes of practice
- demonstrating all of the following:
  - application of organisation management systems and procedures to WHS/OHS
  - organisation’s procedures for maintaining WHS/OHS records
- performing all of the following applications of risk management procedures:
  - undertake hazard identification
  - risk assessment and risk control in accordance with the hierarchy of control
  - application of the characteristics of the workforce impacting on the management of WHS/OHS
- demonstrating all of the following implementation and monitoring procedures:
  - provision of relevant information to the workgroup about WHS/OHS and the organisation's WHS/OHS policies, procedures and programs
  - participative arrangements for the management of WHS/OHS
  - organisation's procedures for identifying hazards and assessing risks
  - organisation's procedures for controlling risks
  - organisation's procedures for dealing with hazardous events
  - organisation’s procedure for providing WHS/OHS training
- dealing with unplanned events on at least one (1) occasion.

© Commonwealth of Australia, 2025
Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working practices and procedures for the installation of overhead distribution conductors, including:
  - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWP)
  - requirements of persons prior to making bare hand contact with dead low voltage (LV) mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and high voltage (HV) apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedure to attach an on-site earthing device to de-energised LV and HV overhead circuit
- powerline safety practices, including:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel; and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker’s body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles; including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker’s responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods; and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- implementation and monitoring requirements for powerline safety, including:
  - identification of relevant legislation, codes and government guidelines for the

© Commonwealth of Australia, 2025
Powering Skills Organisation

implementation and monitoring of WHS/OHS in the workplace - Commonwealth/state/territory legislation relevant to the workplace and the meaning of general duty of care under WHS/OHS legislation and common law
    - workplace WHS/OHS enterprise plan - responsibilities of each member of the work team, review process for changing/improving WHS/OHS safety plan, and standing instructions for the systematic management of WHS/OHS in the workplace
    - relationship between the WHS/OHS committee and employees - methods used to collate and distribute/disseminate WHS/OHS information; staff development activities and legislation requirements with regards to WHS/OHS training; methods of addressing barriers, such as literacy and cultural differences; and provisions relating to WHS/OHS issue resolution
    - hazards associated with powerline industry - identification of hazards in the workplace, processes used and contributing factors to a hazardous situation, assessment of risks and control of WHS/OHS risks (risk management), the hierarchy of control and monitoring of risk control measures
    - risk assessment and its management in powerline industry - principles and purposes of risk management; processes for conducting risk assessment, including, risk analysis and risk evaluation activities for selecting and implementing appropriate options for eliminating or minimising risk
    - maintenance strategies for WHS/OHS programs - developing processes for promoting, maintaining and improving WHS/OHS in the workplace; identifying techniques for evaluating and reviewing WHS/OHS education and training programs; elements of an effective WHS/OHS management system; and WHS/OHS consultation and accident/incident investigations
- enterprise-specific policies and procedure instructions, including:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations, induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, complaint and issues procedures
    - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprises-specific WHS/OHS instructions, including:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol

© Commonwealth of Australia, 2025
Powering Skills Organisation

  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records, manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to implement and monitor the power system environmental and sustainable energy management policies and procedures in the electricity supply industry (ESI).

It includes collecting, interpreting and applying environmental management information, identifying environmental impacts, assessing risks and establishing best practice procedures for implementation of management plans to ensure compliance. It also includes monitoring policies and plans and developing modifications as part of the review process.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in one (1) of the identified Pathway Unit Group(s) must have been completed.

Electrotechnology Pathway Unit Group

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Electricity supply industry (ESI) - time-domain reflectometer (TDR) Pathway Unit Group

UETTDREL11 Apply sustainable energy and environmental procedures

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan to implement and monitor environmental and sustainable energy management policies and procedures	**1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
	1.2 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
	1.3 Job requirements and workplace procedures are identified and communicated with relevant personnel
	1.4 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
	1.5 Relevant work permits are obtained, understood and signed onto in accordance with workplace procedures
	1.6 Plant, equipment, tools and personal protective equipment required for work is identified, obtained and confirmed in working order
	1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to perform work, as required
	1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
	1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
	1.10 Traffic management is planned and implemented in accordance with workplace procedures
2 Carry out the implementation and monitoring of	**2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with

© Commonwealth of Australia, 2025 Powering Skills Organisation

	environmental and sustainable energy management policies and procedures	workplace procedures
		2.2 First Aid, pole top rescue and other related work procedures are performed in accordance with job requirements and/or workplace procedures
		2.3 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
		2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks and risk control measures are implemented, preventative action taken and monitored and/or appropriate authorities consulted, where necessary, in accordance with requirements and workplace procedures
		2.5 Remedial actions are taken to overcome shortfalls encountered in the work schedule in accordance with job requirements and workplace procedures
		2.6 Environmental and sustainable energy management policies and procedures are implemented and monitored in accordance with work schedules, job requirements and workplace procedures
		2.7 Environmental and sustainable energy management policies and procedures are implemented and monitored to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
		2.8 Solutions to non-routine problems are identified and actioned in accordance with workplace procedures
		2.9 Quality checks of work are undertaken in accordance with industry standards and workplace procedures
3	**Complete the implementation and monitoring of environmental and sustainable energy management policies and procedures**	**3.1** Work is checked against work schedule for conformance with job requirements, anomalies reported and solutions identified in accordance with workplace procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Accidents, incidents and/or injuries are reported in accordance with requirements and workplace procedures

3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures

3.4 Tools, equipment and surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures

3.5 Relevant work permit/s are signed off, work completed/returned to service and client/customer advised in accordance with job requirements

3.6 Work completion records, reports and information are confirmed, processed and relevant person/s notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS63A Implement and monitor the power system environmental and sustainable energy management policies and procedures.

Assessment Requirements for UETTDRIS63 Implement & monitor power system environmental & sustainable energy management policies & procedures

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- gathering environmental management information
- implementing and monitoring environmental and sustainable energy policies and plans
- identifying environmental impacts and assess risks
- implementing and monitoring the procedures for quantifying environmental impacts and controlling risks
- implementing and monitoring procedures for dealing with environmental incidents
- maintaining environmental records, reports and plans
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental fundamentals, including:
  - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the control of environment associated with the worksite - relevant federal legislation, relevant state/territory legislation, relevant local government by-laws, relevant government or quasi government policies and regulations, and relevant community planning and development agreements (include land care agreements)
  - employer and employee responsibilities
  - methods of obtaining information on environmental issues and updates
  - methods of identifying environmental impacts from work-related activities
  - meaning of environmental terms - identification, assessment and control of risks,

© Commonwealth of Australia, 2025
Powering Skills Organisation

compliance, best practice and sustainable energy
    - procedures for implementing management plans to ensure compliance
- implementation and monitoring requirements for the impact of powerline installations and operation on the environment and/or the area surrounding the powerline and/or equipment, including:
    - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of environmental impact factors in the workplace and areas of power distribution or transmission - Commonwealth/state/territory legislation relevant to the workplace and the Environment Protection Act legislation and common law
    - identification, assessment, control and monitoring of the hazards to the environment associated with the powerline industry
    - workplace environment quality standards enterprise plan - setting of acceptable emission level limits from power plant equipment; impact of the enterprise activities on air, water quality and nature; impact and level of emissions from power plant, power distribution and transmission equipment; and network infrastructure (noise generation, noxious gas emissions, greenhouse gas production, electromagnetic emissions, electromagnetic field strength, oil leakage and insulation breakdown products)
    - provision of manufacturer and supplier information, such as material safety data sheets (MSDS)
    - gathering of environment management information
    - maintenance of environmental records
    - risk assessment and its management in powerline industry
    - maintenance strategies for environment protection programs - developing processes for promoting, maintaining and improving environmental impact in the workplace; identifying techniques for evaluating and reviewing environment protection education and training programs; elements of an effective environment protection management system; and Environment Protection Authority (EPA) consultation and accident/incident investigations
- implementation and monitoring requirements for the management of sustainable energy in powerline installations and operation of plant and equipment, including:
    - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of sustainable energy principles in the workplace, and power distribution and transmission networks - Commonwealth/state/territory legislation, legislation relevant to the workplace, Environment Protection Act legislation, local government by-laws, community planning and development agreements (i.e. land care agreements)
    - monitoring and reporting procedures for enterprise-specific policy implementation on sustainable energy issues, including the gathering of energy consumption and loss information
    - ongoing development of energy conservation policies - procedures for quantifying energy usage and wastage, energy usage auditing procedures, planning of energy conservation methods, and monitoring and review processes
    - resource availability planning for policy implementation
    - techniques in managing documentation - information on applicable sustainable energy

© Commonwealth of Australia, 2025 Powering Skills Organisation

laws or other requirements; complaint records; training records; process information; process operational log books; inspection, maintenance and calibration records; relevant contractor and supplier information; incident reports; and information on emergency preparedness and response

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as MSDS; registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise policies and procedures in maintaining the operation of plant, equipment and powerline installations using sustainable energy principles, including:
  - overview of sustainable energy technologies – solar, wind, biomass and CO2 generation
  - economic benefits of sustainable energy initiatives

© Commonwealth of Australia, 2025 Powering Skills Organisation

- relationship between greenhouse effect and sustainable energy
- types of renewable energy technology suitable for use in Australia - photovoltaic, solar thermal, wind energy conversion, biomass, wind/tidal and gas thermal
- relationship between safe building design and energy efficiency - building aspect, insulation, ventilation, glazing, passive solar design and shading
- techniques in selecting control devices
- components within a lighting system
- energy efficient lighting products, design and installation
- use of natural light
- automated lighting control systems
- assessment of requirements and selection of system
- techniques in selecting control devices
- components within a heating, ventilation and air conditioning (HVAC) and refrigeration control system
- energy efficient refrigerants
- detection systems to control air flow
- energy star ratings for coefficient of performance
- energy control systems
- advantages of evaporative air conditioners in dry climates
- assessment of requirements and selection of system.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS64 Install mobile generation set for synchronised HV Genset

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers installation of temporary portable generation sets to high voltage (HV) distribution assets thereby maintaining supply in accordance with industry regulations and established procedures. It encompasses the operation, connection and disconnection of a temporary portable generator and includes the estimation of HV load and assessing the appropriateness of the generator for the required outcome and networking of generators.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETTDREL16 Working safely near live electrical apparatus

Transmission Overhead Pathway Group

UETTDREL11 Apply sustainable energy and environmental procedures

UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS44 Perform HV field switching operation to a given schedule
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRTP26 Install transmission structures and associated hardware
UETTDRTP27 Maintain transmission structures and associated hardware
UETTDRTP29 Install and maintain transmission overhead conductors and cables
Distribution Overhead Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDRDP12 Maintain overhead energised low voltage conductors and cables
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment
UETTDRIS42 Maintain network infrastructure electrical equipment
UETTDRIS43 Perform low voltage field switching operation to a given schedule
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRIS56 Install and maintain low voltage overhead services
Rail Traction Pathway Group
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS52 Install and maintain poles, structures and associated hardware
UETTDRIS54 Install and maintain poles, structures and overhead conductors and cables
UETTDRRT21 Install traction overhead wiring systems
UETTDRRT22 Maintain traction overhead wiring systems
UETTDRRT23 Install rail traction bonds
UETTDRRT27 Install overhead traction components and equipment
UETTDRRT28 Maintain overhead traction components and equipment
UETTDRRT30 Perform to a given schedule rail traction switching operations
Distribution Cable Jointing Pathway Group
UETTDRCJ21 Lay ESI electrical cables
UETTDRCJ26 Install and maintain de-energised low voltage underground polymeric cables
UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables
UETTDREL11 Apply sustainable energy and environmental procedures
UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus
UETTDRIS41 Install network infrastructure electrical equipment

© Commonwealth of Australia, 2025 Powering Skills Organisation

UETTDRIS42 Maintain network infrastructure electrical equipment

UETTDRIS43 Perform low voltage field switching operation to a given schedule

UETTDRIS55 Install and maintain low voltage underground services

Electrical Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRSB39 Perform power system substation switching operation to a given schedule

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare/plan to install mobile generation set for synchronised HV genset	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
	1.2 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with

© Commonwealth of Australia, 2025 Powering Skills Organisation

others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures

1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures

1.4 Relevant requirements and established procedures for the work are to all personnel and identified for all worksites

1.5 WHS/OHS policies and procedures related to the work are identified to ensure safe systems of work are followed

1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order

1.8 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements

1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry out work

1.10 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures

1.11 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

1.12 Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements

© Commonwealth of Australia, 2025 Powering Skills Organisation

2 Carry out the installation of mobile generation set for synchronised HV genset	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
	2.2	First aid and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
	2.4	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
	2.5	Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
	2.6	Installation of mobile generation set for synchronised HV genset is carried out in accordance with the work schedule and requirements and/or established procedures
	2.7	Essential knowledge and associated skills are applied in the safe installation of mobile generation set for synchronised HV genset to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.8	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.9	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete the installation of mobile generation set for synchronised HV genset	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

3.2 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures

3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures

3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

3.5 Relevant work permits are signed off and synchronised HV genset apparatus is returned to service and client/customer advised in accordance with requirements

3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS64A Install mobile generation set for synchronised HV Genset.

Assessment Requirements for UETTDRIS64 Install mobile generation set for synchronised HV Genset

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all of the following:
  - autonomous installation of a mobile generator set for synchronised high voltage (HV) genset incorporating operation, connection and disconnection of the generator
  - evaluating load characteristics associated with networking of generators
  - synchronisation of the generator control systems onto and off the network without interruption to supply
  - estimation of HV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single HV job
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of a HV mobile generation encompassing:
  - safety precautions specific to installing mobile generators - safe working policies, practices and procedures; techniques in connecting, operating and disconnecting generators; types of tools and equipment; and safe use of tools and equipment
  - techniques in the installation of generator sets - the connection of generator onto and off the network without interruption to supply and estimation of HV load
  - assessing the appropriateness of the generator
- HV generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working

© Commonwealth of Australia, 2025 Powering Skills Organisation

policies, practices and procedures; and synchronising procedures
    - techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of HV load and assessing the appropriateness of the generator
    - operating a generator in parallel to a single HV job - overhead systems, indoor systems, customer installations and kiosk substations
    - HV generator set and control system to HV distribution assets
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements the procedures used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses, developing techniques, involvement of external emergency services, and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
    - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances, determining system requirements, aircrew familiarisation with network operations and equipment, and requirements for effective communications operations for aerial work.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so;

© Commonwealth of Australia, 2025 Powering Skills Organisation

where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS65 Contribute to coordinated HV live working

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit specifies the outcomes required of live line working team members to work effectively as a cohesive team to ensure safety of all team members and the community when undertaking high voltage (HV) live line work. It includes the pre-work briefing on tasks to be undertaken, roles of individual team members, identification of possible hazards, risk management analysis and implementation of palliative measures to control or mitigate the risk to acceptable levels. It also encompasses the monitoring of work performance to ensure safety, and the post-work debriefing to identify areas for continuous improvement.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

There are no prerequisite competencies to this unit.

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Powering Skills Organisation

1 Plan to contribute to a coordinated HV live line work team	**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination by the team
	1.2 Relevant requirements and established procedures for the work are communicated to all team members and identified for all worksites
	1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the working on HV live lines are obtained and confirmed for the purposes of the work to be performed and discussed among all team members
	1.4 Work is prioritised and sequenced following consultation with all team members to ensure safe systems of work are followed for completion within acceptable timeframes and in accordance with established procedures
	1.5 WHS/OHS and live line work hazards are identified, risk assessments conducted and control measures identified, prioritised, implemented and documented against the work schedule, including the checking of site weather and environmental conditions, to ensure that live line work can be undertaken safely
	1.6 Relevant live line work permits or authority for live line work are secured to coordinate the performance of work by the team according to requirements and/or established procedures
	1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
	1.8 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
	1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry

© Commonwealth of Australia, 2025 Powering Skills Organisation

		out work
	1.10	Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
	1.11	All team members to be engaged in the work discuss and agree, without ambiguity, on their respective roles, and possible role changes during the course of work
	1.12	Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
2 Carry out the contribution to coordinated HV live line work	**2.1**	WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures, in particular, established live line working procedures are strictly adhered to
	2.2	First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
	2.3	Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices, where applicable, are safely exercised according to requirements
	2.4	Live line permits and other provisions for live line work are in place, as required, in accordance with requirements and established procedures
	2.5	Essential knowledge and associated skills are applied in the safe contribution to coordinated HV live line work to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
	2.6	Work is undertaken on HV live line in a team environment work according to the work schedule and requirements/established procedures
	2.7	Work is shared among all team members in a coordinated manner as discussed and agreed during pre-work briefing
	2.8	Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks discussed with

© Commonwealth of Australia, 2025 Powering Skills Organisation

		team members and reported to immediate authorised personnel for directions according to established procedures
	2.9	Unplanned events in the maintenance of HV live line work are discussed among all team members and appropriate actions undertaken accordingly
	2.10	Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
	2.11	Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
3 Complete the contribution to coordinated HV live line work	**3.1**	Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
	3.2	Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
	3.3	Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant work permits are signed off and HV live line work is returned to service and client/customer advised in accordance with requirements
	3.6	Works completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified
	3.7	Aspects of work schedule are discussed/identified via feedback with fellow team members and information on improvement forwarded to appropriate personnel according to established procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS65A Contribute to coordinated HV live working.

Assessment Requirements for UETTDRIS65 Contribute to coordinated HV live working

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- facilitating communication/consultation processes in a high voltage (HV) live line work team environment
- contributing to pre-work briefings and securing of live line permits or authority to work in a HV live line work team environment
- implementing WHS/OHS policies and procedures in a HV live line work team environment
- contributing to the work schedule in a HV live line work team environment
- contributing to feedback consultation on improving safe working in a HV live line work team environment
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical safe working practices encompassing:
  - risk management and assessment of risk - principle and purpose of risk management and processes for conducting a risk assessment
  - hazards associated with low voltage (LV), extra-low voltage (ELV) and high currents - arrangement of power distribution and circuits in an electrical installation, parts of an electrical system and equipment that operate at LV and ELV, and parts of an electrical system and equipment where high currents are likely
  - risks and control measures associated with HV - parts of an electrical system and equipment that operate at HV, the terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of HV, and control measures used for dealing with the hazards of HV
  - optical fibre safety - coherent optical sources and joining procedures, and laser safety

© Commonwealth of Australia, 2025 Powering Skills Organisation

class 3a devices or their replacement
    - risks and control measures associated with LV - risks associated with modifying electrical installations; fault finding, maintenance and repair; control measures before, during and after working on electrical installations, circuits or equipment; isolation and tagging-off procedures; risks and restrictions in live work, and control measures for live work
    - risks and control measures associated with harmful dusts and airborne contaminants - thermal insulation, fibrous cement materials, and asbestos and other fibre reinforced switchboard materials
    - safety, selection, use, maintenance and care of test equipment - safety characteristics of electrical testing devices, safe use of electrical testing device, and checks and storage methods for maintaining the safety of testing devices
- powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, the procedure used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses, developing techniques, involvement of external emergency services, and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
    - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- principles of statutory and safety considerations encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
    - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing

© Commonwealth of Australia, 2025 Powering Skills Organisation

rules

- working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker encompassing:
  - standards, guidelines/codes of practice, state/territory/local government legislation, supply authority regulations and/or enterprise requirements, including relevant certification and licensing applicable to working safely up to the defined "safe working zone" near energised electrical apparatus, including electrical powerlines, for non-electrical worker
  - definitions of terminologies - ‘safe working zone’ ‘risk assessment’, ‘safe approach distances zones’, ‘safe working distances’.’ work permits’, access authorisation permits’, ‘technical standards’ ‘isolation procedures’ and 'compliance requirements’
  - WHS/OHS policies and procedures for working safely - emergency response and first aid procedures, such as CPR; roles and responsibilities of employers, employees and other parties under WHS/OHS legislation; personal protective equipment (PPE); identifying hazards; assessing and controlling WHS/OHS risks; first aid procedures; duties of a safety observer; working at heights/confined spaces; permit to work systems and isolation procedures
  - safe application of different types of tools and equipment
  - operation of mobile plant and machinery, such as elevated work platform (EWP) near live electrical apparatus
  - electricity supply infrastructure assets and voltages
  - techniques and precautions in undertaking different work functions and working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker - work functions, such as vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing;

© Commonwealth of Australia, 2025 Powering Skills Organisation

and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific specialised tools encompassing:
    - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools - voltage detectors, polarity testers and phase rotation
    - characteristics, capabilities and application of specialised tools for a particular job
    - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
    - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
    - techniques in pre-use inspection on the serviceability of specialised tools
    - techniques in the selection, use, maintenance, care and storage of specialised tools
    - identifying WHS/OHS hazards, assessing and controlling risks associated with their use
    - techniques for the safe use of specialised power tools
- enterprise-specific HV live line teamwork encompassing:
    - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV live lines
    - safety precautions working on energised live lines when working in teams - live line minimum approach distances for person and plant; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE; live line access authority/permit system; disabling auto-reclosing function; ensuring functioning of fault current protective devices and checking integrity of insulation prior to work commencement
    - types and functions of specialised live line working equipment and tools and inspection techniques prior to use
    - safe working policies, procedures and practices when using and operating specialised equipment and tools
    - methods of using specialised equipment and tools
    - use of safety observers
    - emergency response and rescue, including first aid
    - relationship and responsibilities of each team member - roles of individuals in the team, contribution to joint outcome, goals/plans and objectives of the team
    - work team communication - techniques in effective communication, techniques in effective teamwork and dangers of ineffective teamwork.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS67 Solve problems in energy supply network equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit involves the skills and knowledge required to solve problems in energy supply network equipment in the electricity supply industry (ESI).

It includes determining correct operation of energy supply network electrical equipment and providing solutions. It also includes working safely, reading circuit and reticulation diagrams, applying problem solving processes from measurements and completing the necessary documentation.

The application of the skills and knowledge described in this unit may require a licence to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to solve problems in energy supply network equipment	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 Extent of work to be undertaken is determined from reports and/or discussions with relevant person/s
	1.3 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.4 Materials required for work are determined in accordance with workplace procedures
	1.5 Tools, equipment and testing devices required to take measurements are obtained in accordance with workplace procedures and checked for correct operation and safety
2 Solve problems in energy supply network equipment	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in accordance with WHS/OHS requirements and, when necessary, conducted in accordance with workplace safety procedures
	2.3 Circuits/machines/plant are isolated, where necessary, in accordance with WHS/OHS requirements and workplace procedures
	2.4 Safety hazards resulting from reports and risk control measures devised and implemented in consultation with appropriate personnel
	2.5 Problem solving of energy network equipment is approached methodically using measured and calculated

© Commonwealth of Australia, 2025 Powering Skills Organisation

		values of circuit/apparatus parameters
	2.6	Circuit/apparatus components are dismantled, where necessary, and parts stored to protect them against loss or damage
	2.7	Circuits/components are rechecked and their operational status is confirmed
	2.8	Materials/replacement parts required to solve problems are sourced and obtained in accordance with workplace procedures
	2.9	Effectiveness of the repair is tested in accordance with workplace procedures
	2.10	Apparatus is reassembled, tested and prepared for return to service
	2.11	Unplanned events are dealt with safely and with the approval of relevant personnel
	2.12	Problem-solving activities are completed without damage to apparatus, circuits, the surrounding environment or services applying sustainable energy practices
3 Complete and report on problem solving in energy supply network equipment	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares
	3.3	Maintenance work activities are documented in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Powering Skills Organisation

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS67A Solve problems in energy supply network equipment.

Assessment Requirements for UETTDRIS67 Solve problems in energy supply network equipment

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- solving problems in energy supply network equipment, including:
  - determining the operating parameters of existing energy supply equipment
  - envisaging the likely extent of work from reports and discussions with appropriate personnel
  - using methodical problem-solving techniques
  - solving problems efficiently
  - altering an existing energy supply equipment to comply with specified operating parameters
  - developing energy supply equipment to comply with a specified function and operating parameters
  - determining conditions causing an existing energy supply equipment to be unsafe
  - completing documentation correctly
- solving problems in energy supply network equipment on at least one (1) of the following energy supply network systems:
  - distribution overhead system
  - distribution underground system
  - transmission overhead system
  - transmission underground system
- using at least three (3) of the following distribution/transmission equipment:
  - voltage regulation equipment
  - on load tap changers
  - energy metering
  - demand meters
  - load control

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - current transformers
  - potential transformers
- dealing with unplanned events on at least one (1) occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- generation, including:
  - primary energy sources
  - power stations
  - power station output
  - acts and legislation relating to generation
  - renewable energy sources and techniques
- transmission, including:
  - system requirements
  - principal components of a power system
  - voltage levels
  - grid systems
  - acts/legislation relating to transmission
  - future trends
- distribution, including:
  - high voltage (HV) distribution systems
  - medium/low voltage (LV) distribution systems
  - radial feeders
  - parallel feeders
  - ring main feeders
  - acts/legislation relating to distribution
- substations, including:
  - purpose
  - location
  - layout
- overhead and underground systems, including:
  - relative merits
  - applications

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - planning
  - installation
- power distribution system electrical characteristics, including:
  - transmission and distribution systems
  - inductance, capacitance and resistance
- voltage problems in a power distribution system, including:
  - LV
  - unbalanced voltages
  - voltage rises
- voltage regulation, including:
  - autotransformers with on-load tap changer (OLTC)
  - transformers with OLTC
  - static capacitors
  - load control
- control of OLTC, including:
  - regulation relays
  - control circuits
  - line drop compensation
- power distribution system faults, including:
  - type/classification of fault
  - typical causes/effects of faults
  - three phase symmetrical fault levels
  - fault level limitation
- voltage surges in a power distribution system, including:
  - lightning surges
  - switching surges
  - typical surge levels
  - surge impedance, typical values
  - significance of the system surge impedance
- metering and metered quantities, including:
  - purpose
  - energy
  - maximum demand
  - accuracy classes for metering systems
- energy and demand meters, including:
  - construction
  - operation
  - adjustments
  - testing
- metering circuits, including:

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - direct metering
  - instrument transformer metering
- electronic metering systems and recording meters, including:
  - types
  - applications
  - connections
- load control, including:
  - purpose
  - methods.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers determining correct operation of energy supply network protection equipment and systems and providing solutions as they apply to energy supply network protection. It encompasses working safely, reading circuit and reticulation diagrams, applying logical problem-solving processes from measurements and completing the necessary documentation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to solve problems in energy supply network protection equipment and systems	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 The likely extent of work to be undertaken is envisaged from reports and/or discussions with appropriate personnel
	1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
	1.5 Sources of materials that may be required for the work are established in accordance with established procedures
	1.6 Tools, equipment and testing devices needed to take measurements are obtained in accordance with established procedures and checked for correct operation and safety
2 Solve problems in energy supply network protection equipment and systems	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS requirements and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4	Safety hazards resulting from the reports identified and risk control measures devised and implemented in consultation with appropriate personnel
	2.5	Problem solving is approached methodically drawing on knowledge of energy supply network protection equipment and systems using measured and calculated values of circuit/apparatus parameters
	2.6	Circuit/apparatus/system components are dismantled, where necessary, and parts stored to protect them against loss or damage
	2.7	Circuits/components/systems are rechecked and their operational status is confirmed
	2.8	Materials/replacement parts required to solve problems are sourced and obtained in accordance with established procedures
	2.9	Effectiveness of the repair is tested in accordance with established procedures
	2.10	Apparatus is reassembled, finally tested and prepared for return to service
	2.11	Unexpected situations are dealt with safely and with the approval of authorised personnel
	2.12	Problem-solving activities are carried out without damage to apparatus, circuits the surrounding environment or services using sustainable energy practices
3 Complete and report problem solving in energy supply network protection equipment and systems	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares
	3.3	Maintenance work activities are documented in accordance with established procedures

Foundation Skills

Assessment Requirements for UETTDRIS68 Solve problems in energy supply network protection equipment and systems

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- solving problems in energy supply network equipment including all of the following:
  - determining the operating parameters of existing energy supply protection equipment and systems
  - envisaging the likely extent of work from reports and discussions with appropriate personnel
  - using methodical problem-solving techniques
  - solving problems efficiently
  - altering an existing energy supply protection equipment to comply with specified operating parameters
  - developing energy supply protection equipment to comply with a specified function and operating parameters
  - determining conditions causing an existing energy supply protection equipment to be unsafe
  - completing documentation correctly
- solving problems in energy supply network systems including at least one (1) of the following:
  - distribution overhead system
  - distribution underground system
  - transmission overhead system
  - transmission underground system
- solving problems in energy supply protection equipment and systems including at least two (2) of the following:
  - over-current protection
  - earth fault protection
  - differential protection

© Commonwealth of Australia, 2025 Powering Skills Organisation

  - oil and gas devices
  - busbar protection
  - surge protection
  - conventional relays
  - electronic relays
  - reclosers/sectionalisers
- dealing with unplanned events on at least one (1) occasion.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protection fundamentals encompassing:
  - purpose of protection
  - features of a protection scheme
- instrument transformers for protection encompassing:
  - operating principles
  - applications of current transformers
  - applications of voltage transformers
- feeder protection encompassing:
  - fuse protection
  - overcurrent and earth fault
  - sensitive earth fault
  - unit schemes
  - distance protection
  - trip/close sequences for feeders
  - recloser/sectionaliser systems
- transformer protection encompassing:
  - overheating protection
  - overcurrent protection
  - restricted earth fault protection
  - differential protection
  - oil and gas devices
- busbar protection encompassing:
  - types of fault
  - requirements of busbar protection
  - system protection
  - frame-earth protection
- surge protection encompassing:
  - voltage surges

- surge diverters
- arcing horns.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Application

This unit covers diagnosing and rectifying faults in apparatus in energy supply and distribution systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of energy supply apparatus to logical fault-finding processes, implementing fault rectification, safety and functional testing, and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

Competency Field

Industry Specific Cross Discipline

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to diagnose and rectify faults	**1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
	1.2 Established WHS/OHS risk control measures and procedures in preparation for the work are followed
	1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
	1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel
	1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the worksite
	1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety
2 Diagnose and rectify faults	**2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
	2.2 The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
	2.3 Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS requirements and procedures

© Commonwealth of Australia, 2025 Powering Skills Organisation

	2.4	Logical diagnostic methods are applied to diagnose energy supply apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements
	2.5	Suspected fault scenarios are tested as being the source of system problems
	2.6	Causes of faults are identified and appropriately competent person/s engaged to rectify the fault where it is outside the scope of the control system
	2.7	Faults in apparatus components are rectified to raise energy supply apparatus to its operation standard
	2.8	Apparatus is tested to verify that it operates as intended and to specified requirements
	2.9	Decisions for dealing with unexpected situations are made from discussions with appropriate personnel and job specifications and requirements
	2.10	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
	2.11	Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
3 Complete and report fault diagnosis and rectification activities	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
	3.2	Worksite is made safe in accordance with established safety procedures
	3.3	Rectification of faults is documented in accordance with established procedures
	3.4	Appropriate person/s is notified in accordance with established procedures that the system faults have been rectified

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

© Commonwealth of Australia, 2025 Powering Skills Organisation

competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS69A Diagnose and rectify faults in energy supply apparatus.

Assessment Requirements for UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in energy supply apparatus, including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
