- 1.8** Plant, tools, equipment, and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.9** Worksite is prepared in accordance with work plan and workplace requirements
- 1.10** Traffic management plan is confirmed as being applied

- in accordance with workplace requirements
- 2 Carry out installation and maintenance of LV underground services**
- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Installation and maintenance of LV underground service is completed in accordance with work plan and workplace requirements
- 2.5** Earthing and short circuiting equipment is removed, permit signed off and underground electrical distribution network is re-energised in accordance with workplace requirements
- 2.6** LV underground services are tested in accordance with work plan and workplace requirements
- 2.7** Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.8** Quality checks of work are undertaken in accordance with workplace requirements
- 3 Complete work and documentation**
- 3.1** Completed work is checked for compliance against the work plan and workplace requirements
- 3.2** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4** Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5** Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6** Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI37 Install and maintain low voltage services in remote communities (underground).

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRC002 Install and maintain low voltage underground services in a very remote community

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- verifying underground electrical distribution network has been isolated and earthed/short circuited in accordance with workplace requirements
- connecting low voltage (LV) underground services cables, including at least two (2) of the following:
  - underground pillar/pit connection (three phase)\*
  - underground pillar/pit connection (single phase)
  - underground to overhead connection
  - (\* must do)
- installing LV underground service protection devices, including at least one (1) of the following:
  - fuse units
  - circuit breakers
  - service links
- testing LV underground service cable connections, including all of the following:
  - polarity test
  - phase rotation test
  - continuity test
  - voltage test
  - insulation resistance
  - neutral loop impedance

- re-energising underground electrical distribution network in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- types, sizes and characteristics of LV underground service cables, including
  - two, three and four-core cable
  - cable cross-sectional area of conductors
  - current ratings
  - fuse types and ratings
  - cable insulation materials
- types and characteristics of LV service associated equipment, including:
  - conduit
  - heat/cold-shrink materials
  - cable labelling
  - pillars and pits
- construction manuals, system diagrams/plans and drawings
- types of installation plant, tools and equipment
- installation techniques, including:
  - methods of laying cable
  - sand and slabbing
  - minimum depths to assets in ground
- jointing and terminating methods, including:
  - polymeric heat/cold-shrink materials
  - polymeric tape materials
  - insulation piercing connectors (IPCs)
  - energised and de-energised cables
  - connections to point of entry, fuse boxes, pillars and pits
- connection principles, including:

- purpose and function of the multiple earth neutral (MEN) system
- types of connection faults
- causes and effects of incorrect and poor electrical connections
- principles of loop impedance
- reasons for and methods used to maintain standard phase sequencing
- purpose and operation of service fusing
- relevant electrical access permit
- testing and commissioning procedures, including:
  - pre-energisation tests, including continuity and insulation resistance
  - inspection
  - equipment functionality
  - use of independent earth for testing
  - polarity, voltage and phase sequence
  - neutral and phase identification
  - neutral integrity
  - commissioning test forms and documentation
  - meter function
- completing workplace documentation
- techniques for the maintenance of underground services, including:
  - inspection
  - types of faults
  - diagnosis and repair of faults
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used for installing and maintaining LV underground services in a very remote community

- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRC003 Install and maintain public lighting systems in a very remote community**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to install and maintain overhead and underground public lighting systems in very remote communities in the electricity supply industry (ESI).

It includes the installation and maintenance of public lighting poles/columns, street lighting cable, hardware and components, wiring and earthing systems. It also includes the inspection, testing and commissioning associated with the public lighting system.

All work on public lighting systems within very remote communities must be undertaken in an isolated environment other than for testing purposes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRRC006 Perform low voltage electricity network switching in a very remote community

UETDRRC007 Solve problems in electrical network apparatus in a very remote community

UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community

## Competency Field

Remote Community

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install and maintain public lighting systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Work is prioritised and sequenced for completion in accordance with workplan and workplace requirements
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Public lighting system is verified as isolated and earthed/short circuited in accordance with workplace requirements
- 1.7** Work permits are received and signed in accordance with workplace requirements
- 1.8** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.9** Worksite is prepared in accordance with work plan and workplace requirements
- 1.10** Traffic management plan is confirmed as being in place

- in accordance with workplace requirements
- 2 Carry out installation and maintenance of public lighting systems**
- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Excavation/foundation construction is inspected and confirmed as compliant in accordance with work plan and workplace requirements
- 2.5** Public lighting systems are installed and maintained in accordance with work plan and workplace requirements
- 2.6** Hardware, fittings and control gear are installed in accordance with workplace requirements
- 2.7** Street lighting cable and earthing systems are installed in accordance with workplace requirements
- 2.8** Public lighting and hardware are inspected for compliance in accordance with work plan and workplace requirements
- 2.9** Earthing and short circuiting equipment is removed, permit signed off and public lighting system is re-energised in accordance with workplace requirements
- 2.10** Public lighting system is tested and commissioned in accordance with work plan and workplace requirements
- 2.11** Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.12** Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Complete work and documentation**
- 3.1** Completed work is checked for compliance against the work plan and workplace requirements
- 3.2** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3** Worksite is rehabilitated, cleaned and made safe in

accordance with workplace requirements

- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS38 Install and maintain public lighting systems in remote communities.

# Assessment Requirements for UETDRRC003 Install and maintain public lighting systems in a very remote community

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- verifying public lighting system has been isolated and earthed/short circuited in accordance with work plan and workplace requirements
- installing and maintaining public lighting systems on poles or columns, including at least one (1) of the following:
  - wood
  - concrete
  - steel
  - composite
- installing lanterns/luminaires, including at least two (2) of the following:
  - high pressure mercury vapour
  - low pressure and high-pressure sodium vapour
  - fluorescent
  - quartz-halogen
  - light-emitting diode (LED)
- restoring supply to public lighting system in accordance with workplace requirements
- testing public lighting system connections, including all the following:
  - continuity test
  - voltage test
  - neutral loop impedance
  - insulation resistance

- undertaking maintenance of public lighting lanterns/luminaires, including at least two (2) of the following:
  - removing
  - repairing
  - replacing
  - cleaning
- working from at least one (1) of the following:
  - elevated work platform (EWP)
  - platform
  - ladder
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of work permits
- types of lighting systems for overhead and underground, including:
  - wood, concrete, steel and composite poles
  - public lighting brackets
  - associated hardware
- safety precautions specific to working on public lighting, including:
  - safe working practices and procedures
  - working at heights
  - permit to work systems
  - isolation procedures
- basic public lighting principles, including:
  - electromagnetic spectrum
  - principles of colour
  - behaviour of light
  - factors that affect illumination
- requirements for the use of workplace construction manuals, systems, diagrams, plans and drawings, including:

- public light construction
- public lighting circuits
- earthing systems
- types of tools, equipment and specialised testing equipment
- types and function of lanterns/luminaries/lamps and control equipment, including:
  - high-pressure mercury vapour
  - low pressure and high-pressure sodium vapour
  - fluorescent
  - quartz-halogen
  - choke boxes
  - photo-electric cells
  - time switches
  - contactor boxes
  - LED
- techniques for the installation of public lighting systems
- techniques for the inspection, testing and commissioning of public lighting systems, including:
  - pre-energisation tests, including continuity and insulation resistance
  - use of specialist testing equipment
  - neutral and phase identification
  - neutral integrity
  - testing and commissioning forms and documentation
- application of specialist testing equipment, including:
  - voltage detectors
  - insulation resistance testers
  - clamp-on ammeters
  - continuity testers
  - fault indicators
- techniques for the maintenance of public lighting systems, including:
  - diagnosing faults
  - removal, repair, replacement and cleaning of public lighting and hardware
  - controlling and switching of public lighting systems
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used for installing and maintaining public lighting systems in a very remote community
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRC004 Install and replace energy meters and associated equipment in a very remote community**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to install and replace whole current energy meters and associated equipment in a very remote community in the electricity supply industry (ESI).

It includes the testing of whole current energy meters and associated equipment to identify faults and establish normal functions of energy meters and associated equipment.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRRC006 Perform low voltage electricity network switching in a very remote community

UETDRRC007 Solve problems in electrical network apparatus in a very remote community

UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community

## **Competency Field**

Remote Community

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to install and replace energy meters and associated equipment**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.7** Electrical network circuit is confirmed as being isolated and earthed/short circuited in accordance with workplace requirements
- 1.8** Work permits are received and signed in accordance with workplace requirements
- 1.9** Worksite is prepared in accordance with work plan and workplace requirements

#### **2 Carry out the installation or replacement of energy meters and associated equipment**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights, the use of plant, tools, equipment and PPE are carried out in accordance

with workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Installation or replacement of whole current energy meters is carried out in accordance with workplace requirements
- 2.5 Earthing/short circuiting equipment is removed, permit signed off and electrical network circuits re-energised in accordance with workplace requirements
- 2.6 Whole current energy meters and associated equipment are tested in accordance with workplace requirements
- 2.7 Whole current energy meters and associated equipment are programmed and sealed in accordance with workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements

### **3 Complete work and documentation**

- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI34 Install and replace energy meters and associated equipment in remote communities.

## Links

# Assessment Requirements for UETDRRC004 Install and replace energy meters and associated equipment in a very remote community

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- preparing to enter the workplace including the use of work permits, clearances and isolation permissions
- confirming electrical network circuits have been isolated and earthed/short circuited in accordance with work plan and workplace requirements
- installing or replacing at least one (1) of the following whole current energy meters:
  - induction disk energy meter
  - electronic energy meter
  - electronic summator
- installing at least two (2) of the following associated metering equipment:
  - service fuses
  - service links
  - meter panels
  - controlled output meters
- re-energising electrical network circuits in accordance with workplace requirements
- completing at least three (3) of the following tests of whole current energy meters:
  - polarity\*
  - continuity
  - insulation resistance
  - meter functionality (load)
  - neutral integrity
  - phase sequence (rotation)

- voltage
- (\*must do)
- working from at least one (1) of the following:
  - elevated work platform (EWP)
  - platform
  - ladder
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reporting and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- whole current energy meters, including:
  - construction
  - operation
  - error codes
- associated metering equipment, including:
  - construction
  - operation
- metering arrangements, including:
  - direct
  - distributed master
  - multiple master
  - plug-in
  - multiple earth neutral (MEN) system
- cable types and applications
- installation tools, equipment and testing devices
- installation and removal of energy meters, including:
  - stripping cable
  - cable terminations
  - meter wiring positions
  - service protection device (SPD)

- meter boards
- testing procedures, including:
  - continuity
  - insulation resistance
  - polarity
  - phase sequence
  - neutral integrity
  - meter functionality
- procedures for recording energy meter documentation
- customer education on energy meters
- techniques for the maintenance of energy metering, including:
  - fault finding
  - fault rectification
  - meter reading
  - tariff changes
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and replacing whole current energy meters and associated equipment in a very remote community
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRC005 Maintain, test and verify power systems in a very remote community**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to maintain, test and verify power systems and associated hardware in very remote communities in the electricity supply industry (ESI).

It includes working safely, isolating, maintaining and restoring generation power systems, solving problems on distribution electrical network circuits and apparatus, and completing functional testing.

It also includes using specialist tools, equipment, personal protective equipment (PPE), visual inspections, identifying non-compliance defects, the use of work permits and authorisation protocols.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEERE0007 Conduct periodic maintenance of remote area power supply generator sets

UEERE0018 Maintain and repair remote area power generation facilities

UEERE0019 Maintain safety and tidiness of remote area power supply systems

UEERE0023 Work safely with remote area power supply systems

UEERE0041 Maintain operation of remote area power generation plant

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRRC006 Perform low voltage electricity network switching in a very remote community

UETDRRC007 Solve problems in electrical network apparatus in a very remote community

UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community

## Competency Field

Remote Community

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to maintain, test and verify power systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are identified and obtained in accordance with work plan and workplace requirements
- 1.4** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work permits are received and signed in accordance with workplace requirements
- 1.7** Switching/isolation schedule is developed in accordance with work plan and workplace requirements
- 1.8** Plant, tools, equipment and PPE required for work are

- determined, obtained and confirmed in working order
- 1.9** Specialist test equipment is obtained, confirmed in working order and calibrated in accordance with workplace requirements
- 1.10** Worksite is prepared in accordance with work plan and workplace requirements
- 2 Carry out maintenance, testing and verification of generation power systems**
- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Generation power system switching/isolation authorisation is obtained in accordance with switching/isolation schedule and workplace requirements
- 2.5** Generation power systems are isolated, proved de-energised and earthed in accordance with switching/isolation schedule and workplace requirements
- 2.6** Generation power systems equipment and associated hardware is maintained in accordance with work plan and workplace requirements
- 2.7** Generation power systems equipment and associated hardware are visually inspected to confirm compliance in accordance with work plan and workplace requirements
- 2.8** Generation power system authorisation is obtained to commence restoration in accordance with switching/isolation schedule and workplace requirements
- 2.9** Generation power systems are tested and verified compliant in accordance with work plan, work permits and workplace requirements
- 2.10** Incidents or unplanned events are responded to in

- accordance with workplace requirements
- 2.11** Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Solve electrical network apparatus and network circuit problems**
- 3.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 3.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 3.3** Hazard control measures are monitored in accordance with workplace requirements
- 3.4** Live testing or measuring requirements are determined in accordance with workplace requirements
- 3.5** Electrical network apparatus and network circuits are confirmed as isolated and earthed/short circuited in accordance with workplace requirements
- 3.6** Operating parameters of the circuit within the electrical network apparatus are verified in accordance with workplace requirements
- 3.7** Operating parameters of the network electrical circuits are verified in accordance with workplace requirements
- 3.8** Established methodical processes are used to identify electrical problems from measured and calculated values in accordance with workplace requirements
- 3.9** Electrical network apparatus circuit problems are solved without damage to apparatus or circuits to comply with workplace requirements
- 3.10** Electrical network circuit problems are solved without damage to apparatus or circuits to comply with workplace requirements
- 3.11** Earthing/short circuiting equipment is removed, permit signed off and electrical network apparatus and network circuits re-energised in accordance with workplace requirements
- 3.12** Electrical network apparatus and network circuits are tested to determine correct operation in accordance with

|                                   |      |                                                                                                                                     |

|                                   |      | workplace requirements                                                                                                              |
|                                   | 3.13 | Incidents or unplanned events are responded to in accordance with workplace requirements                                            |
| 4 Complete work and documentation | 4.1  | Completed work is checked for compliance against the work plan and workplace requirements                                           |
|                                   | 4.2  | Incidents or unplanned events are reported in accordance with workplace requirements                                                |
|                                   | 4.3  | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                                          |
|                                   | 4.4  | Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements                   |
|                                   | 4.5  | Surplus materials are returned to storage or disposed of in accordance with workplace requirements                                  |
|                                   | 4.6  | Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to UETTDRI99 Test and Verify Distribution Remote Area Installations.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRRC005 Maintain, test and verify power systems in a very remote community

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- preparing, issuing and signing on and off relevant work permits in accordance with workplace requirements
- isolating and restoring generation power systems, including:
  - identifying isolation points
  - preparing a generation isolation and restoration permit to work schedule
  - obtaining authorisation to isolate and restore generation power systems
  - isolating and restoring generation power systems in accordance with switching/isolation schedule
- maintaining generation power system, including:
  - conducting routine safety inspections
  - inspecting generation power system facilities
  - carrying out scheduled generator engine service
  - checking generation power system fuel facilities
  - conducting generation power station operational readings
- testing and maintaining generation power systems, including:
  - electrical equipment and switchgear
  - electrical earthing systems
  - identifying non-compliance
  - rectifying non-compliance or defects
  - completing testing documentation
- confirming network apparatus and network electrical circuits are isolated
- determining the operating parameters of a circuit within the electrical network apparatus
- using established methodical processes to solve electrical problems in accordance with

workplace requirements, including:

- choosing correct instruments and ranges for testing and measuring values
- connecting instruments to measure and calculate values in electrical network apparatus and network circuits
- identifying electrical network apparatus and network circuits problems, including at least three (3) of the following:
  - high (HV)/low voltage (LV)
  - high resistance
  - low resistance
  - fault current (fuses)
  - kilowatt hour meter faults (no supply, reverse polarity etc)
  - public lighting faults
- working from at least one (1) of the following:
  - elevated work platform (EWP)
  - platform
  - ladder
- connecting and testing electrical network apparatus and network circuits to determine correct operation
- removing earthing/short circuiting equipment and re-energising electrical network apparatus and network circuits in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - environmental
  - wiring rules requirements – continuity test and insulation resistance test
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- types, purpose and application of work permits
- organisational workplace requirements, including:
  - generation power systems
  - electrical safety
  - isolation and restoration switching schedules
- generation power systems, including:

- balance of plant
- piping and instrument diagrams
- control and switch rooms
- electrical switchgear
- electrical protection
- generation power system isolation and restoration, including:
  - generation permit to work
  - lock out, tag out (LOTO)
  - authorisations
- generation power system testing, including:
  - electricity network voltages
  - commissioning
- safe use, care and storage of electrical instruments
- fault loop impedance, including:
  - term fault loop impedance of an alternating current (a.c.) power system
  - measuring fault loop impedance of typical circuits
  - procedures for testing fault loop impedance
- single phase systems
- multi-phase systems
- impedance in a.c. circuits
- documentation and reports, including:
  - work records
  - tests and commissions
  - incidents and unplanned events
  - periodic inspections
  - non-compliance and defects
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used for maintaining, testing and verifying generation power systems, network apparatus and network electrical circuits in a very remote community
- applicable documentation, including workplace requirements, network construction standards, network supply standards, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRC006 Perform low voltage electricity network switching in a very remote community**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to perform low voltage (LV) electricity network switching in a very remote community in the electricity supply industry (ESI).

It includes preparing a switching schedule, isolating and restoring LV overhead and underground electricity networks to a given switching schedule using LV circuit breaking and isolation devices.

It also includes paralleling LV electrical network circuits, using specialist tools, personal protective equipment (PPE), earthing and testing equipment, and the use of work permits and authorisation protocols.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

## **Competency Field**

Remote Community

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to perform LV electricity network switching**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Hazards are identified, risks assessed and control measures identified and applied
- 1.4** Plant, tools, equipment and PPE required for work are determined, obtained and confirmed in working order
- 1.5** Switching schedule is developed in accordance with work plan and workplace requirements
- 1.6** LV network switching is prioritised for completion in accordance with workplace requirements
- 1.7** LV network switching schedule is communicated with relevant personnel in accordance with workplace requirements

#### **2 Perform isolation of LV electricity network**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Authorisation is obtained to commence LV electricity network switching in accordance with switching schedule and workplace requirements
- 2.3** Lifting, climbing, working at heights and the use of plant, tools and equipment are carried out in accordance with workplace requirements
- 2.4** Hazard control measures are monitored in accordance with workplace requirements
- 2.5** LV electricity network is isolated in accordance with switching schedule
- 2.6** Communications are maintained with authorisation authority in accordance with workplace requirements

- 2.7 LV electricity network is tested to confirm de-energised and earthed/short circuited in accordance with switching schedule and workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Work permits are received and signed in accordance with workplace requirements
- 2.10 Authorisation authority is notified isolation is completed in accordance with switching schedule and workplace requirements
- 3 Perform restoration of LV electricity network**
  - 3.1 Work permits are signed off in accordance with switching schedule and workplace requirements
  - 3.2 Authorisation is obtained to commence restoration of LV electricity network in accordance with workplace requirements
  - 3.3 Lifting, climbing, working at heights and the use of plant, tools and equipment, are carried out in accordance with workplace requirements
  - 3.4 Restore LV electricity network in accordance with switching schedule
  - 3.5 Authorisation authority is notified restoration is completed in accordance with switching schedule and workplace requirements
- 4 Complete work and documentation**
  - 4.1 Completed work is checked for compliance against the work plan and workplace requirements
  - 4.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 4.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 4.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 4.5 Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS35 Perform remote community network field switching to a given schedule.

## Links

# Assessment Requirements for UETDRRC006 Perform low voltage electricity network switching in a very remote community

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - relevant work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- preparing a low voltage (LV) electricity network switching schedule in accordance with workplace requirements
- obtaining authorisation to perform LV electricity network switching
- isolating and restoring LV electricity networks in accordance with switching schedule requirements
- undertaking tests of LV electricity network, including:
  - voltage
  - phase sequence (rotation)
  - polarity
- operating LV switchgear, including at least one (1) of the following:
  - LV circuit breaker
  - LV links
  - LV fuses
- working from at least one (1) of the following:
  - elevated work platform (EWP)
  - ladder
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- requirements for the use of manuals, system diagrams/plans and drawings, including:
  - types, characteristics and capabilities of electrical apparatus
  - use, characteristics and capabilities of specialised tools and testing equipment
  - restrictions pertaining to LV switching equipment
  - high voltage (HV) network interconnectors source of possible back-feed
- LV switchgear, including:
  - types
  - categories
  - application
  - function
  - operating capabilities
- types, characteristics and capabilities of LV specialised switching and testing equipment
- procedures for obtaining correct LV switching authorisation, including:
  - identification of hazards, assessing and controlling risks
  - safety procedures and precautions
  - safe approach distances
  - responsibilities and protocols
  - identifying switching resources
  - procedures for obtaining electrical access permits/authorities
  - requirements for team switching
  - procedures for coordination of operations
- techniques for overhead and underground LV electricity network switching, including:
  - isolation procedures
  - testing and earthing/short circuiting LV electrical apparatus
  - pre-switching checks
  - switching operational procedures
  - emergency fault procedures
  - restoration procedures
- role and responsibilities of the LV switching operator

- application, function and operating capabilities of switchgear
- preparation of a LV switching schedule, including:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator
  - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for performing LV electricity network switching in a very remote community
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRC007 Solve problems in electrical network apparatus in a very remote community**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to solve electrical network apparatus problems in a very remote community in the electricity supply industry (ESI).

It includes determining correct operation of network apparatus and related circuits, providing solutions as they apply to the electrical network and documenting problem-solving activities.

It also includes safe working practices, network apparatus problem-solving processes, including the use of voltage, current and resistance measuring devices, diagnosing and providing solutions derived from test analysis to solve problems in network apparatus and related circuits.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRRC006 Perform low voltage electricity network switching in a very remote community

## **Competency Field**

Remote Community

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to solve electrical network apparatus problems**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment, and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed, and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Work permits are received and signed in accordance with workplace requirements
- 1.8** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.9** Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### **2 Solve electrical network apparatus problems**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Live testing or measuring requirements are determined in accordance with workplace requirements
- 2.5 Electrical network circuits are confirmed as isolated and earthed/short circuited in accordance with workplace requirements
- 2.6 Operating parameters of the circuit within the electrical network apparatus are verified in accordance with workplace requirements
- 2.7 Established methodical processes are used to identify electrical problems from measured and calculated values in accordance with workplace requirements
- 2.8 Electrical network apparatus circuit problems are solved without damage to apparatus or circuits to comply with workplace requirements
- 2.9 Earthing/short circuiting equipment is removed, permit signed off and electrical network circuits re-energised in accordance with workplace requirements
- 2.10 Electrical network apparatus is tested to determine correct operation in accordance with workplace requirements
- 2.11 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.12 Quality checks of work are undertaken in accordance with work plan and workplace requirements

### **3 Complete work and documentation**

- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
- 3.2 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.3 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.4 Surplus materials are returned to storage or disposed of in accordance with workplace requirements

- 3.5 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.6 Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI32 Solve electrical problems in remote community network apparatus.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRC007 Solve problems in electrical network apparatus in a very remote community

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- preparing to enter the workplace, including the use of work permits, clearances and isolation permissions
- confirming network electrical apparatus circuit is isolated
- determining the operating parameters of a circuit within the electrical network apparatus
- using established methodical processes to solve electrical problems in accordance with workplace requirements, including:
  - choosing correct instruments and ranges for testing and measuring values
  - connecting instruments to measure and calculate values in circuits within the electrical network apparatus
- identifying at least three (3) of the following problems:
  - high voltage (HV)/low voltage (LV)
  - high resistance
  - low resistance
  - fault current (fuses)
  - kilowatt hour meter faults (no supply, reverse polarity etc)
  - public lighting faults
- working from at least one (1) of the following:
  - elevated work platform (EWP)
  - platform
  - ladder
- connecting and testing electrical network apparatus to determine correct operation
- dealing with an unplanned event on at least one (1) occasion

- completing relevant work records, reporting and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - wiring rules requirements – continuity test and insulation resistance test
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- safe use, care and storage of electrical instruments
- parallel circuits, including:
  - schematic diagram of a single-source direct current (d.c.) parallel circuit
  - major components of a parallel circuit (power supply, loads, connecting leads and switch)
  - applications where parallel circuits are used in the remote community electricity supply industry (ESI)
  - characteristics of a parallel circuit (load connection, current paths, voltage drops, power dissipation, and effects of an open circuit in a parallel circuit)
  - relationship between currents entering a junction and currents leaving a junction
  - calculation of the total resistance of a parallel circuit
  - calculation of the total current of a parallel circuit
  - calculation of the total voltage of a parallel circuit
  - single-source d.c. parallel circuit set-up and connection
  - resistance, voltage and current measurements in a single-source parallel circuit
  - voltage, current, resistance or power dissipated from measured values of any of these quantities
- series/parallel circuits, including:
  - schematic diagram of a single-source d.c. series/parallel circuit
  - major components of a series/parallel circuit (power supply, loads, connecting leads and switch)
  - applications where series/parallel circuits are used in the remote community ESI
  - characteristics of a series/parallel circuit (load connection, current paths, voltage drops, power dissipation, and effects of an open circuit in a series/parallel circuit)
  - calculation of the total resistance of a series/parallel circuit
  - calculation of the total current of a series/parallel circuit
  - calculation of the total voltage and the individual voltage drops of a series/parallel circuit
  - setting up and connecting a single-source d.c. series/parallel circuit

- resistance, voltage and current measurements in a single-source d.c. series/parallel circuit
- voltage, current, resistances or power dissipated from measured values of any two of these quantities
- factors affecting resistance, including:
  - four factors that affect the resistance of a conductor (type of material, length, cross-sectional area and temperature)
  - affect the change in the type of material (resistivity) has on the resistance of a conductor
  - effect the change in length has on the resistance of a conductor
  - effect the change in cross-sectional area has on the resistance of a conductor
  - effects of temperature change on the resistance of various conducting materials
  - effects of resistance on the current-carrying capacity and voltage drop in cables
- effects of meters in a circuit, including:
  - meters in terms of units to be measured, range, loading effect, accuracy and safety category of meters for a given application
  - instruments used in the field to measure voltage and current, and the typical circumstances in which they are used
  - hazards involved in using electrical instruments and the safety control measures that should be taken
  - operating characteristics of analogue and digital meters
  - correct techniques to read the scale of an analogue meters and how to reduce the ‘parallax’ error
  - types of voltmeters used in the ESI – bench type, clamp meter and multimeter
  - purpose and characteristics (internal resistance, range, loading effect and accuracy) of a voltmeter
  - types of voltage indicator testers (e.g., light-emitting diode (LED), neon, solenoid, volt-stick and series tester) and the purpose of each voltage indicator tester
  - various types of ammeters used in the ESI (bench, clamp meter and multimeter)
  - purpose and characteristics of an ammeter and the correct connection (series) of an ammeter into a circuit
  - loading effect of various voltmeters when measuring voltage across various loads
- resistance measurement, including:
  - identification of instruments used in the field to measure resistance (including insulation resistance (IR)) and the typical circumstances in which they are used
  - purpose of an IR tester
  - parts and functions of various analogue and digital IR tester (selector range switch, zero ohms adjustment, battery check function, scale and connecting leads)
  - reasons why the supply must be isolated prior to using the IR tester
  - where and why the continuity test would be used in an ESI systems
  - where and why the insulation resistance test would be used in an ESI system
  - voltage ranges of an IR tester and where each range may be used. e.g. 250 V d.c, 500 V d.c & 1000 V d.c
  - IR tester calibration requirements

- measurement of low values of resistance using an IR tester continuity functions
- measurement of high values of resistance using an IR tester insulation resistance function
- volt-ammeter (short shunt and long shunt) methods of measuring resistance
- calculation of resistance values using voltmeter and ammeter reading (long and short shunt connections)
- capacitors and capacitance, including:
  - basic construction of standard capacitor, highlighting the plates, dielectric and connecting leads
  - types of dielectric material and each dielectric's relative permittivity
  - identification of various types of capacitors commonly used in the ESI
  - circuit symbol of various types of capacitors - standard; variable, trimmer and polarised
  - terms: capacitance (  $C$  ), electric charge (  $Q$  ) and energy (  $W$  )
  - unit of capacitance (Farad), electric charge (Coulomb) and energy (Joule)
  - factors affecting capacitance and how factors are present in all circuits to some extent
  - how a capacitor is charged in a d.c. circuit
  - behaviour of a series d.c. circuit containing resistance and capacitance components - charge and discharge curves
  - term: time constant and its relationship to the charging and discharging of a capacitor
  - calculation of quantities from given information - capacitance ( $Q = VC$ ); energy ( $W = \frac{1}{2}CV^2$ ); voltage ( $V = Q/C$ )
  - connection of a series d.c. circuit containing capacitance and resistor to determine the time constant of the circuit
- capacitors, including:
  - hazards involved in working with capacitance effects and the safety control measures that should be taken
  - safe handling and the correct methods of discharging various size capacitors
  - dangers of a charged capacitor and the consequences of discharging a capacitor through a person
  - effects of capacitors connected in parallel
  - effects on the total capacitance of capacitors connected in series
  - common faults in capacitors
  - testing of capacitors to determine serviceability
  - application of capacitors in the ESI
- magnetism, including:
  - magnetic field pattern of bar and horse-shoe magnets
  - magnets attraction and repulsion when brought in contact with each other
  - common magnetic and non-magnetic materials and groupings (diamagnetic, paramagnetic and ferromagnetic materials)
  - principle of magnetic screening (shielding) and its applications
  - practical applications of magnets
- electromagnetism, including:

- conventions representing direction of current flow in a conductor
- magnetic field pattern around a single conductor and two adjacent conductors carrying current
- right hand rule to determine the direction of magnetic field around a current-carrying conductor
- direction of force between adjacent current-carrying conductors
- effect of current, length and distance apart on the force between conductors (including forces on bus bars during fault conditions)
- magnetic field around an electromagnet
- right hand rule to determine the direction of magnetic field around a current-carrying coil
- magnetomotive force (m.m.f.) and its relationship to the number of turns in a coil and the current flowing in the coil
- practical applications of electromagnets
- electromagnetic induction, including:
  - principle of electromagnetic induction (Faraday's law of electromagnetic induction)
  - Fleming's right hand rule to a current-carrying conductor under the influence of a magnetic field
  - calculation of induced electromagnetic force (e.m.f.) in a conductor given the conductor length, flux density and velocity of the conductor
  - calculation of induced e.m.f. in a coil given the number of turns in a coil and the rate of change of flux
  - calculation of force on a conductor given the flux density of the magnetic field, length of the conductor and the current being carried by the conductor
  - Lenz's law
  - applications of electromagnetic induction
- inductance, including:
  - construction of an inductor, including a bifilar winding inductor
  - Australian Standard circuit diagram symbol for the four types of inductor
  - effect of physical parameters on the inductance of an inductor
  - common types of inductor cores
  - applications of the different types of inductors
  - definition of terms self-induction, inductance and mutual inductance
  - calculation of value of self-induced e.m.f. in a coil
  - mutual induction occurs between two coils
  - practical applications for the effects of self and mutual induction
  - undesirable effects of self and mutual induction
- magnetic devices, including:
  - construction, operation and applications of relays
  - construction, operation and applications of contactors
  - magnetic methods used to extinguish the arc between opening contacts
  - construction, operation and applications of Hall effect devices

- construction, operation and application of magnetic sensing devices
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for solving problems in electrical network apparatus in a very remote community
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to solve problems in low voltage (LV) electrical network circuits in a very remote community in the electricity supply industry (ESI).

It includes establishing correct operation of single and multi-phase LV electrical network circuits and solving circuit problems as they apply to servicing, fault-finding and installation work function.

It also includes safe working practices, issues related to fault protection, power factor and multiple earthed neutral (MEN) systems and the use of voltage, current and resistance measuring devices to provide solutions to LV electrical network circuit problems derived from calculated and measured parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRRC006 Perform low voltage electricity network switching in a very remote community

UETDRRC007 Solve problems in electrical network apparatus in a very remote community

## **Competency Field**

Remote Community

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to solve problems in LV electrical network circuits**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment, and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Work permits are received and signed in accordance with workplace requirements
- 1.8** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.9** Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### **2 Solve problems in LV electrical network circuits**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Live testing or measuring requirements are determined in accordance with workplace requirements
- 2.5 Electrical network circuits are confirmed as isolated and proved earthed/short circuited in accordance with workplace requirements
- 2.6 Operating parameters of the network electrical circuits are verified in accordance with workplace requirements
- 2.7 Established methodical processes are used to identify electrical network circuit problems from measured and calculated values in accordance with workplace requirements
- 2.8 Electrical network circuit problems are solved without damage to apparatus or circuits to comply with workplace requirements
- 2.9 Earthing/short circuiting equipment is removed, permit signed off and electrical network circuits re-energised in accordance with workplace requirements
- 2.10 Electrical network circuits are tested to determine correct operation in accordance with workplace requirements
- 2.11 Incidents or unplanned events are responded to in accordance with workplace requirements
- 3 **Complete work and documentation**
  - 3.1 Completed work is checked for compliance against the work plan and workplace requirements
  - 3.2 Worksite is rehabilitated, cleaned and made safe in accordance with workplace procedures
  - 3.3 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 3.4 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
  - 3.5 Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.6 Work records, reports and documentation are completed, and appropriate personnel notified in accordance with

workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS33 Solve electrical problems in remote community network systems.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- preparing to enter the workplace, including the use of work permits, clearances and isolation permissions
- confirming network electrical circuits are isolated
- determining the correct operation of the network electrical circuits
- using established methodical processes to solve electrical problems in accordance with workplace requirements, including:
  - choosing correct instruments and ranges for testing and measuring values
  - connecting instruments to measure and calculate values in circuits within the electrical network
- identifying circuit problems, including at least three (3) of the following:
  - high voltage (HV)/low voltage (LV)
  - high resistance
  - low resistance
  - fault current (fuses)
  - kilowatt hour meter faults (no supply, reverse polarity, etc)
  - streetlight faults
- connecting and testing network electrical circuits to determine correct operation
- working from at least one (1) of the following:
  - elevated work platform (EWP)
  - platform
  - ladder

- dealing with an unplanned event on at least (1) one occasion
- completing relevant work records, reporting and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - wiring rules requirements
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- alternating current (a.c.) quantities, including:
  - sine, cosine and tangent ratios of a right-angle triangle
  - Pythagoras theorem to a right-angle triangle
  - use of the cathode ray oscilloscope (CRO) to measure direct current (d.c.) and a.c. voltage levels
  - sinusoidal voltage generated by a single turn coil rotated in uniform magnetic fields
  - terms ‘period’, ‘maximum value’, ‘peak-to-peak value’, ‘instantaneous value’, ‘average value’, and ‘root-mean-square (r.m.s.) value’, in relation to a sinusoidal waveform
  - calculation of the instantaneous value of induced voltage of a generated sinusoidal waveform
  - measurement of instantaneous, peak and peak-to-peak values and the period of a sinusoidal waveform
  - calculation of r.m.s. value and frequency of a sinusoidal waveform from values of peak voltage and period
- phasor diagrams, including:
  - purpose of phasor diagrams
  - ‘in-phase’, ‘out-of-phase’, ‘phase angle’ ‘lead’ and ‘lag’
  - phase angle between two or more alternating quantities from a given sinusoidal waveform diagram
  - convention for representing voltage, current and the reference quantity in a phasor diagram
  - drawing phasor diagrams to show the relationship between two or more a.c. values of voltage and/or current
  - determination of phase relationship between two or more sinusoidal waveforms from a given diagram and measurements
- single element a.c. circuits, including:
  - setting up and connecting a single-source resistive a.c. circuit and taking voltage and current measurements to determine the resistance
  - determining the voltage, current resistances from the measurement of given values of any

- two of these qualities
- relationship between voltage drops and current in resistive a.c. circuits
- applications of resistive a.c. circuits
- defining ‘inductive reactance’
- calculation of inductive reactance for a given inductor and the relationship between inductive reactance and frequency
- application of Ohm’s law to determine voltage, current of inductive reactance in a purely inductive a.c. circuit given any two to these quantities
- applications of inductive a.c circuits
- calculation of capacitive reactance
- application of Ohm’s law to determine voltage, current or capacitive reactance in a purely capacitive a.c circuit given any two of the quantities
- applications of capacitive a.c circuits
- impedance a.c. circuits, including:
  - impedance and impedance triangle
  - effects of impedance on the neutral and active conductor
  - determining the impedance, current and voltages for a series a.c circuit
  - drawing and labelling the impedance triangle for a series resistor–capacitor (RC) circuit
  - capacitive components in power circuits and systems and the effect on the phase relationship between voltage and current
  - drawing the equivalent circuit of a practical inductor
  - inductive components in power circuits and systems and their effect on the phase relationship between voltage and current
- power in an a.c. circuit, including:
  - difference between true power, apparent power and reactive power and the units in which these quantities are measured
  - power triangle to show the relationships between true power, apparent power and reactive power
  - terms: power factor and phase angle
  - methods used to measure single phase power, energy and demand
- power factor improvement, including:
  - effects of low power factor
  - requirements for power factor improvement
  - methods used to improve low power factor of an installation
  - local supply authority and wiring rules requirements regarding the power factor of an installation and power factor improvement equipment
- harmonics effect in a.c. systems, including:
  - term harmonic in relation to the sinusoidal waveform of an a.c. power system
  - sources in a.c. systems that produce harmonics
  - problems that may arise in a.c. circuits as a result of harmonics and how these are overcome

- methods and test equipment used to test for harmonics
- multi-phase systems, including:
  - features of a multiphase system
  - two-phase systems (230 V/460 V)
  - comparison of voltages generated by single and multi-phase alternators
  - reasons for the adoption of three phases for power systems
  - how three phases are generated in a single alternator
  - calculation of root mean square (r.m.s.) value of voltage generated in each phase given the maximum value
  - relationship between the phase voltages generated in a multi-phase alternator and the conventions for identifying each
  - term phase sequence (also referred to as phase rotation)
  - phase sequence of a multi-phase supply
- single phase systems
- three phase star-connections, including:
  - connecting a three phase star-connection load
  - phase relationship between line and phase voltages and line and phase currents of a star-connected system
  - determining the r.m.s. value of line and phase voltage given any one of these quantities
  - determining the r.m.s. value of line and phase current given any one of these quantities
  - terms balanced load and unbalanced load
  - balanced and unbalanced loads in typical power systems
- three phase four wire systems, including:
  - purpose of the neutral conductor in three phase four wire systems
  - the effects of a high impedance in the neutral conductor of a three phase four wire system supplying an unbalanced load where multiple earthed neutral (MEN) earthing is employed
- three phase delta-connections and interconnected systems, including:
  - connecting three phase delta loads
  - phase relationship between line and phase voltages and line and phase currents of a delta-connected system
  - determining the r.m.s. value of line and phase voltage given any one of these quantities
  - determining the r.m.s. value of line and phase current given any one of these quantities
  - limitations and uses of open delta connections
  - loads in typical power systems
  - typical combinations of three phase interconnected systems using star-connections and a delta connection
  - relationship between line and phase voltages and line and phase currents in the typical interconnected systems using star-connections and delta connections
- fault loop impedance, including:
  - term fault loop impedance of an a.c. power system

- measuring fault loop impedance of typical circuits
- procedures for testing fault loop impedance
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for solving electrical problems in low voltage network circuits in a very remote community
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRF001 Perform cable pit/trench/excavation rescue

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the performance of cable pit/trench/excavation rescue procedures as they apply to live low voltage (LV) cable jointing in the workplace. It specifies the mandatory requirements of rescue from a cable pit/trench/excavation and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

HLTAID009 Provide cardiopulmonary resuscitation

## Competency Field

Refresher Training

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to perform cable pit/trench/excavation**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Instruction in hazards and risk control measures for specific work functions and work areas are identified

|                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

# Assessment Requirements for UETDRRF001 Perform cable pit/trench/excavation rescue

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- inspecting and placing rescue equipment for a cable pit/trench/excavation rescue
- performing a rescue from a pit/trench/excavation in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures for the rescue of a victim from a cable pit/trench/excavation encompassing:
  - inspection of rescue equipment
  - assessing hazards to rescuer, victim and others
  - isolation procedures, where appropriate
  - safe approach distances (SAD) appropriate to cable pit/trench/excavation rescue
  - involvement of external emergency services
- emergency procedures for the skills required for the rescue of a victim from a cable pit/trench/excavation encompassing:
  - placement of rescue equipment
  - controlling hazards to rescuer, victim and others
  - maintaining SAD appropriate to cable pit/trench/excavation rescue
  - removing victim to safe location/place of safety.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing cable pit/trench/excavation rescues
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## UETDRRF002 Perform EWP rescue

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit covers the performance of rescue procedures from an elevated work platform (EWP) in the workplace. It specifies the mandatory requirements of rescue from a raised EWP by a work party member on the ground and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

HLTAID009 Provide cardiopulmonary resuscitation

### Competency Field

Refresher Training

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare to perform EWP

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Instruction in hazards and risk control measures for specific work areas and work activities are identified and

|                                            |            |                                                                                                                                                                                |
|--------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>rescue procedures</b>                   |            | obtained                                                                                                                                                                       |
|                                            | <b>1.2</b> | Tools and emergency equipment are checked for safety, functionality and placed in an accessible location to facilitate response and rescue according to established procedures |
| <b>2 Carry out EWP rescue procedures</b>   | <b>2.1</b> | Workplace procedures and work instructions for controlling risk are followed                                                                                                   |
|                                            | <b>2.2</b> | Workplace procedures for removing the victim, where necessary, from contact with or in vicinity of live apparatus and lowering the EWP to the ground are followed              |
|                                            | <b>2.3</b> | Workplace procedures for removing the victim from the EWP are followed                                                                                                         |
|                                            | <b>2.4</b> | Workplace procedures for carrying out cardiopulmonary resuscitation (CPR), if required at the site, and treatment, where necessary, by medical professionals are followed      |
|                                            | <b>2.5</b> | The worksite is secured and entry controlled until appropriate authorities inspect and release the site                                                                        |
| <b>3 Complete the EWP rescue procedure</b> | <b>3.1</b> | Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures                                             |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRRF03 Perform EWP rescue.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRF002 Perform EWP rescue

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- identifying operational instructions and confirming the function of emergency equipment to facilitate rescue from an incident on an elevated work platform (EWP)
- accessing controls and lowering the EWP in accordance with mobile equipment instructions/workplace procedures
- removing the victim from the EWP to the ground in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures for the EWP rescue of a victim encompassing:
  - inspection of rescue equipment
  - assessing hazards to rescuer, victim and others
  - isolation procedures, where appropriate
  - safe approach distances (SAD) appropriate to EWP rescue
  - involvement of external emergency services
  - emergency retrieval systems
- emergency procedures required to undertake EWP rescue of a victim encompassing:
  - placement of rescue equipment
  - controlling hazards to rescuer, victim and others
  - maintaining SAD appropriate to EWP rescue
  - practical steps in rescuing a person
  - removing victim to safe location/place of safety.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing EWP rescue
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## UETDRRF003 Perform pole top rescue

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit covers the performance of pole top rescue procedures as an emergency procedure required in the workplace. It specifies the mandatory requirements of rescue from a pole top and how they apply in the context of transmission, distribution and rail work functions. It encompasses responsibilities for rescue, health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

HLTAID009 Provide cardiopulmonary resuscitation

### Competency Field

Refresher Training

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare to perform pole top rescue

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Instruction in hazards and risk control measures for specific work functions and work areas are identified and obtained (This will include the risk assessment and

|                                                 |            |                                                                                                                                                                                |
|-------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# Assessment Requirements for UETDRRF003 Perform pole top rescue

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying work health and safety (WHS)/relevant occupational health and safety (OHS) requirements, including the use of risk control measures
- inspecting and placing rescue equipment
- performing pole top rescue in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures for the pole top rescue of a victim encompassing:
  - inspection of rescue equipment
  - assessing hazards to rescuer, victim and others
  - isolation procedures, where appropriate
  - safe approach distances (SAD) appropriate to pole top rescue
  - involvement of external emergency services
- emergency procedures for the pole top rescue of a victim encompassing:
  - placement of rescue equipment
  - controlling hazards to rescuer, victim and others
  - maintaining SAD appropriate to pole top rescue
  - removing victim to safe location/place of safety.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing pole top rescue
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRF004 Perform rescue from a live LV panel

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the performance of rescue procedures from live low voltage (LV) apparatus, not including overhead lines and underground cables in the workplace. It specifies the mandatory requirements of rescue from a live LV panel and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

HLTAID009 Provide cardiopulmonary resuscitation

## Competency Field

Refresher Training

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare to perform rescue procedures from live LV

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

1.1 Instruction in hazards and risk control measures for specific work functions and work areas are identified

|                                                 |            |                                                                                                                                                                                       |
|-------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>panel</b>                                    |            | and obtained                                                                                                                                                                          |
|                                                 | <b>1.2</b> | Electricity isolation point is identified and labelled, where appropriate                                                                                                             |
|                                                 | <b>1.3</b> | Tools and emergency equipment are checked for safety, functionality and placed in an accessible location to facilitate response and rescue according to established procedures        |
| <b>2 Carry out rescue from live LV panel</b>    | <b>2.1</b> | Workplace procedures and work instructions for controlling risk are followed                                                                                                          |
|                                                 | <b>2.2</b> | Workplace procedures for accessing and isolating the LV panel and removing the victim, where necessary, from contact with live apparatus are followed                                 |
|                                                 | <b>2.3</b> | Workplace procedures for applying cardiopulmonary resuscitation (CPR), if required at the site, and gaining access to treatment by a medical professional, if necessary, are followed |
|                                                 | <b>2.4</b> | The worksite is secured and entry controlled until appropriate authorities inspect and release the site                                                                               |
| <b>3 Complete the LV panel rescue procedure</b> | <b>3.1</b> | Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures                                                    |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRRF06 Perform rescue from a live LV panel.

# Assessment Requirements for UETDRRF004 Perform rescue from a live LV panel

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- inspecting and placing rescue equipment
- identifying and labelling the isolation point
- performing a rescue from a low voltage (LV) panel in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures for the rescue of a victim from a live LV panel encompassing:
  - inspection of rescue equipment
  - assessing hazards to rescuer, victim and others
  - isolation procedures, where appropriate
  - safe approach distances SAD appropriate to rescue from a live LV panel
  - involvement of external emergency services
- emergency procedures required for the rescue of a victim from a live LV panel encompassing:
  - placement of rescue equipment
  - controlling hazards to rescuer, victim and others
  - maintaining SAD appropriate to rescue from a live LV panel
  - removing victim to safe location/place of safety.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing rescues from a live LV panel
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRF005 Perform rescue from switchyard structures at heights

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the performance of rescue procedures from switchyard structures at heights in the workplace. It specifies the mandatory requirements of rescue from switchyard structures and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

HLTAID009 Provide cardiopulmonary resuscitation

## Competency Field

Refresher Training

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

| <b>3 Complete rescue procedures from switchyard structures at heights</b> | <b>3.1</b> Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures                                             |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRRF05 Perform rescue from switchyard structures at heights.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRF005 Perform rescue from switchyard structures at heights

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- inspecting and placing emergency rescue equipment
- performing a rescue from switchyard structures in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- emergency procedures for the rescue of a victim from switchyard structures at heights encompassing:
  - inspection of rescue equipment
  - assessing hazards to rescuer, victim and others
  - isolation procedures, where appropriate
  - safe approach distances SAD appropriate to rescue from switchyard structures at heights
  - involvement of external emergency services
- emergency procedures required for the rescue of a victim from switchyard structures at heights encompassing:
  - placement of rescue equipment
  - controlling hazards to rescuer, victim and others
  - maintaining SAD appropriate to rescue from switchyard structures at heights
  - steps to rescuing a person
  - removing victim to safe location/place of safety.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing rescues from switchyard structures at heights
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## UETDRRF006 Perform tower rescue

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit covers the performance of rescue procedures from an electricity supply industry (ESI) tower in the workplace. It specifies the mandatory requirements of rescue from an ESI tower and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

HLTAID009 Provide cardiopulmonary resuscitation

### Competency Field

Refresher Training

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to perform tower rescue**

**1.1** Instruction in hazards and risk control measures for specific work areas and work activities are identified and

|                                                                 |            |                                                                                                                                                                                |
|-----------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## UETDRRF007 Provide first aid in an ESI environment

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit covers the provision of first aid in an electricity supply industry (ESI) environment. It includes the recognition and provision of an initial response where first aid is required in emergency situations by providing essential first aid using basic life support measures according to established workplace first aid policies and procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

HLTAID009 Provide cardiopulmonary resuscitation

### Competency Field

Refresher Training

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to provide first aid in an ESI environment**

**1.1** Physical hazards and risks to personal and others' health and safety are identified according to established procedures

|                                                                     |            |                                                                                                                                     |
|---------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------|
|                                                                     | <b>1.2</b> | The situation is assessed and actions required decided                                                                              |
|                                                                     | <b>1.3</b> | Assistance is sought from others, if required                                                                                       |
| <b>2 Carry out the provision of first aid in an ESI environment</b> | <b>2.1</b> | The victim's physical condition and visible vital signs are assessed                                                                |
|                                                                     | <b>2.2</b> | First aid is provided to stabilise the victim's condition in accordance with recognised first aid procedures                        |
|                                                                     | <b>2.3</b> | Available first aid equipment is used as appropriate                                                                                |
|                                                                     | <b>2.4</b> | Emergency services appropriate to the situation are notified                                                                        |
|                                                                     | <b>2.5</b> | Information about the victim's condition is conveyed accurately and clearly to emergency services personnel or health professionals |
| <b>3 Complete provision of first aid in an ESI environment</b>      | <b>3.1</b> | Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRRF10 Provide first aid in an ESI environment.

# **Assessment Requirements for UETDRRF007 Provide first aid in an ESI environment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- checking site for danger to self, victim and others
- completing the management of electrical burns plus one other of the following:
  - bites or stings
  - shock
  - bleeding
  - electrical shock
- monitoring and managing victim
- raising alarm with emergency services.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of:

- provision of first aid in an emergency situation encompassing:
  - assessing hazards to rescuer, victim and others
  - involvement of external emergency services
  - the treatment of electrical burns, shock, bites, stings, bleeding and electric shock
- skills required to provide first aid in an emergency situation encompassing:
  - controlling hazards to rescuer, victim and others
  - use of available first aid equipment and resources
  - injury management using first aid principles.

## **Assessment Conditions**

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for providing first aid in an ESI environment
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT001 Install overhead rail traction configurations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install overhead rail traction configurations in the electricity supply industry (ESI).

It includes installation of overlaps, cross-overs, turnouts and crossing configurations by using safe working practices on or about the running line/track identifying and confirming road/rail management plans and electrical permits.

It includes inspecting and checking to confirm configurations have been correctly installed in accordance with design and is fit for service, updating installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

UETDRRT004 Install traction overhead wiring systems

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare for installation of overhead traction configurations**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Required design standards and construction plans are obtained
- 1.3** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Worksite, road or rail management plan is prepared in accordance with workplace requirements
- 1.8** Environmental constraints applicable to the work are identified and control measures applied

#### **2 Perform installation of overhead traction configurations**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored

- 2.2 Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Work permits are instructed and issued and where appropriate signed in accordance with workplace requirements
- 2.5 Worksite, road or rail management plan is established in accordance with workplace requirements
- 2.6 Electrical equipment and associated hardware are positioned, secured and terminated/connected in accordance with job and workplace requirements
- 2.7 Overhead traction configurations are installed in agreed timeframes, to design standards and with a minimum of waste in accordance with workplace requirements
- 2.8 Profiling is checked in accordance with workplace requirements
- 2.9 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.10 Quality checks of work are undertaken in accordance with workplace requirements to ensure fit for service

### **3 Complete work and documentation**

- 3.1 Completed work is checked against design standards, construction plans and drawings for compliance and anomalies reported in accordance with workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked, and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements

- 3.6 Work permits are completed and overhead traction configuration is fit for service in accordance with workplace requirements
- 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRT25 Install overhead rail traction configurations.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRRT001 Install overhead rail traction configurations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- installing at least three (3) of the following types of system configurations:
  - overlaps
  - cross-overs
  - turnout crossings
  - train/tram crossings
- operating from at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)
  - ladder
  - mobile platform
- using equipment and tools required for installing overhead rail traction configurations, including:
  - cant gauge
  - height and stagger gauge
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:

- WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- traction configuration design standards and construction plans, including:
  - types
  - purpose
  - assemblies
  - components
- installation of traction configurations, including:
  - installation methods
  - measurement of tolerances
  - recording of tolerances
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment, plant and PPE currently used in industry for installing overhead rail traction configurations
- applicable documentation, including workplace requirements, relevant design standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT002 Install overhead traction components and equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install overhead traction components and equipment in the electricity supply industry (ESI).

It includes installing hardware whilst undertaking safe working practices on or about the running line/track, identifying and confirming road/rail management plans and electrical permits.

It also includes inspecting and checking to confirm equipment, components and hardware have been correctly installed in accordance with design, ensuring traction system is fit for service and updating installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for installation of overhead traction equipment or components**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Required design standards and construction plans are obtained
- 1.3** Plant, tools, equipment, components and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Worksite, road or rail management plan is prepared in accordance with workplace requirements
- 1.8** Environmental constraints applicable to the work are identified and control measures applied

#### **2 Perform installation of overhead traction equipment or components**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with

workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Work permits are instructed and issued and where appropriate signed in accordance with workplace requirements
- 2.5 Worksite, road or rail management plan is established in accordance with workplace requirements
- 2.6 Electrical components or equipment and associated hardware are positioned, secured and terminated or connected in accordance with job and workplace requirements
- 2.7 Overhead traction equipment or components are installed within agreed timeframes, to design standards in accordance with job and workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken, and anomalies recorded and adjusted in accordance with workplace requirements

### **3 Complete work and documentation**

- 3.1 Completed work is checked against design standards, construction plans and drawings for compliance and anomalies reported in accordance with workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked, and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work permits are completed and overhead traction equipment or components are fit for service in accordance with workplace requirements

- 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETDRRT27 Install overhead traction components and equipment.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRT002 Install overhead traction components and equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- installing at least two (2) of the following types of equipment:
  - fuse switches
  - dropout fuses
  - section insulators
  - neutral sections
  - switches/isolators
  - links
  - fuses
  - surge diverters
  - transformers
- installing at least five (5) of the following types of components:
  - cantilever hardware
  - insulators
  - head span
  - pull-offs
  - push-offs
  - registration fittings
  - steady span
  - tension regulators
  - cross spans
  - tramway support network

- pendulum
- rigid rail conductor
- installing at least two (2) of the following types of fittings:
  - preformed fittings
  - compression fittings
  - wedge fittings
  - bolted splices
  - fork collar sockets
  - conical splices
- installing at least three (3) of the following types of connecting components:
  - feeders (drops, cross track)
  - dissimilar conductors
  - lugs
  - bolted clamp
  - drapes/potential jumper
  - droppers
- using at least two (2) of the following required for installing overhead traction components and equipment:
  - voltage detectors
  - micrometer/gauge
  - tension wrench
  - dynamometer
  - specialised tools
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- types and purpose of overhead traction equipment, including:
  - switches/isolators
  - fuse switches

- dropout fuses
- links
- section insulators
- neutral sections
- surge diverters
- transformers
- fuses
- types and purpose of overhead components, including:
  - cantilever hardware
  - droppers
  - span or bay components
  - portal hardware
  - head span hardware
  - section insulators
  - neutral sections
  - registration fittings
  - steady span
  - tension regulators
  - cross spans
  - low clearance components
- types of conductors used for overhead wiring, including:
  - copper hard-drawn
  - copper cadmium
  - copper tin-bearing
  - aluminium
  - steel
  - other alloyed conductors
  - rigid rail conductor
- types of traction wire support structures, including:
  - portals
  - cantilevers
  - twin track cantilevers
  - drop vertical
  - head spans
  - cross spans
  - pull-offs
  - push-offs
- types and purpose of ancillary equipment, including:
  - surge arresters

- booster
- auxiliary transformers
- methods for installing conductors, including:
  - preformed fittings
  - compression fittings
  - wedged fittings
  - bolted splices
  - lugs
  - bolted clamps
  - fork collar sockets
  - conical splices
- methods for installing components, including:
  - feeders (drops, cross track)
  - droppers
  - dissimilar conductors
  - jumpers
  - surge arresters
- use of plant and equipment for installation work, including:
  - elevated work platforms (EWP)
  - ladders
  - works trains
  - rail-mounted overhead wiring equipment/vehicles
  - road/rail height access machinery/vehicles
  - voltage detectors
  - micrometer/gauges
  - tension wrenches
  - dynamometers
  - other specialised tools
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic

and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, plant, equipment and PPE currently used in industry for installing overhead traction components and equipment
- applicable documentation, including workplace requirements, relevant design standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT003 Install rail traction bonds

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install rail traction bonds in the electricity supply industry (ESI).

It includes the preparation and installation of temporary and permanent traction bonds, bonding cables, bonding equipment and hardware whilst undertaking safe working practices on or about the running line/track, identifying and confirming road/rail management plans and electrical permits.

It also includes checks to confirm bonds, bonding cables, bonding equipment and hardware have been correctly installed in accordance with design, ensuring traction bonding is fit for service, and installation data and relevant quality assurance documentation is completed.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

UETDRRT004 Install traction overhead wiring systems

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install traction bonds**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Required design standards and construction plans are obtained
- 1.3** Plant, tools, equipment, conductors and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Worksite, road or rail management plan is prepared in accordance with workplace requirements
- 1.8** Environmental constraints applicable to the work are identified and control measures applied

#### **2 Perform installation of traction bonds**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to

be performed are applied and monitored

- 2.2 Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Work permits are instructed and issued and where appropriate signed in accordance with workplace requirements
- 2.5 Worksite, road or rail management plan is established in accordance with workplace requirements
- 2.6 Cable and surrounds, including rail and other surfaces, are prepared for jointing and terminating in accordance with workplace requirements
- 2.7 Traction bonds and bonding cables are installed and tested in agreed timeframes, to design standards and with minimum waste in accordance with workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken in accordance with workplace requirements to ensure fit for service

### **3 Complete work and documentation**

- 3.1 Completed work is checked against design standards, construction plans and drawings for compliance and anomalies reported in accordance with workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked, and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work permits are completed, and overhead traction

bonding is fit for service in accordance with workplace requirements

- 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRT23 Install rail traction bonds.

## Links

# Assessment Requirements for UETDRRT003 Install rail traction bonds

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- installing at least two (2) of the following types of connecting bond cables and components:
  - covered or bare aluminium bonds
  - copper bonds
  - steel bonds
  - steel rail
- using at least three (3) of the following types of equipment, tools and testers required for installing rail traction bonds:
  - bonding specific tools
  - crimping devices
  - thermal moulds
  - rail drill
  - bonding fittings
  - explosive power tools
  - meter or tester
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace

requirements, including:

- WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- traction bond and cables, including:
  - permanent bonding preparation and installation methods
  - applications for permanent bonding
  - components of permanent bonds
  - interface between traction and signalling circuits
- safe working procedures/practices when carrying out permanent bonding, including:
  - PPE
  - electrical and visual testing of the PPE
- installation of temporary traction bonds and cables, including:
  - types and purpose of tools and equipment
  - installation and removal methods
  - testing for electrical integrity of bonds and cables
- installation of permanent traction bonds and cables, including:
  - types and purposes of tools and equipment
  - installation and removal methods
  - testing for electrical integrity of bond, cables and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing rail traction bonds

- applicable documentation, including workplace requirements, relevant design standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT004 Install traction overhead wiring systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install traction overhead wiring systems in the electricity supply industry (ESI).

It includes installing associated conductors whilst undertaking safe working practices on or about the running line/track, identifying and confirming road/rail management plans and electrical permits.

It also includes inspecting and checking to confirm conductors and hardware have been correctly installed in accordance with design, ensuring traction system is fit for service and updating installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install overhead traction wiring systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Required design standards and construction plans are obtained
- 1.3** Plant, tools, equipment, conductors and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Worksite, road or rail management plan is prepared in accordance with workplace requirements
- 1.8** Environmental constraints applicable to the work are identified and control measures applied

#### **2 Installation of overhead traction wiring systems**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with

workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Work permits are instructed and issued and where appropriate signed in accordance with workplace requirements
- 2.5 Worksite, road or rail management plan is established in accordance with workplace requirements
- 2.6 Overhead traction wiring systems, including cables, fittings, traction conductors and associated equipment, are installed in accordance with job and workplace requirements
- 2.7 Overhead traction wiring systems is installed and completed in agreed timeframes, to design standards and with minimum waste in accordance with workplace requirements
- 2.8 Profiling is checked in accordance with workplace requirements
- 2.9 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.10 Quality checks of work are undertaken in accordance with workplace requirements to ensure fit for service

### **3 Complete work and documentation**

- 3.1 Completed work is checked against design standards, construction plans and drawings for compliance and anomalies reported in accordance with workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked, and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work permits are completed, and overhead traction

equipment or components are fit for service in accordance with workplace requirements

- 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRT21 Install traction overhead wiring systems.

# Assessment Requirements for UETDRRT004 Install traction overhead wiring systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- installing at least four (4) of the following types of system equipment and fittings:
  - support structure
  - span
  - section insulator
  - neutral section
  - droppers
  - support equipment
  - tension regulators
  - stay/guy wire
  - tramway support network
- installing at least two (2) of the following traction conductors and cables:
  - contact/trolley\*
  - catenary
  - feeder
  - midpoint anchor
  - earth conductor
  - return conductor
  - drape/potential jumper
  - (\*must do)
- operating from at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)

- ladder
- mobile platform
- using at least two (2) of the following equipment and tools required for overhead rail traction wiring systems:
  - tensioning equipment\*
  - specialised tools
  - electrical testing equipment
  - geometry profiling equipment
  - (\*must do)
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- methods for running wire systems or conductors
- electrical wiring system components, including:
  - earth wires
  - feeder wire
  - catenary wire
  - contact/trolley wire
  - return conductor
  - insulators
  - surge arresters
  - cantilevers
  - droppers
  - tensioning equipment
  - current collectors
  - tram support network
  - tram fittings
  - low clearance components
- types of electrical traction systems, including:

- auto-tensioning
- spring loaded tension
- balance weight anchor (BWA)
- fixed tension
- relationship of the components, apparatus and the conductors to the operation of the traction system
- effective current collection and wire interface
- effective registration in the traction power system
- methods of profiling overhead traction wire, including:
  - factors that impact on current collectors to achieve smooth current collector transitions and interfaces
- dynamic and static forces, including:
  - types that effect traction systems
  - techniques to minimise the adverse effects
- standards, codes, legislation, supply authority regulations and workplace requirements applicable to electrical traction
- electrical traction voltage and current circuit paths, including:
  - transmission and distribution voltages
  - traction supply system and voltages
  - return and stray current paths, including electrolysis
- relationship of sectioning, section insulator and overlaps/air gaps in a traction power system
- traction power system components, including:
  - function of transformer/rectifiers
  - configuration and purpose of traction overhead wiring systems
  - function of isolators/switches
  - function of the circuit breaker
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment, plant and PPE currently used in industry for installing traction overhead wiring systems
- applicable documentation, including workplace requirements, relevant design standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT005 Maintain energised d.c. traction overhead wiring system

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the maintenance and repair of energised direct current (d.c.) traction overhead wiring system through the use of insulated ladder and working bare hand or insulated stick.

It includes the verification of the site conditions and the potential hazards, the conformance with and calculation of mechanical loads, the selection of appropriate tools and equipment, and authorised work method. It includes the undertaking of work health and safety (WHS)/occupational health and safety (OHS) and safe working practices to ensure that correct procedures and precautions to working live in accordance with the work plan and enterprise requirements are followed.

It also includes the visual inspection and necessary checks to confirm that overhead wiring components and associated hardware are in a safe condition to test and/or return to service, the recommissioning tests of the components and associated hardware and the updating of system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Pathway 1

Qualified and authorised Rail Traction Lineworker

Pathway 2

BSBLDR414 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT001 Install overhead rail traction configurations

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT008 Maintain overhead rail traction configurations

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

UETDRRT012 Operate rail road height access plant near rail traction systems

UETDRRT014 Test and verify rail traction installations

UETTDNIS65 Contribute to coordinated HV live working

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to maintain energised d.c. traction overhead wiring systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work

determined for planning and coordination

- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.4** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.5** Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
- 1.6** Relevant work authority/instructions are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.8** Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.11** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures

- |                                                                                   |             |                                                                                                                                                                                                                                                         |
|-----------------------------------------------------------------------------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                   | <b>1.12</b> | Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements                                                                                                                                      |
| <b>2 Carry out maintenance of energised d.c. traction overhead wiring systems</b> | <b>2.1</b>  | WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures                                                |
|                                                                                   | <b>2.2</b>  | First aid, rescue and other related work procedures are performed according to requirements and/or established procedures                                                                                                                               |
|                                                                                   | <b>2.3</b>  | Lifting, climbing, working aloft, and use of tools/equipment, techniques and practices are safely exercised according to requirements                                                                                                                   |
|                                                                                   | <b>2.4</b>  | Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures                                                                |
|                                                                                   | <b>2.5</b>  | Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures                                                                                                          |
|                                                                                   | <b>2.6</b>  | Maintenance of energised d.c. traction overhead wiring systems is carried out in accordance with the work schedule and requirements and/or established procedures                                                                                       |
|                                                                                   | <b>2.7</b>  | Essential knowledge and associated skills are applied in the safe maintenance of energised d.c. traction overhead wiring systems to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements |
|                                                                                   | <b>2.8</b>  | Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements                                                                                                        |
|                                                                                   | <b>2.9</b>  | Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard                                    |
| <b>3 Complete the maintenance of energised d.c. traction</b>                      | <b>3.1</b>  | Work undertaken is checked against works schedule for conformance with requirements, anomalies reported and                                                                                                                                             |

**overhead wiring systems**

solutions identified in accordance with established procedures

- 3.2 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
- 3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
- 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5 Relevant work authorities/instructions are signed off or returned to client/customer in accordance with requirements
- 3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETDRRT31 Maintain energised d.c. traction overhead wiring system.

# Assessment Requirements for UETDRRT005 Maintain energised d.c. traction overhead wiring system

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining, repairing or replacing components, including at least two (2) of the following:
  - span
  - cross-span
  - headspan
  - section insulator
  - support equipment
  - tramway support network
- maintaining traction components, including at least three (3) of the following:
  - catenary
  - dropper
  - contact/trolley
  - feeder/in-span feeder
  - drape/potential jumper
- performing at least two (2) of the following:
  - removal of trapped foreign objects
  - profiling
  - vertical adjustment of contact or trolley wire
- performing work from at least one (1) of the following:
  - insulated elevating work vehicles
  - insulated ladder
  - insulated work platforms
- using materials and equipment, including at least two (2) of the following:
  - tensioning equipment

- insulated sticks
- ropes
- slings and chains
- geometry profiling equipment
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic rigging techniques encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches and relevant certification and licensing (if required)
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safe use of rigging equipment, tools and associated equipment - types, techniques and application
  - site inspection procedures - identifying hazards, assessing and controlling risks, and appropriate sequence of loading and unloading
  - determining the mass and dimensions of load
  - selection and inspection procedures - rigging equipment, materials and tools (natural and synthetic fibre ropes and chains, fittings, winch and capstan); ratings of wire ropes and slings; removing, repairing and replacing of damage parts
  - techniques for assembling and erecting power winches and capstans
  - checking the integrity of support structure -visual inspection of load connections
  - techniques in moving, lifting, shifting, managing and placing loads - use of appropriate communication and signalling methods, codes of practice/compliance, enterprise and Commonwealth/state/territory legislative requirements, weather conditions, erection of safety nets and lines, methods of fixing and anchoring loads, and load stability
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings - material lists, conductor size, type and route length
  - construction types and structures for distribution and sub-transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors - types of low voltage (LV) and high voltage (HV) overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and

hardware

- methods of stringing, tensioning and termination of LV and HV conductors
- safe working practices and procedures for the installation of overhead distribution conductors encompassing:
  - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWPs)
  - requirements of persons prior to making bare hand contact with dead LV mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedures to attach an on-site earthing device to de-energised LV and HV overhead circuit
- safe working on energised LV equipment encompassing:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, the procedure used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires, general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures,

- establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permits, operational procedures and earthing procedures
  - PPE for LV switching
- safe working on energised d.c. traction equipment encompassing:
  - Commonwealth/state/territory/local government legislation, standards, codes, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on energised LV d.c. traction overhead conductors and cables - safe approach distances; safe working practices, instructions and procedures; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessment and control of WHS/OHS risks; types, selection, maintenance, storage and use of PPE; dangers of working in confined spaces and at heights; notification to work systems, safe working policies, procedures and practices when using/operating specialised equipment and tools; and emergency response and rescue, including first aid
  - techniques in installation, maintenance, replacing and repairing of energised d.c. traction overhead conductors, cables and equipment - span, cross-span, head-span, section insulator, support equipment, tramway support network, catenary, dropper, contact/trolley, feeder/in-span feeder and drape/potential jumper
  - techniques in carrying out work on energised d.c. traction overhead conductors, cables and equipment - removing trapped foreign objects, profiling and vertical adjustment of contact or trolley wire
  - techniques in using plant, equipment and/or tools to carry out work on energised d.c. traction overhead conductors, cables and equipment - insulated elevating work vehicles; insulated ladder; insulated work platforms; tensioning equipment; and insulated sticks, ropes, slings and chains
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations

- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
- overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRT006 Maintain energised traction overhead electrical apparatus using glove techniques**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the maintenance and repair of energised traction overhead electrical apparatus via the use of approved live line glove and barrier techniques.

It includes the verification of site conditions and the potential hazards, the conformance with and calculation of physical loads, the selection of appropriate tools and equipment, and authorised work methods. It encompasses the undertaking of correct procedures and precautions to working live line in accordance with the work plan and enterprise requirements.

It also includes the visual inspection and necessary checks to confirm that the electrical apparatus and components are in a safe condition to test and/or return to service, and the recommissioning tests of the electrical apparatus and components.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

Pathway 1

Qualified and authorised Rail Traction Lineworker

Pathway 2

BSBLDR414 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT001 Install overhead rail traction configurations

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT005 Maintain energised d.c. traction overhead wiring system

UETDRRT008 Maintain overhead rail traction configurations

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

UETDRRT012 Operate rail road height access plant near rail traction systems

UETDRRT014 Test and verify rail traction installations

UETTDNIS65 Contribute to coordinated HV live working

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to maintain energised traction overhead electrical apparatus (glove)**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination

- 1.2** Calculation of physical loads and authorised work methods are obtained and relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
- 1.4** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.5** Hazards associated with the work are identified and risk control measures implemented, including the rendering inoperative of automatic reclosing device
- 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.8** Relevant personnel at worksite are confirmed current in first aid, cardiopulmonary resuscitation (CPR), pole top and other rescue procedures according to requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.11** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established

|                                                                                                |      |                                                                                                                                                                                                                                                              |
|------------------------------------------------------------------------------------------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                |      | procedures                                                                                                                                                                                                                                                   |
|                                                                                                | 1.12 | Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements                                                                                                                                           |
| <b>2 Carry out the maintenance of energised traction overhead electrical apparatus (glove)</b> | 2.1  | WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures                                                     |
|                                                                                                | 2.2  | First aid, CPR, pole top, other rescue procedures and other related work procedures are performed according to requirements and/or established procedures                                                                                                    |
|                                                                                                | 2.3  | Lifting, climbing, and working aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements                                                                                                              |
|                                                                                                | 2.4  | Auto-reclose devices associated with the circuits being worked on are rendered inoperative and necessary work documentation acquired in accordance with enterprise requirements                                                                              |
|                                                                                                | 2.5  | Essential knowledge and associated skills are applied in the safe maintenance of energised traction overhead electrical apparatus to ensure completion within an agreed timeframe and to quality standards with a minimum of waste according to requirements |
|                                                                                                | 2.6  | Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures                                                                     |
|                                                                                                | 2.7  | Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures                                                                                                               |
|                                                                                                | 2.8  | Solutions to non-routine problems are identified and actioned in the maintenance of energised traction overhead electrical apparatus using acquired essential knowledge and associated skills according to requirements and established procedures           |
|                                                                                                | 2.9  | Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for                                                                                                  |

the client/customer and to a community/industry standard

**3 Complete the maintenance of energised traction overhead electrical apparatus (glove)**

- 3.1** Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
- 3.2** Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
- 3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
- 3.4** Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5** Relevant work documentation is signed off and traction overhead electrical apparatus returned to service, including returning of auto-reclosing device to normal, and client/customer advised in accordance with requirements
- 3.6** Work completion records, reports, as installed//modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTRRT33 Maintain energised traction overhead electrical apparatus using glove techniques.

# Assessment Requirements for UETDRRT006 Maintain energised traction overhead electrical apparatus using glove techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- operating from at least one (1) of the following:
  - elevated work platform (EWP)
  - insulated ladder
  - insulated mobile platform
- using at least two (2) of the following:
  - specialised tools
  - insulated gloves and barriers
  - tensioning equipment
  - geometry profiling equipment
- using at least two (2) of the following:
  - air-break switches
  - insulators
  - surge arrestors
  - hardware and fittings
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working on energised lines to 33 kV using live line glove and barrier techniques encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on energised lines to 33 kV

(poles) using live line glove and barrier techniques

- safety precautions working on energised lines to 33 kV using live line high voltage (HV) rubber gloving techniques - live line minimum approach distances of persons and plant; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE); live line access authority/permit system; disabling auto-reclosing function; ensuring functioning of fault current protective devices; checking integrity of insulation prior to work commencement; types and function of specialised live line working equipment and tools inspection before use; safe working policies, procedures and practices when using/operating specialised equipment and tools; methods of using specialised equipment and tools; work team communication; use of safety observers; and emergency response and rescue, including first aid
- policies and procedures dealing with general work practices - definitions of terms used, responsibilities of personnel, types of structures from which glove and barrier methods can be performed, types of equipment and their compliance with relevant standards
- relationship between combined glove and barrier and stick methods - conditions under which they can be practiced
- techniques in installing and/or replacing HV insulators when working live line glove and barrier - intermediate insulators, angle insulators, bridging insulators, strain insulators and suspension insulators
- techniques in erecting and/or replacing HV cross-arms when working live line glove and barrier - intermediate, angle, strain, termination and suspension
- techniques in connecting and/or disconnecting HV bridges connections when working live line glove and barrier - strain/Tee bridges, bypass bridges/connections, HV ABC and similar/dissimilar metals
- techniques in the installation and/or maintenance of electrical equipment - air-break switches, gas switches, fuse assemblies, isolators, bird covers, surge diverters and fault indicators
- techniques in erecting and/or removing temporary midspan switching devices
- techniques using live line glove and barrier to erect and/or replace of poles - intermediate, angle and strain
- techniques using live line glove and barrier for the repair and/or replacement of HV conductors/cables
- techniques in repairing and/or replacing HV armour rods and/or line guards
- conversion methods using live line glove and barrier of intermediate construction to strain construction
- working on energised lines to 33 kV (poles) using live line glove and barrier/hot-stick combined encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on energised lines to 33 kV (poles) using live line glove and barrier/hot-stick combined
  - safety precautions working on energised lines to 33 kV using live line glove and barrier/hot-stick combined - live line minimum approach distances of persons and plant; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE; live line access

authority/permit system; disabling auto-reclosing function; ensuring functioning of fault current protective devices; checking integrity of insulation prior to work commencement ;types and function of specialised live line working equipment and tools inspection before use; safe working policies, procedures and practices when using/operating specialised equipment and tools; methods of using specialised equipment; work team communication; use of safety observers; and emergency response and rescue, including first aid

- policies and procedures dealing with general work practices for both glove and barrier/hot-stick combined, - definitions of terms used, responsibilities of personnel, types of structures from which glove and barrier methods can be performed, and types of equipment and their compliance with relevant standards
- relationship between combined glove and barrier/ hot-stick methods - conditions under which they can be practiced
- techniques for installing and/or replacing HV insulators using glove and barrier/hot-stick combined - intermediate insulators, angle insulators, bridging insulators, strain insulators and suspension insulators
- techniques for erecting and/or replacing HV cross-arms using glove and barrier/hot-stick combined - intermediate and angle
- techniques for connecting and/or disconnecting HV bridges connections using glove and barrier/hot-stick combined - strain/Tee bridges, bypass bridges/connections, HV ABC and HV and similar/dissimilar metals
- techniques in the installation and/or maintenance of electrical equipment using hot-stick - air-break switches, gas switches, fuse assemblies, isolators, bird covers, surge diverters and fault indicators
- techniques in the erection and/or replacement of poles - intermediate/suspension, angle, strain and termination
- techniques in repairing and/or replacing HV armour rods and/or line guards and/or conversion methods of intermediate construction to strain in construction
- techniques in the repairing and replacing HV conductors/cables and the identification of equipment used
- techniques in installing and/or maintaining switching devices using glove and barrier
- plant, equipment and tools used for HV live line work encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with plant, equipment and tools used for HV live line work
  - safety precautions when working on plant, equipment and tools using hot-stick combined - safe working clearances; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE and authorisation to work systems
  - identification of plant, equipment and tools used for HV live line work – types, applications, construction, characteristics, limitations and safe working load
  - serviceability of plant, equipment and tools used for HV live line work - inspection procedures, testing procedures, maintenance procedures and storage procedures
  - relationship of live line work access authority/permit, disabling auto-reclose function and

- ensuring correct functioning of fault current protective devices prior to live line work
- live line access authorities, disabling auto-reclose function and ensuring fault current protective devices prior to live line work
- conductor supports – methods, types of equipment, construction, characteristics and limitations
- techniques in selecting appropriate conductor support methods in accordance with requirements
- calculation of loads and wind loading on conductors
- effects of resultant forces when transferring conductor loads
- rigging procedures for conductor support equipment
- principles of HV encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on or near HV
  - electrical and electrostatic principles related to HV lines - relationship of current, voltage and resistance as related to transmission lines, relationship of phase voltage and respective line voltages
  - production of an electric field – units, effect of distance, potential of an object within the field and the effect of distances to the potential
  - HV insulators - construction of a disc insulator, construction of a polymeric insulator, effects of an electrical field on disc insulators, identification of the number of disc insulators needed for a single line voltage, and performance of a failed disc insulator on the line and the system
  - determining the minimum allowable number of discs per string for each line voltage in the system before bare hand work is to proceed
  - techniques in detecting a failed disc in a string
  - techniques in using appropriate tools and equipment to test a string
  - methods of recording data
  - effects of electrostatic induction on the human body - relationship of the resistance of a human body to different levels of current and voltage, relationship of a human body to an electric field, and effects of electrostatic induction on bare hand work
  - application of Faraday's cage - effects of a body, advantages, and description of the Faraday's cage used by bare-hand live-line workers
  - safety precautions working on or near HV electrical apparatus - safe approach distances from live line; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE, permit to work systems and isolation procedures
  - types and function of specialised live working equipment
  - safe working policies, procedures and practices when using and operating specialised equipment
  - methods of using specialised equipment
  - emergency response and rescue, including first aid
  - effects of lighting and switching surges on performance of string insulators - health effects to workers

- methods used to alleviate surges on transmission lines
- magnetic field - difference between magnetic fields and electrostatic fields; source of magnetic field; techniques in locating, measuring and analysing known sources of magnetic fields; reasons for monitoring magnetic field exposure and techniques used to monitor magnetic fields
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedures for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc strangles
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, PPE and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV fault switching principles encompassing:
  - primary causes, effects and types of HV electrical faults
  - HV protection devices - main components, types, categories, applications and functions
  - basic principle of operation of HV system protection devices
  - protection coordination and protection zoning
  - HV feeder auto-reclosing suppression – function and application
  - circuit condition requirements and switching considerations when paralleling and separating HV feeders
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing

- procedures for access, common distribution transformer and associated electrical apparatus faults
- HV underground switching equipment - arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
  - function of feeder automation system and the main components
  - operation procedure for a remote field device from a local control station
  - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
  - SCADA system security interlocks and access restrictions
  - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
  - function of the main components of a local/remote control system
  - operation of a field devices using SCADA systems via a RAT, dial up voice annunciated system and local control station
- safe working on energised HV alternating current (AC) and/or direct current (DC) traction equipment encompassing:
  - Commonwealth/state/territory/local government legislation, standards, codes, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on energised LV DC traction overhead conductors and cables - live line minimum approach distances; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of PPE; live line permit system; disabling auto-reclosing function; ensuring functioning of fault current protective devices; checking integrity of insulation prior to work commencement; types and function of specialised live line working equipment and tools inspection before use; safe working practices when using specialised equipment and tools; methods of using specialised equipment; work team communication; use of safety observers; and emergency response and rescue, including first aid
  - techniques in the use of hot-sticks for the maintenance of energised traction overhead apparatus
  - techniques in the use of glove and barrier on energised traction overhead apparatus.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRT007 Maintain energised traction overhead electrical apparatus using stick techniques**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the maintenance and repair of energised traction overhead electrical apparatus via the use of approved live line insulated stick techniques.

It includes the verification of site conditions and the potential hazards, the conformance with and calculation of physical loads, the selection of appropriate tools and equipment, and authorised work methods. It encompasses the undertaking of correct procedures and precautions to working live line in accordance with the work plan and enterprise requirements.

It also includes the visual inspection and necessary checks to confirm that the electrical apparatus and components are in a safe condition to test and/or return to service, and the recommissioning tests of the electrical apparatus and components.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

Pathway 1

Qualified and authorised Rail Traction Lineworker

Pathway 2

BSBLDR414 Lead team effectiveness

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT001 Install overhead rail traction configurations

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT005 Maintain energised d.c. traction overhead wiring system

UETDRRT008 Maintain overhead rail traction configurations

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

UETDRRT012 Operate rail road height access plant near rail traction systems

UETDRRT014 Test and verify rail traction installations

UETTDNIS65 Contribute to coordinated HV live working

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to maintain energised traction overhead electrical apparatus**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination

- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Calculation of physical loads and authorised work methods are obtained and relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.4** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
- 1.5** Hazards associated with the work are identified and risk control measures implemented, including the rendering inoperative of automatic reclosing device
- 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.8** Relevant personnel at worksite are confirmed current in first aid, cardiopulmonary resuscitation (CPR), pole top and other rescue procedures according to requirements
- 1.9** Liaison and communication issues with others/ authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.11** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures

- |                                                                                        |             |                                                                                                                                                                                                                                                              |

| <b>2 Carry out the maintenance of energised traction overhead electrical apparatus</b> | <b>2.1</b>  | WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures                                                     |
|                                                                                        | <b>2.2</b>  | First aid, CPR, pole top, other rescue procedures and other related work procedures are performed according to requirements and/or established procedures                                                                                                    |
|                                                                                        | <b>2.3</b>  | Lifting, climbing, and working aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements                                                                                                              |
|                                                                                        | <b>2.4</b>  | Auto-reclose devices associated with the circuits being worked on are rendered inoperative and necessary work documentation acquired in accordance with enterprise requirements                                                                              |
|                                                                                        | <b>2.5</b>  | Essential knowledge and associated skills are applied in the safe maintenance of energised traction overhead electrical apparatus to ensure completion within an agreed timeframe and to quality standards with a minimum of waste according to requirements |
|                                                                                        | <b>2.6</b>  | Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures                                                                     |
|                                                                                        | <b>2.7</b>  | Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures                                                                                                               |
|                                                                                        | <b>2.8</b>  | Unplanned events in the maintenance of energised traction overhead electrical apparatus are managed within the scope of established procedures                                                                                                               |
|                                                                                        | <b>2.9</b>  | Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard                                         |
| <b>3 Complete the maintenance</b>                                                      | <b>3.1</b>  | Work undertaken is checked against work schedule for                                                                                                                                                                                                         |

**of energised traction  
overhead electrical  
apparatus**

conformance with requirements, anomalies reported and solutions identified in accordance with established procedures

- 3.2 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
- 3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
- 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5 Relevant work documentation is signed off and traction overhead electrical apparatus returned to service, including returning of auto-reclosing device to normal, and client/customer advised in accordance with requirements
- 3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT32 Maintain energised traction overhead electrical apparatus using stick techniques.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRRT007 Maintain energised traction overhead electrical apparatus using stick techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining, repairing or replacing components, including at least two (2) of the following:
  - support structures
  - span
  - section insulator
  - neutral section
  - midpoint anchor
  - support equipment
  - tension regulators
- maintaining traction components, including at least two (2) of the following:
  - catenary
  - dropper
  - contact feeder
- performing at least one (1) of the following:
  - insulated elevated work platform (EWP)
  - insulated ladder
  - insulated mobile platform
- performing work from at least two (2) of the following:
  - specialised insulated tools
  - insulated sticks
  - tensioning equipment
  - geometry profiling equipment
- using materials and equipment, including at least two (2) of the following:
  - air-break switches

- insulators
- surge arrestors
- hardware and fittings
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic rigging techniques encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches and relevant certification and licensing (if required)
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safe use of rigging equipment, tools and associated equipment - types, techniques and application
  - site inspection procedures - identifying hazards, assessing and controlling risks, and appropriate sequence of loading and unloading
  - determining the mass and dimensions of load
  - selection and inspection procedures - rigging equipment, materials and tools (natural and synthetic fibre ropes and chains, fittings, winch and capstan); ratings of wire ropes and slings; removing, repairing and replacing damaged parts
  - techniques for assembling and erecting power winches and capstans
  - checking the integrity of support structure - visual inspection of load connections
  - techniques in moving, lifting, shifting, managing and placing loads - use of appropriate communication and signalling methods, codes of practice/compliance, enterprise and Commonwealth/state/territory legislative requirements, weather conditions, erection of safety nets and lines, methods of fixing and anchoring loads, and load stability
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors - types of low voltage (LV) and high voltage (HV) overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and hardware

- methods of stringing, tensioning and termination of LV and HV conductors
- safe working practices and procedures for the installation of overhead distribution conductors encompassing:
  - limits of approach for personnel, vehicles, mobile plant and EWP
  - requirements of persons prior to making bare hand contact with dead LV mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedures to attach an on-site earthing device to de-energised LV and HV overhead circuit
- safe working on energised LV equipment encompassing:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards, assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, release and rescue procedures for work on or near exposed energised LV conductors
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedure of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, the procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses, developing techniques, involvement of external emergency services, and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock

- victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permits, operational procedures and earthing procedures
  - PPE for LV switching
- safe working on energised direct current (d.c.) traction equipment encompassing:
  - Commonwealth/state/territory/local government legislation, standards, codes, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on energised LV d.c. traction overhead conductors and cables - safe approach distances; safe working practices, instructions and procedures; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessment and control of WHS/OHS risks; types, selection, maintenance, storage and use of PPE; dangers of working in confined spaces and at heights; notification to work systems; safe working policies, procedures and practices when using/operating specialised equipment and tools; and emergency response and rescue, including first aid
  - techniques in installation, maintenance, replacing and repairing of energised d.c. traction overhead conductors, cables and equipment - span, cross-span, head-span, section insulator, support equipment, tramway support network, catenary, dropper, contact/trolley, feeder/in-span feeder and drape/potential jumper
  - techniques in carrying out work on energised d.c. traction overhead conductors, cables and equipment - removing trapped foreign objects, profiling and vertical adjustment of contact or trolley wire
  - techniques in using plant, equipment and/or tools to carry out work on energised d.c. traction overhead conductors, cables and equipment - insulated elevating work vehicles; insulated ladders; insulated work platforms; tensioning equipment; and insulated sticks, ropes, slings and chains
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures

- techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
- overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT008 Maintain overhead rail traction configurations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to maintain overhead rail traction configurations in the electricity supply industry (ESI).

It includes repairing or adjusting overlaps, cross-overs, turnouts and crossings configurations, undertaking safe working practices on or about the running line/track, identifying and confirming road/rail management plans, and electrical permits.

It also includes inspecting, diagnosing faults of traction configurations ensuring they are fit for service within normal parameters, including updating of maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT001 Install overhead rail traction configurations

UETDRRT002 Install overhead traction components and equipment

UETDRRT004 Install traction overhead wiring systems

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to maintain overhead traction configurations**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Relevant maintenance documents are identified and obtained
- 1.3** Plant, tools, equipment, conductors and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Worksite, road or rail management plan is prepared in accordance with workplace requirements
- 1.8** Environmental constraints applicable to the work are identified and control measures applied

**2 Perform maintenance of overhead traction configurations**

- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2 Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Work permits are instructed and issued and where appropriate signed in accordance with workplace requirements
- 2.5 Worksite, road or rail management plan is established in accordance with workplace requirements
- 2.6 Configurations are maintained, including adjustment, modification, repair or replacement in accordance with job and workplace requirements
- 2.7 Configurations are maintained and completed in agreed timeframes, to design standards or maintenance documents in accordance with workplace requirements
- 2.8 Profiling is checked in accordance with workplace requirements
- 2.9 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.10 Quality checks of work are undertaken in accordance with workplace requirements to ensure fit for service

**3 Complete work and documentation**

- 3.1 Completed work is checked against maintenance documents for compliance and anomalies reported in accordance with workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked, and returned to storage in accordance with workplace requirements

- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work permits are completed, and rail traction configurations are fit for service in accordance with workplace requirements
- 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRT26 Maintain overhead rail traction configurations.

# Assessment Requirements for UETDRRT008 Maintain overhead rail traction configurations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- maintaining at least three (3) of the following types of system configurations:
  - overlap
  - cross-over
  - turnout crossings
  - train/tram crossing
- using at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)
  - mobile platforms
  - ladder
- using equipment and tools required for maintaining overhead rail traction configurations, including:
  - cant gauge
  - height and stagger gauge
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:

- WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- traction configuration maintenance documents
- maintenance of traction configurations, including:
  - types of components
  - maintenance/repair procedures
  - inspection and recording procedures
- diagnosis and correction of simple faults in specific traction configurations, including:
  - types and causes
  - determination of appropriate corrective actions
  - repair and replace procedures for components of specific configurations
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment, plant and PPE currently used in industry for maintaining overhead rail traction configurations
- applicable documentation, including workplace requirements, maintenance documents, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT009 Maintain overhead traction components and equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to maintain or repair overhead traction equipment, components and hardware in the electricity supply industry (ESI).

It includes repairing or replacing components or equipment and hardware, undertaking safe working practices on or about the running line/track, identifying and confirming road/rail management plans, and electrical permits.

It also includes inspecting and checking equipment, components and hardware are fit for service and are within normal parameters and maintenance records are updated.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare for maintenance of overhead traction equipment or components**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed

**1.2** Relevant maintenance documents are identified and obtained

**1.3** Plant, tools, equipment, components and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order

**1.4** Hazards are identified, risks assessed and control measures identified and applied

**1.5** Work is prioritised and sequenced for completion in accordance with workplace requirements

**1.6** Work permits are organised in accordance with workplace requirements

**1.7** Worksite, road or rail management plan is prepared in accordance with workplace requirements

**1.8** Environmental constraints applicable to the work are identified and control measures applied

#### **2 Perform maintenance of overhead traction equipment or components**

**2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored

**2.2** Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with

workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Work permits are instructed and issued and where appropriate signed in accordance with workplace requirements
- 2.5 Worksite, road or rail management plan is established in accordance with workplace requirements
- 2.6 Overhead traction equipment or components is maintained including repair or replacement in accordance with design standards, drawings and workplace requirements
- 2.7 Overhead traction equipment or components are maintained and completed in agreed timeframes, to design standards or maintenance documents in accordance with workplace requirements
- 2.8 Components or equipment and hardware are confirmed fit for service in accordance with workplace requirements
- 2.9 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.10 Quality checks of work, including visual inspections, are undertaken in accordance with workplace requirements

### **3 Complete work and documentation**

- 3.1 Completed work is checked against maintenance documents for compliance and anomalies reported in accordance with workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work permits are completed, and overhead traction

equipment or components are fit for service in accordance with workplace requirements

- 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRT28 Maintain overhead traction components and equipment.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRT009 Maintain overhead traction components and equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- maintaining at least two (2) of the following types of equipment:
  - fuse switches
  - dropout fuses
  - section insulators
  - neutral sections
  - switches/isolators
  - links
  - fuses
  - surge diverters
  - transformers
- maintaining at least five (5) of the following types of components:
  - cantilever hardware
  - insulators
  - head span
  - pull-offs
  - push-offs
  - registration fittings
  - steady span
  - tension regulators
  - cross spans
  - tramway support network

- pendulum
- rigid rail conductor
- maintaining at least two (2) of the following types of fittings:
  - preformed fittings
  - compression fittings
  - wedge fittings
  - bolted splices
  - fork collar sockets
  - conical splices
- maintaining at least three (3) of the following types of connecting components:
  - feeders (drops, cross track)
  - dissimilar conductors
  - lugs
  - bolted clamp
  - drapes/potential jumper
  - droppers
- using at least two (2) of the following required for maintaining overhead traction components and equipment:
  - voltage detectors
  - micrometer/gauge
  - tension wrench
  - dynamometer
  - specialised tools
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- overhead traction components and equipment maintenance documents
- types and purpose of overhead traction equipment, including:
  - switches/isolators

- fuse switches
- dropout fuses
- links
- section insulators
- neutral sections
- surge diverters
- transformers
- fuses
- types and purpose of overhead components, including:
  - cantilever hardware
  - droppers
  - span or bay components
  - portal hardware
  - head span hardware
  - section insulators
  - neutral sections
  - registration fittings
  - steady span
  - tension regulators
  - cross spans
  - low clearance components
- types of conductors used for overhead wiring, including:
  - copper hard-drawn
  - copper cadmium
  - copper tin-bearing
  - aluminium
  - steel
  - other alloyed conductors
  - rigid rail conductor
- types of traction wire support structures, including:
  - portals
  - cantilevers
  - twin track cantilevers
  - drop vertical
  - head spans
  - cross spans
  - pull-offs
  - push-offs
- types and purpose of ancillary equipment, including:

- surge arresters
- booster
- auxiliary transformers
- methods for replacing conductors, including the use of:
  - preformed fittings
  - compression fittings
  - wedged fittings
  - bolted splices
  - lugs
  - bolted clamps
  - fork collar sockets
  - conical splices
- methods for replacing components, including:
  - feeders (drops, cross track)
  - droppers
  - dissimilar conductors
  - jumpers
  - surge arresters
- use of plant and equipment for maintenance work, including:
  - elevated work platforms (EWPs)
  - ladders
  - works trains
  - rail-mounted overhead wiring equipment/vehicles
  - road/rail height access machinery/vehicles
  - voltage detectors
  - micrometer/gauges
  - tension wrenches
  - dynamometers
  - other specialised tools
- maintenance of overhead traction equipment and components, including:
  - maintenance/repair procedures
  - inspection and recording procedures
- diagnosis and correction of simple faults in specific overhead traction equipment and components, including:
  - types and causes
  - determination of appropriate corrective actions
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, plant, equipment and PPE currently used in industry maintaining overhead traction components and equipment
- applicable documentation, including workplace requirements, maintenance documents, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT010 Maintain rail traction bonds

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to maintain rail traction bonds in the electricity supply industry (ESI).

It includes the maintenance, testing and repair of temporary and permanent traction bonds, bonding cables, bonding equipment and hardware whilst undertaking safe working practices on or about the running line/track, identifying and confirming road/rail management plans and electrical permits.

It also includes checks to confirm bonds, bonding cables, bonding equipment and hardware have been maintained in accordance with maintenance documents, ensuring traction bonding is fit for service, and relevant quality assurance documentation is completed.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare for maintenance of traction bonds**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Relevant maintenance documents are identified and obtained
- 1.3** Plant, tools, equipment, conductors and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Worksite, road or rail management plan is prepared in accordance with workplace requirements

- |                                                |            |                                                                                                                                                                                                                                                            |

|                                                | <b>2.6</b> | Maintenance, testing and repair of traction bonds equipment, associated hardware and bonding cables are completed in agreed timeframes, to design standards or maintenance documents and with a minimum of waste in accordance with workplace requirements |
|                                                | <b>2.7</b> | Incidents or unplanned events are responded to in accordance with workplace requirements                                                                                                                                                                   |
|                                                | <b>2.8</b> | Quality checks of work are undertaken in accordance with workplace requirements to ensure fit for service                                                                                                                                                  |
| <b>3 Complete work and documentation</b>       | <b>3.1</b> | Completed work is checked against maintenance documents for compliance and anomalies reported in accordance with workplace requirements                                                                                                                    |
|                                                | <b>3.2</b> | Incidents or unplanned events are reported in accordance with workplace requirements                                                                                                                                                                       |
|                                                | <b>3.3</b> | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                                                                                                                                                                 |
|                                                | <b>3.4</b> | Plant, tools and equipment are cleaned, checked, and returned to storage in accordance with workplace requirements                                                                                                                                         |
|                                                | <b>3.5</b> | Surplus materials are returned to storage or disposed of                                                                                                                                                                                                   |

in accordance with workplace requirements

- 3.6 Work permits are completed and traction bonds are fit for service in accordance with workplace requirements
- 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETDRRT24 Maintain rail traction bonds.

## Links

# Assessment Requirements for UETDRRT010 Maintain rail traction bonds

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- maintaining at least two (2) of the following types of connecting bond cables and components:
  - covered or bare aluminium bonds
  - copper bonds
  - steel bonds
  - steel rail
- using at least three (3) of the following types of equipment, tools and testers required for maintaining rail traction bonds:
  - bonding specific tools
  - crimping devices
  - thermal moulds
  - rail drill
  - bonding fittings
  - explosive power tools
  - meter or tester
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- rail traction bonds maintenance documents
- traction bond and cables, including:
  - temporary and permanent bonding preparation and installation methods
  - applications for temporary and permanent bonding
  - components of temporary and permanent bonds
  - interface between traction and signalling circuits
- safe working procedures/practices when carrying out temporary and permanent bonding, including:
  - PPE
  - electrical and visual testing of the PPE
- maintenance of traction bond, cables and equipment, including:
  - types and components
  - types and function of tools and equipment
  - maintenance/repair procedures
  - inspection and recording procedures
- diagnosis and correction of simple faults in traction bonds, including:
  - types and causes
  - determination of appropriate corrective actions
  - repair and replace procedures
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for maintaining rail traction bonds
- applicable documentation, including workplace requirements, maintenance documents, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT011 Maintain traction overhead wiring systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to maintain traction overhead wiring systems in the electricity supply industry (ESI).

It includes repairing or replacing wiring systems, undertaking safe working practices on or about the running line/track, identifying and confirming road/rail management plans, and electrical permits.

It also includes inspecting, diagnosing faults of wiring systems ensuring they are fit for service within normal parameters, including updating of maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

UETDRRT004 Install traction overhead wiring systems

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to maintain overhead traction wiring systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Relevant maintenance documents are identified and obtained
- 1.3** Plant, tools, equipment, materials and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Worksite, road or rail management plan is prepared in accordance with workplace requirements
- 1.8** Environmental constraints applicable to the work are identified and control measures applied

#### **2 Perform maintenance on overhead traction wiring systems**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with

workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Work permits are instructed and issued and where appropriate signed in accordance with workplace requirements
- 2.5 Worksite, road or rail management plan is established in accordance with workplace requirements
- 2.6 Overhead traction wiring systems are maintained, including repairing or replacing, and overhead traction conductors are modified and re-adjusted in accordance with workplace requirements
- 2.7 Overhead traction wiring systems are maintained within agreed timeframes, to design standards or maintenance documents in accordance with workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken in accordance with workplace requirements to ensure fit for service
- 3 **Complete work and documentation**
  - 3.1 Completed work is checked against maintenance documents for compliance and anomalies reported in accordance with workplace requirements
  - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 3.4 Plant, tools and equipment are cleaned, checked, and returned to storage in accordance with workplace requirements
  - 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
  - 3.6 Work permits are completed and overhead traction wiring systems are fit for service in accordance with workplace requirements
  - 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRT22 Maintain traction overhead wiring systems.

## Links

# Assessment Requirements for UETDRRT011 Maintain traction overhead wiring systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- maintaining at least four (4) of the following types of system equipment and fittings:
  - support structure
  - span
  - section insulator
  - neutral section
  - droppers
  - support equipment
  - tension regulators
  - stay/guy wire
  - tramway support network
- maintaining at least two (2) of the following types of traction conductors and cables:
  - contact/trolley\*
  - catenary
  - feeder
  - midpoint anchor
  - earth conductor
  - return conductor
  - drape/potential jumper
  - (\*must do)
- operating from at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)

- ladder
- mobile platform
- using at least two (2) of the following equipment and tools required for overhead rail traction wiring systems:
  - tensioning equipment\*
  - specialised tools
  - electrical testing equipment
  - geometry profiling equipment
  - (\*must do)
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- application, purpose and types of permits
- safe use of plant, tools and equipment
- traction overhead wiring systems maintenance documents
- methods for running wire systems or conductors
- electrical wiring system components, including:
  - earth wires
  - feeder wire
  - catenary wire
  - contact/trolley wire
  - return conductor
  - insulators
  - surge arresters
  - cantilevers
  - droppers
  - tensioning equipment
  - current collectors
  - tram support network
  - tram fittings
  - low clearance components

- types of electrical traction systems, including:
  - auto-tensioning
  - spring loaded tension
  - balance weight anchor (BWA)
  - fixed tension
- relationship of the components, apparatus and conductors to the operation of the traction system
- effective current collection and wire interface
- effective registration in the traction power system
- methods of profiling overhead traction wire, including:
  - factors that impact on current collectors to achieve smooth current collector transitions and interfaces
- dynamic and static forces, including:
  - types that effect traction systems
  - techniques to minimise adverse effects
- maintenance of overhead traction wiring systems, including:
  - types of equipment and components
  - types and function of tools and equipment
  - maintenance/repair procedures
  - inspection and recording procedures
- diagnosis and correction of simple faults in specific overhead wiring systems, including:
  - types and causes
  - determination of appropriate corrective actions
  - repair and replace procedures for overhead wiring systems
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment, plant and PPE currently used in industry for maintaining traction overhead wiring systems
- applicable documentation, including workplace requirements, maintenance documents, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT012 Operate rail road height access plant near rail traction systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to operate rail road height access plant near rail traction systems in the electricity supply industry (ESI).

It includes operating and using road rail height access plant to install and maintain overhead traction systems. It also includes performing pre-operational inspection, undertaking safe working practices on or about the running line/track, road/rail management plans, relevant permits and post-operational inspection.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## **1 Prepare to operate road rail height access plant**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Hazards are identified, risks assessed and control measures identified and applied
- 1.3** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Work permits are organised in accordance with workplace requirements
- 1.5** Pre-operational inspections of plant are performed in accordance with workplace requirements
- 1.6** Worksite, road or rail management plan is prepared in accordance with workplace requirements
- 1.7** Environmental constraints applicable to the work are identified and control measures applied

## **2 Operate road rail height access plant**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Work permits are instructed and issued and where appropriate signed in accordance with workplace requirements
- 2.5** Worksite, road or rail management plan is established in accordance with workplace requirements
- 2.6** Road rail height access plant is operated in accordance with workplace requirements
- 2.7** Incidents or unplanned events are responded to in accordance with workplace requirements

**3 Conclude operation of road rail height access plant**

- 3.1** Post-operational inspections of plant are performed, and non-compliances are reported in accordance with workplace requirements
- 3.2** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3** Rail road height access plant is cleaned and secured, and packed up for return to storage
- 3.4** Work permits are completed in accordance with workplace procedures
- 3.5** Work records, reports and documentation are completed in accordance with workplace requirements

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

**Unit Mapping Information**

This unit replaces and is equivalent to UETTDRT29 Operate rail road traction height access equipment.

# Assessment Requirements for UETDRRT012 Operate rail road height access plant near rail traction systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- conducting pre-operational inspections
- conducting post-operational inspections
- operating at least one (1) of the following:
  - elevated work platform (EWP) in the performance of work associated with rail traction
  - road rail platform vehicle in the performance of work associated with rail traction
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, logbooks, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice, organisational and workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - environmental considerations
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- application, purpose and types of permits
- operator requirements, including:
  - pre-operational inspections

- post-operational inspections
- logbook
- road/rail traction height access plant and associated equipment, including:
  - characteristics, capabilities and limitations
  - prestart requirements
  - operation procedure
  - basic problem-solving equipment faults
  - safe working procedures when mechanical failure occurs
  - use of appropriate communication systems
  - isolation procedures
  - operating equipment under live overhead equipment and adjacent to or in the vicinity of live overhead equipment
- procedures for effective road and rail management plans
- emergency procedures in the event of an electrical incident/accident
- emergency procedures in the event of a safe working/road traffic incident/accident
- procedures for rescuing a person from height access plant, including:
  - methods for rescuing a person
  - methods for rescuing a person from a disabled height access plant
  - methods for rescuing an incapacitated person from height access plant
  - methods for rescuing a person in contact with live overhead equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate tools, facilities, road rail height access plant, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT013 Perform rail traction switching operations to a given schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to perform rail traction switching operations to a given schedule in the electricity supply industry (ESI).

It also includes procedures for communicating with the electrical control officer/system, isolating electrical equipment, proving the area is de-energised and earthed or rail-connected, issuing and cancelling/relinquishing of electrical permits and returning affected sections to service.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT001 Install overhead rail traction configurations

UETDRRT002 Install overhead traction components and equipment

UETDRRT004 Install traction overhead wiring systems

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare for rail traction switching operations to a given schedule**

#### **2 Carry out rail traction switching operations to a**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                                                                                             |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed |
| <b>1.2</b> | Operational/switching schedules are obtained and confirmed with stakeholders, as required                                                                   |
| <b>1.3</b> | Alterations to the schedules which may be required after assessing the worksite is communicated to stakeholders for formal approval                         |
| <b>1.4</b> | Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order                          |
| <b>1.5</b> | Hazards are identified, risks assessed and control measures identified and applied                                                                          |
| <b>1.6</b> | Work is prioritised and sequenced for completion in accordance with schedule and workplace requirements                                                     |
| <b>1.7</b> | Work permits are organised in accordance with workplace requirements                                                                                        |
| <b>1.8</b> | Worksite, road or rail management plan is prepared in accordance with workplace requirements                                                                |
| <b>1.9</b> | Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace requirements                                  |
| <b>2.1</b> | Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to                                            |

|                                                                          |                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>given schedule</b>                                                    | be performed are applied and monitored                                                                                                                                                                                                     |
| <b>2.2</b>                                                               | The use of tools, equipment and PPE are carried out in accordance with workplace requirements                                                                                                                                              |
| <b>2.3</b>                                                               | Hazard control measures are monitored in accordance with workplace requirements                                                                                                                                                            |
| <b>2.4</b>                                                               | Communications with electrical control officer are established and maintained during switching operation in accordance with workplace requirements                                                                                         |
| <b>2.5</b>                                                               | Rail traction switching operations are completed in agreed timeframes in accordance with workplace requirements                                                                                                                            |
| <b>2.6</b>                                                               | Electrical equipment and associated sections for the worksite are isolated and proven de-energised using appropriate testing devices and earthed or rail connected, where required, in accordance with schedule and workplace requirements |
| <b>2.7</b>                                                               | Work permits are instructed and issued, and signed in accordance with workplace requirements                                                                                                                                               |
| <b>2.8</b>                                                               | Incidents or unplanned events are responded to in accordance with workplace requirements                                                                                                                                                   |
| <b>2.9</b>                                                               | Work permits are cancelled or relinquished in accordance with workplace requirements                                                                                                                                                       |
| <b>2.10</b>                                                              | Electrical equipment and associated sections for the worksite are returned to service in accordance with schedule and workplace requirements                                                                                               |
| <b>3 Conclude rail traction switching operations to a given schedule</b> | <b>3.1</b> Incidents or unplanned events are reported in accordance with workplace requirements                                                                                                                                            |
|                                                                          | <b>3.2</b> Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                                                                                                                                      |
|                                                                          | <b>3.3</b> Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements                                                                                                                      |
|                                                                          | <b>3.4</b> Work records, reports and documentation are completed and processed in accordance with workplace requirements                                                                                                                   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRRT30 Perform to a given schedule rail traction switching operations.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRT013 Perform rail traction switching operations to a given schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- using and verifying switching scheduling documents
- using appropriate communication with the following:
  - electrical control officer
  - permit holders
  - other network stakeholders
- performing at least one (1) of the following types of rail traction switching operations to a given schedule:
  - high voltage (HV)/low voltage (LV) circuit breakers
  - HV/LV switches
  - HV/LV isolators
  - HV/LV links
  - HV/LV bridges
  - HV/LV fuses
- using at least one (1) of the following types of testing equipment whilst performing overhead traction switching:
  - voltage detectors
  - field intensity meter
  - polarity testers
  - phase rotation indicators
- using all of the following:
  - portable earthing/rail-connecting equipment
  - operating rods/sticks

- completing all of the following stages of electrical permits:
  - writing
  - issuing
  - cancelling or relinquishing
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- standards, codes, legislation, supply authority regulations and workplace requirements applicable to:
  - switching schedules
  - electrical operating diagrams
  - permits
  - communication procedures
  - PPE required for switching
  - danger tag or lockout procedures
- types of rail traction operation switches
- types of testing equipment for overhead traction switching
- portable earthing/rail-connecting equipment
- operating rods/sticks
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic

and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for performing rail traction switching operations to a given schedule
- applicable documentation, including workplace requirements, switching schedules, electrical operating diagrams, permits, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRRT014 Test and verify rail traction installations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to test and verify rail traction installations in the electricity supply industry (ESI).

It includes inspecting, testing and verifying rail traction installations are safe and comply with design and maintenance standards. It also includes working safely, reporting defects and non-compliances in accordance with workplace requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT001 Install overhead rail traction configurations

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT008 Maintain overhead rail traction configurations

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT010 Maintain rail traction bonds

UETDRRT011 Maintain traction overhead wiring systems

UETDRRT012 Operate rail road height access plant near rail traction systems

## Competency Field

Rail Traction

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to inspect, test and verify rail traction installations**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Required design standards and construction plans are obtained
- 1.3** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Specialist test and measurement equipment for testing and verification of rail traction installations are obtained and confirmed in working order in accordance with

|                                                                                     |            |                                                                                                                                                                      |

|                                                                                     | <b>2.8</b> | Rail traction bonding for the installation is inspected and compliance verified in accordance with design standards and workplace requirements                       |
|                                                                                     | <b>2.9</b> | Incidents or unplanned events are responded to in accordance with workplace requirements                                                                             |
| <b>3 Report inspection and test results</b>                                         | <b>3.1</b> | Incidents or unplanned events are reported in accordance with workplace requirements                                                                                 |
|                                                                                     | <b>3.2</b> | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                                                                           |
|                                                                                     | <b>3.3</b> | Non-compliance defects are identified, corrected and/or reported in accordance with workplace requirements                                                           |
|                                                                                     | <b>3.4</b> | Recommendations for rectifying defects are made in accordance with workplace requirements                                                                            |

- 3.5 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.7 Work permits are completed and rail traction installation is fit for service in accordance with workplace requirements
- 3.8 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETDRRT99 Test and verify rail traction installations.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRT014 Test and verify rail traction installations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- inspecting rail traction installations for compliance to design standards using at least one (1) of the following types of inspection equipment:
  - infra-red camera
  - camera
  - binoculars
  - drone
  - laser measuring equipment
  - portable pantograph
  - laser gauge
- testing and verifying against design standards to rectify non-compliances on at least three (3) of the following components and hardware:
  - insulators
  - clamps
  - conductor spacers/knuckles
  - structural components
  - auto tensioning devices
  - switches
- testing and verifying against design standards to rectify non-compliances on at least one (1) of the following types of rail traction conductors:
  - copper
  - aluminium
  - steel
  - aluminium/steel reinforced

- rigid rail
- testing and verifying the rail traction bonding against design standards
- working safely aloft using at least one (1) of the following types of mobile plant and height equipment:
  - elevated work platform (EWP)
  - portable platform
  - ladder
- using the following types of testing and earth/bond equipment:
  - volt metre alternating current (a.c.) or direct current (d.c.)
  - earthing conductors/short circuiting conductor
  - insulation resistance tester
- recording test results in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- requirements for testing rail traction installation for maintenance and construction for safe operational use, including:
  - test results that show a rail traction installation is safe for connection to the supply
  - periodic inspection results and tests that show construction site wiring and equipment is safe to use
  - periodic inspection results and tests that show the rail traction installations electrical equipment are safe to use
- testing techniques, including:
  - rail traction system phasing, phase rotation, polarity and network standards
  - electrical rail traction network voltage levels as per network supply standards
  - potential rail traction network for neutral conductors
  - insulation resistance
  - earthing system/rail traction cables and components
- testing and verifying procedures for rail traction installations, including:
  - testing and recording defects

- verifying against design standards
- electrical compliance
- documentation of testing of quality assurance
- energised tests and commissioning, as required, to verify rail traction installations
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for testing and verifying rail traction installations
- applicable documentation, including workplace requirements, relevant design and maintenance standards, regulations, codes of practice and operation manuals.

# UETDRSB001 Perform substation switching operations to a given schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to perform substation switching operations to a given schedule in the electricity supply industry (ESI).

It includes switching operations in zone, traction or terminal substations in accordance with workplace requirements.

It also includes using specialised tools, personal protective equipment (PPE) and testing equipment.

**Note: Entry requirement into the unit is for users that have successfully completed:**

- *a UET Certificate III, IV, Diploma or Advanced Diploma qualification or the equivalent issued in an Australian state or territory*
- *or*
- *an Electrician or Electrical Fitter qualification or the equivalent issued in an Australian state or territory*
- *or*
- *in the final stages of completing an apprenticeship in the above qualifications.*

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Not applicable, refer to unit application.

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for substation switching**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Switching schedules are obtained and confirmed in accordance with workplace requirements
- 1.3** Plant, tools, equipment and PPE required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks are assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.6** Work permit/approval is organised in accordance with workplace requirements
- 1.7** Worksite is prepared to in accordance with the work plan and workplace requirements

#### **2 Carry out substation switching**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of plant, tools and equipment are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Communication with switching control officer is established and maintained during switching operations in accordance with workplace requirements
- 2.5** Approval is obtained to commence substation switching

in accordance with workplace requirements

- 2.6 Substation switching is performed to isolate and/or transfer supply in accordance with switching schedule and workplace requirements
- 2.7 Work permit is written and issued in accordance with the switching schedule and workplace requirements
- 2.8 Work permit is cancelled or relinquished in accordance with workplace requirements
- 2.9 Approval is obtained to commence restoration of supply in accordance with workplace requirements
- 2.10 Substation switching is performed to restore supply in accordance with the switching schedule and workplace requirements
- 2.11 Switching controller is notified restoration has been completed in accordance with workplace requirements
- 2.12 Incidents or unplanned events are responded to in accordance with workplace requirements

### **3 Complete work and documentation**

- 3.1 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.2 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.3 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.4 Work records, reports and documentation are completed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB39 Perform power system substation switching operation to a given schedule.

# Assessment Requirements for UETDRSB001 Perform substation switching operations to a given schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- establishing and maintaining communications with the following:
  - switching controller
  - permit holders
- obtaining approval to perform substation switching to a given schedule
- performing substation switching operations to a given schedule completing all of the following:
  - isolation
  - restoration
- using at least three (3) of the following specialist tools and equipment:
  - voltage detectors\*
  - operating sticks
  - portable earths
  - phasing equipment
  - operating handles
  - (\*must do)
- operating at least four (4) of the following electrical apparatus:
  - links
  - earth switches
  - air-break switches
  - circuit breakers
  - fuses
- operating the substation electrical equipment remotely via a panel/display

- dealing with an unplanned event on at least one (1) occasion
- organising, issuing, cancelling or relinquishing relevant work permits/approvals in accordance with workplace requirements
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of work permits/approvals
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- substations, including:
  - types
  - layouts
  - bus bar configurations
  - types of electrical apparatus
  - types, function and operating characteristics of various switchgear
  - earthing systems
  - voltage regulation
- protection systems, including:
  - types, function and operating characteristics
  - protection equipment
  - interconnectors and possible sources of back-feed
- substation power supplies, including:
  - low voltage supply
  - batteries and battery charges
- substation switching principles, including:
  - manuals, system diagrams/plans and drawings
  - responsibilities of the switching operator
  - isolation, restoration, paralleling and transferring
  - earthing requirements and procedures
  - requirements and procedures of the operation of switchgear
  - safety requirements and procedures

- use and operation of specialised equipment and tools
- emergency/fault switching
- substation automation system, including:
  - supervisory control and data acquisition (SCADA) system security interlocks and access restrictions
  - function of the main components of a local/remote control system
  - operation procedure for switching from a local control station
  - functions of SCADA (or any other relevant data acquisition and control) systems and its main components
  - operation of a field devices using SCADA systems via a RAT, dial up annunciated system and local control station.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry performing substation switching operations to a given schedule
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRSO001 Coordinate high voltage distribution and sub-transmission networks**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the monitoring of high voltage (HV) distribution and sub-transmission networks in real time. This includes voltage control and monitoring the status of access authorities and ensuring that the network is operated within design parameters at all times. It also includes dispatching and coordination of field repair crews to respond to and rectify abnormalities and liaison with other electrical authorities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy

management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS policies, procedures and programs

UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Plan for the coordination of HV distribution and sub-transmission network

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the coordination of HV distribution and sub-transmission network, are reviewed and determined
- 1.2 Purpose of the coordination of the network is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3 Organisational established procedures on policies and specifications for the coordination of the network are obtained or established with appropriate personnel
- 1.4 Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5 Testing parameters are established from organisational established procedures on policies and specifications
- 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

- 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the coordination of HV distribution and sub-transmission network**
  - 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Coordination decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical and/or engineering models of the coordination process are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within

- an agreed timeframe according to requirements
- 2.7 Testing of coordination process is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
- 3 Complete the coordination of HV distribution and sub-transmission network**
  - 3.1 Final review of the coordination processes is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
  - 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of coordination documents are issued, and records updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector

Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO40 Coordinate high voltage distribution and sub-transmission networks.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRSO001 Coordinate high voltage distribution and sub-transmission networks

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating on at least three (3) occasions the coordination of system manipulations that encompass:
  - high voltage (HV) sub-transmission and distribution network
  - HV sub-transmission and distribution network manipulation to control loading on equipment
  - transformers with HV windings (if applicable to enterprise equipment)
  - HV busbars
  - HV isolators
  - HV switchgear (applicable to enterprise equipment)
- completing all of the following:
  - writing switching instructions
  - checking switching instructions
  - coordinating switching instructions
  - calculating plant loading
  - preparing and authorising HV sub-transmission and distribution switching program
  - monitoring switching progress
  - monitoring the status of access permits/authorities on HV network equipment
  - ensuring network plant operates within design and regulatory requirements on a real time basis
  - dispatching and communicating with field crews to respond/rectify system abnormalities
  - applying and administering supervisory control and data acquisition (SCADA) (if applicable to enterprise equipment)
  - analysing and diagnosing system failures
  - calculating and analysing paralleling conditions on the interconnected HV system

- monitoring and managing switching to:
  - manage load
  - manage voltage
  - minimise loss
  - maximise system reliability
  - allow safe network access for maintenance activities
  - allow safe network access for construction activities
  - validating fault reports arising from system disturbances
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements, such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings

- types and characteristics of HV systems and equipment to be switched
- procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances (SAD)
- responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
- techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers, and operating agreements
  - techniques in coordinating and directing HV and low voltage (LV) switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment -

test instruments, sticks, interrupters and arc stranglers

- HV switchgear – types, categories, application and operating capabilities
- operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
- operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths); and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards,

equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

# UETDRSO002 Coordinate high voltage transmission network

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the monitoring of high voltage (HV) transmission networks in real time. This includes power quality, alarm interpretation, facilitating and monitoring the status of access authorities and ensuring that the network is operated within design parameters at all times. It also includes dispatching and coordination of field repair crews to respond to and rectify abnormalities and liaise with other electrical authorities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRSO004 Develop and evaluate power systems transmission switching programs

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the coordination of HV transmission networks**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the coordination of HV transmission networks, are reviewed and determined
- 1.2** Purpose of the coordination of the network is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the coordination of the network are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures and policies and specifications

- 1.6 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.7 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.8 Liaison and communication issues with other authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.9 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.10 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the coordination of HV transmission networks**
- 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Coordination decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical and/or engineering models of the coordination process are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative actions can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures

- 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
  - 2.7 Testing of coordination process is undertaken according to requirements and established procedures
  - 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
  - 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
  - 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
- 3 Complete the coordination of HV transmission networks**
- 3.1 Final review of the coordination processes is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
  - 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of coordination documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO47 Coordinate high voltage transmission network.

# Assessment Requirements for UETDRSO002 Coordinate high voltage transmission network

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating on at least three (3) occasions the coordination of system manipulations that encompass:
  - high voltage (HV) sub-transmission and distribution network
  - HV sub-transmission and distribution network manipulation to control loading on equipment
  - transformers with HV windings (if applicable to enterprise equipment)
  - HV busbars
  - HV isolators
  - HV switchgear (applicable to enterprise equipment)
- coordinating a HV transmission network, including all of the following:
  - writing switching instructions
  - checking switching instructions
  - coordinating switching instructions
  - calculating plant loading
  - preparing and authorising HV sub-transmission and distribution switching programs
  - monitoring switching progress
  - monitoring the status of access permits/authorities on HV network equipment
  - ensuring network plant operates within design and regulatory requirements on a real time basis
  - dispatching and communicating with field crews to respond/rectify system abnormalities
  - applying and administering of supervisory control and data acquisition (SCADA) (if applicable to enterprise equipment)
  - analysing and diagnosing system failures
  - calculating and analysing paralleling conditions on the interconnected HV system

- allowing safe network access for maintenance activities, including monitoring and managing switching, to:
  - manage load
  - manage voltage
  - minimise loss
  - maximise system reliability
  - allow safe network access for maintenance activities
  - allow safe network access for construction activities
  - validating fault reports arising from system disturbances
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- HV fault switching principles encompassing:
  - primary causes, effects and types of HV electrical faults
  - HV protection devices - main components, types, categories, applications and functions
  - basic principle of operation of HV system protection devices
  - protection coordination and protection zoning
  - HV feeder auto-reclosing suppression encompassing – function and application
  - circuit condition requirements and switching considerations when paralleling and separating HV feeders
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers, and operating agreements
  - techniques in coordinating and directing HV and low voltage (LV) switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator

- techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- techniques in gathering, collating and confirming data on switching procedures
- alternating current (a.c.) transmission system components encompassing:
  - support structures and reasons for selection
  - insulators and reasons for selection
  - conductors and reasons for selection
  - vibration management systems and principles
  - line ratings based on voltage, span, tension and temperature
- a.c. transmission line models encompassing:
  - types of transmission line models based on line length
  - calculation of voltage drop, line regulation and transmission efficiency
  - load sharing between lines
- basic design features and characteristics of transmission structures and associated equipment and/or components encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing of poles/structures and associated equipment and or components
  - transmission systems principles – terminologies, primary and secondary, voltage levels and types of lines
  - characteristics of structure - types of structure (towers and poles, concrete and steel), characteristics of types of structures, installation methods and maintenance techniques
  - characteristics of associated equipment used on structures – insulators and earthing (overhead earth and communication lines).

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards,

equipment specifications, regulations, codes of practice, network drawings, operational event data and operation manuals.

# UETDRSO003 Coordinate power system operations in a regulated energy market

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the coordination of system operations in a regulated energy market. It includes the relevant application of knowledge of the National Electricity Market (NEM), the practices and rules used in facilitating the coordination of operations in a regulated energy market.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Distribution and Sub-transmission Pathway Unit Group

UETDRSO001 Coordinate high voltage distribution and sub-transmission networks

UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

Transmission Pathway Unit Group

UETDRSO002 Coordinate high voltage transmission network

UETDRSO004 Develop and evaluate power systems transmission switching programs

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Plan to coordinate system operations in a regulated energy market

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the coordination of the electricity market, are reviewed and determined
- 1.2 Energy market requirements are established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3 Energy market and associated equipment operational prerequisites are identified and established in accordance with manufacturer and/or enterprise/site procedures
- 1.4 Electricity market coordination and control procedures are discussed with and/or directed to appropriate

personnel in order to ascertain the project brief

- 1.5 Testing parameters are ascertained from established policies, procedures and specifications
  - 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
  - 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities and clients are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Need for relevant work permits is identified to coordinate the performance of work according to requirements and/or established procedures
  - 1.12 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
- 
- 2.1 Strategic plans are developed incorporating organisational initiatives in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Decisions concerning coordination are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Stakeholders/customers are kept informed of current status regarding plan progress and recent developments
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and

## 2 Coordinate system operations in a regulated energy market

preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures

- 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the work within an agreed timeframe according to requirements
- 2.7 Testing of the decision to be implemented is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards

### **3 Complete the coordination of system operations in a regulated energy market**

- 3.1 Final review of the coordination is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the work
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents (electronic/paper) are finalised/commissioned
- 3.3 Reports and/or completion documents (electronic/paper) are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of coordination documents (electronic/paper) are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO49 Coordinate power system operations in a regulated energy market.

# Assessment Requirements for UETDRSO003 Coordinate power system operations in a regulated energy market

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing on at least three (3) occasions the following:
  - dispatching energy to the electricity market
  - responding to electricity market fluctuations/demands
  - manipulating the system to ensure reliable operation in response to electricity market requirements
- demonstrating knowledge of all the following:
  - principals and objectives of the electricity market
  - the role of ancillary services in the operation of the electricity market
  - service provider obligations in the electricity market
  - connection and access requirements to the electricity market
  - analysis of pricing concepts
  - contractual obligations
  - scheduling of generation assets
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings

- the purpose and features of typical types of co-generation systems
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific procedures and work practices relating to managing network demand encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to managing network demand
  - requirements for the use of demand management manuals, system diagrams/plans and drawings
  - identifying and interpreting enterprise demand management procedures
  - techniques in applying enterprise demand management procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, relevant modelling tools, drawings and operation manuals.

# **UETDRSO004 Develop and evaluate power systems transmission switching programs**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the development and evaluation of activities required to place the transmission network in a state in which work can safely be performed whilst minimising customer outages. The format is typically a written sequence of switching items in a pre-defined format.

It includes planning for the management of the network and multiple outages. It encompasses the calculation of network loading conditions to ensure the network will operate within design parameters and in compliance with national electricity code.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEE149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

| ELEMENTS                                                                                              | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Elements describe the essential outcomes.                                                             | Performance criteria describe the performance needed to demonstrate achievement of the element.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

requirements and individual competencies

- 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
- 1.9 Liaison and communication issues with other/authorised personnel, authorities and clients are resolved and activities coordinated to carry out work
- 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out and coordinate the preparation of HV transmission switching programs**
  - 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Decisions concerning the preparation of the HV transmission switching program are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 The effectiveness of the finished project is analysed in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements

- |                                                                                        |      |                                                                                                                                                                                   |

# Assessment Requirements for UETDRSO004 Develop and evaluate power systems transmission switching programs

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing and evaluating at least four (4) switching programs that between them integrates all of the following:
  - a transformer with an extra-high voltage (EHV) winding
  - EHV busbars
  - EHV isolators
  - EHV switchgear (applicable to enterprise equipment)
  - phasing and phase rotation
- commissioning a project that includes more than one (1) item of EHV plant that includes a transformer:
  - a planned liaison with a high voltage (HV) customer
  - activities that address the correction of errors in the process
- preparing switching instructions, testing and earthing all of the following:
  - transformer types
  - busbar types
  - transmission line types
  - circuit breakers, isolators or switches
- conducting all of the following:
  - checking switching instructions
  - calculating plant loading
  - managing the development of multiple switching programs
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply system within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the HV equipment associated with substations
- substations and power transformers encompassing:
  - relationship between the substations within an overall power system - purpose and location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - characteristics of a reactors - description and purpose
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordination and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management

- procedures, and regulatory requirements, such as WHS/OHS and electrical safety
- techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
- methods of conducting audits on correct access authority procedures
- process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
- issue and receipt of operating agreements
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
  - particular reference to state and territory regulations regarding - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits, purpose and procedure for operational forms, and access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc strangles
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE), and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV system switching principles, including switching authorisation procedures to an extent indicated by the following aspects:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings

- types and characteristics of HV systems and equipment to be switched
- procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances
- responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
- techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc strangles
  - HV switchgear – types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings, types and applications, protection systems and substation equipment fault levels and settings and types and applications
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths); and responsibilities of the

switching operator

- techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- substation switching practices encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to substation switching
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of hazards and controlling risks, safety procedures and precautions, responsibilities and protocols, and identifying switching resources
  - techniques in HV substation switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and commissioning procedures
  - use, care and operation of equipment associated with HV substation equipment - test instruments and sticks

- HV switchgear – types, categories, application and operating capabilities
- basic operation of protection systems
- restrictions pertaining to HV substation switching equipment
- restrictions pertaining to enterprise-specific procedures
- transient over voltages encompassing:
  - causes and effects of transient over voltages - switching transients and lightning transients, and effects on plant items
  - control techniques and systems - diverters, shield wires and circuit breaker arc control
  - insulation systems - insulation coordination and insulation grading
- commissioning procedures associated with relevant equipment encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements
- EHV generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
  - techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of EHV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single EHV job - overhead systems, indoor systems, customer installations and kiosk substations
  - EHV generator set and control system to EHV distribution assets
- different types and function of transmission components encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the use and application of transmission components
  - requirements for the use of transmission line construction manuals, system diagrams/plans and drawings
  - types, function and characteristics of transmission components
  - safety policies and procedures precautions related to the handling and installing transmission components
- EHV system load calculation principles encompassing:
  - structure of EHV transmission systems
  - ratings of EHV system components
  - relationship to EHV customers
  - relationship to generation sources
  - methods of determining load on EHV systems
  - records of load on EHV systems

- effect of added load on EHV transmission systems - variation of current, voltage, power, reactive power and power factor
- load flows in parallel or loop operation
- enterprise-specific network coordination tools.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, computerised electrical plant control and monitoring facilities and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, modelling tools, drawings and operation manuals.

# UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the preparation and/or checking of activities required to place the high voltage (HV) distribution and sub-transmission network in a state in which work can safely be performed whilst minimising customer outages. The format is typically a written sequence of switching items in a pre-defined format.

It includes planning outages and taking into account loading of network components. It also includes planning the management of multiple outages on the HV distribution and sub-transmission network and the calculation of network loading conditions to ensure the network is operating within designed parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEE149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the preparation of HV distribution and sub-transmission switching programs**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                                                                                                                                                                                                                |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the preparation of HV distribution and sub-transmission switching system programs, are reviewed and determined |
| <b>1.2</b> | Purpose for the preparation of HV distribution and sub-transmission switching programs is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel                                                                        |
| <b>1.3</b> | Organisational established procedures on policies and specifications for the preparation of HV distribution and sub-transmission switching programs are obtained or established with appropriate personnel                                                                     |
| <b>1.4</b> | Testing/switching procedures are discussed with/directed to the appropriate personnel in order to ascertain the project brief                                                                                                                                                  |
| <b>1.5</b> | Testing/switching parameters are established from organisational established procedures and policies and                                                                                                                                                                       |

specifications

- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7** Work roles and tasks are allocated according to requirements and individual competencies
- 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

## **2 Carry out the preparation of HV distribution and sub-transmission switching programs**

- 2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
- 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
- 2.3** Preparation of HV distribution and sub-transmission switching program decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
- 2.4** Mathematical and/or engineering models of the program is used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
- 2.5** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate

authorities consulted, where necessary, in accordance with requirements and established procedures

- 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7 Testing of the program is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the preparation of HV distribution and sub-transmission switching programs**

- 3.1 Final review of the switching program is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of prepared HV distribution and sub-transmission switching program documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO37 Develop high voltage distribution and subtransmission switching programs.

## Links

# Assessment Requirements for UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least three (3) switching programs that between them encompass the following:
  - a transformer with a high voltage (HV) winding and fixed tap
  - a transformer with a HV winding and on-load tap changer (OLTC)
  - HV busbars
  - HV isolators
  - HV switchgear (applicable to enterprise equipment)
  - phasing and phase rotation
  - commissioning an item of HV plant
  - a planned interruption to a HV customer
  - installation of a mobile generators (if applicable to enterprise equipment)
  - placing distribution feeders in parallel where special considerations are required to cope with capacitors, phase shifts between different bulk supply systems, sensitive earth fault protection and single phase switching
- preparing switching instructions to isolate, test and earth all of the following:
  - all enterprise transformer types
  - all enterprise busbar types
  - all enterprise feeder types
  - all enterprise circuit breakers, isolators or switches
- preparing, writing and checking switching sheets to do all of the following:
  - manage load
  - manage voltage
  - minimise losses
  - maximise network reliability

- checking all above types of switching instructions
- coordinating all above types of switching instructions
- calculating plant loading
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; and how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders; and the HV equipment associated with substations
- different types and function of distribution components encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - types, function and characteristics of distribution components
  - safety policies and procedures precautions related to the handling and installing distribution components
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordination and organising work for a safe outcome according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical

- network diagrams for the specific worksite; earth access authorities; safe working area; work to be carried out in confined space or in hazardous environment; specific outsourcing procedures; specific hazard identification, risk classification and management procedures; regulatory requirements, such as WHS/OHS and electrical safety
- techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
- methods of conducting audits on correct access authority procedures
- process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
- issuing and receipt of operating agreements
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedures for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc strangles
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE) and HV switching techniques
  - operating switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV fault switching principles encompassing:
  - primary causes, effects and types of HV electrical faults

- HV protection devices - main components, types, categories, applications and functions
- basic principle of operation of HV system protection devices
- protection, coordination and protection zoning
- HV feeder auto-reclosing suppression encompassing – function and application
- circuit condition requirements and switching considerations when paralleling and separating HV feeders
- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances
  - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits, and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits hazard/risk assessments; purpose and procedures for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc strangles
  - HV switchgear – types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load

- switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings, types and applications, protection systems and substation equipment fault levels and settings, types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
- operating switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths); and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures, and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to the WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning inspection and testing; emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader

- programs, such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- substation switching practices encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to substation switching
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of hazards and controlling risks, safety procedures and precautions, responsibilities and protocols, and identifying switching resources
  - techniques in HV substation switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and commissioning procedures
  - use, care and operation of equipment associated with HV substation equipment - test instruments and sticks
  - HV switchgear – types, categories, application and operating capabilities
  - basic operation of protection systems
  - restrictions pertaining to HV substation switching equipment
  - restrictions pertaining to enterprise-specific procedures
- transient overvoltage encompassing:
  - causes and effects of transient overvoltage - switching transients and lightning transients, and effects on plant items
  - control techniques and systems - diverters, shield wires and circuit breaker arc control
  - insulation systems - insulation coordination and insulation grading
- procedures to undertake a visual inspection of a scheme encompassing:
  - Commonwealth/state/territory legislation standards, codes, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
  - requirements for the use of manuals, system diagrams/plans and drawings
  - identify obvious deficiencies in operating to the standard functionality
  - techniques in determining device malfunction
  - techniques in determining wiring defects
- commissioning procedures associated with relevant equipment encompassing:
  - Commonwealth/state/territory legislation standards, codes, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements
- effects of harmonics encompassing:
  - characteristics and effects of harmonics on protection device functions/malfunction

- effects of harmonics on transformers, generators, motors and quality of supply
- different types and function of distribution underground components encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the use and application of distribution underground components
  - requirements for the use of underground line construction manuals, system diagrams/plans and drawings
  - types, function and characteristics of distribution underground components
  - safety policies, procedures and precautions related to handling and installing distribution underground components
- HV system load calculation principles encompassing:
  - structure of HV systems
  - ratings of HV system components
  - relationship to HV customers
  - methods of determining load on HV systems
  - records of load on HV systems
  - effect of added load on HV feeders - variation of current, voltage, power, reactive power and power factor
  - load flows in parallel or loop operation
  - enterprise-specific network coordination tools.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

# UETDRSO006 Develop low voltage distribution switching programs

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the preparation and/or checking of activities required to place the low voltage (LV) distribution network in a state in which work can safely be performed whilst minimising customer outages. The format is typically a written sequence of switching items in a pre-defined format.

It includes planning outages and taking into account loading of network components. It also includes planning the management of multiple outages on the LV distribution network and the calculation of network loading conditions to ensure the network is operating within designed parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEE149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the preparation of LV distribution switching programs**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the preparation of LV distribution switching systems, are reviewed and determined
- 1.2** Purpose of the switching program preparation is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the LV distribution switching systems are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures on policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance

criteria and established procedures

- 1.7** Work roles and tasks are allocated according to requirements and individual competencies
- 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

## **2 Carry out the preparation of LV distribution switching programs**

- 2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
- 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
- 2.3** LV distribution switching program decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
- 2.4** Mathematical and/or engineering models of the LV switching systems are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
- 2.5** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.6** Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within

- an agreed timeframe according to requirements
- 2.7 Testing of LV switching program is undertaken according to requirements and established procedures
  - 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
  - 2.9 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
  - 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.11 Strategic plans are developed incorporating organisation initiatives as per established procedures
- 3 Complete the preparation of LV distribution switching programs**
- 3.1 Final review of the switching program is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
  - 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of the preparation of LV distribution switching programs documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector

Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO36 Develop low voltage distribution switching programs.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRSO006 Develop low voltage distribution switching programs

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least three (3) switching programs that between them encompass at least seven (7) of the following:
  - a transformer with a low voltage (LV) winding and fixed tap
  - LV busbars
  - LV isolators
  - LHV switchgear (applicable to enterprise equipment)
  - phasing and phase rotation
  - commissioning an item of LV plant
  - a planned interruption to a LV customer
  - installation of a mobile generators
- preparing switching instructions to isolate, test and earth all of the following:
  - all enterprise transformer types with LV windings
  - all enterprise LV busbar types
  - all enterprise LV feeder types
  - all enterprise LV circuit breakers, isolators or switches
- preparing, writing and checking switching sheets to do all of the following:
  - manage load
  - manage voltage
  - minimise losses
  - maximise network reliability
- checking all above types of switching instructions
- coordinating all above types of switching instructions
- calculating plant loading
- applying and administering supervisory control and data acquisition (SCADA) or

enterprise-specific system

- analysis and diagnosis of system failure
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; and how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- control of generator systems for synchronisation of a LV genset encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator encompassing:
  - safety precautions specific to the synchronisation of gensets - safe working practices and procedures, and synchronising procedures
  - techniques in the installation of gensets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of LV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single LV job - overhead systems, indoor systems, customer installations and kiosk substations
- different types and function of distribution components encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - types, functions and characteristics of distribution components
  - safety policies and procedures precautions related to the handling and installing distribution components
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions

- and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
- techniques in analysing, planning, coordination and organising work for a safe outcome and according to statutory requirements and regulations
- techniques in the effective utilisation of available resources
- techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
- techniques in facilitating and coordinating the delivery and issuing of access authorities
- techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite; earth access authorities; safe working area; work to be carried out in confined space or in hazardous environment; specific outsourcing procedures; specific hazard identification, risk classification and management procedures; regulatory requirements, such as WHS/OHS and electrical safety
- techniques in receiving and coordinating the cancellation of access authorities in readiness for restoration
- methods of conducting audits on correct access authority procedures
- process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
- issuing and receipt of operating agreements
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on LV
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- principles of isolation and tagging procedures associated with protection testing encompassing:
  - Commonwealth/state/territory legislation standards, codes, supply authority regulations and/or enterprise requirements associated with installation, maintenance, isolation and tagging procedures
  - requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
  - techniques in documenting isolations
  - techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
  - techniques in the installation and maintenance procedures protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types,

- characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
- LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
- personnel protective equipment (PPE) for LV switching
- LV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching, and procedures for coordination of operations
  - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to LV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with LV switching - types of operational forms, access authorities and hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings, types and applications, protection systems and substation equipment fault levels and settings, and types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing

- LV switching techniques
- operating switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a LV switching instruction encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched, isolation points and earthing, and responsibilities of the switching operator
  - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility for maintenance, including cleaning inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific switching diagrams and drawing encompassing:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and

- catalogues, and instructions/worksheets
- interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- LV system load calculation principles encompassing:
  - structure of LV systems
  - ratings of LV system components
  - methods of determining load on LV systems
  - records of load on LV systems
  - effect of added load on LV mains - variation of current, voltage and power factor
  - load flow in parallel operation
  - enterprise-specific network coordination tools.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

# UETDRSO007 Manage high voltage distribution and sub-transmission network demand

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the management of the switching of high voltage (HV) network components with due regard to the loadings and prevailing network constraints and includes scheduling of generators, VAR compensators, load shedding and non-essential loads in response to National Electricity Market Management Company (NEMMCO) or network requirements. It also includes voltage control equipment.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEE149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRSO003 Coordinate power system operations in a regulated energy market

UETDRSO011 Respond to discrete and interdependent protection operations

Distribution and Sub-transmission Pathway Unit Group

UETDRSO001 Coordinate high voltage distribution and sub-transmission networks

UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

Transmission Pathway Unit Group

UETDRSO002 Coordinate high voltage transmission network

UETDRSO004 Develop and evaluate power systems transmission switching programs

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Plan for the management of HV distribution and sub-transmission network demand**

- |            |                                                                                                                                                                                                                                                                     |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the management of HV distribution and sub-transmission network systems, are reviewed and determined |
| <b>1.2</b> | Purpose of the management is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel                                                                                                                          |
| <b>1.3</b> | Organisational established procedures on policies and specifications for the management of the network                                                                                                                                                              |

demand are obtained or established with appropriate personnel

**1.4** Testing procedures are discussed with/directed to the appropriate personnel in order to ascertain the project brief

**1.5** Testing parameters are established from organisational established procedures on policies and specifications

**1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

**1.7** Work roles and tasks are allocated according to requirements and individual competencies

**1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures

**1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work

**1.10** Risk control measures are identified, prioritised and evaluated against the work schedule

**1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

## **2 Carry out the management of HV distribution and sub-transmission network demand**

**2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures

**2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures

**2.3** Management of HV distribution and sub-transmission network demand decisions are made on the basis of safety and effective outcomes according to requirements

and/or established procedures

- 2.4 Mathematical models of the HV distribution and sub-transmission network demand are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
- 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7 Testing of HV distribution and sub-transmission network demand is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the management of HV distribution and sub-transmission network demand**

- 3.1 Final inspections of the network demand are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval

- 3.4** Approved copies of the managed HV distribution and sub-transmission network demand documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO35 Manage high voltage distribution and subtransmission network demand.

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRSO007 Manage high voltage distribution and sub-transmission network demand

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least three (3) system manipulations that encompass the following:
  - high voltage (HV) sub-transmission distribution network
  - transmission network manipulation to control loading on equipment
  - transformers with HV windings
  - HV busbars
  - HV isolators
  - HV switchgear (applicable to enterprise equipment)
- managing multiple switching instructions
- coordinating the status of access permits/authorities on HV network equipment
- ensuring network plant operates within design and regulatory requirements on a real time basis
- calculating line loading
- preparing and authorising HV distribution switching programs
- demonstrating application of supervisory control and data acquisition (SCADA) or equivalent
- analysing, diagnosing and reporting system failures
- calculating and analysing paralleling conditions on the interconnected HV system as applicable to the entity
- preparing, writing and checking switching sheets to undertake all of the following:
  - managing load
  - managing voltage
  - minimising loss
  - maximising system reliability
  - allowing safe network access for maintenance activities
  - allowing safe network access for construction activities

- validating fault reports arising from system disturbances
- dealing with unplanned events on at least one (1) occasion,

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to managing network demand encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to managing network demand
  - requirements for the use of demand management manuals, system diagrams/plans and drawings
  - identifying and interpreting enterprise demand management procedures
  - techniques in applying enterprise demand management procedures
- effective management and communication encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to assisting in effective management and communication
  - enterprise operational principles - workplace WHS/OHS enterprise plan, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures
  - relationship between the management and employees - methods used to collate and distribute/disseminate information, responsibilities of each member of the work team, staff development activities and legislation requirements with regard to WHS/OHS training, methods of addressing barriers such as literacy and cultural differences, and provisions relating to WHS/OHS issue resolution
  - techniques associated with organisational policies and procedures related to human resources - relevant awards and certified agreements, legislation impacting on people management, range of support services and expertise available
  - techniques in managing relationships - identifying problems; methods of conflict resolution; methods of consultation, communication, negotiation and mentoring; and strategies for positive feedback
  - techniques in leadership in achieving enterprise strategic and operational plans
  - techniques in managing relationships under stress - stress management
- methodology used in writing enterprise-specific management reports encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the writing enterprise-specific management reports
  - techniques in researching, collating and analysing information for the report - recording, filing, retrieving systems, and storing and retrieving data from computer systems
  - relationship of management reports to enterprise policies and procedures - enterprise

structure and resources, workplace WHS/OHS and risk management enterprise data, financial and operational data, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures

- techniques in writing enterprise-specific management reports - methods used to disseminate information and facilitate enterprise requirements, document proformas, and compliance and legislative requirements to produce effective reports in the appropriate format.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering and alarm equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation including, workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

# UETDRSO008 Manage power systems network faults

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the management of single incident faults on electrical network plant to ensure prompt restoration of supply to affected customers.

Electrical network plant includes feeders, transformers and busbars from transmission to distribution voltages. The unit includes single incident faults ranging from simple (involving a single item and no loss of supply) to complex (involving multiple substations with extensive loss of supply). The unit also encompasses liaison with operating authorities and dispatching and managing field crews, as well as the monitoring of safe access to the network.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRSO003 Coordinate power system operations in a regulated energy market

UETDRSO009 Manage power systems transmission networks

UETDRSO010 Respond to complex power system protection operations

UETDRSO011 Respond to discrete and interdependent protection operations

Generation/Distribution and Sub-transmission Pathway Unit Group

UETDRSO001 Coordinate high voltage distribution and sub-transmission networks

UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

Generation/Transmission Pathway Unit Group

UETDRSO002 Coordinate high voltage transmission network

UETDRSO004 Develop and evaluate power systems transmission switching programs

Distribution and Sub-transmission Pathway Unit Group

UETDRSO001 Coordinate high voltage distribution and sub-transmission networks

UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

UETDRSO007 Manage high voltage distribution and sub-transmission network demand

Transmission Pathway Unit Group

UETDRSO002 Coordinate high voltage transmission network

UETDRSO004 Develop and evaluate power systems transmission switching programs

UETDRSO009 Manage power systems transmission networks

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the management of a network fault**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the management of network faults, are reviewed and determined
- 1.2** Purpose of the management is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the management of network faults are obtained or established with appropriate personnel
- 1.4** Identification and testing procedures are discussed with/directed to appropriate personnel in order to ascertain the occurrence of a network fault
- 1.5** Testing parameters are established from organisational established procedures on policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7** Work roles and tasks are allocated according to requirements and individual competencies
- 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or

- established procedures
- 1.12** Action plan is developed in accordance with requirements and established procedures
- 2 Carry out the management of a network fault**
- 2.1** Action plan is initiated and continually monitored to ensure outcomes are being met
- 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the network fault solution in accordance with requirements and/or established procedures
- 2.3** Network fault management decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
- 2.4** Stakeholders/customers are kept informed of current status regarding plan progress and recent developments
- 2.5** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.6** Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7** Testing of network fault management procedures is undertaken according to requirements and established procedures
- 2.8** Work teams/groups are arranged, coordinated and evaluated to ensure planned goals are met according to established procedures
- 2.9** Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.10** Quality of work is monitored against personal performance agreement and/or established organisational and professional standards

- 2.11** Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
- 3 Complete the management of a network fault**
- 3.1** Final inspection of the network is undertaken to ensure it complies with all requirements and report includes all specifications and documentations needed to complete the project
- 3.2** Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4** Approved copies of network fault management documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO32 Manage power systems network faults.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRSO008 Manage power systems network faults

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- managing a network fault, including all of the following:
  - identifying a network fault by interpreting available alarms and event data
  - developing a plan to enable management of a network fault
  - implementing plans in order that the network be restored after a fault has occurred
  - effectively liaising with operating authorities and field crews to restore the network after a fault has occurred
  - documenting/debriefing actions upon restoration of the network
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific procedures and work practices relating to fault restorations encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the procedures and work practices relating to fault restorations
  - requirements for the use of operational manuals, system diagrams/plans and drawings
  - identifying and interpreting enterprise operating procedures
  - techniques in the applying enterprise operating procedures
- use of fault information to analyse and develop optimal network restoration strategies encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations standards, codes and/or enterprise requirements applicable to the analysis of protection targeting

- requirements for the use of operational manuals, system diagrams/plans and drawings
- techniques in the collation of protection data
- techniques in the analysis and assessment of fault information – public, employee and protection equipment
- application methods of fault information to analyse and develop optimal network restoration strategies - public and employee safety, and enterprise reliability guidelines
- resource availability.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.
- relevant modelling tools, drawings, computerised electrical plant control and monitoring facilities

# UETDRSO009 Manage power systems transmission networks

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the monitoring of extra-high voltage (EHV) transmission networks in real time. This includes voltage control and monitoring the status of access authorities and ensuring that the network is operated within design parameters at all times. It also includes dispatching and management of field repair crews to respond to and rectify abnormalities and liaison with other electrical authorities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEE149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRSO003 Coordinate power system operations in a regulated energy market

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan for the management of transmission networks**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the management of transmission network systems, are reviewed and determined
- 1.2** Purpose of the management of the transmission networks is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the management of transmission

networks are obtained or established with appropriate personnel

- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures on policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7** Work roles and tasks are allocated according to requirements and individual competencies
- 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

## **2 Carry out the management of transmission networks**

- 2.1** Circuit/systems modelling is used to evaluate alternative proposals as per established procedures
- 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
- 2.3** Management decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
- 2.4** Mathematical and/or engineering models of the transmission network are used to analyse the

effectiveness of the finished project in accordance with requirements and established procedures

- 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7 Testing of management processes is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the management of transmission networks**

- 3.1 Final review of management processes is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of management procedure documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO41 Manage power systems transmission networks.

# Assessment Requirements for UETDRSO009 Manage power systems transmission networks

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating on at least three (3) occasions the management of system manipulations encompassing:
  - extra-high voltage (EHV) transmission network
  - EHV network manipulation to control loading on equipment
  - transformers with EHV windings (if applicable to enterprise equipment)
  - EHV busbars
  - EHV isolators
  - EHV switchgear (applicable to enterprise equipment)
- undertaking all of the following:
  - writing switching instructions
  - checking switching instructions
  - coordinating switching instructions
  - calculating plant loading
  - preparing and authorising EHV switching programs
  - monitoring switching progress
  - monitoring the status of access permits/authorities on EHV network equipment
  - ensuring network plant operates within design and regulatory requirements on a real time basis
  - dispatching and communicating with field crews to respond/rectify system abnormalities
  - applying and administering of supervisory control and data acquisition (SCADA) (if applicable to enterprise equipment)
  - analysing and diagnosing system failures
  - calculating and analysing network conditions on the interconnected EHV system
- monitoring and managing switching to:

- manage load
- manage voltage
- minimise loss
- maximise system reliability
- allow safe network access for maintenance activities
- allow safe network access for construction activities
- validating fault reports arising from system disturbances
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- high voltage (HV) system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched

- procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances
- responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
- techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers, and operating agreements
  - techniques in coordinating and directing HV and low voltage (LV) switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment -

- test instruments, sticks, interrupters and arc stranglers
- HV switchgear – types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
  - preparation of a HV switching instruction schedule encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched, points of isolation and earthing locations (safety and working earths), and responsibilities of the switching operator
    - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, protection, control, metering, and alarm equipment, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards,

equipment specifications, regulations, codes of practice, operational event data, network drawings, crisis management procedures and operation manuals.

# UETDRSO010 Respond to complex power system protection operations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the coordination of response to complex protection operations due to system faults. It includes planning, carrying out and completing the response to complex protection operations.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEE149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRSO003 Coordinate power system operations in a regulated energy market

UETDRSO009 Manage power systems transmission networks

UETDRSO011 Respond to discrete and interdependent protection operations

Generation/Distribution and Sub-transmission Pathway Unit Group

UETDRSO001 Coordinate high voltage distribution and sub-transmission networks

UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

Generation/Transmission Pathway Unit Group

UETDRSO002 Coordinate high voltage transmission network

UETDRSO004 Develop and evaluate power systems transmission switching programs

| <b>operations</b>                                               | procedures                                                                                                                                                                                                                                                                             |
|                                                                 | <b>2.2</b> WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures                                              |
|                                                                 | <b>2.3</b> Decisions concerning the response to complex protection operations are made on the basis of safety and effective outcomes according to requirements and/or established procedures                                                                                           |
|                                                                 | <b>2.4</b> Stakeholders/customers are kept informed of current status regarding plan progress and recent developments                                                                                                                                                                  |
|                                                                 | <b>2.5</b> Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures |
|                                                                 | <b>2.6</b> Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the work within an agreed timeframe according to requirements                                                          |
|                                                                 | <b>2.7</b> Testing of the decision to be implemented is undertaken according to requirements and established procedures                                                                                                                                                                |
|                                                                 | <b>2.8</b> Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures                                                                                                                                                    |
|                                                                 | <b>2.9</b> Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements                                                                                                                          |
|                                                                 | <b>2.10</b> Quality of work is monitored against personal performance agreement and/or established organisational and professional standards                                                                                                                                           |
| <b>3 Complete the response to complex protection operations</b> | <b>3.1</b> Final review of the response to complex protection operation is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the work                                                                       |
|                                                                 | <b>3.2</b> Appropriate personnel are notified of completion and reports and/or completion documents (electronic/paper)                                                                                                                                                                 |

are finalised/commissioned

- 3.3 Reports and/or completion documents (electronic/paper) are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of the response to complex protection operation documents (electronic/paper) are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO50 Respond to complex power system protection operations.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRSO010 Respond to complex power system protection operations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing and evaluating, on at least three (3) occasions, all of the following:
  - identifying complex relay operations by interpreting available alarms and event data
  - analysing and diagnosing system failures
  - evaluating response to complex relay operations
- describing control and alarms associated with complex protection systems
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protection system types encompassing:
  - requirements of a protection scheme - relationship to primary system design, purpose of protection, safety of persons, protection of plant, system instability, system break up, loss of customers, loss of revenue, protection zones, restricted schemes, unrestricted schemes, duplicate protection, local backup protection, remote backup protection, selectivity, discrimination, stability, sensitivity and reliability
  - components of a protection scheme - current transformers, potential transformers, summation current transformers, interposing transformers, multi-tapped transformers, all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor-based relays, gas relays, thermal sensors, hardwired communication, powerline carriers systems, microwave systems, fibre optic systems, need for isolation and need for interfacing
  - protection applied to buses - overload, differential, earth leakage, structure leakage, combined schemes and protection overlap

- protection applied to transformers - biased differential, gas, winding temperature and oil temperature
- protection applied to single/radial lines - overcurrent, earth leakage, slow earth leakage, distance, auto-reclose, sectionalising and over voltage
- protection applied to interconnected lines - overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance and offset
- use of fault information to analyse and develop optimal network restoration strategies encompassing:
  - Commonwealth/state/territory and local government legislation, supply authority regulations, standards, codes and/or enterprise requirements applicable to the analysis of protection targeting
  - requirements for the use of operational manuals, system diagrams/plans and drawings
  - techniques in the collation of protection data
  - techniques in the analyse and assessment of fault information – public, employee and protection equipment
  - application methods of fault information to analyse and develop optimal network restoration strategies - public and employee safety, and enterprise reliability guidelines
  - resource availability.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, relevant modelling tools, computerised electrical plant control and monitoring facilities, and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, drawings and operation manuals.

# UETDRSO011 Respond to discrete and interdependent protection operations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the coordination of response to discrete and interdependent protection operations due to system faults.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Distribution and Sub-transmission Pathway Unit Group

UETDRSO001 Coordinate high voltage distribution and sub-transmission networks

UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

Transmission Pathway Unit Group

UETDRSO002 Coordinate high voltage transmission network

UETDRSO004 Develop and evaluate power systems transmission switching programs

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan response to discrete/interdependent protection operations**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the preparation of the switching program, are reviewed and determined
- 1.2** Purpose of the response is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Established policies, procedures and specifications for the response are obtained or established with appropriate personnel
- 1.4** Response to discrete/interdependent protection operations are discussed with and/or directed to appropriate personnel in order to ascertain the scope of

the work/testing required

- 1.5 Testing parameters are ascertained from established policies, procedures and specifications
- 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7 Work roles and tasks are allocated according to requirements and individual competencies
- 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9 Liaison and communication issues with others/authorised personnel, authorities and clients are resolved and activities coordinated to carry out work
- 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11 Need for relevant work permits is identified to coordinate the performance of work according to requirements and/or established procedures
- 1.12 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
- 1.13 Strategic plans are developed incorporating organisational initiatives in accordance with established procedures

## **2 Carry out response to discrete/interdependent protection operations**

- 2.1 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
- 2.2 Decisions concerning the response to protection operations are made on the basis of safety and effective outcomes according to requirements and/or established procedures
- 2.3 Stakeholders/customers are kept informed of current status regarding plan progress and recent developments

- 2.4 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.5 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the work within an agreed timeframe according to requirements
  - 2.6 Testing of the decision to be implemented is undertaken according to requirements and established procedures
  - 2.7 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
  - 2.8 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
  - 2.9 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 3 Complete the response to discrete/interdependent protection operations**
- 3.1 Final review of the switching program is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the work
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents (electronic/paper) are finalised/commissioned
  - 3.3 Reports and/or completion documents (electronic/paper) are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of switching program documents (electronic/paper) are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO48 Respond to discrete and interdependent protection operations.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRSO011 Respond to discrete and interdependent protection operations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing and evaluating, on at least three (3) occasions:
  - identifying discrete/interdependent relay operations by interpreting available alarms and event data
  - analysing and diagnosing system failures
  - evaluating responses to discrete/interdependent relay operations
- describing control and alarms associated with discrete/interdependent protection systems
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations

- substations and power transformers encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers; operation under load/no-load conditions; types and basic operation of tap changing switches, including solid state types; and efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - characteristics of a reactors - description and purpose
- HV fault switching principles encompassing:
  - primary causes, effects and types of HV electrical faults
  - HV protection devices - main components, types, categories, applications and functions
  - basic principle of operation of HV system protection devices
  - protection coordination and protection zoning
  - HV feeder auto-reclosing suppression encompassing – function and application
  - circuit condition requirements and switching considerations when paralleling and separating HV feeders
- detailed operation and setting of discrete protection systems encompassing:
  - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
  - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, CT summation, time graded discrimination and backup protection
  - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- detailed operation of interdependent protection systems encompassing:
  - overcurrent and earth leakage schemes, including intertripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
  - pilot wire and phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
  - load shedding, voltage control, parallel operation and load rejection
  - busbar protection and circuit breaker failure protection
  - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, personal protective equipment (PPE), relevant modelling tools, and computerised electrical plant control and monitoring facilities currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, drawings, regulations, codes of practice and operation manuals.

# UETDRTO004 Inspect and maintain transmission overhead network

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit consolidates critical knowledge and skills developed throughout the term of the qualification to inspect and maintain transmission overhead network in the electricity supply industry (ESI).

It includes inspection and maintenance of de-energised and isolated transmission overhead network in accordance with workplace requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

CPCCLDG3001 Licence to perform dogging

CPCCLRG3001 Licence to perform rigging basic level

TLILIC0005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTO005 Inspect transmission structures, conductors and hardware

UETDRTO006 Install and maintain transmission conductors

UETDRTO007 Install and maintain transmission structures and hardware

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to inspect and maintain transmission overhead network**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Work permits are received and signed in accordance with workplace requirements
- 1.8** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements

- |                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <p><b>3 Maintain transmission overhead network</b></p> | <p><b>3.1</b> Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored</p> <p><b>3.2</b> Lifting, working at heights and the use of plant, tools and equipment are carried out in accordance with</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

workplace requirements

- 3.3 Hazard control measures are monitored in accordance with workplace requirements
- 3.4 Safety observer is positioned to observe the work in accordance with workplace requirements
- 3.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
- 3.6 Working earths are installed in accordance with workplace requirements
- 3.7 Transmission overhead network is maintained in accordance with work plan and workplace requirements
- 3.8 Safe approach distances are maintained when the work is being performed
- 3.9 All earths are removed and work permits signed off and transmission overhead network re-energised in accordance with workplan and workplace requirements
- 3.10 Incidents or unplanned events are responded to in accordance with workplace requirements
- 3.11 Quality checks of work are undertaken in accordance with work plan and workplace requirements

#### **4 Complete work and documentation**

- 4.1 Completed work is checked for compliance against the work plan and workplace requirements
- 4.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 4.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 4.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 4.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 4.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTTP99 Test and verify transmission overhead installations.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRT0004 Inspect and maintain transmission overhead network

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- undertaking inspections of transmission overhead network using at least two (2) of the following methods:
  - visual
  - infra-red camera
  - X-ray
  - camera
  - binoculars/telescope
  - remotely piloted aircraft (RPA)
  - thermographic
- maintaining transmission overhead network including:
  - insulators (strains/termination and suspension)
  - bolts
  - structural components
- installing working earths in accordance with workplace requirements
- undertaking work activities from at least one (1) of the following:
  - elevated work platform (EWP)
  - temporary work platform
  - structure

- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice, and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of work permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- inspection procedures
- maintenance procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for inspecting and maintaining transmission overhead network
- network construction and network supply standards
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTO005 Inspect transmission structures, conductors and hardware

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to inspect transmission structures, conductors and hardware in the electricity supply industry (ESI).

It includes the inspection of transmission poles and towers, conductors, underground and overhead transition points, hardware and earthing systems in accordance with work plan and workplace requirements.

It also includes the completion of inspection reports and other relevant documentation in accordance with requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Prepare for the inspection of transmission structures, conductors and hardware**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Liaison and communication with stakeholders is carried out in accordance with workplace requirements

**2 Carry out inspection of transmission structures, conductors and hardware**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Working at heights and use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Inspection of structures, conductors and hardware is carried out in accordance with the work plan and workplace requirements
- 2.5** Incidents or unplanned events are responded to in accordance with workplace requirements

**3 Complete work and documentation**

- 3.1** Completed work is checked for compliance against the work plan and workplace requirements
- 3.2** Incidents or unplanned events are reported in accordance with workplace requirements

- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Work permits are completed in accordance with workplace requirements
- 3.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTTP30 Inspect transmission overhead structures and electrical apparatus.

## Links

# Assessment Requirements for UETDRT0005 Inspect transmission structures, conductors and hardware

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- organising and completing relevant work permits in accordance with workplace requirements
- undertaking inspections of structures, conductors and hardware using at least two (2) of the following methods:
  - visual
  - infra-red camera
  - X-ray
  - camera
  - binoculars/telescope
  - remote piloted aircraft (RPA)
  - thermographic
- recording inspection results in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS

- safe approach distances
- construction design clearances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- deterioration of structures, conductors and hardware, including:
  - relationship between steel, concrete and other materials
  - deterioration in steel and concrete
  - inspection procedures for deterioration
- inspection methods and techniques for:
  - below ground
  - ground level
  - above ground
  - reporting.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used for inspecting transmission structures, conductors and hardware
- applicable documentation, including workplace requirements, relevant industry standards, regulations, codes of practice and operation manuals.

# UETDRTO006 Install and maintain transmission conductors

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install and maintain transmission conductors in the electricity supply industry (ESI).

It includes installing and maintaining de-energised and isolated conductors and hardware used on towers and poles, including stringing, tensioning, terminating and performing the electrical connections.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

CPCCLRG3001 Licence to perform rigging basic level

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTO007 Install and maintain transmission structures and hardware

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for installation and maintenance of transmission conductors**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.7** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.8** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.9** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.10** Work permits are received and signed in accordance with workplace requirements
- 1.11** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.12** Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### **2 Carry out installation of**

- 2.1** Legislation, regulations, standards, codes of practice and

- transmission conductors** organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
  - 2.3** Hazard control measures are monitored in accordance with workplace requirements
  - 2.4** Safety observer is positioned to observe the work in accordance with workplace requirements
  - 2.5** Communication methods between workers and safety observer are used in accordance with workplace requirements
  - 2.6** Safe approach distances are maintained when the work is being performed
  - 2.7** Working earths are installed in accordance with workplace requirements
  - 2.8** Conductors are strung, tensioned and terminated in accordance with workplace requirements
  - 2.9** Conductor hardware is installed in accordance with workplace requirements
  - 2.10** Electrical connections are made in accordance with the workplace requirements
  - 2.11** Incidents or unplanned events are responded to in accordance with workplace requirements
  - 2.12** Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Carry out maintenance of transmission conductors**
- 3.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 3.2** Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
  - 3.3** Hazard control measures are monitored in accordance with workplace requirements

- 3.4 Safety observer is positioned to observe the work in accordance with workplace requirements
- 3.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
- 3.6 Safe approach distances are maintained when the work is being performed
- 3.7 Working earths are installed in accordance with workplace requirements
- 3.8 Conductors are repaired and/or replaced in accordance with workplace requirements
- 3.9 Conductor hardware is replaced in accordance with workplace requirements
- 3.10 Electrical connections are made in accordance with the workplace requirements
- 3.11 Incidents or unplanned events are responded to in accordance with workplace requirements
- 3.12 Quality checks of work are undertaken in accordance with work plan and workplace requirements

#### **4 Complete work and documentation**

- 4.1 Completed work is checked for compliance against the work plan and workplace requirements
- 4.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 4.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 4.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 4.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 4.6 Working earths are removed in accordance with workplace requirements
- 4.7 Work permits are signed off in accordance with workplace requirements

- 4.8** Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRT29 Install and maintain transmission overhead conductors and cables.

# Assessment Requirements for UETDRT0006 Install and maintain transmission conductors

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- installing and maintaining conductor
- working from at least two (2) of the following:
  - hook ladder\*
  - elevated work platform (EWP)
  - portable platform
  - gondola
  - conductor trolley
  - helicopter
  - elevated work box (EWB)
  - (\*must do)
- using at least five (5) of the following stringing equipment:
  - crimping equipment
  - conductor winches
  - lever hoist
  - conductor trailers/jinker
  - pre-formed splices
  - conductor drum stands
  - draw wire
  - rollers/sheaves

- conductor grip
- conductor stockings
- swivels
- creating an equipotential zone in accordance with workplace requirements
- using testing equipment in accordance with workplace requirements
- using tensioning/sagging equipment in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice, and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - working earths
- hazard, risk assessment and risk control requirements
- potential hazards, including:
  - induced voltages
  - currents
- types and application of PPE
- conductor types and characteristics
- conductor clearances
- stringing methods
- conductor protective hardware, including:
  - types and selection of common dampers, tools and equipment
  - control of Aeolian vibration
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining transmission conductors
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

|                                                                            | <b>3.5</b> Safety observer is positioned to observe the work in accordance with workplace requirements                                                             |
|                                                                            | <b>3.6</b> Communication methods between workers and safety                                                                                                        |

observer are used in accordance with workplace requirements

**3.7** Safe approach distances are maintained when the work is being performed

**3.8** Maintenance of structure and hardware is carried out in accordance with the work plan and workplace requirements

**3.9** Incidents or unplanned events are responded to in accordance with workplace requirements

**3.10** Quality checks of work are undertaken in accordance with work plan and workplace requirements

#### **4 Complete work and documentation**

**4.1** Completed work is checked for compliance against the work plan and workplace requirements

**4.2** Incidents or unplanned events are reported in accordance with workplace requirements

**4.3** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

**4.4** Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements

**4.5** Surplus materials are returned to storage or disposed of in accordance with workplace requirements

**4.6** Work permits are signed off in accordance with workplace requirements

**4.7** Work records, reports and documentation are completed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to UETTDRT26 Install transmission structures and associated hardware and UETTDRT27 Maintain transmission structures and associated hardware.

# Assessment Requirements for UETDRT0007 Install and maintain transmission structures and hardware

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- installing at least two (2) types of structures
- installing all of the following hardware:
  - insulators
  - bolts
  - structural components
- maintaining at least two (2) types of structures
- maintaining at least two (2) types of hardware
- replacing at least two (2) of the following insulators:
  - strains/termination
  - suspension
  - post
  - V strings
- installing working earths in accordance with workplace requirements
- installing temporary work platform
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - transmission voltages
  - working earths
- hazard, risk assessment and risk control requirements, including potential hazards of:
  - induced voltages
  - currents
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- construction manuals, system diagrams/plans and drawings
- role and responsibilities of a safety observer
- types and location of structures
- types and function of hardware
- types and function of insulators
- types of foundations
- structure stabilisation methods
- calculation of conductor forces
- temporary work platforms
- conductor protective hardware, including:
  - types and selection of common dampers, tools and equipment
  - control of Aeolian vibration
- third-party assets used on transmission structures, e.g., mobile communication antenna.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic

and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for the installation and maintenance of transmission structures and hardware
- applicable documentation, including workplace requirements, relevant industry standards, regulations, codes of practice and operation manuals.

# UETDRTO008 Install/maintain overhead transmission network infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the erection of non-energised, pyramid, delta, Pi or enterprise-specific transmission towers and associated hardware and includes installation and maintenance of poles and/or structures and associated hardware and the installation and maintenance of overhead conductors and cables used on towers. It encompasses the erection of components in accordance with construction plans, specifications, work orders and standing enterprise requirements. Erection also involves cleaning and welding.

It also encompasses maintenance work associated with the diagnosing of faults, the conducting of visual inspections, the confirmation of phasing and the completion of other enterprise tests on overhead conductors and cables. It also encompasses confirming isolation of systems and circuits, and accepting/issuing electrical permits. The updating of system data, records and/or completion of relevant documentation in accordance with enterprise requirements also forms part of this competency.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETTDRI67 Solve problems in energy supply network equipment

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan for the installation and maintenance of transmission network**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection

## infrastructure

- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.3** Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the installation and maintenance of transmission network infrastructure are obtained and confirmed for the purposes of the work to be performed and communicated to relevant personnel
- 1.4** Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
- 1.5** Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
- 1.6** Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
- 1.8** Relevant personnel at worksite are confirmed current in first aid, tower/pole top rescue and other related work procedures according to requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved to carry out work, where necessary
- 1.10** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures
- 1.11** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures

- 2 Carry out the installation and maintenance of transmission network infrastructure**
- 1.12** Traffic management plan is identified and implemented
  - 2.1** WHS/OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
  - 2.2** Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices are safely followed and currency according to requirements confirmed
  - 2.3** Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures
  - 2.4** Essential knowledge and associated skills are applied in the safe installation and maintenance of transmission network infrastructure to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
  - 2.5** Poles and/or structures and their associated hardware to be installed are stabilised according to requirements
  - 2.6** Installation of poles and/or structures is carried out in accordance with the work schedule and requirements/established procedures
  - 2.7** Towers and associated hardware to be erected are stabilised according to requirements
  - 2.8** Maintenance, including repair and/or replacement of poles and/or structures, is carried out in accordance with the work schedule and requirements/established procedures
  - 2.9** Overhead conductor/cables are strung, tensioned and terminated in accordance with requirements/established procedures
  - 2.10** Conductors and anti-vibration devices, spaces/spreaders are secured in accordance with established procedures
  - 2.11** Electrical connections are made in accordance with requirements/established procedures
  - 2.12** Maintenance, including repair and/or replacement of

overhead conductors and cables used on towers, is carried out in accordance with the work schedule and requirements/established procedures

- 2.13 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
- 2.14 Erection of towers and associated hardware is carried out in accordance with the work schedule and requirements/established procedures
- 2.15 Unplanned events in the erection of towers and associated hardware are undertaken within the scope of established procedures
- 2.16 Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
- 2.17 Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures

### **3 Complete the installation and maintenance of transmission network infrastructure**

- 3.1 Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures
- 3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
- 3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
- 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures
- 3.5 Relevant work permits are signed off and the transmission network infrastructure is returned to service in accordance with requirements
- 3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are finalised and processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTD RTP34 Install/maintain overhead transmission network infrastructure.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRT0008 Install/maintain overhead transmission network infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining at least one (1) of the following:
  - wood pole/structure
  - steel pole/structure
  - concrete pole/structure
  - composite pole/structure
- incorporating at least three (3) of the following hardware:
  - insulators
  - cross-arm braces
  - cross-arms
  - pole steps
  - shackle straps
  - earth leads
  - traction supports
  - traction registration
  - bonding
- incorporating at least one (1) of the following:
  - baulking
  - stays
  - concreting, including foundation
- incorporating at least one (1) of the following:
  - crane
  - auger/erector
  - 'A' frame

- lifting beam
- pole pikes
- helicopter lift
- erecting one (1) of the following towers:
  - pyramid
  - delta pi
  - enterprise-specific type
- incorporating at least two (2) of the following:
  - insulators
  - clamps
  - bolts
  - structural components
- using at least one (1) of the following methods:
  - welding
  - cleaning
- installing and maintaining at least one (1) of the following conductor types:
  - copper
  - aluminium
  - steel
  - composite
  - aluminium/steel reinforced
  - pilot
- incorporating at least two (2) of the following access equipment:
  - elevated work platform (EWP)
  - portable platform
  - gondola
  - hook ladder\*
  - elevated work box
  - (\*must do)
- incorporating at least five (5) of the following:
  - winches\*
  - tension equipment\*
  - stringing equipment
  - cable trailers
  - crimping equipment \*
  - pre-formed splices
  - hardware
  - cable drum stands
  - ropes

- rollers/ sheaves
- comealongs
- swivels
- (\*must do)
- incorporating at least two (2) of the following:
  - voltage/de-energised indicating device
  - field intensity meter
  - operating rods
  - (\*must do)
- incorporating at least one (1) of the following methods to tension overhead conductors:
  - dynamometer
  - site board
  - abney level
  - sag chart\*
  - theodolite
  - (\*must do)
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematical techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications - application of velocity, acceleration, force, density, torque and pressure
  - applications of the International System of Units (SI) units
  - the relationship between work, power and energy
  - behaviour of object under force - using a block and tackle under load, concept of mechanical advantage, determination of resultant forces and determining the sag in a catenary conductor and the force applied at each end
  - fundamentals of the basic laws of fluid mechanics
- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications - properties of tensile strength; effects of temperature on the expansion of metals; ductility, malleability, work hardening and annealing; and the

- conditions that lead to corrosion and the properties of timbers
- basic rigging techniques encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches and relevant certification and licensing (if required)
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safe use of rigging equipment, tools and associated equipment - types, techniques and application
  - site inspection procedures - identifying hazards, assessing and controlling risks, appropriate sequence of loading and unloading
  - determining the mass and dimensions of load
  - selection and inspection procedures - rigging equipment, materials and tools (natural and synthetic fibre ropes and chains, fittings, winch and capstan); ratings of wire ropes and slings; removing, repairing and replacing damaged parts
  - techniques for assembling and erecting power winches and capstans
  - checking the integrity of support structure - visual inspection of load connections
  - techniques in moving, lifting, shifting, managing and placing loads - use of appropriate communication and signalling methods; codes of practice/compliance, enterprise and Commonwealth/state/territory legislative requirements; weather conditions; erection of safety nets and lines; methods of fixing and anchoring loads; and load stability
- procedures in providing store support encompassing:
  - classification and identification of equipment, components and tools
  - procedures for purchasing/ordering items, removing/dispatching items, stocktaking, security and bookkeeping/record keeping
  - material handling - warehouse/depot storage techniques, handling equipment, pallet lift trucks and forklifts, and cable drum handling equipment
  - safety procedures - storage and care of safety equipment, handling hazardous materials, storage of hazardous substances and dangerous goods, and depot safety procedures
  - manufacturer and supplier information, including material safety data sheets (MSDS)
- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems; and radial, parallel and ring main feeders

- relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
- single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- installation of poles and or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware - types of installation equipment/tools, excavation methods, types of footings/foundations, types of attachments, earthing systems, and clearances between conductors
  - safe methods of erecting and stabling poles and/or structures and cross-arms
  - techniques for maintenance of poles and associated hardware - stabilisation techniques for unstable poles
  - methods of strengthen poles, maintenance and replacement of HV insulators and cross-arms
- transmission structures and hardware encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - types of structures
  - types and function of associated hardware/equipment and insulators
  - types of conductors
  - location of transmissions structures
  - other equipment used on transmission structures, e.g., aircraft warning devices
- procedures for routine maintenance on transmission structures and hardware encompassing:
  - procedures for gaining access permits
  - reasons for gaining access

- types of maintenance procedures on transmission structures - procedure to follow for inspection/patrols according to the transmission supply authority
- erecting and removing of transmission equipment and hardware from a tower - climbing procedures, square rigging principles, calculation of forces at work within a given square rigging system, and construction of a square rigging system
- procedures for changing insulators - vertical angle suspension, strain insulator, post insulator (horizontal or vertical) and bridge insulator, and calculation of conductor forces
- installation of temporary work platforms - types and function of installation tools and equipment, precautions and work methods to follow, and procedures for installations of temporary work platforms
- installation of conductor protective hardware - types and selection of common dampers, tools and equipment, control of Aeolian vibration and procedures for the installation of dampers onto conductors
- dead line insulator washing - supply authority regulations, and procedures for washing de-energised transmission lines
- procedures for installation and maintenance on transmission lines, structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of transmission lines and associated equipment
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings - minimum construction clearances for transmission lines and sag/tension requirements
  - construction types and structures used in transmission lines
  - types, sizes and characteristics of transmission conductors - aluminium conductors, steel reinforced and earthing conductors
  - types of electrical connections used to connect transmission conductors - compression termination and bolted termination
  - causes and effects of poor electrical connections
  - types and application of specialised tools, equipment and hardware for the stringing of transmission conductors
  - techniques for stringing, tensioning and terminating transmission conductors
  - techniques for installation of associated hardware used on transmission towers
  - techniques for maintenance of damaged transmission conductors - repair and replacement
- safe working practices and procedures for the installation of overhead transmission conductors encompassing:
  - limits of approach for personnel, vehicles, mobile plant and EWP
  - requirements of persons prior to making bare hand contact with dead low voltage (LV) mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
  - safe working practices - requirements to enable safe working on conductive poles; procedures to attach an on-site earthing device to de-energised LV and HV overhead circuit; safe working practices when working with associated hardware/equipment and

- insulators; precautions of voltages on transmission structures; dangers when working at heights; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures; and safe working practices when using specialised equipment
- emergency response and rescue, including first aid
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic

and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTO009 Install/maintain transmission network infrastructure electrical equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the maintenance of non-energised, pyramid, delta, Pi or enterprise-specific transmission towers and associated hardware and the inspection requirements of overhead structures, such as towers and electrical apparatus. Overhead structures include towers and overhead conductors and/or cables, including underground and overhead transition points, electrical equipment, hardware and/or earthing systems.

This unit encompasses the repair and/or replacement of components in accordance with construction plans, specifications, work orders and standing enterprise requirements. Maintenance also involves cleaning and welding. The updating of system data, records and/or completion of relevant documentation in accordance with enterprise requirements also forms part of this competency.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTO008 Install/maintain overhead transmission network infrastructure

UETTDRI67 Solve problems in energy supply network equipment

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Prepare/plan to install and maintain transmission network infrastructure electrical equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection

- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.3** Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the installation and maintenance of transmission network infrastructure electrical equipment are obtained and confirmed for the purposes of the work to be performed and communicated to relevant personnel
- 1.4** Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
- 1.5** Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
- 1.6** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
- 1.7** Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
- 1.8** Relevant personnel at worksite are confirmed current in first aid, tower/pole top rescue and other related work procedures according to requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved to carry out work where necessary
- 1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.11** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures
- 1.12** Traffic management plan is identified and implemented

- |                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## equipment

- 3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
- 3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
- 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures
- 3.5 Relevant work permits are signed off and towers and associated hardware are returned to service in accordance with requirements
- 3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are finalised and processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTTP35 Install/maintain transmission network infrastructure electrical equipment.

# Assessment Requirements for UETDRT0009 Install/maintain transmission network infrastructure electrical equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining one (1) of the following types of towers:
  - pyramid
  - delta pi
  - enterprise-specific type
- incorporating at least two (2) of the following:
  - insulators
  - clamps
  - bolts
  - structural components
- incorporating at least one (1) of the following maintenance tasks:
  - welding
  - cleaning
- inspecting at least four (4) of the following:
  - towers
  - overhead conductors/cables
  - structural fittings
  - electrical equipment
  - hardware
  - earthing systems
- incorporating at least two (2) of the following:
  - visual\*
  - infra-red camera
  - X-ray

- camera
- binoculars/telescope
- (\* must do)
- incorporating all the following:
  - reporting procedures
  - reporting outcomes
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for routine maintenance on transmission structures and hardware encompassing:
  - procedures for gaining access permits
  - reasons for gaining access
  - types of maintenance procedures on transmission structures - procedure to follow for inspection/patrols according to the transmission supply authority
  - erecting and removing of transmission equipment and hardware from a tower - climbing procedures, square rigging principles, calculation of forces at work within a given square rigging system and construction of a square rigging system
  - procedures for changing insulators - vertical angle suspension, strain insulator, post insulator (horizontal or vertical) and bridge insulator, and calculation of conductor forces
  - installation of temporary work platforms - types and function of installation tools and equipment, precautions and work methods to follow, and procedures for installations of temporary work platforms
  - installation of conductor protective hardware - types and selection of common dampers, tools and equipment; control of Aeolian vibration and procedures for the installation of dampers onto conductors
  - dead line insulator washing - supply authority regulations, and procedures for washing de-energised transmission lines
- inspection of towers and structures used for transmission lines encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - characteristics of materials used for towers structures within the electrical transmission system - faults that occur that influence the integrity of the structure
  - deterioration prevention techniques - relationship between steel and other materials, inspection procedures for deterioration and deterioration prevention procedures in steel
  - procedures for the repair of deterioration in steel
- inspection of transmission lines encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - clearances and safety procedures
  - ground line inspection procedures of electrical transmission lines - requirements for inspection of transmission lines and insulators, use of specific equipment and testing

- devices during testing/inspection, techniques in transmission line inspection and methods of recording data
- overhead line inspection procedures of electrical transmission lines - methods and requirements for overhead line inspection on electrical structures, clearances for overhead conductors, cables and structures, techniques used to obtain close inspection of transmission lines, and use of specific equipment and testing devices during testing/inspection
  - methods of recording data
  - powerline safety practices encompassing:
    - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
    - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
    - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
    - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
    - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires, general fire prevention methods and the precautions for personal protection when fighting small fires
    - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
    - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTO010 Maintain energised transmission lines using barehand techniques from a helicopter

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to maintain energised transmission lines using barehand techniques from a helicopter in the electricity supply industry (ESI).

It includes the calculation of physical loads and the use and maintenance of specialised tools and equipment, live work authorities/permits and disabling the automatic re-closing device.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UETDRTO012 Maintain energised transmission lines using live work stick techniques

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to maintain energised transmission**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to

|                                                                                | <b>1.8</b> Minimum approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements                          |
|                                                                                | <b>1.9</b> Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements                                                |
|                                                                                | <b>1.10</b> Work permits are received and signed in accordance with workplace requirements                                                                         |
|                                                                                | <b>1.11</b> Auto-reclose devices and associated circuits are rendered inoperative in accordance with workplace requirements                                        |
|                                                                                | <b>1.12</b> Worksite is prepared in accordance with the work plan and workplace requirements                                                                       |
|                                                                                | <b>1.13</b> Traffic management plan is confirmed as being in place in accordance with workplace requirements                                                       |
| <b>2 Perform maintenance of energised transmission lines from a helicopter</b> | <b>2.1</b> Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored |
|                                                                                | <b>2.2</b> Working at heights and the use of tools, equipment and PPE are carried out in accordance with workplace requirements                                    |

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
  - 2.4 Minimum approach distances are maintained when the work is being performed
  - 2.5 Energised overhead electrical transmission apparatus is maintained in accordance with the work plan and workplace requirements
  - 2.6 Incidents or unplanned events are responded to in accordance with workplace requirements
  - 2.7 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Complete work and documentation**
- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
  - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 3.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
  - 3.6 Work permits are signed off in accordance with workplace requirements
  - 3.7 Works records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector

Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTTP33 Maintain energised transmission lines using Barehand technique on a helicopter platform.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRT0010 Maintain energised transmission lines using barehand techniques from a helicopter

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - minimum approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- inspecting, fitting and testing conductive suit
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- calculating conductor load
- installing a working platform
- applying helicopter safety procedures
- confirming the electrical integrity of insulators
- completing at least three (3) of the following tasks using live work barehand techniques from a helicopter:
  - replacing/installing vibration damper
  - replacing/installing conductor spacers
  - replacing/installing conductor joint
  - replacing/installing helical repair splice
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - minimum approach distances
  - working on energised lines utilising live work barehand techniques from a helicopter
  - helicopter safety procedures
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- roles and responsibilities of team members
- electrical and electrostatic principles, including:
  - relationship of the resistance of a human body to different levels of current and voltage
  - relationship of a human body to an electric field
  - effects of electrostatic induction
  - relationship of phase voltage and respective line voltages
  - effect of distance
  - potential of an object within the field and the effect of distances to the potential
  - Faraday's cage - effects of a body, advantages, description of the Faraday's cage used by barehand live line workers
  - lighting and switching surges
- application and function of extra-high voltage (EHV) auto-reclosing suppression
- testing, types, selection, maintenance and storage of specialised equipment:
  - conductive suit
  - tools
  - PPE
  - insulating sticks
- pilot briefing requirements:
  - emergency response and rescue
- techniques for working barehand on energised transmission lines from a helicopter
- requirements for aerial linework, including:
  - planning, establishing and implementing relevant aviation authority clearances
  - determining system requirements
  - aircrew familiarisation with network operations and equipment

- effective communication
- electrical integrity of insulators including:
  - visual and audible assessment
  - disc voltage difference
  - condition of insulator string.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- materials, tools, equipment and PPE currently used for maintaining energised transmission lines using barehand techniques from a helicopter
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTO011 Maintain energised transmission lines using live work barehand techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to maintain energised transmission lines using live work barehand techniques in the electricity supply industry (ESI).

It includes the calculation of physical loads and the use and maintenance of specialised tools and equipment, live work authorities/permits and disabling the automatic re-closing device.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UETDRTO012 Maintain energised transmission lines using live work stick techniques

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare to maintain energised transmission

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to

|                                                              |             |                                                                                                                                                         |

# Assessment Requirements for UETDRT0011 Maintain energised transmission lines using live work barehand techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - minimum approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- inspecting, fitting and testing conductive suit
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- calculating conductor load
- accessing work zone using at least two (2) of the following methods:
  - insulated ladder
  - elevated work platform (EWP)
  - elevated work box (EWB)
  - rope
- confirming the electrical integrity of insulators
- completing at least three (3) of the following tasks using live work barehand techniques:
  - replacing strain insulators\*
  - replacing/connecting bridge/bonding connections\*
  - replacing suspension insulators
  - replacing vibration dampers
  - repairing/replacing conductor spacers
  - repairing/replacing conductor joints
  - repairing conductors
  - (\*must do)

- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - minimum approach distances
  - working on energised lines utilising live work barehand techniques
  - emergency response and rescue procedures
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- roles and responsibilities of team members
- calculation of forces supported by live working equipment
- electrical and electrostatic principles, including:
  - relationship of the resistance of a human body to different levels of current and voltage
  - relationship of a human body to an electric field
  - effects of electrostatic induction
  - relationship of phase voltage and respective line voltages
  - effect of distance
  - potential of an object within the field and the effect of distances to the potential
  - Faraday's cage - effects of a body, advantages, description of the Faraday's cage used by bare hand live-line workers
  - lighting and switching surges
- application and function of extra-high voltage (EHV) auto-reclosing suppression
- testing, types, selection, maintenance and storage of specialised equipment:
  - conductive suit
  - insulated boom EWP
  - plant and tools
  - PPE
  - ropes

- sticks
- live work barehand techniques for maintaining energised transmission lines in accordance with workplace requirements
- electrical integrity of insulators, including:
  - visual and audible assessment
  - disc voltage difference
  - condition of insulator string.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- materials, tools, equipment and PPE currently used for maintaining energised transmission lines using live work barehand techniques
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTO012 Maintain energised transmission lines using live work stick techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to maintain energised transmission lines using live work stick techniques in the electricity supply industry (ESI).

It includes the calculation of physical loads and the use and maintenance of specialised tools and equipment, live work authorities/permits and disabling the automatic re-closing device.

***This unit is subject to the following requirements for entry:***

- *Certificate III in ESI - Transmission Overhead powerline worker qualification or equivalent.*

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Not applicable, refer to unit application.

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Plan to maintain energised transmission lines**
  - 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
  - 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
  - 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
  - 1.4** Plant, tools, equipment, and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
  - 1.5** Hazards are identified, risks assessed and control measures identified and applied
  - 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
  - 1.7** Work permits are received and signed in accordance with workplace requirements
  - 1.8** Auto-reclose devices and associated circuits are rendered inoperative in accordance with workplace requirements
  - 1.9** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
  - 1.10** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
  - 1.11** Minimum approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
  - 1.12** Worksite is prepared in accordance with the work plan and workplace requirements
  - 1.13** Traffic management is confirmed as being in place in accordance with workplace requirements
- 2 Carry out the maintenance of energised transmission lines**
  - 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored

2.2 Lifting, working at heights and use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements

2.3 Hazard control measures are monitored in accordance with workplace requirements

2.4 Safety observer is positioned to observe the work in accordance with workplace requirements

2.5 Communication methods between workers and safety observer are used in accordance with workplace requirements

2.6 Minimum approach distances are maintained when the work is being performed

2.7 Energised overhead electrical transmission apparatus is maintained in accordance with the work plan and workplace requirements

2.8 Incidents or unplanned events are responded to in accordance with workplace requirements

2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements

### **3 Complete work and documentation**

3.1 Completed work is checked for compliance against the work plan and workplace requirements

3.2 Incidents or unplanned events are reported in accordance with workplace requirements

3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements

3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements

3.6 Work permits are signed off in accordance with workplace requirements

3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTTP31 Maintain energised transmission lines using high voltage live work stick method.

# Assessment Requirements for UETDRT0012 Maintain energised transmission lines using live work stick techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - minimum approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- confirming safety observer is in position in accordance with workplace requirements
- determining communication method with safety observer
- calculating conductor load
- accessing work zone using at least two (2) of the following methods:
  - insulated ladder
  - elevated work platform (EWP)
  - elevated work box (EWB)
  - structure
- confirming the electrical integrity of insulators
- replacing at least one (1) of the following:
  - strain insulators
  - suspension insulators
  - post insulators
- completing at least two (2) of the following tasks using live work stick techniques:
  - replacing/installing vibration dampers
  - repairing/replacing conductor spacers
  - repairing/replacing conductor fittings and hardware
  - applying pre-formed helical fittings
  - replacing cross-arms

- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - minimum approach distances
  - working on energised lines for voltages from 66 kV utilising live work stick techniques
  - emergency response and rescue procedures
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- roles and responsibilities of team members
- calculation of forces supported by live working equipment
- electrical and electrostatic principles, including:
  - relationship of the resistance of a human body to different levels of current and voltage
  - relationship of a human body to an electric field
  - effects of electrostatic induction
  - relationship of phase voltage and respective line voltages
  - effect of distance
  - potential of an object within the field and the effect of distances to the potential
  - lightning and switching surges
- application and function of extra-high voltage (EHV) auto-reclosing suppression
- testing, types, selection, maintenance, storage of specialised equipment, including:
  - plant and tools
  - PPE
  - ropes
  - sticks
- live stick work techniques for maintaining energised transmission lines in accordance with workplace requirements
- electrical integrity of insulators, including:

- visual and audible assessment
- disc voltage difference
- condition of insulator string.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- materials, tools, equipment and PPE currently used for maintaining of energised transmission lines using live work stick techniques
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRT0015 Assemble and erect transmission structures

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 3.0.

## Application

This unit involves the skills and knowledge required for the assembly and erection of transmission structures in the electricity supply industry (ESI).

It includes the assembly and erection of transmission structures in accordance with construction plans, drawings and workplace requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

CPCCLDG3001 Licence to perform dogging

CPCCLRG3001 Licence to perform rigging basic level

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL002 Comply with environmental requirements

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Prepare to assemble and erect transmission structures**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks are assessed and control measures identified and applied
- 1.6** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.7** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.8** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.9** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.10** Work permits are signed in accordance with workplace requirements
- 1.11** Worksite is prepared in accordance with the work plan and workplace requirements

**2 Carry out the assembly and erection of transmission structures**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements

- 2.4 Safety observer is positioned to observe the work in accordance with workplace requirements
- 2.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
- 2.6 Safe approach distances are maintained when the work is being performed in accordance with workplace requirements
- 2.7 Transmission structures are assembled and erected in accordance with construction plans, drawings and workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements

### **3 Complete the work**

- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work permits are signed off in accordance with workplace requirements
- 3.7 Personnel are notified of work completion in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to UETDRT0002 Erect power systems transmission structures.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRT0015 Assemble and erect transmission structures

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 3.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS) requirements
  - safe approach distances
- identifying hazards; assessing risks; and identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- assembling transmission structure components
- erecting transmission structures
- dealing with an unplanned event on at least one (1) occasion
- signing on and off relevant work permits in accordance with workplace requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards of:
  - induced voltages
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident

- construction manuals, system diagrams/plans and drawings
- role and responsibilities of a safety observer
- types and location of structures
- structure stabilisation methods
- methods for assembly and erection of transmission structures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate tools, equipment and PPE currently used in industry to assemble and erect transmission structures
- applicable documentation, including workplace requirements, equipment specifications, standards and operation manuals.

# UETDRT0016 Install transmission structure hardware

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 3.0.

## Application

This unit involves the skills and knowledge required for the installation of hardware used on transmission structures in the electricity supply industry (ESI).

It includes the installation of hardware on the transmission structures in accordance with construction plans and workplace requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

CPCCLDG3001 Licence to perform dogging

CPCCLRG3001 Licence to perform rigging basic level

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL002 Comply with environmental requirements

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Prepare to install transmission structure hardware**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks are assessed and control measures identified and applied
- 1.6** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.7** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.8** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.9** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.10** Work permits are signed in accordance with workplace requirements
- 1.11** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.12** Traffic management plan is confirmed as being in place in accordance with workplace requirements

**2 Carry out the installation of transmission structure hardware**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
  - 2.4 Safety observer is positioned to observe the work in accordance with workplace requirements
  - 2.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
  - 2.6 Safe approach distances are maintained when the work is being performed in accordance with workplace requirements
  - 2.7 Transmission structure hardware is installed in accordance with construction plans, drawings and workplace requirements
  - 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
  - 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Complete the work**
- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
  - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
  - 3.6 Work permits are signed off in accordance with workplace requirements
  - 3.7 Personnel are notified of work completion in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

# UETDRTO017 String overhead transmission conductors

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 3.0.

## Application

This unit involves the skills and knowledge required for the stringing of overhead conductors with no electrical connections being made in the electricity supply industry (ESI).

It includes the preparation of a stringing site, use of stringing equipment and stringing overhead conductors prior to tensioning and terminating.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

CPCCLDG3001 Licence to perform dogging

CPCCLRG3001 Licence to perform rigging basic level

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

UETDRTO015 Assemble and erect transmission structures

UETDRTO016 Install transmission structure hardware

## Competency Field

Transmission Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare to string the overhead transmission conductors

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2 Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3 Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4 Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5 Hazards are identified, risks are assessed and control measures identified and applied
- 1.6 Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.7 Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.8 Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.9 Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.10 Work permits are signed in accordance with workplace requirements
- 1.11 Worksite is prepared in accordance with the work plan and workplace requirements
- 1.12 Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### 2 Carry out stringing of

- 2.1 Legislation, regulations, standards, codes of practice and

**overhead transmission conductors**

organisational workplace requirements for the work to be performed are applied and monitored

- 2.2 Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Safety observer is positioned to observe the work in accordance with workplace requirements
- 2.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
- 2.6 Safe approach distances are maintained when the work is being performed in accordance with workplace requirements
- 2.7 Stringing of overhead transmission conductors prior to terminating is performed in accordance with work plan, drawings and workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements

**3 Complete the work**

- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work permits are signed off in accordance with workplace requirements

- 3.7** Personnel are notified of work completion in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to UETDRT0013 Pre-tension stringing overhead transmission conductors and cables.

## Links

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRT0017 String overhead transmission conductors

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 3.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS) requirements
  - safe approach distances
- identifying hazards; assessing risks; and identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- creating an equipotential work zone
- stringing conductors
- using at least five (5) of the following stringing equipment:
  - crimping equipment
  - conductor winches
  - lever hoist
  - conductor trailers/jinker
  - pre-formed splices
  - conductor drum stands
  - draw wire
  - rollers/sheaves
  - conductor grip
  - conductor stockings
  - swivels
- dealing with an unplanned event on at least one (1) occasion
- signing on and off relevant work permits in accordance with workplace requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards of:
  - induced voltages
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- construction manuals, system diagrams/plans and drawings
- role and responsibilities of a safety observer
- conductor types and characteristics
- construction clearances
- stringing methods.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, standards and operation manuals.

# UETDRTS001 Commission complex network protection and control systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the commissioning of network protection and control systems in complex situations and includes isolation, inspection, monitoring, testing, adjustment and repair, refurbishment and/or overhaul and functional checks. It includes schemes from discrete and interdependent schemes, such as distance, differential, transformer differential, bus zone, bus overcurrent, revenue metering, current transformer accuracy, supervisory control and data acquisition (SCADA), communications, harmonic control, point on wave and high voltage (HV) plant testing.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTS004 Commission interdependent network protection and control systems

UETDRTS010 Develop power systems secondary isolation instructional documents

UETDRTS015 Maintain complex network protection and control systems

UETDRTS017 Maintain interdependent network protection and control systems

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the commissioning of network protection and control systems (complex)**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the commissioning of network protection and control systems (complex), are reviewed and determined
- 1.2** Purpose of the commissioning of network protection and control systems (complex) is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the commissioning of network protection and control systems (complex) are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project

brief

- 1.5** Testing parameters are established from organisational established procedures and policies and specifications
  - 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
  - 1.7** Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the commissioning of network protection and control systems (complex)**
- 2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3** Commissioning of network protection and control systems (complex) decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4** Mathematical and/or engineering models of the schemes are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures

- 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
  - 2.7 Testing of network protection and control systems (complex) is undertaken according to requirements and established procedures
  - 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
  - 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
  - 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
- 3 Complete the commissioning of network protection and control systems (complex)**
- 3.1 Final inspections of the network protection and control systems (complex) are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
  - 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of the commissioning of network protection and control systems (complex) documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS36 Commission complex network protection and control systems.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS001 Commission complex network protection and control systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- commissioning of a protection and control system, including at least five (5) complex schemes
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- electrical equipment associated with protection and control schemes encompassing:
  - types and applications of electrical equipment – characteristics, capabilities (schemes: overcurrent, frame leakage, cooling, buchholz, direct current (d.c.) supplies, restricted earth, sensitive earth fault, circuit breaker fail, reclose, d.c. frame leakage, CEL fail, under frequency load shed and earth fault)
- principles of isolation and tagging procedures associated with protection testing encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation, maintenance, isolation and tagging procedures
  - requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings

- techniques in documenting isolations
- techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- techniques in the installation and maintenance procedures protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- maintenance and commissioning procedures associated with discrete protection schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the maintenance and commissioning procedures
  - requirements for the use of maintenance and commissioning manuals, system diagrams/plans and drawings
  - techniques in maintenance and commissioning procedures – planning, policy and testing techniques
  - close out requirements
- relay manufacturer specifications encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of relay manufacturer specifications
  - requirements for the use of relay manufacturer manuals, system diagrams/plans and drawings
  - types, function and characteristics of specific relays - differences between specific relays used for the same functionality
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
  - identification of environmental issues associated with the handling and disposing of insulation materials
  - safety precautions when handling and disposing of heat dissipation materials - safe working practices; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures; types and function of specialised equipment; safe working practices when using specialised equipment; and emergency response and rescue including first aid e
  - techniques in the handling and disposing of insulation materials - polychlorinated biphenyl (PCB), asbestos, insulating oil and sulphur hexafluoride (SF6) gas
- procedure to undertake a visual inspection of a scheme encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
  - requirements for the use of manuals, system diagrams/plans and drawings

- identifying obvious deficiencies in operating to the standard functionality
- techniques in determining relay malfunction - targeting
- techniques in determining wiring defects
- operation and maintenance procedures associated with discrete protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with operating procedures
  - requirements for the use of operating manuals, system diagrams/plans and drawings
  - techniques - gas collection and analysis, bleeding and resetting, calibration, operational and sensitivity checks, and trip and alarm checks
  - surge relay types and uses, including transformer main tanks and diverter switch chambers
- commissioning procedures associated with discrete protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements
- measurements and the interpretation and analysis of those measurements related to the plant and/or equipment type encompassing:
  - type of measurements - timing, current, voltage, capacitance, inductance, impedance, phase angle, phase shift, resistance, dielectric dissipation factor, frequency, polarisation index, ratio, vector group and temperature
  - interpretation and analysis the use of techniques - digital comparison of data, extrapolation, use of graphs and charts, statistics and tables, mathematical calculation of expected values and comparison with manufacturer data and measurements
  - techniques in the processes involved in follow-up actions and recommendations resulting from analysis and interpretation of results and measurements
- principles of power transformer construction and operations encompassing:
  - applications of static reactive plant in HV networks, including voltage control, volt-ampere reactive (VAR) control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators (SVC) and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS

- risks; types, selection, maintenance and use of PPE
- types and applications of test equipment encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of electrical and/or electronic test equipment
  - types and applications of test equipment used on discrete protection scheme
  - techniques in the use of test equipment - electronic test equipment (Doble and Ohmmicrome), gas injection equipment, manufacturer test equipment, multimeters, phase angle meters and meggers
- detailed operation and setting of discrete protection systems encompassing:
  - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
  - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, current transformer summation, time graded discrimination and backup protection
  - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- detailed operation of interdependent protection systems encompassing:
  - overcurrent and earth leakage schemes, including inter-tripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
  - pilot wire and phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
  - load shedding, voltage control, parallel operation and load rejection
  - busbar protection and circuit breaker failure protection
  - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking
- detailed operation of complex protection systems encompassing:
  - distance - characteristics, electromechanical, electronic, impedance, mho, offset mho, switched schemes, non-switched schemes, blocking schemes and bus zone
  - differential, transformer differential and bus overcurrent - principles, feeder protection, transformer protection, bias systems, harmonic restraint, current transformer connections, bus protection, low impedance schemes, high impedance schemes, bus overcurrent schemes, generator protection, current transformer connections, special considerations and digital systems
  - types of revenue metering
  - applications of supervisory control and data acquisition (SCADA)
  - complex protection systems for communications
  - harmonic control
  - point on wave switching.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## UETDRTS002 Commission energy/revenue metering schemes

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit covers the commissioning of energy/revenue metering schemes. This includes isolation, inspection, monitoring, testing, adjustment, repair, refurbishment and/or overhaul and functional checks of revenue metering schemes. It includes the requirements to prove the functionality of the metering scheme in accordance with electrical installation (state and national) standards, metrology procedures and compliance to tariff requirements.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage

electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTS012 Install and replace complex energy/revenue metering schemes and associated equipment

UETDRTS013 Install and replace high voltage metering and associated equipment

UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures

UETDRTS020 Management of energy registration data errors for revenue billing purposes

UETDRTS022 Perform current injection testing using phantom load

UETDRTS024 Test and maintain energy/revenue metering schemes

UETDREL15 Respond to power systems technical enquiries and requests

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the commissioning of energy/revenue metering schemes**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the commissioning of energy/revenue metering schemes,**

are reviewed and determined

- |                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

- 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3 Lifting, climbing and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
  - 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.6 Testing equipment is used in accordance with the work schedule and requirements and/or established procedures
  - 2.7 Commissioning of energy/revenue metering schemes is carried out in accordance with the work schedule
  - 2.8 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.9 Essential knowledge and associated skills are applied in the safe commissioning of revenue metering schemes to ensure completion in an agreed timeframe according to requirements
  - 2.10 Solutions to non-routine problems are identified and actioned, using essential knowledge and associated skills, according to requirements
  - 2.11 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 3 Complete the commissioning of energy/revenue metering schemes**
- 3.1 Final inspections of the commissioning of energy/revenue metering schemes using routine tests and acceptance tests are undertaken to ensure they comply with all requirements and include all specifications and documents needed to complete the project
  - 3.2 Appropriate internal/external personnel are notified of

completion and reports and/or completion documents are finalised/commissioned according to established procedures and timeframes

- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of routine testing and acceptance testing procedures/activities/results, for the commissioning of energy/revenue metering schemes, documents are issued and records updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS43 Commission energy/revenue metering schemes.

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS002 Commission energy/revenue metering schemes

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing, on at least three (3) occasions, the commissioning of the following metering schemes types:
  - single feeder high voltage (HV)
  - low voltage (LV) current transformer customer sites
- performing, on at least three (3) occasions, commissioning involving at least seven (7) of the following:
  - isolation
  - inspection
  - monitoring
  - testing
  - adjustment
  - repair
  - refurbishment and/or overhaul
  - functional checks of revenue metering schemes
- demonstrating, on at least three (3) occasions, knowledge and application of at least two (2) different manufacturer's:
  - proprietary software
  - application programming
  - interrogations
- undertaking, on at least three (3) occasions, the following:
  - calculations, including obtain final revenue multiplier
  - validation of meter pulse multiplier
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- commissioning techniques
- evaluation of the metering design and equipment accuracy to ensure suitability with national electricity market requirements
- recording nameplate details for all metering scheme components and ensuring compliance with the design accuracy class
- confirmation of instrument transformer connected ratios, polarities, burdens and voltage drops
- checking integrity of all wiring, connections and terminalisations
- ensuring cable types and sizes selected are correct
- phase sequence and vector relationships are correct
- documentation verifying the errors of current transformers and voltage transformers
- validation of meter data to verify the metering programming parameters, display and error functions are all correct in accordance with manufacturer specifications
- verifying meter programming to ensure the best possible resolution of energy data measurement and recording
- validating the interval data with the responsible person and/or meter data provider
- confirming remote communications with the metering is established and is of sufficient quality to support reliable communications and data transfer
- standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
- requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
- requirements for the use of maintenance and commissioning manuals, system diagrams/plans and drawings
- techniques in commissioning procedures – planning, policy and testing techniques
- close out requirements
- requirements for the use of meter manufacturer manuals, system diagrams/plans and drawings.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## UETDRTS003 Commission energy/revenue metering schemes (complex)

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit covers the commissioning of energy/revenue metering schemes in complex situations, including summation, subtraction, generation, bulk supply, interconnector and wholesale metering installations. This includes isolation, inspection, monitoring, testing, adjustment, repair, refurbishment and/or overhaul and functional checks of complex revenue metering schemes. It includes the requirements to prove the functionality of the metering scheme in accordance with electrical installation (state and national) standards, metrology procedures and compliance to tariff requirements.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE105A Fix and secure electrotechnology equipment

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEE006A Solve problems in single and three phase low voltage machines

UEENEE033A Solve problems in single and three phase low voltage electrical apparatus and

circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTS002 Commission energy/revenue metering schemes

UETDRTS012 Install and replace complex energy/revenue metering schemes and associated equipment

UETDRTS013 Install and replace high voltage metering and associated equipment

UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures

UETDRTS020 Management of energy registration data errors for revenue billing purposes

UETDRTS022 Perform current injection testing using phantom load

UETDRTS024 Test and maintain energy/revenue metering schemes

UETDRTS025 Test and maintain energy/revenue metering schemes (complex)

UETDREL15 Respond to power systems technical enquiries and requests

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the commissioning of energy/revenue metering schemes (complex)**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the commissioning of energy/revenue metering schemes (complex), are reviewed and determined
- 1.2** Purpose of the commissioning of energy/revenue metering schemes (complex) is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures, policies and specifications for the commissioning of energy/revenue metering schemes (complex) are obtained or established with appropriate personnel
- 1.4** Commissioning of energy/revenue metering schemes (complex) procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Commissioning parameters are established from organisational established procedures, policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7** Work roles and tasks are allocated according to requirements and individual competencies

- 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and customers are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant internal/external work permits are obtained to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the commissioning of energy/revenue metering schemes (complex)**
  - 2.1 WHS/OHS and sustainable energy principles, functionality and practices to prevent the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3 Lifting, climbing and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
  - 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.6 Testing equipment is used in accordance with the work schedule and requirements and/or established procedures
  - 2.7 Commissioning of energy/revenue metering schemes (complex) is carried out in accordance with the work schedule
  - 2.8 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and

preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures

- 2.9** Essential knowledge and associated skills are applied in the safe commissioning of energy/revenue metering schemes (complex) to ensure completion in an agreed timeframe according to requirements
- 2.10** Solutions to non-routine problems are identified and actioned, using essential knowledge and associated skills, according to requirements
- 2.11** Quality of work is monitored against personal performance agreement and/or established organisational and professional standards

### **3 Complete the commissioning of energy/revenue metering schemes (complex)**

- 3.1** Final inspections of the commissioning of energy/revenue metering schemes (complex) using routine tests and acceptance tests are undertaken to ensure they comply with all requirements and include all specifications and documents needed to complete the project
- 3.2** Appropriate internal/external personnel are notified of completion and reports and/or completion documents are finalised/commissioned according to established procedures and timeframes
- 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4** Approved copies of routine testing and acceptance testing procedures/activities/results, for the commissioning of energy/revenue metering schemes (complex), documents are issued and records updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS47 Commission energy/revenue metering schemes (complex).

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS003 Commission energy/revenue metering schemes (complex)

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing, on at least three (3) occasions, the commissioning of at least seven (7) of the following complex metering scheme types:
  - multiple feeder high voltage (HV) and low voltage (LV) customers
  - summation
  - subtraction
  - interposing
  - voltage changeover schemes
  - generation
  - zone substation
  - bulk supply
  - interconnector
  - wholesale metering
- performing, on at least three (3) occasions, at least six (6) of the following activities:
  - isolation
  - inspection
  - monitoring
  - testing
  - adjustment
  - repair
  - refurbishment and/or overhaul
  - functional checks of complex revenue metering schemes
- performing, on at least three (3) occasions, all the following activities:
  - ensuring meter function using multiple proprietary software applications
  - determining energy flows, voltage, current and phasor relationships

- validating against independent information sources and test results to ensure that the installation is operating within prescribed limits (enterprise, manufacturer and regulated energy market requirements)
- validation of the actual meter energy data against meter data provider remote data streams
- calculating and recording the overall installation site
- ensuring compliance with regulated energy market compliance
- endorsing the site overall accuracy and installation compliance as the technical representative authorised by the metering provider
- ensuring all records of the commissioning of energy/revenue metering schemes (complex) are complete and forwarded to the appropriate authority in accordance with regulatory requirements
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- additional hardware components which add complexity and the possibility for greater uncertainty in overall accuracy
- calculations are more complex and require consideration of multiple sources of errors to accurately determine the overall site errors
- calculation and verification of correct application of transformer losses, transmission line losses and correction factors in meter programming
- determining the inputs and relationships required of physical metering points to establish and verify logical metering schemes
- consideration to all sources of burden on the metering instrument transformers and ensuring the instrument transformer is operating within its accuracy limits
- communicating with market participants, including meter data provider and responsible person
- knowledge of high fault currents
- risk assessments and safe systems of work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRTS004 Commission interdependent network protection and control systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package 2.0.

## **Application**

This unit covers the commissioning of network protection and control systems in interdependent situations and includes isolation, inspection, monitoring, testing, adjustment and repair, refurbishment and/or overhaul and functional checks. It also includes schemes, such as circuit breaker fail, master-controlled earth fault, impedance and differential relays, inter-tripping, blocking, synchronising, pilot wire, phase comparison, load shedding, voltage control, parallel operation and load rejection. This includes commissioning of discrete and interdependent schemes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTS010 Develop power systems secondary isolation instructional documents

UETDRTS017 Maintain interdependent network protection and control systems

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the commissioning of network protection and control systems (interdependent)**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the commissioning of network protection and control systems (interdependent), are reviewed and determined
- 1.2** Purpose of the commissioning of network protection and control systems (interdependent) is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the commissioning of network protection and control systems (interdependent) are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational

established procedures and policies and specifications

**1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

**1.7** Work roles and tasks are allocated according to requirements and individual competencies

**1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures

**1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work

**1.10** Risk control measures are identified, prioritised and evaluated against the work schedule

**1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

## **2 Carry out the commissioning of network protection and control systems (interdependent)**

**2.1** Circuit/systems modelling is used to evaluate alternative proposals as per established procedures

**2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures

**2.3** Commissioning of network protection and control systems (interdependent) decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures

**2.4** Mathematical and/or engineering models of the schemes are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures

**2.5** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate

authorities consulted, where necessary, in accordance with requirements and established procedures

- 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7 Testing of network protection and control systems (interdependent) is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the commissioning of network protection and control systems (interdependent)**

- 3.1 Final inspections of the network protection and control systems (interdependent) are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of the commissioning of network protection and control systems (interdependent) documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS22 Commission interdependent network protection and control systems.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS004 Commission interdependent network protection and control systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating commissioning of a protection and control system involving at least five (5) of the following:
  - circuit breaker fail protection
  - master controlled earth fault
  - inter-tripping
  - blocking
  - synchronising
  - pilot wire
  - phase comparison
  - load shedding
  - voltage control protection
  - frame leakage
  - delta current
  - reverse power
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- commissioning procedures associated with discrete protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures

- requirements for the use of commissioning manuals, system diagrams/plans and drawings
- techniques in commissioning procedures – planning, policy, testing techniques and close out requirements
- principles of power transformer construction and operations encompassing:
  - applications of static reactive plant in high voltage (HV) networks, including voltage control, voltage-ampere reactive (VAR) control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE).

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals
- working at realistic heights above ground, i.e., above three metres, in limited spaces, with different structural/construction types and method and in a variety of environments.

# UETDRTS005 Commission power systems metering schemes

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the commissioning of metering schemes and includes isolation, inspection, monitoring, testing and adjustment; and repair, refurbishment and/or overhaul and function checks on schemes including ammeters, voltmeters, wattmeters, volt-ampere reactive (VAR) meters and energy metering. It also includes an emphasis on ensuring that the metering is connected into the power system safely and correctly and that it returns valid information.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTS010 Develop power systems secondary isolation instructional documents

UETDRTS014 Maintain and test and metering schemes

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the commissioning of metering schemes**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the commissioning of metering schemes, are reviewed and determined
- 1.2** Purpose of the commissioning of metering schemes is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the commissioning of metering schemes are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures on policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

- 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the commissioning of metering schemes**
  - 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Commissioning of metering scheme decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical/engineering models of the commissioning of metering schemes are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements

- 2.7 Testing of the commissioning of metering schemes is undertaken according to requirements and established procedures
  - 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
  - 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
  - 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
- 3 Complete the commissioning of metering schemes**
- 3.1 Final inspections of the commissioning of metering schemes are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
  - 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of the commissioning of metering schemes documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector

Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS26 Commission power systems metering schemes.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS005 Commission power systems metering schemes

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating commissioning metering schemes, on at least three (3) occasions, testing accuracy to established plans of at least three (3) schemes using the following equipment
  - ammeter
  - voltmeter
  - wattmeter
  - volt-ampere reactive (VAR) meter
  - energy meter\*
  - (\*Must do)
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of metering and control equipment encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment
  - types of meters - kilowatt-hour meters single and polyphase, demand meters, recording meters and electronic recording metering system summators
  - installation and removal methods - direct connection and plug in method, and enterprise specific
  - types of associated equipment and accessories - meter boards, service fuse, links, contactors, time switch and audio frequency injection relay
  - testing procedures - safety testing and polarity testing

- commissioning procedures associated with relevant equipment encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# UETDRTS006 Conduct evaluation of power system substation faults

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the procedure in evaluating power system incidents by following a process of downloading event and disturbance record information from protection relays. This includes interpreting items, such as alarms, relay targets, relay settings, event records, disturbance records and sequence of events records. It also encompasses the evaluation and/or investigation of relay operation, relay schemes functionality and relay settings.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy

management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the evaluation of power system events**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the evaluation of power system failures, are reviewed and determined
- 1.2** Purpose of the evaluation of power system events are established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the evaluation of power system failures are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures on policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7** Work roles and tasks are allocated according to requirements and individual competencies

- 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the evaluation of power system events**
  - 2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3** Following evaluation of power system events, decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4** Mathematical and /or engineering models of the evaluation of power system events are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6** Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
  - 2.7** Testing of power system is undertaken according to requirements and established procedures

- 2.8** Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
  - 2.9** Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
  - 2.10** Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.11** Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
- 3 Complete the evaluation of power system events**
  - 3.1** Final evaluation of all relevant data pertaining to the power system event is undertaken to ensure the recommendations comply with all requirements and include all specifications and documentations needed to complete the project
  - 3.2** Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
  - 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4** Approved copies of the evaluation of power system event documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS23 Conduct evaluation of power system substation faults.

## Links

# Assessment Requirements for UETDRTS006 Conduct evaluation of power system substation faults

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating at least two (2) downloads from protection relays or recording equipment from each of the following:
  - relay panel
  - remote location
- developing five (5) evaluation reports on power system events, including all of the following:
  - interpretation of targets in a substation
  - interpretation of fault reports
  - interpretation of downloaded event data
  - development of valid conclusions and recommendations
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management

systems

- analysis of relevant data and evaluation of WHS/OHS system effectiveness
- assess resources to establish and maintain WHS/OHS management systems
- power distribution network documentation encompassing:
  - requirements for the use of manuals, system diagrams/plans and drawings and for plans, such as work method statements for the control of WHS/OHS risks
  - types and application of power distribution network documentation drawings and documents - wiring and schematic diagrams, drawings and switching symbols, mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different diagrams and documentation on low voltage (LV) and high voltage (HV) systems - overhead distribution extensions, underground distribution extensions, distribution substations and street lighting systems
- measurements and the interpretation and analysis of those measurements related to the plant and/or equipment type encompassing:
  - type of measurements - timing, current, voltage, capacitance, inductance, impedance, phase angle, phase shift, resistance, dielectric dissipation factor, frequency, polarisation index, ratio, vector group and temperature
  - interpretation and analysis of the use of techniques - digital comparison of data, extrapolation, use of graphs and charts, statistics and tables, mathematical calculation of expected values and comparison with manufacturer data and measurements
  - techniques in the processes involved in follow-up actions and recommendations resulting from analysis and interpretation of results and measurements
- system components and layouts encompassing:
  - distribution system layouts - overhead/underground, urban/rural, HV customers, high-rise building systems, three phase lines, single phase lines, single wire earth return (SWER) systems, spur, parallel and ring systems, and typical substation types
  - transmission system layouts - lines, buses, transformers and cables; line/bus layouts, including single, double, ring and breaker and half systems, and HV crossing methods
- calculation of fault levels encompassing:
  - calculation of fault levels in symmetrical and asymmetrical fault conditions - types of faults, interconnected and radial systems, symmetrical components, representation of voltages and currents, sequence impedances of system plant, calculation/determination of sequence impedance networks, determination of operative sequence impedances, fault or arc impedances and first approximation techniques
  - interrupting device capabilities - determination of fault current breaking capability and let through energy capability of fuses and circuit breakers, direct current (d.c.) offset and transient condition effects
- protection system types encompassing:
  - requirements of a protection scheme - relationship to primary system design, purpose of protection, safety of persons, protection of plant, system instability, system break up, loss of customers, loss of revenue, protection zones, restricted schemes, unrestricted schemes, duplicate protection, local backup protection, remote backup protection, selectivity, discrimination, stability, sensitivity and reliability

- components of a protection scheme - current transformers, potential transformers, summation current transformers, interposing transformers, multi-tapped transformers, all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor-based relays, gas relays, thermal sensors, hardwired communication, powerline carriers systems, microwave systems, fibre optic systems, need for isolation and need for interfacing
- protection applied to buses - overload, differential, earth leakage, structure leakage, combined schemes and protection overlap
- protection applied to transformers - biased differential, gas, winding temperature and oil temperature
- protection applied to single/radial lines - overcurrent, earth leakage, slow earth leakage, distance, auto reclose, sectionalising and over voltage
- protection applied to interconnected lines - overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance and offset
- detailed operation and setting of discrete protection systems encompassing:
  - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
  - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, current transformer summation, time graded discrimination and backup protection
  - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- detailed operation of interdependent protection systems encompassing:
  - overcurrent and earth leakage schemes, including inter-tripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
  - pilot wire, phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
  - load shedding, voltage control, parallel operation and load rejection
  - busbar protection and circuit breaker failure protection
  - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking
- detailed operation of complex protection systems encompassing:
  - distance - characteristics, electromechanical, electronic, impedance, mho, offset mho, switched schemes, non-switched schemes, blocking schemes and bus zone
  - differential, transformer differential and bus overcurrent - principles, feeder protection, transformer protection, bias systems, harmonic restraint, current transformer connections, bus protection, low impedance schemes, high impedance schemes, bus overcurrent schemes, generator protection, special considerations and digital systems
  - types of revenue metering
  - applications of supervisory control and data acquisition (SCADA)
  - complex protection systems for communications

- harmonic control
- point on wave switching.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals
- working at realistic heights above ground, i.e., above three metres, in limited spaces, with different structural/construction types and method and in a variety of environments.

# UETDRTS007 Conduct evaluation of power systems primary plant

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the commissioning and maintenance testing requirements for primary plant and equipment. It includes both the practical application of the tests and analysis of results, covering, but not limited to; applied high voltage (HV) testing and induced HV testing, ratio, polarity, winding resistance, impedance, dielectric loss angle, partial discharge and watts loss insulation resistance and transformer vector group. It encompasses a complete understanding of the nature of the tests being conducted and the ability to conduct the tests in a safe manner.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTS010 Develop power systems secondary isolation instructional documents

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the testing of primary plant**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the testing of primary plant systems, are reviewed and determined
- 1.2** Purpose of the testing of primary plant is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the testing of primary plant are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures and policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

- 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the testing of primary plant**
- 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Testing of primary plant decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical/engineering models of the testing of primary plant are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements

- 2.7 Testing of primary plant is undertaken according to requirements and established procedures
  - 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
  - 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
  - 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
- 3 Complete the testing of primary plant**
- 3.1 Final inspections of the primary plant are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
  - 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of the testing of primary plant documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS32 Conduct evaluation of power systems primary plant.

# Assessment Requirements for UETDRTS007 Conduct evaluation of power systems primary plant

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing five (5) of the following tests on primary plant – transformers (note: at least two (2) (\*) must be included):
  - \*direct current (d.c.) high voltage (HV) tests
  - \*alternating current (a.c.) HV tests
  - \*induced HV tests
  - ratio tests
  - polarity tests
  - winding resistance tests
  - impedance tests
  - insulation resistance tests
  - transformer vector group tests
  - winding temperature indicator tests
  - alarm tests
  - neutral current transformer tests
- complete five (5) of the following tests on primary plant – circuit breakers (note: at least two (2) (\*) must be included):
  - profiling and contact timing
  - \*a.c. HV tests
  - function tests
  - minimum voltage operation tests
  - insulation resistance tests
  - contact resistance tests
  - auxiliary contact tests
  - alarm tests

- complete at least three (3) of the following tests on primary plant – capacitor banks:
  - cell capacitance measurement
  - neutral current transformer tests
  - balance tests
  - insulation resistance
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- detailed operation of fundamental test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurement of voltage, current, power, resistance, insulation resistance, impedance and phase sequence, and the use of oscilloscopes
- primary plant testing encompassing:
  - transformers - d.c. HV tests, a.c. HV tests, HV tests, ratio tests, polarity tests, winding resistance tests, impedance tests, insulation resistance tests, transformer vector group test, winding temperature indicator test, alarm tests and neutral current transformer tests
  - circuit breakers - d.c. HV tests, a.c. HV tests, induced HV tests, function tests, operation timing, minimum voltage operation test, insulation resistance test, contact resistance test, auxiliary contact test and alarm tests
  - capacitor banks - d.c. HV tests, a.c. HV tests, induced HV tests, neutral current transformer tests, balance tests and insulation resistance.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRTS008 Design power systems secondary isolation instructional documents**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the skills needed to design secondary isolations. This will involve analysis of tripping and a thorough understanding of secondary voltage and current, direct current (d.c.), alarm, metering and communication circuits. It also involves accurate communication of this information in a format acceptable to the operating or testing authority.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

requirements and individual competencies

- 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

## **2 Carry out the design of secondary isolation instructional documents**

- 2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
- 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
- 2.3** Design of secondary isolation instructional document decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
- 2.4** Mathematical and/or engineering models of the design of secondary isolation instructional documents are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
- 2.5** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.6** Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within

- an agreed timeframe according to requirements
- 2.7 Testing of the design of secondary isolation instructional documents is undertaken according to requirements and established procedures
  - 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
  - 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
  - 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
- 3 Complete the design of secondary isolation instructional documents**
- 3.1 Final inspections of the design of secondary isolation instructional documents are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
  - 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of the design of secondary isolation instructional documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS30 Design power systems secondary isolation instructional documents.

# Assessment Requirements for UETDRTS008 Design power systems secondary isolation instructional documents

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- designing secondary isolation instructional documents for at least four (4) of the following substation equipment:
  - bus protection
  - high impedance bus protection
  - feeder/line protection
  - transformer protection
  - earth fault protection
  - backup protection
  - pilot wire protection
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management

systems

- analysis of relevant data and evaluation of WHS/OHS system effectiveness
- assess resources to establish and maintain WHS/OHS management systems
- secondary switching/isolation principles and sheet preparation encompassing:
  - techniques in performing and demonstrating correct sequence of isolation and/or restoration - communication with appropriate authorities, ensuring adequate protection remains in service to provide plant protection, and reading and interpreting drawings for switching/isolating, sheet/instruction preparation.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS009 Design testing and commissioning procedures for field devices and substations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the testing and commissioning procedures for new substation and field devices in accordance with design. This will involve analysis of settings, and a thorough understanding of the circuit design, which will involve covering areas such as metering, communication circuits and supervisory control and data acquisition (SCADA).

It also includes the procedures needed to enable proof of correct operation of all circuits to design specifications. It also encompasses the need for supplying accurate communication in the format that is acceptable to the operating or testing authority.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Protection Relays and Meters Pathway Unit Group

UETDRTS023 Repair, test and calibrate protection relays and meters

Metering Pathway Unit Group

UETDRTS005 Commission power systems metering schemes

UETDRTS010 Develop power systems secondary isolation instructional documents

UETDRTS014 Maintain and test and metering schemes

Primary Plant Pathway Unit Group

UETDRTS007 Conduct evaluation of power systems primary plant

UETDRTS010 Develop power systems secondary isolation instructional documents

Protection Systems Pathway Unit Group

UETDRTS010 Develop power systems secondary isolation instructional documents

UETDRTS015 Maintain complex network protection and control systems

UETDRTS017 Maintain interdependent network protection and control systems

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

## **1 Plan for the design of testing and commissioning procedures for substation and field devices**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the undertaking of design of testing and commissioning procedures for substation and field devices, are reviewed and determined
- 1.2** Purpose for designing of testing and commissioning procedures for substation and field devices is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the design of testing and commissioning procedures for substation and field devices are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures on policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7** Work roles and tasks are allocated according to requirements and individual competencies
- 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures

## **2 Carry out the design of**

- 2.1** Circuit/systems modelling is used to evaluate alternative

**testing and commissioning  
procedures for substation  
and field devices**

proposals in accordance with established procedures

- 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
- 2.3 Design of testing and commissioning procedures for substation and field devices decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
- 2.4 Mathematical and/or engineering models of design testing and commissioning procedures for substation and field devices are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
- 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7 Testing and commissioning procedures for substation and field devices are developed according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation

initiatives in accordance with established procedures

### **3 Complete the design of testing and commissioning procedures for substation and field devices**

- 3.1** Final review of testing and commissioning procedures for substation and field devices is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
- 3.2** Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4** Approved copies of design testing and commissioning procedures for substation and field devices documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRTS24 Design testing and commissioning procedures for field devices and substations.

# Assessment Requirements for UETDRTS009 Design testing and commissioning procedures for field devices and substations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing testing and commissioning procedures for at least three (3) of the following substation equipment:
  - bus protection
  - feeder/line protection
  - transformer protection
  - earth fault protection
  - backup protection
  - metering schemes
  - communication and supervisory control and data acquisition (SCADA) schemes
- developing testing and commissioning procedures for at least two (2) of the following field devices:
  - regulators
  - automatic circuit reclosers (ACR)/gas switch
  - line capacitors
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker

- requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
- requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
- traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
- control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
- rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances, determining system requirements, aircrew familiarisation with network operations and equipment, and requirements for effective communications operations for aerial work
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- electrical equipment associated with protection and control schemes encompassing:
  - types and applications of electrical equipment – characteristics, capabilities (schemes: overcurrent, frame leakage, cooling, buchholz, direct current (d.c.) supplies, restricted earth, sensitive earth fault, circuit breaker fail, reclose, d.c. frame leakage, CEL fail, under frequency load shed and earth fault)
- principles of isolation and tagging procedures associated with protection testing encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation, maintenance, isolation and tagging procedures
  - requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
  - techniques in documenting isolations
  - techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise

- standards
- techniques in the installation and maintenance procedures for protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- maintenance and commissioning procedures associated with discrete protection schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with maintenance and commissioning procedures
  - requirements for the use of maintenance and commissioning manuals, system diagrams/plans and drawings
  - techniques in maintenance and commissioning procedures – planning, policy and testing techniques
  - close out requirements
- relay manufacturer specifications encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of relay manufacturer specifications
  - requirements for the use of relay manufacturer manuals, system diagrams/plans and drawings
  - types, function and characteristics of specific relays - differences between specific relays used for the same functionality
- procedure to undertake a visual inspection of a scheme encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
  - requirements for the use of manuals, system diagrams/plans and drawings
  - identifying obvious deficiencies in operating to the standard functionality
  - techniques in determining relay malfunction - targeting
  - techniques in determining wiring defects
- operation and maintenance procedures associated with discrete protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with operating procedures
  - requirements for the use of operating manuals, system diagrams/plans and drawings
  - techniques - gas collection and analysis, bleeding and resetting, calibration, operational and sensitivity checks, and trip and alarm checks
  - surge relay types and uses, including transformer main tanks and diverter switch chambers
- measurements and the interpretation and analysis of those measurements related to the plant and/or equipment type encompassing:
  - type of measurements - timing, current, voltage, capacitance, inductance, impedance, phase angle, phase shift, resistance, dielectric dissipation factor, frequency, polarisation index, ratio, vector group and temperature

- interpretation and analysis the use of techniques - digital comparison of data, extrapolation, use of graphs and charts, statistics and tables, mathematical calculation of expected values and comparison with manufacturer data and measurements
- techniques in the processes involved in follow-up actions and recommendations resulting from analysis and interpretation of results and measurements
- substation safety practices encompassing:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures; plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - the rescue personnel from energised conductors, emergency descent from an EWP and/or rescue from confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of HV insulation systems encompassing:
  - insulation design principles - common materials used, electrical characteristics, thermal characteristics, uses and applications to substation HV plant and equipment, grading, construction and cooling
  - common contaminants and their effects - internal contaminants and external contaminants
  - testing and measurement of insulation quality - test types and common measuring instruments and techniques, resistance and resistivity, losses, measurement errors, temperature corrections and safe work practices related to testing and measurement
  - safety precautions when testing and measuring HV insulation systems - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)

- principles of power transformer construction and operations encompassing:
  - transformer types - shell, core, auto, double wound, three phase, single phase and combinations of these types, step up and step down transformers, transmission and generation types
  - reactor types - shunt and series, applications and design considerations
  - iron circuit characteristics - steel types, losses and techniques used to eliminate excess eddy currents and other circulating currents
  - winding configurations and construction techniques - helical, spiral, disc and interleaved disc types
  - insulation methods and techniques - fully insulated windings and graded insulation techniques, oil-filled and gas-filled power transformers
  - transformer and reactor ratings, losses and efficiency - equivalent circuits and vector relationships, and impedance percent
  - nameplate details - BIL, tapping winding detail, physical layout, cooling ratings and physical details
  - transformer and reactor cooling types and their effects on design and rating
  - transformer and reactor auxiliaries - temperature indicators, over pressure devices and control systems
  - winding configurations - star-star, star-delta, star-zigzag, nomenclature and common methods of diagrammatic representation of winding configuration
  - operating constraints as single units and in parallel
  - tapping windings - placement issues, tapping range, on-load tap changer (OLTC) versus off load tap changer techniques, types in use (high speed resistor, reactor and vacuum types, Jansen mechanisms, dead tank and live tank types) and control system characteristics
  - HV bushing selection – type, insulation system used, rating, BIL, selection criteria and testing considerations
- principles of power transformer construction and operations encompassing:
  - applications of static reactive plant in HV networks, including voltage control, volt-ampere reactive (VAR) control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators (SVC) and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- principles of power transformer high speed OLTC encompassing:

- selector types and applications for HV power transformers
- diverter switch types and applications for HV power transformers, including live tank, dead tank, resistor type, reactor type, vacuum type, pennant flag and pennant cycle
- ratings and construction principles
- operating mechanism types, stored energy systems and associated control systems
- operating principles and operating sequences of selectors and diverters
- measurement requirements, including contacts, differential wear, transition resistors and transient protection devices, rotation lag, out of sequence controls and end-of-life unit and component assessment
- online diagnostic tools and devices
- ancillary equipment, including online filters, over pressure relays and devices
- testing requirements, including cycle timing, differential delay, energy accumulator mechanical and operational tests and control system functional tests
- safety precautions when testing and maintaining HV power transformer OLTC - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- operation and maintenance procedures associated with voltage regulation schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the operating procedures
  - requirements for the use of operating manuals, system diagrams/plans and drawings
  - principles of operation and operating sequences - voltage control, VAR control, live bus/dead bus synchronising checks, tap changer principles, requirements for parallel operations, settings and grading
  - techniques associated with - isolation requirements, enterprise maintenance requirements, setting checks, low voltage (LV) injections and electrical measurements
  - ancillary equipment, including transducers, buswire schemes, tap position indicators, local/remote control systems and alarm systems
  - voltage regulation scheme types, including electromechanical, micro-processor or combinations of both
- types and applications of test equipment encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of electrical and/or electronic test equipment
  - types and applications of test equipment used on discrete protection scheme
  - techniques in the use of test equipment - electronic test equipment (Doble and Ohmmicrome), gas injection equipment, manufacturer test equipment, multimeters, phase angle meters and meggers
- voltage control techniques encompassing:
  - conditions leading to voltage collapse
  - effects on system of HV and LV
  - voltage control devices - voltage regulators applied to generators and synchronous phase modifiers, electromagnetic voltage regulators; series and parallel capacitors; OLTC

- transformers; and SVC, such as saturated reactor compensators, thyristor-controlled reactor compensators and combined systems
- production of harmonics and methods of harmonic control
- location of voltage control devices within the system
- transient over voltages encompassing:
  - causes and effects of transient over voltages - switching transients and lightning transients, and effects on plant items
  - control techniques and systems - surge diverters, shield wires and circuit breaker arc control
  - insulation systems - insulation systems, insulation coordination and insulation grading
- procedure to undertake a visual inspection of a scheme encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
  - requirements for the use of manuals, system diagrams/plans and drawings
  - identifying obvious deficiencies in operating to the standard functionality
  - techniques in determining device malfunction
  - techniques in determining wiring defects
- commissioning procedures associated with relevant equipment encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements
- detailed operation and setting of discrete protection systems encompassing:
  - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
  - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, current transformer summation, time graded discrimination and backup protection
  - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- detailed operation of interdependent protection systems encompassing:
  - overcurrent and earth leakage schemes, including inter-tripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
  - pilot wire, phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
  - load shedding, voltage control, parallel operation and load rejection
  - busbar protection and circuit breaker failure protection
  - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking

- detailed operation of metering devices and principles encompassing:
  - common circuit configurations
  - meters and measurement principles
  - instrument transformer application
  - testing of metering systems and devices
  - implications of market operation
- detailed operation of fundamental test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurement of voltage, current, power, resistance, insulation resistance, impedance and phase sequence and the use of oscilloscopes
- detailed operation of protection test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurement of timing, voltage, current, resistance, inductance, capacitance, impedance, frequency, phase angle, phase difference and the use of primary, secondary and gas injection equipment
- detailed operation of metering test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurements of, voltage, current, power, reactive power, phase angle, resistance, inductance, capacitance, impedance, frequency, harmonics and the use of transient and data logging devices
- detailed operation of field device test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurements of voltage, current, power, reactive power, phase angle, resistance, inductance, capacitance, impedance, frequency, harmonics and the use of transient and data logging devices
- procedure for the systematic fault isolation through the application of diagnostic techniques encompassing:
  - principles of analytical questioning
  - techniques in drawing valid conclusions from first observations
  - concepts of broad first-line testing
  - consideration of/responsibility for avoidance of further damage
  - interpretation of specific test results - cause/effect

- techniques for isolation to appropriate level - half-split, module/function isolation (kernel technique), substitution, diagnostic software, requirements for the use of manuals, system diagrams/plans, drawings, handbooks, specifications and fault pathways
- software/firmware functions awareness
- factors affecting field versus workshop repair costs
- scheduling minor/major repair activities and downtime
- implications of temporary repairs
- use of system knowledge and history
- data interpretation - expected versus actual
- feedback to design/production/installation processes
- subsystems and system structures
- system signals/status indicators
- known failure modes and trends
- action threshold warnings versus catastrophic failure
- component ratings/upgrades
- disassembly/reassembly techniques and care
- relative costs of repair and replacement - remaining life, ongoing maintenance, additional benefits of replacement equipment, e.g., improved productivity and quality.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRTS010 Develop power systems secondary isolation instructional documents**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the skills needed to develop secondary isolations. This will involve analysis of tripping and a thorough understanding of secondary voltage and current, direct current (d.c.), alarm, metering and communication circuits. It also involves accurate communication of this information in a format acceptable to the operating or testing authority.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEE149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

| ELEMENTS                                                                         | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Elements describe the essential outcomes.                                        | Performance criteria describe the performance needed to demonstrate achievement of the element.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>1 Plan for the development of secondary isolation instructional documents</b> | <p><b>1.1</b> Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the development of secondary isolation instructional documents, are reviewed and determined</p> <p><b>1.2</b> Purpose of the development of secondary isolation instructional documents is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel</p> <p><b>1.3</b> Organisational established procedures on policies and specifications for the development of secondary isolation instructional documents are obtained or established with appropriate personnel</p> <p><b>1.4</b> Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief</p> <p><b>1.5</b> Testing parameters are established from organisational established procedures and policies and specifications</p> <p><b>1.6</b> Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures</p> <p><b>1.7</b> Work roles and tasks are allocated according to</p> |

requirements and individual competencies

- 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the development of secondary isolation instructional documents**
  - 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Development of secondary isolation instructional document decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical and/or engineering models of the development of secondary isolation instructional documents are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance

specifications to ensure completion of the project within an agreed timeframe according to requirements

- 2.7 Testing of the development of secondary isolation instructional documents is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the development of secondary isolation instructional documents**

- 3.1 Final inspections of the development of secondary isolation instructional documents are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of the development of secondary isolation instructional documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS29 Develop power systems secondary isolation instructional documents.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRTS010 Develop power systems secondary isolation instructional documents

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing secondary isolation instructional documents for at least four (4) of the following substation equipment:
  - bus protection
  - high impedance bus protection
  - feeder/line protection
  - transformer protection
  - earth fault protection
  - backup protection
  - pilot wire protection
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management

systems

- analysis of relevant data and evaluation of WHS/OHS system effectiveness
- assess resources to establish and maintain WHS/OHS management systems
- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components, typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- HV generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
  - techniques in the installation of generator sets control systems - synchronising of generator control systems onto and off the network without interruption to supply, estimation of HV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single HV job - overhead systems, indoor systems,

- customer installations and kiosk substations
- HV generator set and control system to HV distribution assets
- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment (HV and low voltage (LV) equipment)
  - characteristics, capabilities and application of powerline electrical equipment
  - safety precautions with regards to using electrical equipment
  - techniques in pre-use inspection on the serviceability of electrical equipment
  - techniques in the general maintenance, care and storage of electrical equipment
  - identifying hazards, assessing and controlling risks associated with the use of electrical equipment
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements, such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions,

- and safe approach distances
- responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
- techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- LV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permit authorities, requirements for team switching and procedures for coordination of operations
  - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- secondary switching/isolation principles and sheet preparation encompassing:
  - techniques in performing and demonstrating correct sequence of isolation and/or restoration - communications with appropriate authorities, ensuring adequate protection remains in service to provide plant protection, reading and interpreting drawings for switching/isolating, and sheet/instruction preparation
- protection schemes encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
  - types of protection schemes - reasons for use, application of protection zones around system elements and degree of protection
  - types of feeder protection equipment - overcurrent protection inverse time-current operating characteristics
  - operation of overcurrent protection equipment used on distribution systems
  - operation of automatic circuit reclosers (ACR) and their time-current characteristics
  - types and characteristics of overcurrent relays
  - coordination methods of a distribution feeder protection scheme
  - earth fault protection used on a distribution feeder
  - operation of a single wire earth return (SWER) system
- extra-high voltage (EHV) generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator

- safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
- techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of EHV load and assessing the appropriateness of the generator
- operating a generator in parallel to a single EHV job - overhead systems, indoor systems, customer installations and kiosk substations
- EHV generator set and control system to EHV distribution assets.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS011 Install and maintain power system communication equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the installation and maintenance of network communication systems and includes the isolation and functional checks of discrete and interdependent communication schemes associated with power systems. It also encompasses power line carrier equipment, protection signalling equipment, radio systems and telephone systems, VF systems, multiplexing systems and fibre optic systems, but does not include wiring.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy

management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the installation and maintenance of power system communication equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the installation and maintenance of power system communication equipment systems, are reviewed and determined
- 1.2** Purpose of the installation and maintenance of power system communication equipment is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the installation and maintenance of power system communication equipment are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures and policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

- 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the installation and maintenance of power system communication equipment**
- 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Installation and maintenance of power system communication equipment decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical/engineering models of the installation and maintenance of power system communication equipment are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to

analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements

- 2.7 Testing of the installed and/or maintained power system communication equipment is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the installation and maintenance of power system communication equipment**

- 3.1 Final inspections of the installed and/or maintained power system communication equipment are undertaken to ensure they comply with all requirements and include all specifications and documentation needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of the installation and maintenance of power system communication equipment documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS34 Install and maintain power system communication equipment.

# Assessment Requirements for UETDRTS011 Install and maintain power system communication equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing maintenance testing on substation communications equipment, including isolation and functional checks on at least three (3) of the following systems:
  - supervisory cables
  - power line carrier systems
  - protection signalling equipment
  - telephone systems
  - VF systems
  - fibre optics
- completing commissioning tests on substation communications equipment, including isolation and functional checks on at least three (3) of the following systems:
  - supervisory cables
  - power line carrier systems
  - protection signalling equipment
  - telephone systems
  - VF systems
  - fibre optics
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location,

- and layout of thermal and hydroelectric power stations
- relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
- the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders; and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers; operation under load/no-load conditions; types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and co-ordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management

- procedures, and regulatory requirements, such as WHS/OHS and electrical safety
- techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
- methods of conducting audits on correct access authority procedures
- process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
- issue and receipt of operating agreements
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and-or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances
  - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- low voltage (LV) system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures

- enterprise-specific equipment installation procedures encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE); responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- detailed operation of communication devices and principles encompassing:
  - types of communication systems
  - interface to power system equipment
  - hardware configurations
  - testing of communication links
- procedure for the systematic fault isolation through the application of diagnostic techniques encompassing:
  - principles of analytical questioning
  - techniques in drawing valid conclusions from first observations
  - concepts of broad first-line testing
  - consideration of/responsibility for avoidance of further damage
  - interpretation of specific test results - cause/effect
  - techniques for isolation to appropriate level - half-split, module/function isolation (kernel technique), substitution, diagnostic software, requirements for the use of manuals, system diagrams/plans, drawings, handbooks, specifications and fault pathways
  - software/firmware functions awareness
  - factors affecting field versus workshop repair costs
  - scheduling minor/major repair activities and downtime
  - implications of temporary repairs
  - use of system knowledge and history
  - data interpretation - expected versus actual
  - feedback to design/production/installation processes
  - subsystems and system structures
  - system signals/status indicators
  - known failure modes and trends

- action threshold warnings versus catastrophic failure
- component ratings/upgrades
- disassembly/reassembly techniques and care
- relative costs of repair and replacement - remaining life, ongoing maintenance, additional benefits of replacement equipment, e.g., improved productivity and quality
- protection schemes encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
  - types of protection schemes - reasons for use, application of protection zones around system elements and degree of protection
  - types of feeder protection equipment - overcurrent protection inverse time-current operating characteristics
  - operation of overcurrent protection equipment used on distribution systems
  - operation of automatic circuit reclosers (ACR) and their time-current characteristics
  - types and characteristics of overcurrent relays
  - coordination methods of a distribution feeder protection scheme
  - earth fault protection used on a distribution feeder
  - operation of a single wire earth return (SWER) system
- extra-high voltage (EHV) generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
  - techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of EHV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single EHV job - overhead systems, indoor systems, customer installations and kiosk substations
  - EHV generator set and control system to EHV distribution assets.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRTS012 Install and replace complex energy/revenue metering schemes and associated equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the installation and replacement of energy/revenue meters and associated equipment in complex situations. Replacement includes the identification of faults in accordance with established procedures and return to service. It includes the requirements to ascertain if normal functions of the meters and associated equipment are in accordance with operating standards.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTS013 Install and replace high voltage metering and associated equipment

UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures

UETDRTS022 Perform current injection testing using phantom load

UETDRTS024 Test and maintain energy/revenue metering schemes

UETDREL15 Respond to power systems technical enquiries and requests

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Plan for the installation and replacement of energy/revenue metering schemes and associated equipment (complex)**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the installation and replacement of energy/revenue metering schemes and associated equipment (complex), are reviewed and determined

- 1.2 Purpose of the installation and replacement of energy/revenue metering schemes and associated equipment (complex) is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
  - 1.3 Organisational established procedures, policies and specifications for the installation and replacement of energy/revenue metering schemes and associated equipment (complex) are obtained or established with appropriate personnel
  - 1.4 Installation and replacement of energy/revenue metering schemes and associated equipment (complex) procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
  - 1.5 Installation and replacement parameters are established from organisational established procedures, policies and specifications
  - 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
  - 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients, customers are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant internal and external work permits are obtained to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the installation and replacement of energy/revenue metering schemes and associated**
- 2.1 WHS/OHS and sustainable energy principles, functionality and practices to prevent accidents and minimise waste are incorporated into the project in accordance with requirements and/or established

|                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

applicable, statutory or regulatory approval

- 3.4** Approved copies of the installation and replacement of energy/revenue metering schemes and associated equipment (complex) documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS41 Install and replace complex energy/revenue metering schemes and associated equipment.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRTS012 Install and replace complex energy/revenue metering schemes and associated equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing installation and replacement, on at least three (3) occasions, including at least three (3) of the following:
  - high voltage (HV) metering schemes
  - HV zone substation metering schemes
  - HV bulk supply point metering schemes
  - low voltage (LV) summation metering schemes
- performing, on at least three (3) occasions, the installation and replacement of the following:
  - HV current/voltage transformers (including return to service)
  - energy meters
  - associated equipment
- performing, on at least one (1) occasion, the following activity:
  - installation or replacement of a typical HV bulk supply point metering scheme
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- associated equipment encompassing:
  - summation current transformers, voltage selection relays, auxiliary supply relays, voltage fail relays, fibre optics, data concentrators and in-house displays
- the installation and replacement of complex energy/revenue metering schemes and associated equipment in accordance with enterprise policies and procedures applicable to the work -

impact of work on local network system integrity, substation entry and access requirements, and impacts of isolation on protection and control systems.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRTS013 Install and replace high voltage metering and associated equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the installation and replacement of high voltage (HV) metering and associated equipment. Replacement includes the identification of faults in accordance with established procedures and return to service. It includes the requirements to ascertain if normal functions of the meters and associated equipment are in accordance with operating standards.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage

electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTS022 Perform current injection testing using phantom load

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan for the installation and replacement of HV metering and associated equipment**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the installation and replacement of HV metering and associated equipment, are reviewed and determined
- 1.2** Purpose of the installation and replacement of HV metering and associated equipment is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures, policies and specifications for the installation and replacement of HV metering and associated equipment are obtained or established with appropriate personnel

- 1.4 Installation and replacement of HV metering and associated equipment procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
  - 1.5 Installation and replacement parameters are established from organisational established procedures, policies and specifications
  - 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
  - 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients, customers are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant internal and external work permits are obtained to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the installation and replacement of HV metering and associated equipment**
  - 2.1 WHS/OHS and sustainable energy principles, functionality and practices to prevent accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.2 Installation and replacement of HV metering and associated equipment decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.3 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures

- |                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS38 Install and replace high voltage metering and associated equipment.

# Assessment Requirements for UETDRTS013 Install and replace high voltage metering and associated equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing installation and replacement, on at least three (3) occasions, of at least three (3) of the following:
  - high voltage (HV) metering schemes
  - HV zone substation metering schemes
  - HV bulk supply point metering schemes
  - HV summation metering schemes
- performing on at least three (3) occasions, the installation and replacement of the following:
  - HV current/voltage transformers (including return to service)
  - energy meters
  - associated equipment
- performing on at least one (1) occasion, the following activity:
  - installation or replacement of a typical HV bulk supply point metering scheme
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- associated equipment encompassing:
  - fuses, current transformers, voltage transformers, test block, current transformer chamber, marshalling kiosk, wiring, voltage fail relays, sealing equipment, terminals, links, modems, communications equipment, direct current (d.c.) supplies, aerials, optical isolation equipment, fibre optics, solid state recorders, pulse repeat relays, pulsing outputs, energy/distribution management systems, communication interface modules, and alarms

- selection of suitable equipment to meet site requirements and other requirements as prescribed by the regulated energy market rules
- communicating as required with market participants, including meter data provider and responsible person
- meter storage, handling and disposal processes in accordance with enterprise policies and procedures
- awareness of jurisdictional rules and requirements to allow work to be performed in local network service provider areas
- standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation and replacement of HV metering and associated equipment procedures
- use of enterprise and/or manufacturer manuals, system diagrams/plans and drawings and other related documentation for the installation and replacement of HV metering and associated equipment
- work in accordance with enterprise safe systems of work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS014 Maintain and test and metering schemes

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the testing of metering schemes and includes isolation, inspection, monitoring, testing, adjustment; and repair, refurbishment and/or overhaul and functional checks on schemes, including ammeters, voltmeters, wattmeters, volt-ampere reactive (VAR) meters and energy metering. It also includes the understanding of the purpose of the testing so as to prove accuracy and suitability of the metering for the required task.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTS010 Develop power systems secondary isolation instructional documents

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the testing and maintenance of metering schemes**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the testing and maintenance of metering schemes, are reviewed and determined
- 1.2** Purpose of the testing and maintenance of metering schemes is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the testing and maintenance of metering schemes are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures on policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures

- 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the testing and maintenance of metering schemes**
  - 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Testing and maintenance of metering schemes decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical/engineering models of the testing and maintenance of metering schemes are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements

- |                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                   | <ul style="list-style-type: none"><li>2.7 Testing and maintenance of metering schemes is undertaken according to requirements and established procedures</li><li>2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures</li><li>2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements</li><li>2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards</li><li>2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures</li></ul>  |
| <b>3 Complete the testing and maintenance of metering schemes</b> | <ul style="list-style-type: none"><li>3.1 Final inspections of the testing and maintenance of metering schemes are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project</li><li>3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned</li><li>3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval</li><li>3.4 Approved copies of the testing and maintenance of metering schemes documents are issued and records are updated in accordance with established procedures</li></ul> |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector

Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS25 Maintain and test and metering schemes.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS014 Maintain and test and metering schemes

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating, on at least three (3) occasions, testing accuracy to established plans of at least three (3) schemes using the following equipment:
  - ammeter
  - voltmeter
  - wattmeter
  - volt-ampere reactive (VAR) meter
  - energy meter\*
  - (\*Must do)
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- procedure to undertake a visual inspection of a scheme encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
  - requirements for the use of manuals, system diagrams/plans and drawings
  - identifying obvious deficiencies in operating to the standard functionality

- techniques in determining device malfunction
- techniques in determining wiring defects
- procedures for the location and rectification of faults in electrical equipment up to 1000 volts alternating current (a.c.) and/or 1500 volts direct current (d.c.) encompassing:
  - relationship of WHS/OHS to the location and rectification of faults in electrical equipment - acts and regulations, identification of personal safety, workplace hazards, working with electrically operated tools and equipment, emergency first aid/resuscitation, rescue from a live electrical situation, and enterprise policies and procedures
  - types of drawings - differentiation between symptoms, faults and causes in malfunctioning equipment, and fault-finding techniques and procedures
  - fundamental electrical concepts - effects of current, practical resistors, sources of electromagnetic field, series, parallel and series-parallel circuits, electrical measurement, capacitors, inductors and magnetism
  - fundamentals of general appliances - basic principles of appliances (non-mathematical), appliance identification, appliance ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in appliances and fault-finding procedures (prescriptive)
  - fundamentals of single phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in phase splitting and universal type motors, and fault-finding procedures (prescriptive)
  - fundamentals of three phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, motor starter principles, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, safe testing procedures and fault-finding procedures (prescriptive)
  - fundamentals of single and three phase electrical heaters - basic principles of operation, types of electrical heaters, electrical heater identification, electrical heater ratings, basic principles of operation of control and protection devices, fault conditions and symptoms, safe testing procedures and fault-finding procedures (prescriptive)
- detailed operation of metering devices and principles encompassing:
  - common circuit configurations
  - meters and measurement principles
  - instrument transformer application
  - testing of metering systems and devices
  - implications of market operation
- detailed operation of metering test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurements of voltage, current, power, reactive power, phase angle, resistance, inductance, capacitance, impedance, frequency,

- harmonics and the use of transient and data logging devices
- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000 volts a.c. and/or 1500 volts d.c. encompassing:
  - safe electrical work practices and procedures according to standards such as AS/NZ 4836:2001 Safe working on low-voltage electrical installations and equipment, or equivalent
  - safe use of tools and plant
  - safe use of ladders and elevated work platforms (EWP)
  - safe use of personal protective equipment (PPE)
  - hazards in the (electrical) work environment - shock hazards, fire hazards, chemical hazards other hazardous areas
  - special situations
  - procedures for dealing with fires associated with electrical equipment
  - procedures for dealing with polychlorinated biphenyl (PCB)
  - electric shock victim rescue methods and procedures - basic first aid treatment for shock, burns and bleeding
  - purpose of each procedure and application - expired air resuscitation (EAR), external cardiac-compression (ECC), cardiopulmonary resuscitation (CPR) and combined application of EAR and ECC (purpose of each procedure and application)
  - components of a basic electrical circuit(s) – source, control, protection and load
  - types of circuit diagrams – symbols, conventions, interpretations and free sketches
  - types of circuit connections and functions - open circuit, closed circuit and short circuit
  - techniques in basic electrical measurement - use of multimeters; use of ammeter; use of voltage measuring and indicating devices; testing of measuring instruments; care of measuring instruments; voltage, current and resistance measurement; estimating values of voltage, current and resistance; and using Ohms law
  - fundamental principles of electrical concepts - effects of current; practical resistors; sources of Electromagnetic Field (EMF); simple practical circuit; series, parallel and series-parallel circuits; electrical measurement; capacitors; inductors and magnetism
  - techniques in insulation resistance measurement and requirements
  - earthing principles and systems
- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000 volts a.c. and/or 1500 volts d.c. encompassing:
  - methods for testing insulation resistance - continuity of prospective earthing conductor, and continuity between exposed conductive parts and the earthing system
  - methods of recognising acceptable test results for compliance with safety requirements
  - methods of recognising unacceptable test results requiring an appropriate qualified person to further investigate
  - cable types and conductor termination methods and techniques - conductors solid, stranded and flexible, and colour codes
  - single and three phase systems and loads - number of active and live conductors required, line and phase voltage and typical loads
  - identification and rating of general appliances

- single phase induction motors - motor identification, motor ratings and direction of rotation
- three phase induction motors - motor identification, motor ratings and direction of rotation
- single and three phase heaters - types of heaters, heater identification and heater ratings
- electrical distribution arrangement - power systems within premises, and purpose of switchboards/distribution boards (residual current devices and earth-leakage circuit breaker (ELCBs))
- circuit isolation and protection devices
- isolation procedures - work clearance, testing for voltage, lock-off and tagging, techniques in isolation and tagging, regulations, codes of practice and procedures
- disconnection procedures, practices and requirements
- types of replacement equipment
- methods of ensuring equipment is safe to connect to supply
- methods of reconnection procedures, practices and requirements
- methods of return equipment to service
- effects of harmonics encompassing:
  - characteristics and effects of harmonics on protection device functions/malfunction
  - effects of harmonics on transformers, generators, motors and quality of supply
- procedures for the systematic fault isolation through the application of diagnostic techniques encompassing:
  - principles of analytical questioning
  - techniques in drawing valid conclusions from first observations
  - concepts of broad first-line testing
  - consideration of/responsibility for, avoidance of further damage
  - interpretation of specific test results - cause/effect
  - techniques for isolation to appropriate level - half-split, module/function isolation (kernel technique), substitution; diagnostic software; requirements for the use of manuals, system diagrams/plans, drawings and handbooks; and specifications and fault pathways
  - software/firmware functions awareness
  - factors affecting field versus workshop repair costs
  - scheduling minor/major repair activities and downtime
  - implications of temporary repairs
  - use of system knowledge and history
  - data interpretation, expected versus actual
  - feedback to design/production/installation processes
  - subsystems and system structures
  - system signals/status indicators
  - known failure modes and trends
  - action threshold warnings versus catastrophic failure
  - component ratings/upgrades

- disassembly/reassembly techniques and care
- relative costs of repair and replacement - remaining life, ongoing maintenance, and additional benefits of replacement equipment, e.g., improved productivity and quality.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS015 Maintain complex network protection and control systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the maintenance of network protection and control systems in complex situations and includes isolation, inspection, monitoring, testing, adjustment and repair, refurbishment and/or overhaul and functional checks. It includes schemes from discrete and interdependent schemes, such as distance, differential, transformer differential, bus zone, bus overcurrent, revenue metering, supervisory control and data acquisition (SCADA), communications, harmonic control and point on wave.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTS010 Develop power systems secondary isolation instructional documents

UETDRTS017 Maintain interdependent network protection and control systems

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the maintenance of network protection and control systems (complex)**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the maintenance of network protection and control systems (complex), are reviewed and determined
- 1.2** Purpose of the maintenance of network protection and control systems (complex) is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the maintenance of network protection and control systems (complex) are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with and/or directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are ascertained from organisational established procedures, policies and specifications

- 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
  - 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the maintenance of network protection and control systems (complex)**
  - 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Maintenance of network protection and control systems (complex) decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical and/or engineering models of the scheme are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance

with requirements and established procedures

- 2.6** Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7** Testing of network protection and control systems (complex) is undertaken according to requirements and established procedures
- 2.8** Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9** Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10** Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11** Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the maintenance of network protection and control systems (complex)**

- 3.1** Final inspections of the network protection and control systems (complex) are undertaken to ensure they comply with all requirements and include all specifications and documentation needed to complete the project
- 3.2** Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4** Approved copies of the maintenance of network protection and control systems (complex) documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS35 Maintain complex network protection and control systems.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS015 Maintain complex network protection and control systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all of the following
  - isolating protection, control and alarms associated with complex protection and control schemes
  - calibrating complex protection and control relays
  - carrying out function tests (trips and alarms) on complex protection and control schemes
  - writing reports on performance of complex protection and control schemes
  - isolating 'in service' current transformers
- completing all of the following:
  - activities that address the correction of errors in network protection and control systems
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of power transformer construction and operations encompassing:
  - applications of static reactive plant in high voltage (HV) networks, including voltage control, volt-ampere reactive (VAR) control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type

- typical protection systems used, including neutral unbalance current and neutral unbalance voltage
- techniques used when balancing elements within static reactive plant
- safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
- detailed operation of complex protection systems encompassing:
  - distance - characteristics, electromechanical, electronic, impedance, mho, offset mho, switched schemes, non-switched schemes, blocking schemes and bus zone
  - differential, transformer differential and bus overcurrent - principles, feeder protection, transformer protection, bias systems, harmonic restraint, current transformer connections, bus protection, low impedance schemes, high impedance schemes, bus overcurrent schemes, generator protection, special considerations and digital systems
  - types of revenue metering
  - applications of supervisory control and data acquisition (SCADA)
  - complex protection systems for communications
  - harmonic control
  - point on wave switching.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers demonstrating an understanding of the regulated energy market national regulations to daily work practices of a customer's revenue metering installation.

It also includes demonstrating detailed knowledge of the individual's role and responsibilities as the onsite representative of the metering provider.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage

electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTS013 Install and replace high voltage metering and associated equipment

UETDRTS022 Perform current injection testing using phantom load

UETTDREL15 Respond to power systems technical enquiries and requests

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan for the maintaining of compliance with national electricity market metrology practices and procedures**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the maintaining of compliance with national electricity market metrology practices and procedures, are reviewed and determined
- 1.2** Purpose of the maintaining of compliance with national electricity market metrology practices and procedures is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel

- 1.3 Organisational established procedures, policies and specifications for the maintaining compliance with national electricity market metrology practices and procedures are obtained or established with appropriate personnel
  - 1.4 Maintenance of compliance with national electricity market metrology practices and procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
  - 1.5 Maintenance of compliance with national electricity market metrology practices and procedures parameters are established from organisational established procedures, policies and specifications
  - 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
  - 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and customers are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant internal/external work permits are obtained to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the maintaining of compliance with national electricity market metrology practices and procedures**
- 2.1 WHS/OHS and sustainable energy principles, functionality and practices to prevent the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established procedures

- 2.3 Lifting, climbing, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised personnel for directions according to established procedures
  - 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.6 Testing equipment is used in accordance with the work schedule and requirements and/or established procedures
  - 2.7 Routine management of compliance issues with national electricity market metrology practices and procedures is carried out in accordance with the work schedule
  - 2.8 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.9 Essential knowledge and associated skills are applied in the maintaining of compliance with national electricity market metrology practices and procedures to ensure completion in an agreed timeframe according to requirements
  - 2.10 Solutions to non-routine problems are identified and actioned, using essential knowledge and associated skills, according to requirements
  - 2.11 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 3 Complete the maintaining of compliance with national electricity market metrology practices and procedures**
- 3.1 Final compliance inspections with the maintenance of compliance with national electricity market metrology practices and procedures are undertaken to ensure they conform to all requirements and include all specifications and documents needed to complete the project
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are

finalised/commissioned according to established procedures and timeframes

- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of routine testing and acceptance testing procedures/activities/results, for the maintaining of compliance with national electricity market metrology practices and procedures, documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS39 Maintain compliance with national electricity market metrology practices and procedures.

## Links

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# **Assessment Requirements for UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing, on at least three (3) occasions, the following activity:
  - maintaining the compliance of a customer's revenue metering installation with the metrology practices and procedures of the national electricity market
- demonstrating, on at least one (1) occasion, the following activity:
  - the ability to locate, interpret and apply national electricity market rules
- dealing with unplanned events on at least one (1) occasion.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- navigation of the internet to ascertain current technical and procedural standards applicable to meter provision within the regulated energy market
- interpreting and applying current technical and procedural standards applicable to meter provision within the regulated energy market
- maintaining customer and metering documentation in accordance with enterprise and regulatory requirements applicable to meter service provision in the regulated energy market
- processes and procedures applicable
- identifying and managing risks to compliance
- duties and obligations of market participants
- timeframes applicable to metering
- legal obligations of market and non-market participants
- other relevant legislations, WHS/OHS and trade practices act
- exemption procedures and data substitution procedures

- categories and types of metering installations
- accuracy class for types 1-7
- customer negotiations skills
- ISO 9001:2015 Quality Management System accreditation, ISO 14001:2015 Environmental Management Systems
- auditing course
- service level requirements
- meter asset management plan
- penalties for non-compliance
- interrogating and interpreting meter register, type of site, installation date, overall accuracy and ratios.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRTS017 Maintain interdependent network protection and control systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the maintenance of network protection and control in interdependent situations and includes isolation, inspection, monitoring, testing, adjustment, and repair, refurbishment and/or overhaul and functional checks of interdependent network protection and control systems. It includes the requirements to prove the functionality of interdependent and discrete schemes, such as circuit breaker fail, master-controlled earth fault, inter-tripping, blocking, synchronising, pilot wire, phase comparison, load shedding, voltage control, parallel operation and load rejection.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEE104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTS010 Develop power systems secondary isolation instructional documents

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

| ELEMENTS                                                                                     | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Elements describe the essential outcomes.                                                    | Performance criteria describe the performance needed to demonstrate achievement of the element.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>1 Plan for the maintenance of network protection and control systems (interdependent)</b> | <p><b>1.1</b> Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the maintenance of network protection and control systems (interdependent), are reviewed and determined</p> <p><b>1.2</b> Purpose of the maintenance of network protection and control systems (interdependent) is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel</p> <p><b>1.3</b> Organisational established procedures on policies and specifications for the maintenance of network protection and control systems (interdependent) are obtained or established with appropriate personnel</p> <p><b>1.4</b> Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief</p> <p><b>1.5</b> Testing parameters are established from organisational established procedures on policies and specifications</p> |

- 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7 Work roles and tasks are allocated according to requirements and individual competencies
- 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the maintenance of network protection and control systems (interdependent)**
  - 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Maintenance of network protection and control systems (interdependent) decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical and/or engineering models of the scheme are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance

with requirements and established procedures

- 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7 Testing of network protection and control systems (interdependent) is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the maintenance of network protection and control systems (interdependent)**

- 3.1 Final inspections of the network protection and control systems (interdependent) are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of the maintenance of network protection and control systems (interdependent) documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS21 Maintain interdependent network protection and control systems.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS017 Maintain interdependent network protection and control systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirement, including the use of risk control measures
- applying sustainable energy principles and practices
- demonstrating, at least five (5) times, each of the following activities:
  - isolating protection, control and alarms associated with interdependent protection and control schemes
  - carrying out function tests (trips and alarms) on interdependent protection and control schemes
  - writing reports on performance of interdependent protection and control schemes
  - isolating 'in service' current transformers
- dealing with unplanned events on at least one (1) occasion

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)
  - particular reference to state and territory regulations regarding - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- electrical equipment associated with protection and control schemes encompassing:
  - types and applications of electrical equipment – characteristics, capabilities (schemes: overcurrent, frame leakage, cooling, buchholz, direct current (d.c.) supplies, restricted earth, sensitive earth fault, circuit breaker fail, reclose, d.c. frame leakage, CEL fail, under frequency load shed and earth fault)
- principles of isolation and tagging procedures associated with protection testing

encompassing:

- standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation, maintenance, isolation and tagging procedures
- requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
- techniques in documenting isolations
- techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- techniques in the installation and maintenance procedures protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- maintenance and commissioning procedures associated with discrete protection schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the maintenance and commissioning procedures
  - requirements for the use of maintenance and commissioning manuals, system diagrams/plans and drawings
  - techniques in maintenance and commissioning procedures – planning, policy and testing techniques
  - close out requirements
- relay manufacturer specifications encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of relay manufacturer specifications
  - requirements for the use of relay manufacturer manuals, system diagrams/plans and drawings
  - types, function and characteristics of specific relays - differences between specific relays used for the same functionality
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
  - identification of environmental issues associated with the handling and disposing of insulation materials
  - safety precautions when handling and disposing of heat dissipation materials - safe working practices; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures; types and function of specialised equipment; safe working practices when using specialised equipment; and emergency response and rescue, including first aid

- techniques in the handling and disposing of insulation materials - polychlorinated bi-phenyls (PCB's), asbestos, insulating oil and sulfur hexafluoride (SF6) gas
- procedures to undertake a visual inspection of a scheme encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
  - requirements for the use of manuals, system diagrams/plans and drawings
  - identifying obvious deficiencies in operating to the standard functionality
  - techniques in determining relay malfunction - targeting
  - techniques in determining wiring defects
- operation and maintenance procedures associated with discrete protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with operating procedures
  - requirements for the use of operating manuals, system diagrams/plans and drawings
  - techniques - gas collection and analysis, bleeding and resetting, calibration, operational and sensitivity checks, and trip and alarm checks
  - surge relay types and uses, including transformer main tanks and diverter switch chambers
- measurements and the interpretation and analysis of those measurements related to the plant and/or equipment type encompassing:
  - type of measurements - timing, current, voltage, capacitance, inductance, impedance, phase angle, phase shift, resistance, dielectric dissipation factor, frequency, polarisation index, ratio, vector group and temperature
  - interpretation and analysis the use of techniques - digital comparison of data, extrapolation, use of graphs and charts, statistics and tables, mathematical calculation of expected values and comparison with manufacturers data and measurements
  - techniques in the processes involved in follow-up actions and recommendations resulting from analysis and interpretation of results and measurements
- infra-red imaging principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to infra-red imaging
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for infra-red imaging reporting
  - techniques in evaluating serviceability of circuit breaker operation
  - procedures for obtaining correct HV switchyard arrangements - identification of hazards and controlling risks, safety procedures and precautions, responsibilities and protocols, and identifying switching resources
  - safety precautions when testing and measuring equipment with infra-red imaging - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and

protocols

- commissioning procedures associated with distribution protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy and testing techniques
  - close out requirements
- operation and maintenance procedures associated with voltage regulation schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the operating procedures
  - requirements for the use of operating manuals, system diagrams/plans and drawings
  - principles of operation and operating sequences - voltage control, volt-ampere reactive (VAR) control, live bus/dead bus synchronising checks, tap changer principles, requirements for parallel operations, settings and grading
  - techniques associated with isolation requirements, enterprise maintenance requirements, setting checks, low voltage (LV) injections and electrical measurements
  - ancillary equipment - transducers, buswire schemes, tap position indicators, local/remote control systems and alarm systems
  - voltage regulation scheme types - electromechanical, micro-processor or combinations of both
- types and applications of test equipment encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of electrical and/or electronic test equipment
  - types and applications of test equipment used on discrete protection scheme
  - techniques in the use of test equipment - electronic test equipment (Doble and Ohmicrome), gas injection equipment, manufacturer test equipment, multimeters, phase angle meters and meggers
- electrical equipment associated with distribution field device protection and control schemes encompassing:
  - types and applications of electrical equipment – characteristics, capabilities (schemes: automatic circuit reclosers (ACR), gas switches, secondary injection tests, primary injection tests, trunked mobile radio (TMR), supervisory control and data acquisition (SCADA), remote control, overcurrent, earth fault, sensitive earth fault, inverse time curves, definite time curves, tripping, reclose, direct current (d.c) supplies, and alternating current (a.c.) supplies and alarms)
- circuit breaker auxiliary systems encompassing:
  - types and characteristics of high-pressure air systems, including air storage and air handling processes
  - types and characteristics of d.c. systems, including battery types, charging systems and protection systems

- types and characteristics of special ambient gas (SF6) systems, including gas conditioning, storage and handling systems
- types and characteristics of vacuum interrupters
- types and characteristics of oil filled and oil handling
- detailed operation and setting of discrete protection systems encompassing:
  - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
  - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, current transformer summation, time graded discrimination and backup protection
  - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- detailed operation of interdependent protection systems encompassing:
  - overcurrent and earth leakage schemes, including inter-tripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
  - pilot wire and phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
  - load shedding, voltage control, parallel operation and load rejection
  - busbar protection and circuit breaker failure protection
  - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking
- procedures for the location and rectification of faults in electrical equipment up to 1000 volts a.c. and or 1500 volts d.c. encompassing:
  - relationship of WHS/OHS to the location and rectification of faults in electrical equipment - acts and regulations, identification of personal safety, workplace hazards, working with electrically operated tools and equipment, emergency first aid/resuscitation, rescue from a live electrical situation, and enterprise policies and procedures
  - types of drawings - differentiation between symptoms, faults and causes in malfunctioning equipment, fault-finding techniques and procedures
  - fundamental electrical concepts - effects of current; practical resistors; sources of electromagnetic field; series, parallel and series-parallel circuits; electrical measurement; capacitors; inductors and magnetism
  - fundamentals of general appliances - basic principles of appliances (non-mathematical), appliance identification, appliance ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in appliances and fault-finding procedures (prescriptive)
  - fundamentals of single phase induction motors - basic principles of operation (non-mathematical); motor identification; motor ratings; basic principles of operation of control equipment and protection devices; fault conditions and symptoms; safe isolation procedures; test equipment; safe testing procedures, including continuity; fault types in phase splitting and universal type motors; and fault-finding procedures (prescriptive)

- fundamentals of three phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, motor starter principles, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, safe testing procedures and fault-finding procedures (prescriptive)
- fundamentals of single and three phase electrical heaters - basic principles of operation, types of electrical heaters, electrical heater identification, electrical heater ratings, basic principles of operation of control and protection devices, fault conditions and symptoms, safe testing procedures and fault-finding procedures (prescriptive)
- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000 volts a.c. and or 1500 volts d.c. encompassing:
  - safe electrical work practices and procedures according to standards such as AS/NZ 4836:2001 Safe working on or near low-voltage electrical installations and equipment, or equivalent
  - safe use of tools and plant
  - safe use of ladders and elevated work platforms (EWP)
  - safe use of PPE
  - hazards in the (electrical) work environment - shock hazards, fire hazards, chemical hazards and other hazardous areas
  - special situations
  - procedures for dealing with fires associated with electrical equipment
  - procedures for dealing with PCBs
  - electric shock victim rescue methods and procedures - basic first aid treatment for shock, burns and bleeding
  - purpose of each procedure and application - expired air resuscitation (EAR), external cardiac-compression (ECC), cardiopulmonary resuscitation (CPR), combined application of EAR and ECC
  - components of a basic electrical circuit(s) – source, control, protection and load
  - types of circuit diagrams – symbols, conventions, interpretations and free sketches
  - types of circuit connections and functions - open circuit, closed circuit and short circuit
  - techniques in basic electrical measurement - use of multimeters; use of ammeter; use of voltage measuring and indicating devices; testing of measuring instruments; care of measuring instruments; voltage, current and resistance measurement; estimating values of voltage, current and resistance; and using Ohms law
  - fundamental principles of electrical concepts - effects of current; practical resistors; sources of electromagnetic field; simple practical circuit; series, parallel and series-parallel circuits; electrical measurement; capacitors; inductors and magnetism
  - techniques in insulation resistance measurement and requirements
  - earthing principles and systems
- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000 volts a.c. and or 1500 volts d.c. encompassing:
  - methods for testing insulation resistance - continuity of prospective earthing conductor, continuity between exposed conductive parts and the earthing system

- methods of recognising acceptable test results for compliance with safety requirements
- methods of recognising unacceptable test results requiring an appropriate qualified person for further investigation
- cable types and conductor termination methods and techniques - conductors solid, stranded and flexible, and colour codes
- single and three phase systems and loads - number of active and live conductors required, line and phase voltage, and typical loads
- identification and rating of general appliances
- single phase induction motors - motor identification, motor ratings and direction of rotation
- three phase induction motors - motor identification, motor ratings and direction of rotation
- single and three phase heaters - types of heaters, heater identification and heater ratings
- electrical distribution arrangement - power systems within premises, purpose of switchboards/distribution boards (residual current devices and circuit breakers)
- circuit isolation and protection devices
- isolation procedures - work clearance, testing for voltage, lock-off and tagging, techniques in isolation and tagging, regulation, codes of practice and procedures
- disconnection procedures, practices and requirements
- types of replacement equipment
- methods of ensuring equipment is safe to connect to supply
- methods of reconnection procedures, practices and requirements
- methods of return equipment to service
- effects of harmonics encompassing:
  - characteristics and effects of harmonics on protection device functions/malfunction
  - effects of harmonics on transformers, generators, motors and quality of supply.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals
- working at realistic heights above ground, i.e., above three metres, in limited spaces, with different structural/construction types and methods and in a variety of environments.

# UETDRTS018 Maintain, test and commission power systems voltage regulating equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the maintenance, testing and commissioning of distribution field devices to relevant standards, including voltage regulators, automatic circuit reclosers (ACR) control boxes, line capacitors and associated communication devices. It includes communicating with the operating authority, testing, clearing after test and energisation using techniques that are acceptable to the operating authority.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy

management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan and coordinate the maintenance, testing and commissioning of distribution field devices**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the maintenance testing and commissioning of distribution field devices, are reviewed and determined
- 1.2** Purpose of the work is established and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Established organisational procedures, policies and specifications for the work are obtained or established with appropriate personnel
- 1.4** Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures
- 1.5** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.6** Risk control measures are identified, prioritised and evaluated against the work schedule

- 1.7 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.8 Resources, including personnel, equipment, tools and PPE required for the job are identified, scheduled and coordinated, and confirmed in safe and technical working order
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 2 **Carry out and coordinate the maintenance, testing and commissioning of distribution field devices**
  - 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to avoid the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Maintenance, testing and commissioning decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical models of the distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements

- |                                                                                                           |            |                                                                                                                                                                         |
|-----------------------------------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                           | <b>2.7</b> | Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements                        |
|                                                                                                           | <b>2.8</b> | Quality of work is monitored against personal performance agreement and/or established organisational and professional standards                                        |
| <b>3 Complete and coordinate the maintenance, testing and commissioning of distribution field devices</b> | <b>3.1</b> | Final inspections of the work are undertaken to ensure it complies with all requirements and includes all specifications and documentation needed to complete the brief |
|                                                                                                           | <b>3.2</b> | Appropriate personnel are notified of completion and reports and/or completion documents are finalised                                                                  |
|                                                                                                           | <b>3.3</b> | Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval              |
|                                                                                                           | <b>3.4</b> | Approved copies of test documents are issued and records updated in accordance with established procedures                                                              |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS31 Maintain, test and commission power systems voltage regulating equipment.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS018 Maintain, test and commission power systems voltage regulating equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- testing, on two (2) occasions, at least two (2) of the following:
  - automatic circuit recloser (ACR) control box and recloser functions
  - line capacitor controller
  - voltage regulating relay and voltage regulator
- commissioning, on two (2) occasions, at least two (2) of the following:
  - ACR control box and recloser
  - line capacitors
  - voltage regulating relay and voltage regulator
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management systems

- analysis of relevant data and evaluation of WHS/OHS system effectiveness
- assess resources to establish and maintain WHS/OHS management systems
- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components, typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures

- techniques in facilitating and coordinating the delivery and issuing of access authorities
- techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements, such as WHS/OHS and electrical safety
- techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
- methods of conducting audits on correct access authority procedures
- process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
- issue and receipt of operating agreements
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV system switching principles including switching authorisation procedures to an extent indicated by the following aspects:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances
  - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permit authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- low voltage (LV) system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and

- procedures for coordination of operations
- techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- enterprise-specific equipment installation procedures encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE), responsibilities and protocols and safe working clearances
  - remote and local operating principles and conventions
- principles of power transformer construction and operations encompassing:
  - transformer types - shell, core, auto, double wound, three phase, single phase and combinations of these types, step up and step down transformers, and transmission and generation types
  - reactor types - shunt and series, applications and design considerations
  - iron circuit characteristics - steel types, losses and techniques used to eliminate excess eddy currents and other circulating currents
  - winding configurations and construction techniques - helical, spiral, disc and interleaved disc types
  - insulation methods and techniques - fully insulated windings and graded insulation techniques, oil-filled and gas-filled power transformers
  - transformer and reactor ratings, losses and efficiency - equivalent circuits and vector relationships, and impedance percent
  - nameplate details - basic impulse level (BIL), tapping winding detail, physical layout, cooling ratings and physical details
  - transformer and reactor cooling types and their effects on design and rating
  - transformer and reactor auxiliaries - temperature indicators, over pressure devices and control systems
  - winding configurations - star-star, star-delta, star-zigzag, nomenclature and common methods of diagrammatic representation of winding configuration
  - operating constraints as single units and in parallel
  - tapping windings - placement issues, tapping range, on-load tap changer (OLTC) versus off load tap changer techniques, types in use (high speed resistor, reactor and vacuum

- types, Jansen mechanisms, dead tank and live tank types), and control system characteristics
- HV bushing selection – type, insulation system used, rating, BIL, selection criteria and testing considerations
- principles of power transformer construction and operations encompassing:
  - applications of static reactive plant in HV networks, including voltage control, volt-ampere reactive (VAR) control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators (SVC) and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- principles of power transformer high speed OLTC encompassing:
  - selector types and applications for HV power transformers
  - diverter switch types and applications for HV power transformers, including live tank, dead tank, resistor type, reactor type, vacuum type, pennant flag and pennant cycle
  - ratings and construction principles
  - operating mechanism types, stored energy systems and associated control systems
  - operating principles and operating sequences of selectors and diverters
  - measurement requirements, including contacts, differential wear, transition resistors and transient protection devices, rotation lag, out of sequence controls and end-of-life unit and component assessment
  - online diagnostic tools and devices
  - ancillary equipment, including online filters, over pressure relays and devices
  - testing requirements, including cycle timing, differential delay, energy accumulator mechanical and operational tests, and control system functional tests
  - safety precautions when testing and maintaining HV power transformer OLTC - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- circuit breaker construction principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to circuit breakers
  - requirements for the use of manuals, circuit breaker diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation circuit breakers installed
  - use, characteristics and capabilities of specialised tools and equipment

- identification of components within the circuit breaker and associated control housings
- identification of energy sources within the circuit breaker and associated control housings
- identification of insulation paths within the circuit breaker
- types and characteristics of operating mechanisms
- types and characteristics of interrupter chambers
- safety precautions when constructing circuit breakers - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- synchronous condenser principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to synchronous condensers
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of synchronous condensers installed
  - identification of components within the synchronous condensers and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for synchronous condensers
  - techniques in evaluating serviceability of synchronous condensers operation
  - safety precautions when testing and measuring synchronous condensers - safe working practices and procedures; identification of hazards, assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; safe working clearances and communicating worksite procedures
- operation and maintenance procedures associated with voltage regulation schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the operating procedures
  - requirements for the use of operating manuals, system diagrams/plans and drawings
  - principles of operation and operating sequences - voltage control, VAR control, live bus/dead bus synchronising checks, tap changer principles, requirements for parallel operations, settings and grading
  - techniques associated isolation requirements, enterprise maintenance requirements, setting checks, LV injections and electrical measurements
  - ancillary equipment - transducers, buswire schemes, tap position indicators, local/remote control systems and alarm systems
  - voltage regulation scheme types - electromechanical, micro-processor or combinations of both
- electrical equipment associated with distribution field device protection and control schemes encompassing:
  - types and applications of electrical equipment – characteristics, capabilities (schemes: ACR, gas switches, secondary injection tests, primary injection tests, trunked mobile radio (TMR), supervisory control and data acquisition (SCADA), remote control, overcurrent, earth fault, sensitive earth fault, inverse time curves, definite time curves, tripping, reclose, direct current (d.c.) supplies, alternating current (a.c.) supplies and

- alarms)
- voltage control techniques encompassing:
  - conditions leading to voltage collapse
  - effects on system of HV and LV
  - voltage control devices - voltage regulators applied to generators and synchronous phase modifiers; electromagnetic voltage regulators; series and parallel capacitors; OLTC transformers; and SVC, such as saturated reactor compensators, thyristor-controlled reactor compensators and combined systems
  - production of harmonics and methods of harmonic control
  - location of voltage control devices within the system
- voltage control devices encompassing:
  - typical devices applications and capacities
  - estimation of rating of VAR regulating devices using graphical techniques
- transient over voltages encompassing:
  - causes and effects of transient over voltages - switching transients and lightning transients, and effects on plant items
  - control techniques and systems - surge diverters, shield wires and circuit breaker arc control
  - insulation systems - insulation systems, insulation coordination and insulation grading
- commissioning procedures associated with relevant equipment encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques, close out requirements
- procedures for the location and rectification of faults in electrical equipment up to 1000 volts a.c. and/or 1500 volts d.c. encompassing:
  - relationship of WHS/OHS to the location and rectification of faults in electrical equipment - acts and regulations, identification of personal safety, workplace hazards, working with electrically operated tools and equipment, emergency first aid/resuscitation, rescue from a live electrical situation, and enterprise policies and procedures
  - types of drawings - differentiation between symptoms, faults and causes in malfunctioning equipment, fault-finding techniques and procedures
  - fundamental electrical concepts - effects of current; practical resistors; sources of electromagnetic field; series, parallel and series-parallel circuits; electrical measurement; capacitors; inductors and magnetism
  - fundamentals of general appliances - basic principles of appliances (non-mathematical), appliance identification, appliance ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in appliances and fault-finding procedures (prescriptive)
  - fundamentals of single phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, basic principles of operation of

- control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in phase splitting and universal type motors, and fault-finding procedures (prescriptive)
- fundamentals of three phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, motor starter principles, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, safe testing procedures and fault-finding procedures (prescriptive)
- fundamentals of single and three phase electrical heaters - basic principles of operation, types of electrical heaters, electrical heater identification, electrical heater ratings, basic principles of operation of control and protection devices, fault conditions and symptoms, safe testing procedures and fault-finding procedures (prescriptive)
- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000 volts a.c. and/or 1500 volts d.c. encompassing:
  - safe electrical work practices and procedures according to standards such as AS/NZ 4836:2001 Safe working on low-voltage electrical installations and equipment, or equivalent
  - safe use of tools and plant
  - safe use of ladders and elevated work platforms (EWP)
  - safe use of PPE
  - hazards in the (electrical) work environment - shock hazards, fire hazards, chemical hazards and other hazardous areas
  - special situations
  - procedures for dealing with fires associated with electrical equipment
  - procedures for dealing with PCBs
  - electric shock victim rescue methods and procedures - basic first aid treatment for shock, burns and bleeding
  - purpose of each procedure and application - expired air resuscitation (EAR), external cardiac-compression (ECC), cardiopulmonary resuscitation (CPR), combined application of EAR and ECC
  - components of a basic electrical circuit(s) – source, control and protection, load
  - types of circuit diagrams – symbols, conventions, interpretations and free sketches
  - types of circuit connections and functions - open circuit, closed circuit and short circuit
  - techniques in basic electrical measurement - use of multimeters; use of ammeter; use of voltage measuring and indicating devices; testing of measuring instruments; care of measuring instruments; voltage, current and resistance measurement; estimating values of voltage, current and resistance and using Ohms law
  - fundamental principles of electrical concepts - effects of current; practical resistors; sources of electromagnetic field; simple practical circuit; series, parallel and series-parallel circuits; electrical measurement; capacitors; inductors and magnetism
  - techniques in insulation resistance measurement and requirements
  - earthing principles and systems
- disconnection and reconnection procedures for fixed wiring electrical equipment up to 1000

volts a.c. and/or 1500 volts d.c. encompassing:

- methods for testing insulation resistance - continuity of prospective earthing conductor, continuity between exposed conductive parts and the earthing system
- methods of recognising acceptable test results for compliance with safety requirements
- methods of recognising unacceptable test results requiring an appropriate qualified person to further investigate
- cable types and conductor termination methods and techniques - conductors solid, stranded and flexible, and colour codes
- single and three phase systems and loads - number of active and live conductors required, line and phase voltage, and typical loads
- identification and rating of general appliances
- single phase induction motors - motor identification, motor ratings and direction of rotation
- three phase induction motors - motor identification, motor ratings and direction of rotation
- single and three phase heaters - types of heaters, heater identification and heater ratings
- electrical distribution arrangement - power systems within premises and purpose of switchboards/distribution boards (residual current devices and earth-leakage circuit breakers)
- circuit isolation and protection devices
- isolation procedures - work clearance, testing for voltage, lock-off and tagging, techniques in isolation and tagging, regulation, codes of practice and procedures
- disconnection procedures, practices and requirements
- types of replacement equipment
- methods of ensuring equipment is safe to connect to supply
- methods of reconnection procedures, practices and requirements
- methods of return equipment to service
- effects of harmonics encompassing:
  - characteristics and effects of harmonics on protection device functions/malfunction
  - effects of harmonics on transformers, generators, motors and quality of supply
- procedures for the systematic fault isolation through the application of diagnostic techniques encompassing:
  - principles of analytical questioning
  - techniques in drawing valid conclusions from first observations
  - concepts of broad first-line testing
  - consideration of/responsibility for avoidance of further damage
  - interpretation of specific test results -cause/effect
  - techniques for isolation to appropriate level - half-split, module/function isolation (kernel technique), substitution, diagnostic software, requirements for the use of manuals, system diagrams/plans, drawings, handbooks, specifications and fault pathways
  - software/firmware functions awareness
  - factors affecting field versus workshop repair costs

- scheduling minor/major repair activities and downtime
- implications of temporary repairs
- use of system knowledge and history
- data interpretation - expected versus actual
- feedback to design/production/installation processes
- subsystems and system structures
- system signals/status indicators
- known failure modes and trends
- action threshold warnings versus catastrophic failure
- component ratings/upgrades
- disassembly/reassembly techniques and care
- relative costs of repair and replacement - remaining life, ongoing maintenance, additional benefits of replacement equipment, e.g., improved productivity and quality
- protection schemes encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
  - types of protection schemes - reasons for use, application of protection zones around system elements and degree of protection
  - types of feeder protection equipment - overcurrent protection inverse time-current operating characteristics
  - operation of overcurrent protection equipment used on distribution systems
  - operation of ACR and their time-current characteristics
  - types and characteristics of overcurrent relays
  - coordination methods of a distribution feeder protection scheme
  - earth fault protection used on a distribution feeder
  - operation of a single wire earth return (SWER) system
- extra-high voltage (EHV) generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
  - techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of EHV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single EHV job - overhead systems, indoor systems, customer installations and kiosk substations
  - EHV generator set and control system to EHV distribution assets.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS019 Manage compliance with national electricity market metrology practices and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the management of compliance with national electricity market metrology practice and procedures. It includes managing work functions to ensure the compliance of a customer's revenue metering installation. This includes demonstrating detailed knowledge of the role and responsibilities as the representative of the metering provider. It also includes the establishment/maintenance of relationships with other market participants, and management of compliance with organisational policies, procedures and the national electricity market.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTS002 Commission energy/revenue metering schemes

UETDRTS012 Install and replace complex energy/revenue metering schemes and associated equipment

UETDRTS013 Install and replace high voltage metering and associated equipment

UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures

UETDRTS020 Management of energy registration data errors for revenue billing purposes

UETDRTS022 Perform current injection testing using phantom load

UETDRTS024 Test and maintain energy/revenue metering schemes

UETTDREL15 Respond to power systems technical enquiries and requests

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Plan for the management of compliance with national electricity market metrology practices and procedures**
- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the management of compliance with national electricity market metrology practices and procedures, are reviewed and determined
  - 1.2** Purpose of the management of compliance with national electricity market metrology practices and procedures is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
  - 1.3** Organisational established procedures, policies and specifications for the management of compliance with national electricity market metrology practices and procedures are obtained or established with appropriate personnel
  - 1.4** Management of compliance with national electricity market metrology practices and procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
  - 1.5** Management of compliance with national electricity market metrology practices and procedures parameters are established from organisational established procedures, policies and specifications
  - 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
  - 1.7** Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and customers are resolved and activities coordinated to carry out work
  - 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11** Relevant internal/external work permits are obtained to

- coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the management of compliance with national electricity market metrology practices and procedures**
- 2.1** WHS/OHS and sustainable energy principles, functionality and practices to prevent the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
- 2.2** First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
- 2.3** Lifting, climbing and use of power tools/equipment, techniques and practices are safely exercised according to requirements
- 2.4** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
- 2.5** Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
- 2.6** Testing equipment is used in accordance with the work schedule and requirements and/or established procedures
- 2.7** Routine management of compliance issue with national electricity market metrology practices and procedures is carried out in accordance with the work schedule
- 2.8** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.9** Essential knowledge and associated skills are applied in the management of compliance with national electricity market metrology practices and procedures to ensure completion in an agreed timeframe according to requirements
- 2.10** Solutions to non-routine problems are identified and actioned, using essential knowledge and associated skills, according to requirements

- |                                                                                                                    |             |                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                    | <b>2.11</b> | Quality of work is monitored against personal performance agreement and/or established organisational and professional standards                                                                                                                                                  |
| <b>3 Complete the management of compliance with national electricity market metrology practices and procedures</b> | <b>3.1</b>  | Final compliance inspections with management of compliance with national electricity market metrology practices and procedures are undertaken to ensure they conform to all requirements and include all specifications and documents needed to complete the project              |
|                                                                                                                    | <b>3.2</b>  | Appropriate internal/external personnel are notified of completion and reports and/or completion documents are finalised/commissioned according to established procedures and timeframes                                                                                          |
|                                                                                                                    | <b>3.3</b>  | Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval                                                                                                                        |
|                                                                                                                    | <b>3.4</b>  | Approved copies of routine testing and acceptance testing procedures/activities/results, for the management of compliance with national electricity market metrology practices and procedures, documents are issued and records updated in accordance with established procedures |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS45 Manage compliance with national electricity market metrology practices and procedures.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS019 Manage compliance with national electricity market metrology practices and procedures

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing, on at least one (1) occasion, at least one (1) of the following activities:
  - ensuring compliance to the meter assets management plan
  - conducting appropriate field audits on behalf of or with a representative of the regulated energy market
- performing, on at least one (1) occasion, the following activity:
  - coordinating job activities for multiple discipline work groups
- performing, on at least one (1) occasion, the following activity:
  - managing work functions to ensure the compliance of a customer's revenue metering installation
- performing, on at least two (2) occasions, the following activity:
  - establishing/maintaining relationships with other market participants
- performing, on at least three (3) occasions, the following activity:
  - managing compliance with organisational policies, procedures and the national electricity market requirements
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, rules and regulations applicable to operation within a regulated energy market
- roles and responsibilities of a market participant (meter data provider, meter provider or

- responsible person) operating within a regulated energy market
- detailed knowledge and understanding of the composition of a meter asset management plan (MAMP)
- the provisions of the organisations meter asset management plan
- coordinating job activities for multiple discipline work groups
- auditing for compliance within the regulated energy market
- ISO accreditation applicable to operation within a regulated energy market
- compliance with the organisations service level requirements within the regulated energy market
- management of customer, client and regulator negotiations and correspondence within a regulated energy market
- maintaining meter data within a regulated energy market
- managing registration of customer metering installations within the regulated energy market.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS020 Management of energy registration data errors for revenue billing purposes

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers management of energy registration data errors for revenue billing purposes. It covers the identification of energy registration error within a metering scheme, evaluating the impact on the energy registration and customer billing data, and making recommendation for billing corrections and market settlement data updates.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage

electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTS013 Install and replace high voltage metering and associated equipment

UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures

UETDRTS022 Perform current injection testing using phantom load

UETDRTS024 Test and maintain energy/revenue metering schemes

UETDREL15 Respond to power systems technical enquiries and requests

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Plan for the management of energy registration data errors for revenue billing purposes**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                                                                                                                                                                                                             |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the management of energy registration data errors for revenue billing purposes, are reviewed and determined |
| <b>1.2</b> | Purpose of the management of energy registration data errors for revenue billing purposes is established after                                                                                                                                                              |

data is analysed and expected outcomes of the work are confirmed with appropriate personnel

- 1.3 Organisational established procedures, policies and specifications for the management of energy registration data errors for revenue billing purposes are obtained or established with appropriate personnel
- 1.4 Management of energy registration data errors for revenue billing purposes are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5 Management of energy registration data errors for revenue billing purposes are established from organisational established procedures, policies and specifications
- 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7 Work roles and tasks are allocated according to requirements and individual competencies
- 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and customers are resolved and activities coordinated to carry out work
- 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11 Relevant internal/external work permits are obtained to coordinate the performance of work according to requirements and/or established procedures

## **2 Carry out the management of energy registration data errors for revenue billing purposes**

- 2.1 WHS/OHS and sustainable energy principles, functionality and practices to prevent the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
- 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established

procedures

- 2.3 Lifting, climbing and use of power tools/equipment, techniques and practices are safely exercised according to requirements
- 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
- 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
- 2.6 Testing equipment is used in accordance with the work schedule and requirements and/or established procedures
- 2.7 Evaluation of revenue metering data and faults is carried out in accordance with the work schedule
- 2.8 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.9 Essential knowledge and associated skills are applied in the management of energy registration data errors for revenue billing purposes to ensure completion in an agreed timeframe according to requirements
- 2.10 Solutions to non-routine problems are identified and actioned, using essential knowledge and associated skills, according to requirements
- 2.11 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards

### **3 Complete the evaluation of revenue metering data and faults**

- 3.1 Final inspections of the management of energy registration data errors for revenue billing purposes using routine tests and acceptance tests are undertaken to ensure they comply with all requirements and include all specifications and documents needed to complete the project
- 3.2 Appropriate internal/external personnel are notified of completion and reports and/or completion documents are finalised/commissioned according to established

procedures and timeframes

- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of routine testing and acceptance testing procedures/activities/results, for the management of energy registration data errors for revenue billing purposes, documents are issued and records updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS42 Management of energy registration data errors for revenue billing purposes.

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS020 Management of energy registration data errors for revenue billing purposes

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing, on at least three (3) occasions, the evaluation of two (2) revenue metering data by:
  - downloading load profile data
  - downloading event logs
  - determining error date and time (including calculating substitution data)
- demonstrating, on at least three (3) occasions, the use of at least two (2) different proprietary types of software to interpret the following:
  - alarms
  - meter program/software settings
  - event records
  - power quality records
  - sequence of events records
- performing, on at least three (3) occasions, the following:
  - report writing on in-depth analysis
- performing, on at least three (3) occasions, the evaluation and/or investigation of the following:
  - energy consumption data
  - registration data
  - current transformer/voltage transformer ratio confirmations
  - on-site load comparisons
  - customer consumption history
- performing, on at least two (2) occasions, the following:
  - consultation with customers or their representatives to confirm site consumption patterns and loading

- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- the use of different types of meter manufacturer proprietary software
- common failure modes and the impact on revenue billing
- tariff structures and conditions
- customer segments and commercial and industrial load patterns
- sources of alternative interval data from non-revenue metering systems for use in substitution of revenue data
- metering data substitution estimation and validation procedures for metering types 1-7.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRTS021 Perform accuracy checks on power systems instrument transformers**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers undertaking accuracy checks on instrument transformers and includes proving their functionality. It also includes both current and voltage instrument transformers having various operating principles, which are designed for metering, protection, monitoring or control usage. It also encompasses tasks associated with the isolation from other secondary circuits, inspection, measurement of excitation curves, measurement of phase and ratio errors and comparison of results with previous historical results and/or published specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEE149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

| ELEMENTS                                                     | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Elements describe the essential outcomes.                    | Performance criteria describe the performance needed to demonstrate achievement of the element.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>1 Plan for accuracy checks on instrument transformers</b> | <p><b>1.1</b> Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the performance of accuracy checks on instrument transformers, are reviewed and determined</p> <p><b>1.2</b> Purpose of the performance of accuracy checks on instrument transformers is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel</p> <p><b>1.3</b> Organisational established procedures on policies and specifications for the performance of accuracy checks on instrument transformers are obtained or established with appropriate personnel</p> <p><b>1.4</b> Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief</p> <p><b>1.5</b> Testing parameters are established from organisational established procedures and policies and specifications</p> <p><b>1.6</b> Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures</p> |

- 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out accuracy checks on instrument transformers**
- 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Performance of accuracy checks on instrument transformer decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical and/or engineering models of the performance of accuracy checks on instrument transformers are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance

specifications to ensure completion of the project within an agreed timeframe according to requirements

- 2.7 Accuracy checks on instrument transformers are undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the performance of accuracy checks on instrument transformers**

- 3.1 Final review of test results on instrument transformers is undertaken to ensure they comply with all requirements and includes all specifications and documentations needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of the performance of accuracy checks on instrument transformers documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS27 Perform accuracy checks on power systems instrument transformers.

# Assessment Requirements for UETDRTS021 Perform accuracy checks on power systems instrument transformers

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing five (5) accuracy checks on instrument transformers and incorporating all of the following:
  - isolation from other secondary circuits
  - inspection
  - measurement of excitation curves
- measuring phase and ratio errors on all of the following:
  - current transformers
  - voltage transformers
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management systems

- analysis of relevant data and evaluation of WHS/OHS system effectiveness
- assess resources to establish and maintain WHS/OHS management systems
- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities

- techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements such as WHS/OHS and electrical safety
- techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
- methods of conducting audits on correct access authority procedures
- process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
- issue and receipt of operating agreements
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances
  - responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- low voltage (LV) system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorization - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permit authorities, requirements for team switching and procedures for coordination of operations

- techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- detailed operation of instrument transformers encompassing:
  - voltage and current transformer principles and terminology
  - types and classes of current transformers
  - constructions of current transformers
  - characteristics of current transformers
  - testing of current transformers
  - types and categories of voltage transformers
  - constructions of voltage transformers
  - characteristics of voltage transformers
  - testing of voltage transformers
- protection schemes encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
  - types of protection schemes - reasons for use, application of protection zones around system elements and degree of protection
  - types of feeder protection equipment - overcurrent protection inverse time-current operating characteristics
  - operation of over current protection equipment used on distribution systems
  - operation of automatic circuit reclosers (ACR) and their time-current characteristics
  - types and characteristics of overcurrent relays
  - coordination methods of a distribution feeder protection scheme
  - earth fault protection used on a distribution feeder
  - operation of a single wire earth return (SWER) system
- extra-high voltage (EHV) generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working policies, practices and procedures, and synchronising procedures
  - techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of EHV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single EHV job - overhead systems, indoor systems, customer installations and kiosk substations
  - EHV generator set and control system to EHV distribution assets.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS022 Perform current injection testing using phantom load

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the performance of current injecting testing using a phantom load. It includes the application of artificial load onto low voltage (LV) current transformers to determine correct meter function while ensuring testing is conducted in accordance with established procedures.

It also includes the validation of secondary wiring circuits to determine the correct operation of the metering scheme.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage

electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan for the performance of current injection testing using phantom load**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the performance of current injection testing using phantom load, are reviewed and determined
- 1.2** Purpose of the performance of current injection testing using phantom load is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures, policies and specifications for the performance of current injection testing using phantom load are obtained or established with appropriate personnel
- 1.4** Performance of current injection testing using phantom load procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief

- 1.5 Current injecting testing parameters are established from organisational established procedures, policies and specifications
  - 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
  - 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and customers are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant internal/external work permits are obtained to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the performance of current injection testing using phantom load**
- 2.1 WHS/OHS and sustainable energy principles, functionality and practices to prevent the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.2 Decisions with regard to performance of current injection testing using phantom load are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.3 Mathematical/engineering models for the application of current injection testing using phantom load are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.4 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance

with requirements and established procedures

- 2.5 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.6 Application of current injection testing using phantom load is undertaken according to requirements and established procedures
- 2.7 Solutions to non-routine problems are identified and actioned, using essential knowledge and associated skills, according to requirements
- 2.8 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards

### **3 Complete the performance of current injection testing using phantom load**

- 3.1 Final inspections of the LV current transformers are undertaken to ensure they comply with all requirements and include all specifications and documents needed to complete the project
- 3.2 Appropriate internal/external personnel are notified of completion and reports and/or completion documents are finalised/commissioned according to established procedures and timeframes
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of the application of current injection testing using phantom load documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRTS37 Perform current injection testing using phantom load.

## **Links**

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS022 Perform current injection testing using phantom load

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing, on at least three (3) occasions, the following:
  - application of artificial load onto low voltage (LV) current transformers for injection of current to determine correct meter function testing
- performing, on at least three (3) occasions, the following:
  - validation of secondary wiring circuits to determine the correct operation of the metering scheme
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- the application of current to an existing customer load through the primary of the current transformer
- the principles of current transformer operation
- determine the loading of the current transformer to apply the appropriate level of current required to verify the current transformer ratio, polarity and secondary wiring
- impacts of testing on market settlement/financial data and managing the data substitution requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS023 Repair, test and calibrate protection relays and meters

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the repair, calibration and testing of various types of protection relays. These can include electromechanical, analogue, digital electronic and numerical devices. It also involves finding and replacing faulty components, testing to manufacturer or user specifications and proving all functions of the devices under test.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE101A Solve problems in electromagnetic devices and related circuits

UEENEE102A Solve problems in low voltage a.c. circuits

UEENEE149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the testing, repair and calibration of protection relays and meters**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the testing, repair and calibration of protection relays and meters, are reviewed and determined
- 1.2** Purpose of the testing, repair and calibration of protection relays and meters is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the testing, repair and calibration of protection relays and meters are obtained or established with appropriate personnel
- 1.4** Testing procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing parameters are established from organisational established procedures and policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7** Work roles and tasks are allocated according to

requirements and individual competencies

- 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out the testing, repair and calibration of protection relays and meters**
  - 2.1** Circuit/systems modelling is used to evaluate alternative proposals as per established procedures
  - 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3** Testing, repair and calibration decisions of protection relays and meters are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4** Mathematical and/or engineering models of the testing, repair and calibration of protection relays and meters are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6** Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance

specifications to ensure completion of the project within an agreed timeframe according to requirements

- 2.7 Testing, repair and calibration of protection relays and meters is undertaken according to requirements and established procedures
- 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
- 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures

### **3 Complete the testing, repair and calibration of protection relays and meters**

- 3.1 Final review of test results of tested, repaired and calibrated protection relays and meters is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of the testing, repair and calibration of protection relays and meters documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS28 Repair, test and calibrate protection relays and meters.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS023 Repair, test and calibrate protection relays and meters

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using all of the following simple protection schemes:
  - auxiliary
  - overcurrent
  - timers
  - voltage
- using at least three (3) of the following intermediate protection devices:
  - inverse time delay overcurrent
  - voltage regulating relays
  - differential
  - pilot wire
- using at least two (2) of the following advanced protection schemes:
  - multi-zone impedance
  - multi-function feeder protection
  - phase comparison
  - digital current differential
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for the location and rectification of faults in electrical equipment up to 1000 volts alternating current (a.c.) and/or 1500 volts direct current (d.c.) encompassing:
  - relationship of WHS/OHS to the location and rectification of faults in electrical

- equipment - acts and regulations, identification of personal safety, workplace hazards, working with electrically operated tools and equipment, emergency first aid/resuscitation, rescue from a live electrical situation, and enterprise policies and procedures
- types of drawings - differentiation between symptoms, faults and causes in malfunctioning equipment, fault-finding techniques and procedures
- fundamental electrical concepts - effects of current, practical resistors, sources of electromagnetic field, series, parallel and series-parallel circuits, electrical measurement, capacitors, inductors and magnetism
- fundamentals of general appliances - basic principles of appliances (non-mathematical), appliance identification, appliance ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in appliances and fault-finding procedures (prescriptive)
- fundamentals of single phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, test equipment, safe testing procedures, including continuity, fault types in phase splitting and universal type motors and fault-finding procedures (prescriptive)
- fundamentals of three phase induction motors - basic principles of operation (non-mathematical), motor identification, motor ratings, motor starter principles, basic principles of operation of control equipment and protection devices, fault conditions and symptoms, safe isolation procedures, safe testing procedures and fault-finding procedures (prescriptive)
- fundamentals of single and three phase electrical heaters - basic principles of operation, types of electrical heaters, electrical heater identification, electrical heater ratings, basic principles of operation of control and protection devices, fault conditions and symptoms, safe testing procedures and fault-finding procedures (prescriptive)
- detailed operation of metering devices and principles encompassing:
  - common circuit configurations
  - meters and measurement principles
  - instrument transformer application
  - testing of metering systems and devices
  - implications of market operation
- detailed operation of fundamental test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters - measurement of voltage, current, power, resistance, insulation resistance, impedance and phase sequence, and the use of oscilloscopes
- detailed operation of protection test equipment encompassing:
  - care and safe use
  - operating principles

- comparison of different operating principle meters used for the same purpose
- accuracy and loading effects of meters - measurement of timing, voltage, current, resistance, inductance, capacitance, impedance, frequency, phase angle, phase difference, and the use of primary, secondary and gas injection equipment
- protection schemes encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
  - types of protection schemes - reasons for use, application of protection zones around system elements and degree of protection
  - types of feeder protection equipment - overcurrent protection inverse time-current operating characteristics
  - operation of overcurrent protection equipment used on distribution systems
  - operation of automatic circuit reclosers (ACR) and their time-current characteristics
  - types and characteristics of overcurrent relays
  - coordination methods of a distribution feeder protection scheme
  - earth fault protection used on a distribution feeder
  - operation of a single wire earth return (SWER) system.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS024 Test and maintain energy/revenue metering schemes

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the testing and maintenance of energy/revenue metering schemes. It includes testing, isolation, inspection, monitoring, adjustment, repair, refurbishment and/or overhaul and functional checks of energy/revenue metering schemes.

It includes the requirements to prove the functionality of the metering scheme in accordance with electrical installation (state/territory and national) standards, metrology procedures, compliance to tariff requirements, revenue billing, energy registration and the identification of faults with metering equipment in accordance with established procedures.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTS013 Install and replace high voltage metering and associated equipment

UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures

UETDRTS022 Perform current injection testing using phantom load

UETTDREL15 Respond to power systems technical enquiries and requests

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the testing and maintenance of energy/revenue metering schemes**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the testing and maintenance of energy/revenue metering schemes, are reviewed and determined

- 1.2 Purpose of testing and maintenance of energy/revenue metering schemes is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
  - 1.3 Organisational established procedures, policies and specifications for the testing and maintenance of energy/revenue metering schemes are obtained or established with appropriate personnel
  - 1.4 Testing and maintenance of energy/revenue metering schemes procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
  - 1.5 Testing and maintenance parameters are established from organisational established procedures, policies and specifications
  - 1.6 Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
  - 1.7 Work roles and tasks are allocated according to requirements and individual competencies
  - 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and customers are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant internal/external work permits are obtained to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the testing and maintenance of energy/revenue metering schemes**
  - 2.1 WHS/OHS and sustainable energy principles, functionality and practices to prevent the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures

- 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3 Lifting, climbing and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
  - 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.6 Testing equipment is used in accordance with the work schedule and requirements and/or established procedures
  - 2.7 Routine testing and acceptance testing of the installation, testing and maintenance of revenue metering schemes is carried out in accordance with the work schedule
  - 2.8 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.9 Essential knowledge and associated skills are applied in the safe testing and maintenance of energy/revenue metering schemes to ensure completion in an agreed timeframe according to requirements
  - 2.10 Solutions to non-routine problems are identified and actioned, using essential knowledge and associated skills, according to requirements
  - 2.11 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 3 Complete the testing and maintenance of energy/revenue metering schemes**
- 3.1 Final inspections of the testing and maintenance of energy/revenue metering schemes using routine tests and acceptance tests are undertaken to ensure they comply with all requirements and include all specifications and documents needed to complete the project

- 3.2 Appropriate internal/external personnel are notified of completion and reports and/or completion documents are finalised/commissioned according to established procedures and timeframes
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of routine testing and acceptance testing procedures/activities/results, for the testing and maintenance of energy/revenue metering schemes, documents are issued and records updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS40 Test and maintain energy/revenue metering schemes.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS024 Test and maintain energy/revenue metering schemes

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing, on at least three (3) occasions, testing/maintaining all of the following:
  - ensuring meter function
  - determining energy flows, voltage, current and phasor relationships
  - inspecting/monitoring equipment
  - gathering of information to ensure the application of standards and specifications have been met
  - specific notification of faults with metering equipment affecting energy registration and revenue billing in accordance with established procedures
  - ensuring that the installation is operating within prescribed limits (enterprise, manufacturer and regulated energy market requirements)
  - making recommendations, adjustments, replacements and repairs
- performing, on at least three (3) occasions, all of the following:
  - isolating, at local fuses and links
  - determining actions against standards if additional isolation is required
- demonstrating, on at least three (3) occasions, the functionality of the metering scheme in accordance with:
  - electrical installation (state and national) standards
  - metrology procedures
  - compliance to tariff requirements
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- operation of energy metering test equipment
- test equipment encompassing:
  - voltmeters, amp meters, Ohm meters, kWh/kVarh standards, tong ammeters, phase rotation meter, power factor meters, power quality meters, phantom load devices, current/voltage injection devices, measurement bridges, insulation resistance tester, phase angle meters, multimeters, standard current transformers/voltage transformers and insulated operating sticks
- other equipment encompassing:
  - personal computer, calculator, stop watches, printers, telecommunication devices and global positioning systems (GPS)
- testing principles and theories
- techniques in the testing and maintenance procedures of energy metering schemes in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- compliance with ISO 9001:2015 Quality Management Systems
- evaluation of test results to ensure compliance with ISO and Australian Standards
- notification of non-compliance to relevant parties.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- relevant plant, drawings, manufacturer specifications/manuals and specialised testing equipment
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS025 Test and maintain energy/revenue metering schemes (complex)

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the testing and maintenance of energy/revenue metering schemes in complex situations. Complex metering schemes include summation, subtraction, generation, bulk supply, interconnector and wholesale metering installations. Testing and maintenance include isolation, accuracy testing, inspection, monitoring, adjustment, repair or overhaul and functional checks of complex energy/revenue metering schemes.

It includes the requirements to prove the functionality of the metering scheme in accordance with electrical installation (state/territory and national) standards, metrology procedures and compliance to tariff requirements.

This also includes the identification of faults with metering equipment, energy registration and revenue billing in accordance with established procedures.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEE104A Use engineering applications software on personal computers

UEENEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEE102A Fabricate, assemble and dismantle utilities industry components

UEENEE104A Solve problems in d.c. circuits

UEENEE105A Fix and secure electrotechnology equipment

UEENEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEE124A Compile and produce an energy sector detailed report

UEENEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEE126A Provide solutions to basic engineering computational problems

UEENEE137A Document and apply measures to control OHS risks associated with

electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRTS002 Commission energy/revenue metering schemes

UETDRTS012 Install and replace complex energy/revenue metering schemes and associated equipment

UETDRTS013 Install and replace high voltage metering and associated equipment

UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures

UETDRTS020 Management of energy registration data errors for revenue billing purposes

UETDRTS022 Perform current injection testing using phantom load

UETDRTS024 Test and maintain energy/revenue metering schemes

UETTDREL15 Respond to power systems technical enquiries and requests

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the testing and maintenance of energy/revenue metering schemes (complex)**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the testing and maintenance of energy/revenue metering schemes (complex), are reviewed and determined
- 1.2** Purpose of testing and maintenance of energy/revenue metering schemes (complex) is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures, policies and specifications for the testing and maintenance of energy/revenue metering schemes (complex) are obtained or established with appropriate personnel
- 1.4** Testing and maintenance of energy/revenue metering schemes (complex) procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Testing and maintenance parameters are established from organisational established procedures, policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7** Work roles and tasks are allocated according to requirements and individual competencies

- 1.8 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and customers are resolved and activities coordinated to carry out work
  - 1.10 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.11 Relevant internal/external work permits are obtained to coordinate the performance of work according to requirements and/or established procedures
- 2 **Carry out the testing and maintenance of energy/revenue metering schemes (complex)**
  - 2.1 WHS/OHS and sustainable energy principles, functionality and practices to prevent the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3 Lifting, climbing and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
  - 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.6 Testing equipment is used in accordance with the work schedule and requirements and/or established procedures
  - 2.7 Routine testing and acceptance testing of the testing and maintenance of energy/revenue metering schemes (complex) are carried out in accordance with the work schedule
  - 2.8 Technical advice is given regarding potential hazards,

safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures

- 2.9** Essential knowledge and associated skills are applied in the safe testing and maintenance of energy/revenue metering schemes (complex) to ensure completion in an agreed timeframe according to requirements
- 2.10** Solutions to non-routine problems are identified and actioned, using essential knowledge and associated skills, according to requirements
- 2.11** Quality of work is monitored against personal performance agreement and/or established organisational and professional standards

### **3 Complete the testing and maintenance of energy/revenue metering schemes (complex)**

- 3.1** Final inspections of the testing and maintenance of energy/revenue metering schemes (complex) using routine tests and acceptance tests are undertaken to ensure they comply with all requirements and include all specifications and documents needed to complete the project
- 3.2** Appropriate internal/external personnel are notified of completion and reports and/or completion documents are finalised/commissioned according to established procedures and timeframes
- 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4** Approved copies of routine testing and acceptance testing procedures/activities/results, for the testing and maintenance of energy/revenue metering schemes (complex), documents are issued and records updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS44 Test and maintain energy/revenue metering schemes (complex).

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS025 Test and maintain energy/revenue metering schemes (complex)

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing, on at least three (3) occasion, the following activity:
  - field injection testing which includes determining site accuracy by applying multiple specific test points to determine and correct meter accuracy to applicable standards
- performing, on at least three (3) occasions, the testing and maintenance of any four (4) of the following:
  - summation
  - subtraction
  - generation
  - bulk supply
  - interconnector
  - wholesale metering installations
- performing, on at least three (3) occasions, the following activities:
  - identification of faults with metering equipment, energy registration and revenue billing
  - ensuring that all connection points are in operational order
  - identifying and correcting y functional errors
- dealing with unplanned events on at least (1) one occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- determining from schematics whether additional isolation is required and ensuring any current/voltage injection does not impact on related protection, control and supervisory control and data acquisition (SCADA) schemes

- calculation of site overall offset errors due to applied correction factors to the scheme
- calculation of site overall errors for logical metering schemes based on test results of individual related physical metering points
- identifying any impacts of testing on market settlement/financial data and managing the data substitution requirements
- determining the requirement for temporary metering during testing to ensure market settlement data is not adversely affected
- modifying and adapting test procedures to test non-standard metering schemes
- determining impacts of testing to ensure customer control, process and energy management systems are not adversely effected.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS026 Undertake power systems project management of substation augmentation and maintenance

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the coordination, planning and supervision of projects, including but not limited to, commissioning of new plant and equipment, maintenance projects and retrofit works. It includes coordinating and facilitating the work of others and the collation of the relevant outcomes and results and involves an overview of both primary and secondary works to ensure completion of all aspects of the project and must encompass at least 20 identifiable tasks.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE124A Compile and produce an energy sector detailed report

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Protection Relays and Meters Pathway Unit Group

UETDRTS023 Repair, test and calibrate protection relays and meters

Metering Pathway Unit Group

UETDRTS005 Commission power systems metering schemes

UETDRTS010 Develop power systems secondary isolation instructional documents

UETDRTS014 Maintain and test and metering schemes

Primary Plant Pathway Unit Group

UETDRTS007 Conduct evaluation of power systems primary plant

UETDRTS010 Develop power systems secondary isolation instructional documents

Protection Systems Pathway Unit Group

UETDRTS010 Develop power systems secondary isolation instructional documents

UETDRTS015 Maintain complex network protection and control systems

UETDRTS017 Maintain interdependent network protection and control systems

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the project management of substation augmentation and**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the undertaking of project management of substation

|                                                                                  |                                                                                                                                                                                                                             |

|                                                                                  | <b>1.5</b> Testing parameters are established from organisational established procedures and policies and specifications                                                                                                    |
|                                                                                  | <b>1.6</b> Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures                                                                          |
|                                                                                  | <b>1.7</b> Work roles and tasks are allocated according to requirements and individual competencies                                                                                                                         |
|                                                                                  | <b>1.8</b> Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures                        |
|                                                                                  | <b>1.9</b> Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work                                                 |
|                                                                                  | <b>1.10</b> Risk control measures are identified, prioritised and evaluated against the work schedule                                                                                                                       |
|                                                                                  | <b>1.11</b> Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures                                                                                 |
| <b>2 Carry out project management of substation augmentation and maintenance</b> | <b>2.1</b> Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures                                                                                                    |

- 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Undertaking of project management of substation augmentation and maintenance decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical/engineering models of the undertaking of project management of substation augmentation and maintenance are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
  - 2.7 Testing of substation augmentation and maintenance is undertaken according to requirements and established procedures
  - 2.8 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
  - 2.9 Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements
  - 2.10 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.11 Strategic plans are developed incorporating organisation initiatives in accordance with established procedures
- 3 Complete the project management of substation**
- 3.1 Final inspections of substation augmentation and maintenance are undertaken to ensure they comply with

## **augmentation and maintenance**

all requirements and include all specifications and documentations needed to complete the project

- 3.2** Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4** Approved copies of the project management of substation augmentation and maintenance documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRTS33 Undertake power systems project management of substation augmentation and maintenance.

## **Links**

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS026 Undertake power systems project management of substation augmentation and maintenance

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- managing three (3) projects (encompassing at least twenty (20) identifiable tasks), including installation, testing and commissioning stages
- applying project management skills, including all of the following:
  - work planning
  - coordination of labour resources
  - on-site supervision
  - controlling quality
  - use of quality systems
  - planned versus actual comparisons
  - communication with designers
  - control of materials
  - substation primary plant
  - substation secondary equipment
  - substations civil projects
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- system components and layouts encompassing:
  - distribution system layouts - overhead/underground, urban/rural, high voltage (HV) customers, high-rise building systems, three phase lines, single phase lines, single wire

- earth return (SWER) systems, spur, parallel and ring systems, and typical substation types
- transmission system layouts - lines, buses, transformers and cables; line/bus layouts, including single, double, ring and breaker and half systems; and HV crossing methods
- alternating current (a.c.) transmission system components encompassing:
  - support structures and reasons for selection
  - insulators and reasons for selection
  - conductors and reasons for selection
  - vibration management systems and principles
  - line ratings based on voltage, span, tension and temperature
- procedure to undertake a visual inspection of a scheme encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with visual inspection procedures of a scheme
  - requirements for the use of manuals, system diagrams/plans and drawings
  - identify obvious deficiencies in operating to the standard functionality
  - techniques in determining device malfunction
  - techniques in determining wiring defects
- commissioning procedures associated with relevant equipment encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy, testing techniques and close out requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRTS027 Verification and certification of revenue metering/energy measurement instruments

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the evaluation and development of procedures and routines to certify the accuracy, traceability and uncertainty of measurement of metering standards and test equipment. This encompasses developing test procedures, PC controlled and software driven test sequences and includes the evaluation of test equipment capability and design of hardware interfaces. These processes must ensure compliance with metering industry regulations to ensure traceability of all measurement.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG076A Install and replace low voltage current transformer metering

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEG171A Install, set up and commission interval metering

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRTS002 Commission energy/revenue metering schemes

UETDRTS012 Install and replace complex energy/revenue metering schemes and associated equipment

UETDRTS013 Install and replace high voltage metering and associated equipment

UETDRTS016 Maintain compliance with national electricity market metrology practices and procedures

UETDRTS020 Management of energy registration data errors for revenue billing purposes

UETDRTS022 Perform current injection testing using phantom load

UETDRTS024 Test and maintain energy/revenue metering schemes

UETTDREL15 Respond to power systems technical enquiries and requests

## Competency Field

Testing

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Plan for the verification and certification of revenue metering/energy measurement instruments**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence verification and certification of revenue metering/energy measurement instruments, are reviewed and determined
- 1.2** Purpose of the verification and certification of revenue metering/energy measurement instruments is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures, policies and specifications for the verification and certification of revenue metering/energy measurement instruments are obtained or established with appropriate personnel
- 1.4** Verification and certification of revenue metering/energy measurement instruments procedures are discussed with/directed to appropriate personnel in order to ascertain the project brief
- 1.5** Verification and certification parameters are established from organisational established procedures policies and specifications
- 1.6** Equipment/tools and personal protective equipment (PPE) are selected based on specified performance criteria and established procedures
- 1.7** Work roles and tasks are allocated according to requirements and individual competencies
- 1.8** Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and customers are resolved and activities coordinated to carry out work
- 1.10** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.11** Relevant internal/external work permits are obtained to coordinate the performance of work according to requirements and/or established procedures

- 2 Carry out the verification and certification of revenue metering/energy measurement instruments**
- 2.1** WHS/OHS and sustainable energy principles, functionality and practices to prevent the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.2** First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3** Lifting, climbing and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
  - 2.5** Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.6** Testing equipment is used in accordance with the work schedule and requirements and/or established procedures
  - 2.7** Verification and certification of revenue metering/energy measurement instruments is carried out in accordance with the work schedule
  - 2.8** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.9** Essential knowledge and associated skills are applied in the safe verification and certification of revenue metering/energy measurement instruments to ensure completion in an agreed timeframe according to requirements
  - 2.10** Solutions to non-routine problems are identified and actioned, using essential knowledge and associated skills, according to requirements
  - 2.11** Quality of work is monitored against personal performance agreement and/or established organisational and professional standards

- 3 Complete the verification and certification of revenue metering/energy measurement instruments**
- 3.1** Final inspections of the verification and certification of revenue metering/energy measurement instruments using routine tests and acceptance tests are undertaken to ensure they comply with all requirements and include all specifications and documents needed to complete the project
  - 3.2** Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned according to established procedures and timeframes
  - 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4** Approved copies of routine testing and acceptance testing procedures/activities/results, for the verification and certification of revenue metering/energy measurement instruments, documents are issued and records updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRTS46 Verification and certification of revenue metering/energy measurement instruments.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRTS027 Verification and certification of revenue metering/energy measurement instruments

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS) occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing, on at least three (3) occasions, the following activity:
  - developing and evaluating procedures and routines to verify and certify the accuracy, traceability and uncertainty of metering standards and test equipment
- performing, on at least one (1) occasion, the following activity:
  - evaluating and implementing procedures and practices to ensure traceability of test equipment to National Association of Testing Authorities (NATA) requirements
- performing, on at least one (1) occasion, the following activity:
  - developing test procedures for new hardware and analysing performance against required outcomes
- performing, on at least one (1) occasion, the following activity:
  - evaluating test equipment capability and design of hardware interfaces
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation

- procedures
- techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
- overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- electrical field testing and measurement encompassing:
  - measurement concepts - notion of error, accuracy, resolution, sources of measurement error and uncertainties, instrument specifications and calibration certificates, test and measuring instrument safety certification levels and their application
  - types of field measuring instruments and their application - instrument meter movements and readouts (moving coil, moving iron and dynamometer meter movements, liquid crystal display (LCD) digital and screen readouts), and role of a microprocessor/controller in measuring instrument
  - measuring low voltages (LV) and direct current (d.c.) and alternating currents (a.c.) - LV and current measurement techniques embodied in microprocessor-based instruments, causes of inaccuracies and overcoming them, test instrument set-up and safety procedures, and interpreting test readings
  - measuring HV and d.c. and a.c. - HV and current measurement techniques embodied in microprocessor-based instruments, causes of inaccuracies and overcoming them, test instrument set-up and safety procedures, and interpreting test readings
  - measuring fault levels and (earth) fault loop impedance - fault and fault loop impedance measurement techniques embodied in microprocessor based instruments, causes of inaccuracies and overcoming them, test instrument set-up and safety procedures, and interpreting test readings
  - measuring power, energy, reactive power, power factor and maximum demand - power measurement techniques embodied in microprocessor-based instruments, causes of inaccuracies and overcoming them, test instrument set-up and safety procedures, and interpreting test readings
  - measuring power quality - power measurement techniques embodied in microprocessor based instruments, causes of inaccuracies and overcoming them, test instrument set-up and safety procedures, and interpreting test readings (power quality measurement, including waveform distortion, harmonics, power factor and transients)
- calibration techniques encompassing:
  - principles of common calibration techniques
  - purpose of standards and calibration certification
  - minimising error during calibration - source and type of errors, techniques to minimise errors during measurements, calculating the degree of error and calibration factors
  - determining the parameters to which the device will be calibrated
  - need for normal performance check
  - purpose of calibration documentation.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRVC001 Apply work health and safety requirements for powerline vegetation control

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to apply work health and safety (WHS)/ occupational health and safety (OHS) requirements for powerline vegetation control in the electricity supply industry (ESI).

It includes identifying WHS/OHS legislation, regulations, standards, codes of practice and organisational workplace requirements and their application to relevant workplace tasks.

It also includes identifying hazards, controlling risks, responding to emergencies and completing relevant workplace documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Not applicable.

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

# Assessment Requirements for UETDRVC001 Apply work health and safety requirements for powerline vegetation control

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - identifying typical hazards associated with powerline vegetation control work
  - applying and reviewing risk control measures to minimise, control or eliminate identified hazards
  - monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- applying workplace procedures for an emergency involving electricity
- using plant, tools and equipment safely
- applying correct manual handling techniques
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant WHS/OHS legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - duty of care
  - employer and employee responsibilities, rights and obligations
  - major functions of safety committees and representatives
  - powers of health and safety inspectors
  - WHS consultation (toolbox/safety meetings)
  - manual handling
  - working at heights
  - safe approach distances

- drop zones
- hazard and risk assessment, including:
  - difference between hazards and risks
  - hierarchy of control
  - control measures and monitoring of control measures
  - hazards in the powerline vegetation control environment
  - physical and psychological hazards, including excessive noise, vibration, flying particles, heat, cold, ultraviolet (UV) radiation, chemicals, burns, dust, electrical currents, insects, snakes, fauna, fatigue, stress, drugs and alcohol
- types, inspection and application of PPE
- safe use of plant, tools and equipment, including:
  - pre-operational checks
  - post-operational checks
- types of fires and basic firefighting equipment
- types of injuries common in the powerline vegetation control environment
- incident, emergency and rescue procedures
- processes for communicating, reporting and recording incidents and emergencies
- hazardous substances and dangerous goods in the workplace, including:
  - classifications
  - labelling and storage requirements
  - purpose and interpretation of safety data sheets (SDS)
- working safely in a powerline vegetation control environment, including:
  - effects of electric shock on the body
  - consequences of short circuits, including arc flash and touch and step potentials
  - precautions to minimise the chance of electric shock
  - procedures for emergencies involving electricity
  - common causes of electrical accidents.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRVC002 Assess vegetation in an electricity supply industry environment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to assess vegetation in an electricity supply industry (ESI) environment.

It includes identification of vegetation, tree defects and hazards, encroaching vegetation, clearance zones, electrical network characteristics and environmental requirements.

It also includes recommending and documenting control measures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

UETDRVC001 Apply work health and safety requirements for powerline vegetation control

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Prepare to assess vegetation**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work instruction is obtained and confirmed in accordance with workplace requirements
- 1.3** Hazards are identified, risks assessed and control measures identified and applied
- 1.4** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in safe working order
- 1.5** Liaison and communication with stakeholders is carried out in accordance with workplace requirements
- 1.6** Work is prioritised and sequenced for completion in accordance with workplace requirements

**2 Conduct assessment of vegetation and recommend control measures**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Tools, equipment and PPE are used in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Vegetation is assessed in accordance with workplace requirements
- 2.5** Environmental requirements are identified in accordance with workplace requirements
- 2.6** Vegetation control measures are recommended in accordance with workplace requirements

**3 Complete work and documentation**

- 3.1** Work instructions are updated, and documentation completed in accordance with workplace requirements
- 3.2** Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.3** Personnel are notified of work completion in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRVC24 Assess vegetation and recommend control measures in an ESI environment.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRVC002 Assess vegetation in an electricity supply industry environment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- interpreting and using drawings, diagrams and instructions
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- identifying electrical apparatus, including but not limited to:
  - low voltage (LV)
  - high voltages (HV)
  - stay wires
- assessing vegetation clearances
- identifying tree species and characteristics, including regrowth
- assessing vegetation for defects and hazards, including
  - recommending control measures:
    - tools and equipment
    - safe approach distances for:
      - plant
      - persons and handheld tools
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:

- WHS/OHS
- vegetation clearances
- safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- events constituting an unplanned event or incident
- tree species and characteristics, including regrowth
- tree defects and hazards
- methods for removal, pruning and cutting of vegetation
- characteristics of overhead and underground electricity networks, including:
  - transmission, distribution and rail
  - layout/configuration
  - components
  - voltage levels
  - network diagrams.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations and codes of practice.

# UETDRVC003 Control vegetation for powerline work

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required for powerline vegetation control work in the electricity supply industry (ESI).

It includes vegetation control work in the vicinity of live electrical apparatus by line workers using plant, tools and equipment in accordance with workplace requirements.

This unit is subject to the following requirements for entry:

***Note: Those holding an existing Certificate III ESI qualification or equivalent meets the prerequisite unit requirements.***

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

AHCMOM213 Operate and maintain chainsaws

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to control vegetation**

- 1.1** Legislation, regulations, standards, codes of practice and industry workplace requirements for the work to be performed are obtained and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in safe working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.6** Work permits are received and signed in accordance with workplace requirements
- 1.7** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.8** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.9** Safe approach distances and vegetation clearances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.10** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.11** Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### **2 Control vegetation**

- 2.1** Legislation, regulations, standards, codes of practice and industry workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of plant, tools

and equipment are carried out in accordance with workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Safety observer is positioned to observe the work in accordance with workplace requirements
- 2.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
- 2.6 Safe approach distances are maintained when the work is being performed
- 2.7 Vegetation control is performed in accordance with work plan and workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements

### **3 Complete work and documentation**

- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
- 3.2 Work permits are signed off in accordance with workplace requirements
- 3.3 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.4 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.5 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.6 Work records, reports and documentation are completed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRVC29 Control vegetation whilst performing linework.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRVC003 Control vegetation for powerline work

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
  - vegetation clearances
- identifying hazards and assessing risks
- identifying, applying and monitoring control measures
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- confirming safety observer is in position in accordance with workplace requirements
- communicating with the safety observer during the vegetation control work, including:
  - verbal
  - non-verbal
- pruning vegetation in accordance with workplace requirements, including:
  - using techniques for shaping, forming and controlling/managing epicormic regrowth
  - using appropriate cutting techniques for branch removal
  - providing clearance for electrical apparatus
  - applying the principles of compartmentalization of decay in trees (CODIT)
  - determining the correct location for the final cut
  - using species-appropriate pruning techniques
- using specialised tools and equipment safely
- performing pre-operational checks on specialised tools and equipment
- undertaking vegetation control measures using the following:
  - hand clearing
  - specialised tools and equipment
- dealing with an unplanned event on at least one (1) occasion

- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - vegetation clearances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- vegetation control principles and techniques
- pruning principles and techniques, including:
  - shaping, forming and controlling epicormic regrowth
  - preventing disease and damage (CODIT)
  - promoting tree health
  - providing clearance for electrical apparatus
  - effects of incorrect pruning
- tree physiology (basic), including:
  - photosynthesis
  - transpiration
  - respiration
  - plant development and growth
- biosecurity practices for pruning, including:
  - sterilisation of clothing, tools and equipment
  - management of debris removal
- specialised pruning tools and equipment, including:
  - inspection
  - care and maintenance
  - storage and transport
- pruning techniques, including:

- feathering
- formative
- preventative
- natural target pruning
- sequence (cutting techniques) for branch removal.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for controlling vegetation for powerline work
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRVC004 Control vegetation in the vicinity of live electrical apparatus from an elevated work platform

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to control vegetation in the vicinity of live electrical apparatus from an elevated work platform (EWP) in the electricity supply industry (ESI).

It includes the safe operation of an EWP, vegetation clearance zones, safe approach distances and specialised tools and equipment to cut and prune vegetation in accordance with workplace requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

UETDRVC001 Apply work health and safety requirements for powerline vegetation control

UETDRVC007 Control vegetation using pruning techniques

UETDRVC009 Monitor vegetation control work in the vicinity of live electrical apparatus

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to control vegetation from an EWP**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work instruction is obtained and confirmed in accordance with workplace requirements
- 1.3** Work permits are organised in accordance with workplace requirements
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** EWP, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in safe working order
- 1.6** Worksite is prepared in accordance with the work instruction and workplace requirements
- 1.7** Routine pre-operational checks are completed to manufacturer specifications and workplace requirements
- 1.8** Safety observer role, responsibility and communication method is discussed and confirmed in accordance with workplace requirements
- 1.9** Safe approach distances and vegetation clearances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.10** Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### **2 Perform vegetation control from an EWP**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights and the use of EWP, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance

with workplace requirements

- 2.4 Safety observer is positioned to observe the work in accordance with workplace requirements
- 2.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
- 2.6 Safe approach distances are maintained when the work is being performed
- 2.7 Vegetation control work from an EWP is performed in accordance with the work instruction and workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements

### 3 Complete work and documentation

- 3.1 Completed work is checked for compliance against the work instruction and workplace requirements
- 3.2 EWP, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.3 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.4 Work permits are signed off, where appropriate, in accordance with workplace requirements
- 3.5 Worksite is cleaned and made safe in accordance with workplace requirements
- 3.6 Work documentation is completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRVC25 Use elevated platform to cut vegetation above ground level near live electrical apparatus.

## Links

# **Assessment Requirements for UETDRVC004 Control vegetation in the vicinity of live electrical apparatus from an elevated work platform**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS) requirements
  - safe approach distances
  - vegetation clearances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- organising and signing on and off relevant work permits in accordance with workplace requirements
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- performing pre-operational checks on elevated work platform (EWP), tools and equipment
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- using tools and equipment to safely control vegetation from an EWP, including:
  - techniques for shaping, forming, and controlling/managing epicormic regrowth
  - appropriate cutting technique for branch removal
  - providing clearance for electrical apparatus
- using an EWP whilst maintaining safe approach distance in the vicinity of live electrical apparatus
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace

requirements, including:

- WHS/OHS
- safe approach distances
- vegetation clearances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- application, purpose and types of work permits
- safety observer:
  - role and responsibilities
  - communication methods
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- vegetation control principles and techniques
- EWP operation, including:
  - types of, selection and safe use
  - insulation properties and testing
  - inspection, care and maintenance
  - emergency procedures
- vegetation control tools and equipment, including:
  - types of, selection and safe use
  - insulated tools and testing
  - inspection, care and maintenance.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRVC006 Control vegetation in the vicinity of live electrical apparatus from within the tree

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to control vegetation in the vicinity of live electrical apparatus from within the tree in the electricity supply industry (ESI).

It includes cutting and pruning, vegetation clearance zones, safe approach distances, specialised climbing tools, equipment, personal protective equipment (PPE) and climbing techniques.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

UETDRVC001 Apply work health and safety requirements for powerline vegetation control

UETDRVC007 Control vegetation using pruning techniques

UETDRVC009 Monitor vegetation control work in the vicinity of live electrical apparatus

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

# Assessment Requirements for UETDRVC006 Control vegetation in the vicinity of live electrical apparatus from within the tree

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
  - vegetation clearances
- identifying hazards and assessing risks
- identifying, applying and monitoring control measures
- organising and signing on and off relevant work permits in accordance with workplace requirements
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- performing pre-operational checks on tools and equipment
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- using safe climbing techniques
- using tools and equipment to safely control vegetation, including:
  - techniques for shaping, forming and controlling/managing epicormic regrowth
  - appropriate cutting technique for branch removal
  - providing clearance for electrical apparatus
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:

- WHS/OHS
  - safe approach distances
  - vegetation clearances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of work permits
- safety observer:
  - role and responsibilities
  - communication methods
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- climbing equipment, including:
  - types and application
  - inspection, care and maintenance
- safe climbing techniques
- vegetation control tools and equipment, including:
  - types of, selection and use
  - insulated tools and testing
  - inspection, care and maintenance.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRVC007 Control vegetation using pruning techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to control vegetation using pruning techniques in the electricity supply industry (ESI).

It includes pruning activities performed in accordance with relevant industry standards to achieve statutory vegetation clearance requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

UETDRVC001 Apply work health and safety requirements for powerline vegetation control

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

## Elements and Performance Criteria

- 3.4 Worksite is cleaned and made safe in accordance with workplace requirements
- 3.5 Work documentation is completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRVC33 Apply pruning techniques to vegetation control near live electrical apparatus.

## Links

# Assessment Requirements for UETDRVC007 Control vegetation using pruning techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards and assessing risks
- identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- pruning vegetation in accordance with workplace requirements, including:
  - using techniques for shaping and forming vegetation
  - controlling/managing epicormic regrowth
  - using appropriate cutting techniques for branch removal
  - applying the principles of compartmentalization of decay in trees (CODIT)
  - determining the correct location for the final cut
  - using species appropriate pruning techniques
- using tools and equipment safely
- performing pre-operational checks on tools and equipment
- using correct cutting angle in accordance with workplace requirements, including:
  - branch bark ridge
  - stem bark ridge
  - visible branch collar
  - determining suitable growth points
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice industry and workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- pruning principles and techniques, including:
  - shaping, forming and controlling epicormic regrowth
  - preventing disease and damage (CODIT)
  - promoting tree health
  - effects of incorrect pruning
- tree physiology (basic), including:
  - photosynthesis
  - transpiration
  - respiration
  - plant development and growth (including epicormic growth)
- biosecurity practices for pruning, including:
  - sterilisation of clothing, tools and equipment
  - management of debris removal
- pruning tools and equipment, including:
  - inspection
  - care and maintenance
  - storage and transport
- pruning techniques, including:
  - formative
  - preventative
  - natural target pruning
  - sequence (cutting techniques) for branch removal
  - crown modification
  - directional pruning.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRVC008 Coordinate vegetation control operations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the coordination and implementation of continuous vegetation control and takes into account arboreal regeneration, environmental issues and liaison and consultation procedures with appropriate government agencies, property owners and environmental groups. It also encompasses conducting and/or contributing to public education processes and legislation issues.

The skills and knowledge described in this unit may only be practiced under the regulations pertaining to each state and territory for the safe planning for the removal of vegetation around live powerlines up to the live work zone, including near live electrical apparatus, and regulations that directly relate to work health and safety (WHS)/occupational health and safety (OHS) and/or contracts of training where they apply.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to coordinate vegetation control work**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.4** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.5** Hazards are identified, WHS/OHS risks assessed and control measures are prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
- 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.8** Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work

- 1.10 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
  - 1.11 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
  - 1.12 Positioning of road signs, barriers and warning devices is planned in accordance with requirements
- 2 Carry out the coordination of vegetation control work
  - 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
  - 2.2 First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3 Lifting, climbing, working aloft and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised persons for directions according to established procedures
  - 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.6 Coordination of vegetation control work is carried out in accordance with the work schedule and requirements and/or established procedures
  - 2.7 Essential knowledge and associated skills are applied in the safe coordination of vegetation control work to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
  - 2.8 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements

- 2.9** Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
- 3 Complete the coordination of vegetation control work**
- 3.1** Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
- 3.2** Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
- 3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
- 3.4** Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5** Relevant work permits are signed off and equipment returned to service and client/customer advised in accordance with requirements
- 3.6** Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRVC30 Coordinate vegetation control operations.

## Links

# Assessment Requirements for UETDRVC008 Coordinate vegetation control operations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using tools, equipment, materials and workplace procedures, including at least three (3) of the following clearing methods:
  - hand clearing
  - machinery assisted clearing
  - growth retardants
  - fire clearing
  - herbicidal clearing
- coordinating operations from two (2) of the following levels:
  - ladder
  - elevated work platform (EWP)
  - tree
  - ground
- considering all of the following:
  - personnel aspects
  - material aspects
  - financial aspects
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of high voltage (HV) encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations

and/or enterprise requirements associated with working on or near HV

- electrical and electrostatic principles related to HV lines - relationship of current, voltage and resistance as related to transmission lines, relationship of phase voltage and respective line voltages
- production of an electric field – units, effect of distance, potential of an object within the field and the effect of distances to the potential
- HV insulators - construction of a disc insulator, construction of a polymeric insulator, effects of an electrical field on disc insulators, identification of the number of disc insulators needed for a single line voltage, and performance of a failed disc insulator on the line and the system
- determining the minimum allowable number of discs per string for each line voltage in the system before bare hand work is to proceed
- techniques in detecting a failed disc in a string
- techniques in using appropriate tools and equipment to test a string
- methods of recording data
- effects of electrostatic induction on the human body - relationship of the resistance of a human body to different levels of current and voltage, relationship of a human body to an electric field, and effects of electrostatic induction on bare hand work
- application of Faraday's cage - effects of a body, advantages, description of the Faraday's cage used by bare hand live line workers
- safety precautions working on or near HV electrical apparatus - safe approach distances from live line; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures
- types and function of specialised live working equipment
- safe working policies, procedures and practices when using and operating specialised equipment
- methods of using specialised equipment
- emergency response and rescue, including first aid
- effects of lighting and switching surges on performance of string insulators - health effects to workers
- methods used to alleviate surges on transmission lines
- magnetic field - difference between magnetic fields and electrostatic fields; source of magnetic field; techniques in locating, measuring and analysing known sources of magnetic fields; reasons for monitoring magnetic field exposure and techniques used to monitor magnetic fields
- ecological principles for vegetation control encompassing:
  - ecological principles - interdependence of plants, animals, the soil and the environment; environment; habitats and the food chain
  - soil and erosion control principles - soil types, simple tests, types of erosion, theory of erosion prevention and control, land degradation control and functions of trees in the environment
  - basic anatomy and physiology - plant morphology, internal anatomy, growth patterns and

habits, and simple physiology

- tree hazard assessment encompassing: - symptoms of stress in trees, diagnosing tree problems, assessments for line clearance, personal hazards, the tree's response to wounding and decay, theory of compartmentalisation and tree stability (damage to root systems due to excavation)
- principles of pruning
- branch collars
- control of vegetation encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements, including relevant certification and licensing applicable to the control of vegetation - clearance zones and approach distances from overhead power lines, legislation associated with easement access and maintenance, appropriate PPE, equipment maintenance and safety precautions
  - tree climbing and pruning - chainsaw safety and maintenance, basic cross-cutting techniques, simple felling, use of EWP, safe climbing with ropes and harnesses, use of chainsaws in the tree, cutting techniques, roping techniques, chemical control of foliage and the required safety techniques, and practical work on-site with a range of trees
  - easement management - legislation relating to easement access and maintenance, use of chemicals and herbicides and provision of material safety data sheets (MSDS) for those substances, use of machinery and plant, and access tracks
- working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker encompassing:
  - standards, guidelines/codes of practice, state/territory/local government legislation, supply authority regulations and/or enterprise requirements, including relevant certification and licensing applicable to working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker
  - definitions of terminologies - 'safe working zone' 'risk assessment', 'safe approach distances zones', 'safe working distances', 'work permits', 'access authorisation permits', 'technical standards' 'isolation procedures' and 'compliance requirements'
  - WHS/OHS policies and procedures for working safely - emergency response and first aid procedures, such as cardiopulmonary resuscitation (CPR); roles and responsibilities of employers, employees and other parties under WHS/OHS legislation; PPE; identifying hazards; assessing and controlling WHS/OHS risks; duties of a safety observer; working at heights/confined spaces; permit to work systems and isolation procedures; safe application of different types of tools and equipment; and operation of mobile plant and machinery (e.g. EWP) near live electrical apparatus
  - electricity supply infrastructure assets and voltages
  - techniques and precautions in undertaking different work functions and working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker - work functions that may be performed, including vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker
- coordination of vegetation control inspection programs encompassing:
  - Commonwealth/state/territory/local government legislation/regulations, standards, codes,

supply authority regulations and/or enterprise requirements, including relevant certification and licensing applicable to coordinating the inspection of vegetation control:

- clearance zones and approach distances from overhead power lines, legislation associated with easement access and maintenance, and use and operation of plant and equipment, such as EWPs, chainsaws/pole saws and stump grinders

- appropriate PPE
- equipment maintenance and safety precautions
- endangered plants/animals/insects
- soil erosion
- chemical treatment
- provision of manufacturer and supplier information, such as MSDSs
- traffic management control plan
- alternative engineering solutions for vegetation management
- emergency response and first aid procedures
- techniques in the inspection of vegetation to determine action required - diagnosing tree problems and systems of stress in trees; identification of fall zone; identification of WHS/OHS hazards; assessing and controlling risks; safety policies, procedures and precautions; responsibilities and protocols for team members; procedures for obtaining electrical access authorities and procedures for coordination of operations
- techniques in determining the resources required for a particular vegetation control project
- techniques in determining the condition of the tools and equipment needed for a particular vegetation control project
- techniques in determining the duration and cost of the vegetation control project
- techniques in relaying information to team members - safe precautions and procedures; clearances zones and approach distances; proper selection, maintenance, use and storage of PPE; procedures regarding safe use of equipment, including pre-operational checks for serviceability; and procedures in the safe transporting, use, storage and disposal of chemicals
- procedures for removal of vegetation
- techniques in record keeping of data.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRVC009 Monitor vegetation control work in the vicinity of live electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to monitor vegetation control work in the vicinity of live electrical apparatus in an electricity supply industry (ESI) environment.

It includes communicating with workers to prevent unsafe work activities and to stop the encroachment of workers, mobile plant, tools and equipment into the safe approach distance.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

UETDRVC001 Apply work health and safety requirements for powerline vegetation control

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

### 3.2 Work documentation is completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRVC27 Monitor safety compliance of vegetation control work in an ESI environment.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRVC009 Monitor vegetation control work in the vicinity of live electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- monitoring vegetation control work including safe approach distances and vegetation clearances
- identifying hazards and assessing risks
- identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- identifying electricity networks, including:
  - low voltage (LV)
  - high voltages (HV)
- maintaining drop zone
- selecting the best position for monitoring and controlling work
- identifying and using selected communication method
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - vegetation clearances
  - emergency response and rescue, including first aid

- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- vegetation cutting techniques
- operation of plant, tools and equipment.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations and codes of practice.

# UETDRVC010 Perform rescue from within a tree in the vicinity of live electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to perform rescue from within a tree in the vicinity of live electrical apparatus.

It includes applying safe approach distances, tree climbing techniques, rescue methods, inspection and use of rescue equipment.

It also includes emergency procedures for energised and non-energised rescue, hazard assessment, site security and reporting requirements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

UETDRVC001 Apply work health and safety requirements for powerline vegetation control

UETDRVC006 Control vegetation in the vicinity of live electrical apparatus from within the tree

UETDRVC007 Control vegetation using pruning techniques

UETDRVC009 Monitor vegetation control work in the vicinity of live electrical apparatus

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Prepare to respond to a rescue from within a tree**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the rescue response are referred to and confirmed
- 1.2** Tools and emergency equipment are checked for safety, functionality and placed in an accessible location to facilitate response and rescue according to workplace requirements
- 1.3** Emergency rescue responsibilities are confirmed and clarified with work team prior to work being undertaken

**2 Respond and perform rescue from within a tree**

- 2.1** Emergency situation is assessed in accordance with workplace requirements
- 2.2** Emergency responses are activated in accordance with workplace requirements
- 2.3** Assistance is requested from work team and/or public, where required
- 2.4** Nature of the injury is assessed and communicated
- 2.5** First aid is applied, where required
- 2.6** Casualty is prepared for descent according to first aid and risk assessments
- 2.7** Casualty is lowered safely to the ground with support of rescuer

**3 Perform casualty recovery**

- 3.1** First aid is applied on the ground, where required
- 3.2** Emergency assistance is confirmed in accordance with emergency response

**4 Complete documentation**

- 4.1** Incident is reported in accordance with workplace requirements
- 4.2** Incident site is secured and entry controlled in accordance with workplace requirements
- 4.3** Work documentation is completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRVC34 Undertake release and rescue from a tree near live electrical apparatus.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRVC010 Perform rescue from within a tree in the vicinity of live electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
  - vegetation clearances
  - securing the incident site
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using rescue equipment
- performing a rescue from a tree using at least two (2) of the following rescue types:
  - lower casualty on own system
  - lower casualty on additional system
  - lower casualty on the rescuers climbing system
  - pole top (tree)
- using emergency communication system
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - vegetation clearances
  - incident site security
  - reporting requirements

- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of personal protective equipment (PPE)
- branches/limbs that are unsafe to climb
- rescue equipment, including:
  - storage and maintenance
  - inspection
  - placement
  - components and application
- safe climbing practices, including:
  - ropes, slings and harnesses
  - roping and slinging techniques
  - application of lifelines and ropes
  - load bearing equipment and lifts
- range of emergency situations that may arise
- emergency response procedures in rescuing a climber, including:
  - first aid/cardiopulmonary resuscitation (CPR)
  - climber position with respect to live power lines
  - contacting emergency services
  - assessment of rescue priorities
  - safe rescue of the climber
  - selection of rescue method and equipment
- emergency response procedures in rescuing a person from an energised position, including:
  - climber position with respect to live power lines
  - identification of voltage
  - isolation of supply
  - contacting network operator/asset owners.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- suitable simulated work environment
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRVC011 Use specialised plant to cut vegetation above ground in the vicinity of live electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to use specialised plant to cut vegetation above ground in the vicinity of live electrical apparatus in the electricity supply industry (ESI).

It includes carrying out pre- and post-operational checks, vegetation clearances zones, safe approach distances, reporting faults and maintaining operational records and using the plant to safely cut vegetation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

UETDRVC001 Apply work health and safety requirements for powerline vegetation control

UETDRVC009 Monitor vegetation control work in the vicinity of live electrical apparatus

## Competency Field

Vegetation Control

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## **1 Prepare specialised plant**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work instruction is obtained and confirmed in accordance with workplace requirements
- 1.3** Plant and personal protective equipment (PPE) required for the work are determined, obtained and confirmed in safe working order
- 1.4** Hazards are identified, risks assessed, and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with work instruction and workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Worksite is prepared in accordance with the work instruction and workplace requirements
- 1.8** Safety observer role, responsibility and communication method is discussed and confirmed in accordance with workplace requirements
- 1.9** Safe approach distances and vegetation clearances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.10** Routine pre-operational checks are completed to manufacturer specifications and workplace requirements

## **2 Operate specialised plant**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** PPE is used in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Safety observer is positioned to observe the work in accordance with workplace requirements

- 2.5    Communication methods between workers and safety observer are used in accordance with workplace requirements
- 2.6    Safe approach distances are maintained when the work is being performed
- 2.7    Plant is operated in a safe and controlled manner, and monitored for performance and efficiency
- 2.8    Environmental implications associated with specialised plant operation are identified, assessed and reported according to workplace requirements
- 2.9    Incidents or unplanned events are responded to in accordance with workplace requirements
- 3    Complete work and documentation**
  - 3.1    Completed work is checked for compliance against the work instruction and workplace requirements
  - 3.2    Work permits are signed off, where appropriate, in accordance with workplace requirements
  - 3.3    Shutdown procedures for specialised plant are completed to manufacturer specifications and workplace requirements
  - 3.4    Post-operational checks, minor maintenance of plant is conducted in accordance with workplace requirements
  - 3.5    Plant is cleaned and returned to storage in accordance with workplace requirements
  - 3.6    Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.7    Worksite is cleaned and made safe in accordance with workplace requirements
  - 3.8    Work documentation is completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRVC32 Use specialised plant to cut vegetation above ground level in the vicinity of live electrical apparatus.

## Links

Companion Volume Implementation Guides are found in VETNet -

# **Assessment Requirements for UETDRVC011 Use specialised plant to cut vegetation above ground in the vicinity of live electrical apparatus**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
  - vegetation clearances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- operating specialised plant to cut vegetation above ground level in the vicinity of live electrical apparatus
- conducting pre- and post-operational checks specialised plant
- inspecting and maintaining specialised plant
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- using operational techniques for the specific terrain, including on and off-road environments and weather conditions
- securing, cleaning and storing plant in accordance with manufacturer specifications and workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace

requirements, including:

- WHS/OHS
- safe approach distances
- vegetation clearances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- application, purpose and types of work permits
- safety observer:
  - role and responsibilities
  - communication methods
- specialised plant to cut vegetation above ground level in the vicinity of live electrical apparatus, including:
  - mechanical tree trimmer
  - mechanical hedger
  - pre- and post-operational checks
  - safe operation of plant
  - inspection, care, maintenance and transport/loading
  - emergency procedures
- relevant environmental implications associated with the operation of plant
- relevant work documentation
- vegetation control specialised plant, including:
  - work instruction relevant to the vegetation type
  - cutting techniques
  - drop zone
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# **UETTDREL15 Respond to power systems technical enquiries and requests**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## **Application**

This Unit covers responding to enquiries of a technical nature using electricity supply industry (ESI) transmission, distribution and rail/tram network requirements, techniques and processes. It includes the relevant application of knowledge of relevant Acts and regulations, codes of practice, guidelines and compliance regimes, and arrangements used to facilitate a response to enquiries or requests. The enquiries may be internal or with customers.

Note: examples include storm codes identification of key equipment, recognition of normal and abnormal industry situations, key processes and systems used in the industry, such as maps and the application of general safety and environmental processes and practices used in the industry.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

There are no prerequisite competencies to this unit.

## **Competency Field**

Entry Level Cross Discipline

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to respond to technical enquiries and requests**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Instructions related to responding to enquiries using industry requirements, techniques and processes of a technical nature to be performed are received and confirmed
- 1.2** Relevant requirements and established procedures to be followed and relevant personnel (including internal and/or customer) to be communicated with for the work to be performed are identified
- 1.3** Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures to be followed for the work to be performed are received and confirmed
- 1.4** Suggestions to assist in meeting the safety requirements for responding to technical enquiries and requests are made to others involved in the work
- 1.5** Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear according to established procedures
- 1.6** Scope of responsibility and process of relevant work permit(s) issue is identified, received and confirmed according to requirements and established procedures
- 1.7** Relevant responsibility associated with first aid, safety observers and/or other related work safety procedures at the worksite are identified in accordance with requirements and established procedures to ensure safety measures are followed in the instance of an incident
- 1.8** Processes for identifying and reporting client (including internal and customer) issues to appropriate personnel in accordance with industry/acceptable/community standards are identified
- 1.9** Workplace and the work schedule are confirmed according to given instructions for a quality outcome and to minimise risk and damage to property, commerce, stock and individuals in accordance with

established procedures

- 1.10** Electricity infrastructure assets, related voltages and requirements, where applicable, for working safely near live electrical apparatus as non-electrical worker are identified
  - 1.11** Safe approach distances, including any zones thereof that may apply as defined in industry guidelines, requirements and/or established procedures for the intended work, are confirmed
- 2 Carry out responses to technical enquiries and requests**
  - 2.1** WHS/OHS principles and practices to reduce the incidents of accidents are identified in accordance with given instructions, requirements and/or established procedures
  - 2.2** Enquiries and/or requests are responded to according to requirements and established procedures, and in a timely manner
  - 2.3** Working safely and complying with all safety requirements for responding to technical enquiries and requests are followed in accordance with given instructions and established routines/procedures
  - 2.4** Processes for monitoring and reporting/referring hazards and WHS/OHS risks to the immediate authorised personnel for directions according to established procedures are followed
  - 2.5** Non-routine events are referred to the immediate authorised personnel for directions according to established procedures
  - 2.6** Essential knowledge and associated skills are applied in the application of responding to technical enquiries and requests to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
  - 2.7** Unexpected events associated with enquiries and/or requests of a technical nature are responded to using acquired known solutions and skills related to routine procedures to ensure work instructions and established procedures are met
- 3 Complete responses to technical enquiries and**
  - 3.1** Work schedule and anomalies for completion and checking of the work are reported to authorised

**requests**

personnel in accordance with established procedures

- 3.2** Processes for reporting accidents and/or incidents to authorised personnel are confirmed in accordance with established procedures
- 3.3** Requirements for returning work permit(s) and/or access authorisation permits, where applicable, are confirmed
- 3.4** Appropriate personnel are notified of work completion according to established procedures
- 3.5** Works completion records and/or report forms/data sheets are completed accurately in accordance with given instructions and established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDREL15A Respond to power systems technical enquiries and requests.

## Links

# Assessment Requirements for UETTDREL15 Respond to power systems technical enquiries and requests

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- confirming safe working zone for safe work and access near live electrical and mechanical apparatus
- applying knowledge of relevant acts and regulations, codes of practice, guidelines and compliance regimes, and arrangements used
- identifying established (enterprise) procedures and processes
- confirming the principles of electricity, three phase power system, electric shock and resuscitation, and power system
- recognising aerial voltage systems
- identifying low voltage (LV) networks
- identifying high voltage (HV) networks
- identifying all of the following:
  - procedures in the event of an incident
  - events constituting an incident
  - procedures for responding to incidents
  - hazard and risk assessment general principles and procedures
  - principles for conducting worksite hazard assessment checks, basic safety principles and hazard control measures
- identifying all of the following:
  - purpose and use of work and/or authorisation permits
  - possible effects of weather conditions on working near electrical apparatus as a non-electrical worker
- applying knowledge of critical codes in the industry, e.g. storm code emergencies
- identifying key equipment used in the industry
- recognising normal and abnormal industry situations
- responding to a technical enquiry or request in accordance with established procedures and

timely manner

- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- engineering applications of material properties encompassing:
  - identification and classification of engineering materials, including material properties
  - types and applications - properties of tensile strength; effects of temperature on the expansion of metals; ductibility, malleability, work hardening and annealing and the conditions that lead to corrosion; and the properties of timbers
- generation power systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail power systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components, typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- fundamentals for working safely near live electrical apparatus encompassing:
  - standards, guidelines/codes of practice, state/territory/local government legislation, supply authority regulations and/or enterprise requirements, including relevant certification and licensing, applicable to working safely up to the defined safe working zone near energised electrical apparatus (including, electrical powerlines) for non-electrical workers
  - definitions of terminologies - safe working zone risk assessment, safe approach distances zones, safe working distances, work permits, access authorisation permits, technical standards, isolation procedures and compliance requirements
  - WHS/OHS policies and procedures for working safely - emergency response and first aid procedures, such as cardiopulmonary resuscitation (CPR); roles and responsibilities of employers, employees and other parties under WHS/OHS legislation; personal protective equipment (PPE); identifying hazards; assessing and controlling WHS/OHS risks; duties

- of a safety observer; working at heights/confined spaces; permit to work systems and isolation procedures; safe application of different types of tools and equipment
- operation of mobile plant and machinery, such as an elevated work platform (EWP) near live electrical apparatus
- electricity supply infrastructure assets and voltages
- techniques and precautions in undertaking different work functions and working safely up to the defined safe working zone near energised electrical apparatus (including electrical powerlines) for non-electrical worker (work functions that may be performed include, vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker)
- enterprise-specific policies, procedures and instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, training and competency development - understanding and promotion
- enterprises-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application, where and when to be used, method of replacement, and responsibility for maintenance, including cleaning, inspection and testing
  - emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and

- diagrams
- title box - description of parts and version control
- basic network operating principles and parameters encompassing:
  - sources of electricity
  - basic principles of electricity, three phase power system, electric shock and resuscitation, and power system
  - aerial and underground voltage systems
  - LV network systems
  - HV network systems
  - equipment used in a network system
  - multiple earthed neutral (MEN) system
  - hazards and risks in a network system - risk to life, property or commerce, fallen wires/equipment and fires
  - voltage gradients - step potential and touch potential (transferred earth potentials)
- applicable legislation, regulations, standards, industry codes, industry guidelines and policies encompassing:
  - relevant sections of legislation used
  - relevant sections of international or Australian Standards used
  - relevant sections of industry codes used
  - relevant sections of industry guidelines used
  - relevant sections of policies used
  - relevant sections of advisory information used
- incident event procedures
- incidents constituting an event
- incidence response procedures
- general hazard and risk assessment principles and procedures
- principles for conducting worksite hazard assessment checks
- basic safety principles and hazard control measures
- key industry terms and performance indicators and measures used - System Average Interruption Duration Index (SAIDI), System Average Interruption Frequency Index (SAIFI), Momentary Average Interruption Frequency Index (MAIFI), Customer Average Interruption Duration Index (CAIDI), and network owners and operators
- critical industry codes used - storm code emergencies
- key equipment used in the industry - industry-specific equipment, switchgear, transformers, aerial conductors, insulators, poles, mobile plant and mobile equipment
- normal and abnormal industry situations, key processes and systems used in the industry - anomalies report, critical system/network failures/anomalies and key processes and systems used in the industry, e.g. maps, drawings, as well as safety and environment processes and practices; communications systems; fires; automatic switching; emergencies; and security breaches
- techniques and processes for responding to a technical enquiry or request in accordance with established procedures in a timely manner - ethical performance; assessing applications, enquiries or requests; using technology and media, including catalogues to assist

- assessments; client quality service; and reflecting on the completed enquiry or request
- enquiries may be internal or with customers encompassing:
  - customer protocols
  - legal requirements and obligations for property access
- relevant heritage and environmental requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDNIS65 Contribute to coordinated HV live working

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit specifies the outcomes required of live line working team members to work effectively as a cohesive team to ensure safety of all team members and the community when undertaking high voltage (HV) live line work. It includes the pre-work briefing on tasks to be undertaken, roles of individual team members, identification of possible hazards, risk management analysis and implementation of palliative measures to control or mitigate the risk to acceptable levels. It also encompasses the monitoring of work performance to ensure safety, and the post-work debriefing to identify areas for continuous improvement.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

There are no prerequisite competencies to this unit.

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Plan to contribute to a coordinated HV live line work team**

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination by the team
- 1.2** Relevant requirements and established procedures for the work are communicated to all team members and identified for all worksites
- 1.3** Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the working on HV live lines are obtained and confirmed for the purposes of the work to be performed and discussed among all team members
- 1.4** Work is prioritised and sequenced following consultation with all team members to ensure safe systems of work are followed for completion within acceptable timeframes and in accordance with established procedures
- 1.5** WHS/OHS and live line work hazards are identified, risk assessments conducted and control measures identified, prioritised, implemented and documented against the work schedule, including the checking of site weather and environmental conditions, to ensure that live line work can be undertaken safely
- 1.6** Relevant live line work permits or authority for live line work are secured to coordinate the performance of work by the team according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.8** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and land owners are resolved and activities coordinated to carry

out work

- 1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.11** All team members to be engaged in the work discuss and agree, without ambiguity, on their respective roles, and possible role changes during the course of work
- 1.12** Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements

## **2 Carry out the contribution to coordinated HV live line work**

- 2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures, in particular, established live line working procedures are strictly adhered to
- 2.2** First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
- 2.3** Lifting, climbing, working aloft, and use of power tools/equipment, techniques and practices, where applicable, are safely exercised according to requirements
- 2.4** Live line permits and other provisions for live line work are in place, as required, in accordance with requirements and established procedures
- 2.5** Essential knowledge and associated skills are applied in the safe contribution to coordinated HV live line work to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
- 2.6** Work is undertaken on HV live line in a team environment work according to the work schedule and requirements/established procedures
- 2.7** Work is shared among all team members in a coordinated manner as discussed and agreed during pre-work briefing
- 2.8** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks discussed with

team members and reported to immediate authorised personnel for directions according to established procedures

**2.9** Unplanned events in the maintenance of HV live line work are discussed among all team members and appropriate actions undertaken accordingly

**2.10** Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements

**2.11** Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard

### **3 Complete the contribution to coordinated HV live line work**

**3.1** Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures

**3.2** Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures

**3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures

**3.4** Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

**3.5** Relevant work permits are signed off and HV live line work is returned to service and client/customer advised in accordance with requirements

**3.6** Works completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

**3.7** Aspects of work schedule are discussed/identified via feedback with fellow team members and information on improvement forwarded to appropriate personnel according to established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI65A Contribute to coordinated HV live working.

# Assessment Requirements for UETTDRIS65 Contribute to coordinated HV live working

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- facilitating communication/consultation processes in a high voltage (HV) live line work team environment
- contributing to pre-work briefings and securing of live line permits or authority to work in a HV live line work team environment
- implementing WHS/OHS policies and procedures in a HV live line work team environment
- contributing to the work schedule in a HV live line work team environment
- contributing to feedback consultation on improving safe working in a HV live line work team environment
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical safe working practices encompassing:
  - risk management and assessment of risk - principle and purpose of risk management and processes for conducting a risk assessment
  - hazards associated with low voltage (LV), extra-low voltage (ELV) and high currents - arrangement of power distribution and circuits in an electrical installation, parts of an electrical system and equipment that operate at LV and ELV, and parts of an electrical system and equipment where high currents are likely
  - risks and control measures associated with HV - parts of an electrical system and equipment that operate at HV, the terms 'touch voltage', 'step voltage', 'induced voltage' and 'creepage' as they relate to the hazards of HV, and control measures used for dealing with the hazards of HV
  - optical fibre safety - coherent optical sources and joining procedures, and laser safety

- class 3a devices or their replacement
- risks and control measures associated with LV - risks associated with modifying electrical installations; fault finding, maintenance and repair; control measures before, during and after working on electrical installations, circuits or equipment; isolation and tagging-off procedures; risks and restrictions in live work, and control measures for live work
- risks and control measures associated with harmful dusts and airborne contaminants - thermal insulation, fibrous cement materials, and asbestos and other fibre reinforced switchboard materials
- safety, selection, use, maintenance and care of test equipment - safety characteristics of electrical testing devices, safe use of electrical testing device, and checks and storage methods for maintaining the safety of testing devices
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, the procedure used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses, developing techniques, involvement of external emergency services, and practical demonstration/rehearsals of rescuing a person from heights and from confined spaces and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing

rules

- working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker encompassing:
  - standards, guidelines/codes of practice, state/territory/local government legislation, supply authority regulations and/or enterprise requirements, including relevant certification and licensing applicable to working safely up to the defined "safe working zone" near energised electrical apparatus, including electrical powerlines, for non-electrical worker
  - definitions of terminologies - 'safe working zone' 'risk assessment', 'safe approach distances zones', 'safe working distances'. 'work permits', access authorisation permits', 'technical standards' 'isolation procedures' and 'compliance requirements'
  - WHS/OHS policies and procedures for working safely - emergency response and first aid procedures, such as CPR; roles and responsibilities of employers, employees and other parties under WHS/OHS legislation; personal protective equipment (PPE); identifying hazards; assessing and controlling WHS/OHS risks; first aid procedures; duties of a safety observer; working at heights/confined spaces; permit to work systems and isolation procedures
  - safe application of different types of tools and equipment
  - operation of mobile plant and machinery, such as elevated work platform (EWP) near live electrical apparatus
  - electricity supply infrastructure assets and voltages
  - techniques and precautions in undertaking different work functions and working safely up to the defined safe working zone near energised electrical apparatus, including electrical powerlines, for non-electrical worker - work functions, such as vegetation control, scaffolding, rigging, painting, and/or any other activity that requires working safely near live electrical apparatus by a non-electrical worker
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing;

- and emergency response, rescue, evacuation and first aid procedures
- personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
- WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific specialised tools encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools - voltage detectors, polarity testers and phase rotation
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, care and storage of specialised tools
  - identifying WHS/OHS hazards, assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific HV live line teamwork encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV live lines
  - safety precautions working on energised live lines when working in teams - live line minimum approach distances for person and plant; WHS/OHS hazards and precautions; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE; live line access authority/permit system; disabling auto-reclosing function; ensuring functioning of fault current protective devices and checking integrity of insulation prior to work commencement
  - types and functions of specialised live line working equipment and tools and inspection techniques prior to use
  - safe working policies, procedures and practices when using and operating specialised equipment and tools
  - methods of using specialised equipment and tools
  - use of safety observers
  - emergency response and rescue, including first aid
  - relationship and responsibilities of each team member - roles of individuals in the team, contribution to joint outcome, goals/plans and objectives of the team
  - work team communication - techniques in effective communication, techniques in effective teamwork and dangers of ineffective teamwork.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRI67 Solve problems in energy supply network equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to solve problems in energy supply network equipment in the electricity supply industry (ESI).

It includes determining correct operation of energy supply network electrical equipment and providing solutions. It also includes working safely, reading circuit and reticulation diagrams, applying problem solving processes from measurements and completing the necessary documentation.

The application of the skills and knowledge described in this unit may require a licence to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to solve problems in energy supply network equipment**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
- 1.2** Extent of work to be undertaken is determined from reports and/or discussions with relevant person/s
- 1.3** Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.4** Materials required for work are determined in accordance with workplace procedures
- 1.5** Tools, equipment and testing devices required to take measurements are obtained in accordance with workplace procedures and checked for correct operation and safety

#### **2 Solve problems in energy supply network equipment**

- 2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
- 2.2** The need to test or measure live work is determined in accordance with WHS/OHS requirements and, when necessary, conducted in accordance with workplace safety procedures
- 2.3** Circuits/machines/plant are isolated, where necessary, in accordance with WHS/OHS requirements and workplace procedures
- 2.4** Safety hazards resulting from reports and risk control measures devised and implemented in consultation with appropriate personnel
- 2.5** Problem solving of energy network equipment is approached methodically using measured and calculated

values of circuit/apparatus parameters

- |                                                                                    |                                                                                                                                                               |
|------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>2.6</b>                                                                         | Circuit/apparatus components are dismantled, where necessary, and parts stored to protect them against loss or damage                                         |
| <b>2.7</b>                                                                         | Circuits/components are rechecked and their operational status is confirmed                                                                                   |
| <b>2.8</b>                                                                         | Materials/replacement parts required to solve problems are sourced and obtained in accordance with workplace procedures                                       |

|                                                                                    | <b>3.3</b> Maintenance work activities are documented in accordance with workplace procedures                                                                 |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRIS67A Solve problems in energy supply network equipment.

## **Links**

UET Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETTDRI67 Solve problems in energy supply network equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- solving problems in energy supply network equipment, including:
  - determining the operating parameters of existing energy supply equipment
  - envisaging the likely extent of work from reports and discussions with appropriate personnel
  - using methodical problem-solving techniques
  - solving problems efficiently
  - altering an existing energy supply equipment to comply with specified operating parameters
  - developing energy supply equipment to comply with a specified function and operating parameters
  - determining conditions causing an existing energy supply equipment to be unsafe
  - completing documentation correctly
- solving problems in energy supply network equipment on at least one (1) of the following energy supply network systems:
  - distribution overhead system
  - distribution underground system
  - transmission overhead system
  - transmission underground system
- using at least three (3) of the following distribution/transmission equipment:
  - voltage regulation equipment
  - on load tap changers
  - energy metering
  - demand meters
  - load control

- current transformers
- potential transformers
- dealing with unplanned events on at least one (1) occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- generation, including:
  - primary energy sources
  - power stations
  - power station output
  - acts and legislation relating to generation
  - renewable energy sources and techniques
- transmission, including:
  - system requirements
  - principal components of a power system
  - voltage levels
  - grid systems
  - acts/legislation relating to transmission
  - future trends
- distribution, including:
  - high voltage (HV) distribution systems
  - medium/low voltage (LV) distribution systems
  - radial feeders
  - parallel feeders
  - ring main feeders
  - acts/legislation relating to distribution
- substations, including:
  - purpose
  - location
  - layout
- overhead and underground systems, including:
  - relative merits
  - applications

- planning
- installation
- power distribution system electrical characteristics, including:
  - transmission and distribution systems
  - inductance, capacitance and resistance
- voltage problems in a power distribution system, including:
  - LV
  - unbalanced voltages
  - voltage rises
- voltage regulation, including:
  - autotransformers with on-load tap changer (OLTC)
  - transformers with OLTC
  - static capacitors
  - load control
- control of OLTC, including:
  - regulation relays
  - control circuits
  - line drop compensation
- power distribution system faults, including:
  - type/classification of fault
  - typical causes/effects of faults
  - three phase symmetrical fault levels
  - fault level limitation
- voltage surges in a power distribution system, including:
  - lightning surges
  - switching surges
  - typical surge levels
  - surge impedance, typical values
  - significance of the system surge impedance
- metering and metered quantities, including:
  - purpose
  - energy
  - maximum demand
  - accuracy classes for metering systems
- energy and demand meters, including:
  - construction
  - operation
  - adjustments
  - testing
- metering circuits, including:

- direct metering
- instrument transformer metering
- electronic metering systems and recording meters, including:
  - types
  - applications
  - connections
- load control, including:
  - purpose
  - methods.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETTDRI68 Solve problems in energy supply network protection equipment and systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## **Application**

This unit covers determining correct operation of energy supply network protection equipment and systems and providing solutions as they apply to energy supply network protection. It encompasses working safely, reading circuit and reticulation diagrams, applying logical problem-solving processes from measurements and completing the necessary documentation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UETTDRI67 Solve problems in energy supply network equipment

## **Competency Field**

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to solve problems in energy supply network protection equipment and systems**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
- 1.2** WHS/OHS risk control measures and procedures in preparation for the work are followed
- 1.3** The likely extent of work to be undertaken is envisaged from reports and/or discussions with appropriate personnel
- 1.4** Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.5** Sources of materials that may be required for the work are established in accordance with established procedures
- 1.6** Tools, equipment and testing devices needed to take measurements are obtained in accordance with established procedures and checked for correct operation and safety

#### **2 Solve problems in energy supply network protection equipment and systems**

- 2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
- 2.2** The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
- 2.3** Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS requirements and procedures

- 2.4 Safety hazards resulting from the reports identified and risk control measures devised and implemented in consultation with appropriate personnel
  - 2.5 Problem solving is approached methodically drawing on knowledge of energy supply network protection equipment and systems using measured and calculated values of circuit/apparatus parameters
  - 2.6 Circuit/apparatus/system components are dismantled, where necessary, and parts stored to protect them against loss or damage
  - 2.7 Circuits/components/systems are rechecked and their operational status is confirmed
  - 2.8 Materials/replacement parts required to solve problems are sourced and obtained in accordance with established procedures
  - 2.9 Effectiveness of the repair is tested in accordance with established procedures
  - 2.10 Apparatus is reassembled, finally tested and prepared for return to service
  - 2.11 Unexpected situations are dealt with safely and with the approval of authorised personnel
  - 2.12 Problem-solving activities are carried out without damage to apparatus, circuits the surrounding environment or services using sustainable energy practices
- 3 **Complete and report problem solving in energy supply network protection equipment and systems**
  - 3.1 WHS/OHS work completion risk control measures and procedures are followed
  - 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares
  - 3.3 Maintenance work activities are documented in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTD68A Solve problems in energy supply network protection equipment and systems.

## Links

# Assessment Requirements for UETTDRIS68 Solve problems in energy supply network protection equipment and systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- solving problems in energy supply network equipment including all of the following:
  - determining the operating parameters of existing energy supply protection equipment and systems
  - envisaging the likely extent of work from reports and discussions with appropriate personnel
  - using methodical problem-solving techniques
  - solving problems efficiently
  - altering an existing energy supply protection equipment to comply with specified operating parameters
  - developing energy supply protection equipment to comply with a specified function and operating parameters
  - determining conditions causing an existing energy supply protection equipment to be unsafe
  - completing documentation correctly
- solving problems in energy supply network systems including at least one (1) of the following:
  - distribution overhead system
  - distribution underground system
  - transmission overhead system
  - transmission underground system
- solving problems in energy supply protection equipment and systems including at least two (2) of the following:
  - over-current protection
  - earth fault protection
  - differential protection

- oil and gas devices
- busbar protection
- surge protection
- conventional relays
- electronic relays
- reclosers/sectionalisers
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protection fundamentals encompassing:
  - purpose of protection
  - features of a protection scheme
- instrument transformers for protection encompassing:
  - operating principles
  - applications of current transformers
  - applications of voltage transformers
- feeder protection encompassing:
  - fuse protection
  - overcurrent and earth fault
  - sensitive earth fault
  - unit schemes
  - distance protection
  - trip/close sequences for feeders
  - recloser/sectionaliser systems
- transformer protection encompassing:
  - overheating protection
  - overcurrent protection
  - restricted earth fault protection
  - differential protection
  - oil and gas devices
- busbar protection encompassing:
  - types of fault
  - requirements of busbar protection
  - system protection
  - frame-earth protection
- surge protection encompassing:
  - voltage surges

- surge diverters
- arcing horns.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDNIS69 Diagnose and rectify faults in energy supply apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers diagnosing and rectifying faults in apparatus in energy supply and distribution systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of energy supply apparatus to logical fault-finding processes, implementing fault rectification, safety and functional testing, and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UETTDNIS67 Solve problems in energy supply network equipment

UETTDNIS68 Solve problems in energy supply network protection equipment and systems

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to diagnose and rectify faults**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
  - 1.2** Established WHS/OHS risk control measures and procedures in preparation for the work are followed
  - 1.3** Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
  - 1.4** The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel
  - 1.5** Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the worksite
  - 1.6** Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety
- 2 Diagnose and rectify faults**
- 2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
  - 2.2** The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
  - 2.3** Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS requirements and procedures

- 2.4 Logical diagnostic methods are applied to diagnose energy supply apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements
  - 2.5 Suspected fault scenarios are tested as being the source of system problems
  - 2.6 Causes of faults are identified and appropriately competent person/s engaged to rectify the fault where it is outside the scope of the control system
  - 2.7 Faults in apparatus components are rectified to raise energy supply apparatus to its operation standard
  - 2.8 Apparatus is tested to verify that it operates as intended and to specified requirements
  - 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate personnel and job specifications and requirements
  - 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
  - 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
- 3 Complete and report fault diagnosis and rectification activities**
- 3.1 WHS/OHS work completion risk control measures and procedures are followed
  - 3.2 Worksite is made safe in accordance with established safety procedures
  - 3.3 Rectification of faults is documented in accordance with established procedures
  - 3.4 Appropriate person/s is notified in accordance with established procedures that the system faults have been rectified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTD RIS69A Diagnose and rectify faults in energy supply apparatus.

## Links

# Assessment Requirements for UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in energy supply apparatus, including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- control of voltage encompassing:
  - conditions leading to voltage collapse and system disintegration
  - effects on the system of high voltage (HV)/low voltage (LV)
  - voltage control devices - voltage regulators applied to generators and synchronous phase modifiers; electromagnetic voltage regulators; series and parallel capacitors; on-load tap changers (OLTC) transformers and static VAR compensations (SVCs), such as saturated reactor (SR) compensations, thyristor controlled reactor (TCR) compensators, combined

- TCR/TSCs and the production of wave-form distorting harmonics and control devices
- the importance of the location in the system of voltage control devices
- the use of graphical methods to calculate the size of VAR regulating plant
- control of power encompassing:
  - base load and spinning reserve
  - regulating machines
  - rapid start plant
  - phase shifting transformers and various forms of load shedding
  - principles and practices of automated control of individual machines
  - stations and transmission/tie-line elements
  - synchronising power
- the relationship between power and frequency encompassing:
  - limiting values
  - machine stabilising - steam by-pass, rapid valving, slip stabilisers and over speed limiting
  - use of single pole generator CB's
  - use of machine AVR's as angular stabilisers
  - damped and un-damped system oscillations
  - relationship between fault clearance times and system stability
  - calculation of critical clearance angles based on equal area criteria
- types of communication systems encompassing:
  - telephone, power line carrier, dedicated cable, microwave links and fibre optics
  - quantities and signals to be communicated
  - advantages and disadvantages of the various systems
  - equipment requirements
- transient over-voltages in power systems encompassing:
  - switching and lightning over-voltages and their effect on different plant items
  - transient over-voltage control and reduction using surge diverters, shield wires and CB control
  - insulation systems, insulation coordination, insulation grading in plant items, bushings and capacitor bushings
- factors leading to the generation of corona encompassing:
  - consequences of corona
  - reduction of corona
  - conductor bundling, grading rings and conductor surface treatment
- power system protection encompassing:
  - location of CT's in major plant items
  - earthing principles and devices
  - fault current control/limitation using neutral earthing compensators (NEC's), neutral point earth impedances, high conductivity shield wires and parallel feed interlocking
  - application of different types of protection.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Prepare to diagnose and rectify faults

- 1.1 Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
- 1.2 Established WHS/OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
- 1.4 The extent of faults is determined from reports and other documentation and from discussions with appropriate personnel
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the worksite
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety

#### 2 Diagnose and rectify faults

- 2.1 WHS/OHS risk control measures and procedures for carrying out the work are followed
- 2.2 The need to test or measure live work is determined in strict accordance with WHS/OHS requirements, and when necessary, conducted within established safety procedures

- 2.3 Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS requirements and procedures
    - 2.4 Logical diagnostic methods are applied to diagnose energy supply apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements
    - 2.5 Suspected fault scenarios are tested as being the source of system problems
    - 2.6 Source of fault is identified and appropriately competent person/s engaged to rectify the fault where it is outside the scope of the control system
    - 2.7 Faults in the apparatus components are rectified to raise energy supply apparatus to its operation standard
    - 2.8 System is tested to verify that it operates as intended and to specified requirements
    - 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate personnel and job specifications and requirements
    - 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
    - 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus, the surrounding environment or services using sustainable energy practices
  - 3 **Complete and report fault diagnosis and rectification activities**
    - 3.1 WHS/OHS work completion risk control measures and procedures are followed
    - 3.2 Worksite is made safe in accordance with established safety procedures
    - 3.3 Rectification of faults is documented in accordance with established procedures
    - 3.4 Appropriate person/s is notified in accordance with established procedures that the system faults have been rectified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS70A Diagnose and rectify faults in electrical energy distribution systems.

## Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETTDRIS70 Diagnose and rectify faults in electrical energy distribution systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in electrical energy distribution systems including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases, the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- distribution system overview encompassing:
  - regulatory conditions of supply and utilisation
  - compliance with Australian Standards
  - reticulation system, including overhead/underground, urban/rural, high voltage (HV) customers and high-rise building systems
  - methods used to ensure continuity of supply

- types of substations in current use
- systems of distribution used, (primary and secondary)
- voltage levels, power factor, wave-form distortion and transient loading
- supply quality
- load curve profiles (residential/industrial/commercial)
- types of feeders
- distribution systems (urban, rural single-phase systems, single wire earth return (SWER), spur, parallel and ring systems)
- overhead lines and installation encompassing:
  - industry and safety regulations
  - overhead conductors
  - conductor material
  - current rating factors (heating, voltage drops and power losses)
  - aerial bundled cables (HV and low voltage (LV))
  - covered conductors - characteristics of lines and cables, including the calculation of R, X and B for different arrangements of conductor; typical values for actual lines; transposition; models based on line length; voltage and line regulation
  - overhead line poles
  - types (wood, concrete and steel)
  - installation of poles (tooling, rake, life, labelling and sinking)
  - maintenance of poles (above and below ground)
  - pole strength and loads
  - crossarms
  - types and standard sizes
  - insulators
  - insulation types
  - types (pin, suspension or disc and shackle)
  - creepage and necessary clearances
  - arcing horns and insulator mounting
  - structure types
  - mechanical properties (working strength, maximum tension and limiting size)
  - interpretation of stringing charts
  - determination of sag (by calculations or measurement and/or tension measurement)
  - sight and wave sagging, and sag correction
  - stays
  - components and anchorage
- use of design schedules encompassing:
  - sample design problems - common design practice line, voltage, structure types used, line deviation, span sag, cross-arms, insulators and stays, wind loading and line deviation loading basic surveying

- measurement of levels, deviation angle and compass bearings
- perform survey of short distribution line extension of produce field notes
- underground cables encompassing:
  - cable types, ratings, core material, design considerations, cable dielectrics, insulating materials and abbreviations, electric stress, cable voltage drop and voltage drop calculations, cable termination, joints and installation
  - induction and eddy currents
  - cable testing and cable fault location
  - cable drawing
- voltage regulations of feeders and associated equipment encompassing:
  - terminology used - distribution system, service line, customer's terminals, customer voltage, utilisation voltage, base voltage, voltage variation and bandwidth
  - voltage limits and effects of voltage variation
  - causes of variation - inductance, capacitance and reactance of distribution lines, and transformers
  - methods of voltage control - off-load, on-load tap changers, voltage regulating relays, line drop compensation and different types of voltage regulators
  - voltage profiles - principles, effect on voltage profiles, limits of voltage, voltage drops due to LV mains transformers, tap-settings feeder and service lines
  - determining voltage drops for components within the profile
- control of voltage - conditions leading to voltage collapse and system disintegration; effects on the system of HV/LV; and voltage control devices encompassing:
  - voltage regulators applied to generators and synchronous phase modifiers
  - electromagnetic voltage regulators
  - series and parallel capacitors
  - on-load tap changer (OLTC) transformers and static VAR compensations (SVCs)
- range of devices covered by SVCs encompassing:
  - saturated reactor (SR) compensations
  - thyristor controlled reactor (TCR) compensators
  - combined TCR/TSCs
  - production of wave-form distorting harmonics and control devices
- importance of the location in the system of voltage control devices
- types of communication systems encompassing:
  - telephone, power line carrier, dedicated cable, micro-wave links and fibre optics
  - quantities and signals to be communicated
  - advantages and disadvantages of the various systems
  - equipment requirements
- transient over-voltages in power systems encompassing:
  - switching and lightning over-voltages and their effect on different plant items
  - transient over-voltage control and reduction using surge diverters, shield wires and CB control

- insulation systems, insulation coordination, insulation grading in plant items, bushings and capacitor bushings
- the principles of operation, voltage and current range, breaking capacity and field of use of circuit breakers - bulk oil, small oil volume, air break, vacuum and SF6 (double pressure and puffer types)
- the types of isolators in use, such as duo-roll, blade and scissor type
- circuit breaker auxiliary systems encompassing:
  - direct current (d.c.) systems, including battery types, charging and protection systems and earth fault detection systems
  - SF6 conditioning, storage and handling systems.

# UETTDNIS71 Diagnose and rectify faults in electrical energy supply transmission systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers diagnosing and rectifying faults in electrical energy transmission systems. The unit encompasses applying safe working practices, interpreting diagrams and technical data; applying knowledge of energy supply and transmission systems to logical fault-finding processes; implementing fault rectification, safety and functional testing; and reporting work activities and outcomes.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UETTDNIS67 Solve problems in energy supply network equipment

UETTDNIS68 Solve problems in energy supply network protection equipment and systems

UETTDNIS69 Diagnose and rectify faults in energy supply apparatus

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to diagnose and rectify faults**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and understood
- 1.2** Established WHS/OHS risk control measures and procedures in preparation for the work are followed
- 1.3** Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
- 1.4** The extent of faults is determined from reports and other documentation and from discussions with appropriate personnel
- 1.5** Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the worksite
- 1.6** Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety

#### **2 Diagnose and rectify faults**

- 2.1** WHS/OHS risk control measures and procedures for carrying out the work are followed
- 2.2** The need to test or measure live work is determined in strict accordance with WHS/OHS requirements and, when necessary, conducted within established safety procedures
- 2.3** Circuits/machines/plant are checked as being isolated, where necessary, in strict accordance with WHS/OHS

requirements and procedures

- 2.4 Logical diagnostic methods are applied to diagnose electrical energy transmission system faults employing measurements and estimations of system operating parameters referenced to system operational requirements
- 2.5 Suspected fault scenarios are tested as being the source of system problems
- 2.6 Source of fault is identified and appropriately competent person/s engaged to rectify the fault where it is outside the scope of the control system
- 2.7 Faults in the system components are rectified to raise electrical energy transmission system to its operation standard
- 2.8 System is tested to verify that it operates as intended and to specified requirements
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate personnel and job specifications and requirements
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes
- 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to system, the surrounding environment or services using sustainable energy practices

### **3 Complete and report fault diagnosis and rectification activities**

- 3.1 WHS/OHS work completion risk control measures and procedures are followed
- 3.2 Worksite is made safe in accordance with established safety procedures
- 3.3 Rectification of faults is documented in accordance with established procedures
- 3.4 Appropriate person/s is notified in accordance with established procedures that the system faults have been rectified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDNIS71A Diagnose and rectify faults in electrical energy supply transmission systems.

## Links

# Assessment Requirements for UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in electrical energy supply transmission systems, including:
  - applying logical diagnostic methods
  - using fault scenarios to test the source of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- overview of the transmission system encompassing:
  - lines, buses, transformers and cables; line/bus layouts, including single and double switching, breaker and a half systems and high voltage (HV) crossing methods
- the principles involved in HV alternating current (a.c.) transmission encompassing:
  - tower types and configurations; choice of towers or poles (economic and environmental); insulator types and configuration; types of conductors, their configuration and standard nomenclature; typical line spacing and ground clearances; line ratings based on ambient

- temperature; conductor terminating and clamping equipment, including vibration damping principles and equipment
- principles involved in direct current (d.c.) transmission encompassing:
  - the economics, harmonic generation, VAR requirements and protection difficulties; types of connections and transformer requirements; advantages and disadvantages of d.c. transmission; typical overseas systems and likely (future) use in Australia
- the principles of operation, voltage and current range, breaking capacity and field of use of the following types of circuit breakers
  - bulk oil
  - small oil volume
  - air break
  - air blast
  - air puffer
  - vacuum and
  - SF6 (double pressure and puffer types)
- the types of isolators in use, such as duo-roll, blade and scissor type
- circuit breaker auxiliary systems encompassing:
  - high pressure air systems, and air storage and handling processes
  - d.c. systems, including battery types, charging and protection systems and earth fault detection systems
  - SF6 conditioning, storage and handling system
- the characteristics of lines and cables encompassing:
  - the calculation of R, X and B for different arrangements of conductor; typical values for actual lines; transposition; models based on line length; voltage and line regulation; the transmission of power (P) and VARs (Q)
- control of voltage - conditions leading to voltage collapse and system disintegration, effects on the system of high voltage (HV)/low voltage (LV), and voltage control devices including:
  - voltage regulators applied to generators and synchronous phase modifiers
  - electromagnetic voltage regulators
  - series and parallel capacitors
  - on-load tap changer (OLTC) transformers and static VAR compensations (SVCs)
- range of devices covered by SVCs, including:
  - saturated reactor (SR) compensations
  - thyristor controlled reactor (TCR) compensators
  - combined TCR/TSCs
  - production of wave-form distorting harmonics and control devices
- importance of the location in the system of voltage control devices
- use of graphical methods to calculate the size of VAR regulating plant
- types of communication systems including:
  - telephone, power line carrier, dedicated cable, micro-wave links and fibre optics; quantities and signals to be communicated; Advantages and disadvantages of the various

systems and equipment requirements

- transient over-voltages in power systems, including:
  - switching and lightning over-voltages and their effect on different plant items; transient over-voltage control and reduction using surge diverters, shield wires and CB control; insulation systems, insulation coordination, insulation grading in plant items, and bushings and capacitor bushings
- factors leading to the generation of corona encompassing:
  - consequences of corona; reduction of corona, including conductor bundling, grading rings and conductor surface treatment.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# Assessment Requirements for UETTDRIS72 Diagnose and rectify faults in distributed generation systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults in distributed generation systems including:
  - applying logical diagnostic methods
  - using fault scenarios to test the cause of system faults
  - identifying faults and competency needed to rectify them
  - rectifying faults in system controls
  - verifying that the system operates correctly
  - documenting fault rectification
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS safety management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS

- management
- relevance of enterprise management systems to WHS/OHS management
- analysis of working environment and design of appropriate WHS/OHS management systems
- analysis of relevant data and evaluation of WHS/OHS system effectiveness
- assess resources to establish and maintain WHS/OHS management systems
- distributive generation systems encompassing:
  - concept and application
  - anti-islanding control and protection
  - system monitoring and load management.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDNIS73 Develop engineering solutions for energy supply power transformer problems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers developing engineering solutions to resolve problems with energy supply system protection. It encompasses working safely, applying extensive knowledge of energy supply power transformer operation and their application, gathering and analysing data, applying problem-solving techniques, and developing and documenting solutions and alternatives.

Typical transformer problems are those encountered in meeting performance requirements and compliance standards, revising a transformer operating parameters and dealing with transformer malfunctions

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Distribution Pathway Unit Group

UETTDRIS70 Diagnose and rectify faults in electrical energy distribution systems

Transmission Pathway Unit Group

UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems

Distributed Generation Pathway Unit Group

UETTDRIS72 Diagnose and rectify faults in distributed generation systems

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to develop engineering solution for energy supply power transformer problems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for a given work area are identified, obtained and understood
- 1.2** Established WHS/OHS risk control measures and procedures in preparation for the work are followed
- 1.3** The extent of the transformer problem is determined from performance specifications and situation reports and in consultation with relevant personnel
- 1.4** Activities are planned to meet scheduled timelines in consultation with others involved in the work

- |                                                                                                         |     |                                                                                                                                                                                                      |
|---------------------------------------------------------------------------------------------------------|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                         | 1.5 | Effective strategies are formed to ensure solution development and implementation is carried out efficiently                                                                                         |
| <b>2 Develop engineering solutions for energy supply power transformer problems</b>                     | 2.1 | WHS/OHS risk control measures and procedures for carrying out the work are followed                                                                                                                  |
|                                                                                                         | 2.2 | Knowledge of supply power transformer arrangements, operation, device characteristics and applications are applied to developing solutions to supply power transformer problems                      |
|                                                                                                         | 2.3 | Parameters, specifications and performance requirements in relation to each transformer problem are obtained in accordance with established procedures                                               |
|                                                                                                         | 2.4 | Approaches to resolving supply power transformer problems are analysed to provide most effective solutions                                                                                           |
|                                                                                                         | 2.5 | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policies                                                                               |
|                                                                                                         | 2.6 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards                                                                      |
| <b>3 Test, document and implement engineering solution for energy supply power transformer problems</b> | 3.1 | Solutions to transformer problems are tested to determine their effectiveness and modified where necessary                                                                                           |
|                                                                                                         | 3.2 | Adopted solutions are documented, including instruction for their implementation that incorporates risk control measures to be followed                                                              |
|                                                                                                         | 3.3 | Appropriately competent and qualified person/s) required to implement solutions to supply power transformer problems is coordinated in accordance with regulatory requirements and enterprise policy |
|                                                                                                         | 3.4 | Justification for solutions used to solve supply power transformer problems is documented for inclusion in work/project development records in accordance with professional standards                |

Note: A license to practice in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI573A Develop engineering solutions for energy supply power transformer problems.

## Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETTDRI573 Develop engineering solutions for energy supply power transformer problems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing engineering solutions for energy supply power transformer, including:
  - understanding the extent of the transformer problems
  - forming effective strategies for solution development and implementation
  - obtaining transformer parameters, specifications and performance requirements appropriate to each problem
  - testing and finding solutions to transformer problems
  - documenting instruction for implementation of solutions that incorporate risk control measure to be followed
  - documenting justification of solutions implemented in accordance with professional standards
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transformer construction and operating principles encompassing:
  - various types of lamination style and core construction used in single phase, three phase, double wound and auto transformers
  - different winding styles/types used in transformers

- how input current is limited on no-load and how power is transferred from primary to secondary when a load is connected
- using the transformation ratio to determine an unknown quantity of V, I and VA
- significance of nameplate data items
- operation of a transformer under load/no-load conditions
- the reason any particular type of transformer is used in a specific application
- safety features specified in regulatory standards with respect to transformers
- safety features specified in regulatory standards with respect to isolating transformers
- basic insulation resistance, continuity and winding identification tests
- transformer parameters encompassing:
  - the percentage impedance of a transformer by test
  - percentage impedance of a transformer by calculation
  - the equivalent circuit of a transformer
  - calculation of voltage regulation
  - losses that occur in a transformer
  - tests to determine losses
  - efficiency and state typical values
  - the all-day efficiency of a transformer
- cooling methods encompassing:
  - methods of natural and forced cooling
  - properties of transformer oil
  - tests performed on transformer oil
  - auxiliary equipment
  - the purpose and operation of the types of auxiliary equipment used on transformers - bushings, explosion vents, surge diverters, tap changers, conservator, breathers and desiccants, gas relays and temperature indicators
- instrument transformers encompassing:
  - construction of current transformers
  - uses and ratings of current transformers
  - construction of voltage transformers
  - uses and ratings of voltage transformers
  - safety techniques when using instrument transformers
- transformer connections encompassing:
  - vector group of a transformer from a connection diagram
  - connections of a three phase transformer to create a particular vector group
  - reasons for using the different vector groups
  - purpose of tertiary windings
  - consequences/effect of an incorrect connection
- parallel operation encompassing:
  - polarity markings for the windings of a transformer

- conditions/restrictions for parallel operation of transformers
- calculation of loading on transformers operating in parallel
- connection of transformers in parallel to supply a common load
- the consequences/effect of an incorrect connection
- harmonics in transformers encompassing:
  - how harmonics are generated in transformers
  - problems caused by harmonics in transformers
  - measurement of the harmonics in a transformer
  - methods/equipment used to overcome harmonics in transformers
- high voltage (HV) isolation encompassing:
  - the term HV
  - procedures for isolating HV apparatus
  - regulations with respect to access permits
  - clearances to be observed with respect to HV up to 33 kV
  - the term ‘step’ and ‘touch’ potential.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETTD RIS74 Develop engineering solutions for energy supply system protection problems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers developing engineering solutions to resolve problems with energy supply system protection. It encompasses working safely; applying extensive knowledge of energy supply system protection operation, protection devices and their application; gathering and analysing data; applying problem-solving techniques and developing and documenting solutions and alternatives.

Typical protection problems are those encountered in meeting performance requirements and compliance standards, revising a protection operating parameters and dealing with protection malfunctions.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETTDRIS67 Solve problems in energy supply network equipment

UETTDRIS68 Solve problems in energy supply network protection equipment and systems

UETTDRIS69 Diagnose and rectify faults in energy supply apparatus

Distribution Pathway Unit Group

UETTDRIS70 Diagnose and rectify faults in electrical energy distribution systems

Transmission Pathway Unit Group

UETTDRIS71 Diagnose and rectify faults in electrical energy supply transmission systems

Distributed Generation Pathway Unit Group

UETTDRIS72 Diagnose and rectify faults in distributed generation systems

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to develop engineering solution for energy supply system protection problems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) processes and procedures for a given work area are identified, obtained and understood
- 1.2** Established WHS/OHS risk control measures and procedures in preparation for the work are followed
- 1.3** The extent of the protection problem is determined from performance specifications and situation reports and in consultation with relevant personnel
- 1.4** Activities are planned to meet scheduled timelines in

|                                                                                                         |     |                                                                                                                                                                                                       |

# Assessment Requirements for UETTDRI574 Develop engineering solutions for energy supply system protection problems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- developing engineering solutions for energy supply system protection, including:
  - understanding the extent of the protection problem
  - forming effective strategies for solution development and implementation
  - obtaining protection parameters, specifications and performance requirements appropriate to each problem
  - testing and solutions to protection problems
  - documenting instructions for implementation of solutions that incorporate risk control measure to be followed
  - documenting justification of solutions implemented in accordance with professional standards
  - dealing with unplanned events on at least one occasion.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- protection scheme requirements encompassing:
  - requirements of a protection scheme - relationship to primary system design, purpose of protection, safety of persons, protection of plant, system instability, system break up, loss of customers, loss of revenue, protection zones, restricted schemes, unrestricted schemes,

- duplicate protection, local backup protection, remote backup protection, selectivity, discrimination, stability, sensitivity and reliability
- components of a protection scheme - current transformers, potential transformers, summation current transformers, interposing transformers, multi-tapped transformers, all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor based relays, gas relays, thermal sensors, hardwired communication, powerline carriers systems, microwave systems, fibre optic systems, need for isolation and need for interfacing
- protection applied to buses - overload, differential, earth leakage, structure leakage, combined schemes and protection overlap
- protection applied to transformers - biased differential, gas, winding temperature and oil temperature
- protection applied to single/radial lines - overcurrent, earth leakage, slow earth leakage, distance, auto reclose, sectionalising and over voltage
- protection applied to interconnected lines - overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance and offset
- discrete protection systems encompassing:
  - earth fault protection - master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination and backup protection
  - overcurrent protection - feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, CT summation, time graded discrimination and backup protection
  - alarms and controls - auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, and over temperature schemes
- interdependent protection systems encompassing:
  - overcurrent and earth leakage intertripping, interlocking and blocking - logic mapping, master control, electromechanical, electronic and shading coils
  - pilot wire, phase comparison - opposed voltage schemes, circulating current schemes, location of components of a scheme and pilot supervisory techniques
  - load shedding, voltage control, parallel operation and load rejection
  - CB failure protection
  - reclose systems - applications, single shot, multi-shot, blocking schemes and synchronisation checking
- complex protection systems encompassing:
  - distance - characteristics, electromechanical, electronic, impedance, mho, offset mho, switched schemes, non-switched schemes, blocking schemes and bus zone
  - differential, transformer differential, bus overcurrent - principles, feeder protection, transformer protection, bias systems, harmonic restraint, CT connections, bus protection, low impedance schemes, high impedance schemes, bus overcurrent schemes, generator protection, CT connections, special considerations and digital systems
  - types of revenue metering
  - applications of supervisory control and data acquisition (SCADA)

- complex protection systems for communications
- harmonic control
- point on wave switching.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRRF01 Apply ESI safety rules, codes of practice and procedures for work on or near electrical apparatus

## Modification History

Release 2. Amendment to the Performance Evidence.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers the knowledge and application of electricity supply industry (ESI) safety rules and codes of practice for work on or near electrical apparatus. It includes the application of relevant state and territory safety rules, codes of practice and enterprise-based procedures and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

There are no prerequisite competencies to this unit.

## Competency Field

Refresher Training

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Prepare to apply ESI safety rules, codes of practice and procedures for work on or near electrical apparatus**

- 1.1** Relevant safety rules, codes of practice and procedures are identified and obtained
- 1.2** Hazards and risk control measures for specific work functions/areas are identified and obtained
- 1.3** The requirement for access authority/work permits required for work are identified and obtained from appropriate personnel according to established procedures
- 1.4** Safety systems and equipment for work are prepared and placed to minimise and control hazards in accordance with established procedures

**2 Carry out application of ESI safety rules, codes of practice and procedures for work on or near electrical apparatus**

- 2.1** Workplace procedures and work instructions for controlling risk are followed
- 2.2** Safety rules, codes of practice and workplace procedures for induction to a worksite, are followed
- 2.3** Specific workplace systems and equipment isolation procedures are followed
- 2.4** Restricted workplace areas are identified, including ingress and egress procedures
- 2.5** Emergency procedures are identified, including assembly areas, and communication systems, including audible alarms and processes, according to established procedures

**3 Complete the application of ESI safety rules, codes of practice and procedures for work on or near electrical apparatus**

- 3.1** Processes for completing work are applied, and access authority/work permits, where required, are completed in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRRF01B Apply ESI safety rules, codes of practice and procedures for work on or near electrical apparatus.

Release 2. Amendment to the Performance Evidence.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying safe approach distances (SAD) to:
  - personnel
  - vehicles
  - insulated mobile plant
  - non-insulated mobile plant.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working on or near electrical network infrastructure encompassing:
  - identifying documentation, procedures and instructions for work on or near electrical apparatus
  - identifying and assessing hazards and control measures
  - SAD for work on or near electrical apparatus
- maintaining SAD for work on or near electrical apparatus.

## **Assessment Conditions**

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# UETTDRRF08 Perform EWP controlled descent escape

## Modification History

Release 2. Amendment to the Performance Evidence.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers the performance of elevated work platform (EWP) controlled descent escape procedures in the workplace. It specifies the mandatory requirements for self-rescue from a raised EWP and how they apply in the context of transmission, distribution or rail work functions. It encompasses responsibilities for health, safety and risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

There are no prerequisite competencies to this unit.

## Competency Field

Refresher Training

## Unit Sector

Not applicable.

## Elements and Performance Criteria

# Assessment Requirements for UETTDRRF08 Perform EWP controlled descent escape

## Modification History

Release 2. Amendment to the Performance Evidence.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- accessing, inspecting, securing and attaching emergency descent equipment to self in accordance with workplace procedures
- evacuating the elevated work platform (EWP) and descending to the ground in accordance with workplace procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- procedures for EWP controlled descent escape encompassing:
  - inspection of rescue equipment
  - assessing hazards to self and others
  - involvement of external emergency services as appropriate
  - safe approach distances (SAD) appropriate to EWP controlled descent escape
- procedures required for EWP controlled descent escape encompassing:
  - fitting of rescue equipment
  - controlling hazards to self and others
  - maintaining SAD for an EWP controlled descent escape
  - removing self to safe location/place of safety

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for performing EWP controlled descent escapes
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# Assessment Requirements for UETTDRRF09 Apply access procedures to work on or near electrical network infrastructure

## Modification History

Release 2. Amendment to the Performance Evidence.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- following workplace procedures for signing on to and off from an access authority/work permit.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working on or near electrical network infrastructure encompassing:
  - rules/codes of practice for work on or near electrical hazards and risk control measures for specific work areas and work activities
  - documentation, roles, responsibilities and procedures for a permit to work system
  - access authority/work permit document for a specific work activity according to established procedures
  - safe approach distances (SAD) and safety measures applicable to the work activity according to established procedures
  - sign on and sign off procedures for an access authority/work permit document
  - workplace procedures to cancel or suspend an access authority/work permit document
  - workplace communication procedures to confirm work is completed or suspended
  - workplace procedures for signing on to a specific role/function identified on an access authority/work permit
- skills required to work on or near electrical network infrastructure encompassing:
  - sign on and sign off an access authority/work permit document in accordance with workplace procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for applying access procedures to work on or near electrical network infrastructures
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRRF11 Testing of connections to low voltage electricity networks

## Modification History

Release 2. Amendment to the Performance Evidence.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers the performance of testing of connections to low voltage (LV) electricity networks according to AS 4741-2010 Testing of connections to electricity networks. It specifies the mandatory requirements for testing when connecting and/or reconnecting a customer's installation to an electricity supply network.

It encompasses the minimum principles and tests required to confirm that the LV supply connections are correct,

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

There are no prerequisite competencies to this unit.

## Competency Field

Refresher Training

## Unit Sector

Not applicable.

# Assessment Requirements for UETDTRRF11 Testing of connections to low voltage electricity networks

## Modification History

Release 2. Amendment to the Performance Evidence.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on one occasion and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- preparing and using of test equipment
- preparing and correctly using personal protective equipment (PPE)
- testing of single phase and multi-phase connections to network operator's procedures
- documenting test results to network operator's procedures.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- low voltage (LV) testing of network connections encompassing:
  - selection and inspection of test equipment relevant for the testing procedures
  - acceptable neutral voltage criteria
  - polarity testing
  - neutral integrity testing
  - phase rotation testing
  - phasing confirmation
  - corrective actions to network operator's procedures
  - recording and reporting results to network operator's procedures
- skills required to test LV network connection encompassing:
  - preparation and use of test equipment
  - preparation and correct use of PPE
  - testing of single phase and multi-phase connections to network operator's procedures
  - documenting test results to network operator's procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for testing of connections to LV electricity networks
- applicable documentation including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB21 Diagnose and rectify faults in substation environment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to diagnose and rectify faults in substation in the electricity supply industry (ESI).

It includes identifying and analysing fault conditions including isolating, repairing and restoring substation control circuits.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan for fault finding and rectification in power system substation environment**

- |            |                                                                                                                                                        |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed                                        |
| <b>1.2</b> | Job requirements and workplace procedures are identified and communicated with relevant personnel                                                      |
| <b>1.3</b> | Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented |

and monitored in accordance with workplace procedures

- 1.4** Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
- 1.5** Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
- 1.6** Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
- 1.7** Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
- 1.8** Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
- 1.9** Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures

## **2 Carry out fault finding within the substation environment**

- 2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
- 2.2** Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
- 2.3** Safe working documentation is acquired and requirements completed in accordance with workplace procedures
- 2.4** Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
- 2.5** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions/preventative actions taken in accordance with workplace procedures

- 2.6 Faults in power system substation are diagnosed and rectified to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
  - 2.7 Faults are located, identified and affected circuits isolated in accordance with the work schedules, job requirements and workplace procedures
  - 2.8 Faults in power system substation control circuits are rectified in an agreed timeframe and to workplace quality standards with a minimum of waste
  - 2.9 Unplanned events in the diagnosis and analysis of faults are responded to in accordance with workplace procedures
  - 2.10 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills in accordance with requirements
  - 2.11 Circuit functions are restored in accordance with work schedules, job requirements and workplace procedures
  - 2.12 Quality checks of work are undertaken in accordance with industry standards and workplace procedures
- 3 **Complete fault finding within the substation environment**
  - 3.1 Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
  - 3.2 Safe working documentation is surrendered, and equipment made ready for service in accordance with workplace procedures
  - 3.3 Worksite is cleaned and confirmed safe in accordance with workplace procedures
  - 3.4 Tools, equipment and surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
  - 3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB21A Diagnose and rectify faults in substation environment.

## Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETTDRSB21 Diagnose and rectify faults in substation environment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- diagnosing and rectifying faults on at least two (2) of the following system faults:
  - high voltage (HV) circuit breaker control system fault
  - transformer control system fault
  - direct current (d.c.) supply systems fault
  - d.c. switchgear and equipment fault
- diagnosing faults using at least three (3) of the following testers:
  - multimeters
  - tong testers
  - insulation resistance/continuity tester
  - low resistance high current tester
  - overload injection tester
  - specialist test equipment
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV0) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; and types, selection, maintenance and use of personal protective equipment (PPE)

- work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records -audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams,

- d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans
- processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors; polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer

- techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems, and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
  - types of fault conditions - failure to operate, failure in service, = including the appropriate procedures for work on or in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures; and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substation work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP

- control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; and the precautions for personal protection when fighting small fires
- control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
- rescue and release procedures - the rescue of personnel from energised conductors, emergency descent from an EWP, and/or rescue from confined spaces
- enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
- hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV a.c. and d.c. supply systems, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other appropriate diagrammatic representations
  - LV design specifications, supply requirements, electrical load assessments
  - substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements
  - control equipment and auxiliary relays, flags and alarms
  - common panel layouts
- LV substation switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to LV substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the LV switching operator
  - operational forms, access authorities and permits associated with LV switching - types of operational forms, access authorities and permits, and purpose and procedures for operational forms
  - use, care and operation of equipment associated with LV substation switching
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV substation switching or indicating devices
  - operation of protection systems and substation equipment
  - restrictions pertaining to LV switching equipment
  - earthing LV electrical apparatus practices and procedures for access
  - LV switching techniques

- restrictions pertaining to enterprise-specific procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB22 Carry out power systems substation inspection

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to carry out power system substation inspection in the electricity supply industry (ESI).

It includes the security, electrical and environmental inspections of substations, , recording of information and reporting defective/non-compliant conditions in accordance with industry standards and workplace procedures.

The application of the skills and knowledge described in this unit may require a licence to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan to carry out substation inspections**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures

- 1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
  - 1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
  - 1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
  - 1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
  - 1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
  - 1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
- 2 **Carry out substation inspections**
  - 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
  - 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
  - 2.3 Safe working documentation is acquired, as appropriate, and requirements completed in accordance with workplace procedures
  - 2.4 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
  - 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions in accordance with workplace procedures
  - 2.6 Substation equipment, environmental protection systems and security systems are inspected to comply with job

- requirements and workplace procedures
- 2.7** Critical defects are assessed for level of safety/system impact and communicated to appropriate personnel for further action
  - 2.8** Minor defects and/or non-conformances are rectified in-situ
  - 2.9** Substation inspections are performed to ensure completion in agreed timeframes, to quality standards and in accordance with workplace procedures
  - 2.10** Unplanned events are responded to in accordance with workplace procedures
- 3 Record the outcomes of substation inspections**
- 3.1** Completed work is checked against works schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
  - 3.2** Safe working documentation is surrendered in accordance with workplace procedures, as required
  - 3.3** Worksite is cleaned and confirmed safe in accordance with workplace procedures
  - 3.4** Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
  - 3.5** Work records, reports and/or documentation are completed in accordance with workplace procedures and appropriate personnel are notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB22A Carry out power systems substation inspection.

## Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETTDRSB22 Carry out power systems substation inspection

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing substation inspections on at least one (1) of the following:
  - transmission substation
  - distribution substation
  - traction substation
  - zone substation
  - terminal switching stations
- performing substation inspections on all of the following:
  - substation plant and equipment
  - substation environmental systems
  - substation security systems
- performing substation inspection on at least ten (10) of the following:
  - circuit breakers
  - transformers
  - control systems
  - operating mechanism cabinets
  - voltage transformers
  - current transformers
  - surge arrestors
  - capacitor banks
  - static VAR compensator (SVC)
  - synchronous condenser
  - harmonic filters
  - rectifier transformers

- rectifiers
- invertors
- negative reactors
- energy dissipation resistors
- disconnectors/isolators
- earth switches
- fault throwing switches
- sectionalisers
- a.c. and d.c. supply systems
- control room environments
- batteries
- chargers
- proving de-energised equipment
- fire systems equipment
- oil spill equipment
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures

- personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
- WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including a.c., d.c. and combinations of both
  - types of fault conditions - failure to operate, failure in service, including the appropriate procedures for work on in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, overpressure, under pressure, and out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures; and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present

### WHS/OHS hazards to persons in the workplace

- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials, oil containment facilities and systems
  - rescue and release procedures - rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB23 Install and maintain substation direct current systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to install and maintain substation direct current systems in the electricity supply industry (ESI).

It includes installing and maintaining substation direct current (DC) systems such as main batteries, communication batteries, DC lighting systems, battery chargers, uninterrupted power supply (UPS) systems and associated control circuits in accordance with workplace procedures. It also includes diagnosing faults, replacing faulty equipment, conducting pre-commissioning/re-commissioning tests and interpreting test results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan to install and/or maintain substation d.c. systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
- 1.4** Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
- 1.5** Risk control measures are identified, prioritised, implemented and evaluated against the work schedule

- 1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
  - 1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
  - 1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
  - 1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
- 2 **Carry out the installation and maintenance of substation d.c. systems**
  - 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
  - 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
  - 2.3 Safe working documentation is acquired and requirements completed in accordance with workplace procedures
  - 2.4 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
  - 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
  - 2.6 Substation d.c. systems are installed safely to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
  - 2.7 Installation of substation d.c. systems is performed in accordance with work schedules, job requirements and workplace procedures
  - 2.8 Maintenance of substation d.c. systems is performed in

- accordance with work schedules, job requirements and workplace procedures
- 2.9** Installation and/or maintenance of substation d.c. systems are completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
  - 2.10** Unplanned events or conditions are responded to in accordance with workplace procedures
  - 2.11** Substation d.c. systems are performance tested in accordance with workplace procedures and job specifications
  - 2.12** Quality checks of work are undertaken in accordance with industry standards and workplace procedures
- 3 Complete the installation and maintenance of substation d.c. systems**
- 3.1** Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
  - 3.2** Safe working documentation is surrendered and equipment made ready for service in accordance with workplace procedures, if required
  - 3.3** Worksite is cleaned and confirmed safe in accordance with workplace procedures
  - 3.4** Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
  - 3.5** Work records, reports and/or documentation are completed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB23A Install and maintain substation direct current systems.

## Links

# Assessment Requirements for UETTDRSB23 Install and maintain substation direct current systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- working on at least one (1) of the following types of batteries:
  - nickel cadmium batteries
  - lead acid batteries
  - gel cell batteries
- working on at least one (1) of the following battery systems:
  - main batteries
  - communication batteries
- working on all of the following equipment:
  - battery chargers
  - d.c. control circuits
- performing at least two (2) of the following types of tests:
  - cell voltage test
  - hydrometer/specific gravity test
  - battery discharge and capacity tests
  - impedance testing
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements

- safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
- work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with

- switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
- interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors; polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risk, types, selection, maintenance and use of PPE, responsibilities and protocols and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and

- protocols in accordance with enterprise-specific procedures
- calculation of results and data measurements using the computer
- techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including a.c., d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in-service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP), and any

WHS/OHS requirements associated with the use of EWP

- control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
- control of oil spills - identification, use and maintenance of spill oil control equipment and materials, and oil containment facilities and systems
- rescue and release procedures - rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
- enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
- hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV a.c. and d.c. supply systems, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other appropriate diagrammatic representations
  - LV design specifications, supply requirements and electrical load assessments
  - substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements,
  - control equipment and auxiliary relays, flags and alarms
  - common panel layouts.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB24 Maintain high voltage power system circuit breakers

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to maintain high voltage (HV) power system circuit breakers in the electricity supply industry (ESI).

It includes diagnosing faults, repairing and replacing HV power system circuit breakers components in accordance with workplace procedures. It also includes performing diagnostic checks, pre-commissioning tests and function checks involving circuit breakers and associated control circuits and interpreting these tests against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan to maintain HV power system circuit breakers**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks

assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures

- 1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
- 1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
- 1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
- 1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
- 1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
- 1.9 Worksite is prepared in accordance with the work schedule and to minimise risk and damage to property and personnel in accordance with established procedures

## **2 Carry out maintenance on HV power system circuit breakers**

- 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
- 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
- 2.3 Safe working documentation is acquired and requirements completed in accordance with established procedures
- 2.4 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
- 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with established procedures

- 2.6 Essential knowledge and associated skills are applied for the safe maintenance of HV power system circuit breakers and maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
  - 2.7 Maintenance of HV power system circuit breakers is performed in accordance with work schedules, job requirements and workplace procedures
  - 2.8 Maintenance of HV power system circuit breakers is completed in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
  - 2.9 Unplanned events or conditions are responded to in accordance with established procedures
- 3 **Complete the maintenance of HV power system circuit breakers**
  - 3.1 Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
  - 3.2 Safe working documentation is surrendered and HV power system circuit breakers are made ready for service in accordance with workplace procedures
  - 3.3 Worksite is cleaned and confirmed safe in accordance with workplace procedures
  - 3.4 Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
  - 3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRSB24A Maintain high voltage power system circuit breakers.

## **Links**

# Assessment Requirements for UETTDRSB24 Maintain high voltage power system circuit breakers

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- working on at least two (2) of the following types of high voltage (HV) power system circuit breakers:
  - bulk oil circuit breakers
  - small oil volume circuit breaker
  - air blast circuit breaker
  - vacuum circuit breaker
  - gas-insulated HV switchgear (GIS) circuit breakers
  - gas circuit breakers
- working on at least two (2) of the following types of operating mechanisms:
  - spring operated mechanism
  - solenoid operated mechanism
  - hydraulic operated mechanism
  - pneumatic operated mechanism
- performing at least three (3) of the following tests:
  - insulation resistance tests
  - contact resistance tests
  - minimum close and open tests (reduced voltage tests)
  - sequence timing tests
  - contact travel/timing test
  - vibration test
  - gas pressure tests
- performing measuring or sampling tests using at least two (2) of the following:
  - gas measuring devices
  - pressure measuring devices

- sulfur hexafluoride (SF6) gas sampling
- oil sampling
- SF6 moisture content (dew point)
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- LV switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - PPE for LV switching
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise

- regulations pertaining to WHS/OHS policies and procedures
- methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
- specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
- personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
- WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools

- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives, stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including a.c., d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type,

including:

- types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
- types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
- techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP), and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV a.c. and d.c. supply systems, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other

- appropriate diagrammatic representations
- LV design specifications, supply requirements, electrical load assessments
- substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements
- control equipment and auxiliary relays, flags and alarms
- common panel layouts
- design principles of hydraulic and pneumatic operating mechanism principles, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, standards, supply authority regulations and-or enterprise requirements
  - control system operating diagrams, including nomenclature, symbols and operating sequences, and units of measurement
  - fundamentals of pressure intensification, forces and energy accumulators
  - applications for substation HV equipment - circuit breaker operating mechanisms, interrupter mechanisms, pumps and compressors, GIS operating mechanisms and transformer cooling systems
  - safety precautions for work on hydraulic and/or pneumatic systems - safe working practices and procedures; identification of hazards, assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- LV substation switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to LV substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the LV switching operator
  - operational forms, access authorities and permits associated with LV switching - types of operational forms, access authorities and permits, purpose and procedures for operational forms, access authorities and permits
  - use, care and operation of equipment associated with LV substation switching
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV substation switching or indicating devices
  - operation of protection systems and substation equipment
  - restrictions pertaining to LV switching equipment
  - earthing LV electrical apparatus practices and procedures for access
  - LV switching techniques
  - restrictions pertaining to enterprise -specific procedures
- circuit breaker operating principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to circuit breakers
  - requirements for the use of manuals, circuit breaker diagrams/plans and drawings

- operation of protection systems and substation equipment associated with circuit breakers
- use, characteristics and capabilities of specialised tools and equipment
- capabilities of operating mechanisms
- capabilities of interrupter chambers
- enterprise-specific policies and procedures for the operation of circuit breakers
- techniques in evaluating serviceability of circuit breaker operation
- control equipment and auxiliary relays, flags and alarms
- safety precautions when constructing circuit breakers - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and access for operating.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB25 Maintain high voltage power and instrument transformers

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to maintain high voltage (HV) power and instrument transformers in the electricity supply industry (ESI).

It includes conducting routine diagnostic tests within agreed specifications and maintaining associated cooling systems, controls, alarm systems and tertiary cabling and/or busbar systems in accordance with workplace procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan to maintain HV power and instrument transformers**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented

and monitored in accordance with workplace procedures

- 1.4** Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
- 1.5** Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
- 1.6** Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
- 1.7** Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
- 1.8** Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
- 1.9** Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures

## **2 Carry out the maintenance of HV power and instrument transformers**

- 2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
- 2.2** Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
- 2.3** Safe working documentation is acquired and requirements completed in accordance with workplace procedures
- 2.4** Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
- 2.5** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are monitored and preventive action taken and/or appropriate authorities consulted, where necessary, in accordance with workplace procedures

- 2.6 HV power system and instrument transformers are maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
  - 2.7 Transformers/instrument transformers are isolated and maintained in accordance with manufacturer instructions and workplace procedures
  - 2.8 Diagnostic measurements are performed and results interpreted, analysed and recorded in accordance with workplace procedures
  - 2.9 Transformers/instrument transformers are restored in accordance with workplace policies and procedures
  - 2.10 Unplanned events or conditions are responded to in accordance with workplace procedures
- 3 **Complete the maintenance of HV power and instrument transformers**
  - 3.1 Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
  - 3.2 Safe working documentation is surrendered and transformer/instrument transformer made ready for service
  - 3.3 Worksite is cleaned and confirmed safe in accordance with workplace procedures
  - 3.4 Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures
  - 3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRSB25A Maintain high voltage power and instrument transformers.

## **Links**

# Assessment Requirements for UETTDRSB25 Maintain high voltage power and instrument transformers

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least one (1) of the following:
  - power transformer
  - high voltage (HV) reactor
- maintaining at least two (2) of the following:
  - auxiliary transformer
  - current transformer
  - voltage transformer
- performing at least two (2) of the following tests:
  - insulation resistance tests
  - dielectric dissipation factor tests
  - low voltage (LV) excitation checks
  - frequency response analysis
  - recovery voltage measurements
  - ratio checks
  - winding resistance tests
  - oil sampling
  - low resistance, high current connection testing
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised LV equipment, including:

- standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
- safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
- work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- LV switching principles including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - PPE for LV switching
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to the WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance including, cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental

- monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms

- techniques in evaluating serviceability of equipment to be installed
- safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
- remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including a.c., d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace

- substation safety practices including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP), and any OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV AC and DC supply systems including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - wiring conventions, systems and labelling conventions
  - substation equipment identification and layout, wiring and schematic diagrams and other appropriate diagrammatic representations
  - LV design specifications, supply requirements and electrical load assessments
  - substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements,
  - control equipment and auxiliary relays, flags and alarms
  - common panel layouts
- design principles of HV insulation systems, including:
  - insulation design principles - common materials used, electrical characteristics, thermal characteristics, uses and applications to substation HV plant and equipment, grading,

- construction and cooling
- common contaminants and their effects - internal contaminants and external contaminants
- testing and measurement of insulation quality - test types and common measuring instruments and techniques, resistance and resistivity, losses, measurement errors, temperature corrections, and safe work practices related to testing and measurement
- safety precautions when testing and measuring HV insulation systems - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- principles of power transformer construction and operations, including:
  - transformer types - shell, core, auto, double wound, three phase, single phase and combinations of these types, step up and step-down transformers, transmission and generation types
  - reactor types - shunt and series, applications and design considerations
  - iron circuit characteristics - steel types, losses and techniques used to eliminate excess eddy currents and other circulating currents
  - winding configurations and construction techniques - helical, spiral, disc and interleaved disc types
  - insulation methods and techniques - fully insulated windings and graded insulation techniques, and oil filled and gas filled power transformers
  - transformer and reactor ratings, losses and efficiency - equivalent circuits and vector relationships, and impedance percent
  - nameplate details - basic insulation level (BIL), tapping winding detail, physical layout, cooling ratings and physical details
  - transformer and reactor cooling types and their effects on design and rating
  - transformer and reactor auxiliaries - temperature indicators, over pressure devices and control systems
  - winding configurations - star-star, star-delta, star-zigzag, nomenclature and common methods of diagrammatic representation of winding configuration
  - operating constraints as single units and in parallel
  - tapping windings - placement issues, tapping range, on-load tap changer (OLTC) versus off load tap changer techniques, types in use (high speed resistor, reactor and vacuum types, Jansen mechanisms, dead tank and live tank types), and control system characteristics
  - HV bushing selection – type, insulation system used, rating, BIL, selection criteria and testing considerations
- LV substation switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to LV substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the LV switching operator
  - operational forms, access authorities and permits associated with LV switching - types of

operational forms, access authorities and permits, purpose and procedure for operational forms, access authorities and permits

- use, care and operation of equipment associated with LV substation switching
- LV switchgear – types, categories, application and operating capabilities
- operation of LV substation switching or indicating devices
- operation of protection systems and substation equipment
- restrictions pertaining to LV switching equipment
- earthing LV electrical apparatus practices and procedures for access
- LV switching techniques
- restrictions pertaining to enterprise-specific procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB26 Install high current d.c. equipment and switchgear

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to install high current equipment and switchgear in the electricity supply industry (ESI).

It includes installing direct current (d.c.) switchgear and other equipment, such as rectifier transformers, rectifiers, invertors, isolators and links, harmonic filters, negative reactors and energy dissipation resistors EDR's to ensure correct installation to workplace procedures and industry standards.

It also includes isolating systems and/or circuits for safe working in accordance with work plans, visual inspections and necessary checks to ensure equipment and components have been correctly installed in accordance with design and are in a safe condition for pre-commissioning tests prior to energisation, as well as updating installation data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan to install high current d.c. switchgear and equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
- 1.4** Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures

- 1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
  - 1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
  - 1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
  - 1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
  - 1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
- 2 Carry out installation of high current d.c. switchgear and equipment**
- 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
  - 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
  - 2.3 Safe working documentation is acquired and requirements completed in accordance with workplace procedures
  - 2.4 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
  - 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions in accordance with workplace procedures
  - 2.6 High current d.c. switchgear and equipment are installed in accordance with work schedules, job requirements and workplace procedures

- |                                                                              |            |                                                                                                                                                                                                |
|------------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                              | <b>2.7</b> | High current d.c. switchgear and equipment are safely installed to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures |
|                                                                              | <b>2.8</b> | Unplanned events or conditions are responded to in accordance with workplace procedures                                                                                                        |
| <b>3 Complete installation of high current d.c. switchgear and equipment</b> | <b>3.1</b> | Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures                             |
|                                                                              | <b>3.2</b> | Safe working documentation is surrendered and equipment made ready for service                                                                                                                 |
|                                                                              | <b>3.3</b> | Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures                                                                                               |
|                                                                              | <b>3.4</b> | Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures                                                         |
|                                                                              | <b>3.5</b> | Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified                                                               |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB26A Install high current DC equipment and switchgear.

## Links

UET Training Package Companion Volume Implementation Guide is found in VETNet -

# Assessment Requirements for UETTDRSB26 Install high current d.c. equipment and switchgear

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- using testing and measuring instruments including all of the following:
  - 1500 V drop out tester
  - ammeter
  - low resistance high current
  - megger tester
  - multimeters
  - voltmeter
- using drawings and diagrams including all of the following:
  - building layouts
  - cable block and schedule diagrams
  - operating and substation arrangement diagrams wiring diagrams
  - schematic drawings
- installing at least six (6) of the following types of equipment:
  - d.c. circuit breakers
  - rectifier transformers
  - rectifiers
  - isolators and links
  - harmonic filters
  - negative reactors
  - energy dissipation resistors
- installing at least ten (10) of the following associated equipment:
  - d.c. feeders
  - surge arresters

- isolating links
- busbars
- cables
- cable supports
- pits and enclosures
- protection/alarm systems
- control wiring
- metering
- supervisory interface
- cabinets
- REC
- installing at least three (3) of the following types of protection:
  - buchholz
  - frame leakage
  - overcurrent
  - earth leakage
  - reverse current
  - delta I
  - diode protection
- performing all of the following terminations and alignments:
  - cable terminations
  - busbar termination/joint
  - alignment of electrical contacts of withdrawable equipment
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship

- methods of obtaining the up-to-date information on enterprise policy and procedures
- rules and regulations
- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
- overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)

- characteristics, capabilities and application of specialised tools for a particular job
- safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
- selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
- techniques in pre-use inspection on the serviceability of specialised tools
- techniques in the selection, use, maintenance, and care and storage of specialised tools
- identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
- techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- substation d.c. circuit breaker principles, including:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the d.c. circuit breakers
  - types of d.c. circuit breakers- self and withdrawable types
  - characteristics of d.c. circuit breakers- purpose of d.c. circuit breakers and application of d.c. circuit breakers
  - principles of operation of different types of d.c. circuit breakers- arc expulsion versus arc containment, latched versus magnetically held, advantages and disadvantages of different types, fixed or withdrawable and protection/diagnostic technology
  - principles of operation of high-speed d.c. circuit breakers— characteristics and calibration
  - how d.c. circuit breakers are designated - feeder, rectifier, EDR, bus-section and negative breakers, auto-reclose or non-auto-reclose type
  - type and function of d.c. circuit breaker peripheral components - delta I relays, busbar, control wiring, trunk and associated plug/receptacle
  - identification, characteristics, application and care of d.c. circuit breaker components - holding coils, closing coils, contactors, resistors, arc chutes, blow-out coils, arcing contacts, main contacts, braids, moving arm, pole face, arcing horns, electronic cards,

- dashpots, fingers, diode strings, fuses, insulators, latching mechanisms, motors, wiring and relays
- characteristics, application and care of hand and specialised tools used on d.c. circuit breakers - combination/multigrips/long nose pliers, side cutters, screwdrivers, wire strippers, crimpers, knife, hacksaw, hammers, mallets, levels, tape measures, spanners, T-wrench, pistol drills, battery drills, heat gun, de-soldering tools and soldering iron/torches, Allen keys, socket spanners, gauges, feeler gauges and specialist tools supplied by the manufacturer
- characteristics, application and care of test and measurement instruments used on d.c. CB's - multimeters, tong testers, ammeters, voltmeters, ohmmeters, test lamps, high and low voltage insulation resistance/ continuity testers, earth resistance tester, ductor and drop-out test sets
- installation of substation d.c. circuit breakers and associated equipment, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation of substation d.c. circuit breakers
  - safety precautions when installing substation d.c. circuit breakers - safe operation procedures; WH/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of PPE; permit to work systems and isolation procedures; safe working practices when using specialised equipment; and emergency response and rescue, including first aid
  - use and interpretation of technical manuals and diagrams - manufacturer/enterprise manuals; block, wiring and schematic diagrams; 1500 V sectioning diagrams; substation HV operating diagrams; substation arrangement diagrams and layout drawings; technical/manufacturer specifications; and maintenance instructions/schedules
  - techniques in the safe installation of d.c. circuit breakers CB's
- LV substation switching principles including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to LV substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the LV switching operator
  - operational forms, access authorities and permits associated with LV switching - types of operational forms, access authorities and permits, purpose and procedures for operational forms, and access authorities and permits
  - use, care and operation of equipment associated with LV substation switching
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV substation switching or indicating devices
  - operation of protection systems and substation equipment
  - restrictions pertaining to LV switching equipment
  - earthing LV electrical apparatus practices and procedures for access
  - LV switching techniques
  - restrictions pertaining to enterprise-specific procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB27 Maintain high current d.c. equipment and switchgear

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to maintain high current direct current (d.c.) equipment and switchgear in the electricity supply industry (ESI).

It includes maintaining d.c. switchgear and other equipment, such as rectifier transformers, rectifiers, invertors, isolators and links, harmonic filters, negative reactors and energy dissipation resistors (EDR)s. It also includes diagnosing of faults and replacement and repair in accordance to workplace procedures and industry standards, isolating systems and/or circuits for safe work in accordance with work plans, visual inspections and necessary checks to ensure safe energisation, and updating of maintenance data and relevant quality assurance documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan to maintain high current d.c. switchgear and equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel

- 1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and in accordance with workplace procedures
  - 1.4 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others and for completion within acceptable timeframes, to agreed quality standards and in accordance with workplace procedures
  - 1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
  - 1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
  - 1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
  - 1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
  - 1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
- 2 **Carry out the maintenance of high current d.c. switchgear and equipment**
  - 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
  - 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
  - 2.3 Safe working documentation is acquired and requirements completed in accordance with workplace procedures
  - 2.4 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures

- |                                                                                 |            |                                                                                                                                                                                                |
|---------------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                 | <b>2.5</b> | Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions in accordance with workplace procedures |
|                                                                                 | <b>2.6</b> | Maintenance and repair of high current d.c. switchgear and equipment are maintained and repaired in accordance with works schedules, job requirements and workplace procedures                 |
|                                                                                 | <b>2.7</b> | High current d.c. switchgear and equipment are safely maintained to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures     |
|                                                                                 | <b>2.8</b> | Unplanned events or conditions are responded to in accordance with workplace procedures                                                                                                        |
| <b>3 Complete the maintenance of high current d.c. switchgear and equipment</b> | <b>3.1</b> | Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures                             |
|                                                                                 | <b>3.2</b> | Safe working documentation is surrendered and equipment made ready for service                                                                                                                 |
|                                                                                 | <b>3.3</b> | Worksite is cleaned and confirmed safe in accordance with workplace procedures                                                                                                                 |
|                                                                                 | <b>3.4</b> | Tools, equipment, surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with workplace procedures                                     |
|                                                                                 | <b>3.5</b> | Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified                                                               |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB27A Maintain high current DC equipment and switchgear.

# Assessment Requirements for UETTDRSB27 Maintain high current d.c. equipment and switchgear

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining high current direct current (d.c) switchgear and equipment using all of the following:
  - multimeters
  - low resistance high current
  - megger tester
  - ammeter
  - voltmeter
  - 1500 V drop out tester
  - wiring diagrams
  - schematic drawings
  - operating and substation arrangement diagrams
  - building layouts
  - cable block and schedule diagrams
- maintaining at least six (6) of the following types of equipment:
  - direct current circuit breakers
  - rectifier transformers
  - rectifiers
  - isolators and links
  - harmonic filters
  - negative reactors
  - energy dissipation resistors
- maintaining at least ten (10) of the following associated equipment:
  - d.c. feeders
  - surge arresters

- isolating links
- busbars
- cables
- cable supports
- pits and enclosures
- protection/alarm systems
- control wiring
- metering
- supervisory interface
- cabinets
- REC
- using all of the following:
  - cable terminations
  - busbar termination/joint
  - alignment of electrical contacts of withdrawable equipment
- dealing with unplanned events on at least one occasion

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policy and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue

- management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools

- identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
- techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with the enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- substation d.c circuit breaker principles, including:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the d.c. circuit breakers
  - types of d.c. circuit breakers - self and withdrawable types
  - characteristics of d.c. circuit breakers - purpose of d.c. circuit breakers and application of d.c. circuit breakers
  - principles of operation of different types of d.c. circuit breakers - arc expulsion versus arc containment, latched versus magnetically held, advantages and disadvantages of different types, fixed or withdrawable and protection/diagnostic technology
  - principles of operation of high-speed d.c. circuit breakers – characteristics and calibration
  - how d.c. circuit breakers are designated - feeder, rectifier, EDR, bus-section and negative breakers, auto-reclose or non-auto-reclose type
  - type and function of d.c. circuit breaker peripheral components - delta I relays, busbar,

- control wiring, trunk and associated plug/receptacle
- identification, characteristics, application and care of d.c. circuit breakers components - holding coils, closing coils, contactors, resistors, arc chutes, blow-out coils, arcing contacts, main contacts, braids, moving arm, pole face, arcing horns, electronic cards, dashpots, fingers, diode strings, fuses, insulators, latching mechanisms, motors, wiring and relays
- characteristics, application and care of hand and specialised tools used on d.c. circuit breakers - combination/multigrips/long nose pliers, side cutters, screwdrivers, wire strippers, crimpers, knife, hacksaw, hammers, mallets, levels, tape measures, spanners, T-wrench, pistol drills, battery drills, heat gun, de-soldering tools and soldering iron/torches, Allen keys, socket spanners, gauges, feeler gauges and specialist tools supplied by the manufacturer
- characteristics, application and care of test and measurement instruments used on d.c. circuit breakers - multimeters, tong testers, ammeters, voltmeters, ohmmeters, test lamps, HV and LV insulation resistance/continuity testers, earth resistance tester, ductor and drop-out test sets
- maintenance of substation d.c. circuit breakers and associated equipment, including:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the maintenance of d.c. circuit breakers
  - requirements for the use and interpretation of manuals, system diagrams/plans and drawings - 1500V sectioning diagrams, substation HV operating diagrams, substation arrangement diagrams and layout drawings, technical/manufacture specifications and maintenance instructions/schedules
  - relationship and function of d.c. circuit breaker equipment/component interface - d.c. circuit breaker frame, connection fingers, associated busbar, physical arrangements and clearances
  - safety precautions when undertaking maintenance procedures on d.c. circuit breakers - safe working practices; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of PPE; permit to work systems and isolation procedures; types and function of specialised equipment; safe working practices when using specialised equipment; and emergency response and rescue, including first aid
  - techniques in maintenance of d.c. circuit breakers - closing and opening operations, range settings, adjustments and calibration, spring settings, main contact arrangement and auxiliary contact arrangement, arc chute inspection and procedures, basic fault finding and repair/adjustment techniques, control cards, their uses, application and fault finding, and earthing requirements and techniques
  - techniques in testing and commissioning of d.c. circuit breakers - supply authority regulations and/or enterprise requirements, standards and procedures
- installation of substation d.c. circuit breakers and associated equipment including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation of substation d.c. circuit breakers
  - safety precautions when installing substation d.c. circuit breakers - safe operation procedures; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of PPE; permit to work systems

and isolation procedures; safe working practices when using specialised equipment; and emergency response and rescue, including first aid

- use and interpretation of technical manuals and diagrams - manufacturer/enterprise manuals, block, wiring and schematic diagrams, 1500 V sectioning diagrams, substation HV operating diagrams, substation arrangement diagrams and layout drawings, technical/manufacturer specifications and maintenance instructions/schedules
- techniques in the safe installation of d.c. circuit breakers.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB29 Maintain capacitor bank equipment for voltage regulation

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to maintain capacitor bank equipment for voltage regulation in the electricity supply industry (ESI).

It includes maintaining and repairing substation voltage regulating equipment and is restricted to high voltage (HV) capacitor banks and associated switching reactors and the inspection, recording of information, testing and measurement of the associated control circuits. It also includes the range of acceptance tests and discharge requirements for complete units within a substation in accordance with industry standards and workplace procedures, fault diagnosis and return to service tests and interpretation of test results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan to maintain voltage regulating equipment (capacitor banks)**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
- 1.4** Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
- 1.5** Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
- 1.6** Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
- 1.7** Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
- 1.8** Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace

- procedures
- 2 Carry out the maintenance of voltage regulating equipment (capacitor banks)**
- 1.9** Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
- 2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
- 2.2** Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
- 2.3** Safe working documentation is acquired and requirements completed in accordance with workplace procedures
- 2.4** Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
- 2.5** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
- 2.6** Capacitor bank is isolated, discharged and maintained in accordance with workplace procedures
- 2.7** Defective capacitor elements are identified, located and replaced in accordance with manufacturer instructions and workplace procedures
- 2.8** Capacitor network is balanced and pre-service tests and measurements completed in accordance with workplace procedures
- 2.9** Voltage regulating equipment (capacitor banks) are safely maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures
- 2.10** Unplanned events are responded to in accordance with workplace procedures
- 3 Complete the maintenance of voltage regulating**
- 3.1** Completed work is checked against work schedule, construction plans and drawings for compliance and

**equipment (capacitor banks)**

anomalies are reported in accordance with workplace procedures

- 3.2** Safe working documentation is surrendered and the capacitor bank is made ready for service
- 3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
- 3.4** Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
- 3.5** Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB29A Maintain capacitor bank equipment for voltage regulation.

## Links

# Assessment Requirements for UETTDRSB29 Maintain capacitor bank equipment for voltage regulation

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least one (1) of the following systems:
  - double star neutral current unbalance type
  - voltage unbalance type, single star
- maintaining at least two (2) of the following components:
  - internal discharge resistor cans
  - external resistor type
  - switching reactors
  - neutral unbalance current transformer
- performing at least three (3) of the following types of tests:
  - insulation resistance tests
  - capacitance tests
  - unbalance current/voltage tests
  - primary injection tests
  - high voltage (HV) direct current d.c. withstand tests
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working

- practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
- work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when deal with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and

- catalogues, and instructions/worksheets
- interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures

- calculation of results and data measurements using the computer
- techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities with regard to the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any

WHS/OHS requirements associated with the use of EWP

- control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
- control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
- rescue and release procedures - the rescue procedures for personnel from energised conductors, emergency descent from an EWP and/or confined spaces
- enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
- hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- principles of power transformer construction and operations, including:
  - applications of static reactive plant in HV networks, including voltage control, volt-ampere reactive VAR control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, static VAR compensators and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# **UETTDRSB30 Maintain high voltage power system static VAR compensators (SVC)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## **Application**

This unit involves the skills and knowledge required to maintain high voltage (HV) power system static VAR compensators (SVC) in the electricity supply industry (ESI).

It includes diagnosing faults, replacing and repairing high voltage power system static VAR compensator components. It also includes diagnostic and return to service tests and interpreting tests results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRSB25 Maintain high voltage power and instrument transformers

UETTDRSB29 Maintain capacitor bank equipment for voltage regulation

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Plan to maintain HV power system SVC

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2 Job requirements and workplace procedures are identified and communicated with relevant personnel

- 1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
    - 1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
    - 1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
    - 1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
    - 1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
    - 1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
    - 1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
  - 2 **Carry out maintenance on HV power system SVC**
    - 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
    - 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
    - 2.3 Safe working documentation is acquired and requirements completed in accordance with workplace procedures
    - 2.4 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
    - 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to

immediate authorised personnel for directions in accordance with workplace procedures

**2.6** HV power system SVC are safely maintained and repaired to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures

**2.7** Pre-service tests and measurements are conducted in accordance with enterprise procedures

**2.8** Unplanned events or conditions are responded to in accordance with workplace procedures

**3 Complete the maintenance of HV power system SVC**

**3.1** Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures

**3.2** Safe working documentation is surrendered and HV power system SVC is made ready for service

**3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures

**3.4** Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures

**3.5** Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB30A Maintain high voltage power system static VAR compensators (SVC).

## Links

# Assessment Requirements for UETTDRSB30 Maintain high voltage power system static VAR compensators (SVC)

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least two (2) of the following types of equipment:
  - static VAR compensator (SVC) power transformer
  - SVC auxiliary transformer
  - capacitors
  - reactors
  - cooling equipment
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:

- standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
- methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
- specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
- personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
- WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawing, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - low voltage (LV) system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their

use

- techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
- remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- principles of power system SVC, including:
  - applications of static reactive plant in HV networks, including voltage control, VAR control and transient response capacity
  - types of static reactive plant, including HV capacitors, HV reactors, SVC and combinations of these
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS

risks; types, selection, maintenance and use of PPE.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB31 Maintain high voltage power system synchronous condensers

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to maintain high voltage (HV) power system synchronous condensers in the electricity supply industry (ESI).

It includes diagnosing faults and replacing and repairing high voltage power system synchronous condenser components. It includes diagnostic and pre-commissioning tests involving synchronous condensers and interpreting these tests against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan to maintain HV power system synchronous condensers**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented

and monitored in accordance with workplace procedures

- 1.4** Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
- 1.5** Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
- 1.6** Equipment, tools and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
- 1.7** Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
- 1.8** Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
- 1.9** Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures

## **2 Carry out maintenance on HV power system synchronous condensers**

- 2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
- 2.2** Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
- 2.3** Safe working documentation is acquired and requirements completed in accordance with workplace procedures
- 2.4** Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
- 2.5** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures

- |                                                                             |            |                                                                                                                                                                                             |
|-----------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                             | <b>2.6</b> | HV power system synchronous condensers are safely maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures |
|                                                                             | <b>2.7</b> | Pre-service tests and measurements are conducted in accordance with enterprise procedures                                                                                                   |
|                                                                             | <b>2.8</b> | Unplanned events or conditions are responded to in accordance with workplace procedures                                                                                                     |
| <b>3 Complete the maintenance of HV power system synchronous condensers</b> | <b>3.1</b> | Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures                          |
|                                                                             | <b>3.2</b> | Safe working documentation is surrendered and the power system synchronous condenser made ready for service                                                                                 |
|                                                                             | <b>3.3</b> | Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures                                                                                            |
|                                                                             | <b>3.4</b> | Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage or in accordance with workplace procedures                                                   |
|                                                                             | <b>3.5</b> | Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified                                                            |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB31A Maintain high voltage power system

synchronous condensers.

## Links

# Assessment Requirements for UETTDRSB31 Maintain high voltage power system synchronous condensers

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least one (1) of the following windings:
  - stator winding
  - rotor winding
- maintaining the following system:
  - cooling system
- maintaining at least one (1) of the following systems:
  - control system
  - alarm system
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised low voltage (LV) equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- LV switching principles, including:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
- requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
- LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
- PPE for LV switching
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams

- title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools
  - identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
  - techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management

- requirements for the use of manuals, substation diagrams/plans and drawings
- types of enterprise-specific computer software
- techniques in storing and retrieving data and reports from the computer
- techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
- calculation of results and data measurements using the computer
- techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service including the appropriate procedures for work on in service plant/equipment
  - types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities regarding the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of

- extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from energised conductors
- requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP), and any WHS/OHS requirements associated with the use of EWPs
- control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
- control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
- rescue and release procedures - the rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
- enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
- hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- synchronous condenser principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to synchronous condensers
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of synchronous condensers installed
  - identification of components within the synchronous condensers and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for synchronous condensers
  - techniques in evaluating serviceability of synchronous condensers operation
  - safety precautions when testing and measuring synchronous condensers - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; safe working clearances and communicating worksite procedures
  - operating characteristics and operational constraints, including point on wave switching issues
  - ratings, cooling systems and control systems and ancillary equipment used
  - configurations and system layout, including single star, double star and bridge type
  - typical protection systems used, including neutral unbalance current and neutral unbalance voltage
  - techniques used when balancing elements within static reactive plant
  - safety precautions when testing and maintaining HV static reactive plant - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB32 Maintain power transformer on load tap changers (OLTC)

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to maintain power transformer on load tap changers (OLTC) in the electricity supply industry (ESI).

It includes maintaining, repairing and overhauling substation voltage regulating equipment restricted to resistor and reactor type high speed on load tap changers but does not include the main tank tap selector mechanism. It also includes inspecting, recording of information, testing and measuring of associated control circuits, range of acceptance tests required on installed complete units within the parent power transformer, diagnostic and pre-commissioning checks and tests involving tap changers and interpreting these results against agreed specifications.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRSB25 Maintain high voltage power and instrument transformers

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Prepare to maintain voltage regulating equipment (tap changers)**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are

identified and communicated with relevant personnel

- 1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
        - 1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
        - 1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
        - 1.6 Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
        - 1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
        - 1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
        - 1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
  - 2 **Carry out the maintenance of voltage regulating equipment (tap changers)**
    - 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
    - 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
    - 2.3 Safe working documentation is acquired and requirements completed in accordance with workplace procedures
    - 2.4 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures

- 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
  - 2.6 Oil circuits are isolated and tap changer vessels drained in accordance with workplace and environmental protection procedures
  - 2.7 Tap changer is withdrawn and maintained in accordance with manufacturer instructions and workplace procedures
  - 2.8 Pre-service tests and measurements are conducted in accordance with workplace procedures
  - 2.9 Voltage regulating equipment (tap changers) are safely maintained to ensure completion in agreed timeframes, to quality standards and with minimum waste
  - 2.10 Unplanned events or conditions are responded to in accordance with workplace procedures
- 3 Complete the maintenance of voltage regulating equipment (tap changers)**
- 3.1 Completed work is checked against works schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
  - 3.2 Safe working documentation is surrendered and transformer made ready for service
  - 3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
  - 3.4 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
  - 3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB32A Maintain power transformer on load tap changers (OLTC).

## Links

# Assessment Requirements for UETTDRSB32 Maintain power transformer on load tap changers (OLTC)

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- maintaining at least one (1) of the following systems:
  - high speed resistor type and drive mechanism
  - high speed reactor type and drive mechanism
- maintaining at least two (2) of the following pieces of equipment:
  - live tank diverter switch
  - dead tank diverter switch
  - tap selector
- performing at least three (3) of the following tests:
  - insulation resistance tests
  - transition resistor tests
  - contact resistance tests
  - sequence timing tests
  - ratio checks
  - winding resistance tests
  - oil sampling
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship

- methods of obtaining the up-to-date information on enterprise policies and procedures
- rules and regulations
- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
- overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - low voltage (LV) system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise

- regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
- characteristics, capabilities and application of specialised tools for a particular job
- safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
- selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and or hiring arrangements
- techniques in pre-use inspection on the serviceability of specialised tools
- techniques in the selection, use, maintenance, and care and storage of specialised tools
- identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
- techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of (PPE); responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with the enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- principles of power transformer high speed on-load tap changers (OLTC), including:
  - selector types and applications for HV power transformers
  - diverter switch types and applications for HV power transformers, including live tank, dead tank, resistor type, reactor type, vacuum type, pennant flag and pennant cycle

- ratings and construction principles
- operating mechanism types, stored energy systems and associated control systems
- operating principles and operating sequences of selectors and diverters
- measurement requirements, including contacts, differential wear, transition resistors and transient protection devices, rotation lag, out of sequence controls and end-of-life unit and component assessment
- online diagnostic tools and devices
- ancillary equipment, including online filters, over pressure relays and devices
- testing requirements, including cycle timing, differential delay, energy accumulator mechanical and operational tests, and control system functional tests
- safety precautions when testing and maintaining HV power transformer OLTC - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB33 Install high voltage plant and equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to install high voltage (HV) plant and equipment in the electricity supply industry (ESI).

It includes conducting pre-commissioning tests within agreed specifications, installing earthing systems, tertiary cabling and/or busbar systems. It does not include associated protection systems.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan the installation of HV plant and equipment**

- |            |                                                                                                                                                                                                              |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed                                                                                              |
| <b>1.2</b> | Job requirements and workplace procedures are identified and communicated with relevant personnel                                                                                                            |
| <b>1.3</b> | Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures |
| <b>1.4</b> | Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures                                     |
| <b>1.5</b> | Risk control measures are identified, prioritised, implemented and evaluated against the work schedule                                                                                                       |
| <b>1.6</b> | Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order                                                                           |

- 1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
  - 1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
  - 1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
- 2 **Carry out the installation of HV plant and equipment**
  - 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
  - 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
  - 2.3 Safe working documentation is acquired and requirements completed in accordance with workplace procedures
  - 2.4 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
  - 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
  - 2.6 Earthing requirements are identified and installed or confirmed installed in accordance with workplace procedures
  - 2.7 Foundations and other appropriate civil works are constructed and/or confirmed ready for the erection of HV plant and equipment
  - 2.8 HV plant and equipment is erected and associated HV connections, low voltage (LV) controls and supplies are installed in accordance with manufacturer instructions and workplace procedures
  - 2.9 Remedial actions are taken to overcome shortfalls

encountered in the work schedule in accordance with job requirements and workplace procedures

- 2.10** Pre-commissioning checks are performed and HV plant and equipment made ready for service in accordance with workplace procedures
- 2.11** Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
- 2.12** Essential knowledge and associated skills are applied for the safe installation of HV plant and equipment to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
- 2.13** Unplanned events or conditions are responded to in accordance with workplace procedures

### **3 Complete the installation of HV plant and equipment**

- 3.1** Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
- 3.2** Safe working documentation is surrendered and installed power system HV plant and equipment made ready for service
- 3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
- 3.4** Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
- 3.5** Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified
- 3.6** Associated drawings, schematics and diagrams are updated to reflect work as executed in accordance with workplace procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRSB33A Install high voltage plant and equipment.

## **Links**

# Assessment Requirements for UETTDRSB33 Install high voltage plant and equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing at least two (2) of the following pieces of equipment:
  - power transformer
  - high voltage (HV) reactor (series or parallel)
  - auxiliary transformer
  - current transformer
  - voltage transformer
  - capacitor bank
  - circuit breaker
  - high current direct current (d.c.) switchgear and/or equipment
- installing at least two (2) of the following pieces of associated equipment:
  - disconnecter
  - fault throwing switch
  - earth switch
  - earth grid connections
  - surge arrestor
  - neutral earthing transformer
  - resistor bank
  - busbar
- performing at least three (3) of the following tests:
  - insulation resistance tests
  - dielectric dissipation factor tests
  - low voltage (LV) excitation checks
  - continuity checks

- ratio checks
- winding resistance tests
- gas pressure checks
- timing checks
- contact resistance checks
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working on energised LV equipment, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
  - safety precautions specific to working on or near energised LV conductors - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of personal protective equipment (PPE)
  - work on or near energised LV conductors - types and function of specialised tools, safe working practices when using specialised tools, methods of using specialised tools, safe procedures for work on panels and in cubicles on or near energised LV conductors, and release and rescue procedures for work on or near exposed energised LV conductors
- LV switching principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - PPE for LV switching
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire=fighting procedures, fatigue

- management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, d.c. traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storing specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance, and care and storage of specialised tools

- identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
- techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions and systems
  - interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
  - interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
  - types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
  - types of fault conditions - failure to operate and failure in service, including the

- appropriate procedures for work on or in service plant/equipment
- types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment; replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures, and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities regarding the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials, and oil containment facilities and systems
  - rescue and release procedures - the rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
  - enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
  - hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of substation LV a.c. and d.c. supply systems, including:

- standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements
- wiring conventions, systems and labelling conventions
- substation equipment identification and layout, wiring and schematic diagrams and other appropriate diagrammatic representations
- LV design specifications, supply requirements and electrical load assessments
- substation LV system distribution requirements - substation batteries, isolation requirements, paralleling requirements, battery chargers, d.c. distribution panels and control systems, a.c. distribution panels and control systems, and auto change-over requirements
- control equipment and auxiliary relays, flags and alarms
- common panel layouts
- design principles of hydraulic and pneumatic operating mechanism principles, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, standards, supply authority regulations and/or enterprise requirements
  - control system operating diagrams, including nomenclature, symbols and operating sequences, and units of measurement
  - fundamentals of pressure intensification, forces and energy accumulators
  - applications for substation HV equipment - circuit breaker operating mechanisms, interrupter mechanisms, pumps and compressors, gas insulated switchgear (GIS) operating mechanisms and transformer cooling systems
  - safety precautions for work on hydraulic and/or pneumatic systems - safe working practices and procedures; identification of hazards, assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE
- principles of power transformer construction and operations, including:
  - transformer types - shell, core, auto, double wound, three phase, single phase and combinations of these types, step up and step-down transformers, transmission and generation types
  - reactor types - shunt and series, applications and design considerations
  - iron circuit characteristics - steel types, losses and techniques used to eliminate excess eddy currents and other circulating currents
  - winding configurations and construction techniques - helical, spiral, disc and interleaved disc types
  - insulation methods and techniques - fully insulated windings and graded insulation techniques, oil filled and gas filled power transformers
  - transformer and reactor ratings, losses and efficiency - equivalent circuits and vector relationships, and impedance percent
  - nameplate details - basic insulation level (BIL), tapping winding detail, physical layout, cooling ratings and physical details
  - transformer and reactor cooling types and their effects on design and rating
  - transformer and reactor auxiliaries - temperature indicators, over pressure devices and control systems
  - winding configurations - star-star, star-delta, star-zigzag, nomenclature and common

- methods of diagrammatic representation of winding configuration
- operating constraints as single units and in parallel
- tapping windings - placement issues, tapping range, on-load tap changer (OLTC) versus off load tap changer techniques, types in use (high speed resistor, reactor and vacuum types, Jansen mechanisms, dead tank and live tank types), and control system characteristics
- HV bushing selection – type, insulation system used, rating, BIL, selection criteria and testing considerations
- circuit breaker operating principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to circuit breakers
  - requirements for the use of manuals, circuit breaker diagrams/plans and drawings
  - operation of protection systems and substation equipment associated with circuit breakers
  - use, characteristics and capabilities of specialised tools and equipment
  - capabilities of operating mechanisms
  - capabilities of interrupter chambers
  - enterprise specific policies and procedures for the operation of circuit breakers
  - techniques in evaluating serviceability of circuit breaker operation
  - control equipment and auxiliary relays, flags and alarms
  - safety precautions when constructing circuit breakers - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and access for operating

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB34 Carry out surveys using thermovision techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to carry out surveys using thermovision techniques in the electricity supply industry (ESI).

It includes thermographic inspections of transmission/distribution systems and/or substation equipment. It also includes surveying, inspecting, recording information and reporting of defective/non-compliant conditions in accordance with workplace procedures.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan to carry out thermographic surveys**

- 1.1** Work schedules, construction plans, drawings, workplace procedures and material lists are obtained and analysed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures

- 1.4 Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
  - 1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
  - 1.6 Equipment, tools and personal protective equipment (PPE) required for work is identified, obtained and confirmed in working order
  - 1.7 Liaison and communication issues with authorised personnel, authorities, clients and land owners are resolved to facilitate work, as required
  - 1.8 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
  - 1.9 Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
- 2 **Carry out thermographic surveys**
  - 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
  - 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place in accordance with job requirements and/or workplace procedures
  - 2.3 Safe working documentation is acquired, as appropriate, and requirements completed in accordance with workplace procedures
  - 2.4 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures
  - 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
  - 2.6 Circuit load conditions are assessed, relevant personnel and/or organisations consulted and appropriate circuit

- adjustments made prior to survey in accordance with workplace procedures
- 2.7 Substation equipment and/or transmission/distribution systems are surveyed, joints, connections and components surveyed and assessed in accordance with workplace procedures
  - 2.8 Non-conformance defects are assessed for level of safety/system impact and communicated to appropriate personnel for further action in accordance with workplace procedures
  - 2.9 Circuits are restored to pre-survey conditions and appropriate personnel/organisations informed in accordance with workplace procedures
  - 2.10 Thermographic surveys are performed to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
  - 2.11 Unplanned events or conditions are responded to in accordance with workplace procedures
- 3 Record the outcomes of thermographic surveys**
- 3.1 Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
  - 3.2 Safe working documentation is surrendered if appropriate
  - 3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
  - 3.4 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
  - 3.5 Work records, reports and/or documentation are completed in accordance with workplace procedures and relevant personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB34A Carry out surveys using thermovision techniques.

## Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETTDRSB34 Carry out surveys using thermovision techniques

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- performing surveys using thermovision techniques in one (1) of the following substations:
  - transmission substation
  - distribution substation
  - traction substation
  - zone substation
- performing surveys using thermovision techniques on at least one (1) of the following:
  - substation apparatus and equipment
  - transmission/distribution system conlow resistance high currents and components
- performing surveys using thermovision techniques on at least three (3) of the following associated equipment:
  - disconnectors
  - transmission/distribution system conlow resistance high currents
  - mid-span joints
  - bolted palms and connections
  - terminations
  - jumpers
  - pot heads
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- enterprise specific policies and procedure instructions, including:

- responsibilities and duty of care of employer and employee relationship
- methods of obtaining the up-to-date information on enterprise policies and procedures
- rules and regulations
- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
- overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance including, cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings, including:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - low voltage (LV) system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, high voltage (HV) transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams
- enterprise-specific specialised tools, including:

- legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of specialised tools (voltage detectors, polarity testers and phase rotation)
- characteristics, capabilities and application of specialised tools for a particular job
- safety policies, procedures and precautions with regards to using, transporting and storage of specialised tools
- selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
- techniques in pre-use inspection on the serviceability of specialised tools
- techniques in the selection, use, maintenance, and care and storage of specialised tools
- identifying WHS/OHS hazards, and assessing and controlling risks associated with their use
- techniques for the safe use of specialised power tools
- enterprise-specific equipment installation procedures, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to equipment installation
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types, characteristics and capabilities of HV substation equipment to be installed
  - identification of components within the equipment to be installed and associated control housings
  - use, characteristics and capabilities of specialised tools and equipment
  - enterprise-specific policies and procedures for equipment to be installed
  - control equipment and auxiliary relays, flags and alarms
  - techniques in evaluating serviceability of equipment to be installed
  - safety precautions when testing and measuring equipment to be installed - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and safe working clearances
  - remote and local operating principles and conventions
- enterprise-specific data management processes, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to data management
  - requirements for the use of manuals, substation diagrams/plans and drawings
  - types of enterprise-specific computer software
  - techniques in storing and retrieving data and reports from the computer
  - techniques in using the data management systems in following necessary commands and protocols in accordance with the enterprise-specific procedures
  - calculation of results and data measurements using the computer
  - techniques in the preparation of preliminary works creation and closure
- fault conditions and symptoms related to the plant and/or equipment type, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to typical fault conditions

and systems

- interpretation of faults in operating mechanisms, such as drive trains and mechanical power drives; stored energy systems, including hydraulic systems, pneumatic systems and mechanical storage systems; and accumulators
- interpretation of faults in electrical control systems, such as electromechanical relay systems, micro-processor-based systems, programmable logic controller (PLC) systems, integrated control systems or combinations of electrical/mechanical systems
- types of electrical systems, including alternating current (a.c.), d.c. and combinations of both
- types of fault conditions - failure to operate and failure in service, including the appropriate procedures for work on or in service plant/equipment
- types of symptoms - alarms, relay flags, mechanical defects, insulation deterioration, leaks, over pressure, under pressure, out of tolerance measurements and checks
- substation equipment components and materials related to the plant and/or equipment type, including:
  - types of components - complete unit of plant and/or equipment, replacement components or appropriate substitutes; their dimensions, suitability and serviceability; also, the components associated with the local control systems of the equipment, including indication of levels, quantities, volumes, pressures and temperatures and the operating principles of these devices and components
  - types of materials - insulation, construction, fabrication or lubrication of the plant/equipment
  - techniques in enterprise procedures and regulatory/legislative requirements for the handling/use and storage of equipment components and materials which may present WHS/OHS hazards to persons in the workplace
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substations work, including responsibilities regarding the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment

- and materials; and oil containment facilities and systems
- rescue and release procedures - the rescue procedures of personnel from energised conductors, emergency descent from an EWP and/or confined spaces
- enterprise requirements - safe access and authorisation to work procedures, use of mobile extendable equipment on or near energised HV conductors, and emergency response procedures
- hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction, and dangers of near approach to energised conductors
- design principles of HV insulation systems, including:
  - insulation design principles - common materials used, electrical characteristics, thermal characteristics, uses and applications to substation HV plant and equipment, grading, construction and cooling
  - common contaminants and their effects - internal contaminants and external contaminants
  - testing and measurement of insulation quality - test types and common measuring instruments and techniques, resistance and resistivity, losses, measurement errors, temperature corrections, and safe work practices related to testing and measurement
  - safety precautions when testing and measuring HV insulation systems - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use PPE
- principles of power transformer construction and operations, including:
  - transformer types - shell, core, auto, double wound, three phase, single phase and combinations of these types, step up and step-down transformers, transmission and generation types
  - reactor types - shunt and series, applications and design considerations
  - iron circuit characteristics - steel types, losses and techniques used to eliminate excess eddy currents and other circulating currents
  - winding configurations and construction techniques - helical, spiral, disc and interleaved disc types
  - insulation methods and techniques - fully insulated windings and graded insulation techniques, oil filled, and gas filled power transformers
  - transformer and reactor ratings, losses and efficiency - equivalent circuits and vector relationships and impedance percent
  - nameplate details - basic insulation level (BIL), tapping winding detail, physical layout, cooling ratings and physical details
  - transformer and reactor cooling types and their effects on design and rating
  - transformer and reactor auxiliaries - temperature indicators, over pressure devices and control systems
  - winding configurations - star-star, star-delta, star-zigzag, nomenclature and common methods of diagrammatic representation of winding configuration
  - operating constraints as single units and in parallel
  - tapping windings - placement issues, tapping range, on-load tap changer (OLTC) versus off load tap changer techniques, types in use (high speed resistor, reactor and vacuum types, Jansen mechanisms, dead tank and live tank types), and control system

characteristics

- HV bushing selection – type, insulation system used, rating, BIL, selection criteria and testing considerations
- circuit breaker operating principles, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to circuit breakers
  - requirements for the use of manuals, circuit breaker diagrams/plans and drawings
  - operation of protection systems and substation equipment associated with circuit breakers
  - use, characteristics and capabilities of specialised tools and equipment
  - capabilities of operating mechanisms
  - capabilities of interrupter chambers
  - enterprise-specific policies and procedures for the operation of circuit breakers
  - techniques in evaluating serviceability of circuit breaker operation
  - control equipment and auxiliary relays, flags and alarms
  - safety precautions when constructing circuit breakers - safe working practices and procedures; identification of hazards; assessment and control of WHS/OHS risks; types, selection, maintenance and use of PPE; responsibilities and protocols; and access for operating.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB35 Maintain discrete control and protection systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers the isolation, inspection, testing, adjustment, repair, refurbishment and/or overhaul and functional checks of discrete protection and control devices. It includes the requirements to prove the functionality of discrete devices, such as direct current (d.c.) supplies, overcurrent, overload, earth fault, transformer temperature controls, alarms and indication circuits.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan for the maintenance of discrete protection and control devices**

- 1.1** Work schedules, including drawings, plans, requirements procedures and material lists, are acquired, analysed and the extent of work determined
- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to

ensure safe systems of work are followed and according to established procedures

- 1.4** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to agreed quality standards and in accordance with established policies and procedures
- 1.5** Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
- 1.6** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, acquired and confirmed safe and in technical working order
- 1.7** Liaison issues with other personnel and/or authorities are resolved and activities coordinated to facilitate the work
- 1.8** Personnel participating in the work, including plant operators and contractors, are fully briefed, their respective responsibilities explained and coordinated, and appropriate authorisation checked in accordance with established procedures
- 1.9** Worksite is prepared according to the work schedule and to minimise risk and damage to property and personnel in accordance with established procedures

## **2 Carry out the maintenance of discrete protection and control devices**

- 2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are implemented and monitored in accordance with established procedures
- 2.2** Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place according to requirements and established procedures
- 2.3** Safe working documentation is acquired and requirements completed in accordance with established procedures
- 2.4** Lifting, use of power tools/equipment techniques and practices are safely exercised in accordance with established procedures

- 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
  - 2.6 Maintenance of discrete protection and control devices is undertaken according to requirements and established procedures
  - 2.7 Data is analysed and compared with compliance specifications to ensure completion of the maintenance work is within an agreed timeframe and according to requirements
  - 2.8 Essential knowledge and associated skills are applied for the safe maintenance of discrete protection and control devices to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
  - 2.9 Unplanned events or conditions are responded to in accordance with established procedures
- 3 Complete the maintenance of discrete protection and control devices**
- 3.1 Final inspections of discrete protection and control devices are undertaken and checked against the work schedule to ensure they comply with all requirements, including all required documentation
  - 3.2 Anomalies between the work schedule requirements and measured performance are reported and solutions identified in accordance with established procedures
  - 3.3 Safe working documentation is surrendered and transformer made ready for service
  - 3.4 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
  - 3.5 Tools, equipment and any surplus resources and materials are cleaned, checked and returned to storage in accordance with established procedures
  - 3.6 Required work completion records, reports and/or documentation and information are completed, processed and appropriate personnel notified in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSB35A Maintain discrete control and protection systems.

## Links

UET Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETTDRSB35 Maintain discrete control and protection systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- undertaking functional checks and testing of discrete control and protection devices including all of the following:
  - isolate discrete protection
  - control and indications
  - overcurrent and earth fault relays
  - direct current (d.c.) supplies
  - trip and control circuits
  - alarms and indications
  - function test of discrete devices
- inspecting discrete control and protection devices including at least three (3) of the following:
  - neutral displacement
  - no-volt changeover
  - discrete auto-reclose
  - d.c. frame leakage
  - oil surge (site maintenance)
  - voltage regulation
  - parallel operation
  - thermal overloads
  - transformer temperature control devices
  - CEL fail
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)
  - particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- principles of isolation and tagging procedures associated with protection testing encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation, maintenance, isolation and tagging procedures
  - requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
  - techniques in documenting isolations
  - techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
  - techniques in the installation and maintenance procedures protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- maintenance procedures associated with discrete protection schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the maintenance procedures
  - requirements for the use of maintenance manuals, system diagrams/plans and drawings
  - techniques in maintenance procedures – planning, policy and testing techniques
  - close out requirements
- relay manufacturer specifications encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of relay manufacturer specifications
  - requirements for the use of relay manufacturer manuals, system diagrams/plans and drawings
  - types, function and characteristics of specific relays - differences between specific relays used for the same functionality
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants, encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
  - identification of environmental issues associated with the handling and disposing of

insulation materials

- safety precautions when handling and disposing of heat dissipation materials - safe working practices; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures; types and function of specialised equipment; safe working practices when using specialised equipment; and emergency response and rescue, including first aid
- techniques in the handling and disposing of insulation materials - polychlorinated biphenyls (PCB), asbestos, insulating Oil and sulfur hexafluoride (SF6) gas.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB36 Commission discrete control and protection systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers the commissioning/testing of discrete protection and control systems and includes isolation, inspection, monitoring, testing, adjustment and functional checks on systems, such as overcurrent, overloads, earth fault, alarms and controls.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRSB25 Maintain high voltage power and instrument transformers

UETTDRSB29 Maintain capacitor bank equipment for voltage regulation

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the commissioning/testing of discrete protection and control systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements procedures and material lists, are acquired, analysed and the extent of work determined
- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.3** Hazards are identified, work health and safety

(WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures

**1.4** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to agreed quality standards and in accordance with established policies and procedures

**1.5** Risk control measures are identified, prioritised, implemented and evaluated against the work schedule

**1.6** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, acquired and confirmed safe and in technical working order

**1.7** Liaison issues with other personnel and/or authorities are resolved and activities coordinated to facilitate the work

**1.8** Personnel participating in the work, including plant operators and contractors, are fully briefed, their respective responsibilities explained and coordinated, and appropriate authorisation checked in accordance with established procedures

**1.9** Worksite is prepared according to the work schedule and to minimise risk and damage to property and personnel in accordance with established procedures

## **2 Carry out the commissioning/testing of discrete protection and control systems**

**2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are implemented and monitored in accordance with established procedures

**2.2** Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place according to requirements and established procedures

**2.3** Safe working documentation is acquired and requirements completed in accordance with established procedures

**2.4** Lifting, use of power tools/equipment techniques and

practices are safely exercised in accordance with established procedures

- 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
- 2.6 Commissioning/testing of discrete protection and control systems is undertaken according to requirements and established procedures
- 2.7 Data is analysed and compared with compliance specifications to ensure commissioning/testing of the discrete system is completed within an agreed timeframe and according to requirements
- 2.8 Essential knowledge and associated skills are applied for the safe commissioning/testing of discrete protection and control systems to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
- 2.9 Unplanned events or conditions are responded to in accordance with established procedures

### **3 Complete the commissioning/testing of discrete protection and control systems**

- 3.1 Final inspections and functional testing of the discrete protection and control systems are completed and checked to ensure compliance with all requirements
- 3.2 Anomalies between requirements and measured performance are reported and solutions identified in accordance with established procedures
- 3.3 Safe working documentation is surrendered and discrete protection and control systems are made ready for service
- 3.4 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
- 3.5 Tools, equipment and any surplus resources and materials are cleaned, checked and returned to storage in accordance with established procedures
- 3.6 Required work completion records, reports and/or documentation and information are completed, processed and appropriate personnel notified in

accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRSB36A Commission discrete control and protection systems.

## **Links**

UET Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETTDRSB36 Commission discrete control and protection systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- undertaking final inspections and functional testing of the discrete protection and control systems including all of the following:
  - isolating protection
  - inspecting controls and alarms with discrete protection and control systems
  - isolating current transformers
  - calibrating discrete protection and control relays
  - carrying out function tests (trips and alarms) on discrete protection and control systems without assistance
  - writing reports on the performance of discrete protection and control systems
- undertaking commissioning and testing of discrete control and protection devices including at least three (3) of the following:
  - overcurrent
  - frame leakage
  - cooling controls
  - buchholz/surge protection
  - direct current (d.c.) supplies control
  - neutral displacement circuit breaker reclose
  - d.c. frame leakage
  - CEL fail
  - earth fault
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- commissioning procedures associated with discrete protection schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the commissioning procedures
  - requirements for the use of commissioning manuals, system diagrams/plans and drawings
  - techniques in commissioning procedures – planning, policy and testing techniques
  - close out requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB37 Maintain power system distribution field devices

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers the maintenance of automatic circuit reclosers (ACRs), gas switches, regulators and line capacitors; and communication systems, including mobile phones and trunked mobile radio (TWR). It includes secondary injection, timing and function tests, and proving correct tripping, reclosing and remote operation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Troubleshoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

Pathway 1 - Electrician

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

Pathway 2 - Electrical Fitter

UEENEEG199A Conduct compliance and functional verification of electrical apparatus and existing circuits

## Competency Field

Substation

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the maintenance of distribution field devices**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, procedures and material lists, are acquired, analysed and the extent of work determined
- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according

to established procedures

- 1.4 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to agreed quality standards and in accordance with established policies and procedures
        - 1.5 Risk control measures are identified, prioritised, implemented and evaluated against the work schedule
        - 1.6 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, acquired and confirmed safe and in technical working order
        - 1.7 Liaison issues with other personnel and/or authorities are resolved and activities coordinated to facilitate the work
        - 1.8 Personnel participating in the work, including plant operators and contractors, are fully briefed, their respective responsibilities explained and coordinated, and appropriate authorisation checked in accordance with established procedures
        - 1.9 Worksite is prepared according to the work schedule and to minimise risk and damage to property and personnel in accordance with established procedures
- 2 Carry out the maintenance of distribution network field devices**
  - 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are implemented and monitored in accordance with established procedures
  - 2.2 Cardiopulmonary resuscitation (CPR), rescue from live electrical apparatus and other related safety procedures are in place according to requirements and established procedures
  - 2.3 Safe working documentation is acquired and requirements completed in accordance with established procedures
  - 2.4 Lifting, use of power tools/equipment techniques and practices are safely exercised in accordance with established procedures
  - 2.5 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to

immediate authorised personnel for directions according to established procedures

**2.6** Essential knowledge and associated skills are applied for the safe maintenance of distribution field devices to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements

**2.7** Maintenance, including testing of distribution field devices, is undertaken according to requirements and established procedures

**2.8** Unplanned events or conditions are responded to in accordance with established procedures

### **3 Complete the maintenance of distribution network field devices**

**3.1** Functional checks of distribution field devices are completed and all work checked against the requirements to ensure compliance

**3.2** Anomalies between the work schedule requirements and measured performance are reported and solutions identified in accordance with established procedures

**3.3** Safe working documentation is surrendered and transformer made ready for service

**3.4** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures

**3.5** Tools, equipment and any surplus resources and materials are cleaned, checked and returned to storage in accordance with established procedures

**3.6** Approved copies of the maintenance of distribution network field devices documents are issued and records updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRSB37A Maintain power system distribution field devices.

# Assessment Requirements for UETTDRSB37 Maintain power system distribution field devices

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- undertaking functional checks and testing of power system distribution field devices including all of the following:
  - assembly
  - functional checks
  - applying device settings
  - secondary injections
  - timing
  - remote operations
- maintaining power system distribution field devices including at least three of the following:
  - Automatic circuit reclosers (ACRs)
  - gas switches
  - regulators
  - line capacitors
  - mobile phone systems
  - trunked mobile radio (TMR) systems
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV)

- particular reference to state and territory regulations - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- principles of isolation and tagging procedures associated with protection testing encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the installation, maintenance, isolation and tagging procedures
  - requirements for the use of isolation and tagging, manuals, system diagrams/plans and drawings
  - techniques in documenting isolations
  - techniques in appropriate isolation and tagging procedures in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
  - techniques in the installation and maintenance procedures protection devices in accordance with Commonwealth/state/territory legislation, supply authority regulations and enterprise standards
- maintenance procedures associated with discrete protection schemes encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations and/or enterprise requirements associated with the maintenance procedures
  - requirements for the use of maintenance manuals, system diagrams/plans and drawings
  - techniques in maintenance procedures – planning, policies and testing techniques
  - close out requirements
- relay manufacturer specifications encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the use and application of relay manufacturer specifications
  - requirements for the use of relay manufacturer manuals, system diagrams/plans and drawings
  - types, function and characteristics of specific relays - differences between specific relays used for the same functionality
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants, encompassing:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
  - identification of environmental issues associated with the handling and disposing of insulation materials
  - safety precautions when handling and disposing of heat dissipation materials - safe working practices; WHS/OHS hazards and precautions; identification of hazards; assessing and controlling risks; types, selection, maintenance and uses of personnel protective equipment (PPE); permit to work systems and isolation procedures; types and function of specialised equipment; safe working practices when using specialised equipment; and emergency response and rescue, including first aid
  - techniques in the handling and disposing of insulation materials - polychlorinated

biphenyls (PCB), asbestos, insulating oil and sulfur hexafluoride (SF6) gas.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSB38 Commission power system distribution field devices

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers the commissioning of automatic circuit reclosers (ACRs), gas switches, regulators and line capacitors; and communication systems, including mobile phones and trunked mobile radio (TMR). It also includes communication with the operating authority, testing, clearing after testing and energising using techniques that are acceptable to the operating authority.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

# Assessment Requirements for UETTDRSB38 Commission power system distribution field devices

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- undertaking all of the following:
  - applying device settings
  - secondary injections
  - timing
  - remote operations
  - earthing checks
  - calibrations
- undertaking commissioning and testing of power system distribution field devices including at least three (3) of the following:
  - automatic circuit reclosers (ACRs)
  - gas switches
  - regulators
  - line capacitors
  - mobile phone systems
  - trunked mobile radio (TMR) systems
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- commissioning procedures associated with distribution protection and control systems encompassing:
  - standards, codes, Commonwealth/state/territory legislation, supply authority regulations

and/or enterprise requirements associated with the commissioning procedures

- requirements for the use of commissioning manuals, system diagrams/plans and drawings
- techniques in commissioning procedures – planning, policies and testing techniques
- close out requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETTDRSO45 Operate and monitor system SCADA equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers the skills and knowledge to operate, monitor and control high voltage (HV) apparatus on the network via supervisory control and data acquisition (SCADA) control.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Common Unit Group

UETTDREL15 Respond to power systems technical enquiries and requests

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan and prepare for the operation, monitoring and control of system equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the preparation of the switching program, are reviewed**

and determined

- 1.2 System requirements are established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
    - 1.3 System and associated equipment operational prerequisites are identified and established in accordance with manufacturer and/or enterprise/site procedures
    - 1.4 System monitoring and control procedures are discussed with and/or directed to appropriate personnel in order to ascertain the project brief
    - 1.5 Operational parameters are ascertained from established policies, procedures and specifications
    - 1.6 Work roles and tasks are allocated according to requirements and individual competencies
    - 1.7 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe, to a quality standard and in accordance with established procedures
    - 1.8 Liaison and communication issues with others/authorised personnel, authorities and clients are resolved and activities coordinated to carry out work
    - 1.9 Risk control measures are identified, prioritised and evaluated against the work schedule
    - 1.10 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 2 Carry out and coordinate the operation, monitoring and control of system equipment**
  - 2.1 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidents of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.2 Decisions concerning the operation, monitoring and control of system equipment are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.3 The effectiveness of the finished project is analysed in accordance with requirements and established

procedures

- |                                                                             |                                                                                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>2.4</b>                                                                  | Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures |
| <b>2.5</b>                                                                  | Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements                                                       |
| <b>2.6</b>                                                                  | Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures                                                                                                                                                    |
| <b>2.7</b>                                                                  | Solutions to non-routine problems are identified and actioned, using acquired essential knowledge and associated skills, according to requirements                                                                                                                          |
| <b>2.8</b>                                                                  | Quality of work is monitored against personal performance agreement and/or established organisational and professional standards                                                                                                                                            |
| <b>3 Complete the operation, monitoring and control of system equipment</b> | <b>3.1</b> Final review of the operation, monitoring and control of system equipment is undertaken to ensure it complies with all requirements and include all specifications and documentations needed to complete the project                                             |
|                                                                             | <b>3.2</b> Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned                                                                                                                                              |
|                                                                             | <b>3.3</b> Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval                                                                                                       |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRSO45A Operate and monitor system SCADA equipment.

## **Links**

UET Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETTDRSO45 Operate and monitor system SCADA equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements , including the use of risk control measures
- applying sustainable energy principles and practices
- performing on at least three (3) occasions the following:
  - evidence of switching programs involving the operation and monitoring of system equipment via supervisory control and data acquisition (SCADA)
- performing on at least two (2) occasions the following:
  - evidence of unplanned switching events involving the operation and monitoring of system equipment via SCADA
- demonstrating the following:
  - extracting data used in the analysis of network loading trends
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- SCADA systems encompassing:
  - SCADA system features and applications - industries in which SCADA systems are used, associate benefits of the package, features and facilities of different SCADA packages, and hardware requirements
  - reading mimics and animated graphics
  - trending - analysis of process to select data, viewing data and graphical representation of selected information, trend graphs and data matching
  - alarm logging - analysing select data, and corrective action of alarm status
- personal computer operating systems encompassing:
  - basic function, components and concepts

- operating systems in use
- system installation and configuration
- computers applications encompassing:
  - application software types
  - configurations and preferences
  - use of particular software packages - word processor, spreadsheet, database, presentation software, web/document publisher, computer-aided drafting (CAD)/drawing packages, email client and business management
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders, and the HV equipment associated with substations
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing ;and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or

- equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- power distribution network documentation encompassing:
  - requirements for the use of manuals, system diagrams/plans and drawings; and for plans, such as work method statements for the control of WHS/OHS risks
  - types and application of power distribution network documentation drawings and documents - wiring and schematic diagrams, drawings and switching symbols, mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different diagrams and documentation on low voltage (LV) and high voltage (HV) systems - overhead distribution extensions, underground distribution extensions, distribution substations and street lighting systems.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment, and SCADA equipment currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice, relevant modelling tools, drawings and operation manuals.

# UETTDRSO46 Monitor and control the field staff activities

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit covers the monitoring of permit to work requests, dispatching personnel, responding to alarms, travel and activity monitoring of field personnel, monitoring work activities of field personnel against work schedule.

It also includes contingency skills, response to third-party enquiries, out of hour, response to man down alarm, tracking of field personnel (remote area), monitoring activities on system equipment, monitoring availability of assets (maintain a log), monitor equipment status, coordinating field activities, controlling and authorising field works, and preparing incident reports.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licencing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

To minimise incidents related to safe systems of work, entry into this unit requires at a minimum that an individual has demonstrated or possesses relevant technical engineering discipline competencies of at least AQF level 3. It is intended that an individual will be expected to perform with a large degree of autonomy in decision making, whilst in an individual environment.

This may include immediate response to protect human life, adverse effect on safety, security of supply or the integrity of the assets.

NOTE: Typically the following disciplines provide direct entry; electrical or instrumentation, fitting and turning or mechanical trade.

Where an individual does not possess or demonstrate the requisite entry requirement, an equivalent bridging program should be used to ensure equivalence of entry.

## Competency Field

System Operations

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for the monitoring and controlling of field activities**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, plans, requirements and established procedures are detailed and analysed and, if necessary, the extent of the preparation of the work determined for planning and coordination
- 1.2** Shift handover detail is received, understood and confirmed according to established procedures
- 1.3** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.4** Risk control measures for identified hazards are prioritised, implemented and evaluated against the work schedule
- 1.5** Salient system constraints are communicated to relevant persons and identified for worksites in accordance with established procedures
- 1.6** Operational and commercial requirements are communicated to stakeholders in accordance with established procedures
- 1.7** Work health and safety (WHS)/occupational health and safety (OHS), environmental and sustainable energy policies and procedures related to the work are identified to ensure safe systems of work are followed
- 1.8** Relevant work permits are secured to coordinate the performance of work according to requirements and established procedures
- 1.9** Liaison and communication with authorised personnel, authorities, clients and land owners is performed/actioned and activities are coordinated to

|                                                                   |            |                                                                                                                                                                                                                     |
|-------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                   |            | carry out work                                                                                                                                                                                                      |
| <b>2 Undertake monitoring and controlling of field activities</b> | <b>2.1</b> | WHS/OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents and hazards                                                                                                 |
|                                                                   | <b>2.2</b> | Work is performed and coordinated in accordance with work schedules and established procedures                                                                                                                      |
|                                                                   | <b>2.3</b> | WHS/OHS risks are monitored and action taken according to established procedures                                                                                                                                    |
|                                                                   | <b>2.4</b> | Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and established procedures                                                                         |
|                                                                   | <b>2.5</b> | Essential knowledge and associated skills are applied in an agreed timeframe and to quality standards efficiently according to requirements and established procedures                                              |
|                                                                   | <b>2.6</b> | Solutions to non-routine problems are identified and actioned using essential knowledge and associated skills according to requirements                                                                             |
|                                                                   | <b>2.7</b> | Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer to community and industry standards |
| <b>3 Complete monitoring and controlling of field activities</b>  | <b>3.1</b> | Work undertaken is checked against work schedule for conformance with requirements and anomalies are reported and solutions identified in accordance with established procedures                                    |
|                                                                   | <b>3.2</b> | Relevant work permit(s) and field activities are signed off and the status of plant, equipment and personnel movements recorded and handover procedures are conducted in accordance with established procedures     |
|                                                                   | <b>3.3</b> | Shift handover detail is relayed and confirmed according to established procedures                                                                                                                                  |
|                                                                   | <b>3.4</b> | Work completion records, reports, documentation and information is confirmed, processed and appropriate personnel notified                                                                                          |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRSO46A Monitor and control the field staff activities.

# Assessment Requirements for UETTDRSO46 Monitor and control the field staff activities

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all the following:
  - evaluating, responding to and reporting threats to systems operation/security
  - identifying and reporting abnormal conditions of the network
  - using relevant field permit to work systems
  - responding correctly to alarms
  - monitoring field work activities
  - communicating effectively in the workplace
  - operating communications equipment
  - interpreting technical drawings and symbols
  - following emergency response procedures
  - utilising relevant WHS/OHS legislation, regulations, codes of practice, policies and procedures
  - applying planning skills
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- personal computer operating systems encompassing:
  - basic function, components and concepts
  - operating systems in use
  - system installation and configuration
- transmission, distribution and rail systems encompassing:

- relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
- characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
- relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
- single line drawings and layouts - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements such as WHS/OHS and electrical safety
  - techniques in receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, if required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- implementation and monitoring requirements for the impact of powerline installations and operation on the environment and/or the area surrounding the powerline and/or equipment encompassing:
  - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of environmental impact factors in the workplace and areas of power distribution or transmission - Commonwealth/state/territory legislation relevant to the workplace and the Environment Protection Act legislation and common law
  - identification, assessment, control and monitoring of the hazards to the environment

associated with the powerline industry

- workplace environment quality standards enterprise plan - setting of acceptable emission level limits from power plant equipment, impact of the enterprise activities on air and water quality, nature, impact and level of emissions from power plant, power distribution and transmission equipment and network infrastructure (noise generation, noxious gas emissions, greenhouse gas production, electromagnetic emissions, electromagnetic field strength, oil leakage and insulation breakdown products)
- provision of manufacturer and supplier information, such as material safety data sheets (MSDS)
- gathering of environment management information
- maintenance of environmental records
- risk assessment and its management in powerline industry
- maintenance strategies for environment protection programs - developing processes for promoting, maintaining and improving environmental impact in the workplace; and identifying techniques for evaluating and reviewing environment protection education and training programs and elements of an effective environment protection management system; Environment Protection Authority (EPA) consultation and accident/incident investigations
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV
  - particular reference to state and territory regulations regarding - working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV system switching principles, including switching authorisation procedures encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, and safe approach distances (SAD)
  - responsibilities and protocols for identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, switching operational procedures, emergency fault procedures and energisation procedures
- low voltage (LV) system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings

- types and characteristics of LV systems and equipment to be switched
- procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
- techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers, and operating agreements
  - techniques in coordinating and directing HV and LV switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits; hazard/risk assessments, purpose and procedure for operational forms; access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc strangles
  - HV switchgear – types, categories, application and operating capabilities

- operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, airbreaks switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
- operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to LV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc strangles
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, airbreak switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing
  - LV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures

- rules and regulations
- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
- overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records, manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- effective management and communication encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to assisting in effective management and communication
  - enterprise operational principles - workplace WHS/OHS enterprise plan, environmental enterprise policies and procedures, industrial relations policies and procedures, and anti-discrimination policies and procedures
  - relationship between the management and employees - methods used to collate and distribute/disseminate information, responsibilities of each member of the work team, staff development activities and legislation requirements with regard to WHS/OHS training, methods of addressing barriers such as literacy and cultural differences, and provisions relating to WHS/OHS issue resolution
  - techniques associated with organisational policies and procedures related to human resources - relevant awards and certified agreements, legislation impacting on people management, and range of support services and expertise available
  - techniques in managing relationships - identifying problems; methods of conflict resolution; methods of consultation, communication, negotiation and mentoring; and strategies for positive feedback
  - techniques in leadership in achieving enterprise strategic and operational plans

- techniques in managing relationships under stress - stress management.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## AHCARB322 Access trees for inspection

### Modification History

| Release   | Comments                                                                                                                    |
|-----------|-----------------------------------------------------------------------------------------------------------------------------|
| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 5.0. |

### Application

This unit describes the skills and knowledge required to access trees for inspection. It does not describe the skills and knowledge required to access trees to conduct arboricultural work, tree pruning or removal.

The unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection, allocation and use of available resources and for solving problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Nil

### Unit Sector

Arboriculture (ARB)

### Elements and Performance Criteria

| Elements                                         | Performance Criteria                                                                                                                                                                                                                                                                                |

# Assessment Requirements for AHCARB322 Access trees for inspection

## Modification History

| Release   | Comments                                                                                                                    |
|-----------|-----------------------------------------------------------------------------------------------------------------------------|
| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 5.0. |

## Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has used climbing techniques to access at least 2 structurally different trees, including:

- confirmed access to site and scope of works
- identified workplace health, safety and environmental hazards and completed a job safety analysis (JSA) or safe work method statement (SWMS) for the site and activities
- confirmed availability of first aid and rescue personnel, equipment and procedures
- conducted pre-operational safety checks, on ropes, harnesses, tools and equipment
- selected and used personal protective equipment (PPE) and safety equipment during works
- inspected tree and discussed with work team to determine a safe and efficient access route
- selected and prepared climbing equipment for accessing tree
- ascended, navigated through and descended tree canopy using harness and lanyard and safe anchor points, following safe climbing techniques, including:
  - moving rope with prusik technique
  - trunk walking technique
  - use of foot ascenders
- tied, dressed, set and finished the following climbing knots and hitches, including:
  - alpine butterfly
  - blake's hitch
  - scaffold knot
  - double fisherman's bend/prusik loop
  - girth hitch
  - English prusik hitch
  - marlinspike hitch
  - munter hitch

- clove hitch
- double-overhand stopper knot
- bowline
- running bowline
- communicated with work team during operations using agreed communication procedures
- maintained safe clearances from power lines
- removed all access equipment in a controlled manner on descend from tree
- inspected, cleaned, maintained and stored climbing and personal protective equipment according to manufacturer instructions.

## Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- assessing and selecting different methods for climbing trees
- workplace health, safety, site, environmental and traffic control measures, including:
  - completing JSAs and SWMS for site-specific risks
  - purpose of first aid and rescue personnel, equipment and procedures
  - pre-operational and safety checks, on ropes, harnesses, tools and equipment
  - PPE used when climbing
- inspection, use and maintenance of arborist climbing equipment, including:
  - ropes and their characteristics
  - rope type, construction and materials
  - rope inspection and failure conditions
  - uses of climbing ropes
  - triple-locking carabiners
  - climbing hardware
- purpose, function, selection, tying, dressing, setting, checking and finishing of arborist knots used for climbing techniques
- safety when climbing trees, including:
  - safe working limits of ropes and equipment
  - defects in ropes, tools and equipment
  - climbing harnesses and lanyards
- hazards to avoid when climbing within the tree canopy, including:
  - safe distances from electrical power lines
  - tree structural defects
  - the presence of insects or other animals
  - deciding on low-risk access routes
- environmental impacts of tree access methods, including:
  - potential impact on tree of various climbing methods
  - impact on animal habitat or food source

- communications strategies used when climbing with a work team, including:
  - voice
  - hand
  - electronic communications
- climbing techniques using ropes and harnesses, including:
  - moving rope with prusik technique
  - trunk walking
  - foot ascenders
  - safe transitions between points of attachment
  - low-risk anchor points
  - controlled descent operations
- controlled removal of access equipment
- procedures for inspecting, cleaning, maintaining and storing climbing equipment.

## Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - two trees with different canopy structures as stipulated in the performance evidence
- resources, equipment and materials:
  - standard climbing kit
  - harness
  - arborist communications equipment
  - personal protective equipment
  - first aid and emergency response equipment
- specifications:
  - workplace and manufacturer instructions for safe operation, cleaning and storage of the equipment specified in the assessment conditions
- relationships:
  - work team.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards. In particular, assessors must have:

- arboriculture vocational competencies at least to the level being assessed
- current arboriculture industry skills directly relevant to the unit of competency being assessed.

# AHCCHM201 Apply chemicals under supervision

## Modification History

| Release   | Comments                                                                                                                    |
|-----------|-----------------------------------------------------------------------------------------------------------------------------|
| Release 2 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0. |
| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0. |

## Application

This unit of competency describes the skills and knowledge required to handle, transport, and apply chemicals under supervision using workplace specified chemicals and application equipment.

The unit applies to individuals working in a broad range of job contexts who undertake defined routine activities under supervision. They exercise limited autonomy within established and well-known parameters, providing solutions to a limited range of predictable problems.

State or territory licensing, legislative or certification requirements apply in some jurisdictions.

## Pre-requisite Unit

Nil

## Unit Sector

Chemicals (CHM)

## Elements and Performance Criteria

| Elements                                         | Performance Criteria                                                                                   |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------|
| <i>Elements describe the essential outcomes.</i> | <i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i> |
| 1. Prepare to handle chemicals                   | 1.1 Confirm the activity related to chemical handling to be undertaken with supervisor                 |

| Elements                                         | Performance Criteria                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## Assessment Requirements for AHCCHM201 Apply chemicals under supervision

### Modification History

| Release   | Comments                                                                                                                    |
|-----------|-----------------------------------------------------------------------------------------------------------------------------|
| Release 2 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0. |
| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0. |

### Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has on at least one occasion demonstrated that chemicals have been applied under supervision, ensuring they have:

- identified hazards and risks and adopted safe work practices and used appropriate personal protective equipment (PPE) according to supervisors' instructions
- confirmed activity with supervisor and identified and selected tools and equipment necessary for the application of chemical treatment
- carried out pre-operational checks of application equipment and made it ready for operation
- handled and transported chemicals to be used according to chemical labels and supervisors' instructions
- followed directions on chemical labels and relevant safety data sheets to safely mix and prepare chemicals
- selected appropriate measuring equipment and measured, mixed and loaded application equipment with chemicals safely and correctly
- ensured chemical spills were cleared according to chemical label instruction and supervisor instructions
- checked the application equipment for output against plan and applied chemical safely complying with weather conditions
- monitored and recorded weather and applied chemical appropriate to prevailing conditions
- maintained a healthy and safe condition for the environment and others while applying and following chemical application
- cleaned application equipment and PPE and disposed of waste according to equipment manufacturer instructions, chemical label and supervisor instructions
- complied with equipment manufacturer instructions, chemical label and supervisor instructions

- maintained chemical application records and incident reports according to workplace procedures
- stored protection equipment, application equipment and unused chemicals according to workplace procedures.

## Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- various handling and transport techniques and requirements for chemicals
- structure and content of chemical labels and safety data sheets and their use and purpose for safe chemical application
- principles and methods of measuring, mixing and applying chemicals
- features and functions of a range of application equipment relevant to the workplace their operations, and maintenance requirements
- risk factors to be taken into account for human and animal health, spillage and environmental impact relevant to chemical use before, during and following chemical application
- basic chemical groupings and types used in the workplace, including:
  - the mode of action
  - the impact on chemical safety
  - application methods
- paths of entry of poisons into the body and the methods of limiting exposure through practices and personal protective clothing
- maintenance practices for chemical application related equipment and PPE and disposal procedures for chemical contaminants and containers
- assessing weather conditions and the impact on safe application of chemicals
- components of a workplace chemical application plan
- chemical related records and reports and their purpose.

## Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a typical workplace environment or an environment that accurately represents workplace conditions
  - access to chemical store
- resources, equipment and materials:
  - common chemicals
  - PPE
  - chemical application equipment
  - chemical measuring and mixing equipment
- specifications:

- workplace documents, including work instructions and procedures
- chemical labels and safety data sheets
- chemical application plan and relevant chemical application rates
- manufacturers' operation and maintenance instructions for chemical measuring and application equipment
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0. |

### Application

This unit of competency describes the skills and knowledge required to safely operate a hand-held chainsaw and maintain it in working condition.

This unit applies to cross-cutting fallen timber using safe cutting techniques.

The unit applies to individuals who apply low risk work procedures and comply with worksite health and safety requirements when operating hand-held chainsaws to carry out routine work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Nil

### Unit Sector

Machinery operation and maintenance (MOM)

### Elements and Performance Criteria

| Elements                                         | Performance Criteria                                                                                                                                                    |

## Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

| Skill                      | Description                                                                                                                                                                                                                                                                     |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reading                    | <ul style="list-style-type: none"> <li>Interpret textual information from a range of sources to identify relevant and key information about workplace operations</li> </ul>                                                                                                     |
| Writing                    | <ul style="list-style-type: none"> <li>Document site health and safety in the workplace, environmental and traffic control measures</li> </ul>                                                                                                                                  |
| Oral communication         | <ul style="list-style-type: none"> <li>Use clear language to report hazards and risks and to confirm work site, first aid and emergency personnel, equipment and procedures</li> <li>Participate in verbal exchanges to respond to questions and clarify information</li> </ul> |
| Numeracy                   | <ul style="list-style-type: none"> <li>Calculate fuel oil ratios and fuel quantities</li> </ul>                                                                                                                                                                                 |
| Navigate the world of work | <ul style="list-style-type: none"> <li>Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility</li> </ul>                                                                                               |
| Interact with others       | <ul style="list-style-type: none"> <li>Use verbal and non-verbal communications with work team during operations using voice, hand and whistle signals</li> </ul>                                                                                                               |

## Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

|                                                                            |                                                                                                                                                                                                       |
|----------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Personal protective equipment must include:                                | <ul style="list-style-type: none"> <li>• safety helmet</li> <li>• mesh visor</li> <li>• gloves</li> <li>• hearing protection</li> <li>• safety glasses or goggles</li> <li>• safety boots.</li> </ul> |
| Routine checks and maintenance must include at least two of the following: | <ul style="list-style-type: none"> <li>• checking and adjusting bar</li> <li>• cleaning air filter</li> <li>• cleaning and/or replacing spark plug</li> <li>• sharpening chain.</li> </ul>            |
| Supports must include at least one of the following:                       | <ul style="list-style-type: none"> <li>• fallen timber</li> <li>• saw horse trestle</li> <li>• v-shaped supports.</li> </ul>                                                                          |
| Cutting methods must include:                                              | <ul style="list-style-type: none"> <li>• pulling chains cuts (bottom of bar)</li> <li>• pushing chainsaw cuts (top of bar)</li> <li>• bore / plunge cuts (tip of bar).</li> </ul>                     |
| Tools must include:                                                        | <ul style="list-style-type: none"> <li>• bars</li> <li>• chains</li> <li>• files</li> <li>• plug spanner.</li> </ul>                                                                                  |

| Release 2 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0. |
| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0. |

### Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has safely operated a hand-held chainsaw at least once, maintained it in working condition and demonstrated the following:

- determined site location for work and work details and clarified with supervisor
- identified site hazards, assessed risks and reported to supervisor
- confirmed work zone with work crew and monitored site
- confirmed first aid and emergency personnel, equipment and procedures
- applied hazard and risk assessment and implemented controls for chainsaw use
- performed routine checks and maintenance for chainsaw usage according to operation and maintenance manual
- identified, tagged and reported chainsaw faults and malfunctions
- recorded and implemented site health and safety in the workplace, environmental and traffic control measures
- used personal protective equipment that complies with Australian Standards
- safely cross-cut fallen timber using compression and tension cuts with a hand held chainsaw
- used appropriate tools and materials to maintain chainsaw
- applied environmentally responsible workplace practices
- applied low risk work practices including stopping, disengaging quickly and dealing with foreign matter
- cleaned and stored chainsaw
- followed workplace procedures relevant to safely operating a chainsaw.

## Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the principles and practice for operating chainsaws
- chainsaw routine checks and maintenance according to operation and maintenance manual, including:
  - checking and adjusting bar
  - cleaning air filter
  - cleaning and replacing spark plug
  - sharpening chain
- workplace safe operating procedures
- hazards and risks when operating a chainsaw
- relevant Australian Standards concerning chainsaw operation including use of personal protective equipment
- components of chainsaws and their respective functions
- common defects in woody materials
- cutting methods and techniques, patterns and sequence of cuts
- health and safety in the workplace requirements for the operation of a chainsaw including caution and hazard signs and symbols
- environmental impacts associated with operating chainsaws.

## Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - personal protective equipment must be worn whilst operating chainsaw
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
- resources, equipment and materials:
  - chainsaws
  - chainsaw tools
  - wood
  - safety equipment and personal protective equipment applicable to the task being undertaken
- specifications:
  - chainsaw manufacturer specifications and operator manuals
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

# AHCMOM304 Operate machinery and equipment

## Modification History

| Release   | Comments                                                                                                                    |
|-----------|-----------------------------------------------------------------------------------------------------------------------------|
| Release 2 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 3.0. |
| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0. |

## Application

This unit of competency describes the skills and knowledge required to prepare and operate machinery and equipment in a safe and controlled manner that is used principally in agriculture, horticulture, and conservation and land management work.

This unit does not apply to chainsaws, tractors, vehicles or earth moving equipment.

The unit applies to individuals who operate machinery and equipment under broad direction, and take responsibility for their own work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Nil

## Unit Sector

Machinery operation and maintenance (MOM)

## Elements and Performance Criteria

| <i>Elements describe the essential outcomes.</i> | <i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                                                  | <p>1.2 Source and interpret relevant machinery and equipment operation and maintenance manual and manufacturer instructions</p> <p>1.3 Assess the work site and confirm the suitability of the machinery and equipment for the task</p> <p>1.4 Select and maintain personnel protective equipment applicable to the machinery and equipment to be operated and the task to be undertaken</p> <p>1.5 Fit and use personal protective equipment according to workplace procedures and job requirements</p> <p>1.6 Conduct routine pre-operational checks as described in operation and maintenance manual</p> <p>1.7 Replace and report damaged or worn components in line with workplace reporting requirements</p> <p>1.8 Attach ancillary equipment and check for correct operation</p> |
| 2. Operate machinery and equipment               | <p>2.1 Operate machinery according to task requirements, conditions, operation and maintenance manual and manufacturer specifications</p> <p>2.2 Monitor machinery performance and efficiency and make adjustments</p> <p>2.3 Continually monitor hazards and risks, and ensure safety of self, other personnel, plant and equipment</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 3. Complete machinery and equipment operation    | <p>3.1 Conduct shut down of machinery according to workplace procedures</p> <p>3.2 Perform routine operational servicing and minor maintenance according to operation and maintenance manual</p> <p>3.3 Identify and report malfunctions, faults, irregular performance or damage according to workplace procedures</p> <p>3.4 Clean, secure and store machinery and equipment according to workplace procedures</p> <p>3.5 Maintain machinery and equipment use records in required format</p>                                                                                                                                                                                                                                                                                          |

## Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

| Skill                      | Description                                                                                                                                                                     |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reading                    | <ul style="list-style-type: none"><li>Interpret textual information from a range of sources to identify relevant and key information about workplace operations</li></ul>       |
| Writing                    | <ul style="list-style-type: none"><li>Document machinery and equipment use</li></ul>                                                                                            |
| Oral communication         | <ul style="list-style-type: none"><li>Use clear language to report malfunctions, faults, irregular performance or damage</li></ul>                                              |
| Numeracy                   | <ul style="list-style-type: none"><li>Calculate quantities of machinery fluids including oil and fuel</li></ul>                                                                 |
| Navigate the world of work | <ul style="list-style-type: none"><li>Recognise and follow workplace requirements, including safety requirements, associated with own role and area of responsibility</li></ul> |

## Range of Conditions

*This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.*

|                                                                     |                                                                                                                                                                                                                                   |
|---------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Machinery and equipment must include at least one of the following: | <ul style="list-style-type: none"><li>hydraulic equipment</li><li>stationary engines</li><li>spraying equipment</li><li>mulching and chipping equipment</li><li>powered trailers</li><li>three point linkage equipment.</li></ul> |
| Pre operational checks must include:                                | <ul style="list-style-type: none"><li>machinery and equipment damage and serviceability</li><li>engine oil</li><li>fuel</li><li>machinery and equipment controls</li><li>reporting and tagging defects.</li></ul>                 |

| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 1.0. |

## Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit. There must be evidence that the individual has operated agricultural or horticultural machinery and equipment at least once and has:

- identified and reported workplace hazards and implemented safe operating procedures
- carried out machinery and equipment pre-operational checks including basic servicing and maintenance according to operation and maintenance manual
- operated machinery and equipment in a safe and controlled manner consistent with task requirements, conditions, operation and maintenance manual and manufacturer specifications
- attached ancillary equipment and checked for correct operation
- carried out machinery shut down procedures
- recognised, reported and documented defects in equipment and machinery and operational capacity
- cleaned, secured and stored machinery and equipment.

## Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- hazards and risks associated with machinery and equipment operation
- pre-operational and safety checks for machinery and equipment according to operation and maintenance manual
- operating principles and operating methods for machinery and equipment
- procedures for cleaning, securing and storing machinery, equipment and materials
- risks associated with the operation of machinery and equipment in different weather conditions and difficult terrain conditions

- duty of care to self, others and the environment
- workplace procedures applicable to health and safety in the workplace requirements for operating machinery and equipment.

## Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
  - individual must not be under the influence of alcohol or drugs
  - individual must not be taking any medication (prescribed or otherwise) that may impair judgement
  - individual must not be in a fatigued state when operating machinery and equipment
- resources, equipment and materials:
  - a range of machinery and equipment
  - enclosed toe shoes
  - safety equipment and personal protective equipment applicable to the machinery and equipment being used and the task being undertaken
- specifications:
  - machinery and equipment operation and maintenance manuals
  - industry and workplace biosecurity procedures applicable to machinery and equipment operation
  - records must include details of the machinery and equipment that the individual was assessed on
- timeframes:
  - according to the job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

## AHCPCM204 Recognise plants

### Modification History

| Release   | Comments                                                                                                                    |
|-----------|-----------------------------------------------------------------------------------------------------------------------------|
| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0. |

### Application

This unit of competency describes the skills and knowledge required to recognise commonly encountered plants, including desired species and weeds, and to document and confirm plant identification.

The unit applies to individuals who recognise plants under general supervision with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Nil

### Unit Sector

Plant Culture and Management (PCM)

### Elements and Performance Criteria

| Elements                                         | Performance Criteria                                                                                                                                                                                                                                                                                   |

# Assessment Requirements for AHCPM204 Recognise plants

## Modification History

| Release   | Comments                                                                                                                    |
|-----------|-----------------------------------------------------------------------------------------------------------------------------|
| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0. |

## Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has recognised a range of plants from a range of plant families and classifications, including:

- annual
- biennial
- perennial
- evergreen and deciduous
- trees
- shrubs
- ground cover
- climbers
- monocot.

There must also be evidence that the individual has:

- applied workplace health and safety requirements applicable to recognising plants
- selected and prepared tools, equipment and materials for use in recognition activity
- located desirable and non-desirable plants requiring recognition
- recognised and described plant habits, characteristics and significant features
- used appropriate reference material to assist with plant recognition
- recorded information about identified plants.

## Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace requirements applicable to health and safety in the workplace for recognising plants
- principles and practices of plant recognition, including:
  - plant morphology and physiology as they relate to recognising plants

- plant nomenclature
- resources for obtaining information about plants
- plant recognition techniques.

## Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - plants
  - plant recognition resources and equipment
  - access to internet and field guide reference materials applicable to plant recognition
- specifications:
  - workplace requirements applicable to health and safety in the workplace for recognising plants
- relationships:
  - appropriate personnel and supervisor
- timeframes:
  - according to job requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

## AHCPCM205 Fell small trees

### Modification History

| Release   | Comments                                                                                                                    |
|-----------|-----------------------------------------------------------------------------------------------------------------------------|
| Release 1 | This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 6.0. |

### Application

This unit of competency describes the skills and knowledge required to prepare for tree felling, fell small trees and complete felling operations where hazards have been assessed as low risk.

The unit applies to individuals who apply low risk work procedures and comply with worksite health and safety requirements when felling trees under general supervision, with limited autonomy or accountability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

The prerequisite unit of competency for this unit is:

- AHCMOM213 Operate and maintain chainsaws.

### Unit Sector

Plant Culture and Management (PCM)

### Elements and Performance Criteria

| Elements                                         | Performance Criteria                                                                                                                                                                                                              |
