# **UET Transmission, Distribution and Rail Sector**

**Release: 3.0**

## CONTENTS

|                                                                                                                                               |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------|-----|
| UET20321 Certificate II in ESI - Powerline Vegetation Control .....                                                                           | 20  |
| UET20621 Certificate II in ESI - Asset Inspection and Testing .....                                                                           | 24  |
| UET20422 Certificate II in Transmission Line Construction.....                                                                                | 27  |
| UET30521 Certificate III in ESI - Transmission Overhead.....                                                                                  | 30  |
| UET30621 Certificate III in ESI - Distribution Overhead.....                                                                                  | 37  |
| UET30721 Certificate III in ESI - Rail Traction.....                                                                                          | 50  |
| UET30821 Certificate III in ESI - Distribution Underground .....                                                                              | 62  |
| UET30921 Certificate III in ESI - Very Remote Community Utilities .....                                                                       | 77  |
| UET40421 Certificate IV in ESI - Network Systems .....                                                                                        | 89  |
| UET40521 Certificate IV in ESI - Power Systems Substations .....                                                                              | 135 |
| UET40621 Certificate IV in ESI - Power Systems Network Infrastructure.....                                                                    | 166 |
| UET50221 Diploma of ESI - Power Systems .....                                                                                                 | 201 |
| UET50321 Diploma of ESI - Power Systems Operations .....                                                                                      | 235 |
| UET60221 Advanced Diploma of ESI - Power Systems .....                                                                                        | 269 |
| UETDRAI001 Inspect and test poles at and below ground level .....                                                                             | 318 |
| Assessment Requirements for UETDRAI001 Inspect and test poles at and below ground level.....                                                  | 322 |
| UETDRAI002 Inspect poles, hardware and electrical apparatus .....                                                                             | 325 |
| Assessment Requirements for UETDRAI002 Inspect poles, hardware and electrical apparatus .....                                                 | 328 |
| UETDRAI003 Perform minor maintenance on electricity network assets.....                                                                       | 331 |
| Assessment Requirements for UETDRAI003 Perform minor maintenance on electricity network assets .....                                          | 335 |
| UETDRAI004 Treat poles .....                                                                                                                  | 337 |
| Assessment Requirements for UETDRAI004 Treat poles.....                                                                                       | 340 |
| UETDRAI005 Use asset inspection equipment .....                                                                                               | 342 |
| Assessment Requirements for UETDRAI005 Use asset inspection equipment .....                                                                   | 345 |
| UETDRDO001 Inspect overhead poles, structures and electrical apparatus .....                                                                  | 347 |
| Assessment Requirements for UETDRDO001 Inspect overhead poles, structures and electrical apparatus.....                                       | 350 |
| UETDRDO002 Inspect, maintain and restore energised low voltage overhead distribution network infrastructure.....                              | 353 |
| Assessment Requirements for UETDRDO002 Inspect, maintain and restore energised low voltage overhead distribution network infrastructure ..... | 359 |
| UETDRDO003 Maintain energised high voltage distribution overhead electrical apparatus (glove and barrier).....                                | 365 |
| Assessment Requirements for UETDRDO003 Maintain energised high voltage distribution overhead electrical apparatus (glove and barrier) .....   | 369 |
| UETDRDO004 Maintain energised high voltage distribution overhead electrical apparatus (stick) .....                                           | 372 |
| Assessment Requirements for UETDRDO004 Maintain energised high voltage distribution overhead electrical apparatus (stick) .....               | 376 |
| UETDRDO005 Maintain overhead energised low voltage distribution network.....                                                                  | 379 |
| Assessment Requirements for UETDRDO005 Maintain overhead energised low voltage distribution network.....                                      | 383 |
| UETDRDO006 Maintain, test and verify distribution overhead network.....                                                                       | 386 |
| Assessment Requirements for UETDRDO006 Maintain, test and verify distribution overhead network .....                                          | 391 |
| UETDRDS001 Design customer power system substations .....                                                                                     | 394 |

|                                                                                                                                        |     |
|----------------------------------------------------------------------------------------------------------------------------------------|-----|
| Assessment Requirements for UETDRDS001 Design customer power system substations                                                        | 399 |
| UETDRDS002 Design overhead distribution power systems .....                                                                            | 403 |
| Assessment Requirements for UETDRDS002 Design overhead distribution power systems                                                      | 408 |
| UETDRDS003 Design power system distribution substations.....                                                                           | 415 |
| Assessment Requirements for UETDRDS003 Design power system distribution substations .....                                              | 420 |
| UETDRDS004 Design power system public lighting systems .....                                                                           | 426 |
| Assessment Requirements for UETDRDS004 Design power system public lighting systems                                                     | 431 |
| UETDRDS005 Design underground distribution power systems.....                                                                          | 436 |
| Assessment Requirements for UETDRDS005 Design underground distribution power systems .....                                             | 441 |
| UETDRDS006 Develop high voltage and low voltage distribution protection systems.....                                                   | 446 |
| Assessment Requirements for UETDRDS006 Develop high voltage and low voltage distribution protection systems.....                       | 451 |
| UETDRDS007 Develop planned power systems outage strategies.....                                                                        | 456 |
| Assessment Requirements for UETDRDS007 Develop planned power systems outage strategies .....                                           | 460 |
| UETDRDS008 Draft and layout a power system distribution substation minor upgrade                                                       | 466 |
| Assessment Requirements for UETDRDS008 Draft and layout a power system distribution substation minor upgrade .....                     | 471 |
| UETDRDS009 Draft and layout a power system overhead distribution extension .....                                                       | 476 |
| Assessment Requirements for UETDRDS009 Draft and layout a power system overhead distribution extension .....                           | 481 |
| UETDRDS010 Draft and layout a power system street lighting system .....                                                                | 486 |
| Assessment Requirements for UETDRDS010 Draft and layout a power system street lighting system.....                                     | 491 |
| UETDRDS011 Draft and layout a power system underground distribution extension ....                                                     | 498 |
| Assessment Requirements for UETDRDS011 Draft and layout a power system underground distribution extension.....                         | 503 |
| UETDRDS012 Investigate quality of power systems supply issues .....                                                                    | 507 |
| Assessment Requirements for UETDRDS012 Investigate quality of power systems supply issues.....                                         | 512 |
| UETDRDS013 Organise and implement ESI line and easement surveys.....                                                                   | 514 |
| Assessment Requirements for UETDRDS013 Organise and implement ESI line and easement surveys.....                                       | 519 |
| UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure.....                              | 522 |
| Assessment Requirements for UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure ..... | 526 |
| UETDRDU001 Conduct high voltage testing of underground power cable system .....                                                        | 535 |
| Assessment Requirements for UETDRDU001 Conduct high voltage testing of underground power cable system.....                             | 539 |
| UETDRDU002 Inspect underground electrical apparatus .....                                                                              | 542 |
| Assessment Requirements for UETDRDU002 Inspect underground electrical apparatus                                                        | 545 |
| UETDRDU003 Install and maintain gas and oil pressure systems for specialised underground cables .....                                  | 548 |
| Assessment Requirements for UETDRDU003 Install and maintain gas and oil pressure systems for specialised underground cables .....      | 553 |
| UETDRDU004 Install and maintain network infrastructure HV underground cables ....                                                      | 558 |
| Assessment Requirements for UETDRDU004 Install and maintain network infrastructure HV underground cables .....                         | 563 |
| UETDRDU005 Install and maintain network infrastructure LV underground cables.....                                                      | 567 |

|                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------|-----|
| Assessment Requirements for UETDRDU005 Install and maintain network infrastructure<br>LV underground cables .....                     | 572 |
| UETDRDU006 Install and maintain polymeric specialised underground cables .....                                                        | 578 |
| Assessment Requirements for UETDRDU006 Install and maintain polymeric specialised<br>underground cables .....                         | 583 |
| UETDRDU007 Install and maintain underground public lighting .....                                                                     | 587 |
| Assessment Requirements for UETDRDU007 Install and maintain underground public<br>lighting .....                                      | 592 |
| UETDRDU008 Install gas and oil filled specialised underground cables .....                                                            | 595 |
| Assessment Requirements for UETDRDU008 Install gas and oil filled specialised<br>underground cables .....                             | 600 |
| UETDRDU009 Install, test and verify distribution underground cable installations .....                                                | 604 |
| Assessment Requirements for UETDRDU009 Install, test and verify distribution<br>underground cable installations .....                 | 608 |
| UETDRDU010 Joint, terminate and maintain energised low voltage underground paper<br>insulated cable .....                             | 611 |
| Assessment Requirements for UETDRDU010 Joint, terminate and maintain energised low<br>voltage underground paper insulated cable ..... | 615 |
| UETDRDU011 Joint, terminate and maintain energised low voltage underground<br>polymeric cable .....                                   | 618 |
| Assessment Requirements for UETDRDU011 Joint, terminate and maintain energised low<br>voltage underground polymeric cable .....       | 622 |
| UETDRDU012 Joint, terminate and maintain high voltage underground paper insulated<br>cable .....                                      | 625 |
| Assessment Requirements for UETDRDU012 Joint, terminate and maintain high voltage<br>underground paper insulated cable .....          | 630 |
| UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable .....                                               | 634 |
| Assessment Requirements for UETDRDU013 Joint, terminate and maintain high voltage<br>underground polymeric cable .....                | 639 |
| UETDRDU014 Joint, terminate and maintain low voltage underground paper insulated<br>cable .....                                       | 642 |
| Assessment Requirements for UETDRDU014 Joint, terminate and maintain low voltage<br>underground paper insulated cable .....           | 647 |
| UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable .....                                                | 651 |
| Assessment Requirements for UETDRDU015 Joint, terminate and maintain low voltage<br>underground polymeric cable .....                 | 656 |
| UETDRDU016 Lay power cables .....                                                                                                     | 659 |
| Assessment Requirements for UETDRDU016 Lay power cables .....                                                                         | 663 |
| UETDRDU017 Locate faults in underground power cables .....                                                                            | 666 |
| Assessment Requirements for UETDRDU017 Locate faults in underground power cables .....                                                | 670 |
| UETDRDU018 Maintain gas and oil filled specialised underground cables .....                                                           | 673 |
| Assessment Requirements for UETDRDU018 Maintain gas and oil filled specialised<br>underground cables .....                            | 678 |
| UETDRDU019 Transition joint high voltage paper insulated cable to high voltage<br>polymeric cable .....                               | 681 |
| Assessment Requirements for UETDRDU019 Transition joint high voltage paper<br>insulated cable to high voltage polymeric cable .....   | 685 |
| UETDREL001 Apply environmental requirements .....                                                                                     | 688 |
| Assessment Requirements for UETDREL001 Apply environmental requirements .....                                                         | 691 |
| UETDREL002 Comply with environmental requirements .....                                                                               | 694 |
| Assessment Requirements for UETDREL002 Comply with environmental requirements .....                                                   | 697 |
| UETDREL003 Identify and apply controls for alternate supplies on the distribution<br>network .....                                    | 700 |

|                                                                                                                                                  |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Assessment Requirements for UETDREL003 Identify and apply controls for alternate supplies on the distribution network.....                       | 703 |
| UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus.....                                                         | 706 |
| Assessment Requirements for UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus .....                            | 709 |
| UETDREL005 Work safely in the vicinity of live electrical apparatus .....                                                                        | 712 |
| Assessment Requirements for UETDREL005 Work safely in the vicinity of live electrical apparatus .....                                            | 715 |
| UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker .....                                             | 718 |
| Assessment Requirements for UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker .....                 | 721 |
| UETDRIS001 Coordinate and direct power system switching schedules.....                                                                           | 724 |
| Assessment Requirements for UETDRIS001 Coordinate and direct power system switching schedules.....                                               | 730 |
| UETDRIS002 Coordinate power system permit procedures .....                                                                                       | 738 |
| Assessment Requirements for UETDRIS002 Coordinate power system permit procedures.....                                                            | 744 |
| UETDRIS003 Develop high voltage switching schedule.....                                                                                          | 751 |
| Assessment Requirements for UETDRIS003 Develop high voltage switching schedule .....                                                             | 757 |
| UETDRIS004 Develop low voltage switching schedule .....                                                                                          | 763 |
| Assessment Requirements for UETDRIS004 Develop low voltage switching schedule.....                                                               | 769 |
| UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures .....                            | 774 |
| Assessment Requirements for UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures..... | 778 |
| UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs.....                                  | 783 |
| Assessment Requirements for UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs .....     | 788 |
| UETDRIS007 Install and maintain distribution overhead conductors and cables.....                                                                 | 792 |
| Assessment Requirements for UETDRIS007 Install and maintain distribution overhead conductors and cables.....                                     | 796 |
| UETDRIS008 Install and maintain electrical apparatus.....                                                                                        | 799 |
| Assessment Requirements for UETDRIS008 Install and maintain electrical apparatus .....                                                           | 804 |
| UETDRIS009 Install and maintain ESI network infrastructure electrical equipment .....                                                            | 808 |
| Assessment Requirements for UETDRIS009 Install and maintain ESI network infrastructure electrical equipment .....                                | 813 |
| UETDRIS010 Install and maintain low voltage overhead services .....                                                                              | 819 |
| Assessment Requirements for UETDRIS010 Install and maintain low voltage overhead services .....                                                  | 823 |
| UETDRIS011 Install and maintain low voltage underground services .....                                                                           | 827 |
| Assessment Requirements for UETDRIS011 Install and maintain low voltage underground services .....                                               | 831 |
| UETDRIS012 Install and maintain poles, structures and hardware .....                                                                             | 834 |
| Assessment Requirements for UETDRIS012 Install and maintain poles, structures and hardware.....                                                  | 838 |
| UETDRIS013 Install and maintain public lighting systems.....                                                                                     | 841 |
| Assessment Requirements for UETDRIS013 Install and maintain public lighting systems.....                                                         | 846 |
| UETDRIS014 Install and replace energy meters and associated equipment .....                                                                      | 849 |
| Assessment Requirements for UETDRIS014 Install and replace energy meters and associated equipment.....                                           | 853 |
| UETDRIS015 Install low voltage mobile generator.....                                                                                             | 856 |
| Assessment Requirements for UETDRIS015 Install low voltage mobile generator .....                                                                | 859 |

|                                                                                                                                    |     |
|------------------------------------------------------------------------------------------------------------------------------------|-----|
| UETDRIS016 Install mobile generation set for synchronised HV Genset.....                                                           | 861 |
| Assessment Requirements for UETDRIS016 Install mobile generation set for synchronised HV Genset.....                               | 867 |
| UETDRIS017 Perform high voltage field switching operation to a given schedule.....                                                 | 870 |
| Assessment Requirements for UETDRIS017 Perform high voltage field switching operation to a given schedule.....                     | 874 |
| UETDRIS018 Perform low voltage field switching operation to a given schedule .....                                                 | 878 |
| Assessment Requirements for UETDRIS018 Perform low voltage field switching operation to a given schedule .....                     | 882 |
| UETDRIS019 Sample, test, filter and reinstate insulating oil.....                                                                  | 885 |
| Assessment Requirements for UETDRIS019 Sample, test, filter and reinstate insulating oil.....                                      | 889 |
| UETDRRC001 Install and maintain low voltage overhead services in a very remote community .....                                     | 895 |
| Assessment Requirements for UETDRRC001 Install and maintain low voltage overhead services in a very remote community .....         | 899 |
| UETDRRC002 Install and maintain low voltage underground services in a very remote community .....                                  | 903 |
| Assessment Requirements for UETDRRC002 Install and maintain low voltage underground services in a very remote community .....      | 907 |
| UETDRRC003 Install and maintain public lighting systems in a very remote community.....                                            | 911 |
| Assessment Requirements for UETDRRC003 Install and maintain public lighting systems in a very remote community .....               | 915 |
| UETDRRC004 Install and replace energy meters and associated equipment in a very remote community .....                             | 919 |
| Assessment Requirements for UETDRRC004 Install and replace energy meters and associated equipment in a very remote community ..... | 923 |
| UETDRRC005 Maintain, test and verify power systems in a very remote community ....                                                 | 927 |
| Assessment Requirements for UETDRRC005 Maintain, test and verify power systems in a very remote community.....                     | 933 |
| UETDRRC006 Perform low voltage electricity network switching in a very remote community .....                                      | 937 |
| Assessment Requirements for UETDRRC006 Perform low voltage electricity network switching in a very remote community .....          | 941 |
| UETDRRC007 Solve problems in electrical network apparatus in a very remote community .....                                         | 944 |
| Assessment Requirements for UETDRRC007 Solve problems in electrical network apparatus in a very remote community .....             | 948 |
| UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community .....                              | 954 |
| Assessment Requirements for UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community .....  | 958 |
| UETDRRF001 Perform cable pit/trench/excavation rescue .....                                                                        | 963 |
| Assessment Requirements for UETDRRF001 Perform cable pit/trench/excavation rescue.....                                             | 966 |
| UETDRRF002 Perform EWP rescue .....                                                                                                | 968 |
| Assessment Requirements for UETDRRF002 Perform EWP rescue.....                                                                     | 971 |
| UETDRRF003 Perform pole top rescue .....                                                                                           | 973 |
| Assessment Requirements for UETDRRF003 Perform pole top rescue .....                                                               | 976 |
| UETDRRF004 Perform rescue from a live LV panel.....                                                                                | 978 |
| Assessment Requirements for UETDRRF004 Perform rescue from a live LV panel .....                                                   | 981 |
| UETDRRF005 Perform rescue from switchyard structures at heights .....                                                              | 983 |
| Assessment Requirements for UETDRRF005 Perform rescue from switchyard structures at heights.....                                   | 986 |
| UETDRRF006 Perform tower rescue .....                                                                                              | 988 |

|                                                                                                                               |      |
|-------------------------------------------------------------------------------------------------------------------------------|------|
| Assessment Requirements for UETDRRF006 Perform tower rescue .....                                                             | 991  |
| UETDRRF007 Provide first aid in an ESI environment .....                                                                      | 993  |
| Assessment Requirements for UETDRRF007 Provide first aid in an ESI environment...                                             | 996  |
| UETDRRT001 Install overhead rail traction configurations .....                                                                | 998  |
| Assessment Requirements for UETDRRT001 Install overhead rail traction configurations                                          | 1002 |
| UETDRRT002 Install overhead traction components and equipment .....                                                           | 1004 |
| Assessment Requirements for UETDRRT002 Install overhead traction components and equipment .....                               | 1008 |
| UETDRRT003 Install rail traction bonds.....                                                                                   | 1013 |
| Assessment Requirements for UETDRRT003 Install rail traction bonds .....                                                      | 1017 |
| UETDRRT004 Install traction overhead wiring systems .....                                                                     | 1020 |
| Assessment Requirements for UETDRRT004 Install traction overhead wiring systems                                               | 1024 |
| UETDRRT005 Maintain energised d.c. traction overhead wiring system .....                                                      | 1028 |
| Assessment Requirements for UETDRRT005 Maintain energised d.c. traction overhead wiring system.....                           | 1033 |
| UETDRRT006 Maintain energised traction overhead electrical apparatus using glove techniques .....                             | 1039 |
| Assessment Requirements for UETDRRT006 Maintain energised traction overhead electrical apparatus using glove techniques ..... | 1045 |
| UETDRRT007 Maintain energised traction overhead electrical apparatus using stick techniques .....                             | 1052 |
| Assessment Requirements for UETDRRT007 Maintain energised traction overhead electrical apparatus using stick techniques ..... | 1058 |
| UETDRRT008 Maintain overhead rail traction configurations.....                                                                | 1064 |
| Assessment Requirements for UETDRRT008 Maintain overhead rail traction configurations.....                                    | 1068 |
| UETDRRT009 Maintain overhead traction components and equipment .....                                                          | 1070 |

# UET20321 Certificate II in ESI - Powerline Vegetation Control

## Modification History

Release 2. PUAWHS002 Maintain safety at an incident scene added to Group A electives.  
AHPCPM201 Recognise plants moved from Group B to Group A electives.

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) or the vegetation control industry as a Powerline Vegetation Control Worker.

This qualification covers vegetation control work at and above ground level in the vicinity of live electrical apparatus. It also includes complying with relevant legislation, applicable industry guidelines, codes of practices or other related requirements for safe work in the vicinity of live electrical apparatus.

The application of the skills and knowledge described within the units in this qualification may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **8 units** comprising:

- **5 core units** listed below; plus
- **2 elective units** from Group A listed below; plus
- **1 elective unit** from any group listed below within this qualification or, with appropriate contextualisation, from a qualification in this or any other endorsed Training Package, provided selected unit contributes to the vocational outcome of the qualification.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for the qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

### Core units

- AHCMOM213 Operate and maintain chainsaws
- UETDREL002 Comply with environmental requirements
- UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker
- UETDRVC001 Apply work health and safety requirements for powerline vegetation control
- UETDRVC009 Monitor vegetation control work in the vicinity of live electrical apparatus
- └ UETDREL002 Comply with environmental requirements
  - └ UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker
  - └ UETDRVC001 Apply work health and safety requirements for powerline vegetation control

## Group A

- AHCPCM204 Recognise plants
- UETDRVC002 Assess vegetation in an electricity supply industry environment
- └ UETDREL002 Comply with environmental requirements

# UET20621 Certificate II in ESI - Asset Inspection and Testing

## Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as an Asset Inspector.

This qualification covers inspecting, testing and reporting on the status of electricity network assets, including poles, hardware, cables, overhead conductors, public lighting and electrical apparatus. It also includes the use of specialised asset inspection equipment and software applications.

The application of the skills and knowledge described within the units in this qualification may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **8 units** of competency comprising:

- **6 core units** listed below; plus
- **2 elective units** from the elective units listed below, of which, 1 elective unit may be selected, with appropriate contextualisation, from a qualification in this or any other endorsed Training Package, provided the selected unit contributes to the vocational outcome of the qualification.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for the qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

# UET20422 Certificate II in Transmission Line Construction

## Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 3.0.

## Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a Transmission Line Construction Worker.

This qualification covers assembling transmission structures and installing hardware. It also includes stringing transmission overhead conductors prior to being tensioned and terminated.

The application of the skills and knowledge described within the units in this qualification may require a licence/registration to practice in the workplace.

High risk work (HRW) licences are required for dogging work and rigging as outlined on the Safe Work Australia website.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this qualification.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 10 units of competency comprising:

- 8 core units listed below; plus
- 2 elective units from the elective units listed below, of which, 1 elective unit may be selected, with appropriate contextualisation, from a qualification in this or any other endorsed Training Package, provided the selected unit contributes to the vocational outcome of the qualification.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for the qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

# UET30521 Certificate III in ESI - Transmission Overhead

## Modification History

Release 2. Updated superseded TLI elective units.

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as an Overhead Transmission Lineworker.

This qualification covers work on transmission overhead powerlines, including the installation, inspection and maintenance of towers, poles, structures, conductors and hardware.

The application of the skills and knowledge described within the units in this qualification may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **19 units** comprising:

- **17 core units** listed below; plus
- **2 electives units** from the elective units listed below, of which, 1 elective unit may be selected, with appropriate contextualisation, from a qualification in this or any other endorsed Training Package, provided the selected unit contributes to the vocational outcome of the qualification.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for the qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

## UET30621 Certificate III in ESI - Distribution Overhead

### Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as an Overhead Distribution Lineworker.

This qualification covers the installation, maintenance and inspection of poles, structures, hardware, electrical apparatus and the use of support plant, tools and equipment.

The application of the skills and knowledge described within the units in this qualification may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this qualification.

### Entry Requirements

There are no entry requirements for this qualification

### Packaging Rules

A total of **24 units** comprising:

- **20 core units** listed below; plus
- **4 elective units** from the elective units listed below, of which, 1 elective unit may be selected with appropriate contextualisation from a qualification in this or any other endorsed Training Package, provided the selected unit contributes to the vocational outcome of the qualification.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for the qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

#### Core units

AHCMOM213    Operate and maintain chainsaws

CPCCLDG3001    Licence to perform dogging

|            |                                                                                                                                                                                                                                                                                                                                                                                                      |

## UET30721 Certificate III in ESI - Rail Traction

### Modification History

Release 2. Updated superseded TLI elective units.

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Qualification Description

This qualification provides the skills and knowledge to work in the electrical supply industry (ESI) as a Rail Traction Lineworker.

This qualification covers the installation, maintenance and inspection of overhead poles/structures, conductors, cables and rail traction wiring systems, including associated equipment used in the rail traction industry. It also includes the maintenance of bonds and the operation of rail traction height access equipment.

The application of the skills and knowledge described within the units in this qualification may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this qualification.

### Entry Requirements

There are no entry requirements for this qualification

### Packaging Rules

A total of **28 units** of competency comprising:

- **26 core units** listed below; plus
- **2 elective units** from the elective units listed below, of which, 1 elective unit may be selected, with appropriate contextualisation, from a qualification in this or any other endorsed Training Package, provided the selected unit contributes to the vocational outcome of the qualification.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for the qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

#### Core units

AHCMOM213      Operate and maintain chainsaws

└ UETDREL005 Work safely in the vicinity of live electrical apparatus

## Qualification Mapping Information

This qualification replaces and is not equivalent to UET30719 Certificate III in ESI – Power Systems – Rail Traction

## Links

Companion Volume Implementation Guides are found in VETNet -

# UET30821 Certificate III in ESI - Distribution Underground

## Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a Distribution Underground Cable Jointer.

This qualification covers the installation and maintenance of low voltage (LV) and high voltage (HV) underground cables, services and electrical equipment.

The application of the skills and knowledge described within the units in this qualification may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **23 units** comprising:

- **18 core units** listed below; plus
- **5 elective units**

The elective units are to be chosen as follows:

- **3 elective units** selected from Group A listed below
- **2 elective units** may be selected from Group A or Group B elective units listed below, of which, 1 elective unit may be selected, with appropriate contextualisation, from a qualification in this or any other endorsed Training Package, provided the selected unit contributes to the vocational outcome of the qualification.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for the qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

## Core units

# UET30921 Certificate III in ESI - Very Remote Community Utilities

## Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Training Package Release 2.0.

## Qualification Description

This qualification provides the skill and knowledge to work on very remote community utility systems as a remote community utilities worker in the electricity supply industry (ESI).

The qualification covers the skills and knowledge to operate, monitor and maintain generation power systems, distribution electrical network circuits and apparatus, and specialisations in power and water systems.

### Combined Specialist – Power and Water Systems

This combined specialisation covers the skills and knowledge required to work on very remote community utility power and water systems.

### Specialist – Power Systems

This specialisation covers the skills and knowledge required to install, operate, monitor and maintain distribution overhead and underground networks and customer connections. It also includes the skills and knowledge required to monitor and maintain renewable energy systems.

### Specialist – Water Systems

This specialisation covers the skills and knowledge required to install, operate, monitor and maintain water systems.

All work on power systems will be undertaken on isolated assets other than for testing purposes.

The use of support plant and equipment to perform these tasks and environmental requirements also play a part in this qualification.

**Please note: RTO to insert on the testamur, the specialisation selected from the specialist elective unit group below.**

**Very Remote Communities:** means a community with restricted access and very little accessibility of goods, services and opportunities for social interaction. Supporting information on the classification of a very remote community can be defined using the latest version of Accessibility/Remoteness Index of Australia (ARIA) (excluding mine sites).

**Isolated:** Means disconnected from all possible sources of electricity supply by means that prevent unintentional energisation of the apparatus and that are assessed as a suitable step in the process of making safe for access purposes. That is for high voltage (HV) (short-circuited and earthed) and for low voltage (LV) (short-circuited to the neutral).

The application of the skills and knowledge described within the units in this qualification may

require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **24 units** comprising:

### Combined Specialisation - Power and Water Systems

- **17 core units** listed below, plus
- **7 elective units** from a combination of Group A and Group B below.

### Specialisation – Power Systems

- **17 core units** listed below, plus
- **7 elective units** from Group A listed below.

### Specialisation– Water Systems

- **17 core units** listed below, plus
- **7 elective units** from Group B listed below.

Up to 1 elective unit may be selected, with appropriate contextualisation, from a qualification in this or any endorsed Training Package, provided the selected unit contributes to the vocational outcome of the qualification.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for the qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊐ .

└ UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

└ UETDREL005 Work safely in the vicinity of live electrical apparatus

└ UETDRRC006 Perform low voltage electricity network switching in a very remote community

└ UETDRRC007 Solve problems in electrical network apparatus in a very remote community

└ UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community

### **Group B: Water Systems**

NWPCAD004 Maintain catchment and surrounding areas

NWPCAD019 Monitor and operate groundwater extraction

NWPGEN017 Apply the risk management principles of the water industry standards, guidelines and legislation

NWPGEN020 Sample and test source or drinking water

NWPGEN021 Sample and test wastewater

NWPGEN023 Use maps, plans, drawings and details

NWPGEN027 Monitor and operate pump stations

NWPNET020 Control electrical risk on metallic pipes

NWPNET036 Perform leak detection

NWPNET038 Install metering equipment

NWPNET039 Maintain and repair network assets for drinking water

NWPNET040 Maintain and repair network assets for wastewater

NWPTRT005 Monitor and operate water treatment processes

NWPTRT027 Monitor and operate wastewater treatment processes

## **Qualification Mapping Information**

This qualification replaces and is equivalent to UET30919 Certificate III in ESI - Remote Community Utilities Worker

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# UET40421 Certificate IV in ESI - Network Systems

## Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work on network systems in the electricity supply industry (ESI).

This qualification covers work on the network systems in the specific fields of live line transmission, live line distribution, live line rail traction and/or installation and maintenance of specialised underground cables. These roles may lead or supervise work teams and work in transmission, distribution, rail or cable jointing.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **1280 weighting points** comprising:

**540 core weighting points** listed below; **plus**

**740 general elective weighting points** from the general elective units listed below.

Choose a total of **740 weighting points** elective units from the list below, of which between 0 and 60 **weighting points** can be taken from Group A; between 0 and 420 **weighting points** can be taken from Group B; and between 320 and 740 **weighting points** taken from Group C. You may select all your electives from this group.

**Up to 60 weighting points of the general elective units Group A** may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified

are complied with.

| Core units  |                                                                                                                                                                                                                                                                                      | Weighting Points |
|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| CPCCLDG3001 | Licence to perform dogging                                                                                                                                                                                                                                                           | 20               |
| TLILIC0005  | Licence to operate a boom-type elevating work platform (boom length 11 metres or more)                                                                                                                                                                                               | 40               |

# UET40521 Certificate IV in ESI - Power Systems Substations

## Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work in power system substations in the electricity supply industry (ESI).

This qualification covers selecting, installing, setting up, testing, fault finding, repairing and maintaining electrical systems and equipment in buildings and premises. It also provides a career in installation and maintenance of substations, such as the maintenance of high voltage (HV) power system, including circuit breakers and transformers. It includes substation switching, inspection and diagnosing and rectifying faults. Options are available for skills to be obtained in high current direct current (d.c.) switchgear and equipment, installation of HV plant and equipment and/or the maintenance and commissioning of discrete protection and control systems.

It includes the Electrical Regulatory Authorities Council (ERAC) requirements for an 'Electrician's licence'. Competency development activities in this qualification are subject to regulations directly related to licensing.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **1280 weighting points** comprising:

**1030 core weighting points** listed below; **plus**

**250 general elective weighting points** from the general elective units listed below.

Choose a total of **250 weighting points** elective units from the list below, of which between 0 and 50 **weighting points** can be taken from Group A; between 0 and 120 **weighting points** can be taken from Group B; and between 130 and 250 **weighting points** taken from Group C. You may select all your electives from this group.

**Up to 50 weighting points of the general elective units Group A** may be selected, with

appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

| Core units  |                                                                                                                                                                                                                                                                                                                                                          | Weighting Points |

Conditions: Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian state or territory meet the requirements of this unit and its prerequisite requirements.

A 'licensed electrician' applying for an 'electrical contractors licence' may be required to undertake this unit to demonstrate their currency with verification of compliance requirements. In this case they are deemed to have met the prerequisites for this unit provided that: they hold a current 'electricians licence' or its equivalent issued in an Australian state or territory and have recently been in permanent employment as a licensed electrician sufficient to evidence current knowledge of applicable standards and regulations.

## Qualification Mapping Information

This qualification replaces and is equivalent to UET40519 Certificate IV in ESI - Power Systems Substations

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# UET40621 Certificate IV in ESI - Power Systems Network Infrastructure

## Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work on power system network infrastructure in the electricity supply industry (ESI).

This qualification covers the selection, installation, set up, testing, fault finding, repair and maintenance of electrical systems and equipment in buildings and premises. It includes skills and knowledge needed for a career in installation and maintenance of network infrastructure in the transmission, distribution or rail traction in the ESI.

It includes Electrical Regulatory Authorities Council (ERAC) requirements for an Electrician's licence. Competency development activities in this qualification are subject to regulations directly related to licensing.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **1280 weighting points** comprising:

**940 core weighting points** listed below; **plus**

**340 general elective weighting points** from the general elective units listed below.

Choose a total of **340 weighting points** elective units from the list below, of which between 0 and 50 **weighting points** can be taken from Group A; between 0 and 140 **weighting points** can be taken from Group B; and between 200 and 340 **weighting points** taken from Group C. You may select all your electives from this group.

**Up to 50 weighting points of the general elective units Group A** may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or

accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

| Core units  |                                                                                                                                                                                                                                                                                                                                                                    | Weighting Points |

Conditions: Those holding an 'Unrestricted Electrician's Licence' or equivalent issued in an Australian state or territory meet the requirements of this unit and its prerequisite requirements.

A 'licensed electrician' applying for an 'electrical contractor's licence' may be required to undertake this unit to demonstrate their currency with verification of compliance requirements. In this case they are deemed to have met the prerequisites for this unit provided that they hold a current 'electricians licence' or its equivalent issued in an Australian state or territory and have recently been in permanent employment as a licensed electrician sufficient to evidence current knowledge of applicable standards and regulations.

# UET50221 Diploma of ESI - Power Systems

## Modification History

Release 2. Updated superseded elective units.

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a High Voltage (HV) Substation Project Manager or a Senior Systems Operator (ESI) or a Power Systems Technical Officer.

This qualification covers overseeing the construction of electrical substations and related projects within the ESI. It also includes managing personnel, the business aspects of projects and giving specialist advice to deal with day-to-day issues and problems.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **1600 weighting points** comprising:

**700 core weighting points** listed below; **plus**

**900 general elective weighting points** from the general elective units listed below.

Choose a total of **900 weighting points** elective units from the list below, of which between 0 and 270 **weighting points** can be taken from Group A; between 0 and 400 **weighting points** can be taken from Group B; between 0 and 200 **weighting points** can be taken from Group C and between 140 and 900 **weighting points** taken from Group D. You may select all your electives from this group.

**Up to 270 weighting points of the general elective units Group A** may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed

weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

| <b>Core units</b>                                                                                                                                                                                                                                                 | <b>Weighting Points</b> |

|            | To minimise incidents related to safe systems of work, entry into this unit requires at a minimum that an individual has demonstrated or possesses relevant technical engineering discipline competencies of at least |     |

AQF level 3. It is intended that an individual will be expected to perform with a large degree of autonomy in decision-making, whilst in an individual environment.

This may include immediate response to protect human life, adverse effect on safety, security of supply or the integrity of the assets.

NOTE: Typically the following disciplines provide direct entry; electrical or instrumentation, fitting and turning or mechanical trade.

Where an individual does not possess or demonstrate the requisite entry requirement, an equivalent bridging program shall be used to ensure equivalence of entry.

## **Qualification Mapping Information**

This qualification replaces and is equivalent to UET50219 Diploma of ESI - Power Systems

## **Links**

# UET50321 Diploma of ESI - Power Systems Operations

## Modification History

Release 2. Updated superseded TLI elective unit.

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a Power Systems Technical Officer, a High Voltage (HV) Substation Project Manager or a Senior Systems Operator.

This qualification covers designing new overhead and underground powerline systems, overseeing the construction of electrical substations and related projects. These roles may also manage personnel, the business aspects of projects and give specialist advice to deal with day-to-day issues and problems.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **1600 weighting points** comprising:

**850 core weighting points** listed below; **plus**

**750 general elective weighting points** from the general elective units listed below.

Choose a total of **750 weighting points** elective units from the list below, of which between 0 and 270 **weighting points** can be taken from Group A; between 0 and 360 **weighting points** can be taken from Group B; between 0 and 200 **weighting points** can be taken from Group C and between 190 and 750 **weighting points** taken from Group D. You may select all your electives from this group.

**Up to 270 weighting points of the general elective units Group A** may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the

qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

| <b>Core units</b>                                                                                                                                                                                                                                           | <b>Weighting Points</b> |

## Pathway Unit Group 1

└ UETDRDS013 Organise and implement ESI line and easement surveys

└ UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

## Pathway Unit Group 2

└ UETDRDS006 Develop high voltage and low voltage distribution protection systems

UETDRDS003    Design power system distribution substations                      140

## Common Unit Group

└ UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

└ UEENEEE102A Fabricate, assemble and dismantle utilities industry components

└ UEENEEE104A Solve problems in d.c. circuits

└ UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

└ UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

└ UEENEEE126A Provide solutions to basic engineering computational problems

└ UEENEEG101A Solve problems in electromagnetic devices and related circuits

└ UEENEEG102A Solve problems in low voltage a.c. circuits

└ UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

└ UETDREL001 Apply environmental requirements

└ UETDREL005 Work safely in the vicinity of live electrical apparatus

└ UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

└ UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Pathway Unit Group 1

└ UETDRDS013 Organise and implement ESI line and

easement surveys

└ UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

Pathway Unit Group 2

└ UETDRDS006 Develop high voltage and low voltage distribution protection systems

UETDRDS004 Design power system public lighting systems 140

Common Unit Group

└ UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

└ UEENEEE102A Fabricate, assemble and dismantle utilities industry components

└ UEENEEE104A Solve problems in d.c. circuits

└ UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

└ UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

└ UEENEEE126A Provide solutions to basic engineering computational problems

└ UEENEEG101A Solve problems in electromagnetic devices and related circuits

└ UEENEEG102A Solve problems in low voltage a.c. circuits

└ UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

└ UETDREL001 Apply environmental requirements

└ UETDREL005 Work safely in the vicinity of live electrical apparatus

└ UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

└ UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Pathway Unit Group 1

└ UETDRDS013 Organise and implement ESI line and easement surveys

└ UETDRDS014 Prepare and manage detailed

construction plans for electrical power system infrastructure

#### Pathway Unit Group 2

└ UETDRDS006 Develop high voltage and low voltage distribution protection systems

UETDRDS005 Design underground distribution power systems 140

#### Common Unit Group

### Common Unit Group

- └ UEENEED104A Use engineering applications software on personal computers
  - └ UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace
  - └ UEENEEE102A Fabricate, assemble and dismantle utilities industry components
  - └ UEENEEE104A Solve problems in d.c. circuits
  - └ UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications
  - └ UEENEEE124A Compile and produce an energy sector detailed report
  - └ UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits
  - └ UEENEEE126A Provide solutions to basic engineering computational problems
  - └ UEENEEG101A Solve problems in electromagnetic devices and related circuits
  - └ UEENEEG102A Solve problems in low voltage a.c. circuits
  - └ UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits
  - └ UETDREL001 Apply environmental requirements
  - └ UETDREL005 Work safely in the vicinity of live electrical apparatus
  - └ UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures
  - └ UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs
- ### Distribution and Sub-transmission Pathway Unit Group
- └ UETDRSO001 Coordinate high voltage distribution and sub-transmission networks
  - └ UETDRSO005 Develop high voltage distribution and sub-transmission switching programs
- ### Transmission Pathway Unit Group
- └ UETDRSO002 Coordinate high voltage transmission network

# UET60221 Advanced Diploma of ESI - Power Systems

## Modification History

Release 1. This is the first release of this qualification in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Qualification Description

This qualification provides the skills and knowledge to work in the electricity supply industry (ESI) as a Power System Senior Technical Officer or a Power Distribution System Engineer.

This qualification covers high-level managerial, design, testing and system operation functions in the transmission and distribution sectors of the ESI. These roles may also install, commission, maintain, diagnose and repair the hardware and software of complex power system protection, control and metering systems.

The skills and knowledge described within the units in this qualification may require a licence or permit to practice in the workplace.

Additional and/or other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing the qualification.

## Entry Requirements

There are no entry requirements for this qualification

## Packaging Rules

A total of **2160 weighting points** comprising:

**820 core weighting points** listed below; **plus**

**1340 general elective weighting points** from the general elective units listed below.

Choose a total of **1340 weighting points** elective units from the list below, of which between 0 and 360 **weighting points** can be taken from Group A; between 0 and 400 **weighting points** can be taken from Group B; between 0 and 200 **weighting points** can be taken from Group C, between 140 and 900 **weighting points** can be taken from Group D and between 440 and 1200 **weighting points** taken from Group E.

**Up to 360 weighting points of the general elective units Group A** may be selected, with appropriate contextualisation, from any relevant nationally endorsed Training Package or accredited course, provided selected units contribute to the vocational outcome of the qualification. Previously assigned weighting points are listed in UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide, if not listed weighting points will be 10 points.

Where imported units are selected, care must be taken to ensure all prerequisite units specified are complied with.

| Core units                                                                                                                                                                                          | Weighting Points |

sector detailed report

└ UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

└ UEENEEE126A Provide solutions to basic engineering computational problems

└ UEENEEG101A Solve problems in electromagnetic devices and related circuits

└ UEENEEG102A Solve problems in low voltage a.c. circuits

└ UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

└ UETDREL001 Apply environmental requirements

└ UETDREL005 Work safely in the vicinity of live electrical apparatus

└ UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

└ UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Distribution and Sub-transmission Pathway Unit Group

└ UETDRSO001 Coordinate high voltage distribution and sub-transmission networks

└ UETDRSO005 Develop high voltage distribution and sub-transmission switching programs

Transmission Pathway Unit Group

└ UETDRSO002 Coordinate high voltage transmission network

└ UETDRSO004 Develop and evaluate power systems transmission switching programs

| UETTDRSO46 | Monitor and control the field staff activities<br>To minimise incidents related to safe systems of work, entry into this unit requires at a minimum that an individual has demonstrated or possesses relevant technical engineering discipline competencies of at least AQF level 3. It is intended that an individual will be expected to perform with a large degree of autonomy in decision-making, whilst in an individual environment.<br>This may include immediate response to protect human life, adverse effect on safety, security of supply or the integrity of the assets.<br>NOTE: Typically the following disciplines provide direct entry; electrical or instrumentation, fitting and turning or mechanical trade.<br>Where an individual does not possess or demonstrate the requisite entry requirement, an equivalent bridging program shall be used to ensure equivalence of entry. | 150 |

# UETDRAI001 Inspect and test poles at and below ground level

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to inspect and test poles at and below ground level in the electricity supply industry (ESI).

It includes testing poles using invasive or non-invasive methods utilising plant, asset inspection tools and equipment. It also includes analysing and recording testing results.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace and

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker or

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Asset Inspection

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Prepare to inspect and test pole

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for work to be performed are referred to and confirmed
- 1.2 Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3 Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4 Hazards are identified, risks assessed and control measures identified and applied
- 1.5 Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.6 Liaison and communication with stakeholders is carried out in accordance with workplace requirements
- 1.7 Work permit/approval is organised in accordance with workplace requirements
- 1.8 Worksite is prepared in accordance with the work plan and workplace requirements
- 1.9 Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### 2 Carry out inspection and testing of pole

- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2 Lifting, the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Pole is visually inspected at and below ground level in accordance with the work plan and workplace requirements

- |                                          |            |                                                                                                                                     |
|------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------|
|                                          | <b>2.5</b> | Test equipment is set up and used in accordance with manufacturer's instructions and workplace requirements                         |
|                                          | <b>2.6</b> | Test results are analysed and recorded in accordance with workplace requirements                                                    |
|                                          | <b>2.7</b> | Pole is labelled or marked to indicate its condition in accordance with workplace requirements                                      |
|                                          | <b>2.8</b> | Incidents or unplanned events are responded to in accordance with workplace requirements                                            |
| <b>3 Complete work and documentation</b> | <b>3.1</b> | Completed work is checked for compliance against the work plan and workplace requirements                                           |
|                                          | <b>3.2</b> | Incidents or unplanned events are reported in accordance with workplace requirements                                                |
|                                          | <b>3.3</b> | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                                          |
|                                          | <b>3.4</b> | Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements                   |
|                                          | <b>3.5</b> | Work permits are signed off, if applicable, in accordance with workplace requirements                                               |
|                                          | <b>3.6</b> | Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to UETTDREL18 Inspect and treat poles and inspect electrical apparatus.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRAI001 Inspect and test poles at and below ground level

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - manual handling
  - hazardous materials/substances
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- using plant, tools and equipment safely
- visually inspecting poles
- testing poles using at least two (2) of the following methods:
  - sounding
  - drilling
  - resistance
  - ultrasonic/acoustic
  - radiography
  - stress wave
  - dynamic (vibration)
  - mechanical
  - electromagnetic field
- using software applications or workplace documents for:
  - accessing and verifying existing data
  - capturing or recording data
  - analysing and recording results
- indicating pole condition by labelling/markings
- dealing with an unplanned event on at least one (1) occasion
- organising relevant work permits/approvals

- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - manual handling
  - hazardous materials/substances
  - visual inspection requirements
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits/approvals
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- poles, including:
  - types
  - characteristics
  - types of defects
- electricity network construction types
- pole testing methods and procedures
- test equipment, including:
  - types
  - selection
  - operation and characteristics
  - calibration
  - handling
  - maintenance
  - storage
- procedures for interpretation and recording of results
- pole marking/labelling requirements
- reporting requirements
- software applications and/or data capturing documentation.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used to inspect and test poles at and below ground level
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRAI002 Inspect poles, hardware and electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to inspect poles, hardware and electrical apparatus in the electricity supply industry (ESI).

It includes visual inspection of poles above ground, overhead conductors and/or cables, underground and overhead transition points, pole-mounted transformers, switchgear, hardware and/or earthing systems.

It also includes identifying and reporting defects.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

## Competency Field

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential      Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Prepare to inspect poles, hardware and electrical apparatus**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Plant, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.6** Liaison and communication with stakeholders is carried out in accordance with workplace requirements
- 1.7** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.8** Traffic management plan is confirmed as being in place in accordance with workplace requirements

**2 Inspect poles, hardware and electrical apparatus**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Working at heights and the use of plant, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Poles, hardware and electrical apparatus are visually inspected in accordance with the work plan and workplace requirements
- 2.5** Pole, hardware and electrical apparatus inspection results are recorded
- 2.6** Incidents or unplanned events are responded to in accordance with workplace requirements

**3 Complete work and documentation**

- 3.1** Completed work is checked for compliance against the work plan and workplace requirements
- 3.2** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4** Plant and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5** Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

**Unit Mapping Information**

This is a new unit. No equivalent unit.

**Links**

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRAI002 Inspect poles, hardware and electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and industry and workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- visually inspecting poles, hardware and electrical apparatus
- identifying pole, hardware and electrical apparatus defects
- using software applications or workplace documents for:
  - accessing and verifying existing data
  - capturing or recording data
  - categorising and recording defects
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - visual inspection requirements
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant and equipment

- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- poles, including:
  - types
  - characteristics
  - defects
- hardware, including:
  - types
  - characteristics
  - defects
- electrical apparatus, including:
  - types
  - characteristics
  - defects
- electricity networks, including:
  - construction types
  - identification of low voltage (LV)
  - identification of high voltage (HV)
  - clearances for overhead conductors, cables and structures
  - vegetation clearance profiles
- identification and categorisation of defects
- procedures for recording inspection results
- software applications and/or data capturing documentation.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for inspecting poles, hardware and electrical apparatus
- applicable documentation, including workplace requirements, relevant industry standards,

equipment specifications, regulations, codes of practice and operation manuals.

# UETDRAI003 Perform minor maintenance on electricity network assets

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to perform minor maintenance on electricity network assets in the electricity supply industry (ESI).

It includes signage/labels, cover plates/guards/strips, minor vegetation control and completing workplace documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

## Competency Field

Asset Inspection

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                                          | 2.6 Incidents or unplanned events are responded to in accordance with workplace requirements                                            |
|                                          | 2.7 Quality checks of work are undertaken in accordance with work plan and workplace requirements                                       |
| <b>3 Complete work and documentation</b> | 3.1 Completed work is checked for compliance against the work plan and workplace requirements                                           |
|                                          | 3.2 Incidents or unplanned events are reported in accordance with workplace requirements                                                |
|                                          | 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                                          |
|                                          | 3.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements                          |
|                                          | 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements                                  |
|                                          | 3.7 Work permits are signed off, if applicable, in accordance with workplace requirements                                               |
|                                          | 3.8 Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDREL20 Undertake minor vegetation control and routine minor maintenance of poles and electrical apparatus.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRAI003 Perform minor maintenance on electricity network assets

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- performing minor vegetation control
- performing minor maintenance on electricity network assets
- organising relevant work permits/approvals
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice, and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - records, reports and documentation procedures
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of work permits/approvals
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident

- minor vegetation control procedures
- types and procedures for minor maintenance on electricity network assets.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used to perform minor maintenance on electricity network assets
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

## UETDRAI004 Treat poles

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit involves the skills and knowledge required to treat poles in the electricity supply industry (ESI).

It includes the types, handling and usage, transporting, storing and disposing of pole treatment applications.

It also includes environmental requirements and the completion of work documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

### Competency Field

Asset Inspection

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This is a new unit. No Equivalent Unit.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRAI004 Treat poles

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - environmental requirements
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- applying treatment applications to at least two (2) of the following pole types:
  - wood
  - steel
  - concrete
  - composite
- handling, transporting, storing and disposing of treatment applications
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice, and organisational workplace requirements, including:
  - WHS/OHS
  - environmental
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident

- procedures for work records, reports and documentation
- treatment applications, including:
  - types and characteristics
  - safe handling and application
  - storage
  - transport
  - disposal.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used to treat poles
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

## UETDRAI005 Use asset inspection equipment

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit involves the skills and knowledge required to use asset inspection equipment in the electricity supply industry (ESI).

It includes selecting and using asset inspection equipment to identify the condition of above ground overhead assets.

It also includes interpreting and recording information from asset inspection equipment.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UETDREL002 Comply with environmental requirements

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

### Competency Field

Asset Inspection

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

# Assessment Requirements for UETDRAI005 Use asset inspection equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- selecting, inspecting, using and storing asset inspection equipment
- interpreting and recording inspection results
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice, and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - working safely with asset inspection equipment
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- asset inspection equipment, including:
  - types

- selection
- operation and characteristics
- calibration
- handling
- maintenance
- storage
- procedures for interpretation and recording of results.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate tools, equipment and PPE currently used for asset inspection
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice, operator manuals and manufacturer manuals.

# UETDRDO001 Inspect overhead poles, structures and electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to inspect overhead poles, structures and electrical apparatus in the electricity supply industry (ESI).

It includes visual inspection of poles and structures above ground, overhead conductors and cables, underground to overhead transition points, electrical apparatus, hardware and earthing systems.

It also includes identifying and reporting defects.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Distribution Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to inspect overhead poles, structures, and electrical apparatus**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.6** Liaison and communication with stakeholders is carried out in accordance with workplace requirements
- 1.7** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.8** Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### **2 Inspect overhead poles, structures and electrical apparatus**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Poles, structures and electrical apparatus are visually inspected in accordance with the work plan and workplace requirements
- 2.5** Inspection results are recorded in accordance with

workplace requirements

- |                                          |                                                                                                                       |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>3 Complete work and documentation</b> | <b>2.6</b> Incidents or unplanned events are responded to in accordance with workplace requirements                   |
|                                          | <b>3.1</b> Completed work is checked for compliance against the work plan and workplace requirements                  |
|                                          | <b>3.2</b> Incidents or unplanned events are reported in accordance with workplace requirements                       |
|                                          | <b>3.3</b> Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                 |
|                                          | <b>3.4</b> Plant and equipment are cleaned, checked and returned to storage in accordance with workplace requirements |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDP11 Inspect overhead poles-structures and electrical apparatus.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDO001 Inspect overhead poles, structures and electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- visually inspecting poles, structures and electrical apparatus
- identifying, categorising and recording defects
- undertaking inspections using at least one (1) of the following:
  - ground
  - vehicle
  - helicopter
  - fixed wing
  - remotely piloted aircraft (RPA)
  - elevated work platform (EWP)
  - ladder
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - visual inspection requirements

- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- poles, including:
  - types
  - characteristics
  - defects
- hardware, including:
  - types
  - characteristics
  - defects
- electrical apparatus, including:
  - types
  - characteristics
  - defects
- electricity networks, including:
  - construction types
  - identification of low voltage (LV)
  - identification of high voltage (HV)
  - clearances for overhead conductors, cables and structures
- identification and categorisation of defects
- procedures for recording inspection results.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for inspecting overhead poles, structures and electrical apparatus

- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDO002 Inspect, maintain and restore energised low voltage overhead distribution network infrastructure**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the inspection of overhead structures, such as poles and/or other structures other than towers, and the maintenance of overhead energised low voltage (LV) conductors and cables. It includes the conducting of LV switching operations involving the operation of circuit breaking and isolation devices from a given switching schedule in accordance with enterprise procedures. It covers LV distribution systems in field situations but also includes paralleling in accordance with the switching schedule.

It also includes inspection of electrical apparatus, such as overhead conductors and/or cables, underground and overhead transition points, electrical equipment, such as pole-mounted transformers, switchgear, hardware and/or earthing systems. It encompasses the completion of inspection reports and other relevant documentation in accordance with requirements.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRIS009 Install and maintain ESI network infrastructure electrical equipment

UETTDRI67 Solve problems in energy supply network equipment

## Competency Field

Distribution Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Prepare for the inspection, maintenance and restoration of overhead distribution network**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection

## infrastructure

- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.3** Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the inspection of overhead structures and electrical apparatus used on poles and/or structures, the maintenance of overhead energised LV conductors and cables and LV switching, are obtained and confirmed for the purposes of the work to be performed and communicated
- 1.4** Physical loads and calculations are confirmed according to requirements using essential knowledge and appropriate skill
- 1.5** Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
- 1.6** Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear according to established procedures
- 1.7** Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
- 1.8** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
- 1.9** Specialist equipment for live work is inspected and confirmed in working order in accordance with requirements and established procedures
- 1.10** Relevant personnel at worksite are confirmed current in first aid, pole top rescue and other related work procedures according to requirements
- 1.11** Liaison and communication issues with other/authorised personnel, authorities, clients and landowners are resolved to carry out work where necessary

- 1.12 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.13 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures
- 1.14 Traffic management plan is identified and implemented
- 2 Carry out inspection, maintenance and restoration of overhead distribution network infrastructure
  - 2.1 WHS/OHS, sustainable energy and environmental principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures
  - 2.2 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed, and currency according to requirements is confirmed
  - 2.3 Essential knowledge and associated skills are applied in the safe maintenance and restoration of overhead distribution network infrastructure to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
  - 2.4 Inspection of overhead structures and electrical apparatus used on poles and/or structures is carried out in accordance with the work schedule and requirements/established procedures
  - 2.5 Maintenance, including repair and/or replacement of poles and/or structures, is carried out in accordance with the work schedule and requirements/established procedures
  - 2.6 Communications with Switching Control Officer are established and maintained throughout the isolation operation according to established procedures
  - 2.7 Electrical equipment and associated circuits line/network or worksite to be switched, including paralleling, is isolated and proved de-energised using appropriate devices and earthed, where required, according to requirements and established procedures
  - 2.8 Hazard warnings and safety signs are recognised and

hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures

**2.9** Unplanned events during the inspection, maintenance or switching procedures are undertaken within the scope of established procedures

**2.10** Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills

**2.11** Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures

**3 Complete the inspection, maintenance and restoration of overhead distribution network infrastructure**

**3.1** Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures

**3.2** Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable

**3.3** Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures

**3.4** Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage or disposed of in accordance with established procedures

**3.5** Relevant work permits are signed off and overhead structures and electrical apparatus used on poles and/or structures are returned to service in accordance with requirements

**3.6** Work completion records, reports, as installed/modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDP15 Inspect, maintain and restore energised low voltage overhead distribution network infrastructure.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDO002 Inspect, maintain and restore energised low voltage overhead distribution network infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- inspecting three (3) of the following overhead structures and electrical apparatus:
  - poles and structures
  - overhead conductors/cables
  - underground/overhead transition points
  - electrical equipment
  - hardware
  - earthing systems
- conducting inspections using at least one (1) of the following:
  - ground
  - vehicle
  - helicopter
  - fixed wing
- using at least two (2) of the following inspection techniques:
  - visual\*
  - infra-red camera
  - X-ray
  - camera
  - (\*must do)
- maintaining at least two (2) of the following overhead energised low voltage (LV) conductors and cables:
  - copper
  - aluminium

- aluminium steel
- steel
- pilot
- using at least two (2) of the following access equipment:
  - elevated work platform (EWP)
  - ladder
  - portable platform
- using all of the following live LV working equipment:
  - insulating mats/sleeves
  - temporary bridging device
  - insulating gloves
  - insulated cable tensioning devices
  - ladder/pole shrouds
  - equipotential bonding
- using at least three (3) of the following testing and recording devices:
  - voltage detector\*
  - clamp-on ammeter
  - polarity tester
  - insulation resistance tester
  - phase sequence indicator
  - recording meters
  - (\*must do)
- performing LV switching to a given schedule and incorporating all of the following:
  - approvals/clearances
  - access authority/permits
- incorporating two (2) of the following:
  - voltage detectors
  - polarities testers
  - phase rotation indicators
- operating at least one (1) of the following switchgear types:
  - LV links
  - LV bridges
  - LV fuses
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- powerline safety practices encompassing:

- protective apparatus and apparel for linework:
  - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel
  - types of protective apparatus and apparel used for the line worker
- requirements for the use of ladders:
  - carrying, erecting, collapsing and lowering different types of extension ladders against a standing pole
  - maintenance checks on different types of ladders
  - renewal of extension ropes
  - safety issues relating to clearances from overhead conductors
- requirements for climbing and working aloft:
  - methods used to identify a pole is safe to climb
  - methods used to inspect a line worker's body belt
  - application of knots and hitches appropriate to the requirements of a line worker
  - height safety principles, including personal fall protection, prevention and related requirements
  - practical procedures of climbing an overhead structure and fitting a pole chair
- traffic management:
  - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry requirements
  - procedures used to provide an effective traffic management scheme and the use of a two-way radio
- control of small fires:
  - identification, selection and operation of the appropriate extinguishing mediums for various types of fires
  - general fire prevention methods
  - precautions for personal protection when fighting small fires
- rescue victims from heights and confined spaces:
  - planning, identifying and establishing procedures and responses
  - developing techniques
  - involvement of external emergency services
  - emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework:
  - planning, establishing and implementing relevant aviation authority clearances
  - determining system requirements
  - aircrew familiarisation with network operations and equipment
  - requirements for effective communications operations for aerial work
- LV - energised LV equipment working practices for substations encompassing:
  - standards, codes, Commonwealth, state/territory/local government legislation, supply authority regulations and/or enterprise requirements

- safety precautions specific to working on or near energised LV conductors:
  - safe working practices and procedures
  - identification of hazards
  - assessment and control of WHS/OHS risks
  - types, selection, maintenance and use of personal protective equipment (PPE)
- work on or near energised LV conductors:
  - types and function of specialised tools
  - safe working practices when using specialised tools
  - methods of using specialised tools
  - safe procedures for work on panels and in cubicles on or near energised LV conductors
  - release and rescue procedures for work on or near exposed energised LV conductors
- poles and structures inspection principles encompassing:
  - standards, codes, legislation, supply authority regulations and or enterprise requirements
  - characteristics of wood used for structures within the electrical distribution system:
    - relationship between timber and water
    - faults that occur that influence the integrity of the structure
    - effects of fungal activity, termite and borer activity and dry rot
  - chemical treatment principles:
    - types of chemical used to treat timber
    - regulations and procedures in handling and transporting chemicals safely
    - application procedures of chemicals to wood
  - deterioration prevention techniques:
    - relationship between steel, concrete and wood
    - inspection procedures for deterioration
    - deterioration prevention procedures in steel, concrete and wood
    - procedures for the repair of deterioration in steel, concrete and wood
- powerline inspection principles encompassing:
  - standards, codes, legislation, supply authority regulations and or enterprise requirements
  - ground line inspection procedures of electrical distribution structures:
    - requirements for pole inspection on electrical distribution structures
    - use of specific equipment and testing devices during testing/inspection
    - methods of recording data
  - overhead line inspection procedures of electrical distribution structures:
    - methods and requirements for overhead line inspection on electrical distribution structures
    - clearances for overhead conductors, cables and structures
    - use of specific equipment and testing devices during testing/inspection
    - methods of recording data
  - underground cable inspection procedures in the electrical distribution system:

- state/territory industry policy and regulations
- methods and requirements for line inspection on underground cable terminations
- installation of switchgear and associated equipment encompassing:
  - types and function of various switchgear:
    - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches and circuit breakers
    - operating characteristics, advantages and disadvantages of different types of switchgear
    - installation procedures, earthing requirements and techniques
  - types of equipment:
    - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements
    - assembly and erecting procedures
    - earthing requirements and techniques
    - pole mounted locations
  - maintenance procedures for switchgear and equipment:
    - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
  - testing and commissioning:
    - ESI standards and procedures
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings:
    - types, characteristics and capabilities of electrical apparatus
    - use, characteristics and capabilities of specialised tools and testing equipment
    - LV network interconnectors source of possible backfeed
  - LV switching techniques:
    - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures, earthing procedures
  - PPE for LV switching.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

## UETDRDO003 Maintain energised high voltage distribution overhead electrical apparatus (glove and barrier)

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit involves the skills and knowledge required to install and maintain energised high voltage (HV) overhead electrical apparatus using glove and barrier in the electricity supply industry (ESI).

It includes gaining network access approval, verifying site conditions and potential hazards, calculating physical loads and selecting appropriate work techniques.

It also includes preparing, using and maintaining specialised insulated tools and equipment.

*This unit is subject to the following requirements for entry:*

- *Certificate III in ESI - Distribution Overhead - powerline worker qualification or equivalent.*

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

Not applicable, refer to unit application.

### Competency Field

Distribution Overhead

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Plan to maintain energised HV distribution overhead electrical apparatus (glove and barrier)**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Loads/forces are calculated in accordance with workplace requirements
- 1.5** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.6** Hazards are identified, risks assessed and control measures identified and applied
- 1.7** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.8** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.9** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.10** Work permit/approval is organised in accordance with workplace requirements
- 1.11** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.12** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.13** Traffic management plan is confirmed as being in place in accordance with workplace requirements

**2 Carry out maintenance of energised HV distribution overhead electrical apparatus (glove and barrier)**

- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2 Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Work permit/approval is obtained to commence the work in accordance with workplace requirements
- 2.5 Safety observer is positioned to observe the work in accordance with workplace requirements
- 2.6 Communication methods between workers and safety observer are used in accordance with workplace requirements
- 2.7 Safe approach distances are maintained when the work is being performed
- 2.8 Energised HV distribution overhead electrical apparatus is installed and maintained in accordance with the work plan and workplace requirements
- 2.9 Work permit/approval is cancelled or relinquished in accordance with workplace requirements
- 2.10 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.11 Quality checks of work are undertaken in accordance with work plan and workplace requirements

**3 Complete work and documentation**

- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace

requirements

- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDP14 Maintain energised HV distribution overhead electrical apparatus (glove).

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# **Assessment Requirements for UETDRDO003 Maintain energised high voltage distribution overhead electrical apparatus (glove and barrier)**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- installing/replacing all of the following:
  - structure
  - cross-arm
  - strain insulator
  - pin insulator
  - connecting bridge/bonding connections
- installing/maintaining at least four (4) of the following:
  - pole mounted reclosers
  - air brake switches
  - high voltage (HV) links/disconnects
  - temporary HV links/HV fuses
  - expulsion drop-out fuses
  - lightning arrestors
  - conductors
  - vibration dampers, line splices, armour rods or aircraft warning markers
- working from an approved elevated work platform (EWP)
- using at least one (1) of the following testing and recording devices:
  - amp meter

- insulation test equipment
- leakage detector
- voltage detector
- dealing with an unplanned event on at least one (1) occasion
- organising, issuing, cancelling or relinquishing relevant work permits/approvals in accordance with workplace requirements
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice, and organisational workplace requirements, including:
  - WHS/OHS
  - live work up to and including 33 kV HV glove and barrier principles, techniques and procedures
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of work permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety precautions for HV live distribution glove and barrier work, including:
  - minimum approach distances/safe approach distances
  - effects of excessive conductor temperature on insulating equipment
  - types and application of PPE
  - integrity of insulation
  - emergency response, first aid and rescue
  - disabling auto-reclose function
  - network access and communication
- definition of terms for HV live work glove and barrier method
- mobile plant, including:
  - types
  - care and maintenance
  - frequency of testing
  - earthing
- insulated barriers, sticks, tools and equipment, including:
  - types, construction and characteristics
  - application
  - care and maintenance

- frequency of testing
- gloves and sleeves, including:
  - types, construction and characteristics
  - application
  - care and maintenance
  - frequency of testing
- operational use of plant, sticks, tools and equipment, including:
  - conductor support
  - selecting conductor support method
  - calculation of loads
  - effects of secondary loadings/forces
  - effects of resultant forces
  - conductor support rigging procedures
- safety observer:
  - role and responsibilities
  - communication methods.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry to maintain energised HV distribution overhead electrical apparatus (glove and barrier)
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

## UETDRDO004 Maintain energised high voltage distribution overhead electrical apparatus (stick)

### Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

### Application

This unit involves the skills and knowledge required to install and maintain energised high voltage (HV) distribution overhead electrical apparatus using stick method in the electricity supply industry (ESI).

It includes gaining network access approval, verifying site conditions and potential hazards, calculating physical loads and selecting appropriate work techniques.

It also includes preparing, using and maintaining specialised insulated tools and equipment.

*This unit is subject to the following requirements for entry:*

- *Certificate III in ESI - Distribution Overhead - powerline worker qualification or equivalent.*

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

### Pre-requisite Unit

Not applicable, refer to unit application.

### Competency Field

Distribution Overhead

### Unit Sector

Not applicable.

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Plan to maintain energised HV distribution overhead electrical apparatus (stick)**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Loads/forces are calculated in accordance with workplace requirements
- 1.5** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.6** Hazards are identified, risks assessed and control measures identified and applied
- 1.7** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.8** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.9** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.10** Work permit/approval is organised in accordance with workplace requirements
- 1.11** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.12** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.13** Traffic management plan is confirmed as being in place in accordance with workplace requirements

**2 Carry out maintenance of energised HV distribution**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to

**overhead electrical  
apparatus (stick)**

be performed are applied and monitored

- 2.2 Lifting, climbing, working at heights and the use of plant tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Work permit/approval is obtained to commence the work in accordance with workplace requirements
- 2.5 Safety observer is positioned to observe the work in accordance with workplace requirements
- 2.6 Communication methods between workers and safety observer are used in accordance with workplace requirements
- 2.7 Safe approach distances are maintained when the work is being performed
- 2.8 Energised HV overhead electrical apparatus is installed and maintained in accordance with work plan and workplace requirements
- 2.9 Work permit/approval is cancelled or relinquished in accordance with workplace requirements
- 2.10 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.11 Quality checks of work are undertaken in accordance with work plan and workplace requirements

**3 Complete work and  
documentation**

- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of

in accordance with workplace requirements

- 3.6** Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDP13 Maintain energised HV distribution overhead electrical apparatus (stick).

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDO004 Maintain energised high voltage distribution overhead electrical apparatus (stick)

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- installing/replacing all of the following:
  - structure
  - cross-arm
  - strain insulator
  - pin insulator
  - connecting bridge/bonding connections
- installing/maintaining at least two (2) of the following:
  - pole mounted reclosers
  - air brake switches
  - high voltage (HV) links/disconnects
  - temporary HV links/HV fuses
  - expulsion drop-out fuses
  - lightning arrestors
  - vibration dampers, line splices, armour rods or aircraft warning markers
- working from at least two (2) of the following:
  - elevated work platform (EWP)
  - ladder
  - pole platform
  - structure
- using at least one (1) of the following testing and recording devices:

- amp meter
- insulation test equipment
- leakage detector
- voltage detector
- dealing with an unplanned event on at least one (1) occasion
- organising, issuing, cancelling or relinquishing relevant work permits/approvals in accordance with workplace requirements
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - live work up to and including 66 kV HV stick principles, techniques and procedures
- hazard, risk assessment and risk control requirements, including potential hazards
- safe use of plant, tools and equipment
- application, purpose and types of work permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety precautions for HV live distribution stick work, including:
  - minimum approach distances/safe approach distances
  - effects of excessive conductor temperature on insulating equipment
  - types and application of PPE
  - integrity of insulation
  - emergency response, first aid and rescue
  - disabling auto-reclose function
  - network access and communication
- definition of terms for HV live work stick method
- mobile plant, including:
  - types
  - care and maintenance
  - frequency of testing
  - earthing
- insulated sticks, tools and equipment, including:
  - types, construction and characteristics
  - application
  - care and maintenance

- frequency of testing
- operational use of plant, sticks, tools and equipment, including:
  - conductor support
  - selecting conductor support method
  - calculation of loads
  - effects of secondary loadings/forces
  - effects of resultant forces
  - conductor support rigging procedures
- safety observer:
  - role and responsibilities
  - communication methods.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry to maintain energised HV distribution overhead electrical apparatus (stick)
- applicable documentation, including workplace requirements, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDO005 Maintain overhead energised low voltage distribution network**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to maintain overhead energised low voltage (LV) distribution network in the electricity supply industry (ESI).

It includes maintaining cables and conductors, replacing poles and hardware, using specialised equipment, undertaking electrical tests and completing documentation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

## **Competency Field**

Distribution Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to maintain overhead energised LV distribution network**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Resources, including plant, equipment, tools and PPE, required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.7** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.8** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.9** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.10** Worksite is prepared in accordance with the work plan and workplace requirements

- |                                                                              |             |                                                                                                                                                         |

|                                                                              | <b>2.4</b>  | Safety observer is positioned to observe the work in accordance with workplace requirements                                                             |
|                                                                              | <b>2.5</b>  | Communication methods between workers and safety observer are used in accordance with workplace requirements                                            |
|                                                                              | <b>2.6</b>  | Safe approach distances are maintained when the work is being performed                                                                                 |
|                                                                              | <b>2.7</b>  | Overhead energised LV conductors and cables are maintained in accordance with workplace requirements                                                    |
|                                                                              | <b>2.8</b>  | Overhead LV structure is maintained in accordance with workplace requirements                                                                           |
|                                                                              | <b>2.9</b>  | Incidents or unplanned events are responded to in accordance with workplace requirements                                                                |
|                                                                              | <b>2.10</b> | Quality checks of work are undertaken in accordance with work plan and workplace requirements                                                           |
| <b>3 Complete work and documentation</b>                                     | <b>3.1</b>  | Completed work is checked for compliance against the work plan and workplace requirements                                                               |
|                                                                              | <b>3.2</b>  | Incidents or unplanned events are reported in accordance with workplace requirements                                                                    |
|                                                                              | <b>3.3</b>  | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                                                              |
|                                                                              | <b>3.4</b>  | Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements                                       |

- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDP12 Maintain overhead energised low voltage conductors and cables.

## Links

# Assessment Requirements for UETDRDO005 Maintain overhead energised low voltage distribution network

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- repairing and joining energised overhead low voltage (LV) conductors and cables
- connecting and terminating conductors and cables in accordance with workplace requirements
- completing at least four (4) of the following energised LV tasks:
  - replacing strain cross arm\*
  - replacing intermediate cross arm
  - conversion from intermediate to strain, or strain to intermediate
  - replacing pole
  - replacing insulator
  - installing/replacing bridge/tap
  - replacing LV isolators/links/disconnector/s
  - (\*must do)
- working on energised LV from at least two (2) of the following:
  - elevated work platform (EWP)
  - ladder
  - portable platform
- using at least four (4) of the following specialised energised LV equipment:
  - insulating mats/sleeves
  - temporary bridging device
  - insulating gloves

- tensioning devices
- pole shrouds
- performing at least two (2) of the following LV tests:
  - polarity and loop impedance
  - phasing
  - neutral identification
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safe work practices and procedures for working on or near energised LV
- insulating gloves, including:
  - types, construction and characteristics
  - application
  - care and maintenance
  - testing
- specialised tools and equipment, including:
  - types, construction and characteristics
  - application
  - care and maintenance
  - testing
- conductor support:
  - selecting conductor support method
  - calculation of loads
  - effects of secondary loadings/forces
- safety observer:
  - role and responsibilities
  - communication methods.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for maintaining overhead energised LV distribution networks
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDO006 Maintain, test and verify distribution overhead network

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit consolidates critical knowledge and skills developed throughout the term of the qualification to maintain, test and verify distribution overhead network installations in the electricity supply industry (ESI).

It includes maintaining energised low voltage (LV) distribution overhead network installations.

It also includes testing and verifying network circuits, electrical apparatus and customer connections for compliance with the work plan and workplace requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDRDO001 Inspect overhead poles, structures and electrical apparatus

UETDRDO005 Maintain overhead energised low voltage distribution network

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS008 Install and maintain electrical apparatus

UETDRIS010 Install and maintain low voltage overhead services

UETDRIS012 Install and maintain poles, structures and hardware

## Competency Field

Distribution Overhead

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to maintain, test and verify overhead distribution network**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Safe approach distances for the work are determined and confirmed in accordance with the work plan and workplace requirements
- 1.7** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.8** Communication method between the workers and safety observer is determined and confirmed in accordance

- with workplace requirements
- 1.9** Work permits are received and signed in accordance with workplace requirements
  - 1.10** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
  - 1.11** Equipment for testing and verification is determined, inspected, confirmed in working order and calibrated in accordance with workplace requirements
  - 1.12** Worksite is prepared in accordance with the work plan and workplace requirements
  - 1.13** Traffic management plan is confirmed as being in place in accordance with workplace requirements
- 2 Carry out maintenance of overhead distribution network**
- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
  - 2.3** Hazard control measures are monitored in accordance with workplace requirements
  - 2.4** Safety observer in position to observe the work in accordance with workplace requirements
  - 2.5** Safe approach distances are maintained when the work is being performed
  - 2.6** Communication method between workers and safety observer is used in accordance with workplace requirements
  - 2.7** Overhead energised LV structure is maintained in accordance with workplace requirements
  - 2.8** Overhead electrical apparatus is maintained in accordance with workplace requirements
  - 2.9** Incidents or unplanned events are responded to in accordance with workplace requirements
- 3 Test and verify overhead distribution network**
- 3.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to

be performed are applied and monitored

- 3.2 Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 3.3 Hazard control measures are monitored in accordance with workplace requirements
- 3.4 Safety observer is positioned to observe the work in accordance with workplace requirements
- 3.5 Safe approach distances are maintained when the work is being performed
- 3.6 Communication method between workers and safety observer is used in accordance with workplace requirements
- 3.7 Overhead distribution network installations are tested for compliance in accordance with workplace requirements
- 3.8 Overhead distribution network installations are inspected for compliance in accordance with workplace requirements
- 3.9 Inspection and test results are recorded in accordance with workplace requirements
- 3.10 Incidents or unplanned events are responded to in accordance with workplace requirements

#### **4 Complete work and documentation**

- 4.1 Incidents or unplanned events are reported in accordance with workplace requirements, as required
- 4.2 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 4.3 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 4.4 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 4.5 Work permits are signed off in accordance with workplace requirements
- 4.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDP99 Test and verify distribution overhead installations.

## Links

# Assessment Requirements for UETDRDO006 Maintain, test and verify distribution overhead network

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant plant, tools, equipment and personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- selecting, inspecting and using specialised tools and equipment
- maintaining energised low voltage (LV) distribution overhead network installations including at least one (1) of the following:
  - strain cross arm replacement
  - intermediate cross arm replacement
  - conversion from intermediate to strain
- testing electrical apparatus, including:
  - insulation resistance
  - earth resistance
  - voltage
- testing network circuit including at least three (3) of the following:
  - phasing\*
  - neutral identification
  - phase rotation
  - loop impedance
  - voltage
  - current
  - earthing systems
  - (\*must do)

- testing consumer/customer connections including at least five (5) of the following:
  - neutral integrity\*
  - polarity\*
  - voltage
  - current
  - phase rotation
  - insulation resistance
  - neutral identification
  - loop impedance
  - earth resistance
  - (\*must do)
- inspecting overhead distribution network installation for compliance
- recording test results in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - network circuit testing
  - electrical apparatus testing
  - customer/consumer connection testing
  - maintenance procedures for energised LV overhead distribution network
  - capture and record test results
  - work records, reports and documentation
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and specialised equipment
- application, purpose and types of work permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for maintaining, testing and verifying distribution overhead network
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS001 Design customer power system substations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the design of basic primary and secondary plant within a customer substation. Such designs will usually include relay-operated high voltage (HV) switchgear, distribution transformers, low voltage (LV) switchgear, including customer distribution boards. The design may include minor civil engineering aspects and must conform to relevant Australian Standards, safety regulations, environmental standards and customer requirements taking into account costs as an important criterion.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

### Pathway Unit Group 1

UEENEEE104A Solve problems in d.c. circuits

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDRDS013 Organise and implement ESI line and easement surveys

UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

Pathway Unit Group 2

UEENEEE104A Solve problems in d.c. circuits

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDRDS006 Develop high voltage and low voltage distribution protection systems

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for and coordinate the design of customer substations**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the design of customer substations, are reviewed and determined
- 1.2** Purpose of the design is established and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the design are obtained or established with appropriate personnel

- 1.4 Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures
  - 1.5 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
  - 1.6 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.7 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.8 Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.9 Liaison and communication issues with other/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 2 Carry out and coordinate the design of customer substations**
- 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Substation design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical models of the customer substation are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures

- |                                                                     |     |                                                                                                                                                                                                                                                                      |
|---------------------------------------------------------------------|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                     | 2.5 | Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures |
|                                                                     | 2.6 | Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements                                                |
|                                                                     | 2.7 | Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements                                                                                                                     |
|                                                                     | 2.8 | Quality of work is monitored against personal performance agreement and/or established organisational and professional standards                                                                                                                                     |
| <b>3 Complete and coordinate the design of customer substations</b> | 3.1 | Final inspections of the design are undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the design brief                                                                                    |
|                                                                     | 3.2 | Appropriate personnel are notified of completion and reports and/or completion documents are finalised                                                                                                                                                               |
|                                                                     | 3.3 | Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval                                                                                                           |
|                                                                     | 3.4 | Approved copies of design documents are issued and records are updated in accordance with established procedures                                                                                                                                                     |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS50 Design customer power system substations.

## Links

# Assessment Requirements for UETDRDS001 Design customer power system substations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) designs in total drawn from at least two (2) of the following project types:
  - single transformer substations
  - multi-transformer substations
  - upgrade/alteration to existing assets
  - auto-changeover systems
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- substations and power transformers encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of high voltage (HV) equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers, operation under load/no-load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, testing and fault-finding procedures
  - characteristics of reactors - description and purpose
- installation of metering and control equipment encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment

- types of meters - kilowatt-hour meters, single and polyphase, demand meters, recording meters and electronic recording metering system summators
- installation and removal methods - direct connection and plug in method, and enterprise specific
- types of associated equipment and accessories - meter boards, service fuse, links, contactors, time switch and audio frequency injection relay
- testing procedures - safety and polarity testing
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
  - HV underground switching equipment - arc strangles, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- feeder automation system encompassing:
  - function of feeder automation system and the main components
  - operation procedure for a remote field device from a local control station
  - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
  - SCADA system security interlocks and access restrictions
  - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
  - function of the main components of a local/remote control system
  - operation of a field devices using SCADA systems via a RAT, dial up annunciated system and local control station
- layout principles for a distribution substation minor upgrade encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to a distribution substation minor upgrade
  - requirements for the use of distribution substation minor upgrade construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists - components types and quantity required, spacing of components and equipment, and costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length

- resources needed for the laying of conductors, cables and equipment
- determining the appropriate installation sequence
- minimum clearances between conductors and equipment
- estimation of the duration of underground distribution extension project
- fundamentals of distribution transformers encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the safe operation and testing of distribution transformers and auxiliary equipment
  - drawing layouts, conventions and symbols - vector group of transformers and three phase transformers
  - construction of a distribution transformer
  - characteristics when operated under load and no-load conditions
  - percentage impedance determinations by test and calculation
  - function and operation of tap charging switches, including solid state tap changing equipment
  - function and operation of transformer auxiliary equipment
  - problems caused by harmonics in transformers
  - methods and equipment used to overcome harmonics in transformers
- testing procedures of distribution transformers encompassing:
  - safety precautions specific to the testing of distribution transformers
  - procedures for safely connecting distribution transformers for testing
  - testing of distribution transformers to determine losses
  - calculation of transformer efficiency
  - methods and types of equipment used to cool transformers - properties of transformer oil and tests performed on transformer oil
  - techniques in performing selected tests on transformer oil
  - techniques in performing testing procedures on armer
  - techniques in testing distribution transformers
  - distribution transformer parallel connections - conditions and restrictions for parallel operations and calculations of loading on transformers operating in parallel
  - connection of transformer in parallel to supply a common load.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry to design customer substations
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS002 Design overhead distribution power systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the technical design of overhead distribution and sub-transmission networks to relevant standards, including electrical clearances, electrical and mechanical loadings, earthing, environmental considerations, minor civil aspects and the handling of waterway, railway and other crossings. It also includes the necessary established procedures to ensure the line design conforms to specific organisational technical standards, operational and system planning requirements, and incorporates the principles of safe design.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Pathway Unit Group 1

UETDRDS013 Organise and implement ESI line and easement surveys

UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

Pathway Unit Group 2

UETDRDS006 Develop high voltage and low voltage distribution protection systems

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for and coordinate the safe design of overhead distribution systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the design of overhead distribution systems, are reviewed and determined
- 1.2** Purpose of the design is established and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures, policies and specifications for the design are obtained or established with appropriate personnel
- 1.4** Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures

- 1.5 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
  - 1.6 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.7 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.8 Resources, including personnel, equipment, tools and PPE required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 2 Carry out and coordinate the safe design of overhead distribution systems**
- 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical models of the distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate

- authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.6** Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7** Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.8** Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 3 Complete and coordinate the safe design of overhead distribution systems**
- 3.1** Final inspections of the design are undertaken to ensure they comply with all requirements and include all specifications and documentation needed to complete the design brief
- 3.2** Appropriate personnel are notified of completion and reports and/or completion documents are finalised
- 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4** Approved copies of design documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS35 Design overhead distribution power systems.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDS002 Design overhead distribution power systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) compliant technical designs of an overhead distribution or sub-transmission system with at least one relating to each of the following project types:
  - multi-pole extensions
  - in-line pole relocations
  - multi-circuit overhead lines
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematical techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications:
    - application of velocity, acceleration, force, density, torque and pressure
  - application of the International System of Units (SI) units

- the relationship between work, power and energy
- behaviour of object under force:
  - using a block and tackle under load
  - concept of mechanical advantage
  - determination of resultant forces and determining the sag in a catenary conductor and the force applied at each end
- fundamentals of the basic laws of fluid mechanics
- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications:
    - properties of tensile strength
    - effects of temperature on the expansion of metals
    - ductility, malleability, work hardening and annealing and the conditions that lead to corrosion and the properties of timbers
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
    - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors:
    - types of low voltage (LV) and high voltage (HV) overhead electrical conductor connections
    - causes and effects of poor electrical connections
    - reasons for and methods used to maintain standard phase sequencing
    - removing, repairing and replacing of damage conductors
    - minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation:
    - types and application of tools, equipment and hardware
    - methods of stringing, tensioning and termination of LV and HV conductors
- installation of poles and/or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
    - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware:
    - types of installation equipment/tools
    - excavation methods

- types of footings/foundations, types of attachments
- earthing systems
- clearances between conductors
- safe methods of erecting and stabling poles and/or structures and cross-arms
- techniques for maintenance of poles and associated hardware:
  - stabilisation techniques for unstable poles
  - methods of strengthen poles
  - maintenance and replacement of HV insulators and cross-arms
- installation of metering and control equipment encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment
  - types of meters:
    - kilowatt-hour meters single and polyphase
    - demand meters, recording meters and electronic recording metering systems summators
  - installation and removal methods:
    - direct connection and plug in method
    - enterprise specific
  - types of associated equipment and accessories:
    - meter boards, service fuse, links, contactors, time switch and audio frequency injection relay
  - testing procedures:
    - safety testing
    - polarity testing
- different types and function of distribution components encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - types, function and characteristics of distribution components
  - safety policies and procedures precautions related to the handling and installing of distribution components
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV systems
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components

- circuit arrangement
- principle of operation
- hazards and procedures associated with faulty SWER earth systems
- procedure to isolate, energise and commission SWER substations
- power distribution network documentation encompassing:
  - requirements for the use of manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - types and application of power distribution network documentation drawings and documents:
    - wiring and schematic diagrams
    - drawings and switching symbols
    - mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different diagrams and documentation on LV and HV systems:
    - overhead distribution extensions
    - underground distribution extensions
    - distribution substations
    - street lighting systems
- layout principles for overhead distribution encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to overhead distribution layout
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - resources needed for the stringing and maintenance of conductors
  - types of LV and HV overhead electrical conductor connections
  - minimum clearances between overhead conductors and LV and/HV structures
  - estimation of the duration of overhead distribution extension project
- system components and layouts encompassing:
  - distribution system layouts:
    - overhead/underground, urban/rural, HV customers, high-rise building systems, three phase lines, single phase lines, SWER systems, spur, parallel and ring systems, typical substation types

- transmission system layouts:
  - lines, buses, transformers and cables, line/bus layouts including single, double, ring and breaker and half systems, and HV crossing methods
- alternating current (AC) transmission system components encompassing:
  - support structures and reasons for selection
  - insulators and reasons for selection
  - conductors and reasons for selection
  - vibration management systems and principles
  - line ratings based on voltage, span, tension and temperature
- AC transmission line electrical parameters encompassing:
  - typical arrangements
  - parameters of significance
  - calculation of line parameters:
    - calculation of resistive, inductive and capacitive values assuming regular transposition and solid conductors
  - comparison with actual values
  - typical parameter values and ratios for different voltage level lines
- AC transmission line models encompassing:
  - types of transmission line models based on line length
  - calculation of voltage drop, line regulation and transmission efficiency
  - load sharing between lines
- basic design features and characteristics of poles/structures and associated equipment and/or components encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing of poles/structures and associated equipment and or components
  - distribution systems principles:
    - terminologies
    - primary and secondary
    - voltage levels
    - supply quality
    - load curve profiles (residential/industrial/commercial)
    - types of feeders
    - urban and rural single-phase systems
    - SWER
  - characteristics of poles:
    - types of poles (wood, concrete and steel)
    - installation methods of poles (tooling, rake, life, labelling and sinking)
    - maintenance techniques of poles (above and below ground pole strength and loads)
  - characteristics of associated equipment used on poles and structures:
    - cross-arms (types and standard sizes)

- insulators
- basic design features and characteristics of underground cables, lines, poles/structures and associated equipment and/or components encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - overhead lines characteristics:
    - type of components
    - characteristics of conductor material
    - mechanical limitations and physical dimensions of lines
    - current rating factors (heating, voltage drops, power losses) of conductors
    - aerial bundled cables (HV and LV)
    - covered conductors
  - characteristics and constructional features of poles and structures:
    - types of poles and structures
    - characteristics of poles/structure materials
    - mechanical limitations of poles/structures
    - footings and additional support techniques
  - characteristics and constructional features of underground cables:
    - underground cables constructional features
    - insulation materials and abbreviations
    - cable dielectrics, electric stress and cable voltage drop
  - calculation of cable voltage drop in relation to length of cable run
  - techniques in reducing electrical stress on cables
  - cable rating factors
  - methods of joining and terminating cables
  - techniques in the installation of cables above and below ground
  - techniques in cable testing and the location of cable faults
  - techniques in cable drawing.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS003 Design power system distribution substations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the technical design of distribution substations to relevant standards and specifications, including earthing, location of substation relevant to load, customer and environmental needs and minor civil aspects. It also includes the necessary established procedures to ensure the substation design conforms to specific organisational technical standards, operational and system planning requirements and encompasses the principles of safe design.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Pathway Unit Group 1

UETDRDS013 Organise and implement ESI line and easement surveys

UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

Pathway Unit Group 2

UETDRDS006 Develop high voltage and low voltage distribution protection systems

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for and coordinate the safe design of distribution substations**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the design of distribution substations, are reviewed and determined
- 1.2** Purpose of the design is established and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the design are obtained or established with appropriate personnel
- 1.4** Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures

- 1.5 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
  - 1.6 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.7 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.8 Resources, including personnel, equipment, tools and PPE required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.9 Liaison and communication issues with other/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 2 **Carry out and coordinate the design of distribution substations**
  - 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical models of the distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance

|                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                         | with requirements and established procedures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>2.6</b>                                                              | Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>2.7</b>                                                              | Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>2.8</b>                                                              | Quality of work is monitored against personal performance agreement and/or established organisational and professional standards                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>3 Complete and coordinate the design of distribution substations</b> | <p><b>3.1</b> Final inspections of the design are undertaken to ensure they comply with all requirements and include all specifications and documentation needed to complete the design brief</p> <p><b>3.2</b> Appropriate personnel are notified of completion and reports and/or completion documents are finalised</p> <p><b>3.3</b> Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval</p> <p><b>3.4</b> Approved copies of design documents are issued and records are updated in accordance with established procedures</p> |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS37 Design power system distribution

substations.

# Assessment Requirements for UETDRDS003 Design power system distribution substations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) technical designs of a distribution substation relating to at least two of the following project types:
  - multi-transformer substations
  - residential developments
  - industrial/commercial developments
  - alteration to existing assets
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist, which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications:
    - application of velocity, acceleration, force, density, torque and pressure

- applications of the International System of Units (SI) units
- the relationship between work, power and energy
- behaviour of object under force:
  - using a block and tackle under load
  - concept of mechanical advantage
  - determination of resultant forces and determining the sag in a catenary conductor and the force applied at each end
- fundamentals of the basic laws of fluid mechanics
- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications:
    - properties of tensile strength
    - effects of temperature on the expansion of metals
    - ductility, malleability, work hardening and annealing and the conditions that lead to corrosion and the properties of timbers
- generation systems encompassing:
  - methods of generating electricity:
    - types of power stations and reasons for their location
    - layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements:
    - operating speeds for thermal and hydroelectric generating sets
    - typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- substations and power transformers encompassing:
  - relationship between the substations within an overall power system:
    - purpose and location in relation to load centres
    - layout of high voltage (HV) equipment within the substation and auxiliary equipment
  - characteristics of a power transformer:
    - basic construction of distribution transformers
    - operation under load/no load conditions
    - types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers:
    - function and basic operation
  - maintenance of a power transformer:
    - basic connections
    - restrictions to parallel operation
    - problems and remedies associated with harmonics
    - testing and fault-finding procedures
  - characteristics of a power transformer:

- description and purpose
- the installation of metering and control equipment encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of energy meters and associated equipment
  - types of meters:
    - kilowatt-hour meters single and polyphase
    - demand meters
    - recording meters and electronic recording metering systems summators
  - installation and removal methods:
    - direct connection and plug in method
    - enterprise specific
  - types of associated equipment and accessories:
    - meter boards, service fuse, links, contactors, time switch and audio frequency injection relay
  - testing procedures:
    - safety and polarity testing
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV systems
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- the installation of switchgear and associated equipment encompassing:
  - types and function of various switchgear:
    - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches and circuit breakers
    - operating characteristics
    - advantages and disadvantages of different types of switchgear
    - installation procedures
    - earthing requirements and techniques
  - types of equipment, including:
    - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment encompassing:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements
    - assembly and erecting procedures
    - earthing requirements and techniques and pole mounted locations
  - maintenance procedures for switchgear and equipment:
    - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures

- testing and commissioning:
  - ESI standards and procedures
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers:
    - principle governing factors for transformer ratings, protection and alarms
    - operating limitations and the relationship between transformer and HV fuse rating
    - purpose and principle operation of HV distribution transformer tap changers
    - HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
  - HV underground switching equipment:
    - arc strangles, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- feeder automation system encompassing:
  - function of feeder automation system and the main components
  - operation procedure for a remote field device from a local control station
  - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
  - SCADA system security interlocks and access restrictions
  - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
  - function of the main components of a local/remote control system
  - operation of a field devices using SCADA systems via a RAT, dial up annunciated system and local control station
- environmental fundamentals encompassing:
  - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the control of environment associated with the worksite encompassing, relevant federal legislation, relevant state/territory legislation, relevant local government by-laws, relevant government or quasi government policies and regulations and relevant community planning and development agreements (land care agreements)
  - employer and employee responsibilities
  - methods of obtaining information on environmental issues and updates
  - methods of identifying environmental impacts from work related activities
  - meaning of environmental terms encompassing:
    - identification, assessment and control of risks
    - compliance and best practice and sustainable energy
  - procedures in implementing management plans to ensure compliance
- layout principles for a distribution substation minor upgrade encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to a distribution substation

- minor upgrade
- requirements for the use of distribution substation minor upgrade construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
- methods in determining material, equipment and tool lists:
  - components types and quantity required
  - spacing of components and equipment
  - costings of items and components
- purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
- determination of conductor size, type and route length
- resources needed for the laying of conductors, cables and equipment
- determining the appropriate installation sequence
- minimum clearances between conductors and equipment
- estimation of the duration of underground distribution extension project
- fundamentals of distribution transformers encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the safe operation and testing of distribution transformers and auxiliary equipment
  - drawing layouts, conventions and symbols:
    - vector group of transformers
    - three phase transformers
  - construction of a distribution transformer
  - characteristics when operated under load and no-load conditions
  - percentage impedance determinations by test and calculation
  - function and operation of tap changing switches, including solid state tap changing equipment
  - function and operation of transformer auxiliary equipment
  - problems caused by harmonics in transformers
  - methods and equipment used to overcome harmonics in transformers
- testing procedures of distribution transformers encompassing:
  - safety precautions specific to the testing of distribution transformers
  - procedures for safely connecting distribution transformers for testing
  - testing of distribution transformers to determine losses
  - calculation of transformer's efficiency
  - methods and types of equipment used to cool transformers:
    - properties of transformer oil and tests performed on transformer oil
  - techniques in performing selected tests on transformer oil
  - techniques in performing testing procedures on armer
  - techniques in testing distribution transformers
  - distribution transformer parallel connections:

- conditions and restrictions for parallel operations
- calculations of loading on transformers operating in parallel
- connection of transformer in parallel to supply a common load
- distribution earthing system encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to the distribution earthing system
  - reason and types of distribution earthing systems
  - terminologies used in the earth systems including, touch and step potential
  - conditions associated when an active HV conductor fails to earth
  - selection of earthing electrodes and grids
  - determination of the earthing resistance of copper clad rods using earthing monograms.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS004 Design power system public lighting systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the technical design of public lighting systems. This includes pedestrian and traffic route lighting to relevant Australian Standards utilising appropriate software to generate design conformance.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies,

procedures and programs

Pathway Unit Group 1

UETDRDS013 Organise and implement ESI line and easement surveys

UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

Pathway Unit Group 2

UETDRDS006 Develop high voltage and low voltage distribution protection systems

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for and coordinate the safe design of public lighting systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures which may influence the design of public lighting systems are reviewed and determined
- 1.2** Purpose of the design is established and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the design are obtained or established with appropriate personnel
- 1.4** Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures
- 1.5** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a

- quality standard and in accordance with established procedures
- 1.6** Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.7** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.8** Resources, including equipment, tools and PPE required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.9** Liaison and communication issues with other/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
  - 1.11** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
- 2 Carry out and coordinate the design of public lighting systems**
- 2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3** System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4** Mathematical models of the distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5** Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate

|                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                        | authorities consulted, where necessary, in accordance with requirements and established procedures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                                                                        | <p><b>2.6</b> Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements</p> <p><b>2.7</b> Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements</p> <p><b>2.8</b> Quality of work is monitored against personal performance agreement and/or established organisational and professional standards</p>                                                                               |
| <b>3 Complete and coordinate the design of public lighting systems</b> | <p><b>3.1</b> Final inspections of the design are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the design brief</p> <p><b>3.2</b> Appropriate personnel are notified of completion and reports and/or completion documents are finalised</p> <p><b>3.3</b> Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval</p> <p><b>3.4</b> Approved copies of design documents are issued and records are updated in accordance with established procedures</p> |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS38 Design power system public lighting systems.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDS004 Design power system public lighting systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) technical designs of a public lighting system utilising at least three (3) of the following project types:
  - single light on existing assets
  - main road/minor road schemes
  - intersections
  - traffic management devices
  - alteration to existing assets
  - multi-circuit systems
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:

- identification of basic concepts, principles and applications:
  - application of velocity, acceleration, force, density, torque and pressure
- applications of the International System of Units (SI) units
- the relationship between work, power and energy
- behaviour of object under force:
  - using a block and tackle under load
  - concept of mechanical advantage
  - determination of resultant forces
  - determining the sag in a catenary conductor and the force applied at each end
- fundamentals of the basic laws of fluid mechanics
- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications:
    - properties of tensile strength
    - effects of temperature on the expansion of metals
    - ductility, malleability, work hardening and annealing and the conditions that lead to corrosion and the properties of timbers
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system:
    - different organisations responsible for generation, transmission, distribution and rail/tram and how they correlate and their functions
  - characteristics of a transmission, distribution and rail system:
    - principal components
    - typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system:
    - advantages/disadvantages
    - applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts:
    - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- procedures for installation and maintenance on public lighting structures and associated equipment encompassing:
  - standards, codes, legislation, supply authority regulations, local government and/or enterprise requirements pertaining to the installation and maintenance of public lighting systems and associated equipment
  - safety precautions specific to working on street lighting:

- safe working practices and procedures
- safe clearances from low voltage (LV) and HV mains
- working at heights, working in confined spaces, permit to work systems and isolation procedures
- emergency response and rescue, including first aid
- basic public lighting principles:
  - electromagnetic spectrum
  - principles of colour
  - behaviour of light
  - factors that affect illumination
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
  - street lighting circuits and earthing system
- types of tools and equipment used for installation and maintenance
- types and function of lanterns/luminaires/lamps, control equipment, poles and associated hardware used for street lighting:
  - high-pressure mercury vapour, low pressure and high-pressure sodium vapour, fluorescent, quartz-halogen, wood, concrete, steel, composite, choke boxes, photo-electric cells, time switches and contactor boxes
- types of lighting systems:
  - overhead and underground street lighting systems and controlling and switching of lighting systems
- techniques for the installation of street lighting systems
- techniques for the maintenance of street lighting systems:
  - diagnosing of faults
  - removing, repairing, replacing and cleaning of public lighting and associated hardware
- application of specific testing equipment:
  - voltage detectors
  - insulation resistance testers
  - clamp-on ammeters
  - continuity testers
  - fault indicators
- techniques for the inspection, testing and commissioning of street lighting systems
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on HV systems
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- principles of light design layout encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply

- authority regulations and/or enterprise requirements applicable to the light design principles
- requirements for the use of street lighting system construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
- types of tariffs and charges
- types of street lighting components:
  - column types, foundations, brackets, luminaries and mounting heights
- types of electrical street lighting circuits:
  - types of supply
  - lighting circuit and control circuit
- fundamentals of lighting production:
  - electromagnetic spectrum
  - visible and non-visible radiation
  - spectral energy distribution
  - infra-red, ultraviolet, radiation-safety, incandescence and phosphorescence
  - reflection and refraction
- fundamentals of lighting concepts:
  - terms and units and the purpose of reflectors and diffusers
- factors affecting external lighting design
- calculation of light output
- determining illuminance:
  - point to point and lumen method
- determining rated life of luminaries
- fundamentals of street lighting design
- considerations for special lighting situations:
  - security lighting, hazardous street locations and emergency lighting
- principles to layout and draft a street lighting system encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to street lighting system layouts and drafts
  - requirements for the use of street lighting system construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components, such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length

- determination of street lighting positions for optimum visibility and to minimise traffic hazards
- techniques in mounting and positioning of lights
- resources needed for the installation of street lighting system
- methods of pegging out of pole positions and/or underground cable positions
- minimum clearances between overhead conductors and LV and HV structures
- estimation of the duration of overhead distribution extension project.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS005 Design underground distribution power systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the technical design of underground distribution and sub-transmission networks to relevant standards, including cable sizing and locations, soil resistivity and heat dissipation, backfill and trenching details, minor civil aspects and dynamic and cyclic ratings. It also includes the necessary established procedures to ensure the line design conforms to specific organisational technical standards, operational and system planning requirements and encompasses the principles of safe design.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Pathway Unit Group 1

UETDRDS013 Organise and implement ESI line and easement surveys

UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

Pathway Unit Group 2

UETDRDS006 Develop high voltage and low voltage distribution protection systems

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for and coordinate the safe design of underground distribution systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the design of underground distribution systems, are reviewed and determined
- 1.2** Purpose of the design is established after data is analysed and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures or policies and specifications for the design are obtained or established with appropriate personnel
- 1.4** Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures

- 1.5 Work is prioritised and sequenced for the most efficient/effective outcome, completed within an acceptable timeframe to a quality standard and in accordance with established procedures
  - 1.6 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.7 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.8 Resources, including personnel, equipment, tools and PPE required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 2 Carry out and coordinate the design of underground distribution systems**
- 2.1 Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
  - 2.4 Mathematical models for the design of the underground distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
  - 2.5 Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance

with requirements and established procedures

- 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.8 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards

### **3 Complete and coordinate the design of underground distribution systems**

- 3.1 Final inspections of the design are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the project
- 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised/commissioned
- 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4 Approved copies of design documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS36 Design underground distribution power systems.

## Links

# Assessment Requirements for UETDRDS005 Design underground distribution power systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) technical designs of an underground distribution or sub-transmission network relating to the following project types:
  - residential subdivision developments
  - industrial/commercial subdivision developments
  - alteration to existing assets
  - underground supplies to single customers, including projects requiring substations
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematics techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications:
    - application of velocity, acceleration, force, density, torque and pressure

- applications of the International System of Units (SI) units
- the relationship between work, power and energy
- behaviour of object under force:
  - using a block and tackle under load
  - concept of mechanical advantage
  - determination of resultant forces and determining the sag in a catenary conductor and the force applied at each end
- fundamentals of the basic laws of fluid mechanics
- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications:
    - properties of tensile strength
    - effects of temperature on the expansion of metals
    - ductility, malleability, work hardening and annealing and the conditions that lead to corrosion and the properties of timbers
- installation of underground cable encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safety precautions specific to the installation of underground cable:
    - excavation and trench safety regulations
    - gas detection procedures
    - working in confined spaces
    - personal protective equipment (PPE)
    - hazards for the use of liquid petroleum gas (LPG) equipment for jointing of underground cable
    - gas bottle testing procedures
    - permit to work systems and isolation procedures
  - trench excavation and reinstatement procedures
  - installation of underground cable procedures:
    - types of tools and equipment
    - methods of installing conduits
    - methods of installing cables and sealing cable ends (direct buried, ducts cleated and racked)
  - procedures for the safe use of LPG equipment for cable jointing
- construction and types of underground cables encompassing:
  - safety precautions specific to handling underground cables
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types and applications of underground cables
  - construction types and structures of underground cables
  - characteristics of different types of underground cables

- ratings
- principles of statutory and safety considerations encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with working on high voltage (HV) systems
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- the implementation and monitoring requirements for the impact of powerline installations and operation on the environment and/or the area surrounding the powerline and/or equipment encompassing:
  - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of environmental impact factors in the workplace and areas of power distribution or transmission:
    - Commonwealth/state/territory legislation relevant to the workplace and the Environment Protection Act legislation and common law
  - identification, assessment, control and monitoring of the hazards to the environment associated with the powerline industry
  - workplace environment quality standards enterprise plan:
    - setting of acceptable emission level limits from power plant equipment
    - impact of the enterprise activities on air and water quality
    - nature, impact and level of emissions from power plant, power distribution and transmission equipment and network infrastructure (noise generation, noxious gas emissions, greenhouse gas production, electromagnetic emissions, electromagnetic field strength, oil leakage and insulation breakdown products)
  - provision of manufacturer and supplier information, such as material safety data sheets (MSDS)
  - gathering of environment management information
  - maintenance of environmental records
  - risk assessment and its management in powerline industry
  - maintenance strategies for environment protection programs:
    - developing processes for promoting, maintaining and improving environmental impact in the workplace
    - identifying techniques for evaluating and reviewing environment protection education and training programs and elements of an effective environment protection management system
    - Environment Protection Authority (EPA) consultation and accident/incident investigations
- layout principles for underground mains distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to underground mains distribution extension
  - requirements for the use of underground mains construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the

- control of WHS/OHS risks
- methods in determining material, equipment and tool lists:
  - components types and quantity required
  - spacing of components and equipment
  - costings of items and components
- purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
- determination of conductor size, type and route length
- resources needed for the laying of conductors
- determining the appropriate excavation for the location
- determining the size and depth of excavation
- determining the trench and pit layout procedures
- minimum clearances between conductors
- estimation of the duration of underground distribution extension project
- system components and layouts encompassing:
  - distribution system layouts:
    - overhead/underground and/or urban/rural
    - HV customers
    - high-rise building systems
    - three phase lines
    - single phase lines
    - single wire earth return (SWER) systems
    - spur, parallel and ring systems
    - typical substation types
  - transmission system layouts:
    - lines, buses, transformers and cables
    - line/bus layouts, including single, double, ring and breaker and half systems
    - HV crossing methods
- basic design features and characteristics of underground cables, lines, poles/structures and associated equipment and/or components encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - overhead lines characteristics:
    - type of components
    - characteristics of conductor material
    - mechanical limitations and physical dimensions of lines
    - current rating factors (heating, voltage drops and power losses) of conductors
    - aerial bundled cables (HV and low voltage (LV))
    - covered conductors
  - characteristics and constructional features of poles and structures:

- types of poles and structures
- characteristics of poles/structure materials
- mechanical limitations of poles/structures, footings and additional support techniques
- characteristics and constructional features of underground cables:
  - underground cables constructional features
  - insulation materials and abbreviations
  - cable dielectrics, electric stress and cable voltage drop
- calculation of cable voltage drop in relation to length of cable run
- techniques in reducing electrical stress on cables
- cable rating factors
- methods of joining and terminating cables
- techniques in the installation of cables above and below ground
- techniques in cable testing and the location of cable faults
- techniques in cable drawing.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDS006 Develop high voltage and low voltage distribution protection systems**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the development of appropriate protection systems for high voltage (HV) and low voltage (LV) distribution networks, including calculations of fault levels, selection of appropriate protection devices and automation requirements, and protection coordination schemes. It also includes recommendations to support the calculations and must ensure conformance to specific organisational operational and system planning requirements, and compliance with national or supply authority codes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

| ELEMENTS                                                                         | PERFORMANCE CRITERIA                                                                                                                                                                                                                                    |

|                                                                                  | <b>1.7</b> Relevant work permits are secured to coordinate the performance of work according to requirements and/or                                                                                                                                     |

established procedures

- 1.8** Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.11** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures

## **2 Carry out and coordinate the development of HV and LV protection systems**

- 2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures
- 2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
- 2.3** System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures
- 2.4** Mathematical models of the HV and LV protection systems are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures
- 2.5** Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
- 2.6** Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance

- specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7** Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.8** Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
- 3 Complete and coordinate the development of HV and LV protection systems**
- 3.1** Final inspections of the system design are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the design brief
- 3.2** Appropriate personnel are notified of completion and reports and/or completion documents are finalised
- 3.3** Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
- 3.4** Approved copies of design documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS43 Develop high voltage and low voltage distribution protection systems.

## Links

# Assessment Requirements for UETDRDS006 Develop high voltage and low voltage distribution protection systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing at least two (2) designs from two (2) of the following project types:
  - distribution overhead designs
  - distribution underground designs
  - distribution substation designs
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS systems
  - analysis of relevant data and evaluation of WHS/OHS system effectiveness
  - assess resources to establish and maintain WHS/OHS management systems
- principles of safe design encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with safe design principles

- particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
- application of safe design principles:
  - safe design duty related information, safe design process related information and safe design evaluations
- installation of switchgear and associated equipment encompassing:
  - types and function of various switchgear:
    - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches and circuit breakers
    - operating characteristics
    - advantages and disadvantages of different types of switchgear
    - installation procedures
    - earthing requirements and techniques
  - types of equipment:
    - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment:
    - standards, codes, legislation, supply authority regulations and/or enterprise requirements
    - assembly and erecting procedures
    - earthing requirements and techniques and pole mounted locations
  - maintenance procedures for switchgear and equipment:
    - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
  - testing and commissioning:
    - ESI standards and procedures
- electrical equipment associated with distribution field device protection and control schemes encompassing:
  - types and applications of electrical equipment:
  - characteristics and capabilities
  - schemes, automatic circuit reclosers (ACRs), gas switches, secondary injection tests, primary injection tests, TMR radios, supervisory control and data acquisition (SCADA), remote control, overcurrent, earth fault, sensitive earth fault, inverse time curves, definite time curves, tripping, reclose, direct current (DC) supplies, alternating current (AC) supplies and alarms
- calculation of fault levels encompassing:
  - calculation of fault levels in symmetrical and asymmetrical fault conditions:
    - types of faults
    - interconnected and radial systems
    - symmetrical components
    - representation of voltages and currents

- sequence impedances of system plant
- calculation/determination of sequence impedance networks
- determination of operative sequence impedances
- fault or arc impedances
- first approximation techniques
- interrupting device capabilities:
  - determination of fault current breaking capability and let through energy capability of fuses and circuit breakers
  - DC offset and transient condition effects
- detailed operation and setting of discrete protection systems encompassing:
  - earth fault protection:
    - master earth leakage schemes
    - sensitive earth fault relays and schemes
    - residual earth fault scheme
    - core balance earth fault scheme
    - frame/structure earth leakage scheme
    - time graded discrimination
    - backup protection
  - overcurrent protection:
    - feeder overcurrent protection
    - instantaneous overcurrent schemes
    - inverse timed overcurrent schemes
    - types and location of components of an overcurrent scheme
    - CT summation
    - time graded discrimination
    - backup protection
  - alarms and controls:
    - auxiliary relays
    - voltage regulating relays
    - line drop compensation
    - gas relay types
    - gas relay scheme operation and setting
    - over temperature schemes
- polyphase systems and its application towards the calculation of circuit conditions encompassing:
  - structure of a three phase system:
    - components, sequence of phases and balanced and unbalanced load conditions
  - calculations of phase and line voltages for a specified phase sequence
  - calculation of voltage, current, power, power factor in a three phase system:
    - balanced three phase systems

- unbalanced delta connected loads
- unbalanced four-wire star connected loads
- unbalanced three-wire star connected loads
- unbalanced four-wire star connected systems
- calculation of the neutral displacement voltage in unbalanced three-wire star connected systems
- selection and connection of meters to confirm calculations
- control of harmonics:
  - harmonic analysis of non-sinusoidal waves of voltage and current
  - production of harmonics in three phase power systems
  - effects of harmonics on three power systems and loads
  - types of harmonics commonly encountered on three phase power systems
  - identification by observation of harmonic components present in a waveform
- calculation of effective value of non-sinusoidal waves
- calculation of current/voltage in a complex load given a voltage/current with a Fourier analysis of up to 3 terms
- pre-unit system in calculations:
  - reasons for use
  - groups of parameters commonly represented
  - common applications of the per-unit system to represent device specifications
  - applications of per-unit quantities in simple electrical calculations
- method of symmetrical components:
  - reasons for the use
  - types of components used to represent a three phase system
  - reasons for difference in the impedance of a component to the various symmetrical components and commonly occurring relationships between different sequence impedances for common component groups
- protection schemes encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to protection schemes
  - types of protection schemes:
    - reasons for use
    - application of protection zones around system elements and degree of protection
  - types of feeder protection equipment:
    - overcurrent protection inverse time-current operating characteristics
  - operation of overcurrent protection equipment used on distribution systems
  - operation of ACRs and their time-current characteristics
  - types and characteristics of overcurrent relays
  - coordination methods of a distribution feeder protection scheme
  - earth fault protection used on a distribution feeder

- operation of a single wire earth return (SWER) system.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for high voltage (HV) and low voltage (LV) distribution protection systems
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS007 Develop planned power systems outage strategies

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the competency required to assess and manage the impact on the network and customers with regards to planned outages. This includes customer outage times, network and plant loading issues and regulatory requirements. A detailed knowledge of network performance indicators is required.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEED104A Use engineering applications software on personal computers

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Plan for and coordinate the development of outage strategies**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the outage strategies, are reviewed and determined
- 1.2** Purpose of the outage is established and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the outage are obtained or established with appropriate personnel
- 1.4** Equipment/tools and personnel protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures
- 1.5** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.6** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.7** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.8** Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures

- |                                                                        |                                                                                                                                                                                                                                                                                 |
|------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>2 Carry out and coordinate the development of outage strategies</b> | <b>2.1</b> Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures                                                                                                                                                        |
|                                                                        | <b>2.2</b> WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the strategy in accordance with requirements and/or established procedures                                      |
|                                                                        | <b>2.3</b> Strategy decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures                                                                                                                                    |
|                                                                        | <b>2.4</b> Mathematical models of the outage strategies are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures                                                                                                |
|                                                                        | <b>2.5</b> Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures |
|                                                                        | <b>2.6</b> Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the strategy within an agreed timeframe according to requirements                                               |
|                                                                        | <b>2.7</b> Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements                                                                                                                     |
|                                                                        | <b>2.8</b> Quality of work is monitored against personal performance agreement and/or established organisational and professional standards                                                                                                                                     |
| <b>3 Complete and coordinate the development of outage strategies</b>  | <b>3.1</b> Final review of the strategy is undertaken to ensure it complies with all requirements and includes all specifications and documentations needed to complete the project                                                                                             |
|                                                                        | <b>3.2</b> Appropriate personnel are notified of completion and reports and/or completion documents are finalised                                                                                                                                                               |
|                                                                        | <b>3.3</b> Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval                                                                                                           |

- 3.4** Approved copies of outage strategy documents are issued and records are updated in accordance with established procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRDS46 Develop planned power systems outage strategies.

## **Links**

# Assessment Requirements for UETDRDS007 Develop planned power systems outage strategies

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- writing three (3) outage strategies, including at least one (1) of each of the following network types:
  - low voltage (LV) networks
  - high voltage (HV) networks
- each of the above outage strategies must include the following:
  - switching instructions laid out according to enterprise requirements
  - a documented process to indicate methods used to check switching instructions
  - documentation of coordination process of switching schedules
  - documentation of plant loading calculation
  - initiation of customer notifications according to enterprise requirements
  - entry of data for collection of ‘minute of supply’ records into relevant systems
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working safely on or around electrical equipment through the application of risk management principles and control measures for dealing with non-electrical hazards and extra-low voltage (ELV), LV and HV hazards and high current hazards encompassing:
  - risk management and assessment of risk:
    - principle and purpose of risk management and processes for conducting a risk assessment
  - hazards associated with LV, ELV and high currents

- arrangement of power distribution and circuits in an electrical installation
- parts of an electrical system and equipment that operate at LV and ELV
- parts of an electrical system and equipment where high currents are likely
- risks and control measures associated with HV:
  - parts of an electrical system and equipment that operate at HV
  - the terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of HV
  - control measures used for dealing with the hazards of HV
- optical fibre safety:
  - coherent optical sources and joining procedures and laser safety class 3a devices or their replacement
- risks and control measures associated with LV:
  - risks associated with modifying electrical installations, fault finding, maintenance and repair
  - control measures before, during and after working on electrical installations, circuits or equipment
  - isolation and tagging-off procedures
  - risks and restrictions in live work and control measures for live work
- risks and control measures associated with harmful dusts and airborne contaminants:
  - thermal insulation, fibrous cement materials and asbestos and other fibre reinforced switchboard materials
- safety, selection, use, maintenance and care of test equipment:
  - safety characteristics of electrical testing devices
  - safe use of electrical testing device
  - checks and storage methods for maintaining the safety of testing devices
- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management systems to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management systems
  - analysis of relevant data and evaluation of WHS/OHS system effectiveness
  - assess resources to establish and maintain WHS/OHS management systems
- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination:
    - clear and concise instructions and information

- methods for the encouragement of feedback and contributions of information and ideas
- responsibilities of members of the team
- techniques in analysing, planning, coordination and organising work for a safe outcome and according to statutory requirements and regulations
- techniques in the effective utilisation of available resources
- techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
- techniques in facilitating and coordinating the delivery and issuing of access authorities
- techniques in gathering, collating and confirming data on different worksites:
  - electrical network diagrams for the specific worksite
  - earth access authorities
  - safe working area
  - work to be carried out in confined space or in hazardous environment
  - specific outsourcing procedures
  - specific hazard identification, risk classification and management procedures
  - regulatory requirements, such as WHS/OHS and electrical safety
- techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
- methods of conducting audits on correct access authority procedures
- process of issuing of other access authorities for work permits:
  - working in confined space, if required
  - coordination of access authorities
  - engaging and briefing contractors on electrical and other work
- issue and receipt of operating agreements
- principles of safe design encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with safe design principles
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
  - application of safe design principles:
    - safe design duty related information, safe design process related information and safe design evaluations
- installation of switchgear and associated equipment encompassing:
  - types and function of various switchgear:
    - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches and circuit breakers
  - operating characteristics
  - advantages and disadvantages of different types of switchgear
  - installation procedures

- earthing requirements and techniques
- types of equipment:
  - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
- installation procedures for switchgear and equipment:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - assembly and erecting procedures
  - earthing requirements and techniques and pole mounted locations
- maintenance procedures for switchgear and equipment:
  - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
- testing and commissioning:
  - ESI standards and procedures
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings:
    - types, characteristics and capabilities of electrical apparatus
    - use, characteristics and capabilities of specialised tools and testing equipment
    - LV network interconnectors source of possible back-feed
  - LV switching techniques:
    - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures, earthing procedures and personnel protective equipment (PPE) for LV switching
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings:
    - types, characteristics and capabilities of electrical apparatus
    - use, characteristics and capabilities of specialised tools and testing equipment
    - HV network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching:
    - types of operational forms, access authorities and permits
    - purpose and procedure for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment:
    - test instruments, sticks, interrupters and arc strangles
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment

- procedures for the isolation of HV transmission main and working earths
- earthing HV electrical apparatus practices and procedures for access:
  - purposes of operational and additional work part 'on-site' earths
  - factors determining the location and effectiveness of operational earthing
  - acceptable industry procedures and PPE
- HV switching techniques
- operating switching apparatus:
  - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings:
    - types, characteristics and capabilities of HV electrical equipment to be switched
    - use and characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits hazard/risk assessments associated with HV switching:
    - types of operational forms, access authorities and permits
    - hazard/risk assessments and purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment:
    - test instruments, sticks, interrupters and arc strangles
  - HV switchgear:
    - types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices:
    - fuses; disconnect fuses
    - load switching
    - live line indicators
    - capacitors
    - reclosers
    - sectionalisers
    - underslung links
    - air-breaks
    - switches
    - disconnects
    - live line clamps
    - phasing sticks
    - phasing tester

- operation of protection systems and substation equipment:
  - fault levels and settings
  - types and applications
  - protection systems and substation equipment fault levels and settings
  - types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths:
  - earthing HV electrical apparatus practices and procedures for access authority issuing
  - HV switching techniques
- operate switching apparatus:
  - identifying hazards, assessing and controlling risks associated with HV switchgear operation
  - systematic and defensive techniques
  - mobile radio procedures
  - double isolation procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry to develop planned outage strategies
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDS008 Draft and layout a power system distribution substation minor upgrade**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the drafting and laying out of minor low voltage (LV) distribution substation upgrades, including the estimating of the costs and/or resources for the work to be undertaken. It also encompasses on-the-job design, surveying techniques, the pegging and/or marking out of the trench position, the pit/pillar position and the cable position according to the work order and enterprise requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to draft and layout a distribution substation upgrade**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the work determined for planning and coordination
- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.4** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites
- 1.5** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures are prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and in accordance with established procedures
- 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the

job are identified, scheduled and coordinated and confirmed safe and in technical working order

- 1.8** Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
- 1.11** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.12** Positioning of road signs, barriers and warning devices is planned in accordance with requirements

## **2 Carry out the drafting and layout of a distribution substation upgrade**

- 2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
- 2.2** First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
- 2.3** Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
- 2.4** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
- 2.5** Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
- 2.6** Drafting and layout of a distribution substation upgrade is carried out in accordance with the work schedule and

requirements and/or established procedures

**2.7** Essential knowledge and associated skills are applied in the safe drafting and layout of a distribution substation upgrade to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements

**2.8** Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements

**2.9** Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard

### **3 Complete the drafting and layout of a distribution substation upgrade**

**3.1** Work undertaken is checked against work schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures

**3.2** Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures

**3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures

**3.4** Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

**3.5** Relevant work permits are signed off and substation equipment, apparatus, wiring and instrumentation are returned to service and advised to client/customer in accordance with requirements

**3.6** Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETDRDS34 Draft and layout a power system distribution substation minor upgrade.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRDS008 Draft and layout a power system distribution substation minor upgrade

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- drafting at least one (1) of the following:
  - a multi-phase pole mounted distribution transformer upgrade plan/layout
  - a single-phase pole mounted transformer upgrade plan/layout
- laying out at least one (1) of the following:
  - a multi-phase underground distribution substation upgrade
  - a multi-phase distribution substation or associated equipment upgrade, e.g., substations, transformers, high voltage (HV)/low voltage (LV) switchgear
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
    - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors:
    - types of LV and HV overhead electrical conductor connections
    - causes and effects of poor electrical connections

- reasons for and methods used to maintain standard phase sequencing
- removing, repairing and replacing of damage conductors
- minimum clearances between overhead conductors and LV and HV structures
- techniques for conductor installation:
  - types and application of tools, equipment and hardware
  - methods of stringing, tensioning and termination of LV and HV conductors
- installation of underground cable encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safety precautions specific to the installation of underground cable:
    - excavation and trench safety regulations
    - gas detection procedures
    - working in confined spaces
    - personal protective equipment (PPE)
    - hazards for the use of liquid petroleum gas (LPG) equipment for jointing of underground cable
    - gas bottle testing procedures
    - permit to work systems and isolation procedures
  - trench excavation and reinstatement procedures
  - installation of underground cable procedures:
    - types of tools and equipment
    - methods of installing conduits
    - methods of installing cables and sealing cable ends (direct buried, ducts cleated and racked)
  - procedures for the safe use of LPG equipment for cable jointing
- construction and types of underground cables encompassing:
  - safety precautions specific to handling underground cables
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types and applications of underground cables
  - construction types and structures of underground cables
  - characteristics of different types of underground cables
  - ratings
- enterprise-specific switching diagrams and drawing encompassing:
  - types and application of enterprise-specific switching drawings and documents:
    - wiring and schematic diagrams and switching symbols
    - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams:
    - LV system switching diagrams
    - direct current (d.c.) traction supply sectioning diagrams

- HV transmission and distribution system symbols and feeder plans
- processes of updating switching diagrams
- power distribution network documentation encompassing:
  - requirements for the use of manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - types and application of power distribution network documentation drawings and documents:
    - wiring and schematic diagrams, drawings and switching symbols
    - mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different diagrams and documentation on LV and HV systems:
    - overhead distribution extensions
    - underground distribution extensions
    - distribution substations
    - street lighting systems
- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the surveying for an overhead and underground extension
  - techniques in measuring heights and distances
  - techniques in taking bearings/angles of deviation using a compass
  - techniques in using a clinometer
  - techniques in recording and storage of data
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - techniques in plotting long spans:
    - measuring stick, clinometer, trundle wheel and tapes
    - correction for sloping ground
    - distance across objects and range rods
  - techniques in pegging pole positions:
    - foot path alignments, types of pegs, pegs of other authorities and locating survey pegs
- fundamentals of computer-aided drafting (CAD) for drafting and layout of distribution extension and upgrades encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the drafting and layouts of distribution extensions and upgrades
  - types of computer hardware and software, tools and equipment for the production of a draft and layout of distribution extension and/or upgrade
  - techniques in storing and retrieving programs and files from the computer
  - identification and methods of retrieving and manipulating digital symbols, designs, layouts, fonts and graphs stored in the computer

- techniques in using the CAD package in following necessary commands and protocols in accordance with the operating instructions of the CAD software manufacturer, such as:
  - using file structure, menu utilisation, system library usage, data banking, achieving, file management and maintenance procedures
- calculation of dimensions and drafting measurements using the computer
- techniques in the preparation of preliminary sketches using the computer
- techniques in using 2-D computer graphics system and associated equipment to produce a distribution extension and or upgrade draft or layout
- techniques to diagnosing basic faults in computer operation
- layout principles for underground mains distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to underground mains distribution extension
  - requirements for the use of underground mains construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components and equipment
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - resources needed for the laying of conductors
  - determining the appropriate excavation for the location
  - determining the size and depth of excavation
  - determining the trench and pit layout procedures
  - minimum clearances between conductors
  - estimation of the duration of underground distribution extension project
- layout principles for a distribution substation minor upgrade encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to a distribution substation minor upgrade
  - requirements for the use of distribution substation minor upgrade construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components and equipment
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information

- determination of conductor size, type and route length
- resources needed for the laying of conductors, cables and equipment
- determining the appropriate installation sequence
- minimum clearances between conductors and equipment
- estimation of the duration of underground distribution extension project.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry to undertake drafting and layout of a distribution substation upgrade
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDS009 Draft and layout a power system overhead distribution extension**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the planning and layout of one or two pole minor overhead distribution extensions, including estimating of the costs and/or resources for the work to be undertaken. It also encompasses on-the-job design, surveying techniques and layout to the field locations in accordance with enterprise requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to draft and layout an overhead distribution extension**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the work determined for planning and coordination
- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.4** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.5** Hazards are identified, work health and safety (WHS/occupational health and safety (OHS) risks are assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
- 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the

job are identified, scheduled and coordinated, and confirmed safe and in technical working order

- 1.8** Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
- 1.11** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.12** Positioning of road signs, barriers and warning devices is planned in accordance with requirements

## **2 Carry out drafting and layout of an overhead distribution extension**

- 2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
- 2.2** First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
- 2.3** Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
- 2.4** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised person/s for directions according to established procedures
- 2.5** Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
- 2.6** The drafting and layout of an overhead distribution extension is carried out in accordance with the work

schedule and requirements and/or established procedures

**2.7** Essential knowledge and associated skills are applied for the drafting and layout of an overhead distribution extension to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements

**2.8** Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements

**2.9** Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard

### **3 Complete drafting and layout of an overhead distribution extension**

**3.1** Work undertaken is checked against works schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures

**3.2** Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures

**3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures

**3.4** Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

**3.5** Relevant work permits are signed off and the job is returned to service and advised to client/customer in accordance with requirements

**3.6** Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS31 Draft and layout a power system overhead distribution extension.

## Links

# Assessment Requirements for UETDRDS009 Draft and layout a power system overhead distribution extension

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- drafting at least one (1) of the following:
  - a low voltage (LV) single phase distribution extension plan/layout
  - an LV multi-phase distribution extension plan/layout
- laying out at least one (1) of the following:
  - a high voltage (HV) single phase distribution extension
  - a HV multi-phase distribution extension
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
    - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors:
    - types of LV and HV overhead electrical conductor connections
    - causes and effects of poor electrical connections
    - reasons for and methods used to maintain standard phase sequencing

- removing, repairing and replacing of damage conductors
- minimum clearances between overhead conductors and LV and HV structures
- techniques for conductor installation:
  - types and application of tools, equipment and hardware
  - methods of stringing, tensioning and termination of LV and HV conductors
- installation of poles and or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
    - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware:
    - types of installation equipment/tools
    - excavation methods
    - types of footings/foundations
    - types of attachments, earthing systems, clearances between conductors, safe methods of erecting and stabling poles and/or structures and cross-arms
  - techniques for maintenance of poles and associated hardware:
    - stabilisation techniques for unstable poles
    - methods of strengthen poles
    - maintenance and replacement of HV insulators and cross-arms
- different types and function of distribution components encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - types, function and characteristics of distribution components
  - safety policies, procedures and precautions related to the handling and installing of distribution components
- enterprise-specific switching diagrams and drawing encompassing:
  - types and application of enterprise-specific switching drawings and documents:
    - wiring and schematic diagrams and switching symbols
  - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams:
    - LV system switching diagrams
    - direct current (d.c.) traction supply sectioning diagrams
    - HV transmission and distribution system symbols and feeder plans
    - processes of updating switching diagrams
- power distribution network documentation encompassing:

- requirements for the use of manuals, system diagrams/plans and drawings, and for plans such as work method statements for the control of WHS/OHS risks
- types and application of power distribution network documentation drawings and documents:
  - wiring and schematic diagrams
  - drawings and switching symbols
  - mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
- interpretation of different diagrams and documentation on LV and HV systems:
  - overhead distribution extensions
  - underground distribution extensions
  - distribution substations
  - street lighting systems
- layout principles for overhead distribution encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to overhead distribution layout
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings, and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components, such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length -
  - resources needed for the stringing and maintenance of conductors
  - types of low LV and HV overhead electrical conductor connections
  - minimum clearances between overhead conductors and LV and HV structures
  - estimation of the duration of overhead distribution extension project
- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the surveying for an overhead and underground extension
  - techniques in measuring heights and distances
  - techniques in taking bearings/angles of deviation using a compass
  - techniques in using a clinometer
  - techniques in recording and storage of data
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings

- techniques in plotting long spans:
  - measuring stick, clinometer, trundle wheel and tapes
  - correction for sloping ground
  - distance across objects and range rods
- techniques in pegging pole positions:
  - foot path alignments
  - types of pegs, pegs of other authorities and locating survey pegs
- fundamentals of computer-aided drafting (CAD) for drafting and layout of distribution extension and upgrades encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the drafting and layouts of distribution extensions and upgrades
  - types of computer hardware and software, tools and equipment for the production of a draft and layout of distribution extension and or upgrade
  - techniques in storing and retrieving programs and files from the computer
  - identification and methods of retrieving and manipulating digital symbols, designs, layouts, fonts and graphs stored in the computer
  - techniques in using the CAD package in following necessary commands and protocols in accordance with the operating instructions of the CAD software manufacturer, such as:
    - using file structure, menu utilisation, system library usage, data banking, achieving, file management and maintenance procedures
  - calculation of dimensions and drafting measurements using the computer
  - techniques in the preparation of preliminary sketches using the computer
  - techniques in using 2-D computer graphics system and associated equipment to produce a distribution extension and/or upgrade draft or layout
  - techniques to diagnosing basic faults in computer operation
  - requirements for aerial linework:
    - planning, establishing and implementing relevant aviation authority clearances
    - determining system requirements
    - aircrew familiarisation with network operations and equipment
    - requirements for effective communications operations for aerial work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic

and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry to draft and layout an overhead distribution extension
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS010 Draft and layout a power system street lighting system

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the planning and layout of street lighting systems. It includes the conduction of site inspections to confirm and/or modify a street lighting system layout, estimation of costs and resources for the work order, and the pegging out of the poles/underground cables according to the work order and to optimise visibility and minimise traffic hazards. It also encompasses the provision of advice on conditions of supply and permits and the communication and coordination needed to be undertaken with the relevant authorities and clients.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to draft and layout a street lighting system**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the work determined for planning and coordination
- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.4** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.5** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks are assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and in accordance with established procedures
- 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the

job are identified, scheduled and coordinated and confirmed as safe and in technical working order

- 1.8** Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
- 1.11** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.12** Positioning of road signs, barriers and warning devices is planned in accordance with requirements

## **2 Carry out the drafting and layout of a street lighting system**

- 2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures

# Assessment Requirements for UETDRDS010 Draft and layout a power system street lighting system

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- producing all of the following:
  - preliminary plan for a street lighting system
  - a layout of a street lighting system
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
    - material lists, conductor size, type and route length
  - construction types and structures for distribution and sub-transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors:
    - types of low voltage (LV) and high voltage (HV) overhead electrical conductor connections
    - causes and effects of poor electrical connections
    - reasons for and methods used to maintain standard phase sequencing
    - removing, repairing and replacing of damaged conductors
    - minimum clearances between overhead conductors and LV and HV structures

- techniques for conductor installation:
  - types and application of tools, equipment and hardware
  - methods of stringing, tensioning and termination of LV and HV conductors
- installation of poles and/or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
    - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware:
    - types of installation equipment/tools
    - excavation methods
    - types of footings/foundations
    - types of attachments
    - earthing systems
    - clearances between conductors
    - safe methods of erecting and stabling poles and/or structures and cross-arms
  - techniques for maintenance of poles and associated hardware:
    - stabilisation techniques for unstable poles
    - methods of strengthen poles
    - maintenance and replacement of HV insulators and cross-arms
- procedures for installation and maintenance on public lighting structures and associated equipment encompassing:
  - standards, codes, legislation, supply authority regulations, local government and/or enterprise requirements pertaining to the installation and maintenance of public lighting systems and associated equipment
  - safety precautions specific to working on street lighting:
    - safe working practices and procedures
    - safe clearances from LV and HV mains
    - working at heights, working in confined spaces, permit to work systems and isolation procedures, emergency response and rescue, including first aid
  - basic public lighting principles:
    - electromagnetic spectrum
    - principles of colour
    - behaviour of light
    - factors that affect illumination
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings:
    - street lighting circuits
    - earthing system
  - types of tools and equipment used for installation and maintenance

- types and function of lanterns/luminaires/lamps, control equipment, poles and associated hardware used for street lighting:
  - high-pressure mercury vapour, low pressure and high-pressure sodium vapour, fluorescent, quartz-halogen, wood, concrete, steel, composite, choke boxes, photo-electric cells, time switches and contactor boxes
- types of lighting systems:
  - overhead and underground street lighting systems
  - controlling and switching of lighting systems
- techniques for the installation of street lighting systems
- techniques for the maintenance of street lighting systems:
  - diagnosing of faults
  - removing, repairing, replacing and cleaning of public lighting and associated hardware
- application of specific testing equipment:
  - voltage detectors, insulation resistance testers, clamp-on ammeters, continuity testers and fault indicators
- techniques for the inspection, testing and commissioning of street lighting systems
- different types and functions of distribution components encompassing:
  - Commonwealth/state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the use and application of distribution components
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - types, function and characteristics of distribution components
  - safety policies, procedures and precautions related to the handling and installing of distribution components
- enterprise-specific switching diagrams and drawings encompassing:
  - types and application of enterprise-specific switching drawings and documents:
    - wiring and schematic diagrams and switching symbols
    - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams
  - LV system switching diagrams
  - direct current (d.c.) traction supply sectioning diagrams
  - HV transmission and distribution system symbols and feeder plans
  - processes of updating switching diagrams
- power distribution network documentation encompassing:
  - requirements for the use of manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - types and application of power distribution network documentation drawings and documents:
    - wiring and schematic diagrams

- drawings and switching symbols
- mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
- interpretation of different diagrams and documentation on LV and HV systems:
  - overhead distribution extensions
  - underground distribution extensions
  - distribution substations
  - street lighting systems
- layout principles for overhead distribution encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to overhead distribution layout
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components, such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - resources needed for the stringing and maintenance of conductors
  - types of LV and HV overhead electrical conductor connections
  - minimum clearances between overhead conductors and LV and/HV structures
  - estimation of the duration of overhead distribution extension project
- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the surveying for an overhead and underground extension
  - techniques in measuring heights and distances
  - techniques in taking bearings/angles of deviation using a compass
  - techniques in using a clinometer
  - techniques in recording and storage of data
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
  - techniques in plotting long spans:
    - measuring stick, clinometer, trundle wheel and tapes
    - correction for sloping ground
    - distance across objects and range rods

- techniques in pegging pole positions:
  - foot path alignments, types of pegs, pegs of other authorities and locating survey pegs
- fundamentals of computer-aided drafting (CAD) for drafting and layout of distribution extension and upgrades encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the drafting and layouts of distribution extensions and upgrades
  - types of computer hardware and software, tools and equipment for the production of a draft and layout of distribution extension and or upgrade
  - techniques in storing and retrieving programs and files from the computer
  - identification and methods of retrieving and manipulating digital symbols, designs, layouts, fonts and graphs stored in the computer
  - techniques in using the CAD package in following necessary commands and protocols in accordance with the operating instructions of the CAD software manufacturer, such as:
    - using file structure, menu utilisation, system library usage, data banking, achieving, file management and maintenance procedures
  - calculation of dimensions and drafting measurements using the computer
  - techniques in the preparation of preliminary sketches using the computer
  - techniques in using 2-D computer graphics system and associated equipment to produce a distribution extension and/or upgrade draft or layout
  - techniques to diagnosing basic faults in computer operation
- principles to light design layout encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the light design principles
  - requirements for the use of street lighting system construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - types of tariffs and charges
  - types of street lighting components:
    - column types, foundations, brackets, luminaries and mounting heights
  - types of electrical street lighting circuits:
    - types of supply, lighting circuit and control circuit
  - fundamentals of lighting production:
    - electromagnetic spectrum
    - visible and non-visible radiation
    - spectral energy distribution
    - infra-red, ultraviolet (UV), radiation safety, incandescence and phosphorescence
    - reflection and refraction
  - fundamentals of lighting concepts:
    - terms and units
    - purpose of reflectors and diffusers

- factors affecting external lighting design
- calculation of light output
- determining illuminance:
  - point to point method
  - lumen method
- determining rated life of luminaries
- fundamentals of street lighting design
- considerations for special lighting situations:
  - security lighting, hazardous street locations and emergency lighting
- principles to layout and draft a street lighting system encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to street lighting system layouts and drafts
  - requirements for the use of street lighting system construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components, such as equipment, poles and cross-arms
    - costings of items and components
  - purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
  - determination of conductor size, type and route length
  - determination of street lighting positions for optimum visibility and to minimise traffic hazards
  - techniques in mounting and position of lights
  - resources needed for the installation of street lighting system
  - methods of pegging out of pole positions and/or underground cable positions
  - minimum clearances between overhead conductors and LV/and HV structures
  - estimation of the duration of overhead distribution extension project.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry to undertake drafting and layout of a street lighting system.
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDS011 Draft and layout a power system underground distribution extension**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the planning and layout of minor high voltage (HV) and low voltage (LV) underground distribution extensions, including the estimating of the costs and/or resources for the work to be undertaken. It also encompasses on-the-job design, surveying techniques, the pegging and/or marking out of the trench position, the pit/pillar position and the cable position according to the work order and enterprise requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to draft and layout an underground distribution extension**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the work determined for planning and coordination
- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.4** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.5** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
- 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the

job are identified, scheduled and coordinated and confirmed safe and in technical working order

- 1.8** Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
- 1.11** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures
- 1.12** Positioning of road signs, barriers and warning devices is planned in accordance with requirements

## **2 Carry out drafting and layout of an underground distribution extension**

- 2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidence of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
- 2.2** First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
- 2.3** Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
- 2.4** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to the immediate authorised persons for directions according to established procedures
- 2.5** Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
- 2.6** The drafting and layout of an underground distribution extension is carried out in accordance with the work

schedule and requirements and/or established procedures

**2.7** Essential knowledge and associated skills are applied for drafting and layout of an underground distribution extension to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements

**2.8** Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements

**2.9** Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard

**3 Complete drafting and layout of an underground distribution extension**

**3.1** Work undertaken is checked against works schedule for conformance with requirements, anomalies are reported and solutions identified in accordance with established procedures

**3.2** Accidents and/or injuries are reported in accordance with requirements/established procedures

**3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures

**3.4** Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures

**3.5** Relevant work permits are signed off and the job is returned to service and advised to client/customer in accordance with requirements

**3.6** Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETDRDS32 Draft and layout a power system underground distribution extension.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDS011 Draft and layout a power system underground distribution extension

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- drafting at least one (1) of the following:
  - high voltage (HV) multi-phase underground distribution extension plan/layout
  - a low voltage (LV) multi-phase underground distribution extension plan/layout
- laying out at least one (1) of the following:
  - a LV multi-phase underground distribution extension
  - a HV multi-phase underground distribution extension
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of underground cable encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safety precautions specific to the installation of underground cables:
    - excavation and trench safety regulations
    - gas detection procedures
    - working in confined spaces
    - personal protective equipment (PPE)
    - hazards for the use of liquid petroleum gas (LPG) equipment for jointing of underground cables
    - gas bottle testing procedures
    - permit to work systems and isolation procedures

- trench excavation and reinstatement procedures
- installation of underground cable procedures:
  - types of tools and equipment
  - methods of installing conduits
  - methods of installing cables and sealing cable ends (direct buried, ducts cleated and racked)
- procedures for the safe use of LPG equipment for cable jointing
- construction and types of underground cables encompassing:
  - safety precautions specific to handling underground cables
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types and applications of underground cables
  - construction types and structures of underground cables
  - characteristics of different types of underground cables
  - ratings
- enterprise-specific switching diagrams and drawing encompassing:
  - types and application of enterprise-specific switching drawings and documents:
    - wiring and schematic diagrams and switching symbols
    - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams:
    - LV system switching diagrams
    - direct current (d.c.) traction supply sectioning diagrams
    - HV transmission and distribution system symbols and feeder plans
    - processes of updating switching diagrams
- power distribution network documentation encompassing:
  - requirements for the use of manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - types and application of power distribution network documentation drawings and documents:
    - wiring and schematic diagrams, drawings and switching symbols, mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different diagrams and documentation on LV and HV systems:
    - overhead distribution extensions
    - underground distribution extensions
    - distribution substations
    - street lighting systems
- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the

- surveying for an overhead and underground extension
- techniques in measuring heights and distances
- techniques in taking bearings/angles of deviation using a compass
- techniques in using a clinometer
- techniques in recording and storage of data
- requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
- techniques in plotting long spans:
  - measuring stick, clinometer, trundle wheel and tapes
  - correction for sloping ground
  - distance across objects and range rods
- techniques in pegging pole positions:
  - foot path alignments, types of pegs, pegs of other authorities and locating survey pegs
- fundamentals of computer-aided drafting (CAD) for drafting and layout of distribution extension and upgrades encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to the drafting and layouts of distribution extensions and upgrades
  - types of computer hardware and software, tools and equipment for the production of a draft and layout of distribution extension and/or upgrade
  - techniques in storing and retrieving programs and files from the computer
  - identification and methods of retrieving and manipulating digital symbols, designs, layouts, fonts and graphs stored in the computer
  - techniques in using the CAD package in following necessary commands and protocols in accordance with the operating instructions of the CAD software manufacturer, such as:
    - using file structure, menu utilisation, system library usage, data banking, achieving, file management and maintenance procedures
  - calculation of dimensions and drafting measurements using the computer
  - techniques in the preparation of preliminary sketches using the computer
  - techniques in using 2-D computer graphics system and associated equipment to produce a distribution extension and/or upgrade draft or layout
  - techniques to diagnosing basic faults in computer operation
- layout principles for underground mains distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to underground mains distribution extension
  - requirements for the use of underground mains construction manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
  - methods in determining material, equipment and tool lists:
    - components types and quantity required
    - spacing of components and equipment

- costings of items and components
- purchasing and contractual arrangements, including requirements to eliminate WHS/OHS hazards, minimise risks and provide residual WHS/OHS risk information
- determination of conductor size, type and route length
- resources needed for the laying of conductors
- determining the appropriate excavation for the location
- determining the size and depth of excavation
- determining the trench and pit layout procedures
- minimum clearances between conductors
- estimation of the duration of underground distribution extension project.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS012 Investigate quality of power systems supply issues

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the technical investigation of quality of supply issues and recommending solutions. Quality of supply issues may include television and radio interference, voltage complaints, harmonics and system irregularities.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE125A Provide engineering solutions for problems in complex multiple path circuits

UEENEEE126A Provide solutions to basic engineering computational problems

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG149A Provide engineering solutions to problems in complex polyphase power circuits

UETDRDS002 Design overhead distribution power systems

UETDRDS005 Design underground distribution power systems

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

Pathway Unit Group 1

UETDRDS013 Organise and implement ESI line and easement surveys

UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

Pathway Unit Group 2

UETDRDS006 Develop high voltage and low voltage distribution protection systems

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Plan for and coordinate the investigation of issues in the quality of supply**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the investigation of issues in the quality of supply, are reviewed and determined
- 1.2** Purpose of the investigation is established and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Organisational established procedures on policies and specifications for the investigation are obtained or established with appropriate personnel
- 1.4** Equipment/tools and personal protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures

- 1.5 Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
  - 1.6 Risk control measures are identified, prioritised and evaluated against the work schedule
  - 1.7 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.8 Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
  - 1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
  - 1.12 Positioning of road signs, barriers and warning devices is planned in accordance with requirements
- 2 Carry out and coordinate the investigation of issues in the quality of supply**
- 2.1 Circuit/system modelling is used to evaluate alternative proposals in accordance with established procedures
  - 2.2 WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures
  - 2.3 Investigation decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures

- 2.4 Mathematical models of the quality system are used to analyse the effectiveness of the finished product/service in accordance with requirements and established procedures
  - 2.5 Technical advice is given regarding potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures
  - 2.6 Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements
  - 2.7 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
  - 2.8 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.9 Testing of supply quality is undertaken according to requirements and established procedures
- 3 **Complete and coordinate the investigation of issues in the quality of supply**
  - 3.1 Final assessments of the quality of project are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the supply brief
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised
  - 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of quality assessment documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS42 Investigate quality of power systems supply issues.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRDS012 Investigate quality of power systems supply issues

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) technical solutions to issues relating to the following project types:
  - television and radio interference
  - voltage irregularities in an urban area
  - voltage irregularities in a rural area
  - voltage irregularities affecting an industrial/commercial customer
  - voltage irregularities in an underground area
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- detailed operation of fundamental test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters:
    - measurement of voltage, current, power, resistance, insulation resistance, impedance and phase sequence, and the use of oscilloscopes
- detailed operation of field device test equipment encompassing:
  - care and safe use
  - operating principles
  - comparison of different operating principle meters used for the same purpose
  - accuracy and loading effects of meters:

- measurement of voltage, current, power, reactive power, phase angle, resistance, inductance, capacitance, impedance, frequency, harmonics and the use of transient and data logging devices
- quality of supply measures encompassing:
  - measures, analysis and solutions for the following:
    - voltage variation outside of standards
    - voltage sags and swells
    - repeated fluctuations, impulses and momentary interruptions
    - frequency variation and harmonics - causes, effects and methods of minimisation.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry to investigate quality of supply issues
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS013 Organise and implement ESI line and easement surveys

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the surveying of distribution and sub-transmission lines and easements for activities associated with the design and installation of electrical equipment. This activity encompasses the use of instruments, such as compasses, inclinometer and distance measuring devices, in accordance with customer requirements, nominated design specifications and company processes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

| Elements describe the essential outcomes.                                                     | Performance criteria describe the performance needed to demonstrate achievement of the element.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>1 Plan and coordinate the organisation and implementation of line and easement surveys</b> | <p><b>1.1</b> Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures and environmental and sustainable energy procedures, which may influence the organisation and implementation of line and easement surveys, are reviewed and determined</p> <p><b>1.2</b> Purpose of the line and easement surveys is established and expected outcomes of the work are confirmed with appropriate personnel</p> <p><b>1.3</b> Organisational established procedures on policies and specifications for the design are obtained or established with appropriate personnel</p> <p><b>1.4</b> Equipment/tools and personnel protective equipment (PPE) are selected and coordinated based on specified requirements and established procedures</p> <p><b>1.5</b> Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures</p> <p><b>1.6</b> Risk control measures are identified, prioritised and evaluated against the work schedule</p> <p><b>1.7</b> Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures</p> <p><b>1.8</b> Resources, including personnel, equipment, tools and PPE, required for the job are identified, scheduled and</p> |

coordinated and confirmed safe and in technical working order

**1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work

**1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures

**1.11** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures

**1.12** Positioning of road signs, barriers and warning devices is planned in accordance with requirements

**2 Carry out and coordinate the organisation and implementation of line and easement surveys**

**2.1** Circuit/systems modelling is used to evaluate alternative proposals in accordance with established procedures

**2.2** WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures

**2.3** Survey project decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures

**2.4** Mathematical models of the distribution system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures

**2.5** Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures

**2.6** Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance

- specifications to ensure completion of the project within an agreed timeframe according to requirements
- 2.7 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
  - 2.8 Quality of work is monitored against personal performance agreement and/or established organisational and professional standards
  - 2.9 Work teams/groups are arranged/coordinated/evaluated to ensure planned goals are met according to established procedures
- 3 Complete and coordinate the organisation and implementation of line and easement surveys**
- 3.1 Final assessment of the surveys is undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the design brief
  - 3.2 Appropriate personnel are notified of completion and reports and/or completion documents are finalised
  - 3.3 Reports and/or completion documents are submitted to relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval
  - 3.4 Approved copies of survey documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS45 Organise and implement ESI line and

easement surveys.

# Assessment Requirements for UETDRDS013 Organise and implement ESI line and easement surveys

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing six (6) surveys of an overhead network relating to the following project types:
  - multi-pole extensions (distribution and sub-transmission)
  - in-line pole relocations (distribution and sub-transmission)
  - multi-circuit overhead lines (distribution and sub-transmission)
  - underground augmentation project
- completing designs, including:
  - activities that address the correction of errors in the process
  - application of a design control checklist which lists all of the required design activities to be carried out in this process
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- fundamentals of surveying for the purpose of producing an overhead or underground distribution extension encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply and aviation authority regulations and/or enterprise requirements applicable to the surveying for an overhead and underground extension
  - techniques in measuring heights and distances
  - techniques in taking bearings/angles of deviation using a compass
  - techniques in using a clinometer
  - techniques in recording and storage of data

- requirements for the use of overhead line construction manuals, system diagrams/plans and drawings
- techniques in plotting long spans:
  - measuring stick, clinometer, trundle wheel and tapes
  - correction for sloping ground
  - distance across objects and range rods
- techniques in pegging pole positions:
  - foot path alignments, types of pegs, pegs of other authorities and locating survey pegs
- project management encompassing:
  - Commonwealth, state/territory and local government legislation, standards, codes, supply authority regulations and/or enterprise requirements, including relevant certification and licensing applicable to the duties and responsibilities for management of a project
  - analysis functions of project management to determine achievement of project objectives
  - relationship of stakeholders to the project
  - techniques in development of project plan:
    - project integration, scope, timelines, cost, quality, resources, communication/protocol requirements, risk/uncertainties and procurement and contacting
  - relationship between project processes, project life and project phases
  - planning and control procedures, resource management and risk management
  - techniques, methodologies and tools available to project managers
  - types of internal and external environmental factors that may affect the project.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the preparation of detailed plans to be used during the design phase and preparation of as-built drawings during the construction phase and utilised by network owners as technical reference materials to detail system infrastructure. It includes the use of computer-aided drafting (CAD) or other relevant drafting methods.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Design

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan for and coordinate the preparation and management of detailed construction plans for electrical system infrastructure**

- 1.1** Work health and safety (WHS)/occupational health and safety (OHS) practices/procedures, which may influence the preparation and management of detailed construction plans for electrical system infrastructure, are reviewed and determined
- 1.2** Purpose of the construction plans is established and expected outcomes of the work are confirmed with appropriate personnel
- 1.3** Established organisational procedures, policies and specifications for the construction plans are obtained or established with appropriate personnel
- 1.4** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.5** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.8** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work

- |                                                                                                                                      |            |                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>2 Carry out and coordinate the preparation and management of detailed construction plans for electrical system infrastructure</b> | <b>2.1</b> | WHS/OHS and sustainable energy principles, functionality and practices to reduce the incidence of accidents and minimise waste are incorporated into the project in accordance with requirements and/or established procedures                                       |
|                                                                                                                                      | <b>2.2</b> | System design decisions are made on the basis of safety and effective outcomes according to requirements and/or established procedures                                                                                                                               |
|                                                                                                                                      | <b>2.3</b> | Mathematical models of the system are used to analyse the effectiveness of the finished project in accordance with requirements and established procedures                                                                                                           |
|                                                                                                                                      | <b>2.4</b> | Technical advice is given to potential hazards, safety risks and control measures so that monitoring and preventative action can be undertaken and/or appropriate authorities consulted, where necessary, in accordance with requirements and established procedures |
|                                                                                                                                      | <b>2.5</b> | Essential knowledge and associated skills are applied to analyse specific data and compare it with compliance specifications to ensure completion of the project within an agreed timeframe according to requirements                                                |
|                                                                                                                                      | <b>2.6</b> | Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements                                                                                                                     |
|                                                                                                                                      | <b>2.7</b> | Quality of work is monitored against personal performance agreement and/or established organisational and professional standards                                                                                                                                     |
| <b>3 Complete and coordinate the preparation and management of detailed construction plans for electrical system infrastructure</b>  | <b>3.1</b> | Final inspections of the construction plans are undertaken to ensure they comply with all requirements and include all specifications and documentations needed to complete the design brief                                                                         |
|                                                                                                                                      | <b>3.2</b> | Appropriate personnel are notified of completion and reports and/or completion documents are finalised                                                                                                                                                               |
|                                                                                                                                      | <b>3.3</b> | Reports and/or completion documents are submitted to                                                                                                                                                                                                                 |

relevant personnel/organisations for approval and, where applicable, statutory or regulatory approval

- 3.4** Approved copies of construction plan documents are issued and records are updated in accordance with established procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRDS39 Prepare and manage detailed construction plans for electrical power system infrastructure.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDS014 Prepare and manage detailed construction plans for electrical power system infrastructure

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- preparing six (6) compliant detailed plans that relate to the following project types:
  - overhead line designs
  - underground line designs
  - distribution substations designs
  - transmission and sub-transmission substation designs
  - public lighting designs
  - zone substation designs
  - customer substation designs
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- working safely on or around electrical equipment through the application of risk management principles and control measures for dealing with non-electrical hazards and extra-low voltage (ELV), low voltage (LV) and high voltage (HV) hazards and high current hazards encompassing:
  - risk management and assessment of risk:
    - principle and purpose of risk management and the processes for conducting a risk assessment
  - hazards associated with LV, ELV and HV:
    - arrangement of power distribution and circuits in an electrical installation

- parts of an electrical system and equipment that operate at LV and ELV
- parts of an electrical system and equipment where high currents are likely
- risks and control measures associated with HV:
  - parts of an electrical system and equipment that operate at HV
  - the terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of HV and control measures used for dealing with the hazards of HV
- optical fibre safety:
  - coherent optical sources, joining procedures and laser safety class 3a devices or their replacement
- risks and control measures associated with LV:
  - modifying electrical installations, fault finding, maintenance and repair
  - control measures before, during and after working on electrical installations, circuits or equipment
  - isolation and tagging-off procedures
  - risks and restrictions of live work
  - control measures for live work
- risks and control measures associated with harmful dusts and airborne contaminants:
  - thermal insulation, fibrous cement materials and asbestos and other fibre reinforced switchboard materials
- safety, selection, use, maintenance and care of test equipment:
  - safety characteristics of electrical testing devices
  - safe use of electrical testing device
  - checks and storage methods for maintaining the safety of testing devices
- WHS/OHS enterprise responsibilities encompassing:
  - provisions of relevant WHS/OHS legislation
  - principles and practice of effective WHS/OHS management
  - management arrangements relating to regulatory compliance
  - enterprise hazards and risks, control measures and relevant expertise required
  - characteristics and composition of workforce and their impact on WHS/OHS management
  - relevance of enterprise management system to WHS/OHS management
  - analysis of working environment and design of appropriate WHS/OHS management systems
  - analysis of relevant data and evaluation of WHS/OHS system effectiveness
  - assessing resources to establish and maintain WHS/OHS management systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system:
    - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions

- characteristics of a transmission, distribution and rail system:
  - principal components
  - typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
- relationship between an overhead and underground supply systems within an overall power system:
  - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
- single line drawings and layouts:
  - drawings and layouts of transmission and distribution systems, including radial, parallel and ring main feeders and the HV equipment associated with substations
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings:
    - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub-transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors:
    - types of LV and HV overhead electrical conductor connections
    - causes and effects of poor electrical connections
    - reasons for and methods used to maintain standard phase sequencing, removing, repairing and replacing of damaged conductors
    - minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation:
    - types and application of tools, equipment and hardware
    - methods of stringing, tensioning and termination of LV and HV conductors
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework:
    - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders:
    - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole
    - maintenance checks on different types of ladders
    - renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft:
    - methods used to identify a pole is safe to climb
    - methods used to inspect a line worker's body belt

- application of knots and hitches appropriate to the requirements of a line worker
- height safety principles, including personal fall protection, prevention and related requirements
- practical procedures of climbing an overhead structure and fitting a pole chair
- traffic management:
  - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry requirements
  - procedures used to provide an effective traffic management scheme and the use of a two-way radio
- control of small fires:
  - identification, selection and operation of the appropriate extinguishing mediums for various types of fires
  - general fire prevention methods
  - precautions for personal protection when fighting small fires
- rescue victims from heights and confined spaces:
  - planning and identifying procedures, and establishing responses and developing techniques
  - involvement of external emergency services
  - emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework:
  - planning, establishing and implementing relevant aviation authority clearances
  - determining system requirements
  - aircrew familiarisation with network operations and equipment
  - requirements for effective communications operations for aerial work
- implementation and monitoring requirements for powerline safety encompassing:
  - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of WHS/OHS in the workplace:
  - Commonwealth/state/territory legislation relevant to the workplace and the meaning of general duty of care under WHS/OHS legislation and common law
  - workplace WHS/OHS enterprise plan:
    - responsibilities of each member of the work team
    - review process for changing/improving WHS/OHS safety plan/standing instructions for the systematic management of WHS/OHS in the workplace
  - relationship between the WHS/OHS committee and employees:
    - methods used to collate and distribute/disseminate WHS/OHS information
    - staff development activities and legislation requirements with regards to WHS/OHS training
    - methods of addressing barriers such as literacy and cultural differences
    - provisions relating to WHS/OHS issue resolution
  - hazards associated with powerline industry:

- identification of hazards in the workplace
- processes used and contributing factors to a hazardous situation assessment of risks and control of WHS/OHS risks (risk management),
- the hierarchy of control and monitoring of risk control measures
- risk assessment and its management in powerline industry:
  - principles and purposes of risk management
  - processes for conducting risk assessment, including risk analysis and risk evaluation activities for selecting and implementing appropriate options for eliminating or minimising risk
- maintenance strategies for WHS/OHS programs:
  - developing processes for promoting, maintaining and improving WHS/OHS in the workplace
  - identify techniques for the evaluating and reviewing WHS/OHS education and training programs and elements of an effective WHS/OHS management system
  - WHS/OHS consultation and accident/incident investigations
- principles of safe design encompassing:
  - Commonwealth/state/territory legislation, standards, codes, supply authority regulations and/or enterprise requirements associated with safe design principles
  - particular reference to state and territory regulations regarding working near energised conductors, electrical access, heights, confined space, testing procedures and licensing rules
  - application of safe design principles:
    - safe design duty-related information
    - safe design process related information and safe design evaluations
- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- enterprise-specific switching diagrams and drawing encompassing:
  - types and application of enterprise-specific switching drawings:
    - wiring and schematic diagrams and switching symbols
    - mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams:
    - LV system switching diagrams
    - direct current (DC) traction supply sectioning diagrams
    - HV transmission and distribution system symbols and feeder plans
    - processes of updating switching diagrams
- power distribution network documentation encompassing:

- requirements for the use of manuals, system diagrams/plans and drawings and for plans such as work method statements for the control of WHS/OHS risks
- types and application of power distribution network documentation drawings and documents:
  - wiring and schematic diagrams
  - drawings and switching symbols
  - mechanical drawings dealing with the power distribution network, project charts, schedules, graphs, technical manuals and catalogues, and instructions/worksheets
- interpretation of different diagrams and documentation on LV and HV systems:
  - overhead distribution extensions
  - underground distribution extensions
  - distribution substations
  - street lighting systems
- system components and layouts encompassing:
  - distribution system layouts:
    - overhead/underground
    - urban/rural
    - HV customers
    - high-rise building systems
    - three phase lines and single phase lines
    - SWER systems
    - spur, parallel and ring systems
    - typical substation types
  - transmission system layouts:
    - lines, buses, transformers and cables
    - line/bus layouts, including single, double, ring and breaker, and half systems
    - HV crossing methods
- circuit breaker auxiliary systems encompassing:
  - types and characteristics of high-pressure air systems, including air storage and air handling processes
  - types and characteristics of DC systems, including battery types, charging systems and protection systems
  - types and characteristics of special ambient gases (SF6) systems, including gas conditioning, storage and handling systems
  - types and characteristics of vacuum interrupters
  - types and characteristics of oil filled and oil handling
- DC transmission systems encompassing:
  - structure of DC transmission systems
  - types of equipment required for DC transmission systems
  - types of connections used for DC transmission systems

- principles of control of DC transmission systems
- advantages of DC transmission in comparison to alternating current (AC) transmission
- disadvantages of DC transmission in comparison to AC transmission
- AC transmission line electrical parameters encompassing:
  - typical arrangements
  - parameters of significance
  - calculation of line parameters:
    - calculation of resistive, inductive and capacitive values assuming regular transposition and solid conductors
  - comparison with actual values
  - typical parameter values and ratios for different voltage level lines
- AC transmission line models encompassing:
  - types of transmission line models based on line length
  - calculation of voltage drop, line regulation and transmission efficiency
  - load sharing between lines
- voltage control techniques encompassing:
  - conditions leading to voltage collapse
  - effects on system of HV and LV
  - voltage control devices:
    - voltage regulators applied to generators and synchronous phase modifiers
    - electromagnetic voltage regulators
    - series and parallel capacitors
    - on-load tap changer (OLTC) transformers and static VAR compensators (SVC) - SVC's include saturated reactor compensators; thyristor controlled reactor compensators and combined systems
  - production of harmonics and methods of harmonic control
  - location of voltage control devices within the system
- voltage control devices encompassing:
  - typical devices applications and capacities
  - estimation of rating of VAR regulating devices using graphical techniques
- corona encompassing:
  - factors leading to the generation of corona:
    - voltage levels
    - conductor spacings, conductor sizes and shaping
    - atmospheric conditions
  - consequences of corona
  - corona reduction:
    - conductor selection
    - conductor bundling
    - conductor surface treatment

- grading rings
- internal discharge:
  - causes of internal discharge
  - effects of internal discharge
  - testing techniques
- protection system types encompassing:
  - requirements of a protection scheme:
    - relationship to primary system design
    - purpose of protection, safety of persons and protection of plant
    - system instability
    - system break up
    - loss of customers and loss of revenue
    - protection zones
    - restricted schemes and unrestricted schemes
    - duplicate protection
    - local backup protection and remote backup protection
    - selectivity, discrimination, stability, sensitivity and reliability
  - components of a protection scheme:
    - current transformers, potential transformers, summation current transformers, interposing transformers and multi-tapped transformers
    - all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor-based relays and gas relays
    - thermal sensors
    - hardwired communication
    - powerline carrier systems
    - microwave systems
    - fibre optic systems
    - need for isolation
    - need for interfacing
  - protection applied to buses:
    - overload, differential, earth leakage, structure leakage, combined schemes and protection overlap
  - protection applied to transformers:
    - biased differential, gas, winding temperature and oil temperature
  - protection applied to single/radial lines:
    - overcurrent, earth leakage, slow earth leakage, distance, auto reclose, sectionalising and over voltage
  - protection applied to interconnected lines:
    - overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance and offset.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry for detailed construction plans for electrical system infrastructure
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDU001 Conduct high voltage testing of underground power cable system**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to conduct high voltage (HV) testing of an electricity supply industry (ESI) underground power system.

It includes testing using direct current (d.c.) or alternating current (a.c.) voltage methods to identify cable system defects.

It also includes interpreting the test results to determine the integrity of the cable system.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL005 Work safely in the vicinity of live electrical apparatus

## **Competency Field**

Distribution Underground

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to conduct HV testing of underground power cable system**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work instruction is obtained and confirmed in accordance with workplace requirements
- 1.3** Work is prioritised and sequenced for completion in accordance with work instruction and workplace requirements
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work permits are organised in accordance with workplace requirements
- 1.6** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.7** Testing method is determined and appropriate test equipment is obtained and confirmed in working order in accordance with the work instruction and workplace requirements
- 1.8** Worksite is prepared in accordance with the work instruction and workplace requirements
- 1.9** Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### **2 Carry out the testing of a HV underground power cable system**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working in confined spaces and the use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements

- 2.4 Test equipment is positioned, set up for testing and confirmed to be operating correctly
- 2.5 Cable is confirmed de-energised in accordance with workplace requirements
- 2.6 Work permits are received and signed in accordance with workplace requirements
- 2.7 Cable is prepared for testing and test equipment connected to the cable in accordance with workplace requirements
- 2.8 Cable system is tested to determine the integrity of the system in accordance with workplace requirements
- 2.9 Incidents or unplanned events are responded to in accordance with workplace requirements
- 3 **Complete work and documentation**
  - 3.1 Completed work is checked for compliance against the work instruction and workplace requirements
  - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 3.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 3.5 Work permits are signed off in accordance with workplace requirements
  - 3.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector

Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI59 Conduct high potential testing of power system underground power cables.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU001 Conduct high voltage testing of underground power cable system

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - handling underground power cables
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- using at least one (1) of the following cable testing methods:
  - insulation resistance (IR)
  - very low frequency (VLF) alternating current (a.c.) withstand or monitored withstand
  - direct current (d.c.) withstand
- completing at least three (3) of the following cable tests:
  - sheath integrity
  - core insulation resistance
  - tan delta
  - partial discharge
  - high voltage (HV) withstand (VLF a.c.)
  - HV withstand (d.c.)
- analysing the testing result to determine the integrity of the cable system
- using testing equipment in accordance with workplace requirements
- recording test results in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - working in confined spaces
  - trench safety
  - manual handling
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- work instruction requirements, including:
  - types of and layout of drawings
  - cable routes
  - manufacturer's instructions
  - testing standards
  - workplace documentation procedures
- HV paper insulated and polymeric cables, including:
  - types and sizes
  - construction, characteristics and properties
  - minimum bending radius
- HV testing requirements, including:
  - cable handling techniques
- types of and causes of cable defects, including:
  - poor jointing techniques (joints and terminations)
  - cracking or rupturing of cross-linked polyethylene (XLPE) or paper cable insulation
  - insulation porosity or other material defects
  - impurity inclusion or other contaminants in the main insulation
  - internal voids either in main insulation or in joints and terminations
  - water treeing
  - electrical trees
  - protrusions in the semi-conductive layers
  - insulation surface scratches or scoring
  - overheating by excess current

- insulation damage due to voltage transients
- mechanical damage to the outer sheath
- HV testing methods
- advantages and disadvantages of different HV testing methods
- HV failure of insulation
- use of HV testing equipment
- HV testing procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used for conducting HV testing of underground power cable system
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and manufacturer's instructions.

# UETDRDU002 Inspect underground electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Application

This unit involves the skills and knowledge required to inspect underground electrical apparatus in the electricity supply industry (ESI).

It includes visually inspecting and identifying defective, damaged or faulty electrical apparatus and reporting inspection outcomes.

It also includes determining the cause of defective, damaged or faulty electrical apparatus.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace and

UETDREL005 Work safely in the vicinity of live electrical apparatus

or

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Prepare to inspect underground electrical apparatus**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.6** Liaison and communication with stakeholders is carried out in accordance with workplace requirements
- 1.7** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.8** Traffic management plan is confirmed as being in place in accordance with workplace requirements

**2 Carry out inspection of underground electrical apparatus**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** The use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Underground electrical apparatus is visually inspected in accordance with work plan and workplace requirements
- 2.5** Underground electrical apparatus defect or damage is identified in accordance with workplace requirements
- 2.6** Underground electrical apparatus defect or damage cause is determined
- 2.7** Incidents or unplanned events are responded to in

- accordance with workplace requirements
- 3 Complete work and documentation**
- 3.1** Completed work is checked for compliance against the work plan and workplace requirements
- 3.2** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3** Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.4** Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This is a new unit. No Equivalent Unit.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU002 Inspect underground electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- inspecting underground electrical apparatus, including:
  - transformers
  - switchgear
  - pole mounted cable and cable terminations
  - pillars
  - switchboards
  - earthing systems
- identifying underground electrical apparatus defects and damage
- determining the cause of underground electrical apparatus defects and damage
- using software applications or workplace documents for:
  - accessing and verifying existing data
  - capturing or recording data
  - categorising and recording defects
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice, and organisational workplace requirements, including:

- WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- construction manuals, system diagrams/plans and drawings
- procedures for workplace records, reports and documentation
- types, function and operation of underground electrical apparatus, including:
  - transformers
  - switchgear
  - pole mounted cable and cable terminations
  - pillars
  - switchboards
  - earthing systems
- installation requirements for underground electrical apparatus, including:
  - construction
  - connection
  - earthing
- types and causes of underground electrical apparatus defects and damage.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for inspecting underground electrical apparatus.
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDU003 Install and maintain gas and oil pressure systems for specialised underground cables**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the installation, maintenance and repair of oil and gas pressure systems for specialised underground cables. It includes the undertaking of pressure control activities, the installation of gauges, oil tanks and gas cubicles. It also includes knowledge of oil route profiles as well as the operation of pressure equipment for jointing works, and the repairing and replacing of pressure systems. It also encompasses the procedures associated with performing accessory impregnation, oil flow testing, the processes for oil degasification and performing leak location of pressure systems.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDRDU009 Install, test and verify distribution underground cable installations

UETDRDU012 Joint, terminate and maintain high voltage underground paper insulated cable

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDRDU016 Lay power cables

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare/plan to install and maintain oil and gas pressure systems for specialised underground cables**

- |            |                                                                                                                                                                                                                                                                       |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained, analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination                   |
| <b>1.2</b> | Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures                                    |
| <b>1.3</b> | Risk control measures are identified, prioritised and evaluated against the work schedule                                                                                                                                                                             |
| <b>1.4</b> | Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites                                                                                                                                      |
| <b>1.5</b> | Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according |

to established procedures

- 1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.8 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
- 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
- 1.12 Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements

## **2 Carry out the installation and maintenance of oil and gas pressure systems for specialised underground cables**

- 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
- 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
- 2.3 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
- 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to

- immediate authorised personnel for directions according to established procedures
- 2.5** Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
- 2.6** Installation and/or maintenance of oil and gas pressure systems for specialised underground cables are carried out in accordance with the work schedule and requirements and/or established procedures
- 2.7** Essential knowledge and associated skills are applied in the safe installation and/or maintenance of oil and gas pressure systems for specialised underground cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
- 2.8** Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.9** Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
- 3 Complete the installation and maintenance of oil and gas pressure systems for specialised underground cables**
- 3.1** Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
- 3.2** Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
- 3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
- 3.4** Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5** Relevant work permits are signed off and underground cables are returned to service and advised to client/customer in accordance with requirements

- 3.6** Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ32 Install and maintain gas and oil pressure systems for specialised underground cables.

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU003 Install and maintain gas and oil pressure systems for specialised underground cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining oil and gas filled pressure systems
- using all of the following oil and gas processing and control equipment:
  - gas analyser/detector
  - cable freezing equipment
  - accessory impregnation equipment
  - oil degasification plant
  - manometers
  - flow boards
  - vacuum pumps
  - site bottles
  - gas cylinders
  - liquid nitrogen cylinders
  - pressure/vacuum meters
  - oil evacuation pumps
  - oil and gas piping equipment
  - oil sampling equipment
- using all of the following gas processing and control equipment:
  - gas control cubicles
  - oil control cubicles
  - oil degasification units
  - oil pressure tanks
- undertaking jointing and terminating of oil or gas filled specialised underground cables
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the working with oil or gas filled specialised underground cables
  - types of oil or gas filled specialised underground cables - properties of paper insulation, oil and nitrogen gas, construction, reasons for gas and/or oil filled, characteristics and capabilities of the cable, pressure/volume characteristics of oil and gas, and precautions when handling
  - types and functions of tools and equipment used on oil or gas filled specialised underground cables
  - techniques when handling, storing and disposing of oil or gas filled specialised underground cables
- installation of oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the installation of oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE), including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - types, function and serviceability of tools and equipment used for the installation of oil or gas filled specialised underground cables
  - techniques in the safe installation of oil or gas filled specialised underground cables
  - techniques in the safe testing/inspection of the oil or gas filled specialised underground cables to ensure successful installation has occurred
- jointing and termination of oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to working with oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE, including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - types, function and serviceability of tools and equipment used for the jointing and terminating of oil or gas filled specialised underground cables

- techniques in the safe jointing and terminating oil or gas filled specialised underground cables
- techniques in the safe testing of the oil or gas filled specialised underground cables to ensure successful jointing and/or termination has occurred
- maintenance of oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the maintenance of oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE, including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - safe storage and disposal of oil or gas filled specialised underground cables and associated equipment and components
  - types, function and serviceability of tools and equipment used for the maintenance of oil or gas filled specialised underground cables
  - techniques in the safe maintenance of oil or gas filled specialised underground cables
  - techniques in the safe testing/inspection of the oil or gas filled specialised underground cables to ensure successful maintenance has occurred
- oil and gas pressurised systems for specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of oil and gas pressurised systems
  - safe storage and disposal of oil or gas pressurised equipment and associated components
  - requirements for the use of manuals, system diagrams/plans, drawings, charts and layouts
  - characteristics, application and care of hand and specialised tools
  - techniques in determining route profiles and access locations
  - pressure system characteristics for oil filled and gas filled cables
  - techniques in the safe installation of oil and gas pressurised systems
  - techniques in the safe maintenance of oil and gas pressurised systems
  - techniques in the safe use of tools and equipment in the process of installation and maintenance of oil and gas pressurised systems - gas analyser/detector, manometers, flow boards, cable freezing equipment, accessory impregnation equipment, oil degasification plant, manometers, flow boards, vacuum pumps, site bottles, gas cylinders, pressure/vacuum meters, oil evacuation pumps, Residual Gas Pressure (RGP) equipment, oil sampling equipment, gas control cubicles, oil control cubicles, cable joints and terminations, oil degasification units and oil pressure tanks
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations

- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relations, and complaint and issues procedures
- overview of enterprise professional development - fire-fighting procedures, fatigue management, training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDU004 Install and maintain network infrastructure HV underground cables**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the installation and maintenance of de-energised high voltage (HV) underground cables and covers the laying of cables as well as the jointing, terminating, repair and replacement of cables. It includes direct laying of cables in trenches, on racks, in troughs and/or in conduit or ducts, and the isolation of systems and circuits, the procedure of issuing/accepting electrical access permits, the undertaking of pre-commissioning and/or recommissioning tests and the updating of system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDRDU005 Install and maintain network infrastructure LV underground cables

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRIS009 Install and maintain ESI network infrastructure electrical equipment

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Prepare the laying, installation and maintenance of de-energised HV underground cables**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection
- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and

identified for all worksites

- 1.3** Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the laying, installing and maintenance of HV underground cables are obtained and confirmed for the purposes of the work to be performed and communicated to relevant personnel
- 1.4** Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
- 1.5** Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
- 1.6** Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed in working order
- 1.8** Relevant personnel at worksite are confirmed current in first aid and other related work procedures according to requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved to carry out work, where necessary
- 1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.11** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
- 1.12** Road signs, barriers and warning devices are positioned in accordance with requirements

## **2 Carry out the laying, installation and**

- 2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and

## **maintenance of HV underground cables**

minimise waste are monitored and followed in accordance with requirements and/or established procedures

- 2.2 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements confirmed
- 2.3 Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures
- 2.4 Essential knowledge and associated skills are applied in the safe installation and maintenance of HV underground polymeric cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
- 2.5 Electrical cables are laid in accordance with the work schedule and requirements/established procedures
- 2.6 De-energised HV underground cables are installed according to the work schedule and requirements/established procedures
- 2.7 Maintenance, including repair and/or replacement of de-energised HV underground cables, is carried out in accordance with the work schedule and requirements/established procedures
- 2.8 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
- 2.9 Unplanned events in the installation and maintenance of HV underground cables are undertaken within the scope of established procedures
- 2.10 Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
- 2.11 Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures

## **3 Complete the laying, installation and maintenance of HV**

- 3.1 Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures

## **underground cables**

- 3.2** Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
- 3.3** Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
- 3.4** Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5** Relevant work permits are signed off and HV underground cables are returned to service in accordance with requirements
- 3.6** Work completion records, reports, as installed/modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRCJ34 Install and maintain network infrastructure HV underground cables.

## **Links**

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU004 Install and maintain network infrastructure HV underground cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- laying at least one (1) of the following cable types:
  - high voltage (HV) polymeric
  - HV paper insulated
- laying HV cables using at least one (1) of the following installation methods:
  - direct lay
  - on racks
  - in conduits
- laying HV cables using at least one (1) cable pulling method of the following:
  - stocking pulling
  - bond pulling
  - armour pulling
  - nose pull attachments
- sealing HV cables using at least two (2) of the following cable sealing methods:
  - heat shrinkable
  - pre-stretched materials
  - tin/lead wiping
  - pre-moulded components
- cutting HV cables using at least one (1) of the following cable cutting methods:
  - hydraulic cutters
  - electric reciprocating
  - motorised
  - hand tools
- laying HV cables using at least four (4) of the following supporting plant and equipment:

- drum jacks
- winches
- spindles
- capstans
- bollards
- cable trailers
- rollers
- lubricants
- ropes
- bell mouths
- draw wires/rods
- joining HV cables using at least two (2) of the following jointing methods:
  - tee-off joints
  - straight through joint
  - parallel branch joint
  - parallel joint
- incorporating at least one (1) of the following:
  - transformers
  - ring main units
  - chamber substations
- incorporating at least one (1) of the following:
  - busbar/termination boxes
  - links/fuses
  - termination boxes
  - control gear
  - circuit breakers
- jointing and terminating HV cables using at least two (2) of the following material types:
  - resin filled boxes
  - compound filled boxes
  - polymeric tape
  - heat shrink
  - 'slip-on' moulds
  - pre-stretched polymeric
- testing HV cables using all the following testing and recording equipment:
  - insulation resistance testers
  - voltage detectors
- incorporating all the following:
  - cable identification devices
  - cable spiking devices

- incorporating at least two (2) of the following:
  - mechanical connectors
  - compression connectors
  - lugs
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of HV underground polymeric cables
- requirements for the use of enterprise construction manuals, system diagrams/plans and drawings encompassing:
  - characteristics of different types of cables and components
  - purpose of stress control
  - applications of various tools and equipment for HV jointing
- procedure for isolating HV underground cables encompassing:
  - method for proving safe to work
  - earthing procedures
- techniques in jointing HV underground polymeric cable encompassing:
  - short circuit cores and seal cable
  - straight through
  - trifurcating
- techniques in HV terminations encompassing:
  - pole top termination
  - substation/switchgear termination
  - ABC termination
  - telcon termination
- procedures for repairing HV underground cables encompassing:
  - location of faults
  - types of damage
  - techniques to repairs to sheath
  - techniques to repairs to core.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDU005 Install and maintain network infrastructure LV underground cables**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the installation and maintenance of de-energised low voltage (LV) underground cables and covers the laying of cables as well as the jointing, terminating, repair and replacement of cables. It also includes direct laying of cables in trenches, on racks, in troughs and/or in conduit or ducts; and the isolation of systems and circuits, the procedure of issuing/accepting electrical access permits, the undertaking of pre-commissioning and/or recommissioning tests and the updating of system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

UETDRIS009 Install and maintain ESI network infrastructure electrical equipment

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare for the laying, installation and maintenance of underground cables**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection
- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites

- 1.3 Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the laying, installing and maintenance of LV underground cables are obtained and confirmed for the purposes of the work to be performed and communicated
  - 1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
  - 1.5 Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
  - 1.6 Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
  - 1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are obtained and confirmed to be in working order
  - 1.8 Relevant personnel at worksite are confirmed current in first aid and other related work procedures according to requirements
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved to carry out work where necessary
  - 1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
  - 1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed where applicable in accordance with established procedures
  - 1.12 Road signs, barriers and warning devices are positioned in accordance with requirements
- 2 Carry out the laying, installation and maintenance of LV**
- 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in

|                                                                                     |                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>underground cables</b>                                                           | accordance with requirements and/or established procedures                                                                                                                                                                                      |
| <b>2.2</b>                                                                          | Lifting, climbing, working in confined spaces and working aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency checked according to requirements confirmed                                       |
| <b>2.3</b>                                                                          | Systems and circuits are isolated as required, proved safe to work on in accordance with the requirements/permits and established procedures                                                                                                    |
| <b>2.4</b>                                                                          | Essential knowledge and associated skills are applied for the safe installation and maintenance of LV underground cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements |
| <b>2.5</b>                                                                          | Electrical cables are laid in accordance with the work schedule and requirements/established procedures                                                                                                                                         |
| <b>2.6</b>                                                                          | De-energised LV underground cables are installed according to the work schedule and requirements/established procedures                                                                                                                         |
| <b>2.7</b>                                                                          | Maintenance, including repair and/or replacement of de-energised LV underground cables, is carried out in accordance with the work schedule and requirements/established procedures                                                             |
| <b>2.8</b>                                                                          | Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures                                                        |
| <b>2.9</b>                                                                          | Unplanned events in the laying, installing and carrying out the maintenance of LV underground cables are undertaken within the scope of established procedures                                                                                  |
| <b>2.10</b>                                                                         | Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills                                                                                                                                   |
| <b>2.11</b>                                                                         | Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures                                                                                                                                 |
| <b>3 Complete the laying, installation and maintenance of LV underground cables</b> | <b>3.1</b> Work undertaken is checked against work schedule for conformance with requirements and anomalies reported in accordance with established procedures                                                                                  |

- 3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable
- 3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
- 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5 Relevant work permits are signed off and LV underground cables are returned to service in accordance with requirements
- 3.6 Work completion records, reports, drawings and/or documentation and information are finalised and processed, and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ33 Install and maintain network infrastructure LV underground cables.

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU005 Install and maintain network infrastructure LV underground cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- laying at least one (1) of the following low voltage (LV) cable types:
  - LV polymeric
  - LV paper insulated
- laying LV cables using at least one (1) of the following installation types:
  - direct lay
  - on racks
  - in conduits
- laying LV cables using at least one (1) of the following cable pulling methods:
  - stocking pulling
  - bond pulling
  - armour pulling
  - nose pull attachments
- sealing LV cables using at least two (2) of the following cable sealing methods:
  - heat shrinkable
  - pre-stretched materials
  - tin/lead wiping
  - pre-moulded components
- cutting LV cables using at least one (1) of the following cable cutting methods:
  - hydraulic cutters
  - electric reciprocating
  - motorised
  - hand tools
- laying LV cables using at least four (4) of the following supporting plant and equipment:

- drum jacks
- winches
- spindles
- capstans
- bollards
- cable trailers
- rollers
- lubricants
- ropes
- bell mouths
- draw wires/rods
- joining LV cables using at least two (2) of the following jointing methods:
  - tee-off joints
  - straight through joints
  - parallel branch joints
  - parallel joints
- terminating LV cables in/on at least two (2) of the following locations:
  - transformers
  - LV switchboards
  - pillars/turrets
  - lighting columns
  - ring main units
  - chamber substations
- terminating LV cables using at least two (2) of the following types of equipment:
  - busbar/termination boxes
  - links/fuses
  - disconnect boxes
  - termination boxes
  - control gear
  - underground/overhead terminations
  - circuit breakers
- jointing and terminating LV cables using at least one (1) of the following material types:
  - resin filled boxes
  - compound filled boxes
  - polymeric tape
  - heat shrink
  - 'slip-on' moulds
  - pre-stretched polymeric
- terminating LV cables using at least one (1) of the following connectors:

- compression lugs
- welded connections
- mechanical connectors
- insulation piercing connectors
- testing LV cables using all of the following testing and recording equipment:
  - insulation resistance testers
  - voltage detectors
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram; how they correlate and their functions
  - characteristics of a transmission, distribution and rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the HV equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of high voltage (HV) equipment within the substation and auxiliary equipment
  - characteristics of a power transformer - basic construction of distribution transformers; operation under load/no-load conditions; types and basic operation of tap changing switches, including solid state types, efficiency and cooling
  - auxiliary equipment used on transformers - function and basic operation of equipment
  - maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, and testing and fault-finding procedures
  - description, purpose and characteristics of a reactors
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different

types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors

- requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
- traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedure used to provide an effective traffic management scheme and the use of a two-way radio
- control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires, general fire prevention methods and the precautions for personal protection when fighting small fires
- rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- procedures in providing store support encompassing:
  - classification and identification of equipment, components and tools
  - procedures for purchasing/ordering items, removing/dispatching items, stocktaking, security and bookkeeping/record keeping
  - material handling - warehouse/depot storage techniques, handling equipment, pallet lift trucks and forklifts
  - cable drum handling equipment
  - safety procedures - storage and care of safety equipment; handling hazardous materials; storage of hazardous substances and dangerous goods; depot safety procedures; manufacturer and supplier information, including material safety data sheets (MSDS)
- installation of underground cable encompassing:
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safety precautions specific to the installation of underground cable - excavation and trench safety regulations, gas detection procedures, working in confined spaces, personal protective equipment (PPE), hazards for the use of liquid petroleum gas (LPG) equipment for jointing of underground cable, gas bottle testing procedures, permit to work systems and isolation procedures
  - trench excavation and reinstatement procedures
  - installation of underground cable procedures - types of tools and equipment, methods of installing conduits, methods of installing cables and sealing cable ends (direct buried,

- ducts cleated and racked)
- procedures for the safe use of LPG equipment for cable jointing
- LV polymeric cable jointing principles encompassing:
  - techniques in jointing LV cross-linked polyethylene (XLPE) cables - straight through joint, jointing different types of cable and service and street light cable joints
  - techniques in terminating LV XLPE - pole top terminations, substation terminations, distribution pillar /column/cubicle terminations and service and street light cable terminations
  - techniques in repairing LV XLPE cable - different types of damage, repairs to sheath and repairs to cores
  - methods of testing cable after jointing
- jointing and termination of LV polymeric cable encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements pertaining to the jointing of LV polymeric cables
  - types of cables - single core, multi-core and XLPE insulation
  - methods of cable handling - direct laid cables, duct laid cables, solid laid cables and cables supported in cleats or hangers
  - corrosion protection
  - minimum bending radius of cables
  - methods of cable sealing - shorting of cables cores and core of un-terminated cables
  - methods of protection from corrosion
  - polymeric sheathed cables sealing with mastic lined
  - heat shrink caps buried sealed ends
  - types of jointing tools - general hand tools and compression tools
  - techniques in the use of LPG - safety precautions, PPE, general maintenance and repair
  - safety precautions when cable jointing -working in confined spaces; permit to work systems and isolation procedures; and emergency rescue/response, including first aid
- underground cables construction and types encompassing:
  - safety precautions specific to handling underground cables
  - requirements for the use of enterprise manuals, system diagrams/plans and drawings
  - types and applications of underground cables
  - construction types and structures of underground cables
  - characteristics of different types of underground cables
  - ratings.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDU006 Install and maintain polymeric specialised underground cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the installation, maintenance and repair of polymeric specialised underground cables, including cross-linked polyethylene (XLPE) and ethylene propylene rubber (EPR) above 33 kV. It includes jointing and terminating, as well as working under induced voltages and undertaking the relevant tests required for jointing. It also encompasses the preparation of the cable jointing bay, the preparation of cables and phasing out, cable identification and spiking, and the treatment/handling of, but not jointing fibre optical cables.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDRDU009 Install, test and verify distribution underground cable installations

UETDRDU012 Joint, terminate and maintain high voltage underground paper insulated cable

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDRDU016 Lay power cables

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to install and maintain polymeric specialised underground cables**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                                                                                                                                                                                                                                 |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination                                          |
| <b>1.2</b> | Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites                                                                                                                                                                |
| <b>1.3</b> | Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures |
| <b>1.4</b> | Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures                                                              |
| <b>1.5</b> | Risk control measures are identified, prioritised and evaluated against the work schedule                                                                                                                                                                                                       |

- 1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.8 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
  - 1.11 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
  - 1.12 Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
- 2 **Carry out the installation and maintenance of polymeric specialised underground cables**
  - 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
  - 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according

to established procedures

- 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
- 2.6 Installation and/or maintenance of polymeric specialised underground cables is carried out in accordance with the work schedule and requirements and/or established procedures
- 2.7 Essential knowledge and associated skills are applied in the safe installation and/or maintenance of polymeric specialised underground cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
- 2.8 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.9 Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard

### **3 Complete the installation and maintenance of polymeric specialised underground cables**

- 3.1 Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
- 3.2 Accidents and/or injuries are reported in accordance with requirements/established procedures
- 3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
- 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5 Relevant work permits are signed off and underground cables are returned to service and advised to client/customer in accordance with requirements
- 3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are

confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ31 Install and maintain polymeric specialised underground cables.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU006 Install and maintain polymeric specialised underground cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining at least one (1) of the following specialised 33 kV and above cable types:
  - cross-linked polyethylene (XLPE) cables
  - ethylene propylene rubber (EPR) cables
- undertaking jointing and terminating including all of the following:
  - straight through joints
  - terminations
- using at least three (3) of the following specialised cable installation equipment:
  - winches
  - caterpillars
  - rollers
  - bond lines
  - nose pull devices
  - drum jacks
- connecting cable conductors using at least two (2) of the following:
  - compression lugs
  - welded connections
  - mechanical connectors
- using cable terminating materials including at least two (2) of the following:
  - compound and resin filled boxes
  - air boxes
  - gas filled boxes
  - polymeric tape
  - polymeric heat shrink

- slip-on moulds
- pre-stretched polymeric materials
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- polymeric specialised underground cables principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the working with polymeric specialised underground cables
  - types of polymeric specialised underground cables – construction, characteristics and capabilities of the polymeric specialised cable, pressure/volume characteristics of oil and gas, and precautions when handling
  - types and functions of tools and equipment used on polymeric specialised underground cables
  - techniques when handling polymeric specialised underground cables
- installation and maintenance of polymeric specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the installation and maintenance of polymeric specialised underground cables
  - safety precautions of working with polymeric specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE); authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - types, function and serviceability of tools and equipment used for the installation of polymeric specialised underground cables
  - techniques in the safe installation of polymeric specialised underground cables
  - techniques in the safe maintenance of polymeric specialised underground cables
  - techniques in the safe testing/inspection of the polymeric specialised underground cables to ensure successful installation and/or maintenance has occurred
- jointing and termination of polymeric specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the working with polymeric specialised underground cables
  - safety precautions of working with polymeric specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE; authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including

first aid

- types, function and serviceability of tools and equipment used for the jointing and terminating of polymeric specialised underground cables
- techniques in the safe jointing and terminating polymeric specialised underground cables
- techniques in the safe testing of the polymeric specialised underground cables to ensure successful jointing and/or termination has occurred
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - firefighting procedures, fatigue management, training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDU007 Install and maintain underground public lighting

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install and maintain underground public lighting in the electricity supply industry (ESI).

It includes installing poles/columns, hardware, underground cable and control equipment.

It also includes testing and commissioning, inspecting and maintaining public lighting.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install and maintain underground public lighting**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Work permits are received and signed in accordance with workplace requirements
- 1.8** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.9** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.10** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.11** Traffic management plan is confirmed as being in place in accordance with workplace requirements

**2 Carry out installation of underground public lighting**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working at heights, the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Safety observer is positioned to observe the work in accordance with workplace requirements
- 2.5** Communication methods between workers and safety observer are used in accordance with workplace requirements
- 2.6** Excavation/foundation is inspected for compliance with the work plan and workplace requirements
- 2.7** Pole/column, hardware and control equipment is assembled in accordance with the work plan and workplace requirements
- 2.8** Pole/column is erected and stabilised in accordance with the work plan and workplace requirements
- 2.9** Earthing is installed in accordance with the work plan and workplace requirements
- 2.10** Cable is laid and connected at the pole/column connection point and at the pillar
- 2.11** Public lighting is tested and commissioned in accordance with the work plan and workplace requirements
- 2.12** Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.13** Quality checks of work are undertaken in accordance with work plan and workplace requirements

**3 Carry out maintenance of underground public lighting**

- 3.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 3.2** Lifting, working at heights, and the use of plant, tools, equipment and PPE are carried out in accordance with

workplace requirements

**3.3** Hazard control measures are monitored in accordance with workplace requirements

**3.4** Safety observer is positioned to observe the work in accordance with workplace requirements

**3.5** Communication methods between workers and safety observer are used in accordance with workplace requirements

**3.6** Public lighting is inspected in accordance with workplace requirements

**3.7** Public lighting is maintained in accordance with the work plan and workplace requirements

**3.8** Incidents or unplanned events are responded to in accordance with workplace requirements

**3.9** Quality checks of work are undertaken in accordance with work plan and workplace requirements

#### **4 Complete work and documentation**

**4.1** Completed work is checked for compliance against the work plan and workplace requirements

**4.2** Incidents or unplanned events are reported in accordance with workplace requirements

**4.3** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

**4.4** Surplus materials are returned to storage or disposed of in accordance with workplace requirements

**4.5** Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements

**4.6** Work permits are signed off in accordance with workplace requirements

**4.7** Work records, reports and documentation are completed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This is a new unit. No equivalent unit.

# Assessment Requirements for UETDRDU007 Install and maintain underground public lighting

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- installing public lighting, including:
  - poles/columns
  - cable
  - lanterns/luminaires
  - outreach arms
  - fuses
  - control equipment
- replacing public lighting poles/columns
- maintaining public lighting hardware, including replacing any three (3) of the following:
  - luminaires
  - lamps
  - fuses
  - cable
  - control equipment
- identifying/diagnosing public lighting faults
- rectifying public lighting faults
- conducting at least three (3) of the following tests:

- polarity\*
- voltage
- continuity
- insulation resistance
- neutral identification
- loop impedance
- earth resistance
- (\*must do)
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - installation and maintenance of public lighting
  - inspection, testing and commissioning of public lighting
  - live low voltage (LV) connection principles
- hazard, risk assessment and risk control requirements including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- construction manuals, system diagrams/plans and drawings for public lighting
- basic lighting principles
- types and function of poles/columns and outreach arms
- types, function and operation of luminaires/lamps
- types, function and operation of control equipment
- controlling and switching of public lighting
- maintenance of public lighting, including:
  - types of faults and causes
  - repairing and replacing poles/columns, hardware and control equipment

- cleaning hardware.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining underground public lighting.
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDU008 Install gas and oil filled specialised underground cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the installation, jointing and termination of oil and gas filled specialised underground cables from 33 kV and higher. It includes the laying of the specialised underground cable, the preparation of the cables and phasing out jointing and terminating and the preparation of the cable jointing bay. It also encompasses the relevant safety procedures to ensure installation of the specialised cable is undertaken according to established enterprise requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDRDU009 Install, test and verify distribution underground cable installations

UETDRDU012 Joint, terminate and maintain high voltage underground paper insulated cable

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDRDU016 Lay power cables

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to install oil and gas filled specialised underground cables**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.3** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.4** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.5** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures

- 1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.8 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
  - 1.11 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
  - 1.12 Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
- 2 Carry out the installation of oil and gas filled specialised underground cables**
- 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
  - 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according

to established procedures

- 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
- 2.6 Installation of oil and gas filled specialised underground cables is carried out in accordance with the work schedule and requirements and/or established procedures
- 2.7 Essential knowledge and associated skills are applied in the safe installation of oil and gas filled specialised underground cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
- 2.8 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.9 Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard

### **3 Complete the installation of oil and gas filled specialised underground cables**

- 3.1 Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
- 3.2 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
- 3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
- 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5 Relevant work permit(s) are signed off and underground cables are returned to service and advised to client/customer in accordance with requirements
- 3.6 Work completion records, reports, as installed/modified drawing(s) and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ29 Install gas and oil filled specialised underground cables.

## Links

# Assessment Requirements for UETDRDU008 Install gas and oil filled specialised underground cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing the following pressurised 33 kV and above cable types:
  - oil filled cables
  - gas filled cables
- using all of the following equipment:
  - specialised cable installation equipment
  - winches
  - caterpillars
  - rollers
  - bond lines
  - drum jacks
  - cable end caps/nose pull assemblies
- performing at least two (2) of the following jointing methods:
  - straight through joint
  - straight stop joint
  - trifurcating joint
  - splitter joint
  - trifurcating/transition/stop
- performing at least one (1) of the following termination methods:
  - box termination
  - gas filled termination
  - compound filled termination
- performing at least two (2) of the following connectors:
  - welded connectors

- mechanical connectors
- compression connectors
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- oil and gas filled specialised underground cable principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the working with oil or gas filled specialised underground cables
  - types of oil or gas filled specialised underground cables - properties of paper insulation, oil and nitrogen gas, construction, reasons for gas and/or oil filled, characteristics and capabilities of the cable, and pressure/volume characteristics of oil and gas
  - precautions when handling
  - types and functions of tools and equipment used on oil or gas filled specialised underground cables
  - techniques when handling, storing and disposing of oil or gas filled specialised underground cables
- installation of oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the installation of oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of personnel protective equipment (PPE), including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
  - types, function and serviceability of tools and equipment used for the installation of oil or gas filled specialised underground cables
  - techniques in the safe installation of oil or gas filled specialised underground cables
  - techniques in the safe testing/inspection of the oil or gas filled specialised underground cables to ensure successful installation has occurred
- jointing and terminating oil or gas filled specialised underground cables encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to jointing and terminating oil or gas filled specialised underground cables
  - safety precautions of working with oil or gas filled specialised underground cables - safe operation procedures; WHS/OHS hazards and precautions; dangers of working in confined spaces; identification of WHS/OHS hazards; assessing and controlling risks; types, selection, maintenance, storage and uses of PPE, including intrinsically safe equipment for use in confined and hazardous environments; permit/authorisation to work

- systems and isolation procedures; safe working policies, procedures and practices when using/operating specialised equipment; and emergency response and rescue, including first aid
- types, function and serviceability of tools and equipment used for the jointing and terminating of oil or gas filled specialised underground cables
  - techniques in the safe jointing and terminating oil or gas filled specialised underground cables
  - techniques in the safe testing of the oil or gas filled specialised underground cables to ensure successful jointing and/or termination has occurred
  - enterprise-specific policies and procedure instructions encompassing:
    - responsibilities and duty of care of employer and employee relationship
    - methods of obtaining the up-to-date information on enterprise policies and procedures
    - rules and regulations
    - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
    - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
    - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
  - enterprise-specific WHS/OHS instructions encompassing:
    - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
    - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
    - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
    - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
    - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
    - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records and first aid/medical records
  - enterprise-specific technical drawing and documents encompassing:
    - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
    - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
    - title box - description of parts and version control.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDU009 Install, test and verify distribution underground cable installations**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit consolidates critical knowledge and skills developed throughout the term of the qualification to install, test and verify distribution underground cable installations in the electricity supply industry (ESI).

It includes the jointing, terminating and testing of underground cable and electrical equipment and the connection and testing of a customer connection.

It also includes verifying the cable installation complies with the work plan and workplace requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

CPCCLDG3001 Licence to perform dogging

TLILIC0005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDRDU002 Inspect underground electrical apparatus

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Prepare to install, test and verify underground cable installations

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2 Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3 Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4 Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5 Hazards are identified, risks assessed and control measures identified and applied
- 1.6 Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7 Work permits are received and signed in accordance with workplace requirements

- |                                                                                           |            |                                                                                                                                                         |
|-------------------------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                           | <b>1.8</b> | Worksite is prepared in accordance with the work plan and workplace requirements                                                                        |
| <b>2 Carry out installation, testing and verifying of underground cable installations</b> | <b>2.1</b> | Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored |
|                                                                                           | <b>2.2</b> | Manual handling, working in confined spaces, and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements   |
|                                                                                           | <b>2.3</b> | Hazard control measures are monitored in accordance with workplace requirements                                                                         |
|                                                                                           | <b>2.4</b> | Cable is prepared and tested in accordance with the work plan and workplace requirements                                                                |
|                                                                                           | <b>2.5</b> | Cable jointing, terminating and testing is carried out in accordance with the work plan and workplace requirements                                      |
|                                                                                           | <b>2.6</b> | Electrical equipment is tested in accordance with the work plan and workplace requirements                                                              |
|                                                                                           | <b>2.7</b> | Low voltage (LV) service installation is connected and tested in accordance with the work plan and workplace requirements                               |
|                                                                                           | <b>2.8</b> | Cable installation is verified in accordance with the work plan and workplace requirements                                                              |
|                                                                                           | <b>2.9</b> | Incidents or unplanned events are responded to in accordance with workplace requirements                                                                |
| <b>3 Complete work and documentation</b>                                                  | <b>3.1</b> | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                                                              |
|                                                                                           | <b>3.2</b> | Incidents or unplanned events are reported in accordance with workplace requirements                                                                    |
|                                                                                           | <b>3.3</b> | Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements                                       |
|                                                                                           | <b>3.4</b> | Surplus materials are returned to storage or disposed of in accordance with workplace requirements                                                      |
|                                                                                           | <b>3.5</b> | Work permits are signed off in accordance with                                                                                                          |

workplace requirements

- 3.6** Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ99 Test and verify distribution cable jointing installations.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for UETDRDU009 Install, test and verify distribution underground cable installations

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- interpreting and using drawings, diagrams and instructions
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- completing at least one (1) of the following low voltage (LV) joints:
  - tee-off
  - straight
  - breech
- completing at least one (1) of the following high voltage (HV) joints:
  - tee-off
  - straight
  - breech
- completing at least one (1) of the following LV terminations:
  - pole top
  - transformer
  - LV switchboard
  - pillar/turret
  - lighting column
- completing at least one (1) of the following HV terminations:
  - pole top
  - transformer
  - switchgear
- completing at least two (2) of the following cable tests:
  - voltage
  - continuity

- insulation resistance
- phase identification
- installing electrical equipment, including:
  - testing electrical equipment
  - testing earthing systems
- connecting a LV service cable
- testing consumer/customer connections, including at least five (5) of the following:
  - neutral integrity\*
  - polarity\*
  - voltage
  - current
  - phase rotation
  - insulation resistance
  - neutral identification
  - loop impedance
  - earth resistance
  - (\*must do)
- verifying cable installations, including:
  - complying with the work plan
  - identifying and rectifying non-compliance issues
- using testing equipment in accordance with workplace requirements
- recording test results in accordance with workplace requirements
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements including:
  - WHS/OHS
  - live LV connection principles
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- construction manuals, system diagrams/plans and drawings
- HV and LV cable installation, including:

- cable jointing and terminating procedures
- testing procedures
- electrical equipment installation, including:
  - construction and connection procedures
  - testing procedures
- LV service installation, including:
  - connection procedures
  - testing procedures
- cable installation verification procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing, testing and verifying underground cable installations
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRDU010 Joint, terminate and maintain energised low voltage underground paper insulated cable**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to joint, terminate and maintain energised low voltage (LV) underground paper insulated cable in the electricity supply industry (ESI).

It includes jointing, terminating, repairing and the testing of cable in existing installations.

It also includes using a range of tools, specialised equipment, materials and manufacturer instructions.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDRDU014 Joint, terminate and maintain low voltage underground paper insulated cable

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## **Competency Field**

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to joint, terminate and maintain energised LV underground paper insulated cable**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Work permits are received and signed in accordance with workplace requirements
- 1.8** Work site is prepared in accordance with the work plan and workplace requirements

#### **2 Carry out jointing, terminating and maintenance of energised LV underground paper insulated cable**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Manual handling, working in confined spaces and use of tools, equipment and PPE are carried out in accordance with workplace requirements

2.3 Hazard control measures are monitored in accordance with workplace requirements

2.4 Specialised equipment is used in accordance with workplace requirements

2.5 Cable is prepared for jointing, terminating and maintenance in accordance with manufacturer instructions and workplace requirements

2.6 Cable is tested before jointing or terminating in accordance with the work plan and workplace requirements

2.7 Cable is jointed, terminated and maintained in accordance with manufacturer instructions and workplace requirements

2.8 Cable is tested after jointing or terminating in accordance with the work plan and workplace requirements

2.9 Incidents or unplanned events are responded to in accordance with workplace requirements

2.10 Quality checks of work are undertaken in accordance with work plan and workplace requirements

### **3 Complete work and documentation**

3.1 Completed work is checked for compliance against the work plan and workplace requirements

3.2 Incidents or unplanned events are reported in accordance with workplace requirements

3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

3.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements

3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements

3.6 Work permits are signed off in accordance with workplace requirements

3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ24 Joint and maintain energised low voltage underground paper insulated cables.

## Links

# Assessment Requirements for UETDRDU010 Joint, terminate and maintain energised low voltage underground paper insulated cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - protecting existing underground services
  - handling underground power cables
  - using liquefied petroleum gas (LPG)
  - applying shoring requirements
  - applying low voltage (LV) energised work principles
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- completing at least one (1) of the following cable joints:
  - tee-off
  - straight
  - breech
- completing at least one (1) of the following cable terminations:
  - LV switchboard
  - pillar/turret
  - lighting column
- using at least two (2) of the following cable jointing/terminating products:
  - resin
  - heat shrink
  - cold applied
- completing at least one (1) of the following earth bond methods:

- lead wiping
- mechanical
- using at least two (2) of the following cable conductor connection methods:
  - mechanical connector
  - compression lug
  - insulating piercing connector
- completing at least one (1) of the following cable maintenance tasks:
  - outer sheath repair
  - insulation repair
- completing at least two (2) of the following cable tests:
  - moisture content\*
  - voltage
  - insulation resistance
  - phase identification
  - phase rotation
  - \*(must do)
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - LV energised work principles and procedures
  - specialised equipment for LV energised work
  - working in confined spaces
  - excavation and trench safety
  - LPG equipment and testing
  - safe approach distances
  - manual handling
- hazard, risk assessment and risk control requirements including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- cable alignment and identification

- work plan requirements, including:
  - types of and layout of drawings
  - manufacturer's instructions
  - testing plan
  - quality checklist
  - workplace documentation procedures
- LV paper insulated cable, including:
  - types and sizes
  - construction, characteristics and properties
  - minimum bending radius
- cable jointing, terminating and maintenance requirements:
  - cable handling techniques
  - energised jointing, terminating and maintenance principles, techniques and procedures
  - earth bonding methods and procedures
  - types of cable damage/defects
  - cable repair techniques and procedures
  - testing procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used for jointing, terminating and maintaining energised LV underground paper insulated cable
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and manufacturer's instructions.

# **UETDRDU011 Joint, terminate and maintain energised low voltage underground polymeric cable**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to joint, terminate and maintain energised low voltage (LV) underground polymeric cable in the electricity supply industry (ESI).

It includes jointing, terminating, repairing and testing of cable in existing installations.

It also includes using a range of tools, specialised equipment, materials and manufacturer's instructions.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## **Competency Field**

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to joint, terminate and maintain energised LV underground polymeric cable**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Work permits are received and signed in accordance with workplace requirements
- 1.8** Worksite is prepared in accordance with the work plan and workplace requirements

#### **2 Carry out the jointing, terminating and maintenance of energised LV underground polymeric cable**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Manual handling, working in confined spaces and use of tools, equipment and PPE are carried out in accordance with workplace requirements

- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Specialised equipment is used in accordance with workplace requirements
- 2.5 Cable is prepared for jointing, terminating or maintenance in accordance with manufacturer's instructions and workplace requirements
- 2.6 Cable is tested before jointing or terminating in accordance with the work plan and workplace requirements
- 2.7 Cable is jointed, terminated or maintained in accordance with manufacturer's instructions and workplace requirements
- 2.8 Cable is tested after jointing or terminating in accordance with the work plan and workplace requirements
- 2.9 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.10 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work permits are signed off in accordance with workplace requirements
- 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

### **3 Complete work and documentation**

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ28 Joint and maintain energised low voltage underground polymeric cables.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU011 Joint, terminate and maintain energised low voltage underground polymeric cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - protecting existing underground services
  - handling underground power cables
  - using liquefied petroleum gas (LPG)
  - applying shoring requirements
  - applying low voltage (LV) energised work principles
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- completing at least two (2) of the following cable joints:
  - tee-off
  - straight
  - breech
- completing at least one (1) of the following cable terminations:
  - LV switchboard
  - pillar/turret
  - lighting column
- using at two (2) of the following cable jointing/terminating methods:
  - resin
  - heat shrink
  - cold applied
- using at least two (2) of the following cable conductor connection methods:
  - compression lug

- insulation piercing connector
- mechanical connector
- completing at least one (1) of the following cable maintenance tasks:
  - outer sheath repair
  - insulation repair
- completing at least two (2) of the following cable tests:
  - voltage
  - insulation resistance
  - phase identification
  - phase rotation
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - LV energised work principles and procedures
  - specialised equipment for LV energised work
  - working in confined spaces
  - excavation and trench safety
  - LPG equipment and testing
  - safe approach distances
  - manual handling
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- cable alignment and identification
- work plan requirements, including:
  - types of and layout of drawings
  - manufacturer's instructions
  - testing plan
  - quality checklist
  - workplace documentation procedures

- LV polymeric cables, including:
  - types and sizes
  - construction, characteristics and properties
  - minimum bending radius
- cable jointing, terminating and maintenance requirements, including:
  - cable handling techniques
  - energised jointing, terminating and maintenance principles, techniques and procedures
  - types of cable damage/defects
  - cable repair techniques and procedures
  - testing procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used for jointing, terminating and maintaining energised LV underground polymeric cable
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and manufacturer's instructions.

# UETDRDU012 Joint, terminate and maintain high voltage underground paper insulated cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to joint, terminate and maintain high voltage (HV) underground paper insulated cable in the electricity supply industry (ESI).

It includes jointing, terminating and the testing of cable in new installations. It also includes maintaining cable in existing installations, including repairing, replacing, re-jointing or re-terminating and testing of de-energised cable.

It includes using a range of tools, equipment, specialised materials and manufacturer's instructions.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to joint, terminate and maintain HV underground paper insulated cable**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Worksite is prepared in accordance with work plan and workplace requirements

#### **2 Carry out jointing and terminating of HV underground paper insulated cable in new installations**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Manual handling, working in confined spaces, the use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements

- 2.4 Cable is tested before jointing or terminating in accordance with work plan and workplace requirements
- 2.5 Cable is prepared for jointing or terminating in accordance with the work plan and workplace requirements
- 2.6 Cable is jointed or terminated in accordance with the work plan and workplace requirements
- 2.7 Cable is tested after jointing or terminating in accordance with work plan and workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 **Carry out maintenance of de-energised HV underground paper insulated cable**
  - 3.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 3.2 Manual handling, working in confined spaces, the use of tools, equipment and PPE are carried out in accordance with workplace requirements
  - 3.3 Hazard control measures are monitored in accordance with workplace requirements
  - 3.4 Cable is identified and spiked or cut in accordance with workplace requirements
  - 3.5 Work permit is received and signed in accordance with workplace requirements
  - 3.6 Cable is tested before maintenance in accordance with the work plan and workplace procedures
  - 3.7 Cable is prepared for maintenance in accordance with manufacturer's instructions and workplace requirements
  - 3.8 Cable is maintained in accordance with manufacturer's instructions and workplace requirements
  - 3.9 Work permits are signed off in accordance with workplace requirements

- 3.10 Cable, cable joint or termination is tested in accordance with the work plan and workplace requirements
  - 3.11 Incidents or unplanned events are responded to in accordance with workplace requirements
  - 3.12 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 4 **Complete work and documentation**
  - 4.1 Completed work is checked for compliance against the work plan and workplace requirements
  - 4.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 4.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 4.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 4.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
  - 4.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ23 Install and maintain de-energised high voltage underground paper insulated cables.

# Assessment Requirements for UETDRDU012 Joint, terminate and maintain high voltage underground paper insulated cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - protecting existing underground services
  - handling underground power cables
  - using liquefied petroleum gas (LPG)
  - applying shoring requirements
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- completing at least one (1) of the following cable joints:
  - tee-off
  - straight
  - breech
- completing at least one (1) of the following cable terminations:
  - pole top
  - transformer
  - switchgear
- using at least one (1) of the following cable jointing/terminating products:
  - taped resin
  - heat shrink
  - cold applied
- completing at least one (1) of the following earth bond methods:
  - lead wiping
  - mechanical

- completing at least one (1) of the following cable maintenance tasks:
  - outer sheath repair
  - insulation repair
- completing at least one (1) of the following to determine the cable electrical status:
  - spiking
  - guillotine/remote cutting
- completing at least three (3) the following cable tests:
  - moisture content\*
  - voltage
  - continuity
  - insulation resistance
  - phase identification
  - (\*must do)
- using at least one (1) of the following cable conductor connection methods:
  - compression lug
  - mechanical connector
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safe work practices, including:
  - working in confined spaces
  - excavation and trench safety
  - LPG equipment and testing
  - cable spiking, guillotine/remote cutting
  - manual handling
- cable alignment and identification

- work plan requirements, including:
  - types of and layout of drawings
  - manufacturer's instructions
  - construction manuals
  - testing plan
  - quality checklist
  - workplace documentation procedures
- high voltage (HV) paper insulated cables, including:
  - types and sizes
  - construction, characteristics and properties
  - minimum bending radius
- cable jointing, terminating and maintenance requirements, including:
  - cable handling techniques
  - jointing, terminating and maintenance principles, techniques and procedures
  - earth bonding methods and procedures
  - cable moisture testing procedures
  - types of cable damage/defects
  - use of test equipment
  - testing procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for jointing, terminating and maintaining HV underground paper insulated cable
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to joint, terminate and maintain HV underground polymeric cable**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Worksite is prepared in accordance with the work plan and workplace requirements

#### **2 Carry out the jointing and terminating of HV underground polymeric cable in new installations**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Manual handling, working in confined spaces and the use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements

- 2.4 Cable is tested before jointing or terminating in accordance with the work plan and workplace procedures
  - 2.5 Cable is prepared for jointing or terminating in accordance with manufacturer's instructions and workplace requirements
  - 2.6 Cable is jointed or terminated in accordance with manufacturer's instructions and workplace requirements
  - 2.7 Cable is tested after joining or terminating in accordance with the work plan and workplace requirements
  - 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
  - 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Carry out the maintenance of de-energised HV underground polymeric cable**
- 3.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 3.2 Manual handling working in confined spaces and the use of tools, equipment and PPE are followed in accordance with workplace requirements
  - 3.3 Hazard control measures are monitored in accordance with workplace requirements
  - 3.4 Cable is identified and spiked or cut in accordance with workplace requirements
  - 3.5 Work permits are received and signed in accordance with workplace requirements
  - 3.6 Cable is tested in accordance with the work plan and workplace requirements
  - 3.7 Cable is prepared for maintenance in accordance with manufacturer's instructions and workplace requirements
  - 3.8 Cable is maintained in accordance with manufacturer's instructions and workplace requirements
  - 3.9 Work permits are signed off in accordance with

workplace requirements

**3.10** Cable, cable joint and termination are tested in accordance with the work plan and workplace requirements

**3.11** Incidents or unplanned events are responded to in accordance with workplace requirements

**3.12** Quality checks of work are undertaken in accordance with work plan and workplace procedures

#### **4 Complete work and documentation**

**4.1** Completed work is checked for compliance against the work plan and workplace requirements

**4.2** Incidents or unplanned events are reported in accordance with workplace requirements

**4.3** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

**4.4** Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements

**4.5** Surplus materials are returned to storage or disposed of in accordance with workplace requirements

**4.6** Work records, reports and documentation are completed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRCJ27 Install and maintain de-energised high voltage underground polymeric cables.

# Assessment Requirements for UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - protecting existing underground services
  - handling underground power cables
  - using liquefied petroleum gas (LPG)
  - applying shoring requirements
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- completing at least one (1) of the following cable joints:
  - tee-off
  - straight through
  - breech
- using at least one (1) of the following cable jointing/terminating products:
  - taped resin
  - heat shrink
  - cold applied
- completing at least two (2) of the following cable terminations:
  - pole top
  - transformer
  - switchgear
- using the following cable connection methods:
  - mechanical connector
  - compression lug

- completing at least one (1) of the following cable maintenance tasks:
  - repair outer sheath
  - replace termination lug
- completing at least one (1) of the following to determine cable electrical status:
  - spiking
  - guillotine/remote cutting
- completing at least two (2) of the following cable tests:
  - voltage
  - continuity
  - insulation resistance
  - phase identification
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - working in confined spaces
  - excavation and trench safety
  - LPG equipment and testing
  - cable spiking, guillotine/remote cutting
  - manual handling

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to joint, terminate and maintain LV underground paper insulated cable**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Worksite is prepared in accordance with workplace requirements

#### **2 Carry out jointing and terminating of LV underground paper insulated cable in new installations**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Manual handling, working in confined spaces and use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements

- 2.4 Cable is tested before jointing or terminating in accordance with the work plan and workplace requirements
- 2.5 Cable is prepared for jointing or terminating in accordance with workplace requirements
- 2.6 Cable is jointed or terminated in accordance with workplace requirements
- 2.7 Cable is tested after jointing or terminating in accordance with the work plan and workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 **Carry out the maintenance of de-energised LV underground paper insulated cable**
  - 3.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 3.2 Manual handling, working in confined spaces and the use of tools, equipment and PPE are carried out in accordance with workplace requirements
  - 3.3 Hazard control measures are monitored in accordance with workplace requirements
  - 3.4 Cable is identified and spiked or cut in accordance with workplace requirements
  - 3.5 Work permits are received and signed in accordance with workplace requirements
  - 3.6 Cable is tested before the maintenance in accordance with the work plan and workplace procedures
  - 3.7 Cable is prepared for maintenance in accordance with manufacturer's instructions and workplace requirements
  - 3.8 Cable is maintained in accordance with manufacturer's instructions and workplace requirements
  - 3.9 Work permits are signed off in accordance with

workplace requirements

**3.10** Cable, cable joint or termination is tested in accordance with the work plan and workplace requirements

**3.11** Incidents or unplanned events are responded to in accordance with workplace requirements

**3.12** Quality checks of work are undertaken in accordance with work plan and workplace procedures

#### **4 Complete work and documentation**

**4.1** Completed work is checked for compliance against the work plan and workplace requirements

**4.2** Incidents or unplanned events are reported in accordance with workplace requirements

**4.3** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

**4.4** Surplus materials are returned to storage or disposed of in accordance with workplace requirements

**4.5** Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements

**4.6** Work records, reports and documentation are completed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDRCJ22 Install and maintain de-energised low voltage underground paper insulated cables.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU014 Joint, terminate and maintain low voltage underground paper insulated cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - protecting existing underground services
  - handling underground power cables
  - using liquefied petroleum gas (LPG)
  - applying shoring requirements
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- completing at least one (1) of the following cable joints:
  - tee-off
  - straight
  - breech
- completing at least one (1) of the following cable terminations:
  - pole top
  - transformer
  - low voltage (LV) switchboard
  - pillar/turret
- using at least one (1) of the following cable jointing/terminating products:
  - taped resin
  - heat shrink
  - cold applied
- completing at least one (1) of the following earth bond methods:
  - lead wiping

- mechanical
- completing at least one (1) of the following cable maintenance tasks:
  - outer sheath repair
  - insulation repair
- completing at least one (1) of the following to determine the cable electrical status:
  - spiking
  - guillotine/remote cutting
  - safe/live cut
- completing at least three (3) the following cable tests:
  - moisture content\*
  - voltage
  - continuity
  - insulation resistance
  - phase identification
  - (\*must do)
- using at least one (2) of the following cable conductor connection methods:
  - compression lug
  - mechanical connector
  - insulation piercing connector
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safe work practices, including:
  - working in confined spaces
  - excavation and trench safety
  - LPG equipment and testing

- cable spiking, guillotine/remote cutting or safe/live cut
  - manual handling
- cable alignment and identification
- work plan requirements, including:
  - layout of drawings
  - manufacturer's instructions
  - construction manuals
  - testing plan
  - quality checklist
  - workplace documentation procedures
- LV paper insulated cables, including:
  - types and sizes
  - construction, characteristics and properties
  - minimum bending radius
- cable jointing, terminating and maintenance requirements, including:
  - cable handling techniques
  - jointing principles, techniques and procedures
  - earth bonding methods and procedures
  - cable moisture testing procedures
  - types of cable damage/defects
  - use of test equipment
  - testing procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for jointing, terminating and maintaining LV underground paper insulated cable
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and manufacturer's instructions.

# UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to joint, terminate and maintain low voltage (LV) underground polymeric cable in the electricity supply industry (ESI).

It includes jointing, terminating and the testing of cable in new installations. It also includes maintaining cable in existing installations including repairing, replacing, re-jointing or re-terminating and testing of de-energised cable.

It includes using a range of tools, equipment, specialised materials, and manufacturer's instructions.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to joint, terminate and maintain LV underground polymeric cable**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Worksite is prepared in accordance with work plan and workplace requirements

#### **2 Carry out the jointing and terminating of LV underground polymeric cable in new installations**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Manual handling, working in confined spaces and the use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements

- 2.4 Cable is tested before jointing or terminating in accordance with the work plan and workplace requirements
  - 2.5 Cable is prepared for jointing or terminating in accordance with the work plan and workplace requirements
  - 2.6 Cable is jointed or terminated in accordance with manufacturer's instructions and workplace requirements
  - 2.7 Cable is tested after jointing or terminating in accordance with the work plan and workplace requirements
  - 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
  - 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 **Carry out the maintenance of de-energised LV underground polymeric cable**
  - 3.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 3.2 Manual handling, working in confined spaces and use of tools, equipment and PPE are carried out in accordance with workplace requirements
  - 3.3 Hazard control measures are monitored in accordance with workplace requirements
  - 3.4 Cable is identified and spiked or cut in accordance with workplace requirements
  - 3.5 Work permits are received and signed in accordance with workplace requirements
  - 3.6 Cable is tested before the maintenance in accordance with the work plan and workplace procedures
  - 3.7 Cable is prepared for maintenance in accordance with manufacturer's instructions and workplace requirements
  - 3.8 Cable is maintained in accordance with manufacturer's instructions and workplace requirements

- |                                          |             |                                                                                                            |
|------------------------------------------|-------------|------------------------------------------------------------------------------------------------------------|
|                                          | <b>3.9</b>  | Work permits are signed off in accordance with workplace requirements                                      |
|                                          | <b>3.10</b> | Cable is tested after maintenance in accordance with the work plan and workplace requirements              |
|                                          | <b>3.11</b> | Incidents or unplanned events are responded to in accordance with workplace requirements                   |
|                                          | <b>3.12</b> | Quality checks of work are undertaken in accordance with work plan and workplace procedures                |
| <b>4 Complete work and documentation</b> | <b>4.1</b>  | Completed work is checked for compliance against the work plan and workplace requirements                  |
|                                          | <b>4.2</b>  | Incidents or unplanned events are reported in accordance with workplace requirements                       |
|                                          | <b>4.3</b>  | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                 |
|                                          | <b>4.4</b>  | Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements |
|                                          | <b>4.5</b>  | Surplus materials are returned to storage or disposed of in accordance with workplace requirements         |
|                                          | <b>4.6</b>  | Work records, reports and documentation are completed in accordance with workplace requirements            |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ26 Install and maintain de-energised low

voltage underground polymeric cables.

# Assessment Requirements for UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - protecting existing underground services
  - handling underground power cables
  - using liquefied petroleum gas (LPG)
  - applying shoring requirements
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- completing at least two (2) of the following cable joints:
  - tee-off
  - straight
  - breech
- completing at least two (2) of the following cable terminations:
  - pole top
  - transformer
  - low voltage (LV) switchboard
  - pillar/turret
  - lighting column
- using at least two (2) of the following cable jointing/terminating products:
  - resin filled
  - heat shrink
  - cold applied
- using at least two (2) of the following cable conductor connection methods:

- compression lug
- mechanical connector
- insulation piercing connector
- completing at least one (1) of the following cable maintenance tasks:
  - outer sheath repair
  - insulation repair
  - core repair
- completing at least one (1) of the following to determine the cable electrical status:
  - cable spiking
  - guillotine/remote cutting
  - safe/live cut
- completing at least two (2) of the following cable tests:
  - voltage
  - continuity
  - insulation resistance
  - phase identification
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - working in confined spaces
  - excavation and trench safety
  - LPG equipment and testing
  - cable spiking, guillotine/remote cutting or safe/live cut
  - safe approach distances
  - manual handling
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- cable alignment and identification
- work plan requirements, including:

- types of and layout of drawings
- manufacturer's instructions
- testing plan
- quality checklist
- workplace documentation procedures
- LV polymeric cables, including:
  - types and sizes
  - construction, characteristics and properties
  - minimum bending radius
- cable jointing, terminating and maintenance requirements:
  - cable handling techniques
  - jointing, terminating and maintenance principles, techniques and procedures
  - types of cable damage/defects
  - cable repair techniques and procedures
  - use of test equipment
  - testing procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used for jointing, terminating and maintaining LV underground polymeric cable
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and manufacturer's instructions.

# UETDRDU016 Lay power cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to lay power cables in the electricity supply industry (ESI).

It includes positioning and using plant and equipment for direct laying of cables in trenches, on racks and in conduit or ducts.

It also includes bedding and protecting cables, cable pulling methods, sealing cable ends and backfilling the excavation.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Not applicable.

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                     |                                                                                                                             |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| <b>1 Prepare to lay power cable</b> | <b>1.1</b> Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|

be performed are referred to and confirmed

- 1.2 Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3 Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4 Plant, tools, equipment, and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5 Communication method for the laying is confirmed with other workers
- 1.6 Hazards are identified, risks assessed and control measures identified and applied
- 1.7 Cable route is confirmed, excavated and bedded in accordance with the work plan and workplace requirements
- 1.8 Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.9 Worksite is prepared in accordance with the work plan and workplace requirements
- 1.10 Traffic management plan is confirmed as being in place in accordance with workplace requirements

## **2 Carry out laying of power cable**

- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2 Lifting, working in confined spaces, the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3 Hazard control measures are monitored in accordance with workplace requirements
- 2.4 Cable laying plant and equipment is positioned in accordance with the work plan and workplace requirements
- 2.5 Conduit and cable are laid, cable is bedded and protected in accordance with the work plan and workplace requirements

- 2.6 Communication with other workers is maintained during the laying of cables in accordance with the work plan and workplace requirements
  - 2.7 Cable ends are sealed in accordance with the work plan and workplace requirements
  - 2.8 Backfilling is confirmed in accordance with the work plan and workplace requirements
  - 2.9 Incidents or unplanned events are responded to in accordance with workplace requirements
  - 2.10 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Complete work and documentation**
- 3.1 Completed work is checked for compliance against the work plan and workplace requirements
  - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
  - 3.6 Personnel are notified of work completion in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ21 Lay ESI electrical cables.

# Assessment Requirements for UETDRDU016 Lay power cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - using liquefied petroleum gas (LPG)
  - excavation/trench safety
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- interpreting and using drawings, diagrams and instructions
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- laying of cables, including:
  - high voltage (HV) polymeric
  - low voltage (LV) polymeric
  - laying and sealing conduits
  - positioning cable laying plant and equipment
  - sealing cable ends
  - bedding and protecting cables
- backfilling open trench in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - excavation/trench safety
  - use of LPG
- hazard, risk assessment and risk control requirements, including potential hazards

- types and application of PPE
- safe use of plant, tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- diagrams/plans
- power cables, including:
  - cables types and sizes
  - cable construction and bending radius
- cable laying, including:
  - excavation/trenching
  - conduit laying and sealing
  - cable alignments and depths
  - plant, tools and equipment for cable laying
  - clearance from other underground cables or buried utilities
  - cable handling
  - cable laying methods
  - cable pulling methods
  - cable tensioning methods
  - cable protection methods
  - cable sealing
  - bedding and backfilling.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for laying power cables
- applicable documentation, including workplace requirements, relevant industry standards, regulations, codes of practice and operation manuals.

# UETDRDU017 Locate faults in underground power cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to locate faults in underground power cables in the electricity supply industry (ESI).

It includes setting up test equipment and using the equipment to pre locate and pinpoint the cable fault. It also includes interpreting test results, documenting the fault location and likely cause and listing recommendations for correcting the cable fault.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to locate underground power cable faults**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work instruction is obtained and confirmed in accordance with workplace requirements
- 1.3** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with work instruction and workplace requirements
- 1.6** Work permits are organised in accordance with workplace requirements
- 1.7** Worksite is prepared in accordance with the work instruction and workplace requirements

#### **2 Carry out the locating of underground power cable faults**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, working in a confined space, and the use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Test equipment is positioned, set up for testing and confirmed to be operating correctly
- 2.5** Cable is tested and confirmed de-energised in accordance with workplace requirements
- 2.6** Work permits are received and signed in accordance with workplace requirements

- 2.7 Cable is prepared for testing and test equipment connected to the cable in accordance with workplace requirements
  - 2.8 Cable is tested to pre-locate the cable fault in accordance with workplace requirements
  - 2.9 Cable is tested to pinpoint the location of the cable fault in accordance with workplace requirements
  - 2.10 Cable faults are identified and analysed in accordance with workplace requirements
  - 2.11 Incidents or unplanned events are responded to in accordance with workplace requirements
- 3 Complete work and documentation**
- 3.1 Recommendations for rectification are made in accordance with workplace requirements
  - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 3.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 3.5 Work permits are signed off in accordance with workplace requirements
  - 3.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI58 Locate faults in power system underground power cables.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU017 Locate faults in underground power cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- using at least one (1) of the following cable fault pre location methods for low resistance faults:
  - time-domain reflectometry (TDR)
  - bridge method (e.g. Murray Loop)
- using at least one (1) of the following cable fault prelocation methods for high resistance faults:
  - arc reflection
  - voltage decay
  - impulse current
  - bridge (Murray loop)
- using at least one (1) of the following cable fault pinpointing methods:
  - acoustic detection using surge generator (thumper)
  - audio frequency pinpointing using twist method
  - fault sniffing
  - step voltage (pool of potential test or earth gradient method)
- locating at least three (3) of the following cable faults:
  - short circuit
  - open circuits

- high resistance
- earth and sheath
- humid and wet
- flashing
- analysing the testing results to determine the type and location of fault
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - working in confined spaces
  - trench safety
  - manual handling
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of work permits
- events that constitute an incident or unplanned event
- procedures for responding to an unplanned event or incident
- work instruction requirements, including:
  - types of and layout of drawings
  - cable routes
  - manufacturer's instructions
  - workplace documentation procedures
- high voltage (HV) and low voltage (LV) paper insulated and polymeric cables, including:
  - types and sizes
  - construction, characteristics and properties
  - minimum bending radius
- cable fault location, including:
  - types of and causes of cable defects
  - types of and causes of cable faults
  - low resistance cable fault pre-location methods
  - high resistance cable fault pre-location methods
  - cable fault pinpointing methods

- advantages and disadvantages of different testing methods
- types of cable fault locating equipment
- use of cable fault locating equipment
- cable fault locating procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for locating faults in underground power cables
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDU018 Maintain gas and oil filled specialised underground cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the maintenance and repair of oil and gas filled specialised underground cables 33 kV and above. It includes testing, diagnosing faults, repairing and replacing the specialised cables. It also encompasses the processes for preliminary pressure control and leak repair, as well as working under induced voltages, cable identification and cable freezing.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDRDU008 Install gas and oil filled specialised underground cables

UETDRDU009 Install, test and verify distribution underground cable installations

UETDRDU012 Joint, terminate and maintain high voltage underground paper insulated cable

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDRDU016 Lay power cables

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to maintain oil and gas filled specialised underground cables**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.4** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.5** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures

- 1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.8 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
  - 1.11 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
  - 1.12 Positioning of road signs, barriers and warning devices is planned in accordance with requirements
- 2 **Carry out the maintenance of oil and gas filled specialised underground cables**
  - 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
  - 2.2 First aid, rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3 Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures

- 2.5 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.6 Maintenance of oil and gas filled specialised underground cables is carried out in accordance with the work schedule and requirements and/or established procedures
  - 2.7 Essential knowledge and associated skills are applied in the safe maintenance of oil and gas filled specialised underground cables to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
  - 2.8 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
  - 2.9 Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
- 3 Complete the maintenance of oil and gas filled specialised underground cables**
- 3.1 Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
  - 3.2 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
  - 3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with established procedures
  - 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
  - 3.5 Relevant work permits are signed off and underground cables are returned to service and advised to client/customer in accordance with requirements
  - 3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ30 Maintain gas and oil filled specialised underground cables.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU018 Maintain gas and oil filled specialised underground cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing all of the following pressurised 33 kV and above cable types:
  - oil filled cables
  - gas filled cables
- performing at least two (2) of the following jointing methods:
  - straight through joint
  - straight stop joint
  - trifurcating joint
  - splitter joint
  - trifurcating/transition/stop joint
- performing at least one (1) of the following termination methods:
  - air box terminator
  - gas filled terminator
  - compound filled terminator
- connecting cable conductors using at least two (2) of the following:
  - welded connectors
  - mechanical connectors
  - compression connectors
- using specialist testing devices including all of the following:
  - voltage detectors
  - cable identification equipment and spiking
  - insulation resistance testers
- using/applying all of the following equipment and materials:
  - leak repair and pressure control cable freezing equipment

- pressure control tapes
- fittings and seals
- undertaking preparation for cable freezing, preliminary pressure control and leak repair activities
- using cable terminating materials, including at least two of the following:
  - paper tape
  - polymeric tape
  - heat shrink
  - slip-on moulds
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the maintenance of oil or gas filled specialised underground cables
- safety precautions of working with oil or gas filled specialised underground cables encompassing:
  - safe operation procedures
  - WHS/OHS hazards and precautions
  - dangers of working in confined spaces
  - identification of WHS/OHS hazards, and assessing and controlling risks
  - types, selection, maintenance, storage and uses of personnel protective equipment (PPE), including intrinsically safe equipment for use in confined and hazardous environments
  - permit/authorisation to work systems and isolation procedures
  - safe working policies, procedures and practices when using/operating specialised equipment
  - emergency response and rescue, including first aid
- safe storage and disposal of oil or gas filled specialised underground cables and associated equipment and components; types, function and serviceability of tools and equipment used for the maintenance of oil or gas filled specialised underground cables; and techniques in the safe maintenance of oil or gas filled specialised underground cables
- techniques in the safe testing/inspection of the oil or gas filled specialised underground cables to ensure successful maintenance has occurred.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRDU019 Transition joint high voltage paper insulated cable to high voltage polymeric cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to transition joint high voltage (HV) paper insulated cable to HV polymeric cable in the electricity supply industry (ESI).

It includes confirming that the cables are de-energised and the testing of cables using a range of tools, equipment, specialised materials and manufacturer's instructions.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Distribution Underground

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to transition HV paper insulated cable to HV polymeric cable**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Work permits are organised in accordance with workplace requirements
- 1.8** Worksite is prepared in accordance with the work plan and workplace requirements

#### **2 Carry out the transition of HV paper insulated cable to HV polymeric cable**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Manual handling, working in confined spaces and use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance

with workplace requirements

- 2.4 Cable is identified and spiked or cut in accordance with workplace requirements
- 2.5 Work permits are received and signed in accordance with workplace requirements
- 2.6 Cables are tested in accordance with workplace requirements
- 2.7 Cables are prepared for jointing in accordance with manufacturer instructions and workplace requirements
- 2.8 Cables are jointed in accordance with manufacturer instructions and workplace requirements
- 2.9 Work permits are signed off in accordance with workplace requirements
- 2.10 Cables and cable joint are tested in accordance with workplace requirements
- 2.11 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.12 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 **Complete work and documentation**
  - 3.1 Completed work is checked for compliance against the work plan and workplace requirements
  - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 3.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
  - 3.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRCJ25 Perform straight through high voltage paper insulated to polymeric transition joint.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRDU019 Transition joint high voltage paper insulated cable to high voltage polymeric cable

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - protecting existing underground services
  - handling underground power cables
  - using liquefied petroleum gas (LPG)
  - applying shoring requirements
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- jointing at least one (1) of the following cable types:
  - belted paper insulated cable to polymeric
  - screened paper insulated cable to polymeric
- completing at least one (1) of the following cable joints:
  - three core paper insulated to three core polymeric
  - three core paper insulated to 3 x 1 core polymeric
  - three core paper insulated to trifurcated three core polymeric
  - single core paper insulated to single core polymeric
- using at least one (1) of the following cable jointing/terminating products:
  - taped resin
  - heat shrink
  - cold applied
- completing at least one (1) of the following earth bond methods:
  - lead wiping
  - mechanical

- using at least one (1) of the following cable conductor connection methods:
  - compression lug
  - mechanical connector
- completing at least one (1) of the following to determine the cable electrical status:
  - spiking
  - guillotine/remote cutting
- completing at least three (3) of following cable tests:
  - moisture content\*
  - continuity
  - insulation resistance
  - phase identification
  - (\*must do)
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - working in confined spaces
  - excavation and trench safety
  - LPG equipment and testing
  - cable spiking, guillotine/remote cutting
  - safe approach distances
  - manual handling
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- cable alignment and identification
- work plan requirements, including:
  - types of and layout of drawings
  - manufacturer's instructions
  - testing plan
  - quality checklist

- completion of workplace documentation
- high voltage (HV) paper insulated and polymeric cables, including:
  - types and sizes
  - construction, characteristics and properties
  - electrical stress control
  - minimum bending radius
- cable jointing, terminating and maintenance requirements, including:
  - cable handling techniques
  - jointing principles, techniques and procedures
  - earth bonding methods and procedures
  - cable moisture testing procedures
  - types of cable damage/defects
  - cable repair techniques and procedures
  - use of test equipment
  - testing procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for transitioning HV paper insulated cable to HV polymeric cable
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and manufacturer's instructions.

# UETDREL001 Apply environmental requirements

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to apply environmental requirements in the electricity supply industry (ESI).

It includes participating in and contributing to environmental requirements for specific projects/sites, identifying and controlling possible environmental risks and impacts, and recording and reporting environmental incidents.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Not applicable.

## Competency Field

Entry Level Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to apply environmental requirements**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1** Environmental legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and

confirmed

**1.2** Work plan is obtained and confirmed in accordance with workplace requirements

**1.3** Environmental hazards are identified, risks assessed and control measures identified and applied

**1.4** Work permits/approvals are organised in accordance with workplace requirements

**1.5** Plant, materials, vehicles, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order

**1.6** Worksite is prepared in accordance with the work plan and workplace requirements

## **2 Apply environmental requirements**

**2.1** Environmental legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored

**2.2** Environmental hazard control measures are monitored in accordance with workplace requirements

**2.3** Work permits/approvals are applied in accordance with workplace requirements

**2.4** Plant, materials, vehicles, tools, equipment and PPE are used in accordance with workplace requirements

**2.5** Environmental incidents or unplanned events are responded to in accordance with workplace requirements

## **3 Complete work and documentation**

**3.1** Completed work is checked for compliance against the work plan and workplace requirements

**3.2** Work permits/approvals are finalised in accordance with workplace requirements

**3.3** Environmental incidents or unplanned events are reported in accordance with workplace requirements

**3.4** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

**3.5** Plant, vehicles, tools, and equipment are cleaned, checked and returned to storage in accordance with workplace requirements

- 3.6 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.7 Environmental work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDREL11 Apply sustainable energy and environmental procedures.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDREL001 Apply environmental requirements

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - environmental
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- applying and monitoring environmental requirements
- completing environmental risk assessment
- using plant, vehicles, materials, tools and equipment safely
- maintaining a safe and clean workplace environment
- organising and finalising relevant work permits/approvals in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - manufacturer and supplier information of hazardous substances/dangerous goods, including safety data sheets (SDS)
- hazards, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- application, purpose and types of work permits/approvals
- events constituting an unplanned event or incident

- procedures for responding to an unplanned event or incident
- employer and employee responsibilities
- source information on environmental issues and updates
- environmental impacts from work-related activities
- environmental terminology used in the electricity supply industry (ESI)
- workplace environmental management plan
- methods of cleaning mobile plant, equipment and tools
- safe use of plant, vehicles, materials, tools and equipment
- types and application of PPE used for hazardous substances and dangerous goods/materials
- procedures for handling plant, tools and equipment that contain hazardous substances
- procedures for handling, controlling, storing, recycling and disposing of:
  - hazardous substances
  - waste materials
- emergency procedures for spillages of hazardous substances to reduce risks to the environment, including:
  - methods of cleaning up excessive spillages
  - methods of protection to surrounding environment
  - procedures for notification of relevant personnel and authorities
  - procedures for reporting and recording incidents
- environmentally sensitive areas, including:
  - identification of
  - working in
  - procedures for entering and exiting
- fire precautions for field work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for applying environmental requirements
- applicable documentation, including workplace requirements, relevant industry standards,

equipment specifications, regulations, codes of practice and operation manuals.

# UETDREL002 Comply with environmental requirements

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to comply with environmental requirements in the electricity supply industry (ESI).

It includes complying with and monitoring environmental requirements, risks and impacts. It also includes recording and reporting environmental incidents.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Not applicable.

## Competency Field

Entry Level Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to comply with environmental requirements**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1** Environmental legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed

- |                                                 |            |                                                                                                                                                                             |
|-------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                 | <b>1.2</b> | Work plan is confirmed in accordance with workplace requirements                                                                                                            |
|                                                 | <b>1.3</b> | Environmental hazards are identified, risks assessed and control measures identified and confirmed                                                                          |
|                                                 | <b>1.4</b> | Work permits/approvals are received and confirmed in accordance with workplace requirements                                                                                 |
|                                                 | <b>1.5</b> | Plant, materials, vehicles, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order              |

| <b>2 Comply with environmental requirements</b> | <b>2.1</b> | Environmental legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are complied with and monitored |
|                                                 | <b>2.2</b> | Environmental hazard control measures are monitored in accordance with workplace requirements                                                                               |
|                                                 | <b>2.3</b> | Work permits/approvals are complied with in accordance with workplace requirements                                                                                          |
|                                                 | <b>2.4</b> | Plant, materials, vehicles, tools, equipment and PPE are used in accordance with workplace requirements                                                                     |
|                                                 | <b>2.5</b> | Environmental incidents or unplanned events are responded to in accordance with workplace requirements                                                                      |
| <b>3 Complete work and documentation</b>        | <b>3.1</b> | Completed work is checked for compliance against the work plan and workplace requirements                                                                                   |
|                                                 | <b>3.2</b> | Work permits/approvals are finalised in accordance with workplace requirements                                                                                              |
|                                                 | <b>3.3</b> | Environmental incidents or unplanned events are reported in accordance with workplace requirements                                                                          |
|                                                 | <b>3.4</b> | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                                                                                  |
|                                                 | <b>3.5</b> | Plant, vehicles, tools, and equipment are cleaned, checked and returned to storage in accordance with workplace requirements                                                |

- 3.6 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.7 Environmental work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDREL13 Comply with sustainability, environmental and incidental response policies and procedures.

## Links

# Assessment Requirements for UETDREL002 Comply with environmental requirements

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- complying with relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - environmental
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- complying with and monitoring environmental requirements
- using plant, vehicles, materials, tools and equipment safely
- maintaining a safe and clean workplace environment
- dealing with an unplanned environmental event on at least one (1) occasion
- complying with unplanned environmental event reporting procedures
- receiving and finalising relevant work permits/approvals in accordance with workplace requirements
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - manufacturer and supplier information of hazardous substances/dangerous goods, including safety data sheets (SDS)
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- application, purpose and types of work permits/approvals
- events constituting an unplanned event or incident

- procedures for responding to an unplanned event or incident
- employer and employee responsibilities
- source information on environmental issues and updates
- environmental impacts from work-related activities
- environmental terminology used in the electricity supply industry (ESI)
- workplace environmental management plan
- methods of cleaning plant, equipment and tools
- safe use of plant, vehicles, materials, tools and equipment
- types and application of PPE used for hazardous substances and dangerous goods/materials
- procedures for handling plant, tools and equipment that contain hazardous substances
- procedures for handling, controlling, storing, recycling and disposing of:
  - hazardous substances
  - waste materials
- environmentally sensitive areas, including:
  - identification of
  - working in
  - procedures for entering and exiting
- emergency procedures for spillages of hazardous substances to reduce risks to the environment, including:
  - methods of cleaning up excessive spillages
  - methods of protection to surrounding environment
  - procedures for notification of relevant personnel and authorities
  - procedures for reporting and recording incidents
- fire precautions for field work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, equipment specifications,

regulations, codes of practice and operation manuals.

# **UETDREL003 Identify and apply controls for alternate supplies on the distribution network**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to identify and apply controls for alternate supplies on the distribution network in the electricity supply industry (ESI).

It includes identifying potential alternate supplies and applying control measures while performing work on or near the de-energised distribution network.

It also includes monitoring control measures for the alternate supplies to manage two-way power flow.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS018 Perform low voltage field switching operation to a given schedule

## **Competency Field**

Entry Level Cross Discipline

## Unit Sector

Not Applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to work on the distribution network**

- 1.1** Legislation, regulations, standards, codes of practice and workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Alternate supplies are identified and control measures are applied in accordance with workplace requirements
- 1.3** Hazards are identified, risks assessed and control measures identified and applied
- 1.4** Work permits are organised in accordance with workplace requirements
- 1.5** Tools, equipment and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
- 1.6** Worksite is prepared in accordance with workplace requirements

#### **2 Carry out work on the distribution network**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied
- 2.2** Work permits are received and signed in accordance with workplace requirements
- 2.3** Control measures are monitored for alternative supplies in accordance with workplace requirements
- 2.4** Manual handling, the use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.5** Work is carried out on the distribution network in accordance with workplace requirements
- 2.6** Incidents or unplanned events are responded to in

|                                          |            |                                                                                                            |
|------------------------------------------|------------|------------------------------------------------------------------------------------------------------------|
|                                          |            | accordance with workplace requirements                                                                     |
| <b>3 Complete work and documentation</b> | <b>3.1</b> | Work is completed and control measures removed from the worksite in accordance with workplace requirements |
|                                          | <b>3.2</b> | Work permits are signed off in accordance with workplace requirements                                      |
|                                          | <b>3.3</b> | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                 |
|                                          | <b>3.4</b> | Incidents or unplanned events are reported in accordance with workplace requirements                       |
|                                          | <b>3.5</b> | Tools and equipment are cleaned, checked and returned in accordance with workplace requirements            |
|                                          | <b>3.6</b> | Work records, reports and documentation are completed in accordance with workplace requirements            |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This is a new unit. No Equivalent Unit.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDREL003 Identify and apply controls for alternate supplies on the distribution network

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- identifying potential alternate supplies
- identifying control measures to manage alternate supplies
- implementing at least two (2) of the following control measures for alternate supplies:
  - isolation points, including using tags and locks in accordance with workplace requirements
  - short circuiting and earthing
  - bonding
  - low voltage (LV) short circuited
- monitoring control measures for alternate supplies to manage two-way power flow
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including:

- potential hazards, including:
  - alternating current (a.c.) and direct current (d.c.)
  - installation multiple earthed neutral (MEN) location changes in stand-alone mode
  - residual charge in electronic devices, e.g., capacitors in inverters
  - potential rise and currents on neutral
- potential backfeed hazards from:
  - faulty equipment
  - incorrectly installed equipment
- types and application of PPE
- test equipment
- concept, application and operation of alternate supplies, including:
  - anti-islanding control and protection
  - system monitoring and load management
- identification of alternate supplies from:
  - signage
  - visual
  - registers
- alternate supplies, including:
  - photovoltaic (PV) systems
  - battery systems
- awareness of known and unknown alternate supplies, including:
  - generation sources
  - storage sources
- impacts of two-way power flow connected to the grid
- control measures for alternate supplies, including:
  - isolation points, including tags and locks, in accordance with workplace requirements
  - short circuiting and earthing
  - bonding
  - LV short circuited
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- procedures for workplace records, reports and documentation.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace requirements, relevant industry standards, regulations, codes of practice and operation manuals.

# UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to operate plant and equipment in the vicinity of live electrical apparatus in the electricity supply industry (ESI).

It includes operating plant and equipment safely up to the defined safe approach distance.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

## Competency Field

Entry Level Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare to operate plant and equipment

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed

- 1.2 Work plan is obtained and confirmed in accordance with workplace requirements
  - 1.3 Hazards are identified, risks assessed and control measures identified and applied
  - 1.4 Work permits are received and signed in accordance with workplace requirements
  - 1.5 Plant, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
  - 1.6 Safe approach distances are determined and confirmed in accordance with workplace requirements
  - 1.7 Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
  - 1.8 Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
  - 1.9 Worksite is prepared in accordance with the work plan and workplace requirements
  - 1.10 Traffic management plan is confirmed as being in place in accordance with workplace requirements
- 2 Operate plant and equipment**
- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 2.2 Hazard control measures are monitored in accordance with workplace requirements
  - 2.3 Safety observer is positioned to observe the plant or equipment in accordance with workplace requirements
  - 2.4 Safe approach distances are maintained when operating plant and equipment in the vicinity of live electrical apparatus
  - 2.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
  - 2.6 Plant and equipment are safely operated in the vicinity of live electrical apparatus in accordance with workplace

requirements

2.7 Incidents or unplanned events are responded to in accordance with workplace requirements

### 3 Complete work and documentation

3.1 Incidents or unplanned events are reported in accordance with workplace requirements

3.2 Work permits are signed off in accordance with workplace requirements

3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

3.4 Plant and equipment are cleaned, checked and returned to storage in accordance with workplace requirements

3.5 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDREL12 Operate plant and equipment near live electrical conductors and apparatus.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- confirming safe approach distances
- operating equipment while maintaining the safe approach distance
- operating plant while maintaining the safe approach distance
- determining electricity network voltages, including:
  - low voltage (LV)
  - high voltages (HV)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards:

- conductor movements - swing, sag or blow off
- types and application of PPE
- safe use of plant and equipment in the vicinity of live electrical apparatus
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- plant and equipment, including:
  - operating characteristics
  - terminology related to operating in the vicinity of live electrical apparatus
  - hazards and potential hazards
  - communication methods and barriers between plant/equipment operator and safety observer
- characteristics of overhead and underground electricity networks, including:
  - transmission, distribution and rail
  - layout/configuration
  - components
  - voltage levels.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for operating plant and equipment in the vicinity of live electrical apparatus
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDREL005 Work safely in the vicinity of live electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to work safely in the vicinity of live electrical apparatus in the electricity supply industry (ESI).

It includes working safely up to the defined personal safe approach distance in the vicinity of live electrical apparatus for ESI workers.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

## Competency Field

Entry Level Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare to work safely in the vicinity of live

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to

|                                                                   | <b>2.4</b> Safety observer is positioned to observe the work in accordance with workplace requirements                                                             |
|                                                                   | <b>2.5</b> Communication methods between workers and safety observer are used in accordance with workplace requirements                                            |
|                                                                   | <b>2.6</b> Safe approach distances are maintained when the work is being performed in the vicinity of live electrical apparatus                                    |
|                                                                   | <b>2.7</b> Incidents or unplanned events are responded to in                                                                                                       |

accordance with workplace requirements

### **3 Complete work and documentation**

- 3.1** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.2** Work permits are signed off in accordance with workplace requirements
- 3.3** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4** Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5** Work records, reports and documentation are completed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to UETTDREL16 Working safely near live electrical apparatus.

## **Links**

# Assessment Requirements for UETDREL005 Work safely in the vicinity of live electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- determining electricity network voltages, including:
  - low voltage (LV)
  - high voltages (HV):
    - distribution
    - sub-transmission
    - transmission
- identifying electricity network assets
- determining and confirming safe approach distances
- performing work while maintaining the personal safe approach distance
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:

- WHS/OHS
- safe approach distances
- emergency procedures
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- basic electrical principles, including:
  - voltage, current and resistance
  - typical effects of current, including physiological effects and induced voltages
  - consequences of short circuits, including arc flash and touch and step potentials
- electricity networks, including:
  - LV
  - HV:
    - distribution
    - sub-transmission
    - transmission
  - earthing systems
  - associated assets
  - layouts and configuration
  - basic protection
  - relationship between an overhead and underground supply system
- terminology related to working safely in the vicinity of live electrical apparatus.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for working safely near live electrical apparatus
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to work safely in the vicinity of live electrical apparatus as a non-electrical worker.

It includes compliance with safe approach distances for the worker, plant, tools and equipment.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

Not applicable.

## Competency Field

Entry Level Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Prepare to work safely in the vicinity of live electrical apparatus**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed

- 1.2 Work plan is obtained and confirmed in accordance with workplace requirements
  - 1.3 Materials required for work are determined and obtained in accordance with work plan and workplace requirements
  - 1.4 Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
  - 1.5 Hazards are identified, risks assessed and control measures identified and applied
  - 1.6 Work permits are received and signed in accordance with workplace requirements
  - 1.7 Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
  - 1.8 Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
  - 1.9 Worksite is prepared in accordance with the work plan and workplace requirements
  - 1.10 Electricity infrastructure assets and associated voltages are identified and confirmed
  - 1.11 Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 2 Work safely in the vicinity of live electrical apparatus**
- 2.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 2.2 Lifting, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
  - 2.3 Hazard control measures are monitored in accordance with workplace requirements
  - 2.4 Safety observer is positioned to observe the work in accordance with workplace requirements

- |                                          |     |                                                                                                                                      |
|------------------------------------------|-----|--------------------------------------------------------------------------------------------------------------------------------------|
|                                          | 2.5 | Communication methods between workers and safety observer are used in accordance with workplace requirements                         |
|                                          | 2.6 | Safe approach distances are maintained when the work is being performed                                                              |
|                                          | 2.7 | Incidents or unplanned events are responded to in accordance with workplace requirements                                             |
| <b>3 Complete work and documentation</b> | 3.1 | Incidents or unplanned events are reported in accordance with workplace requirements                                                 |
|                                          | 3.2 | Work permits are signed off in accordance workplace requirements                                                                     |
|                                          | 3.3 | Works records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDREL14 Working safely near live electrical apparatus as a non-electrical worker.

# UETDRIS001 Coordinate and direct power system switching schedules

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the coordination and direction of switching the high voltage (HV) and low voltage (LV) system. It includes coordinating switching between operating authorities and HV customers. It also includes the direction of switching on the HV and LV electrical network.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL005 Work safely in the vicinity of live electrical apparatus

### Transmission Overhead Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS017 Perform high voltage field switching operation to a given schedule

UETDRTO006 Install and maintain transmission conductors

UETDRTO007 Install and maintain transmission structures and hardware

Distribution Overhead Pathway Group

UETDRDO005 Maintain overhead energised low voltage distribution network

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS008 Install and maintain electrical apparatus

UETDRIS010 Install and maintain low voltage overhead services

UETDRIS012 Install and maintain poles, structures and hardware

UETDRIS018 Perform low voltage field switching operation to a given schedule

Rail Traction Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

UETDRRT013 Perform rail traction switching operations to a given schedule

Distribution Cable Jointing Pathway Group

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDRDU016 Lay power cables

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

UETDRIS018 Perform low voltage field switching operation to a given schedule

Electrical Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with

electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDRSB001 Perform substation switching operations to a given schedule

UETTDRIS67 Solve problems in energy supply network equipment

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare/plan to coordinate and direct switching schedules**

- |            |                                                                                                                                                                                                                                                        |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination |
| <b>1.2</b> | Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures                     |
| <b>1.3</b> | Risk control measures are identified, prioritised and evaluated against the work schedule                                                                                                                                                              |

- 1.4** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
  - 1.5** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
  - 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.8** Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
  - 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 2 Carry out coordinate and direct switching schedules**
- 2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
  - 2.2** First aid, pole top rescue and other related work procedures are performed according to requirements and/or established procedures
  - 2.3** Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements
  - 2.4** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
  - 2.5** Remedial actions are taken to overcome any shortfalls

encountered in the work schedule according to requirements and/or established procedures

- 2.6 Coordination and direction of switching schedules are carried out in accordance with the work schedule and requirements and/or established procedures
- 2.7 Essential knowledge and associated skills are applied in the safe coordination and direction of switching schedules to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
- 2.8 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
- 2.9 Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard

### **3 Complete coordinate and direct switching schedules**

- 3.1 Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
- 3.2 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
- 3.3 Relevant work permits are signed off and electrical plant is returned to service and client/customer advised in accordance with requirements
- 3.4 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI51 Coordinate and direct power system switching schedules.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRIS001 Coordinate and direct power system switching schedules

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining all the following:
  - approvals/clearances
  - access permits
- demonstrating all of the following:
  - switching direction
  - switching coordination
  - autonomy of working with network control
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment - high voltage (HV) and low voltage (LV) equipment
  - characteristics, capabilities and application of powerline electrical equipment
  - safety precautions with regards to using electrical equipment
  - techniques in pre-use inspection on the serviceability of electrical equipment
  - techniques in the general maintenance, care and storage of electrical equipment
  - identifying hazards, and assessing and controlling risks associated with the use of electrical equipment
- installation of switchgear and associated equipment encompassing:

- types and function of various switchgear - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types of switchgear, installation procedures, earthing, and requirements and techniques
- types of equipment - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
- installation procedures for switchgear and equipment - standards, codes, legislation, supply authority regulations and/or enterprise requirements, assembly and erecting procedures, earthing requirements and techniques, and pole mounted locations
- maintenance procedures for switchgear and equipment - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
- testing and commissioning - ESI standards and procedures
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permits, operational procedures and earthing procedures
  - personnel protective equipment (PPE) for LV switching
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedures for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of "operational" and additional work part "on-site" earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, PPE and HV switching techniques

- operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
  - HV underground switching equipment - arc strangles, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
  - function of feeder automation system and the main components
  - operation procedure for a remote field device from a local control station
  - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
  - SCADA system security interlocks and access restrictions
  - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
  - function of the main components of a local/remote control system
  - operation of a field devices using SCADA systems via a RAT, dial up voice annunciated system and local control station
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations

- techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, emergency fault procedures and energisation procedures
- LV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distance, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- coordinating and directing switching instructions encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet instructions
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the coordination and directing of switching schedules instructions
  - relationship between the operating authorities and HV customers and operating agreements
  - techniques in coordinating and directing HV and LV switching of electrical networks
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV and HV electrical equipment to be switched
  - responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - techniques in gathering, collating and confirming data on switching procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment

- role and responsibilities of the HV switching operator
- operational forms, access authorities and permits and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits and hazard/risk assessments; purpose and procedure for operational forms, access authorities and hazard/risk assessments
- use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
- HV switchgear – types, categories, application and operating capabilities
- operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing, and HV switching techniques
- operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to LV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
  - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments; purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - LV switchgear – types, categories, application and operating capabilities
  - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to LV switching equipment
  - procedures for the isolation of LV distributions main and working earths
  - earthing LV electrical apparatus practices and procedures for access authority issuing

- LV switching techniques
- operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths); and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- preparation of a LV switching instruction encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator
  - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader

- programs, such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings encompassing:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS002 Coordinate power system permit procedures

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the coordination of work procedures that require the issue of electrical permits to work and other permits for working on major parts of the electrical network. It encompasses the analysis and coordination of all work activities planned to be undertaken within more or less the same time timeframe to ensure that the organisation's work safety and statutory requirements are complied with; the extent of power interruption, and hence inconvenience to customers, is minimised; and the effective utilisation of available resources, both from the organisation and from its contractors to ensure all planned activities are completed in a timely manner to specified standards and requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL005 Work safely in the vicinity of live electrical apparatus

### Transmission Overhead Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS017 Perform high voltage field switching operation to a given schedule

UETDRTO006 Install and maintain transmission conductors

UETDRTO007 Install and maintain transmission structures and hardware

Distribution Overhead Pathway Group

UETDRDO005 Maintain overhead energised low voltage distribution network

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS008 Install and maintain electrical apparatus

UETDRIS010 Install and maintain low voltage overhead services

UETDRIS012 Install and maintain poles, structures and hardware

UETDRIS018 Perform low voltage field switching operation to a given schedule

Rail Traction Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

UETDRRT013 Perform rail traction switching operations to a given schedule

Distribution Cable Jointing Pathway Group

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDRDU016 Lay power cables

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

UETDRIS018 Perform low voltage field switching operation to a given schedule

Electrical Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDRSB001 Perform substation switching operations to a given schedule

UETTDRI67 Solve problems in energy supply network equipment

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Prepare/plan to coordinate permit procedures

- |            |                                                                                                                                                                                                                                                        |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination |
| <b>1.2</b> | Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures                     |

- 1.3 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
    - 1.4 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures
    - 1.5 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
    - 1.6 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and applied in the coordination of permit procedures according to established procedures
    - 1.7 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
    - 1.8 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 2 **Carry out the coordination of permit procedures**
  - 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
  - 2.2 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
  - 2.3 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.4 Coordination of permit procedures is carried out in accordance with the work schedule and requirements and/or established procedures

- 2.5 Essential knowledge and associated skills are applied in the safe coordination of permit procedures to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements
  - 2.6 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
  - 2.7 Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality like outcome is achieved for the client/customer and to a community/industry standard
- 3 **Complete the coordination of permit procedures**
  - 3.1 Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
  - 3.2 Relevant work permits are signed off and plant is returned to service and client/customer advised in accordance with requirements
  - 3.3 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
  - 3.4 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI50 Coordinate power system permit procedures.

## Links

# Assessment Requirements for UETDRIS002 Coordinate power system permit procedures

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all the following:
  - developing a permit schedule and/or permit issuing procedures
  - facilitating and coordinating the delivery and issuing of permits
- gathering, collating and confirming data on different worksites relevant to:
  - electrical network diagrams for the specific worksite
  - earth permits
  - safe working area
  - work to be carried out in confined space or in hazardous environment
  - specific outsourcing procedures
  - specific hazard identification
  - risk classification and management procedures
  - regulatory requirements, such as WHS/OHS and electrical safety
- completing all the following:
  - receiving and coordinating the cancellation of permits in readiness for restoration
  - conducting audits permit correctness procedures
- conducting at least two (2) of the following:
  - issuing other work permits, such as working in confined space, as required
  - coordinating permits
  - engaging and briefing contractors on electrical and other work permits
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

the requirements of the elements and performance criteria and include knowledge of:

- coordinating access authority procedures encompassing:
  - specific enterprise processes, policies and procedures to be followed
  - processes of consultation, negotiation and coordination - clear and concise instructions and information, methods for the encouragement of feedback and contributions of information and ideas, and responsibilities of members of the team
  - techniques in analysing, planning, coordinating and organising work for a safe outcome and according to statutory requirements and regulations
  - techniques in the effective utilisation of available resources
  - techniques in the development of an access authority/permit and/or access authority/permit issuing procedures
  - techniques in facilitating and coordinating the delivery and issuing of access authorities
  - techniques in gathering, collating and confirming data on different worksites - electrical network diagrams for the specific worksite, earth access authorities, safe working area, work to be carried out in confined space or in hazardous environment, specific outsourcing procedures, specific hazard identification, risk classification and management procedures, and regulatory requirements, such as WHS/OHS and electrical safety
  - techniques in the receiving and coordinating the cancellation of access authorities in readiness for restoration
  - methods of conducting audits on correct access authority procedures
  - process of issuing of other access authorities for work permits - working in confined space, as required, coordination of access authorities, and engaging and briefing contractors on electrical and other work
  - issue and receipt of operating agreements
- high voltage (HV) switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits, and purpose and procedures for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of "operational" and additional work part "on-site" earths, factors determining the location

- and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE) and HV switching techniques
- operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms; operating limitations and the relationship between transformer and HV fuse rating; purpose and principle operation of HV distribution transformer tap changers; HV distribution transformer and transformer - cable combination switching practices; paralleling requirements, isolation and earthing procedures for access; common distribution transformer and associated electrical apparatus faults
  - HV underground switching equipment - arc strangles, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER substations
- feeder automation system encompassing:
  - function of feeder automation system and the main components
  - operation procedure for a remote field device from a local control station
  - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
  - SCADA system security interlocks and access restrictions
  - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
  - function of the main components of a local/remote control system
  - operation of a field devices using SCADA systems via a AT, dial up voice annunciated system and local control station
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances (SAD), responsibilities and protocols, identifying switching

- resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
- techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, emergency fault procedures and energisation procedures
- LV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, SAD, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits and hazard/risk assessments; purpose and procedures for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc strangles
  - HV switchgear – types, categories, application and operating capabilities
  - operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks switches, disconnects, live line clamps, phasing sticks and phasing tester
  - operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks

- associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- LV overhead and substation switching principles encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to low voltage overhead and substation switching
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
    - operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments, purpose and procedures for operational forms, access authorities and hazard/risk assessments
    - use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
    - LV switchgear – types, categories, application and operating capabilities
    - operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
    - operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
    - restrictions pertaining to LV switching equipment
    - procedures for the isolation of LV distributions main and working earths
    - earthing LV electrical apparatus practices and procedures for access authority issuing
    - LV switching techniques
    - operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
  - preparation of a HV switching instruction schedule encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; points of isolation and earthing locations (safety and working earths) and responsibilities of the switching operator
    - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
  - preparation of a LV switching instruction encompassing:
    - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
    - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator

- techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings encompassing:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instruction/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution

system symbols and feeder plans, and processes of updating switching diagrams.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS003 Develop high voltage switching schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the preparation of a basic switching schedule for interconnected high voltage (HV) network plant. It includes planning basic outages and taking into account loading of network components. It also includes the calculation of network loading conditions to ensure the network is operating within designed parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS017 Perform high voltage field switching operation to a given schedule

Transmission Overhead Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRTO006 Install and maintain transmission conductors

UETDRTO007 Install and maintain transmission structures and hardware

Distribution Overhead Pathway Group

UETDRDO005 Maintain overhead energised low voltage distribution network

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS008 Install and maintain electrical apparatus

UETDRIS010 Install and maintain low voltage overhead services

UETDRIS012 Install and maintain poles, structures and hardware

Rail Traction Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

Distribution Cable Jointing Pathway Group

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDRDU016 Lay power cables

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

Electrical Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRI67 Solve problems in energy supply network equipment

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to develop HV switching schedules**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Risk control measures are identified, prioritised and evaluated against the work schedule
- 1.4** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.5** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented

and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures

- 1.6** Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE) required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
- 1.8** Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
- 1.9** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised where applicable in accordance with established procedures
- 1.10** Liaison and communication issues with other/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work

## **2 Carry out the development of HV switching schedules**

- 2.1** WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
- 2.2** Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures
- 2.3** Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
- 2.4** Development of HV switching schedules is carried out in accordance with the work schedule and requirements and/or established procedures
- 2.5** Essential knowledge and associated skills are applied in the safe development of HV switching schedules to ensure completion in an agreed timeframe and to quality

standards with a minimum of waste according to requirements

- 2.6 Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements
  - 2.7 Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard
- 3 Complete development of HV switching schedules**
- 3.1 Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures
  - 3.2 Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures
  - 3.3 Relevant work permits are signed off and plant is returned to service and client/customer advised in accordance with requirements
  - 3.4 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS48 Develop high voltage switching schedule.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRIS003 Develop high voltage switching schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining all the following:
  - approvals/clearances
  - access authorities
- completing at least one (1) of the following:
  - development of an interconnected switching schedule
  - development of a radial switching schedule
- completing all of the following:
  - planning of loading of network components, including standby generation
  - evaluating load parameters and effects on system, including paralleling and off-loading
  - identifying unexpected sources of energisation, e.g., generators and uninterruptible power supply (UPS)
  - implementing earthing procedures to reduce induced voltages
  - authorising issuance of work permits
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment - high voltage (HV) and low voltage (LV) equipment
  - characteristics, capabilities and application of powerline electrical equipment

- safety precautions with regards to using electrical equipment
- techniques in pre-use inspection on the serviceability of electrical equipment
- techniques in the general maintenance, care and storage of electrical equipment
- identifying hazards, assessing and controlling risks associated with the use of electrical equipment
- HV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of HV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and network interconnectors source of possible back-feed
  - role of the HV switching operator
  - operational forms, access authorities and permits associated with HV switching - types of operational forms, access authorities and permits; purpose and procedure for operational forms, access authorities and permits
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc strangles
  - types and categories of HV switchgear
  - application, function and operating capabilities of switchgear
  - restrictions pertaining to HV switching equipment
  - procedures for the isolation of HV transmission main and working earths
  - earthing HV electrical apparatus practices and procedures for access - purposes of operational and additional work part on-site earths, factors determining the location and effectiveness of operational earthing, acceptable industry procedures, personal protective equipment (PPE) and HV switching techniques
  - operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- HV distribution transformer principles encompassing:
  - operation of HV distribution transformers - principle governing factors for transformer ratings, protection and alarms, operating limitations and the relationship between transformer and HV fuse rating, purpose and principle operation of HV distribution transformer tap changers, HV distribution transformer and transformer - cable combination switching practices, paralleling requirements, isolation and earthing procedures for access, common distribution transformer and associated electrical apparatus faults
  - HV underground switching equipment - arc strangles, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F and G switching cubicles, voltage indicators and phasing testers
- HV single wire earth return (SWER) system encompassing:
  - application and function of SWER system components
  - circuit arrangement

- principle of operation
- hazards and procedures associated with faulty SWER earth systems
- procedures to isolate, energise and commission SWER substations
- feeder automation system encompassing:
  - function of feeder automation system and the main components
  - operation procedure for a remote field device from a local control station
  - functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
  - SCADA system security interlocks and access restrictions
  - SCADA system operation when switching apparatus or retrieving data via a remote access device, such as remote access terminal (RAT), dial up voice annunciated system and local control station
  - function of the main components of a local/remote control system
  - operation of a field devices using SCADA systems via a RAT, dial up voice annunciated system and local control station
- HV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of HV systems and equipment to be switched
  - procedures for obtaining correct HV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in HV system switching - pre-switching checks, switching operational procedures, isolation procedures and proving dead de-energised, earthing procedures, emergency fault procedures and energisation procedures
- HV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to HV overhead and substation switching
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment
  - role and responsibilities of the HV switching operator
  - operational forms, access authorities and permits, and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and permits, hazard/risk assessments, purpose and procedure for operational forms, access authorities and hazard/risk assessments
  - use and operation of equipment associated with HV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
  - HV switchgear – types, categories, application and operating capabilities

- operation of HV overhead switching or indicating devices - fuses, disconnect fuses, load switching, live line indicators, capacitors, reclosers, sectionalisers, underslung links, air-breaks, switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings; types and applications; protection systems and substation equipment fault levels and settings; types and applications
- restrictions pertaining to HV switching equipment
- procedures for the isolation of HV mains and working earths - earthing HV electrical apparatus practices and procedures for access authority issuing; and HV switching techniques
- operate switching apparatus - identifying hazards, assessing and controlling risks associated with HV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a HV switching instruction schedule encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching instruction schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of HV electrical equipment to be switched, points of isolation and earthing locations (safety and working earths), and responsibilities of the switching operator
  - techniques in writing switching instructions - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or

- equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific switching diagrams and drawings encompassing:
  - types and application of enterprise-specific switching drawings and documents - wiring and schematic diagrams and switching symbols, mechanical drawings dealing with switching operations, project charts, switching schedules, graphs, technical manuals and catalogues, and instructions/worksheets
  - interpretation of different system switching diagrams - LV system switching diagrams, direct current (d.c.) traction supply sectioning diagrams, HV transmission and distribution system symbols and feeder plans, and processes of updating switching diagrams.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS004 Develop low voltage switching schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the preparation of a basic switching schedule for low voltage (LV) network. It includes planning basic outages and taking into account loading of network components. It also includes the calculation of network loading conditions to ensure the network is operating within design parameters.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS018 Perform low voltage field switching operation to a given schedule

Transmission Overhead Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRTO006 Install and maintain transmission conductors

UETDRTO007 Install and maintain transmission structures and hardware

Distribution Overhead Pathway Group

UETDRDO005 Maintain overhead energised low voltage distribution network

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS008 Install and maintain electrical apparatus

UETDRIS010 Install and maintain low voltage overhead services

UETDRIS012 Install and maintain poles, structures and hardware

Rail Traction Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

Distribution Cable Jointing Pathway Group

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDRDU016 Lay power cables

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

Electrical Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETTDRI67 Solve problems in energy supply network equipment

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to develop LV switching schedules**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures
- 1.3** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.4** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, to ensure safe systems of work are followed and according to established procedures

- 1.5 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.6 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.7 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
  - 1.8 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
- 2 **Carry out the development of LV switching schedules**
  - 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in accordance with requirements and/or established procedures
  - 2.2 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures
  - 2.3 Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures
  - 2.4 Development of LV switching schedules is carried out in accordance with the work schedule and requirements and/or established procedures
  - 2.5 Essential knowledge and associated skills are applied in the safe development of LV switching schedules to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements

- |                                                         |     |                                                                                                                                                                                                                      |
|---------------------------------------------------------|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                         | 2.6 | Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements                                                                     |
|                                                         | 2.7 | Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard |
| <b>3 Complete development of LV switching schedules</b> | 3.1 | Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures                                            |
|                                                         | 3.2 | Relevant work permits) are signed off and plant is returned to service and client/customer advised in accordance with requirements                                                                                   |
|                                                         | 3.3 | Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures                                                                                                        |
|                                                         | 3.4 | Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified                                                    |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI549 Develop low voltage switching schedule.

# Assessment Requirements for UETDRIS004 Develop low voltage switching schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS) occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- obtaining all the following:
  - approvals/clearances
  - access authorities
- completing the following:
  - development of low voltage (LV) switching schedule to enterprise requirements
- completing all the following:
  - planning of loading of network components, including standby generation
  - evaluating load parameters and effects on system, including paralleling and off-loading
  - identifying unexpected sources of energisation, e.g., generators, uninterruptible power supply (UPS) and solar
  - implementing earthing procedures to reduce induced voltages
  - authorising issuance of work-permits
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- electrical equipment fundamentals used in the powerline industry encompassing:
  - legislation, standards, codes, supply authority regulations and specific enterprise regulations pertaining to the use and care of electrical equipment - high voltage (HV) and LV equipment
  - characteristics, capabilities and application of powerline electrical equipment
  - safety precautions with regards to using electrical equipment

- techniques in pre-use inspection on the serviceability of electrical equipment
- techniques in the general maintenance, care and storage of electrical equipment
- identifying hazards, and assessing and controlling risks associated with the use of electrical equipment
- installation of switchgear and associated equipment encompassing:
  - types and function of various switchgear - isolators, air-break switches, gas-filled switches, vacuum type, links, fuses, oil disconnectors, fuse switches, circuit breakers, operating characteristics, advantages and disadvantages of different types of switchgear, installation procedures, earthing requirements and techniques
  - types of equipment - transformers, reactors, regulators, capacitors, relays, surge arrestors, fault indicators and mobile generators
  - installation procedures for switchgear and equipment - standards, codes, legislation, supply authority regulations and/or enterprise requirements, assembly and erecting procedures, earthing requirements and techniques, and pole mounted locations
  - maintenance procedures for switchgear and equipment - diagnosing and rectifying faults according to electricity supply industry (ESI) standards and procedures
  - testing and commissioning - ESI standards and procedures
- LV switching principles encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to switching of LV to a given schedule
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of electrical apparatus; use, characteristics and capabilities of specialised tools and testing equipment; and LV network interconnectors source of possible back-feed
  - LV switching techniques - identifying hazards, assessing and controlling risks associated with LV switching operations, electrical access permit(s), operational procedures and earthing procedures
  - personnel protective equipment (PPE) for LV switching
- LV system switching principles, including switching authorisation procedures, encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to system switching
  - requirements for the use of manuals, system diagrams/plans and drawings
  - types and characteristics of LV systems and equipment to be switched
  - procedures for obtaining correct LV switching authorisation - identification of WHS/OHS hazards, assessing and controlling risks, safety procedures and precautions, safe approach distances, responsibilities and protocols, identifying switching resources, procedures for obtaining electrical access permits authorities, requirements for team switching and procedures for coordination of operations
  - techniques in LV system switching - isolation procedures and proving dead, earthing procedures, pre-switching checks, switching operational procedures, emergency fault procedures and energisation procedures
- LV overhead and substation switching principles encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements

applicable to LV overhead and substation switching

- requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; use, characteristics and capabilities of specialised tools and testing equipment; and role and responsibilities of the LV switching operator
- operational forms, access authorities and hazard/risk assessments associated with HV switching - types of operational forms, access authorities and hazard/risk assessments; purpose and procedure for operational forms, access authorities and hazard/risk assessments
- use and operation of equipment associated with LV overhead and substation equipment - test instruments, sticks, interrupters and arc stranglers
- LV switchgear – types, categories, application and operating capabilities
- operation of LV overhead switching or indicating devices - fuses, disconnect fuses, load switching, underslung links, air-break switches, disconnects, live line clamps, phasing sticks and phasing tester
- operation of protection systems and substation equipment - fault levels and settings; types and applications, protection systems and substation equipment fault levels and settings; types and applications
- restrictions pertaining to LV switching equipment
- procedures for the isolation of LV distributions main and working earths
- earthing LV electrical apparatus practices and procedures for access authority issuing
- LV switching techniques
- operate switching apparatus - identifying hazards, assessing and controlling risks associated with LV switchgear operation, systematic and defensive techniques, mobile radio procedures and double isolation procedures
- preparation of a LV switching instruction encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements applicable to switching sheet schedules
  - requirements for the use of manuals, system diagrams/plans and drawings - types, characteristics and capabilities of LV electrical equipment to be switched; isolation points and earthing; and responsibilities of the switching operator
  - techniques in writing switching schedules - sequence of switching operations, isolation procedures, earthing procedures and switching completion notification procedures
- enterprise-specific policies and procedure instructions encompassing:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - fire-fighting procedures, fatigue

- management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions encompassing:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawings and documents encompassing:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to implement and monitor the power system environmental and sustainable energy management policies and procedures in the electricity supply industry (ESI).

It includes collecting, interpreting and applying environmental management information, identifying environmental impacts, assessing risks and establishing best practice procedures for implementation of management plans to ensure compliance. It also includes monitoring policies and plans and developing modifications as part of the review process.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

Electrotechnology Pathway Unit Group

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

ESI - TDR Pathway Unit Group

UETDREL001 Apply environmental requirements

## **Competency Field**

Industry Specific Cross Discipline

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan to implement and monitor environmental and sustainable energy management policies and procedures**

- 1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
- 1.2** Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
- 1.3** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.4** Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
- 1.5** Relevant work permits are obtained, understood and signed onto in accordance with workplace procedures
- 1.6** Plant, equipment, tools and personal protective equipment required for work is identified, obtained and confirmed in working order
- 1.7** Liaison and communication issues with authorised personnel, authorities, clients and landowners are resolved to perform work, as required
- 1.8** Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
- 1.9** Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures
- 1.10** Traffic management is planned and implemented in accordance with workplace procedures

#### **2 Carry out the implementation and monitoring of**

- 2.1** WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with

|                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>environmental and sustainable energy management policies and procedures</b>                                                 | workplace procedures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                                                                                                                                | <p>2.2 First aid, pole top rescue and other related work procedures are performed in accordance with job requirements and/or workplace procedures</p> <p>2.3 Requirements for lifting, climbing, working at heights, confined spaces and use of power tools/equipment are followed in accordance with workplace procedures</p> <p>2.4 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks and risk control measures are implemented, preventative action taken and monitored and/or appropriate authorities consulted, where necessary, in accordance with requirements and workplace procedures</p> <p>2.5 Remedial actions are taken to overcome shortfalls encountered in the work schedule in accordance with job requirements and workplace procedures</p> <p>2.6 Environmental and sustainable energy management policies and procedures are implemented and monitored in accordance with work schedules, job requirements and workplace procedures</p> <p>2.7 Environmental and sustainable energy management policies and procedures are implemented and monitored to ensure completion in agreed timeframes, to quality standards and with minimum waste in accordance with workplace procedures</p> <p>2.8 Solutions to non-routine problems are identified and actioned in accordance with workplace procedures</p> <p>2.9 Quality checks of work are undertaken in accordance with industry standards and workplace procedures</p> |
| <b>3 Complete the implementation and monitoring of environmental and sustainable energy management policies and procedures</b> | <p>3.1 Work is checked against work schedule for conformance with job requirements, anomalies reported and solutions identified in accordance with workplace procedures</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

- 3.2 Accidents, incidents and/or injuries are reported in accordance with requirements and workplace procedures
- 3.3 Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
- 3.4 Tools, equipment and surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
- 3.5 Relevant work permit/s are signed off, work completed/returned to service and client/customer advised in accordance with job requirements
- 3.6 Work completion records, reports and information are confirmed, processed and relevant person/s notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS63 Implement and monitor the power system environmental and sustainable energy management policies and procedures.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# **Assessment Requirements for UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- gathering environmental management information
- implementing and monitoring environmental and sustainable energy policies and plans
- identifying environmental impacts and assess risks
- implementing and monitoring the procedures for quantifying environmental impacts and controlling risks
- implementing and monitoring procedures for dealing with environmental incidents
- maintaining environmental records, reports and plans
- dealing with unplanned events on at least one (1) occasion.

## **Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- environmental fundamentals, including:
  - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the control of environment associated with the worksite - relevant federal legislation, relevant state/territory legislation, relevant local government by-laws, relevant government or quasi government policies and regulations, and relevant community planning and development agreements (including land care agreements)
  - employer and employee responsibilities
  - methods of obtaining information on environmental issues and updates
  - methods of identifying environmental impacts from work-related activities
  - meaning of environmental terms - identification, assessment and control of risks,

compliance, best practice and sustainable energy

- procedures for implementing management plans to ensure compliance
- implementation and monitoring requirements for the impact of powerline installations and operation on the environment and/or the area surrounding the powerline and/or equipment, including:
  - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of environmental impact factors in the workplace and areas of power distribution or transmission - Commonwealth/state/territory legislation relevant to the workplace and the Environment Protection Act legislation and common law
  - identification, assessment, control and monitoring of the hazards to the environment associated with the powerline industry
  - workplace environment quality standards enterprise plan - setting of acceptable emission level limits from power plant equipment; impact of the enterprise activities on air, water quality and nature; impact and level of emissions from power plant, power distribution and transmission equipment; and network infrastructure (noise generation, noxious gas emissions, greenhouse gas production, electromagnetic emissions, electromagnetic field strength, oil leakage and insulation breakdown products)
  - provision of manufacturer and supplier information, such as material safety data sheets (MSDS)
  - gathering of environment management information
  - maintenance of environmental records
  - risk assessment and its management in powerline industry
  - maintenance strategies for environment protection programs - developing processes for promoting, maintaining and improving environmental impact in the workplace; identifying techniques for evaluating and reviewing environment protection education and training programs; elements of an effective environment protection management system; and Environment Protection Authority (EPA) consultation and accident/incident investigations
- implementation and monitoring requirements for the management of sustainable energy in powerline installations and operation of plant and equipment, including:
  - identification of relevant legislation, codes and government guidelines for the implementation and monitoring of sustainable energy principles in the workplace, and power distribution and transmission networks - Commonwealth/state/territory legislation, legislation relevant to the workplace, Environment Protection Act legislation, local government by-laws, community planning and development agreements (i.e., land care agreements)
  - monitoring and reporting procedures for enterprise-specific policy implementation on sustainable energy issues, including the gathering of energy consumption and loss information
  - ongoing development of energy conservation policies - procedures for quantifying energy usage and wastage, energy usage auditing procedures, planning of energy conservation methods, and monitoring and review processes
  - resource availability planning for policy implementation
  - techniques in managing documentation - information on applicable sustainable energy

laws or other requirements; complaint records; training records; process information; process operational logbooks; inspection, maintenance and calibration records; relevant contractor and supplier information; incident reports; and information on emergency preparedness and response

- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations
  - induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, and complaint and issues procedures
  - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
  - WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as MSDS; registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise policies and procedures in maintaining the operation of plant, equipment and powerline installations using sustainable energy principles, including:
  - overview of sustainable energy technologies – solar, wind, biomass and CO<sub>2</sub> generation
  - economic benefits of sustainable energy initiatives

- relationship between greenhouse effect and sustainable energy
- types of renewable energy technology suitable for use in Australia - photovoltaic (PV), solar thermal, wind energy conversion, biomass, wind/tidal and gas thermal
- relationship between safe building design and energy efficiency - building aspect, insulation, ventilation, glazing, passive solar design and shading
- techniques in selecting control devices
- components within a lighting system
- energy efficient lighting products, design and installation
- use of natural light
- automated lighting control systems
- assessment of requirements and selection of system
- techniques in selecting control devices
- components within a heating, ventilation and air conditioning (HVAC) and refrigeration control system
- energy efficient refrigerants
- detection systems to control air flow
- energy star ratings for coefficient of performance
- energy control systems
- advantages of evaporative air conditioners in dry climates
- assessment of requirements and selection of system.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to implement and monitor the power system environmental and sustainable energy management policies and procedures in the electricity supply industry (ESI).

It includes collecting, interpreting and applying environmental management information, identifying environmental impacts, assessing risks and establishing best practice procedures for implementation of management plans to ensure compliance. It also includes monitoring policies and plans and developing modifications as part of the review process.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UETDREL005 Work safely in the vicinity of live electrical apparatus

## **Competency Field**

Industry Specific Cross Discipline

## **Unit Sector**

Not applicable.

## **Elements and Performance Criteria**

### **ELEMENTS**

### **PERFORMANCE CRITERIA**

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Plan to implement and monitor organisational WHS/OHS policies, procedures and programs**

- 1.1** Relevant workplace documentation is identified, analysed and work preparation required for planning and coordination determined
- 1.2** Relevant requirements and workplace procedures are communicated to all personnel and identified for all worksites
- 1.3** Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures are prioritised, implemented and monitored to ensure work safe systems are followed in accordance with workplace procedures
- 1.4** Work is prioritised and sequenced for efficient and effective outcome following consultation with relevant personnel for completion within agreed timeframes, to standard and in accordance with workplace procedures
- 1.5** Risk control measures are identified, prioritised, implemented and evaluated in accordance with work schedule
- 1.6** Relevant work permits are confirmed and signed in accordance with requirements and/or workplace procedures
- 1.7** Resources, personnel, equipment, tools and personal protective equipment (PPE) required for the job are identified, scheduled, coordinated and confirmed in safe and technical working order
- 1.8** Potential issues in communicating with relevant person/s, authorities, clients and landowners are identified, resolved and work activities planned and coordinated
- 1.9** Worksite is prepared in accordance with the work schedule to minimise WHS/OHS risk, damage to property, commerce and individuals in accordance with workplace procedures
- 1.10** Personnel and contractors participating in work are fully briefed and responsibilities authorised and coordinated in accordance with workplace procedures

- 2 Carry out the implementation and monitoring of organisational WHS/OHS policies, procedures and programs**
- 1.11** Traffic management plan is confirmed as being applied in accordance with workplace procedure
  - 2.1** WHS/OHS and sustainable energy principles and practices are implemented and monitored to reduce workplace incidents and minimise waste in accordance with job requirements and workplace procedures
  - 2.2** Relevant worksite personnel are confirmed current in first aid and rescue-related work in accordance with job requirements and workplace procedures
  - 2.3** Lifting, climbing, working in confined spaces, working at heights, using power tools and equipment techniques and practices are followed safely in accordance with requirements and workplace procedures
  - 2.4** Hazard warnings and safety signs are recognised, hazards assessed, WHS/OHS risk control measures implemented and monitored and/or appropriate authorities consulted, as required, in accordance with requirements and workplace procedures
  - 2.5** Remedial actions are taken to overcome shortfalls encountered in the work schedule in accordance with job requirements and workplace procedures
  - 2.6** Participative arrangements for the systematic management of WHS/OHS policies, procedures, programs and issues are implemented and monitored in accordance with work schedule, job requirements and workplace procedures
  - 2.7** Participative arrangements for the systematic management of WHS/OHS policies, procedures, programs and issues are implemented and monitored to ensure completion in agreed timeframe, to quality standards with a minimum of waste in accordance with job requirements
  - 2.8** Solutions to non-routine problems are identified and applied in accordance with requirements
  - 2.9** Quality of work checks are undertaken in accordance with job requirements and workplace procedures and to a community/industry standard

- 3 Complete implementation and monitoring of organisational WHS/OHS policies, procedures and programs**
- 3.1** Work is checked against work schedule for conformance with job requirements, anomalies reported and solutions identified in accordance with workplace procedures
  - 3.2** Accidents, incidents and/or injuries are reported in accordance with requirements and workplace procedures
  - 3.3** Worksite is rehabilitated, cleaned up and confirmed safe in accordance with workplace procedures
  - 3.4** Tools, equipment and surplus resources and materials are cleaned, checked and returned to storage in accordance with workplace procedures
  - 3.5** Relevant work permit/s are signed off, work completed/returned to service and client/customer advised in accordance with job requirements
  - 3.6** Work completion records, reports and information are confirmed, processed and relevant person/s notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI62 Implement and monitor the power system organisational WHS OHS policies, procedures and programs.

## Links

# **Assessment Requirements for UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Performance Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- implementing and monitoring the power system organisational WHS/OHS policies, procedures and programs using all of the following:
  - relevant WHS/OHS Acts
  - regulations
  - codes of practice
- demonstrating all of the following:
  - application of organisation management systems and procedures to WHS/OHS
  - organisation's procedures for maintaining WHS/OHS records
- performing all of the following applications of risk management procedures:
  - undertake hazard identification
  - risk assessment and risk control in accordance with the hierarchy of control
  - application of the characteristics of the workforce impacting on the management of WHS/OHS
- demonstrating all of the following implementation and monitoring procedures:
  - provision of relevant information to the workgroup about WHS/OHS and the organisation's WHS/OHS policies, procedures and programs
  - participative arrangements for the management of WHS/OHS
  - organisation's procedures for identifying hazards and assessing risks
  - organisation's procedures for controlling risks
  - organisation's procedures for dealing with hazardous events
  - organisation's procedure for providing WHS/OHS training
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe working practices and procedures for the installation of overhead distribution conductors, including:
  - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWP)
  - requirements of persons prior to making bare hand contact with dead low voltage (LV) mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and high voltage (HV) apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedure to attach an on-site earthing device to de-energised LV and HV overhead circuit
- powerline safety practices, including:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel; and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles; including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods; and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- implementation and monitoring requirements for powerline safety, including:
  - identification of relevant legislation, codes and government guidelines for the

implementation and monitoring of WHS/OHS in the workplace -

Commonwealth/state/territory legislation relevant to the workplace and the meaning of general duty of care under WHS/OHS legislation and common law

- workplace WHS/OHS enterprise plan - responsibilities of each member of the work team, review process for changing/improving WHS/OHS safety plan, and standing instructions for the systematic management of WHS/OHS in the workplace
- relationship between the WHS/OHS committee and employees - methods used to collate and distribute/disseminate WHS/OHS information; staff development activities and legislation requirements with regards to WHS/OHS training; methods of addressing barriers, such as literacy and cultural differences; and provisions relating to WHS/OHS issue resolution
- hazards associated with powerline industry - identification of hazards in the workplace, processes used and contributing factors to a hazardous situation, assessment of risks and control of WHS/OHS risks (risk management), the hierarchy of control and monitoring of risk control measures
- risk assessment and its management in powerline industry - principles and purposes of risk management; processes for conducting risk assessment, including, risk analysis and risk evaluation activities for selecting and implementing appropriate options for eliminating or minimising risk
- maintenance strategies for WHS/OHS programs - developing processes for promoting, maintaining and improving WHS/OHS in the workplace; identifying techniques for evaluating and reviewing WHS/OHS education and training programs; elements of an effective WHS/OHS management system; and WHS/OHS consultation and accident/incident investigations
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures
  - rules and regulations, induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
  - techniques when dealing with others - working in teams, customer relation, complaint and issues procedures
  - overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprises-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise personal protection equipment (PPE) - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; and emergency response rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol

- WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs, such as equipment operation
- WHS/OHS records - audits; inspection reports; workplace health and environmental monitoring records; training and instruction records, manufacturer and supplier information, such as material safety data sheets (MSDS); registers, maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRIS007 Install and maintain distribution overhead conductors and cables**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to install and maintain distribution overhead conductors and cables used on poles and structures in the electricity supply industry (ESI).

It includes stringing, tensioning, terminating and securing conductors and cables to insulators or supports and carrying out electrical connections.

It also includes the repairing or replacement of conductors and cables, testing and updating system data/maintenance records.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS012 Install and maintain poles, structures and hardware

## **Competency Field**

Industry Specific Cross Discipline

## **Unit Sector**

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install and maintain overhead conductors and cables**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.7** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.8** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.9** Work permits are received and signed in accordance with workplace requirements
- 1.10** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.11** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.12** Traffic management plans are confirmed as being in place in accordance with workplace requirements

#### **2 Carry out installation and**

- 2.1** Legislation, regulations, standards, codes of practice and

|                                                      |                                                                                                                                            |
|------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>maintenance of overhead conductors and cables</b> | organisational workplace requirements for the work to be performed are applied and monitored                                               |
| <b>2.2</b>                                           | Lifting, climbing, working at heights and use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements |
| <b>2.3</b>                                           | Hazard control measures are monitored in accordance with workplace requirements                                                            |
| <b>2.4</b>                                           | Safety observer is positioned to observe the work in accordance with workplace requirements                                                |
| <b>2.5</b>                                           | Communication methods between workers and safety observer are used in accordance with workplace requirements                               |
| <b>2.6</b>                                           | Safe approach distances are maintained when the work is being performed                                                                    |
| <b>2.7</b>                                           | Overhead conductors and cables are strung, tensioned, terminated and secured in accordance with the work plan and workplace requirements   |
| <b>2.8</b>                                           | Overhead conductor and cable electrical connections are completed in accordance with the work plan and workplace requirements              |
| <b>2.9</b>                                           | Repair or replacement of overhead conductors and cables is completed in accordance with the work plan and workplace requirements           |
| <b>2.10</b>                                          | Anti-vibration devices or spreaders are installed in accordance with the work plan and workplace requirements                              |
| <b>2.11</b>                                          | Conductors and cables are tested in accordance with the work plan and workplace requirements                                               |
| <b>2.12</b>                                          | Incidents or unplanned events are responded to in accordance with workplace requirements                                                   |
| <b>2.13</b>                                          | Quality checks of work are undertaken in accordance with work plan and workplace requirements                                              |
| <b>3 Complete work and documentation</b>             |                                                                                                                                            |
| <b>3.1</b>                                           | Completed work is checked for compliance against the work plan and workplace requirements                                                  |
| <b>3.2</b>                                           | Incidents or unplanned events are reported in accordance with workplace requirements                                                       |

- 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work permits are signed off in accordance with workplace requirements
- 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI54 Install and maintain poles, structures and overhead conductors and cables.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRIS007 Install and maintain distribution overhead conductors and cables

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- installing at least two (2) types of overhead conductors/cables
- connecting and terminating conductors and cables in accordance with workplace requirements
- repairing overhead conductors/cables using at least two (2) of the following:
  - compression sleeves
  - splice
  - bullets
  - mid span joint
  - armour rods
- terminating conductors and cables
- connecting conductors and cables
- using at least two (2) types of height access methods
- using at least one (1) of the following types of stringing methods:
  - layout
  - pull through
  - pilot rope
- using at least three (3) of the following types of stringing equipment:
  - cable drum stands
  - cable trailers
  - ropes

- rollers
- sheaves
- stockings
- swivels
- winches
- using at least one (1) of the following tensioning methods:
  - dynamometer
  - site board
  - beat (wave sagging)
  - theodolite
- using testing equipment in accordance with workplace requirements
- recording test results in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe work practices, including:
  - working on conductive poles
  - short circuiting/earthing de-energised low voltage (LV) and high voltage (HV) circuits
  - safe use of plant and equipment
- application, purpose and types of work permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- construction manuals, tension charts/tables, system diagrams/plans and drawings
- types, sizes, properties and characteristics of overhead conductors/cables
- types of LV and HV overhead conductor/cable connections
- types of LV and HV overhead conductor/cable terminations
- causes and effects of poor electrical connections

- overhead conductor/cable clearances, including:
  - to ground
  - to LV/HV structures
  - waterways
  - carriageways
  - buildings
  - bridges
  - railways
- techniques for conductor/cable installation, including:
  - types and application of tools, equipment and hardware
  - procedures for stringing, tensioning and termination of LV and HV conductors/cables.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining distribution overhead conductors and cables
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS008 Install and maintain electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install and maintain electrical apparatus in the electricity supply industry (ESI).

It includes assembling, installing, connecting, testing and commissioning electrical apparatus.

It also includes cleaning, repairing and replacing electrical apparatus.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

and

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

or

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install and maintain electrical apparatus**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.6** Hazards are identified, risks assessed and control measures identified and applied
- 1.7** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.8** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.9** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements

- 1.10** Work permits are received and signed in accordance with workplace requirements
  - 1.11** Worksite is prepared in accordance with the work plan and workplace requirements
  - 1.12** Traffic management plan is confirmed as being in place in accordance with workplace requirements
- 2 Carry out installation of electrical apparatus**
  - 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 2.2** Lifting, climbing, working at heights and the use of plant, tools and equipment are carried out in accordance with workplace requirements
  - 2.3** Hazard control measures are monitored in accordance with workplace requirements
  - 2.4** Safety observer is positioned to observe the work in accordance with workplace requirements
  - 2.5** Communication methods between workers and safety observer are used in accordance with workplace requirements
  - 2.6** Safe approach distances are maintained when the work is being performed
  - 2.7** Electrical apparatus is assembled and tested in accordance with work plan and workplace requirements
  - 2.8** Electrical apparatus is erected and connected in accordance with work plan and workplace requirements
  - 2.9** Electrical apparatus is tested and commissioned in accordance with work plan and workplace requirements
  - 2.10** Incidents or unplanned events are responded to in accordance with workplace requirements
  - 2.11** Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Carry out maintenance of electrical apparatus**
  - 3.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored

- 3.2 Lifting, climbing, working at heights and the use of plant, tools and equipment are carried out in accordance with workplace requirements
- 3.3 Hazard control measures are monitored in accordance with workplace requirements
- 3.4 Safety observer is positioned to observe the work in accordance with workplace requirements
- 3.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
- 3.6 Safe approach distances are maintained when the work is being performed
- 3.7 Problem-solving methods are used to resolve problems from measured and calculated values in accordance with workplace requirements
- 3.8 Electrical apparatus faults are identified in accordance with workplace requirements
- 3.9 Electrical apparatus is repaired or replaced in accordance with workplace requirements
- 3.10 Electrical apparatus is tested and returned to service in accordance with workplace requirements
- 3.11 Incidents or unplanned events are responded to in accordance with workplace requirements
- 3.12 Quality checks of work are undertaken in accordance with work plan and workplace requirements

#### **4 Complete work and documentation**

- 4.1 Completed work is checked for compliance against the work plan and workplace requirements
- 4.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 4.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 4.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements

- 4.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 4.6 Work permits are signed off in accordance with workplace requirements
- 4.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to:

- UETTDRIS41 Install network infrastructure electrical equipment
- UETTDRIS42 Maintain network infrastructure electrical equipment

# Assessment Requirements for UETDRIS008 Install and maintain electrical apparatus

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- connecting and terminating conductors and cables in accordance with workplace requirements
- installing and maintaining electrical apparatus for at least one (1) of the following:
  - transformers
  - reactors
  - regulators
  - capacitors
- installing and maintaining electrical switching apparatus, including least one (1) of the following:
  - reclosers
  - motorised switch
  - gas-filled switch
  - oil-filled switch
  - air-break switch
  - vacuum switch
- installing and maintaining electrical apparatus for at least three (3) of the following:
  - fuse switches
  - sectionalisers
  - dropout fuses
  - disconnectors
  - links
  - fuses

- surge arrestors
- line fault indicators
- conducting at least five (5) of the following tests:
  - voltage
  - phasing
  - current
  - insulation resistance
  - neutral identification
  - polarity
  - phase rotation
  - loop impedance
  - earth resistance
- dealing with an unplanned event on at least one (1) occasion
- recording test results in accordance with workplace requirements
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant and equipment
- application, purpose and types of work permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- construction manuals, system diagrams/plans and drawings
- characteristics of a transformer, including:
  - basic construction of distribution transformers
  - operation under load/no-load conditions
  - types and basic operation of tap changing switches
  - efficiency and cooling
- installation and maintenance of a transformer, including:
  - basic connections
  - restrictions to parallel operation
  - testing

- fault-finding procedures
- earthing types and configurations
- types and function of electrical apparatus, including:
  - reactors
  - regulators
  - capacitors
  - surge arrestors
  - fault indicators
- types and function of various switchgear/protection apparatus, including:
  - isolators
  - air-break
  - gas-filled
  - oil-filled
  - vacuum type
  - links
  - fuses
  - sectionalisers
  - reclosers
  - operating characteristics
  - advantages and disadvantages of different types of switchgear
  - earthing functions
- installation and maintenance procedures for electrical apparatus
- procedures for diagnosing and rectifying faults
- procedures for testing and commissioning procedures.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Evidence should show demonstrated competency working at heights, in limited spaces, with different structural/construction types and method and in a variety of environments.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining electrical apparatus
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRIS009 Install and maintain ESI network infrastructure electrical equipment**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit covers the installation and maintenance of electrical equipment, such as fuse switches, drop-out switches, sectionalisers, links, surge arrestors, gas-filled and/or oil-filled switches, which are relevant to the transmission, distribution and rail networks.

It includes the termination/connection of the equipment in accordance with enterprise requirements, the repair and/or replacement of like-for-like electrical equipment and associated hardware, and sampling of insulating oils. It also encompasses the identification of faults, the relevant pre-commissioning tests involving the equipment/system and the interpretation of these tests against agreed specifications.

It excludes the energisation of the equipment maintained in a highly complex, interdependent and interconnected electricity supply network system, where the effects of unintended consequences on the system are high risk and appropriate personnel effect energisation.

The application of the skills and knowledge described in this unit requires a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG103A Install low voltage wiring and accessories

UEENEEG104A Install appliances, switchgear and associated accessories for low voltage electrical installations

UEENEEG105A Verify compliance and functionality of low voltage general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG107A Select wiring systems and cables for low voltage general electrical installations

UEENEEG108A Troubleshoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS005 Implement & monitor power system environmental & sustainable energy management policies & procedures

UETDRIS006 Implement and monitor the power system organisational WHS/OHS policies, procedures and programs

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

**1 Prepare for the installation and maintenance of network infrastructure electrical equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are received, analysed and confirmed, as necessary, by site inspection

- 1.2** Relevant requirements and established procedures for the work are communicated to all personnel and identified for all worksites
- 1.3** Work health and safety (WHS)/occupational health and safety (OHS) policies and procedures related to requirements and established procedures for the installation and/or maintenance of network infrastructure electrical equipment are obtained and confirmed for the purposes of the work to be performed
- 1.4** Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
- 1.5** Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear according to established procedures
- 1.6** Relevant work permits are obtained to access and perform work according to requirements and/or established procedures
- 1.7** Resources, including personnel, equipment, tools and personal protective equipment (PPE) required for the job are obtained and confirmed in working order
- 1.8** Relevant personnel at worksite are confirmed current in first aid, pole top rescue and other related work procedures according to requirements
- 1.9** Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved to carry out work, where necessary
- 1.10** Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
- 1.11** Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities confirmed, where applicable, in accordance with established procedures
- 1.12** Road signs, barriers and warning devices are positioned in accordance with requirements

- |                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>2 Carry out installation and maintenance of network infrastructure electrical equipment</b>    | <p><b>2.1</b> WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures</p> <p><b>2.2</b> Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed, and currency according to requirements confirmed</p> <p><b>2.3</b> Essential knowledge and associated skills are applied in the safe installation of network infrastructure electrical equipment to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements</p> <p><b>2.4</b> Electrical equipment and associated hardware are positioned, secured and terminated/connected in accordance with requirements and established procedures</p> <p><b>2.5</b> Maintenance, including repair and/or replacement of network infrastructure electrical equipment, is carried out in accordance with the work schedule and requirements/established procedures</p> <p><b>2.6</b> Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions according to established procedures</p> <p><b>2.7</b> Unplanned events in the installation of electrical equipment (network infrastructure) are undertaken within the scope of established procedures</p> <p><b>2.8</b> Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills</p> <p><b>2.9</b> Ongoing checks of quality of the work are undertaken in accordance with instructions and established procedures</p> |
| <b>3 Complete the installation and maintenance of network infrastructure electrical equipment</b> | <p><b>3.1</b> Work undertaken is checked/tested against works schedule for conformance with requirements and anomalies reported in accordance with established procedures</p> <p><b>3.2</b> Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

- 3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with established procedures
- 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5 Relevant work permit(s) are signed off and electrical equipment (network infrastructure) are returned to service in accordance with requirements
- 3.6 Work completion records, reports, as installed/modified drawing and/or documentation and information are finalised and processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIIS46 Install and maintain ESI network infrastructure electrical equipment.

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRIS009 Install and maintain ESI network infrastructure electrical equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- installing and maintaining any three (3) of the following:
  - fuse switches
  - drop-out fuses
  - sectionalisers
  - disconnectors
  - links
  - fuses
  - surge arrestors
- installing and maintaining any one (1) of the following:
  - reclosers
  - motorised switches
  - gas-filled switches
  - ring main units
  - line fault indicators
  - oil-filled switches
  - air-break switches
- installing and maintaining any one (1) of the following:
  - transformers
  - reactors
  - regulators
  - capacitors
  - relays
  - line fault indicators

- with regards to the above incorporate any three (3) of the following:
  - voltage detectors
  - phasing equipment
  - clip-on ammeters
  - insulation resistance testers
  - recording meters
  - earth resistance tester
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- mathematical techniques encompassing:
  - calculations involving fractions, decimals, ratios and proportions
  - calculations involving area, volume, mass and density
  - calculations involving transposition and substitution of formulae
  - calculations involving simple trigonometric problems
- engineering mechanics encompassing:
  - identification of basic concepts, principles and applications - application of velocity, acceleration, force, density, torque and pressure
  - applications of the International System of Units (SI) units
  - the relationship between work, power and energy
  - behaviour of object under force - using a block and tackle under load, concept of mechanical advantage, determination of resultant forces, and determining the sag in a catenary conductor and the force applied at each end
  - fundamentals of the basic laws of fluid mechanics
- materials properties encompassing:
  - identification and classification of engineering materials material properties
  - types and applications - properties of tensile strength; effects of temperature on the expansion of metals; ductility, malleability, work hardening and annealing and the conditions that lead to corrosion; and the properties of timbers
- basic rigging techniques encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with rigging, including the operation of cranes, hoists and winches, and relevant certification and licensing (as required)
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - safe use of rigging equipment, tools and associated equipment - types, techniques and application
  - site inspection procedures - identifying hazards, assessing and controlling risks, and

- appropriate sequence of loading and unloading
- determining the mass and dimensions of load
- selection and inspection procedures - rigging equipment, materials and tools (natural and synthetic fibre ropes and chains, fittings, winch and capstan), ratings of wire ropes and slings, removing, repairing and replacing of damage parts
- techniques for assembling and erecting power winches and capstans
- checking the integrity of support structure - visual inspection of load connections
- techniques in moving, lifting, shifting, managing and placing loads - use of appropriate communication and signalling methods, codes of practice/compliance, enterprise and Commonwealth/state/territory legislative requirements, weather conditions, erection of safety nets and lines, methods of fixing and anchoring loads, and load stability
- procedures in providing store support encompassing:
  - classification and identification of equipment, components and tools
  - procedures for purchasing/ordering items, removing/dispatching items, stocktaking, security and bookkeeping/record keeping
  - material handling - warehouse/depot storage techniques, handling equipment, pallet lift trucks, forklifts and cable drum handling equipment
  - safety procedures - storage and care of safety equipment, handling hazardous materials, storage of hazardous substances and dangerous goods, and depot safety procedures
  - manufacturer and supplier information, including material safety data sheets (MSDS)
- generation systems encompassing:
  - methods of generating electricity - types of power stations and reasons for their location, and layout of thermal and hydroelectric power stations
  - relationship between power control and load requirements - operating speeds for thermal and hydroelectric generating sets, typical generator voltage levels and output ratings
  - the purpose and features of typical types of co-generation systems
- transmission, distribution and rail systems encompassing:
  - relationship between the transmission, distribution and rail/tram system within an overall power system - different organisations responsible for generation, transmission, distribution and rail/tram and, how they correlate and their functions
  - characteristics of a transmission, a distribution and a rail system - principal components; typical voltage levels and methods of transmission and distribution, including grid type transmission systems, radial, parallel and ring main feeders
  - relationship between an overhead and underground supply systems within an overall power system - advantages/disadvantages, applications and the basic steps for planning and installing an overhead and underground distribution system
  - single line drawings and layouts - drawings and layouts of transmission and distribution systems, including, radial, parallel and ring main feeders and the high voltage (HV) equipment associated with substations
- substations, power transformers and reactors encompassing:
  - relationship between the substations within an overall power system - purpose, location in relation to load centres, layout of HV equipment within the substation and auxiliary equipment

- characteristics of a power transformer - basic construction of distribution transformers, operation under load/no load conditions, types and basic operation of tap changing switches, including solid state types, efficiency and cooling
- auxiliary equipment used on transformers - function and basic operation of equipment
- maintenance of a power transformer - basic connections, restrictions to parallel operation, problems and remedies associated with harmonics, testing and fault-finding procedures
- description, purpose and characteristics of a reactors
- installation of overhead distribution conductors encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing conductors and associated equipment
  - requirements for the use of overhead line construction manuals, system diagrams/plans and drawings - material lists, conductor size, type and route length
  - constructions types and structures for distribution and sub transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors - types of low voltage (LV) and HV overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; and minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and hardware, methods of stringing, tensioning and termination of LV and HV conductors
- safe working practices and procedures for the installation of overhead distribution conductors encompassing:
  - limits of approach for personnel, vehicles, mobile plant and elevated work platforms (EWP)
  - requirements of persons prior to making bare-hand contact with dead LV mains and apparatus
  - requirements of relevant electrical access permits necessary to allow work to be performed on LV and HV apparatus
  - safe working practices - requirements to enable safe working on conductive poles, procedure to attach an on-site earthing device to de-energised LV and HV overhead circuit
- installation of poles and/or structures and hardware encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements applicable to installing poles and associated hardware
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings
  - characteristics and applications of different types of poles and associated hardware
  - techniques for installing poles and associated hardware - types of installation equipment/tools, excavation methods, types of footings/foundations, types of attachments, earthing systems, clearances between conductors, safe methods of erecting and stabling poles and-or structures and cross-arms
  - techniques for maintenance of poles and associated hardware - stabilisation techniques for unstable poles, methods of strengthen poles, maintenance and replacement of HV

insulators and cross-arms

- installation of LV electrical services encompassing:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements
  - requirements for the use of enterprise construction manuals, system diagrams/plans and drawings types of LV overhead services, methods of construction and installation, minimum clearances for overhead services to assets and structures, and types of installation equipment/tools
  - characteristics and applications of different types of cables - cable cross-sectional area of conductors, current rating and fuse type
  - techniques for maintenance of service installations - diagnosis and repair of faults
  - jointing and terminating methods - polymeric heat shrink materials, polymeric tape materials, energised and de-energised cables, connections to fuse boxes and pole top boxes
  - testing and commissioning procedures – inspection, polarity, voltage and phase sequence tests
  - construction types and structures for distribution and sub transmission lines
  - types, sizes and characteristics of overhead conductors
  - resources for the stringing and maintenance of conductors, - types of LV and HV overhead electrical conductor connections; causes and effects of poor electrical connections; reasons for and methods used to maintain standard phase sequencing; removing, repairing and replacing damaged conductors; and minimum clearances between overhead conductors and LV and HV structures
  - techniques for conductor installation - types and application of tools, equipment and hardware, methods of stringing, tensioning and termination of LV and HV conductors
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel; and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures for climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedure used to provide an effective traffic management scheme, and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods; and the precautions for personal protection when fighting small fires

- rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses and developing techniques; involving external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
- requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS010 Install and maintain low voltage overhead services

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install and maintain low voltage (LV) overhead services in the electricity supply industry (ESI).

It includes the installation, connection, repair and replacement of service cables and hardware between the customer's connection point and the network point of supply.

It also includes the identification, rectification of faults, testing and commissioning requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install and maintain LV overhead services**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Pre-climbing assessment is conducted in accordance with workplace requirements
- 1.7** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.8** Worksite is prepared in accordance with work plan workplace requirements
- 1.9** Traffic management plan is confirmed as being in place in accordance with workplace requirements
- 1.10** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.11** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements

- 1.12** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 2 Carry out installation and maintenance of LV overhead services**
- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are used in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Safety observer is positioned to observe the work in accordance with workplace requirements
- 2.5** Communication methods between workers and safety observer are used in accordance with workplace requirements
- 2.6** Safe approach distances are maintained when the work is being performed
- 2.7** Specialised energised LV equipment to work on energised LV overhead services is used in accordance with workplace requirements
- 2.8** LV overhead service and hardware are installed in accordance with the work plan and workplace requirements
- 2.9** LV overhead service and hardware are maintained in accordance with the work plan and workplace requirements
- 2.10** LV overhead service is tested and commissioned in accordance with the work plan and workplace requirements
- 2.11** Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.12** Quality checks of work are undertaken in accordance with work plan, network standards and workplace requirements
- 3 Complete work and**
- 3.1** Completed work is checked for compliance against the

**documentation**

work plan, network standards in accordance with workplace requirements

- 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3 Worksite is rehabilitated, cleaned up and made safe in accordance with workplace requirements
- 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6 Work records, reports and documentation are completed in accordance with network standards and workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI56 Install and maintain low voltage overhead services.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRIS010 Install and maintain low voltage overhead services

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational and workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - network standards
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- preparing worksite, including:
  - identifying common pole markings i.e., condemned poles
  - conducting safe to approach tests as required
  - assessing network assets for pre-climbing (poles)
  - identifying potential secondary points of contact
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- applying energised/live low voltage (LV) working requirements and procedures in accordance with workplace requirements
- stringing and connecting low voltage (LV) overhead service cables, including at least two (2) of the following:
  - three phase
  - single phase
  - two phase
- installing LV overhead service protection devices, including at least one (1) of the following:
  - service fuse
  - circuit breakers (pole)
  - service link
- using at least three (3) of the following specialised energised LV equipment:
  - insulating gloves\*
  - insulating mats/sleeves/tubes\*

- tensioning devices
- insulated tools
- pole shrouds
- (\*must do)
- performing at least five (5) of the following LV overhead service tests:
  - neutral integrity\*
  - polarity\*
  - voltage
  - current
  - phase rotation
  - insulation resistance
  - neutral identification
  - loop impedance
  - earth resistance
  - (\*must do)
- recording test results in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and specialised equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- identification and control methods of secondary points of contact
- types and application of specialised energised LV equipment, including:
  - insulating gloves
  - insulating mats/sleeves/tubes
  - tensioning devices
  - insulated tools
  - pole shrouds
- safety observer:

- role and responsibilities
- communication methods
- construction manuals, system diagrams/plans and drawings, including:
  - minimum clearances for overhead services to assets and structures
  - ground clearances for overhead services
  - customer poles
  - network standards
- types, characteristics and applications of service cables, including:
  - cable cross-sectional area of conductors
  - current rating and fuse types and ratings
  - maximum span lengths and tensions for overhead services
- stringing and terminating methods
- connection of overhead services, including:
  - types of overhead service connections
  - live LV work principles and procedures
  - LV distribution mains protection systems
  - purpose and function of the multiple earth neutral (MEN) system
  - causes and effects of connection faults
  - standard phase sequencing
  - purpose and operation of service fusing
- procedures for maintenance of overhead service installations, including:
  - diagnosis and rectification of faults
  - removing, repairing and replacing damaged overhead services
  - removing and replacing service protection devices
- testing and commissioning overhead services, including:
  - pre-energising tests - insulation resistance and continuity test
  - inspection
  - test equipment functionality and interpretation
  - principles of loop impedance
  - polarity, voltage and phase sequence tests
  - neutral and phase identification tests
  - neutral integrity tests
  - use of independent earth
  - recording results.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory

requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining LV overhead services
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS011 Install and maintain low voltage underground services

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install and maintain low voltage (LV) underground services in the electricity supply industry (ESI).

It includes the connection, repair and replacement of service cables and hardware between the customer's connection point and the network point of supply.

It also includes the identification and rectification of faults and testing and commissioning requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under State and Territory legislative and regulatory licensing or network operator requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Industry Specific Cross Discipline

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install and maintain LV underground services**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.7** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.8** Traffic management plan is confirmed as being in place in accordance with workplace requirements
- 1.9** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.10** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements

#### **2 Carry out installation and maintenance of LV**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to

# Assessment Requirements for UETDRIS011 Install and maintain low voltage underground services

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- applying energised/live low voltage (LV) working requirements and procedures in accordance with workplace requirements
- connecting LV underground services to at least two (2) of the following:
  - underground pillar/pit connection (single phase)
  - underground pillar/pit connection (three phase)
  - underground to overhead connection
- using the following specialised energised LV equipment:
  - insulating mats/covers
  - insulating gloves
- testing of LV underground service connections, including at least four (4) of the following tests:
  - polarity\*
  - neutral integrity\*
  - phase rotation
  - continuity
  - voltage
  - insulation resistance
  - (\* must do)
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- safety observer:
  - role and responsibilities
  - communication methods
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- requirements for the use of workplace construction manuals, system diagrams/plans and drawings, including:
  - types of LV underground services
  - methods of construction and installation
  - minimum depths for underground services to be buried and proximity to other assets and structures
- materials for underground service installation
- methods of laying underground service cables
- characteristics and applications of different types of cables
- diagnosis and repair of faults
- jointing and terminating methods in a:
  - fuse box
  - pillar and pit
  - customer installation
- testing and commissioning underground services, including:
  - pre-energising tests - insulation resistance and continuity test
  - inspection
  - test equipment functionality and interpretation
  - polarity, voltage and phase sequence tests
  - neutral and phase identification tests
  - neutral integrity tests
  - recording results
- connection principles, including:
  - energised/live work requirements and procedures
  - purpose and function of multiple earth neutral (MEN) system
  - types of connection faults

- causes and effects of incorrect and poor electrical connections
- principles of loop impedance
- reasons for and methods used to maintain standard phase sequencing
- purpose and operation of service fusing
- use of independent earth for testing.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining LV underground services
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS012 Install and maintain poles, structures and hardware

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install and maintain poles, structures and hardware in the electricity supply industry (ESI).

It includes assembling, fixing and attaching hardware, erecting, stabilising, repairing, replacing and supporting poles and structures (excluding towers).

It also includes repairing and replacing hardware.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under State and Territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to install and maintain poles, structures and hardware**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.7** Work permits are received and signed in accordance with workplace requirements
- 1.8** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.9** Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### **2 Carry out installation and maintenance of poles, structures and hardware**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Hardware is assembled and fixed to the pole/structure in accordance with work plan and workplace requirements

- 2.5 Poles or structures are erected and stabilised in accordance with work plan and workplace requirements
- 2.6 Hardware is maintained in accordance with work plan and workplace requirements
- 2.7 Poles or structures are maintained in accordance with work plan and workplace requirements
- 2.8 Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.9 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 **Complete work and documentation**
  - 3.1 Completed work is checked for compliance against the work plan and workplace requirements
  - 3.2 Incidents or unplanned events are reported in accordance with workplace requirements
  - 3.3 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
  - 3.4 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
  - 3.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
  - 3.6 Work permits are signed off in accordance with workplace requirements
  - 3.7 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector

Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI52 Install and maintain poles, structures and associated hardware.

# Assessment Requirements for UETDRIS012 Install and maintain poles, structures and hardware

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- installing and maintaining at least one (1) of the following pole/structure types:
  - wood
  - steel
  - concrete
  - composite
- installing and maintaining at least three (3) of the following hardware types:
  - insulators
  - cross-arm braces
  - cross arms
  - pole steps
  - shackle straps
  - earth leads
  - traction supports
  - traction registration
  - bonding
- using at least one (1) of the following pole stabilisation methods:
  - compaction
  - baulking
  - stays
  - concreting (including formwork)
- dealing with an unplanned event on at least one (1) occasion
- obtaining and signing on and off relevant work permits in accordance with workplace

requirements

- completing relevant work records, reports and documentation

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant and equipment
- application, purpose and types of work permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- construction manuals, system diagrams/plans and drawings
- characteristics and applications of different types of poles/structures and hardware
- installation of poles/structures and hardware, including:
  - stays/guys
  - erection methods
  - types of installation equipment/tools
  - excavation methods
  - types of footings/foundations
  - types of attachments
  - earthing
  - bonding
  - safe methods of erecting and stabilising poles/structures and cross arms
- maintenance of poles/structures and hardware, including:
  - stays/guys
  - supporting unstable poles/structures
  - strengthening methods
  - insulators and cross arms.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining poles, structures and hardware
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS013 Install and maintain public lighting systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install and maintain public lighting systems in the electricity supply industry (ESI).

It includes installing underground and/or overhead public lighting system, poles/columns, hardware and control equipment.

It also includes testing and commissioning, inspecting and maintaining the public lighting system.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDRDO005 Maintain overhead energised low voltage distribution network

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install and maintain public lighting systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Safety observer role and responsibilities are discussed and confirmed in accordance with workplace requirements
- 1.7** Communication method between the workers and safety observer is determined and confirmed in accordance with workplace requirements
- 1.8** Safe approach distances for the work to be performed are determined and confirmed in accordance with workplace requirements
- 1.9** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements

- 1.10** Worksite is prepared in accordance with the work plan and workplace requirements
  - 1.11** Traffic management plan is confirmed as being in place in accordance with workplace requirements
- 2 Carry out installation and maintenance of underground public lighting systems**
  - 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 2.2** Lifting, working at heights, the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
  - 2.3** Hazard control measures are monitored in accordance with workplace requirements
  - 2.4** Safety observer is positioned to observe the work in accordance with workplace requirements
  - 2.5** Communication methods between workers and safety observer are used in accordance with workplace requirements
  - 2.6** Safe approach distances are maintained when the work is being performed
  - 2.7** Excavation/foundation construction is inspected in accordance with the work plan and workplace requirements
  - 2.8** Pole/column, hardware and control equipment are assembled in accordance with the work plan and workplace requirements
  - 2.9** Pole/column is erected and stabilised in accordance with the work plan and workplace requirements
  - 2.10** Earthing and public lighting circuits are installed in accordance with the work plan and workplace requirements
  - 2.11** Public lighting system is tested and commissioned in accordance with the work plan and workplace requirements
  - 2.12** Public lighting and associated hardware are inspected in accordance with workplace requirements

- 2.13 Public lighting systems are maintained in accordance with the work plan and workplace requirements
  - 2.14 Incidents or unplanned events are responded to in accordance with workplace requirements
  - 2.15 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Carry out installation and maintenance of overhead public lighting systems**
- 3.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
  - 3.2 Lifting, climbing, working at heights, and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
  - 3.3 Hazard control measures are monitored in accordance with workplace requirements
  - 3.4 Safety observer is positioned to observe the work in accordance with workplace requirements
  - 3.5 Communication methods between workers and safety observer are used in accordance with workplace requirements
  - 3.6 Safe approach distances are maintained when the work is being performed
  - 3.7 Hardware, fittings and control equipment are assembled in accordance with the work plan and workplace requirements
  - 3.8 Public lighting is installed in accordance with the work plan and workplace requirements
  - 3.9 Public lighting system is tested and commissioned in accordance with the work plan and workplace requirements
  - 3.10 Public lighting and associated hardware are inspected in accordance with workplace requirements
  - 3.11 Public lighting systems are maintained in accordance with the work plan and workplace requirements
  - 3.12 Incidents or unplanned events are responded to in accordance with workplace requirements

- |                                          |             |                                                                                                                   |
|------------------------------------------|-------------|-------------------------------------------------------------------------------------------------------------------|
|                                          | <b>3.13</b> | Quality checks of work are undertaken in accordance with work plan and workplace requirements                     |
| <b>4 Complete work and documentation</b> | <b>4.1</b>  | Completed work is checked for compliance against the work plan and workplace requirements                         |
|                                          | <b>4.2</b>  | Incidents or unplanned events are reported in accordance with workplace requirements                              |
|                                          | <b>4.3</b>  | Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements                        |
|                                          | <b>4.4</b>  | Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements |
|                                          | <b>4.5</b>  | Surplus materials are returned to storage or disposed of in accordance with workplace requirements                |
|                                          | <b>4.6</b>  | Work records, reports and documentation are completed in accordance with workplace requirements                   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI53 Install and maintain power system public lighting.

## Links

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRIS013 Install and maintain public lighting systems

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- determining communication method with safety observer
- confirming safety observer is in position in accordance with workplace requirements
- installing and maintaining public lighting poles/columns
- installing and maintaining public lighting hardware, including any three (3) of the following:
  - luminaires
  - photoelectric cells
  - lamps
  - fuses
  - control components
  - brackets
- conducting at least five (5) of the following tests:
  - voltage
  - current
  - insulation resistance
  - neutral identification
  - polarity
  - loop impedance
  - earth resistance
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - inspection, testing and commissioning of public lighting systems
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- safety observer:
  - role and responsibilities
  - communication methods
- construction manuals, system diagrams/plans and drawings for public lighting
- basic public lighting principles
- types, function and operation of lanterns/luminaires/lamps
- types, function and operation of control equipment
- types and function of poles/columns
- types and function of hardware used for public lighting
- overhead and underground public lighting systems
- controlling and switching of public lighting systems
- methods for the installation of public lighting systems
- maintenance of public lighting systems, including:
  - fault types and causes
  - cleaning
  - removing, repairing and replacing hardware.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining public lighting systems
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS014 Install and replace energy meters and associated equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install and replace energy meters and associated equipment in the electricity supply industry (ESI).

It includes installing, replacing, testing and commissioning of whole current energy meters and associated equipment in accordance with workplace requirements.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0019 Fabricate, assemble and dismantle utilities industry components

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to install or replace energy meters and associated equipment**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.7** Worksite is prepared in accordance with the work plan and workplace requirements

#### **2 Carry out the installation of new energy meters and associated equipment**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting and the use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Installation of energy meters and associated equipment is performed in accordance with the work plan and workplace requirements
- 2.5** Energy meter is energised and tested in accordance with workplace requirements
- 2.6** Incidents or unplanned events are responded to in accordance with workplace requirements

- 2.7 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Carry out the replacement of energy meters and associated equipment**
- 3.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 3.2 Lifting and the use of tools, equipment and PPE are carried out in accordance with workplace requirements
- 3.3 Hazard control measures are monitored in accordance with workplace requirements
- 3.4 Energy meter is read, isolated and tested to prove de-energised in accordance with workplace requirements
- 3.5 Replacement of energy meters and associated equipment is performed in accordance with the work plan and workplace requirements
- 3.6 Energy meter is energised and tested in accordance with workplace requirements
- 3.7 Incidents or unplanned events are responded to in accordance with workplace requirements
- 3.8 Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 4 Complete work and documentation**
- 4.1 Completed work is checked for compliance against the work plan and workplace requirements
- 4.2 Incidents or unplanned events are reported in accordance with workplace requirements
- 4.3 Worksite is cleaned and made safe in accordance with workplace requirements
- 4.4 Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 4.5 Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 4.6 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS60 Install and replace power system energy meters and associated equipment.

# Assessment Requirements for UETDRIS014 Install and replace energy meters and associated equipment

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- installing whole current energy meters
- reading, testing and replacing whole current energy meters
- installing associated metering equipment
- replacing associated metering equipment
- energising and testing of whole current energy meters and associated equipment
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - energy meters and associated equipment
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- construction, operation and selection of whole current energy meters

- construction, operation and selection of associated metering equipment
- metering arrangements, including direct, distributed master, multiple master, plug-in and multiple earth neutral (MEN) system
- cable types and applications
- installation and replacement of energy meters, including:
  - stripping cable
  - cable terminations
  - meter wiring positions
  - service protection device (SPD)
  - meter boards
- testing procedures, including:
  - voltage
  - continuity
  - insulation resistance
  - polarity
  - phase sequence
  - neutral integrity
  - meter functionality
- procedures for recording energy meter documentation
- techniques for the maintenance of energy metering, including fault finding, fault rectification, meter reading and tariff changes.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and replacing energy meters and associated equipment
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS015 Install low voltage mobile generator

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to install a low voltage (LV) mobile generator in the electricity supply industry (ESI).

It includes selecting, connecting, synchronising, operating and disconnecting of a temporary mobile generator to LV network assets to maintain supply.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare to install LV mobile generator**

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Work is prioritised and sequenced for completion in accordance with work plan and workplace requirements
- 1.7** Worksite is prepared in accordance with the work plan and workplace requirements
- 1.8** Traffic management plan is confirmed as being in place in accordance with workplace requirements

#### **2 Carry out the installation of LV mobile generator**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** LV mobile generator is installed in accordance with the work plan and workplace requirements
- 2.5** LV mobile generator is synchronised to LV network in accordance with the work plan and workplace

requirements

- |                                          |            |                                                                                                                   |
|------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------|
|                                          | <b>2.6</b> | LV mobile generator is monitored in accordance with the work plan and workplace requirements                      |
| <b>3 Complete work and documentation</b> | <b>3.1</b> | Completed work is checked for compliance against the work plan and workplace requirements                         |

Companion Volume Implementation Guides are found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRIS015 Install low voltage mobile generator

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- operating a generator
- connecting a generator
- disconnecting a generator
- synchronising of generator onto the low voltage (LV) network without interruption to supply
- synchronising of generator off the LV network without interruption to supply
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- events constituting an unplanned event or incident
- safety precautions specific to installing mobile generators
- techniques in the connecting, operating and disconnecting of generators, including:
  - synchronising of generator control systems onto and off the network without interruption to supply

- estimation of LV load
- assessing the appropriateness of the generator
- multiple generators
- connections to the network, including:
  - overhead
  - indoor substations
  - customer installations
  - kiosk substations.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing LV mobile generators
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS016 Install mobile generation set for synchronised HV Genset

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers installation of temporary portable generation sets to high voltage (HV) distribution assets thereby maintaining supply in accordance with industry regulations and established procedures. It encompasses the operation, connection and disconnection of a temporary portable generator and includes the estimation of HV load and assessing the appropriateness of the generator for the required outcome and networking of generators.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace subject to regulations for undertaking of electrical work.

Other conditions may apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

All competencies in the Common Unit Group must have been completed, plus all competencies in one (1) of the identified Pathway Unit Group(s).

### Common Unit Group

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UETDREL005 Work safely in the vicinity of live electrical apparatus

### Transmission Overhead Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS017 Perform high voltage field switching operation to a given schedule

UETDRTO006 Install and maintain transmission conductors

UETDRTO007 Install and maintain transmission structures and hardware

Distribution Overhead Pathway Group

UETDRDO005 Maintain overhead energised low voltage distribution network

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS008 Install and maintain electrical apparatus

UETDRIS010 Install and maintain low voltage overhead services

UETDRIS012 Install and maintain poles, structures and hardware

UETDRIS018 Perform low voltage field switching operation to a given schedule

Rail Traction Pathway Group

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS007 Install and maintain distribution overhead conductors and cables

UETDRIS012 Install and maintain poles, structures and hardware

UETDRRT002 Install overhead traction components and equipment

UETDRRT003 Install rail traction bonds

UETDRRT004 Install traction overhead wiring systems

UETDRRT009 Maintain overhead traction components and equipment

UETDRRT011 Maintain traction overhead wiring systems

UETDRRT013 Perform rail traction switching operations to a given schedule

Distribution Cable Jointing Pathway Group

UETDRDU013 Joint, terminate and maintain high voltage underground polymeric cable

UETDRDU015 Joint, terminate and maintain low voltage underground polymeric cable

UETDRDU016 Lay power cables

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDRIS008 Install and maintain electrical apparatus

UETDRIS011 Install and maintain low voltage underground services

UETDRIS018 Perform low voltage field switching operation to a given schedule

## Electrical Pathway Group

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG033A Solve problems in single and three phase low voltage electrical apparatus and circuits

UEENEEG063A Arrange circuits, control and protection for general electrical installations

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEG108A Trouble-shoot and repair faults in low voltage electrical apparatus and circuits

UEENEEG109A Develop and connect electrical control circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDRSB001 Perform substation switching operations to a given schedule

UETTDRIS67 Solve problems in energy supply network equipment

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare/plan to install mobile generation set for synchronised HV Genset**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, including drawings, plans, requirements, established procedures and material lists, are obtained and analysed, as necessary, by site inspection and the extent of the preparation of the work determined for planning and coordination
- 1.2** Work is prioritised and sequenced for the most efficient and effective outcome following consultation with others for completion within acceptable timeframes, to a quality standard and in accordance with established procedures

- 1.3 Hazards are identified, work health and safety (WHS)/occupational health and safety (OHS) risks assessed and control measures prioritised, implemented and monitored, including emergency exits kept clear, according to established procedures
  - 1.4 Relevant requirements and established procedures for the work are to all personnel and identified for all worksites
  - 1.5 WHS/OHS policies and procedures related to the work are identified to ensure safe systems of work are followed
  - 1.6 Relevant work permits are secured to coordinate the performance of work according to requirements and/or established procedures
  - 1.7 Resources, including personnel, equipment, tools and personal protective equipment (PPE), required for the job are identified, scheduled and coordinated and confirmed safe and in technical working order
  - 1.8 Clients/customers are provided with possible solutions and/or options within the scope, acceptable cost and requirements
  - 1.9 Liaison and communication issues with others/authorised personnel, authorities, clients and landowners are resolved and activities coordinated to carry out work
  - 1.10 Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities coordinated and authorised, where applicable, in accordance with established procedures
  - 1.11 Site is prepared according to the work schedule and to minimise risk and damage to property, commerce and individuals in accordance with established procedures
  - 1.12 Positioning of road signs, barriers and warning devices is planned and coordinated in accordance with requirements
- 2 Carry out the installation of mobile generation set for synchronised HV**
- 2.1 WHS/OHS and sustainable energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and actioned in

|                                                                                        |            |                                                                                                                                                                                                                                                           |

|                                                                                        | <b>2.3</b> | Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely exercised according to requirements                                                                                        |
|                                                                                        | <b>2.4</b> | Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks reported to immediate authorised personnel for directions according to established procedures                                                                      |
|                                                                                        | <b>2.5</b> | Remedial actions are taken to overcome any shortfalls encountered in the work schedule according to requirements and/or established procedures                                                                                                            |
|                                                                                        | <b>2.6</b> | Installation of mobile generation set for synchronised HV Genset is carried out in accordance with the work schedule and requirements and/or established procedures                                                                                       |
|                                                                                        | <b>2.7</b> | Essential knowledge and associated skills are applied in the safe installation of mobile generation set for synchronised HV Genset to ensure completion in an agreed timeframe and to quality standards with a minimum of waste according to requirements |
|                                                                                        | <b>2.8</b> | Solutions to non-routine problems are identified and actioned using acquired essential knowledge and associated skills according to requirements                                                                                                          |
|                                                                                        | <b>2.9</b> | Ongoing checks of quality of the work are undertaken in accordance with requirements and established procedures to ensure a quality outcome is achieved for the client/customer and to a community/industry standard                                      |
| <b>3 Complete the installation of mobile generation set for synchronised HV Genset</b> | <b>3.1</b> | Work undertaken is checked against work schedule for conformance with requirements, anomalies reported and solutions identified in accordance with established procedures                                                                                 |
|                                                                                        | <b>3.2</b> | Accidents and/or injuries are reported and followed up in accordance with requirements/established procedures                                                                                                                                             |
|                                                                                        | <b>3.3</b> | Worksite is rehabilitated, cleaned up and confirmed safe                                                                                                                                                                                                  |

in accordance with established procedures

- 3.4 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
- 3.5 Relevant work permits are signed off and synchronised HV Genset apparatus is returned to service and client/customer advised in accordance with requirements
- 3.6 Work completion records, reports, as installed/modified drawings and/or documentation and information are confirmed, processed and appropriate personnel notified

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI64 Install mobile generation set for synchronised HV Genset.

# Assessment Requirements for UETDRIS016 Install mobile generation set for synchronised HV Genset

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- completing all of the following:
  - autonomous installation of a mobile generator set for synchronised high voltage (HV) Genset incorporating operation, connection and disconnection of the generator
  - evaluating load characteristics associated with networking of generators
  - synchronisation of the generator control systems onto and off the network without interruption to supply
  - estimation of HV load and assessing the appropriateness of the generator
  - operating a generator in parallel to a single HV job
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- installation of a HV mobile generation encompassing:
  - safety precautions specific to installing mobile generators - safe working policies, practices and procedures; techniques in connecting, operating and disconnecting generators; types of tools and equipment; and safe use of tools and equipment
  - techniques in the installation of generator sets - the connection of generator onto and off the network without interruption to supply and estimation of HV load
  - assessing the appropriateness of the generator
- HV generator control systems encompassing:
  - legislation, standards, codes, supply authority regulations and/or enterprise requirements pertaining to the operation of a portable generator
  - safety precautions specific to the synchronisation of generator sets - safe working

- policies, practices and procedures; and synchronising procedures
- techniques in the installation of generator sets control systems - the synchronising of generator control systems onto and off the network without interruption to supply, estimation of HV load and assessing the appropriateness of the generator
- operating a generator in parallel to a single HV job - overhead systems, indoor systems, customer installations and kiosk substations
- HV generator set and control system to HV distribution assets
- powerline safety practices encompassing:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedures of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements the procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures, establishing responses, developing techniques, involvement of external emergency services, and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances, determining system requirements, aircrew familiarisation with network operations and equipment, and requirements for effective communications operations for aerial work.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so;

where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS017 Perform high voltage field switching operation to a given schedule

## Modification History

Release 2. Unit application updated for clarification.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to perform high voltage (HV) field switching operation to a given schedule in the electricity supply industry (ESI).

It includes the approval process, isolating, paralleling and restoring HV overhead and underground electricity networks using circuit breaking and isolating equipment, specialised tools, personal protective equipment (PPE) and testing equipment.

It also includes proving de-energised, short circuiting and earthing, preparing, issuing and cancelling work permits.

**Note:** Those holding an existing Certificate III ESI Distribution Overhead, Distribution Underground qualification or equivalent meets the prerequisite unit requirements.

Those holding an existing Diploma / Advanced Diploma of ESI Power Systems or Certificate III Electrotechnology Electrician qualification or equivalent partially meets the prerequisite unit requirements. They are still required to complete:

- UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus
- UETDREL005 Work safely in the vicinity of live electrical apparatus
- UETDRIS018 Perform low voltage field switching operation to a given schedule

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRIS018 Perform low voltage field switching operation to a given schedule

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare for HV field switching

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2 Switching schedule is obtained and confirmed in accordance with workplace requirements
- 1.3 Plant, tools, equipment and PPE required for work are determined, obtained and confirmed in working order
- 1.4 Hazards are identified, risks assessed and control measures identified and applied
- 1.5 Work is prioritised and sequenced for completion in accordance with switching schedule and workplace requirements
- 1.6 Work permit/approval is organised in accordance with workplace requirements
- 1.7 Worksite is prepared in accordance with workplace requirements

## **2 Carry out HV field switching**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Communication with switching controller is established and maintained during switching in accordance with workplace requirements
- 2.5** Approval is obtained to commence HV field switching in accordance with switching schedule and workplace requirements
- 2.6** HV field switching is performed in accordance with the switching schedule and workplace requirements
- 2.7** Work permit is written and issued in accordance with the switching schedule and workplace requirements
- 2.8** Work permit is cancelled or relinquished in accordance with workplace requirements
- 2.9** Approval is obtained to commence restoration of HV supply in accordance with switching schedule and workplace requirements
- 2.10** HV field switching is performed to restore network to normal in accordance with the switching schedule and workplace requirements
- 2.11** Switching controller is notified HV restoration has been completed in accordance with switching schedule and workplace requirements
- 2.12** Incidents or unplanned events are responded to in accordance with workplace requirements

## **3 Complete work and documentation**

- 3.1** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.2** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements

- 3.3 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.4 Work records, reports and documentation are completed in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS44 Perform HV field switching operation to a given schedule.

## Links

# Assessment Requirements for UETDRIS017 Perform high voltage field switching operation to a given schedule

## Modification History

Release 2. Unit application updated for clarification.

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- verifying switching scheduling documents
- establishing and maintaining communications with the following:
  - switching controller
  - permit holders
  - other network stakeholders
- obtaining approval to perform high voltage (HV) field switching to a given schedule
- performing HV field switching operation to a given schedule completing at least two (2) of the following:
  - isolation
  - restoration
  - paralleling
- performing at least two (2) of the following tests:
  - proved de-energised\*
  - voltage
  - phasing
  - (\*must do)
- operating at least four (4) of the following HV electrical apparatus:
  - HV links/isolators/disconnectors
  - air-break switches
  - fuses

- ring main switch
- earth switches
- reclosers
- circuit breakers
- sectionalisers
- live line clamps
- load break elbows
- using at least two (2) of the following specialist tools and equipment:
  - HV phasing sticks
  - HV ground mounted equipment isolating handles
  - HV operating sticks
  - HV earths
- using tags and locks
- organising, issuing, cancelling or relinquishing relevant work permits/approvals in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of work permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- types, characteristics and capabilities of specialised tools and testing equipment, including:
  - insulated equipment
- purpose, layout and application of switching schedules
- HV field switching principles and procedures, including:
  - roles and responsibilities
  - procedures for coordination of operations
  - isolation, restoration and paralleling
  - proving de-energised
  - earthing

- pre- and post-switching checks
- fault finding
- alternate sources of supply and possible back-feed
- primary causes, effects and types of HV electrical faults
- emergency fault procedures
- operation of HV switchgear
- HV feeder auto-reclosing suppression
- distribution protection systems, including:
  - types, operation and applications
  - protection equipment
- HV switchgear, including:
  - types and categories (including live line clamps)
  - application, function and operating capabilities
- application and function of the single wire earth return (SWER) system components, including:
  - circuit arrangement
  - principle of operation
  - hazards and procedures associated with faulty SWER earth systems
  - procedure to isolate, energise and commission SWER transformer
- operation of HV distribution transformers, including:
  - principles governing factors for transformer ratings
  - operating limitations and the relationship between transformer and HV fuse rating
  - purpose and principle operation of HV distribution transformer tap changers
  - paralleling requirements
- functions of supervisory control and data acquisition (SCADA) (or any other relevant data acquisition and control) systems and its main components
- function of the main components of a local/remote control system.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for perform HV field switching operations to a given schedule
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS018 Perform low voltage field switching operation to a given schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit involves the skills and knowledge required to perform low voltage (LV) field switching operation to a given schedule in the electricity supply industry (ESI).

It includes isolating, paralleling and restoring LV overhead and underground electricity networks using circuit breaking and isolating equipment.

It also includes the approval process, using specialist tools, personal protective equipment (PPE), testing, short circuiting for switching and preparing, issuing and cancelling work permits.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL001 Apply environmental requirements

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare for LV field switching**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Switching schedule is obtained and confirmed in accordance with workplace requirements
- 1.3** Plant, tools, equipment and PPE required for work are determined, obtained and confirmed in working order
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work is prioritised and sequenced for completion in accordance with switching schedule and workplace requirements
- 1.6** Work permit/approval is organised in accordance with workplace requirements
- 1.7** Worksite is prepared in accordance with workplace requirements

#### **2 Carry out LV field switching**

- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Communication with switching controller is established and maintained during switching in accordance with workplace requirements

- 2.5 Approval is obtained to commence LV field switching in accordance with switching schedule and workplace requirements
- 2.6 LV field switching is performed to isolate supply in accordance with the switching schedule and workplace requirements
- 2.7 Work permit is written and issued in accordance with the switching schedule and workplace requirements
- 2.8 Work permit is cancelled or relinquished in accordance with workplace requirements
- 2.9 Approval is obtained to commence restoration of LV supply in accordance with switching schedule and workplace requirements
- 2.10 LV field switching is performed to restore supply in accordance with the switching schedule and workplace requirements
- 2.11 Switching controller is notified LV restoration has been completed in accordance with switching schedule and workplace requirements
- 2.12 Incidents or unplanned events are responded to in accordance with workplace requirements

### **3 Complete work and documentation**

- 3.1 Incidents or unplanned events are reported in accordance with workplace requirements
- 3.2 Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.3 Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.4 Work records, reports and documentation are completed in accordance with workplace requirements

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI543 Perform low voltage field switching operation to a given schedule.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRIS018 Perform low voltage field switching operation to a given schedule

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- verifying switching scheduling documents
- establishing and maintaining communications with the following:
  - switching controller
  - permit holders
  - other network stakeholders
- obtaining approval to perform low voltage (LV) field switching to a given schedule
- performing LV field switching operation to a given schedule completing at least two (2) of the following:
  - isolation
  - restoration
  - paralleling
- performing at least two (2) of the following tests:
  - proved de-energised\*
  - voltage
  - current
  - phasing
  - (\*must do)
- operating at least two (2) of the following:
  - LV links
  - LV fuses
  - LV circuit breakers
- using at least one (1) of the following:

- short circuiting equipment
- operating sticks
- using tags and locks
- organising, issuing, cancelling or relinquishing relevant work permits/approvals in accordance with workplace requirements
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident
- types, characteristics and capabilities of specialised tools and testing equipment
- purpose, layout and application of switching schedules
- LV field switching principles and procedures, including:
  - roles and responsibilities
  - procedures for coordination of operations
  - isolation, restoration and paralleling
  - proving de-energised
  - short circuiting
  - pre- and post-switching checks
  - fault finding
  - alternate sources of supply and possible back-feed
  - emergency fault procedures
- electrical operating/LV network diagrams and characteristics
- communication procedures
- danger tag and lockout procedures
- types, characteristics and capabilities of electrical apparatus used as a LV isolation points.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for performing low voltage field switching operation to a given schedule
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# UETDRIS019 Sample, test, filter and reinstate insulating oil

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Application

This unit covers the filtering, sampling, testing and reinstating of insulating oil. It includes the dispatching of oil samples to a laboratory for higher level testing, if required. Post-operational servicing of equipment and/or plant and the identification of any related environment issues concerning disposal and safety are also associated with this unit.

The application of the skills and knowledge described in this unit may require a licence to practice in the workplace.

Other conditions may apply under state and territory legislative and regulatory licensing requirement which must be confirmed prior to commencing this unit.

## Pre-requisite Unit

UEENEEE101A Apply Occupational Health and Safety regulations, codes and practices in the workplace

UEENEEE102A Fabricate, assemble and dismantle utilities industry components

UEENEEE104A Solve problems in d.c. circuits

UEENEEE105A Fix and secure electrotechnology equipment

UEENEEE107A Use drawings, diagrams, schedules, standards, codes and specifications

UEENEEE137A Document and apply measures to control OHS risks associated with electrotechnology work

UEENEEG006A Solve problems in single and three phase low voltage machines

UEENEEG101A Solve problems in electromagnetic devices and related circuits

UEENEEG102A Solve problems in low voltage a.c. circuits

UEENEEG106A Terminate cables, cords and accessories for low voltage circuits

UEENEEK142A Apply environmentally and sustainable procedures in the energy sector

UETDREL005 Work safely in the vicinity of live electrical apparatus

## Competency Field

Industry Specific Cross Discipline

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to sample, test, filter and reinstate insulating oil**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Work schedules, plans, drawings, workplace procedures and material lists are received and confirmed
- 1.2** Job requirements and workplace procedures are identified and communicated with relevant personnel
- 1.3** Work health and safety (WHS)/occupational health and safety (OHS) workplace procedures for sampling, testing, filtering and reinstating insulating oil are obtained and confirmed for the purposes of the work to be performed
- 1.4** Work is prioritised and sequenced for completion within acceptable timeframes following consultation with relevant personnel and in accordance with workplace procedures
- 1.5** Hazards are identified, WHS/OHS risks assessed and control measures prioritised, implemented and monitored in accordance with workplace procedures
- 1.6** Relevant work permits are obtained and signed in accordance with workplace procedures
- 1.7** Equipment, tools and personal protective equipment (PPE) required for work are identified, obtained and confirmed in working order
- 1.8** Liaison and communication issues with authorised personnel, authorities, clients and landowners are resolved to perform work, as required
- 1.9** Worksite is prepared to minimise risk, damage to property, commerce and individuals in accordance with workplace procedures

- 1.10 Personnel participating in work are fully briefed and responsibilities confirmed in accordance with workplace procedures
      - 1.11 Traffic management is planned and implemented in accordance with workplace procedures
- 2 Carry out sampling, testing, filtering and reinstating of insulating oil**
  - 2.1 WHS/OHS, sustainable energy and environmental principles and practices are monitored and actioned to reduce incidents of accidents in accordance with workplace procedures
  - 2.2 Hazard warnings and safety signs are recognised and hazards and assessed WHS/OHS risks are reported to immediate authorised personnel for directions in accordance with workplace procedures
  - 2.3 Requirements for lifting and/or climbing and/or working at heights and the use of power tools/equipment are followed in accordance with workplace procedures
  - 2.4 Sampling, testing, filtering and reinstating of insulating oil are applied to ensure completion in agreed timeframes, to quality standards and minimum waste in accordance with workplace procedures
  - 2.5 Sampling, testing, filtering and reinstating of the insulating oil is performed in accordance with work schedules, job requirements and workplace procedures
  - 2.6 Unplanned events in the filtering, sampling and testing of insulating oil are responded to in accordance with workplace procedures
  - 2.7 Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
  - 2.8 Quality checks of work are undertaken in accordance with industry standards and workplace procedures
- 3 Complete the sampling, testing, filtering and reinstating of insulating oil**
  - 3.1 Completed work is checked against work schedule, construction plans and drawings for compliance and anomalies are reported in accordance with workplace procedures
  - 3.2 WHS/OHS and environmental incidents are reported in accordance with workplace procedures, as required
  - 3.3 Worksite is cleaned and confirmed safe in accordance

with workplace procedures

- 3.4 Tools, equipment, surplus resources and materials are cleaned, checked and returned to storage or disposed of in accordance with workplace procedures
- 3.5 Relevant work permits are signed off and equipment is returned to service in accordance with workplace procedures
- 3.6 Work records, reports and/or documentation are completed in accordance with workplace procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRIS47 Sample, test, filter and reinstate insulating oil.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRIS019 Sample, test, filter and reinstate insulating oil

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including the use of risk control measures
- applying sustainable energy principles and practices
- sampling, testing, filtering and reinstating insulating oil on at least two (2) of the following pieces of equipment:
  - transformer main tank
  - transformer tap changer
  - switchgear
  - cable
  - reactor
- dealing with unplanned events on at least one (1) occasion.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- filtering and sampling of insulating oil, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with filtering and sampling - safe handling procedures; personal hygiene, storage and disposal procedures; WHS/OHS hazards and precautions, including use of appropriate personal protective equipment (PPE); environmental procedures and effects of contaminants
  - properties of insulating oil - dielectric strength, moisture content, acidity and sludge
  - locations where insulating oil is used - transformer, switchgear and oil-filled cable
  - filtering equipment – types, cleaning procedures and method of use
  - techniques in filtering and sampling insulating oil - methods of sampling, methods of filtering, testing procedures on site and analysing oil effectiveness
  - frequency of testing

- testing of insulating oil, including:
  - standards, codes, legislation, supply authority regulations and/or enterprise requirements associated with testing, such as precautions during testing and types of testing equipment
  - techniques in testing insulating oil - electric strength, water content, dielectric dissipation, resistivity and acidity
  - dissolved gas analysis (DGA)
- powerline safety practices, including:
  - protective apparatus and apparel for linework - responsibilities for the selection, use, maintenance and storage of protective apparatus and apparel and the types of protective apparatus and apparel used for the line worker
  - requirements for the use of ladders - carrying, erecting, collapsing and lowering different types of extension ladder against a standing pole; maintenance checks on different types of ladders; renewal of extension ropes; and the safety issues relating to clearances from overhead conductors
  - requirements for climbing and working aloft - methods used to identify a pole is safe to climb; methods used to inspect a line worker's body belt; application of knots and hitches appropriate to the requirements of a line worker; height safety principles, including personal fall protection, prevention and related requirements; and the practical procedure of climbing an overhead structure and fitting a pole chair
  - traffic management - purpose of traffic management and a line worker's responsibilities in accordance with relevant statutory requirements and electricity supply industry (ESI) requirements, demonstration of the procedures used to provide an effective traffic management scheme and the use of a two-way radio
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires; general fire prevention methods and the precautions for personal protection when fighting small fires
  - rescue victims from heights and confined spaces - planning and identifying procedures; establishing responses; developing techniques; involvement of external emergency services; and emergency procedures for the rescue of an electric shock victim, including cardiopulmonary resuscitation (CPR)
  - requirements for aerial linework - planning, establishing and implementing relevant aviation authority clearances; determining system requirements; aircrew familiarisation with network operations and equipment; and requirements for effective communications operations for aerial work
- material handling and the environment, including:
  - methods of obtaining updated environmental information and data sheets on the proper use and handling of equipment and materials
  - environmental standards, codes, environmental legislation, WHS/OHS legislation, hazardous substances/dangerous goods regulations, supply authority regulations and/or enterprise requirements applicable environmental care when handling materials, including provision of manufacturer and supplier information such as material safety data sheets (MSDS)
  - types and application of PPE used for hazards substances and dangerous goods
  - techniques in handling equipment to eliminate/reduce risks to the environment from spillages of oils, herbicides, pesticides and chemicals from equipment, such as vehicle

- loading crane, chainsaw, enterprise vehicles and explosive power tools
- procedures for handling and control of spillages of herbicides
- methods of disposing and storage of herbicides, pesticides and chemicals
- methods of cleaning mobile plant, equipment and tools
- recording of data
- environmental issues when undertaking sampling and filtering of oil, including:
  - environmental standards, codes, environmental legislation, supply authority regulations and/or enterprise requirements applicable to the work to be undertaken
  - methods of obtaining updated environmental information and data sheets on the proper use and handling of oil used on transformers and switchgear, including provision of MSDS
  - techniques in filtering and sampling oil to eliminate/reduce risks to the environment from spillages
  - safety procedures and equipment for handling and control of the oil
  - methods of disposing and storage of the oil
  - methods of cleaning equipment, tools and equipment
  - emergency procedures for spillages of oil to reduce risks to the environment - methods of cleaning up excessive spillages, methods of protection to surrounding environment, procedures for notification of relevant personnel and authorities, and recording procedures
  - polychlorinated biphenyl (PCB) contamination, handling and disposal procedures
- safe handling and/or disposing of insulation materials used in power distribution devices, which are potential environmental pollutants, including:
  - standards, codes, Commonwealth/state/territory and local government legislation, supply authority regulations and/or enterprise requirements applicable to the handling and disposing of insulation or heat dissipation materials used in power distribution devices
  - identification of environmental issues associated with the handling and disposing of insulation materials
  - safety precautions when handling and disposing of heat dissipation materials
  - safe working practices
  - WHS/OHS hazards and precautions
  - identification of hazards, assessing and controlling risks
  - types, selection, maintenance and uses of PPE
  - permit to work systems and isolation procedures
  - types and function of specialised equipment
  - safe working practices when using specialised equipment
  - emergency response and rescue, including first aid
  - techniques in the handling and disposing of insulation materials - PCB, asbestos, insulating oil and SF6 gas
- enterprise-specific policies and procedure instructions, including:
  - responsibilities and duty of care of employer and employee relationship
  - methods of obtaining the up-to-date information on enterprise policies and procedures

- rules and regulations
- induction into workplace - location of work area and storage area, timetable, uniform, personal wellbeing, housekeeping rules, emergency procedures and evacuation procedures
- techniques when dealing with others - working in teams, customer relation, complaint and issues procedures
- overview of enterprise professional development - firefighting procedures, fatigue management, and training and competency development - understanding and promotion
- enterprise-specific WHS/OHS instructions, including:
  - standards, codes, legislation, supply authority regulations and specific enterprise regulations pertaining to WHS/OHS policies and procedures
  - methods of obtaining the up-to-date information on enterprise WHS/OHS policies and procedures
  - specific enterprise PPE - type and application; where and when to be used; method of replacement; responsibility of maintenance, including cleaning, inspection and testing; emergency response, rescue, evacuation and first aid procedures
  - personal wellbeing – hygiene, fatigue/stress management and drugs/alcohol
  - WHS/OHS training - induction training, specific hazard training, specific task or equipment training, emergency and evacuation training, and training as part of broader programs such as equipment operation
  - WHS/OHS records, including audits; inspection reports; workplace health and environmental monitoring records; training and instruction records; manufacturer and supplier information, such as material safety data sheets (MSDS); registers; maintenance reports; workers compensation and rehabilitation records; and first aid/medical records
- enterprise-specific technical drawing and documents, including:
  - types and application of enterprise-specific drawings and documents - electrical and electronic drawings, mechanical drawings, project charts, schedules, graphs, technical manuals and catalogues
  - instructions/worksheets - types and application of enterprise-specific symbols and diagrams
  - title box - description of parts and version control
- enterprise-specific specialised tools, including:
  - legislation, standards, codes, supply authority regulations and/specific enterprise regulations pertaining to the use and care of specialised tools - voltage detectors; polarity testers and phase rotation
  - characteristics, capabilities and application of specialised tools for a particular job
  - safety policies, procedures and precautions with regards to using, transporting and storage of specialised tools
  - selection methods for obtaining the correct specialised tool for the particular job, including during procurement, purchasing and/or hiring arrangements
  - techniques in pre-use inspection on the serviceability of specialised tools
  - techniques in the selection, use, maintenance and care and storage of specialised tools
  - identifying WHS/OHS hazards, assessing and controlling risks associated with their use

- techniques for the safe use of specialised power tools
- substation safety practices, including:
  - standards, codes, Commonwealth/state/territory/local government legislation, supply authority regulations and/or enterprise requirements pertaining to substation safety practices
  - techniques in the use of protective apparatus and apparel for substation work, including responsibilities about the use and maintenance of protective apparatus and apparel and the types of protective apparatus and apparel used for work in substations
  - requirements for the use of ladders and appropriate ladder types for work in substations - safe work methods when carrying, erecting, collapsing and lowering different types of extension ladder against substation structures, plant and equipment; maintenance checks on different types of ladders; renewal of extension ropes and the safety issues relating to clearances from energised conductors
  - requirements for climbing and working at heights in substations - attached climbing principles; selection, use and operation of elevated work platforms (EWP) and any WHS/OHS requirements associated with the use of EWP
  - control of small fires - identification, selection and operation of the appropriate extinguishing mediums for various types of fires and the precautions for personal protection when fighting small fires
  - control of oil spills - identification, use and maintenance of spill oil control equipment and materials; and oil containment facilities and systems
  - rescue and release procedures - rescue of personnel from energised conductors, emergency descent from an EWP and/or rescue from confined spaces
  - enterprise requirements - safe access and authorisation to work procedures; use of mobile extendable equipment on or near energised HV conductors; emergency response procedures; hazards associated with work in substations, including earthing systems, transfer potentials, step and touch effects, electrostatic and electromagnetic induction; and dangers of near approach to energised conductors.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRC001 Install and maintain low voltage overhead services in a very remote community**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to install and maintain low voltage (LV) overhead services in a very remote community in the electricity supply industry (ESI).

It includes the installation, maintenance and connection of LV overhead service cables and associated equipment between the customer's connection point and the network point of supply.

It also includes testing and commissioning, identifying and rectifying faults, and the repair and replacement of service cables.

All installation and maintenance of LV overhead service cables in very remote communities must be undertaken in an isolated environment other than for testing purposes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRRC006 Perform low voltage electricity network switching in a very remote community

UETDRRC007 Solve problems in electrical network apparatus in a very remote community

UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community

## Competency Field

Remote Community

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install and maintain LV overhead services**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Hazards are identified, risks assessed and control measures identified and applied
- 1.5** Work permits are received and signed in accordance with workplace requirements
- 1.6** Plant, tools, equipment and personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
- 1.7** Overhead electrical distribution network is verified as isolated and earthed/short circuited in accordance with workplace requirements
- 1.8** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.9** Worksite is prepared in accordance with work plan and workplace requirements
- 1.10** Traffic management plan is confirmed as being in place

- in accordance with workplace requirements
- 2 Carry out installation and maintenance of LV overhead services**
- 2.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
- 2.2** Lifting, climbing, working at heights and the use of plant, tools, equipment and PPE are carried out in accordance with workplace requirements
- 2.3** Hazard control measures are monitored in accordance with workplace requirements
- 2.4** Installation and maintenance of the LV overhead service is completed in accordance with work plan and workplace requirements
- 2.5** Earthing and short circuiting equipment is removed, permit signed off and overhead electrical distribution network is re-energised in accordance with workplace requirements
- 2.6** LV overhead service connections are tested in accordance with work plan and workplace requirements
- 2.7** Incidents or unplanned events are responded to in accordance with workplace requirements
- 2.8** Quality checks of work are undertaken in accordance with work plan and workplace requirements
- 3 Complete work and documentation**
- 3.1** Completed work is checked for compliance against the work plan and workplace requirements
- 3.2** Incidents or unplanned events are reported in accordance with workplace requirements
- 3.3** Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
- 3.4** Plant, tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
- 3.5** Surplus materials are returned to storage or disposed of in accordance with workplace requirements
- 3.6** Work records, reports and documentation are completed, and appropriate personnel notified in accordance with workplace requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the UET Transmission, Distribution and Rail Sector Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to UETTDRI36 Install and maintain low voltage services in remote communities (overhead).

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=229bace1-b7bc-4653-9300-dffb13ecfad7>

# Assessment Requirements for UETDRRC001 Install and maintain low voltage overhead services in a very remote community

## Modification History

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- verifying power systems electrical distribution network has been isolated and earthed and short circuited in accordance with work plan and workplace requirements
- connecting low voltage (LV) overhead service cables, including at least two (2) of the following:
  - three phase \*
  - single phase
  - two phase
  - (\* must do)
- installing LV overhead service protection devices, including at least one (1) of the following:
  - service fuse
  - circuit breakers (pole)
  - service link
- testing LV overhead service cable connections, including all the following:
  - polarity test
  - phase rotation test
  - continuity test
  - voltage test
  - neutral loop impedance
  - insulation resistance
- restoring supply to LV electricity networks in accordance with work plan and workplace

requirements

- working from at least one (1) of the following:
  - elevated work platform (EWP)
  - platform
  - ladder
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of plant, tools and equipment
- application, purpose and types of permits
- types and characteristics of LV overhead service equipment, including:
  - connectors
  - insulation piercing connectors (IPCs)
  - service termination devices
  - fuse holders
  - fuses
  - service poles
  - point-of-attachment brackets
  - mains connection boxes
- construction manuals, system diagrams, plans and drawings
- types, sizes and characteristics of LV overhead service cables, including:
  - two, three and four-core cable
  - cable cross-sectional area of conductors
  - current ratings
  - cable insulation materials
- types of installation plant, equipment and tools, including:
  - EWPs
  - ladders
  - service cable puller and tension tool
  - stripping tools
  - ABC spanner and spreader

- installation techniques, including:
  - consumer poles
  - location of attachments
  - methods of stringing, tensioning and terminating
  - minimum clearances to assets, structures and the ground
  - maximum span lengths and service cable tensions
- connection principles, including:
  - relevant electrical access permit
  - purpose and function of the multiple earth neutral (MEN) system
  - types of connection faults
  - causes and effects of incorrect and poor electrical connections
  - principles of loop impedance
  - reasons for and methods used to maintain standard phase sequencing
  - purpose and operation of service fusing
- testing and commissioning procedures, including:
  - inspection
  - equipment functionality
- use of independent earth for testing:
  - continuity
  - insulation testing
  - polarity, voltage and phase sequence
  - neutral integrity
  - meter function
- connection testing forms and documentation
- techniques for maintenance of overhead services, including:
  - inspection
  - types of faults
  - diagnosis and repair of faults
  - removing and replacing services and fuses
- events constituting an unplanned event or incident
- procedures for responding to an unplanned event or incident.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for installing and maintaining overhead LV services in a very remote community
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **UETDRRC002 Install and maintain low voltage underground services in a very remote community**

## **Modification History**

Release 1. This is the first release of this unit of competency in the UET Transmission, Distribution and Rail Sector Training Package Release 2.0.

## **Application**

This unit involves the skills and knowledge required to install and maintain low voltage (LV) underground services in very remote communities in the electricity supply industry (ESI).

It includes the installation and maintenance of LV underground services and associated equipment between the customer's connection point and the network point of supply.

It also includes testing and commissioning, identifying and rectifying faults, and the repair and replacement of service cables.

All installation and maintenance of LV underground service cables in very remote communities must be undertaken in an isolated environment other than for testing purposes.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

## **Pre-requisite Unit**

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UETDREL001 Apply environmental requirements

UETDREL004 Operate plant and equipment in the vicinity of live electrical apparatus

UETDREL005 Work safely in the vicinity of live electrical apparatus

UETDRRC006 Perform low voltage electricity network switching in a very remote community

UETDRRC007 Solve problems in electrical network apparatus in a very remote community

UETDRRC008 Solve problems in low voltage electrical network circuits in a very remote community

## Competency Field

Remote Community

## Unit Sector

Not applicable.

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare to install and maintain LV underground services**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
- 1.2** Work plan is obtained and confirmed in accordance with workplace requirements
- 1.3** Materials required for work are determined and obtained in accordance with work plan and workplace requirements
- 1.4** Work is prioritised and sequenced for completion in accordance with workplace requirements
- 1.5** Hazards are identified, risks assessed and control measures identified and applied
- 1.6** Underground electrical distribution network is verified as isolated and earthed/short circuited in accordance with workplace requirements
- 1.7** Work permits are received and signed in accordance with workplace requirements
