# ACMAIM404 Collaborate in planning sedation and anaesthesia of large animals in emergency field situations

## Modification History

| Release   | Comments                                                                                |
|-----------|-----------------------------------------------------------------------------------------|
| Release 1 | This version released with ACM Animal Care and Management Training Package Version 3.0. |

## Application

This unit of competency describes the skills and knowledge required to contribute to assessing and evaluating sedation and anaesthesia needs of large animals in emergency field situations as part of a team responding to an incident.

The unit applies to experienced people responding to incidents in field situations where large animals are compromised or injured. They are required to work with others to plan and discuss sedation and anaesthesia needs of animals to assist with the safety of people, and the care, recovery and welfare of animals in unpredictable and potentially dangerous situations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety and animal welfare regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Note: The administration of sedatives and anaesthetics, including those used for euthanasia, can only be performed by a registered veterinarian or person authorised or licensed according to the relevant state/territory regulations. Users are advised to check with the relevant authority for specific requirements.

## Pre-requisite Unit

Nil

## Unit Sector

Animal Incident Management (AIM)

## Elements and Performance Criteria

| Elements | Performance Criteria |
|----------|----------------------|
|----------|----------------------|

| <i>Elements describe the essential outcomes.</i>         | <i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Assess situation at incident scene                    | <p>1.1 Identify and make contact with the incident controller, animal owner or person in charge at incident scene</p> <p>1.2 Request information about the incident, the animal and proposed incident management or rescue operation</p> <p>1.3 Assess human, animal and environmental risks at the scene</p> <p>1.4 Discuss likely animal behaviour and physical responses with the incident controller and team members</p> <p>1.5 Discuss site requirements for rescue relative to incident scene, in-situ care or transport access</p> <p>1.6 Determine, in consultation with others, required equipment from recovery tool kit, including appropriate personal protective equipment (PPE) for safety, hygiene and biosecurity</p> <p>1.7 Adhere to established incident management system and chain of command at the scene to ensure safety to self, others and animals</p> |
| 2. Assist with triage procedures                         | <p>2.1 Contain or restrain the animal patient</p> <p>2.2 Assess animal condition and extent of injuries in consultation with others</p> <p>2.3 Discuss prognosis for life and viability of rescue or recovery with team members, taking into consideration risks to people involved</p> <p>2.4 Contribute to the decision to euthanase the animal, where necessary, and the most humane method for the situation in consultation with the veterinarian and relevant personnel</p> <p>2.5 Contribute to planning the method, timeframe and level of sedation or anaesthesia required to manage the animal in consultation with relevant personnel</p> <p>2.6 Assess zoonotic disease risk and precautions required with incident controller, veterinarian and team members</p>                                                                                                     |
| 3. Assist with emergency medical care during an incident | <p>3.1 Discuss sedation plan specific to the animal and incident requirements, and contingency or modifications to the plan if circumstances require</p> <p>3.2 Assist with stabilising the animal, and provide immediate care under veterinarian instructions</p> <p>3.3 Discuss and plan with the veterinarian and relevant personnel the sedation and/or anaesthesia doses appropriate for the incident action plan and the animal's condition</p> <p>3.4 Assist with monitoring the animal during the operation to ensure</p>                                                                                                                                                                                                                                                                                                                                                 |

| Elements                                         | Performance Criteria                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <i>Elements describe the essential outcomes.</i> | <i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>                                                                                                                                                                                                                                                                                                                                                                                                          |
|                                                  | safety of operators and welfare of animal                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 4. Provide post-incident care                    | <p>4.1 Monitor signs of recovery of the animal following sedation or anaesthesia</p> <p>4.2 Assist with further treatment or pre-hospital care according to needs of animal</p> <p>4.3 Assist with organising the appropriate transport to veterinary facility if required</p> <p>4.4 Assist with animal post-recovery</p> <p>4.5 Participate in team debriefing and contribute to support of others involved in the incident</p> <p>4.6 Complete records according to regulatory and industry requirements</p> |

## Foundation Skills

*This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.*

| Skill                      | Description                                                                                                                                                                                                                                                             |

## Assessment Requirements for ACMAIM404 Collaborate in planning sedation and anaesthesia of large animals in emergency field situations

### Modification History

| Release   | Comments                                                                                |
|-----------|-----------------------------------------------------------------------------------------|
| Release 1 | This version released with ACM Animal Care and Management Training Package Version 3.0. |

### Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has:

- discussed and contributed to the planning of sedation and anaesthesia requirements of a large animal in three different incident scene scenarios
- assisted with providing animal post-incident care for each of the three scenarios where sedation and anaesthesia were used.

### Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- incident management system and communication protocols used in large animal incident scenes
- veterinarian's role and responsibilities in large animal incident scene management
- incident scene risks, including:
  - large animal behaviour – fight and flight responses
  - environmental issues
  - dealing with people and managing expectations
  - sharps disposal and biosecurity risks
- zoonotic disease risks, including transmission routes and ways to mitigate the risks
- personal protective equipment (PPE) requirements for specific situations
- sedation and anaesthesia (chemical restraints), including:
  - routes of administration for different situations – intravenous (IV), intramuscular (IM), oral
  - analgesics and drugs used for sedation and anaesthesia
  - time to take effect and duration period

- devices used for difficult access, including air-operated gun and pole-operated syringes
- dose levels appropriate for animal state of heightened excitement, fear and/or pain, including impact of adrenalin and need to ensure initial dose is effective and not rely on top-ups
- impact and limitations of sedatives and anaesthesia on different species
- consideration of status of patient – old, exhausted, dehydrated, pain
- sedation reversal
- level of sedation or anaesthesia recommended for:
  - allowing the animal to walk or move to assist with the extrication
  - fitting slings, lifting and sliding the animal
  - lengthy or delayed extrication requiring constant infusion
  - euthanasia
- animal behaviour and responses to sedation and recovery
- large animal anatomy and relationship to animal incident rescue techniques
- issues relating to euthanasia of animals, including:
  - considerations in making the call to euthanase an animal
  - permission/authority, regulatory and insurance requirements
  - approved and humane methods of euthanasia – chemical and physical
  - strategies to use in team and/or owner debriefing after an incident.

## Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions or an incident scene – this includes the use of simulations and scenarios where assessment would be unsafe, impractical or unethical
- resources, equipment and materials:
  - PPE
  - field medical and/or recovery tool kit
  - incident scene scenarios involving large animals to address the performance evidence requirements
- relationships:
  - team members.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
