Application

This unit of competency covers the selection and application of modern agricultural technology in production systems. Applications include the recording and reporting of farm activities, mapping, farm and production planning, data collection and analysis and variable rate technology. This unit assists land managers to make informed decisions specific to production systems and applications.

Applications in agricultural science range from spatial information tools to the precision application of production inputs and growth models for the improvement of production.

All work must be carried out to comply with workplace procedures, work health and safety legislation and codes, and sustainability practices.

This unit is applicable to persons who have a role in managing or operating a land based production business or providing expert advice such as consultants, industry specialists and extension officers.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Agribusiness (AGB)

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Evaluate the need for agricultural technology	1.1 Identify and evaluate organisational tasks and processes that could be supported by technology applications

Element	Performance criteria
	1.2 Assess opportunities and limitations for operational improvements that may result from adopting specific technology applications 1.3 Evaluate equipment, tool and resource requirements and select the most appropriate options 1.4 Evaluate the cost-benefit of using technology 1.5 Seek independent technical advice and sources of information as required 1.6 Develop a plan to incorporate the use of technology to improve operational efficiency, productivity and sustainability
2. Implement technology to manage production	2.1 Record, analyse and manage production data using technology 2.2 Develop treatment strategies or input requirements using technology 2.3 Collect, store and analyse data across the land based business using technology 2.4 Research information resources, report and communicate production management using technology 2.5 Integrate the use of technology to improve operational efficiency, production, profitability and sustainability
3. Evaluate the use of technology	3.1 Develop and review strategies to ensure the use of technology is cost effective and consistent with operational goals 3.2 Assess the need for additional training and support 3.3 Develop strategies to address barriers to the effective use of technology when necessary 3.4 Evaluate the impact of technology use on production levels, input costs and the cash flow budget 3.5 Develop strategies for monitoring, evaluating and incorporating future developments in technology

Foundation Skills

Foundation Skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Unit Mapping Information

New unit - equivalent to VU21629 Select and use agricultural technology
