AHCPER420 Design an urban permaculture system

Release: 1

AHCPER420 Design an urban permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Application

This unit of competency describes the skills and knowledge required to negotiate with clients to develop a design brief, undertake site assessment, develop design concepts and produce final design documentation for an urban permaculture system.

The unit applies to individuals who take responsibility for their own work and for the quality of the work of others. They use discretion and judgement in the selection, allocation and use of available resources.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Permaculture (PER)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Develop a design brief for an urban permaculture system	1.1 Consult with client and determine design objectives for an urban permaculture system 1.2 Determine design context 1.3 Develop and confirm design brief with client 1.4 Negotiate and confirm budget and timelines for design development

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
2. Undertake design analysis	2.1 Access maps, images and geospatial data for site 2.2 Survey site for Zones 1 and 2 and confirm or supplement information of maps and images 2.3 Prepare a site base plan 2.4 Record site survey data on site plan 2.5 Conduct a neighbourhood and bioregional analysis for site 2.6 Identify potential permaculture design elements suitable for design brief outcomes 2.7 Assess and select permaculture design elements according to design brief 2.8 Revise and confirm design elements with client
3. Prepare a design concept	3.1 Determine and evaluate a concept for an urban permaculture system 3.2 Prepare concept design drawings 3.3 Identify and document plant and livestock suitable for concept design in an urban setting 3.4 Develop and compile a bill of materials and cost estimates for design elements, plants and livestock 3.5 Prepare a preliminary budget for design concept 3.6 Present the concept plan and budget to client for feedback and approval 3.7 Review concept plan and budget according to client feedback
4. Produce final design	4.1 Design an urban permaculture system according to design brief and approved concept plan and budget 4.2 Produce drawings and specifications for urban permaculture system 4.3 Present design plans, drawings and specifications to client for final feedback and approval 4.4 Undertake final revision changes for design according to client feedback and approvals 4.5 Finalise and record design according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	Analyse plans and other documentation from a variety of sources, and consolidate information to determine permaculture system requirements and client needs
Writing	Prepare and produce client briefs and plans and specifications, including diagrammatic models and plans, to illustrate complex permaculture design principles and requirements
Oral communication	Use collaborative and inclusive techniques, including active listening and questioning and reading of verbal and non-verbal signals, to convey, clarify and confirm client requirements
Numeracy	Apply financial modelling skills to identify, analyse and evaluate budgetary information, time durations and resource allocations for permaculture system design

Assessment Requirements for AHCPER420 Design an urban permaculture system

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion, designed a permaculture system for an urban property, including:

- consulted and negotiated with client to develop a design brief for an urban permaculture system
- developed concept ideas and sought feedback and approval from client for an urban permaculture system design
- developed the concept, which must include:
 - analysed zones and sectors relevant to an urban permaculture system design
 - designed elements suitable to an urban property
 - identified and recommended plants and animals suitable for inclusion in an urban environment
 - calculated materials and cost estimates for the concept.

There must also be evidence that the individual has:

- prepared landscape drawings and plans for design, including:
 - detail and construction drawings
 - developed planting schedules, budget and specifications
 - developed a final design
- presented a design to a client and finalised workplace design procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- elements of urban permaculture design, including:
 - representation of zones 1 and 2

- needs supplied by other zones
- sector analysis
- neighbourhood context and bioregional analysis
- design that may utilise existing architects' drawings or local maps and plans
- principles and practices of permaculture in an urban setting
- strategies in urban permaculture design
- edible landscapes and aesthetics in design
- public landscapes and community garden design
- contents of a design brief, including:
 - statement of scope of design
 - statement of client needs and requirements
 - listing of project elements
 - listing of assessable tasks
 - options for dealing with client needs and requirements
- design analysis and research techniques
- plan interpretation and map reading
- site analysis, including:
 - site boundaries and contours
 - location of existing infrastructure and features
 - location of services and access points to meters (power, water, sewer, gas)
- site surveying methods and tools, including:
 - vertical measurements
 - measuring angles
 - distance and horizontal measurements
- design concepts, including:
 - preliminary conceptual sketches
 - bubble diagrams
 - preliminary plans, sections and elevations
- design drawing and drafting conventions, including symbols
- presentable and legible design drawings for urban systems suitable for client use
- plant and animal selection
- final design, including:
 - rendered plan, elevation and section drawings to scale
 - design drawing and drafting conventions
 - consistent graphic style
 - legends and keys of elements
 - materials lists, tables, bills of quantity, timelines, installation plans and management plans
 - construction detail drawing
- methods of design, including:

- zone and sector planning
- slope planning
- patterns in space and time.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in an urban environment or an environment that accurately represents urban conditions
- resources, equipment and materials:
 - survey tools and equipment
 - permaculture reference materials
 - drawing equipment and resources
- specifications:
 - workplace procedures
 - workplace client brief
- relationships:
 - client.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
