Assessment Requirements for AHCPRK314 Care for grower and finisher pigs

Release: 1

Assessment Requirements for AHCPRK314 Care for grower and finisher pigs

Modification History

Release	Comments
Release 1	This version released with AHC Agriculture, Horticulture and Conservation and Land Management Training Package Version 9.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively cared for at least two different groups of grower and/or finisher pigs. Each group must include at least four pigs. For each group, the individual must have:

- identified at least two health and safety hazards, and assessed and controlled associated risks
- selected, checked and correctly fitted appropriate personal protective equipment (PPE)
- used safe and low stress animal handling techniques to care for grower and/or finisher pigs
- identified and applied enterprise health and safety, infection control, biosecurity and environmental protection procedures
- maintained grower and/or finisher pig environments, including:
 - checked and prepared feeders and drinkers to ensure they are operational
 - cleaned and/or disinfected food handling equipment and/or housing area
 - identified and reported pest and/or predator activity
 - disposed of waste materials according to environmental requirements
- monitored feed and water quantity, quality and availability
- fed according to grower or finisher pig requirements, including monitored feeding and drinking patterns
- monitored and reported basic pig health and identified signs of:
 - ill health, injury or distress
 - abnormal or depressed appetite
 - non-routine behaviour.

The individual must also have:

- treated at least two pigs according to enterprise requirements, including:

- administered treatments according to Farm Treatment Plan or Approved Medication List
- demonstrated safe handling and positioning of self to reduce risks to pigs, self and others
- safely stored or disposed of materials used during treatments according to enterprise health, safety and biosecurity requirements
- documented at least two treatments provided to pigs, including their withholding period and/or export slaughter interval.

In addition to the above, the individual must have:

- removed and/or disposed of a dead or non-viable pig according to enterprise biosecurity and environmental procedures
- identified and prepared at least three pigs for sale or transfer to another location, including:
 - checked fit to load conditions
 - checked identification and/or tattoo brand as required
 - completed at least one PigPass/National Vendor Declaration (NVD).

Mandatory workplace requirements

All performance evidence specified above must be demonstrated in a pork production site.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key features of state/territory legislation, regulations and codes of practice for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for grower and finisher pigs
- enterprise procedures and requirements for worker health and safety, animal welfare, biosecurity and environment protection that apply to caring for grower and finisher pigs
- hazard identification, risk assessment and controls to minimise risks when caring for grower and finisher pigs
- key care, health and welfare requirements for grower and finisher pigs, including nutrition, water, and protection from adverse weather and predators
- features, functions and benefits of common types of infrastructure, enclosures and equipment used to house and care for grower and finisher pigs using indoor and outdoor farming systems
- drinkers, feeders and other common equipment used to care for grower and finisher pigs in indoor and outdoor farming systems, including:
 - features, functions and benefits
 - safety and operational checks
 - maintenance, cleaning and disinfection requirements
- enterprise procedures for identifying and reporting contaminated feed and water
- optimal range, effects and impacts of ventilation, temperature, humidity and other environmental parameters on grower pig health and welfare

- typical requirements of enterprise work routines for grower and finisher pigs
- safe and low stress techniques for handling and restraining grower and finisher pigs, including injured and ill pigs
- requirements, methods and procedures for formation of viable grower and finisher groups, and the impacts of a viable group on individual pig health and production, including consideration of pig weight, sex and stocking density
- key features of pig anatomy and body functions
- signs of common grower and finisher pig ill health, diseases and injuries, and detection methods, including:
 - irregular behaviour, including self-isolation, lethargy, loss of appetite and drinking
 - checks including weight and breathing
 - limp in step, straight tail, head tilt and body tremors
 - checking skin for red patches, scabs, bleeding, lesions, swelling, open wounds and unusual discharges from eyes, nose and genitalia
 - abnormal faeces
- signs of distress and methods for assessing grower and finisher pig stress levels based on their behaviour
- methods and procedures for feeding and watering grower and finisher pigs
- criteria and methods of assessing optimal stocking densities of grower and finisher pigs
- criteria, methods and procedures for assessing suitability of grower and finisher pigs for sale or transfer, including Fitness to Load guidelines
- requirements, methods and procedures for removal and disposal of pig carcasses, including enterprise biosecurity and environmental considerations
- types, storage, handling, application and disposal procedures of health care treatments of grower and finisher pigs, including withholding periods
- types, storage, handling, use and disposal of cleaning agents and disinfectants commonly used in grower and finisher pig care, including related health, safety and environmental requirements
- features and requirements of property branding and PigPass National Vendor Declaration (NVD)
- zoonoses, including erysipelas, Japanese encephalitis, leptospirosis, worms and influenza
- key features of typical enterprise recording and reporting requirements related to pig care.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - *a pork production site*
- resources, equipment and materials:
 - *live pigs specified in performance evidence*
 - *pig care infrastructure, materials, resources, tools and equipment, including PPE*
 - *safety data sheets*

- specifications:
 - *enterprise procedures for pig care, health and welfare, worker health and safety, and biosecurity activities.*

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Mandatory Workplace Requirements

Mandatory workplace requirements are shown in *italic text*. Refer to the Companion Volume Implementation Guide for further information.
