Assessment Requirements for AMPA2156 Process blood

Release: 1

Assessment Requirements for AMPA2156 Process blood

Modification History

Release	TP Version	Comment
1	AMPv2.0	Initial release

Performance Evidence

The candidate must collect blood from the slaughter floor, process it using equipment such as a centrifuge to recover blood plasma and package the product.

The candidate must:

- collect and process blood hygienically, safely and in accordance with:
 - relevant regulatory requirements
 - SOPs
 - work instructions
 - workplace health and safety requirements
- operate processing equipment in accordance with workplace and manufacturer's requirements
- use relevant workplace machinery correctly
- pack and store blood products according to workplace requirements
- apply relevant mathematical skills to ensure processing, packaging and storage requirements are met

Knowledge Evidence

The candidate must demonstrate a basic factual, technical and procedural knowledge of:

- nature and uses of blood products produced
- relevant work instructions and SOPs
- ways of minimising contamination and cross-contamination
- workplace health and safety policies and procedures
- workplace and manufacturer's requirements for operating processing equipment
- workplace health and safety hazards and ways of minimising them
- sources of contamination and cross-contamination

Assessment Conditions

Assessment must involve processing one or more blood products.

Competency in this unit must be demonstrated under normal workplace conditions.

As a minimum, the following three forms of assessment must be used:

- quiz of underpinning knowledge
- workplace demonstration
- workplace referee or third-party report of performance over time

Assessors must satisfy the current standards for RTOs.
