AURJTD105 Diagnose complex faults in motorcycle steering and suspension systems

Release: 1

AURJTD105 Diagnose complex faults in motorcycle steering and suspension systems

Modification History

Release	Comments
Release 1	This version first released with AUR Automotive Retail, Service and Repair Training Package Version 6.0

Application

This unit describes the skills and knowledge required to diagnose complex faults in motorcycle steering and suspension systems and determine the repair action necessary to restore system performance. It involves confirming the existence of a fault, developing a diagnostic testing strategy, diagnosing the cause of the fault, reporting conclusions and making repair recommendations. Complex faults are outside the normal scope of a technician's diagnosis and repair work. They include intermittent faults, multi-system faults, faults introduced as a result of system repairs, and indirect faults caused by the influence of external systems, requiring the application of complex diagnostic processes to resolve.

The unit applies to those working in the automotive service and repair industry. The steering and suspension systems include those in motorcycles or all-terrain vehicles (ATVs).

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Unit Sector

Mechanical Motorcycle Technical – Steering and suspension

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Identify and confirm the work requirement	1.1 Identify job requirements from workplace instructions 1.2 Confirm nature of fault according to workplace procedures 1.3 Identify hazards and environmental issues associated with diagnose and repair activity, assess potential risks and implement control measures in line with workplace policies and procedures

ELEMENTS	PERFORMANCE CRITERIA
2. Prepare to diagnose complex faults	2.1 Identify required information for diagnosis activity 2.2 Analyse diagnostic options and develop testing strategy, including, diagnostic method sequence, tests and testing processes 2.3 Identify tools and equipment required for testing strategy and establish serviceability according to workplace procedures
3. Apply diagnostic procedures	3.1 Implement diagnostic tests set out in testing strategy according to manufacturer and workplace procedures, and workplace health and safety requirements 3.2 Verify and report diagnostic findings using reliable alternative process according to manufacturer specifications and workplace procedures 3.3 Develop and report recommendations for necessary repairs according to workplace procedures 3.4 Communicate findings to workplace supervisor and customer and confirm next steps
4. Complete work processes	4.1 Conduct final inspection according to workplace procedures and confirm vehicle is ready for repair process or return to customer 4.2 Clear work area and dispose of or recycle materials according to workplace procedures 4.3 Complete documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Learning	• Locates required sources of information efficiently • Develops own approach to a task, including steps to confirm findings • Applies diagnostic skills to different vehicles or machinery.
Reading	• Identifies, organises and interprets technical information from manufacturer and workshop literature when seeking steering and suspension system specifications and procedures.
Oral communication	• Clarifies instructions

SKILL	DESCRIPTION
	Obtains information from customers and supervisors.
Numeracy	- Measures steering and suspension system components and uses basic mathematical operations, including addition and subtraction, to calculate tolerances and deviations from manufacturer specifications - Uses electrical measuring equipment and interpret units, such as amperes, ohms, and volts.
Planning and organising	- Plans own work requirements - Prioritises and sequences actions to achieve required outcomes - Ensures tasks are completed within workplace timeframes.
Technology	Uses precision measuring equipment.

Unit Mapping Information

Supersedes and is equivalent to AURJTD005 Diagnose complex faults in motorcycle steering and suspension systems.

Assessment Requirements for AURJTD105 Diagnose complex faults in motorcycle steering and suspension systems

Modification History

Release	Comments
Release 1	This version first released with AUR Automotive Retail, Service and Repair Training Package Version 6.0

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- diagnose complex steering and suspension system faults in at least three different motorcycles, including:
 - at least one steering system fault
 - at least one suspension system fault
- develop a testing strategy in the course of the above work to diagnose the cause of at least two of the following types of complex faults:
 - an intermittent fault
 - a fault that affects more than one system
 - a fault introduced as a result of a system repair
 - an indirect fault caused by the influence of external systems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods to locate and interpret information required to diagnose complex faults in motorcycle or ATV steering and suspension system, including:
 - motorcycle or ATV steering and suspension system manufacturer specifications
- workplace procedures required to diagnose complex faults in motorcycle or ATV steering and suspension systems, including:
 - establishing the serviceability of tools and equipment
 - documentation procedures
 - housekeeping procedures, including:
 - examination of tools and equipment
 - storage of equipment
 - identification, tagging and isolation of faulty equipment

- safe disposal of materials
 - recycling procedures
- workplace health and safety (WHS) requirements relating to diagnosing complex faults in motorcycle steering and suspension systems, including procedures for:
 - lifting and supporting motorcycles
 - working with stored energy in springs
 - handling steering system bearing grease
- environmental requirements relating to motorcycle steering and suspension systems
- types of complex faults relating to motorcycle steering and suspension systems, including:
 - intermittent
 - multi-system
 - introduced as a result of system repair
 - indirect, caused by the influence of external systems
- testing procedures for motorcycle steering and suspension systems, including:
 - abnormal noise analysis
 - component failure analysis
- types and key features of motorcycle steering and suspension systems, including:
 - telescopic forks, including:
 - fork tubes
 - gaiters
 - stanchions
 - triple clamps
 - steering dampers
 - upside down forks
 - anti-dive fork systems
 - trailing link fork suspension
 - leading link fork suspension, including:
 - springer fork
 - Earles fork
 - girder fork
 - Saxon-Motodd (telelever) fork
 - duolever front suspension (Hossack or Fior)
 - coaxial steering front suspension
 - non-fork front suspension, including hub centre steering
 - rear suspension, including:
 - twin shock swingarm
 - monoshock swingarm
 - monoshock single sided swingarm
 - rear monolever
 - rear paralever

- steering angles, including:
 - wheelbase
 - trail
 - offset
 - rake angle.

Assessment Conditions

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the motorcycle steering and suspension systems that they have worked on, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive repair workplace or simulated workplace
- workplace instructions
- manufacturer motorcycle steering and suspension specifications
- three different motorcycles with complex faults in their steering and suspension systems
- diagnostic equipment for motorcycle steering and suspension systems
- tools, equipment and materials appropriate for diagnosing complex faults in motorcycle steering and suspension systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
