Assessment Requirements for AURTTA001 Remove and tag steering, suspension and braking system components

Release: 1

Assessment Requirements for AURTTA001 Remove and tag steering, suspension and braking system components

Modification History

Release	Comment
Release 1	New unit of competency.

Performance Evidence

Before competency can be determined, individuals must demonstrate they can perform the following according to the standards defined in this unit's elements, performance criteria, range of conditions and foundation skills:

- remove and tag the following components from one vehicle:
 - steering component
 - suspension component
 - brake component.

Knowledge Evidence

Individuals must be able to demonstrate knowledge of:

- work health and safety (WHS) and occupational health and safety (OHS) requirements relating to removing and tagging steering, suspension and braking system components, including procedures for:
 - working with stored energy in springs, air springs and torsion bars
 - working with brake dust and hydraulic fluids
- environmental requirements, including procedures for:
 - trapping, storing and disposing of oils and fluids
 - safely disposing of contaminated parts and components
- identification and basic function of components to be removed and tagged, including:
 - steering components
 - suspension components
 - brake components
- procedures for removing and tagging steering, suspension and braking system components, including:

- component removal
- component inspection
- component tagging, including key information required on tags
- component storage.

Assessment Conditions

Assessors must satisfy NVR/AQTF assessor requirements.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessment must include direct observation of tasks.

Where assessment of competency includes third-party evidence, individuals must provide evidence that links them to the steering, suspension and braking system components that they have removed and tagged, e.g. repair orders.

Assessors must verify performance evidence through questioning on skills and knowledge to ensure correct interpretation and application.

The following resources must be made available:

- automotive workplace or simulated workplace
- task instructions
- manufacturer steering, suspension and brake specifications
- one vehicle with the components specified in the performance evidence requiring removal and tagging
- tools, equipment and materials appropriate for removing and tagging steering, suspension and braking system components.
