AURT572493A Analyse and evaluate tracked mobile plant undercarriage and suspension system faults

Release: 1

AURT572493A Analyse and evaluate tracked mobile plant undercarriage and suspension system faults

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers the competence to analyse and evaluate tracked mobile plant tracks, undercarriage and suspension systems in order to initiate action to sustain, vary or enhance performance.
------------------------	--

Application of the Unit

Application of the unit	It includes failure analysis covering the complex diagnosis of multi-system and intermittent faults as well as evaluation of performance achievements and variations. It also requires the candidate to identify, evaluate, select and document the most appropriate response to the stated objective of the analysis and evaluation process. The unit relates to an automotive technologist or subject matter specialist. It encompasses and builds on trade level competencies.
--------------------------------	--

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.
-----------------------------	--

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
---	--

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and confirm the work requirement	1.1. Work instructions and reports are used to determine the nature and objective of the analysis and evaluation requirements. 1.2. Benchmark specifications for correctly functioning tracked mobile plant undercarriage and suspension systems are accessed and interpreted. 1.3. OH&S requirements, including equipment and system isolation requirements and personal protection needs are observed throughout the work. 1.4. Effects of systemic deficiencies/discrepancies or faults are identified and confirmed from indirect and/or direct evidence. 1.5. Possible safety impacts of the work are considered and responded to in accordance with regulatory and enterprise obligations and practices.
2. Prepare for analysis and evaluation	2.1. Evaluative criteria are developed/adopted to meet the objective of the work. 2.2. System performance achievements and/or discrepancies are identified from an analysis of technical support information and available on-board diagnostic systems. 2.3. Testing equipment is obtained and prepared for application in accordance with regulatory, manufacturer/component supplier and enterprise requirements. 2.4. Tooling and materials required to support the diagnostic process are identified, selected and prepared for use. 2.5. Tracked mobile plant undercarriage and suspension system components are prepared for the diagnostic process, including park-up, isolation and cleaning requirements.
3. Apply the analysis and evaluative methodology	3.1. Selected analytical and diagnostic process is followed in accordance with specifications and directions and/or the locally authorised method. 3.2. Tests and testing equipment are applied in accordance with regulatory requirements and manufacturer/component supplier specifications. 3.3. Analytical and other diagnostic findings are verified, if necessary, by using reliable alternate or optional processes, and documented. 3.4. Analytical findings and results are evaluated against the agreed criteria.

ELEMENT	PERFORMANCE CRITERIA
	3.5. Valid conclusions are drawn from the available evidence and documented to enterprise requirements. 3.6. Information and detail related to the analysis and evaluation is provided to the appropriate parties in accordance with regulatory and commercial obligations.

ELEMENT	PERFORMANCE CRITERIA
4. Select response measure	4.1.Options for responding to the objective or need are identified from further research of technical support information. 4.2.A response option is selected from an analysis of the options, prevailing circumstance, regulatory requirements and commercial policies. 4.3.Selected response option is documented and reported in accordance with regulatory and enterprise requirements and practices.
5. Restore the workplace	5.1.Materials that can be reused is collected and stored. 5.2. Testing equipment and other support materials are cleaned, maintained and prepared ready for further use or stored in accordance with manufacturer/component supplier specifications and enterprise requirements. 5.3.Waste and scrap is removed following workplace procedures. 5.4.Equipment and work area are cleaned and inspected for serviceable condition in accordance with workplace procedures. 5.5.Unserviceable equipment is tagged and faults identified in accordance with workplace procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- research, organise and understand technical information related to contemporary tracked, undercarriage and suspension systems, monitoring and testing processes, diagnostic methods and options and safety procedures.
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, reporting of work outcomes and completion of regulatory, commercial and vehicle information systems inputs.
- plan and organise activities, including the planning of analytical processes, establishment of evaluative (success) criteria, preparation and layout of the worksite and the obtaining of testing equipment and materials to avoid backtracking, workflow interruptions or wastage.
- work with others and in a team by recognising dependencies and using cooperative

REQUIRED SKILLS AND KNOWLEDGE

approaches to optimise workflow and productivity.

- use mathematical ideas and techniques to complete measurements, calculate analytical requirements, calibrate and establish testing equipment and present analytical results.
- establish analytical processes, including diagnostic processes, which anticipate and allow for risks, cater for both direct and indirect evidence, avoid or minimise reworking and avoid wastage.
- use the workplace technology related to systems analysis and diagnosis, information research and management systems, testing equipment, maintenance equipment, tooling, calculators and measuring devices.

Required knowledge

- tracked mobile plant terminology and definitions.
- general knowledge of the concepts, principles and processes involved in planning and implementing systems analysis and evaluation.
- electrical theory covering voltage, current, resistance, power, magnetic.
- mechanical theory covering the concepts and principles of mechanical, hydraulic and pneumatic systems.
- the functions of hydraulic pressure within undercarriage and suspension systems.
- detailed knowledge of the types, function, operations and limitations of mobile plant tracked systems/components.
- detailed knowledge of the types, function, operations and limitations of tracked mobile plant undercarriage systems/components.
- detailed knowledge of the types, function, operations and limitations of tracked mobile plant suspension systems/components.
- general knowledge of mobile plant digital computing systems.
- general knowledge of the theory of diagnosis, including concept, design and planning.
- detailed knowledge of the types, functions, operations and limitations of diagnostic testing equipment.
- general knowledge of the methods and processes for documenting and reporting diagnostic findings and recommendations.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Interpret work instructions and requirements and locate, interpret and apply information.
- Apply safety requirements, including the isolation of equipment and use of personal protective equipment.
- Comply with regulatory and commercial obligations.
- Complete failure analyses on a minimum of three undercarriage and suspension systems with real or simulated multi-system and intermittent faults and identify, evaluate, select and document the most appropriate rectification measure.
- Analyse and validate or recommend variations to a minimum of two available repair/modification procedures for plant undercarriage and suspension systems.
- Document and report analysis and evaluation processes, findings and outcomes.
- Work effectively with others.
- Modify activities to cater for variations in workplace context and environment.

Context of, and specific resources for assessment

Assessment may occur on the job or in a workplace simulated facility with process equipment, material, work instructions and deadlines.

Access to a requirement and objective(s) for analysis and evaluation, operational tracked mobile plant undercarriage and suspension systems with real or simulated faults, monitoring processes and testing equipment appropriate to the objective(s), research facilities and technical information and a work environment.

Method of assessment

Assessment of this unit of competence is most likely to be project related under real or simulated conditions and require portfolios or other forms of indirect evidence of process. Direct evidence may include certification of compliance of the final outcome/product or authorisation for use by a competent authority.

Assessment must confirm the inference that competence is able not only to be satisfied under the particular circumstances, but is able to be transferred to other

EVIDENCE GUIDE	
	circumstances. Competence in this unit may be assessed in conjunction with other functional units which together form part of the holistic work role.

EVIDENCE GUIDE

Guidance information for assessment

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Failure analysis and evaluation process

The objective of the failure analysis and evaluation process may be to determine fault rectification measures, to effect variation in system characteristics and parameters or to enhance system performance.

Tracked mobile plant

Tracked mobile plant covers all mobile plant with tracked undercarriage, including tracked type loaders, crawler tractors tracked type plant, hydraulic excavators and face shovels, material handling machines, agricultural tracked equipment and other rural equipments.

Tracked systems

Tracked systems to be covered in this unit are to include linked, sealed, and sealed and lubricated.

Undercarriage systems and components

Undercarriage systems and components to be covered in this unit are to include rollers, idlers, frames and recoil mechanisms.

Suspension systems and components

Suspension systems and components to be covered in this unit are to include rigid platform, low track, live axle, dead axle and elevated sprocket.

Failures

Failures to be covered in this unit are to include alignment, abnormal wear, component out of specification, component damage, mechanical variations, adjustment errors, inadequate modifications.

RANGE STATEMENT	
Variations and failures	Variations and failures covered by this unit are to include those caused by the influence of external systems which may or may not be faulty in their primary operations.
Unit context	• OH&S requirements include vehicle industry regulations, safety management systems, hazardous substances and dangerous goods code and safe operating procedures. • Work is carried out in accordance with legislative obligations, Australian Standards, environmental legislation, health regulations, manual handling procedures and organisation insurance requirements. • Work requires individuals to demonstrate research, analytical, judgement and problem-solving skills in the diagnosis of faults.
Evaluative criteria	Evaluative criteria, sometimes referred to as success factors, detail the criteria against which the achievement of the objectives of the analysis are judged. They are to include statistically based criteria and may include other measures.
Isolation procedures	Equipment isolation procedures are to industry and enterprise standards.
Testing equipment	Testing equipment is to include callipers, infrared temperature sensor, micrometers, profile and template gauges, tape measures, temperature measuring equipment and verniers, and may include laser alignment system and ultrasound systems (metal thickness).
Tests	Tests to be conducted are to include material thickness, temperature variation, tracking alignment, and wear rate analysis.
Personal protective equipment	Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices.
Information and procedures	• Workplace procedures relating to the use of tooling and equipment. • Workplace procedures relating to reporting and communication. • Manufacturer/component supplier

RANGE STATEMENT

	specifications and application procedures for testing equipment and material. • Manufacturer/component supplier specifications, schematics and operational procedures related to tracked mobile plant undercarriage and suspension systems. • Australian Standards. • Vehicle industry regulations. • Vehicle industry publications related to emerging undercarriage and suspension system technology and technology changes.
