Assessment Requirements for CPCCPD3035 Prepare uncoated surfaces for painting

Release: 3

Assessment Requirements for CPCCPD3035 Prepare uncoated surfaces for painting

Modification History

- Release 3 Updated reference to general construction induction training program.
- Release 2 This version first released with CPC Construction, Plumbing and Services Training Package Release 6.4.
- Correction to Training Package title in the Modification History from CPC Property Services to CPC Construction, Plumbing and Services Training Package.
- Release 1 This version first released with CPC Property Services Training Package Release 5.0.
- New unit.

Performance Evidence

- To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing a minimum of one square metre of each of the following uncoated surfaces for painting:
- an external timber surface
- an internal timber surface
- a plaster surface
- a metal surface
- a masonry surface
- a concrete floor
- exterior cement sheet cladding.

In preparing these surfaces the following equipment must be used:

- drop sheets
- duster brushes
- filling knives and blades
- hand sanders
- mechanical sanders
- water blasters
- nail punches
- putty knives
- scrapers
- wire brushes

- moisture meter.

All work must be performed to the standard required in the workplace and must meet the requirements of Australian Standards, work health and safety (WHS), Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safety requirements relevant to preparing new surfaces for painting
- environmental requirements relevant to preparing new surfaces for painting
- corrosion processes and techniques for the protection of metals relevant to preparing new surfaces for painting
- processes for preparing uncoated substrates for painting:
 - hard wood and soft wood surfaces
 - plaster surfaces
 - ferrous and non-ferrous metal surfaces
 - masonry surfaces
 - concrete floors
 - tilt panels
 - exterior cement sheet cladding
- techniques for removing substrate and surface contaminants, including:
 - dust
 - films of grease
 - mild efflorescence
 - saponification
 - mould
- procedures, products and techniques associated with preparation of new surfaces
- types, characteristics, uses and limitations of tools and equipment for preparing new surfaces for painting
- acid etching and grinding of concrete surfaces in preparation for painting
- moisture and pH testing and remedial actions
- quality requirements relevant to preparing new surfaces for painting.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed:

- in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques replicate construction workplace conditions, materials, activities, responsibilities and procedures.

- using realistic tasks or simulated tasks, relevant specifications and work instructions, standard work practices, safety requirements and environmental constraints.
