		3.3	Check adequacy of drainage and report defects.
		3.4	Prepare flashings and termination seals and make ready for installation to manufacturers' specifications.
		3.5	Check that substrate has a uniform finish to manufacturers' instructions.
		3.6	Clean and prepare substrate ready for waterproofing.
		3.7	Prime substrate ready for waterproofing.
4	Apply waterproofing.	4.1	Apply waterproofing system to prepared surface to manufacturers' specifications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Detail and terminate waterproofing membrane in accordance with system requirements.
		4.3	Check completed waterproofing installation for conformity to manufacturers' specifications.
		4.4	Document movement joints for subsequent trades.
		4.5	Perform final inspection and completion activities.
		4.6	Protect waterproofing membrane.
5	Apply sealants to construction joints.	5.1	Select sealant for compatibility with application, substrate and finishes.
		5.2	Install backing rods and/or release agents to prevent three-sided adhesion.
		5.3	Apply sealant manufacturers' specifications, tool to required finish and allow to cure.
		5.4	Perform final inspection and completion activities.
		5.5	Protect sealant, in accordance with manufacturers' specifications.
6	Clean up.	6.1	Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.

© Commonwealth of Australia, 2026 BuildSkills Australia

		6.2	Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCCWP3002 Apply waterproofing process to internal wet areas

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Performance Evidence and Unit Sector.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by waterproofing an internal wet area, including:

- one shower area, a minimum 1800 millimetres high, 900 millimetres x 900 millimetres wide, incorporating:
    - a niche
    - tap penetrations
    - draining connection
    - water stop/hob
- surrounds for an inserted bath with periphery barrier or water stop.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- requirements of Australian Standards for waterproofing internal wet areas
- safety requirements for waterproofing internal wet areas, including:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - job safety analyses and/or safe work method statements in accordance with Safe Work Australia Code of Practice for Construction Work or state and/or territory equivalent
    - safety data sheets (SDS)
    - personal protective equipment (PPE)
- manufacturers' specifications for waterproofing systems and materials
- assessment and appreciation of moisture content in substrate materials for waterproofing internal wet areas
- waterproofing around fixtures:
    - vanities
    - toilets
    - shower screens
    - taps
    - penetrations
- waterproofing materials, processes and systems for internal wet areas:
    - waterproofing systems/materials:
        - cementitious
        - water-based
        - moisture-cured
        - sealants
        - sprayed material membranes
        - sheet:
            - butyl
            - ethylene propylene diene monomer rubber (EPDM)
            - polyvinyl chloride (PVC)
            - decoupling
    - ancillary materials:
        - adhesives
        - sealants
        - drainage flanges
        - penetration flashings
        - water stops
- internal waterproofing materials, processes and techniques
- types and uses of materials storage and environmentally friendly waste management

© Commonwealth of Australia, 2026 BuildSkills Australia

- types and uses of plans, drawings and specifications for waterproofing internal wet areas
- types and uses of tools and equipment for waterproofing internal wet areas
- principles and considerations of water exclusion
- processes for the calculation of material requirements for waterproofing internal wet areas
- quality requirements for waterproofing internal wet areas
- termination and flashing principles.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCCWP3003 Apply waterproofing process to external above-ground wet areas

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Change to Unit Sector.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to apply waterproofing to external above-ground wet areas, meeting all relevant requirements of Australian Standards, work health and safety (WHS) requirements, and Commonwealth and state or territory legislation.

It includes identification of the appropriate waterproofing system to be used, its preparation and its application.

A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without close supervision.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001 Prepare* to *work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit sector(s)

Construction waterproofing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and prepare to apply waterproofing process to external above-ground wet areas.	1.1	Read and interpret work instructions and plan sequence of work.
		1.2	Select and use personal protective equipment (PPE) as required for each stage of the task.
		1.3	Plan all work to comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications, workplace requirements, drawings and specifications.
		1.4	Follow requirements of job safety analyses and safety data sheets.
		1.5	Inspect work site, assess hazards and apply risk controls, including required signage and barricades.
		1.6	Select tools and equipment, check for serviceability and report any faults.
		1.7	Select materials required for task, calculate quantities, handle safely and prepare and position ready for use.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Select waterproofing system.	2.1	Locate external above-ground area to be waterproofed from drawings and specifications.
		2.2	Check area for soundness and surface defects.
		2.3	Select waterproofing systems suitable for and compatible with site conditions and substrate.
3	Prepare for waterproofing installation.	3.1	Set out above-ground external wet area and check alignment, fixtures and finished levels for conformity with drawings and specifications, and report defects.
		3.2	Test moisture content in substrate for compatibility with system and report defects.
		3.3	Check adequacy of drainage and report defects.
		3.4	Prepare flashings and termination seals and make ready for installation to manufacturers' specifications.
		3.5	Check that substrate has a uniform finish to manufacturers' instructions.
		3.6	Clean and prepare substrate ready for waterproofing and sealant.
		3.7	Prime substrate ready for waterproofing and sealant.
4	Apply waterproofing.	4.1	Apply waterproofing system to prepared surface to manufacturers' specifications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Detail and terminate waterproofing membrane in accordance with system requirements.
		4.3	Check completed waterproofing installation for conformity to manufacturers' specifications.
		4.4	Document movement joints for subsequent trades.
		4.5	Perform final inspection and completion activities.
		4.6	Protect waterproofing membrane.
5	Apply sealants to construction joints.	5.1	Select sealant for compatibility with application, substrate and finishes.
		5.2	Install backing rods and/or release agents to prevent three-sided adhesion.
		5.3	Apply sealant manufacturers' specifications, tool to required finish and allow to cure.
		5.4	Perform final inspection and completion activities.
		5.5	Protect sealant, in accordance with manufacturers' specifications.
6	Clean up.	6.1	Clear work area, dispose of materials, and reuse or recycle in compliance with legislation, regulations and codes of practice.

© Commonwealth of Australia, 2026 BuildSkills Australia

		6.2	Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCCWP3003 Apply waterproofing process to external above-ground wet areas

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Change to Unit Sector.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

- waterproofing:
    - a minimum four square metres of a balcony/deck:
        - where the structural floor levels have a step down of no less than 40 millimetres from internal to external
        - the balcony/deck has fall to the drainage point
        - detailing is provided through threshold cross-section, indicating how waterproofing would terminate at balustrade posts
    - a minimum 600 millimetres x 600 millimetres x 300 millimetres high planter box
- installing sealant to a minimum 900 millimetres long x 25 millimetres wide external above-ground construction joint for waterproofing.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- requirements of Australian Standards for waterproofing above-ground external wet areas
- safety requirements for waterproofing above-ground external wet areas, including:
    - job safety analyses and/or safe work method statements in accordance with Safe Work Australia Code of Practice for Construction Work or state and/or territory equivalent
    - safety data sheets (SDS)
    - personal protective equipment (PPE)
- manufacturers' specifications for waterproofing systems and materials
- waterproofing around fixtures:
    - balustrades
    - posts
    - service penetrations
    - drainage angles and drip moulds
    - skylights
- assessment and appreciation of moisture content in substrate materials for waterproofing above-ground external wet areas
- waterproofing materials, processes and systems for external wet areas:
    - waterproofing systems/materials:
        - water-based
        - cementitious
        - moisture-cured
        - sprayed material membranes
        - sheet:
            - butyl
            - ethylene propylene diene monomer rubber (EPDM)
            - polyvinyl chloride (PVC)
            - decoupling
    - ancillary materials:
        - adhesives
        - drainage cell
        - geotech fabric
        - protection board
        - sealants
        - drainage flanges

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Change to Unit Sector.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must satisfy all of the elements, performance criteria and foundation skills of this unit by:

- analysing defects that require application of waterproofing remedial systems in each of the following:
    - a crack in concrete or masonry of a minimum 900 millimetres
    - a cracked concrete or masonry floor/wall junction of a minimum 900 millimetres
    - rising damp in a minimum 900 millimetre length of concrete/masonry wall
    - a live leak in concrete or masonry
    - a damaged waterproofing membrane
- selecting waterproofing remedial techniques for each of the above waterproofing remedial processes
- repairing a minimum of two of the above defects using at least three different remedial waterproofing techniques.

All work must be performed to the standard required in the workplace and must comply with laws and regulations, Australian Standards, work health and safety (WHS) and environmental requirements, manufacturers' specifications and workplace requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- requirements of Australian Standards for applying waterproofing remedial processes
- safety requirements for applying waterproofing remedial processes, including:
    - job safety analyses and/or safe work method statements in accordance with Safe Work Australia Code of Practice for Construction Work or state and/or territory equivalent
    - safety data sheets (SDS)
    - personal protective equipment (PPE)
- tests of effectiveness of remedial waterproofing:
    - water test
    - flood test
    - moisture readings
    - thermal survey
    - visual inspection
- manufacturers' specifications for waterproofing systems and materials
- remedial waterproofing techniques:
    - remedial injection epoxies or urethanes
    - hydraulic plug or seals
    - cement crystallisation or hydrostatic coating methods
    - concrete repair systems
    - damp-proof course injections
    - application of densifiers
    - remediation to damaged membrane systems
- characteristics and applications of remedial waterproofing materials:
    - cementitious products
    - epoxies
    - expanding polyurethane foam
    - polyurethane resin systems
    - silicon, silane and siloxane products
    - single and dual component resins
- construction systems and waterproofing considerations:
    - barriers to stop rising damp
    - concrete crystallisation/injection
    - concrete repair injection hydrostatic barrier coatings
    - membranes

CPCCWP5001 Design below ground waterproofing

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to design below ground waterproofing systems for buildings and structures.

The unit applies to Class 1 and 10 Buildings, and Class 2 to 9 Buildings.

The unit includes planning and preparing to design waterproofing systems, analysing risk, and carrying out a detailed design of the waterproofing system solution.

The unit is suitable for builders, building surveyors, building designers, architects, waterproofing design specialists and consultants, engineers and other design specialists.

Licensing, legislative, regulatory or certification requirements may apply to this unit. Relevant work health and safety (WHS) state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

essential outcomes.			
1.	Plan and prepare.	1.1	Determine the use of the area and most appropriate form of the waterproofing system, including proposed finishes in accordance with stakeholder needs.
		1.2	Determine site conditions and plan a basement waterproofing brief in consultation with all stakeholders identifying challenges and waterproofing system design requirements.
		1.3	Assess types of construction proposed and their permeability to water and moisture, including concrete, masonry and framing to be managed and identify potential water ingress points.
		1.4	Review drainage system requirements in accordance with the design team.
2.	Carry out risk analysis.	2.1	Assess risk of water bearing to full extent of the structure and the effects of hydrostatic pressure on the proposed waterproofing system.
		2.2	Assess risks of possible defects in the waterproofing system.
		2.3	Assess consequence of water and moisture ingress into an area of the basement.
		2.4	Determine the risk of internal condensation and control measures with the design team.
		2.5	Determine feasibility of the proposed waterproofing design for the structure and the construction sequence.
		2.6	Review any requirement for repair and maintenance of the waterproofing system post construction.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.7	Analyse site environmental conditions according to approved plans, including surface and sub-surface drainage.
3.	Carry out design.	3.1	Identify and assess below ground waterproofing systems available to suit the design that is appropriate for the conditions and in line with the risk analysis.
		3.2	Provide detailed design drawings for the installation of the waterproofing system, including factors such as building construction method and construction sequencing, substrate considerations and compatibility with the waterproofing system and other related building elements in accordance with stakeholder needs.
		3.3	Provide a basement waterproofing requirement and specification in accordance with the agreed waterproofing design brief and stakeholder needs.
		3.4	Carry out a review of and ensure compliance with relevant regulations, National Construction Code (NCC) performance requirements, Australian Standards, work health and safety (WHS), environmental requirements and manufacturers' requirements.
		3.5	Carry out a safety in design analysis of the proposed waterproofing system.
		3.6	Provide quality assurance inspection protocols for the waterproofing installation, including substrate assessment for suitability, compliance of membrane installation with project specifications, completion inspection processes and repair and maintenance plan.
		3.7	Produce and submit design to stakeholders.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria and foundation skills of this unit, in addition to the specific performance and knowledge evidence described below.

Candidates must:

- develop two (2) basement waterproofing designs.

In doing so, the candidate must:

- develop one (1) design for a residential habitable below ground dry space
- develop one (1) design for a multi-level below ground space with a lift pit in conditions of variable high-water table
- design a combined system for each which must incorporate at least two of the following systems:
    - membrane barrier
    - integral waterproofing
    - cavity drains
- provide evidence of compliance of design requirement with National Construction Code (NCC) performance requirements.

The evidence of compliance report must identify:

- class of building
- waterproofing system and its components
- stakeholders consulted
- nominate relevant NCC clauses the design conforms to
- nominate any Australian Standards the design has referenced and must conform to
- requirements for maintenance
- provide a risk assessment report for the two Classes of Buildings used detailing the:
    - waterproofing solution suitability for the project conditions

© Commonwealth of Australia, 2026 BuildSkills Australia

- management of potential defects in the waterproofing system
- consequences of water entering the relevant space
- feasibility of repair of the waterproofing system
- safety in design procedures carried out.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- key principles of water movement, drainage, water tables and hydrostatic pressure/capillarity
- methods for relieving hydrostatic pressure during construction
- various types of piling and how they affect waterproofing design, including:
  - sheet
  - contiguous
  - secant
  - soldier
- types of commercial basement construction and how they affect waterproofing design, including:
  - top down
  - bottom up
  - diaphragm walls
  - hydrostatic floors
- considerations for waterproofing:
  - stakeholder brief
  - hydrology or geotechnical reports
  - site conditions
  - space to be waterproofed
  - water table and its effects on the waterproofing solution considered
  - water management of exposed rock basement walls and their internal drainage systems
  - salts
  - acidic and alkaline soils
  - underground gases
  - moisture vapour transmission
- factors relating to soil permeability, grading, loading and consolidation
- various types of concrete and masonry and their permeability to moisture

© Commonwealth of Australia, 2026 BuildSkills Australia

- methods of waterproofing used during construction for various wall and floor designs
- key design philosophies for below ground waterproofing, including:
    - effects of loads on a material, deformation, stress/strain, especially flexural, compressive and tensile stresses
    - effects of hydrostatic pressure on a waterproofed system and floatation
- ventilation requirements in a building, including heating, ventilation and air conditioning (HVAC) requirements
- below ground waterproofing systems available to the designer, including:
    - bonded and unbonded sheet membranes
    - hydrophilic seals and systems
    - liquid applied membranes
    - positive and negative systems
    - chemical grouts
    - injection systems
    - sealants
    - internal cavity drainage systems
- membrane barriers - positive and negative
- building elements and integration, including:
    - product properties and compatibility with building elements
    - installation method and practices
    - stages of installation and inspection benchmarks
    - waterproofing systems design and relationship with building design
    - permanent formwork
- integral waterproofing systems
- cavity drain systems
- correct application rates of specified waterproofing systems
- methods for calculating the quantities of product required to complete the waterproofing system specified
- advantages and disadvantages of the different systems, including:
    - combinations of different systems and their limitations
    - advantages and disadvantages of different systems
    - maintenance and aftercare requirements
    - the form and feasibility of waterproofing systems for remedial work

© Commonwealth of Australia, 2026 BuildSkills Australia

- general principles of cementitious modified waterproofing systems, including sand/cement mixes, hydration of cements, shrinkage, bonding, importance and construction of floor and wall junctions, fixings and decoration
- general principals of integral protection waterproofing systems
- general principles for cavity drains (internal and external), including fixings, lapping, sumps and pumps, floor and wall junction construction
- a range of internal floor and wall finishing systems possible, including decorative finishes
- maintenance of water management systems (land drains, sumps, pumps and internal drainage channels)
- implications of dampness affecting structural steel in buildings
- properties of waterproofing systems available:
    - substrate assessment and preparation
    - combining components to form a system
    - component compatibility in a combined system
    - component properties for site conditions
    - component installation practices
- construction drawing/computer-aided drawing (CAD) development and specification writing:
    - types/styles of construction drawings to be used and how to integrate into the building design
    - technical specification writing skills
    - appropriate construction terms and definitions
    - technical report writing skills
- document control:
    - project document flow, numbering and tracing for drawings and other written documentation
    - document layout, language and filing/storage
    - other documents:
        - compliance reports
        - request for information
        - site inspection report
        - meeting minutes - taking/control/distribution
- final design report:
    - waterproofing system design analysis for compliance to design brief
    - design decisions made and key milestones achieved

© Commonwealth of Australia, 2026 BuildSkills Australia

    - finalised design approved
- safe work installation practices
- assessment of complex water and moisture ingress situations:
    - moisture and water remedial system relationships
    - combination of systems to form multiple barriers
- stakeholders:
    - architect
    - structural engineer
    - civil engineer
    - HVAC engineer
    - builder
    - building owner
    - consumer
    - design team
    - construction team
    - certifier
    - building surveyor
    - regulators
- environmental considerations and management
- relevant regulations and legislation.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or simulated workplace environment. A simulated workplace is one that fully replicates the resources, environment and any time and productivity pressures that exist in the actual workplace, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant task or design specifications
- Australian Standards, relevant building legislation, industry codes, NCC and requirements of workplace policies and procedures as required by Commonwealth, state and territory regulators
- relevant environmental requirements.

CPCCWP5002 Design external above ground waterproofing

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to design external above ground waterproofing systems for buildings and structures.

The unit applies to Class 1 and 10 Buildings, and Class 2 to 9 Buildings.

The unit includes planning and preparing to design waterproofing, analysing risk, designing waterproofing systems, and evaluating the design of the waterproofing system solution.

The unit is suitable for builders, building designers, architects, building surveyors, waterproofing design specialists and consultants, engineers and other design specialists.

Licensing, legislative, regulatory or certification requirements may apply to this unit. Relevant work health and safety (WHS) state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

essential outcomes.			
1.	Plan and prepare.	1.1	Identify above ground areas to be waterproofed and determine external site conditions, waterproofing brief, challenges, waterproofing system design requirements, including finishes in consultation with stakeholder needs and drawings and specifications.
		1.2	Assess types of construction and their permeability to water and moisture, including concrete, masonry and framing to be managed and identify potential water ingress points for the construction.
		1.3	Identify site conditions, including wind speed, climate zone, water catchment area, and outfalls and overflow effects to adjoining buildings and occupancies below.
		1.4	Analyse areas impacted by waterproofing system failure for their intended use.
		1.5	Determine the management of surface water movement to a drainage point and sub-surface water materials by capillarity.
2.	Carry out risk analysis.	2.1	Assess risks to external wet areas for the purposes of providing designed systems, including service conditions, wind speed, climate zone, water catchment area, and outfall capacities and overflow effects.
		2.2	Assess risk of interstitial condensation within building elements as part of design.
		2.3	Determine ultraviolet (UV) exposure of materials and membranes.
		2.4	Determine effects of water and moisture on building elements.
		2.5	Assess consequence of defects in the waterproofing systems on identified impacted areas.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.6	Assess external wet area for provision of the proposed design of waterproofing.
3.	Carry out waterproofing design.	3.1	Identify structural requirements, including wind speeds and climate zone, and the effects on the building envelope and waterproofing systems.
		3.2	Develop design requirements for level of risk to moisture and water exposure.
		3.3	Identify above ground waterproofing systems available to suit the design that are appropriate for the conditions.
		3.4	Analyse and select waterproofing systems suitable for and compatible with site conditions and substrate.
		3.5	Provide a scope for the installation of the waterproofing system, including substrate considerations and compatibility with finishes, in accordance with principal design, stakeholder needs, compliance with relevant regulations, National Construction Code (NCC) performance requirements, Australian Standards, work health and safety (WHS), environmental requirements, manufacturers' specifications, and drawings and specifications.
		3.6	Provide quality assurance inspection protocols for waterproofing system installation, including substrate assessment for suitability, compliance of membrane installation with manufacturers' specifications, completion inspection processes, and repair and maintenance plan.
4.	Evaluate waterproofing design.	4.1	Assess effectiveness of waterproofing system design for suitability with site conditions and consequential affects where water bears at the maximum designed level, risk of moisture and condensation is present, defects are present in the waterproofing system and defects impact the usage of adjoining areas.
		4.2	Review repair and maintenance plan of waterproofing system.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.3	Record and report on compliant waterproofing design solutions to stakeholders in accordance with service conditions and manufacturers' specifications, Australian Standards, and NCC performance requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCCWP5002 Design external above ground waterproofing

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria and foundation skills of this unit, in addition to the specific performance and knowledge evidence described below.

Candidates must:

- develop two (2) waterproofing designs.

In doing so, the candidate must:

- develop one (1) design of a roof top podium deck which must include:
    - a minimum 100 square meters
    - details of construction joints
    - an integrated planter box and drainage
    - penetration for services and fixings
    - cross-section design of the complete system, including:
        - strata layers
        - provision of falls
        - threshold detail
        - drainage termination detail
        - compatible finishes for intended use
- develop one (1) design for multi-level external decks which must include:
    - a semi-enclosed deck area
    - falls provided to multiple drainage out falls
    - where catchment areas and overflow affect lower bound levels requiring overflow provisions
    - cross-section design of the complete system, including:
        - strata layers
        - provision of falls

© Commonwealth of Australia, 2026 BuildSkills Australia

        - threshold detail
        - drainage termination detail
        - compatible finishes for intended use
- provide evidence of compliance with design requirement with National Construction Code (NCC) performance requirements

The evidence of compliance report must detail:

- class of building
- wind speed
- climate zone
- water catchment area and outfalls
- overflow effects to adjoining and occupancies below
- compatibility chain of materials specified, including finishes
- provide a risk assessment report for the two required designs detailing:
    - waterproofing system solution for the condition
    - management of potential defects in the waterproofing system
    - consequences of water entering the relevant space
    - feasibility of repair of the waterproofing system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- key principles of water movement, drainage and hydrostatic pressure/capillarity
- various types of construction and their permeability to water and moisture, including:
    - concrete
    - masonry
    - framed
- stakeholders:
    - architect
    - engineer
    - builder
    - building owner
    - consumer
    - design team
    - construction team
    - certifier

© Commonwealth of Australia, 2026 BuildSkills Australia

    - building surveyor
    - regulators
- use of space
- fit for purpose water proofing systems
- methods of damp-proofing and external above ground waterproofing appropriate to construction type
- compliance with required testing standards
- requirements of building codes and Australian Standards
- key design philosophies for above ground waterproofing, including:
    - wind loads and the effects on the building envelope and waterproofing systems
    - effects of loads on a material, deformation, stress/strain, especially flexural, compressive and tensile stresses
    - incorporation of acoustic systems
- energy efficiency, including:
    - insulated systems
    - green roofs
    - ventilation requirements in a building
- above ground waterproofing systems available and be able to select and design the appropriate system for the conditions, including:
    - bonded and unbonded sheet membranes
    - liquid applied membranes
    - drainage cells
    - isolation systems
    - sealants
- input and expertise of allied consultants
- compliant processes installation of specified waterproofing systems
- methods for calculating the quantities of components required to complete the waterproofing works specified
- advantages and disadvantages of the different systems, including:
    - combinations of different systems and their limitations
    - maintenance and aftercare requirements
    - the form and feasibility of remedial work
    - impact of different systems
- how membranes work

© Commonwealth of Australia, 2026 BuildSkills Australia

- building elements and integration, including:
    - product properties and compatibility with building elements
    - installation methods and practices
    - stages of installation and inspection benchmarks
    - waterproofing systems design and relationship with building design
    - permanent formwork
- a range of finishing systems, including decorative finishes
- maintenance of water management systems (drainage systems, sumps, pumps and channels)
- implications of dampness affecting timber in buildings, including:
    - identification of timbers that have been affected by water, decay fungi or wood consuming insects
    - providing suitable advice on the need for specialist assessment
- implications of dampness affecting structural steel in buildings
- properties of waterproofing systems available:
    - substrate assessment and preparation
    - combining components to form a system
    - component compatibility in a combined system
    - component properties for site conditions
- component installation practices
- system analysis for effectiveness
- assessment of complex water and moisture ingress situations:
    - moisture and water remedial system relationships
    - combination of systems to form multiple barriers
- environmental considerations and management
- relevant regulations and legislation.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or simulated workplace environment. essential outcomes.			
1.	Plan and prepare.	1.1	Identify internal wet areas and waterproofing requirements in accordance with National Construction Code (NCC) and from drawings and specifications.
		1.2	Identify types of construction and their permeability to water and moisture, including concrete, masonry and framing.
		1.3	Determine the use of the wet area to be waterproofed and categorise as low, medium or high usage, including finishes in accordance with client's needs and use of wet area.
		1.4	Identify shower type to inform the design.
		1.5	Identify extent of membrane application to inform the design.
		1.6	Identify egress points to inform the design.
		1.7	Identify potential water ingress points for the construction.
		1.8	Determine the scope of project, conditions to be managed and waterproofing requirements to be achieved.
		1.9	Determine outfalls to suit water inlet and use of area.
2.	Carry out risk analysis.	2.1	Assess risk of water bearing to full extent of application and the effects of charged dynamic water movement in high usage conditions.
		2.2	Assess risks of defects in the waterproofing systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Assess consequence of water and moisture ingress into space outside of the wet area.
		2.4	Assess and manage interstitial condensation within building elements as part of design.
		2.5	Determine effects of water and moisture on building elements.
		2.6	Determine feasibility of repair and maintenance of the waterproofing system.
		2.7	Identify site environmental conditions according to approved plans, including surface and sub-surface drainage.
3.	Carry out waterproofing design.	3.1	Confirm type of wet area for use and confirm shower type and components.
		3.2	Confirm other fittings and fixtures in internal wet area, including bath type and position, vanity type and position, toilet/bidet type and position.
		3.3	Identify internal wet area waterproofing systems available to suit the design that are appropriate for the conditions.
		3.4	Develop design requirements for level of risk to moisture and water exposure in consultation with stakeholders.
		3.5	Provide a scope for the installation of the internal wet area waterproofing system, including substrate considerations and compatibility with finishes, in accordance with specifications.
		3.6	Provide quality assurance inspection protocols for internal wet area waterproofing system installation, including substrate assessment for suitability, compliance of membrane installation with manufacturers' specifications, completion inspection processes, and repair and maintenance plan.

© Commonwealth of Australia, 2026 BuildSkills Australia

4.	Evaluate waterproofing design.	4.1	Assess effectiveness of internal wet area waterproofing systems design for suitability with site conditions and consequential effect where water bears at the maximum designed level, defects are present in the waterproofing system and defects impact the usage of adjoining areas.
		4.2	Review repair and maintenance plan of internal wet area waterproofing system.
		4.3	Record and report on compliant internal wet area waterproofing design solutions to stakeholders in accordance with service conditions and manufacturers' specifications, Australian Standards, and NCC performance requirements.

Assessment Requirements for CPCCWP5003 Design waterproofing to internal wet area

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria and foundation skills of this unit, in addition to the specific performance and knowledge evidence described below.

Candidates must:

- develop two (2) waterproofing designs for internal wet areas.

In doing so, the candidate must:

- develop one (1) design for wet areas and change rooms, including open unenclosed group showers with multiple wastes and disabled access which must include:
    - a cross-section design of the complete system, including strata layers, provision of falls, water stop details, extent of membrane application and compatible finishes for intended use
- develop one (1) design for a high risk and high usage wet area selected from one of the following:
    - douche room with handheld rose
    - steam room
    - birthing suite with a birthing bath and access steps
    - bathroom with type 2 open unenclosed shower, with window in shower area, free standing bath, wall mount vanity and falls to full floor areas
    - and must include:
    - a cross-section design of the complete system, including strata layers, provision of falls, water stop details, extent of membrane application, water inlet and outfalls and compatible finishes for intended use
- confirm screen/barrier, water inlet positions, number and position of floor wastes, floor water stop positions and vertical water stop positions
- provide evidence of compliance with principal design requirement, stakeholder needs, National Construction Code (NCC) performance requirements, Australian Standards, work health and safety (WHS), environmental requirements, manufacturer’s specifications, and drawings and specifications.

© Commonwealth of Australia, 2026 BuildSkills Australia

The evidence of compliance report must detail:

- class of building
- type of construction
- category of wet area
- category of shower
- water inlet and outfalls
- overflows effects to area affected by leaks adjoining and below the wet area
- compatibility of materials specified, including finishes
- provide a risk assessment report for the two (2) required designs detailing the:
    - waterproofing system solution for the intended service use and site condition
    - management of potential defects in the waterproofing system
    - consequences of water entering the relevant space
    - feasibility of repair of the waterproofing system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- key principles of surface water movement and sub-surface water movement, drainage and capillarity
- role for waterproofing, including:
    - retention within a wet area
    - exclusion from non-water-resistant materials
    - design for surface conditions
- various types of construction and their permeability to water and moisture, including:
    - concrete
    - masonry
    - framed
- methods of waterproofing to internal wet areas suited to type of construction
- key design philosophies for internal wet area waterproofing, including:
    - deformation, stress/strain, especially flexural, compressive and tensile stresses
    - incorporation of acoustic systems
    - energy efficiency, including:
        - ventilation requirements in buildings
        - incorporation of heating elements such as under-floor heating

© Commonwealth of Australia, 2026 BuildSkills Australia

- internal wet area waterproofing systems available and knowledge of their properties for system selection for the conditions, including:
    - bonded sheet membranes
    - liquid applied membranes
- building elements and integration, including:
    - product properties and compatibility with building elements
    - installation method and practices
    - stages of installation and inspection benchmarks
    - waterproofing systems design and relationship with building design
- risk assessment of internal wet areas, including:
    - assessment of service conditions
    - risk and management of interstitial condensation within building elements as part of design
    - consequence of defects affecting the use of the intended area
    - feasibility of repair of the waterproofing system
- stakeholders:
    - architect
    - engineer
    - builder
    - building owner
    - consumer
    - design team
    - construction team
    - certifier
    - building surveyor
    - regulators
- properties of waterproofing systems available:
    - substrate assessment and preparation
    - combining components to form a system
    - component compatibility in a combined system
    - component properties for site conditions
- component installation practices
- system analysis for effectiveness
- assessment of complex water and moisture ingress situations:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - moisture and water remedial system relationships
    - combination of systems to form multiple barriers
- application rates of specified waterproofing systems and installation procedures
- methods for calculating the quantities of product required to complete the waterproofing works specified
- the advantages and disadvantages of the different systems, including:
    - combinations of different systems and their limitations
    - maintenance and aftercare requirements
    - the form and feasibility of remedial work
- types of finishing systems, including decorative finishes
- implications of dampness affecting timber in buildings, including:
    - identification of timbers that have been affected by water, decay fungi or wood consuming insects
    - providing suitable advice on the need for specialist assessment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or simulated workplace environment. A simulated workplace is one that fully replicates the resources, environment and any time and productivity pressures that exist in the actual workplace, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant task or design specifications
- Australian Standards, relevant building legislation, industry codes, NCC and requirements of workplace policies and procedures as required by Commonwealth, state and territory regulators
- relevant environmental requirements.

CPCCWP5004 Determine origin of water and moisture ingress into buildings

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to determine the origin of water and moisture ingress into buildings.

The unit applies to Class 1 and 10 Buildings, and Class 2 to 9 Buildings.

The unit covers gathering information, carrying out the investigation, carrying out the analysis and reporting on findings and conclusions.

The unit is suitable for builders, building supervisors building surveyors, building designers, architects, waterproofing design specialists, waterproofing supervisors, and consultants, engineers or other design specialists.

Licensing, legislative, regulatory or certification requirements may apply to this unit. Relevant work health and safety (WHS) state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Gather information.	1.1	Identify areas of water ingress in consultation with stakeholder(s).
		1.2	Gather relevant drawings, historical reports, design or structural specifications and certification where available.
		1.3	Identify signs and symptoms of the water or moisture ingress.
		1.4	Confirm scope of project based on information and evidence.
2.	Carry out investigation.	2.1	Identify potential water and moisture ingress points into buildings.
		2.2	Determine if non-destructive or destructive investigation is required in consultation with stakeholders.
		2.3	Select tools and technologies to carry out inspections and testing procedures in accordance with site conditions.
		2.4	Carry out inspection and testing using valid testing methods in accordance with testing protocols and against controls and references.
		2.5	Record findings of investigation and testing protocols.
		2.6	Compare findings to information and evidence of water and moisture ingress areas and carry out further investigations where required.

© Commonwealth of Australia, 2026 BuildSkills Australia

3.	Carry out analysis.	3.1	Collate evidence from investigations and testing in accordance with protocols.
		3.2	Analyse causes of water and moisture ingress as determined by investigations and collected evidence.
		3.3	Determine if external factors have influenced the findings.
		3.4	Carry out re-testing to confirm influence of external factors where required.
		3.5	Record results of analysis for stakeholders in accordance with evidence to inform report.
4.	Report findings and conclusions.	4.1	Collate, sort and prioritise information according to the scope requirements within a report.
		4.2	Support diagnostic report findings with relevant references to regulatory requirements, Australian Standards, design and manufacturers' requirements in accordance with stakeholder brief.
		4.3	Determine requirements for further support testing, follow-up investigations and monitoring of area in accordance with inspection and testing protocols.
		4.4	Communicate relevant and supported conclusions according to stakeholder expectations, context and requirements in accordance with report brief.
		4.5	Document the report in accordance with report brief.

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria and foundation skills of this unit, in addition to the specific performance and knowledge evidence described below.

Candidates must conduct three (3) water and moisture ingress investigations and develop diagnostic reports for three (3) different areas, chosen from list provided:

- one investigation and report from an internal wet area which includes a shower
- one investigation and report of water ingress through:
    - an external wall, adjacent to a waterproofed balcony or deck; OR
    - water ingress below a concrete roof terrace
- one investigation and report of water ingress below a waterproofed, lightweight, flat roof structure or balcony
- one investigation and report of water ingress to habitable space below ground.

In doing so, the diagnosis and evidence reports must be written in such a way as to inform a remedial waterproofing design and scope of works and must include:

- all relevant background information
- investigation methodology
- record of findings
- identification of the cause(s) of the water and moisture ingress
- review of evidence against site factors and influences
- assessment of waterproofing design and application against compliance with National Construction Code (NCC) performance requirements, Australian Standards, manufacturers' recommendations, building design and use of area.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of scientific methodology

© Commonwealth of Australia, 2026 BuildSkills Australia

- diagnostic procedures – non-destructive and destructive, including:
    - site investigation
    - inspecting protocols
    - analysing evidence
    - suitable technologies:
        - thermal
        - microwave
        - ground penetrating radar (GPR)
        - dye water testing
        - impedance and capacitance technologies
        - electronic field vector mapping
        - high and low voltage holiday testing
- setting control parameters and testing methods, including:
    - selection of appropriate test method
    - calibration of testing equipment
    - effects on testing equipment by site conditions and testing procedures
- contributing site factors and influence, including:
    - water ingress sources
    - surface water pathways
    - sub-surface water pathways
    - properties of water and moisture movement
    - gradient and falls
    - hydrostatic pressure
    - effects of finishes on surface tension
    - capillarity
    - size and effectiveness of outfalls
    - penetrations and intrusion points
    - condensation
    - ventilation
- building elements and integration, including:
    - principles of water shedding
    - relationship between structural components
    - building movement
    - wind loadings

© Commonwealth of Australia, 2026 BuildSkills Australia

    - construction materials and their properties
- NCC performance requirements relevant to areas tested, including:
    - waterproofing
    - damp proofing
    - condensation management
- NCC evidence of suitability in relation to waterproofing system performance, including:
    - independent test reports
    - CodeMark Australia
    - other independent testing organisations
- Australian Standards and design requirements relevant to areas inspected
- waterproofing system manufacturers' requirements, including:
    - data sheets and specifications
    - installation method statements
    - performance of system according to service conditions
    - suitability of materials as fit for purpose
    - compatibility of components within the system
- stakeholders:
    - architect
    - engineer
    - builder
    - building owner
    - consumer
    - design team
    - construction team
    - certifier
    - building surveyor
    - regulators
- report content and communication of findings, including:
    - types of diagnostic reports and structures
    - tables and diagrams
    - photographic evidence
    - interpreting test results
    - references to Australian Standards and designs

© Commonwealth of Australia, 2026 BuildSkills Australia

- verbal communication strategies
- different audiences
- presenting evidence.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or simulated workplace environment. A simulated workplace is one that fully replicates the resources, environment and any time and productivity pressures that exist in the actual workplace, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant tasks
- Australian Standards, relevant building legislation, industry codes, NCC and requirements of workplace policies and procedures as required by Commonwealth, state and territory regulators
- relevant environmental requirements.

CPCCWP5005 Prepare a scope of works for remedial waterproofing

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to prepare a report for remedial scoping requirements as a result of the diagnosis of cause of water and moisture ingress in construction.

The unit applies to Class 1 and 10 Buildings, and Class 2 to 9 Buildings.

The unit covers planning and preparing to develop a scope of works, developing the scope and specifications, and documenting the scope of works and specifications.

The unit is suitable for builders, building supervisors, building surveyors, building designers, architects, waterproofing design specialists, waterproofing supervisors, and consultants, engineers or other design specialists.

Licensing, legislative, regulatory or certification requirements may apply to this unit. Relevant work health and safety (WHS) state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCCWP5004 Determine origin of water and moisture ingress into buildings

Competency field(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Plan and prepare.	1.1	Review design specifications and water ingress report, including drawings, building and structures.
		1.2	Confirm stakeholder's design brief and expectations, including timelines, finishes, systems and warranty.
		1.3	Confirm relevant regulatory requirements.
		1.4	Liaise with other specialist consultants, including engineers, building surveyors and local councils.
2.	Develop scope and specifications.	2.1	Determine extent of the scope of works, including site conditions, demolition, occupant use, safety, specifications and quality assurance.
		2.2	Develop waterproofing design in line with design brief.
		2.3	Consult with product manufacturers and research appropriate systems in line with design brief.
		2.4	Confirm effectiveness of waterproofing design for compliance and suitability with site conditions in accordance with National Construction Code (NCC) performance requirements, Australian Standards and manufacturers' requirements.
3.	Document scope of works and	3.1	Write scope of works to include establishment of site, roles and responsibilities, safety, stages, statutory requirements and site hand-over.

© Commonwealth of Australia, 2026 BuildSkills Australia

	specifications.		
		3.2	Document the system specifications in accordance with manufacturers' requirements.
		3.3	Document hold points and other quality assurance requirements.
		3.4	Communicate scope of works and specifications to stakeholders.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCCWP5005 Prepare a scope of works for remedial waterproofing

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria and foundation skills of this unit, in addition to the specific performance and knowledge evidence described below.

Prepare and document three (3) scopes of work and specifications for three (3) diagnostic reports provided, chosen from list provided:

- one investigation and report from an internal wet area which includes a shower
- one investigation and report of water ingress through:
    - an external wall, adjacent to a waterproofed balcony or deck; OR
    - water ingress below a concrete roof terrace
- one investigation and report of water ingress below a waterproofed, lightweight, flat roof structure or balcony
- one investigation and report of water ingress to habitable space below ground.

In doing so, the scopes of work and specifications must include at least two (2) alternative system specifications for one (1) of the scopes of work.

Scope of works must also include:

- project aims
- references to regulatory and Australian Standards requirements
- quality assurance requirements
- environmental considerations
- extent of demolition
- roles and responsibilities
- sequence of construction stages
- hours of work
- safety
- rubbish removal

© Commonwealth of Australia, 2026 BuildSkills Australia

- availability of services
- finishes
- re-instatement works
- protection works
- latent conditions.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- contributing site factors, including:
    - water ingress sources
    - surface water pathways
    - sub-surface water pathways
    - properties of water and moisture movement
    - gradient or falls
    - hydrostatic pressure
    - surface tension of finishes
    - capillarity
    - size and effectiveness of outfalls
    - service and fixing penetrations
    - entry thresholds and openings
- building elements and integration, including:
    - principles of water capture, direction and shedding
    - relationship between structural components
    - building movement
    - wind loadings
    - construction materials and their properties
- inspection and testing protocols utilising factors and influences in accordance with risk levels, including:
    - curing times and stages
    - stage inspections or hold points
    - observation procedures
    - establishing control areas and reference points
    - non-destructive investigation procedures
    - destructive investigation procedures

    - utilising information from other sources, e.g., hydraulic and drainage reports, Bureau of Meteorology (BOM) observations
- setting control parameters and testing methods, including:
    - selection of appropriate test method
    - calibration of testing equipment
    - effects on testing equipment by site conditions and testing procedures
- National Construction Code (NCC) performance requirements relevant to areas tested, including:
    - waterproofing
    - weather proofing
    - damp proofing
    - condensation management
- NCC evidence of suitability in relation to waterproofing system performance, including:
    - independent test reports
    - CodeMark Australia
    - other independent testing organisations
- Australian Standards and design requirements relevant to areas inspected
- waterproofing system manufacturers' requirements, including:
    - data sheets and specifications
    - installation method statements
    - performance of system according to service conditions
    - suitability of materials as fit for purpose
    - compatibility of components within the system
- properties of waterproofing systems available:
    - substrate assessment and preparation
    - combining components to form a system
    - component compatibility in a combined system
    - component properties for site conditions
    - component installation practices
- system analysis for effectiveness
- report content and communication of findings:
    - types of diagnostic reports and structures, including:
        - issue

© Commonwealth of Australia, 2026 BuildSkills Australia

        - performance standard
        - remedial action required
    - tables and diagrams
    - photographic evidence
    - thermal imaging analysis
    - interpreting measurement values
    - references to Australian Standards and designs
    - verbal communication strategies

CPCCWP5006 Survey waterproofing systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to conduct a survey of waterproofing systems and remedial recommendations for buildings.

The unit applies to Class 1 and 10 Buildings, and Class 2 to 9 Buildings.

The unit covers planning and preparing to conduct a survey of waterproofing systems, carrying out the survey of waterproofing systems, analysing report findings and making recommendations, and evaluating and communicating survey findings.

The unit is suitable for builders, building supervisors, building surveyors, building designers, architects, waterproofing design specialists, waterproofing supervisors, and consultants, engineers or other design specialists.

Licensing, legislative, regulatory or certification requirements may apply to this unit. Relevant work health and safety (WHS) state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Plan and prepare.	1.1	Determine scope of survey in consultation with stakeholders, reports and project brief, building works or structural specifications.
		1.2	Gather and review design specifications and data sheets, manufacturers' information, drawings and waterproofing contractors' scopes of work.
		1.3	Assess site environmental conditions according to approved plans, including surface and sub-surface drainage.
		1.4	Confirm design complies with National Construction Code (NCC) performance requirements and Australian Standards.
		1.5	Determine tools, equipment and relevant technologies required for the survey according to site conditions.
		1.6	Develop the scope for the survey, including installation stages and compliance review.
2.	Carry out survey.	2.1	Establish stage inspection protocols and benchmarks for compliance with design and manufacturers' specifications.
		2.2	Communicate survey procedures and timeframe in consultation with stakeholders.
		2.3	Conduct quality assurance inspections of the waterproofing systems, including substrate assessment for suitability, component installation and compliance with manufacturers' specifications.
		2.4	Identify latent conditions outside of the waterproofing system design.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Determine if installation complies with design requirements and manufacturers' specifications.
		2.6	Record observations of survey of waterproofing systems for analysis.
3.	Analyse survey report findings and make recommendations.	3.1	Review report findings and confirm installation complies with manufacturer's specifications, Australian Standards and NCC performance requirements.
		3.2	Identify and document any non-compliance regarding installation and deviation from design.
		3.3	Develop recommendations for remediation of non-compliances and any defects.
		3.4	Develop recommendations to remediate the latent conditions to assist with the remediation advice.
		3.5	Develop a report summary and quality control recommendations for stakeholders.
4.	Evaluate survey findings and communicate recommendations.	4.1	Review survey findings against waterproofing systems design.
		4.2	Review and confirm remediation of non-compliances and defects, including latent conditions.
		4.3	Review survey results to accommodate use of area at the highest risk level.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.4	Communicate survey findings and any recommendations to stakeholders.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCCWP5006 Survey waterproofing systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria and foundation skills of this unit, in addition to the specific performance and knowledge evidence described below.

The candidate must develop one (1) survey report for each of the below:

- an internal wet area
- an external above ground area
- a below ground system
- a remedial waterproofing system.

The survey report must include a stage inspection or hold point report and final inspection report.

The candidate must also provide a review of documentation or specifications for each waterproofing system above.

One (1) or more of the survey reports must identify a latent condition and must include recommendations for a resolution of the latent condition.

The survey reports must include:

- parameters of survey in accordance with stakeholders' brief
- classification of wet areas
- assessment of waterproofing design against compliance with National Construction Code (NCC) performance requirements, Australian Standards, building design and use of area
- site conditions at the time of survey
- provision of stage inspection protocols and benchmarks for compliance with design and manufacturers' specifications
- methodical collation of observations from survey
- review of observations against compliance of design and manufacturers' specifications

© Commonwealth of Australia, 2026 BuildSkills Australia

- recommendations for remediation of defects and confirming compliant installation practices
- identify latent conditions outside of systems design
- recommendations to remediate the latent conditions to assist with the remediation advice
- provision of remedial scope and timeframe for remedial works to completion in accordance with survey report
- review of survey findings and recommendations against waterproofing design.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of scientific methodology
- diagnostic procedures – non-destructive and destructive, including:
    - site investigation
    - knowledge of construction materials and their properties
    - inspecting and testing protocols utilising factors and influences in accordance with risk levels, including:
        - observation procedures
        - establishing control areas and reference points
    - analysing evidence
    - utilising information from other sources, e.g., hydraulic and drainage reports, Bureau of Meteorology observations
    - suitable technologies:
        - thermal
        - microwave
        - ground penetrating radar (GPR)
        - dye water testing
        - impedance and capacitance technologies
        - electronic field vector mapping
        - high and low voltage holiday testing
    - setting control parameters and testing values, including:
        - calibration of testing equipment
        - effects on testing equipment by site conditions and testing procedures
- contributing site factors, including:
    - water ingress sources

© Commonwealth of Australia, 2026 BuildSkills Australia

    - surface water pathways
    - sub-surface water pathways
    - properties of water and moisture movement
    - gradient or falls
    - hydrostatic pressure
    - surface tension of finishes
    - capillarity
    - size and effectiveness of outfalls
    - penetrations and intrusion points
- causes and effects of dampness in buildings, including the ingress of water, capillary action and surface and interstitial condensation and their remediation
- building elements and integration, including:
    - product properties and compatibility with building elements
    - installation methods and practices
    - stages of installation and inspection benchmarks
    - waterproofing systems design and relationship with building design
- physical aids to detection of moisture and water ingress and interpretation of results, including:
    - flood testing
    - targeted water testing
    - thermal surveys
    - moisture meters
    - combination of aids
    - hygrometric surveys
- NCC performance requirements relevant to wet areas tested, including:
    - waterproofing
    - weather proofing
    - damp proofing
    - condensation management
- Australian Standards and design requirements relevant to wet areas inspected
- waterproofing system manufacturers' requirements, including:
    - installation
    - performance of system according to service conditions
    - suitability of materials as fit for purpose

© Commonwealth of Australia, 2026 BuildSkills Australia

    - compatibility of components within the system
- risk assessment of water ingress for the purposes of providing designed systems, including:
    - assessment of service conditions
    - risk and management of interstitial condensation within building elements as part of design
    - consequence of defects affecting the use of the intended adversely affected areas as wet, damp or dry
    - feasibility of repair of the waterproofing system
- properties of waterproofing systems available:
    - substrate assessment and preparation
    - combining components to form a system
    - component compatibility in a combined system
    - component properties for site conditions
    - component installation practices
- system analysis for effectiveness
- stakeholders:
    - architect
    - engineer
    - builder
    - building owner
    - consumer
    - design team
    - construction team
    - certifier
    - building surveyor
    - regulators
- report content and communication of findings:
    - types of diagnostic reports and structures, including:
        - issue
        - performance standard
        - remedial action required
    - tables and diagrams
    - photographic evidence

© Commonwealth of Australia, 2026 BuildSkills Australia

- thermal imaging analysis
- interpreting measurement values
- references to Australian Standards and designs
- verbal communication strategies
- different audiences
- presenting evidence.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment of performance must be undertaken in the workplace or simulated workplace environment. A simulated workplace is one that fully replicates the resources, environment and any time and productivity pressures that exist in the actual workplace, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant tasks
- Australian Standards, relevant building legislation, industry codes, NCC and requirements of workplace policies and procedures as required by Commonwealth, state and territory regulators
- relevant environmental requirements.

CPCLOC3001 Apply safety practices when utility locating

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit describes the skills and knowledge required to apply work health and safety (WHS) practices to underground location services.

It applies to those working in operational roles in utility location work. They generally work under supervision and hold some responsibility for the use of equipment to locate and protect underground services.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and utility operators. It is a requirement to check with the relevant body before applying this unit.

Licensing/Regulatory Information

A White Card must be attained when working on a construction site.

Pre-requisite unit(s)

No pre-requisite units

Competency field(s)

Utility Locating

Unit sector(s)

Construction

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Interpret WHS documentation.	1.1 Access worksite requirement documentation for underground services.

© Commonwealth of Australia, 2026 BuildSkills Australia

	1.2 Identify key standards, policies and procedures, regulations, codes of practice and established requirements for identifying, locating and protecting underground services. 1.3 Identify work health and safety (WHS) requirements as they relate to the worksite and underground services. 1.4 Decipher the difference between safe work method statements and job safety requirements. 1.5 Determine how to apply the required WHS practices to specific worksite jobs.
2. Apply WHS procedures while conducting utility locating.	2.1 Access personal protective clothing (PPC) and personal protective equipment (PPE) and ensure they are fitted correctly in accordance with manufacturer specifications while conducting utility locating. 2.2 Identify hazards by conducting a walk around and a visual inspection of the worksite to assist with risk assessment. 2.3 Implement risk controls for identified hazards associated with utility locating within own level of authority, or report hazards requiring further action to the relevant person in accordance with workplace procedures. 2.4 Confirm requirements for complying with environmental protection, safety and traffic management signage requirements. 2.5 Communicate WHS utility locating worksite processes to relevant personnel, owner/operators and the general public in accordance with workplace procedures and worksite safety requirements. 2.6 Complete worksite safety records in accordance with workplace procedures.
3. Monitor WHS on worksite when locating.	3.1 Monitor processes when commencing utility locating services to comply with risk and hazard mitigation practices. 3.2 Monitor processes, worksite conditions and hazard controls while using utility locating equipment and transmitter connection methods according to manufacturer specifications to ensure that hazard controls remain effective. 3.3 Follow worksite reporting processes in accordance with WHS requirements.
4. Identify procedures for accidents or damages.	4.1 Determine which authorities need to be contacted if an accident occurs. 4.2 Conduct reporting requirements for accidents, damages or risk factors.

© Commonwealth of Australia, 2026 BuildSkills Australia

Foundation skills

Skill	Description
Numeracy	Calculates tolerances to determine the safety requirements of the location worksite.
Oral communication	Acquires details and reports problems and/or hazards to a supervisor or service and/or utility owner/operator.
Reading	Identifies, interprets and implements requirements from at times complex workplace procedures, documentation, legislation and regulations
Writing	Records information relating to WHS underground services.

Range of conditions

N/A

© Commonwealth of Australia, 2026 BuildSkills Australia

Assessment Requirements for CPCLOC3001 Apply safety practices when utility locating

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- apply safety practices when utility locating on two occasions for two sites with different conditions.

During the above, the candidate must:

- access worksite documentation to identify underground services
- identify key standards, policies and procedures, legislation and established requirements for identifying, locating and protecting underground services
- safely implement and monitor the requirements, for underground services, including:
    - communicating to clarify instructions and information
    - communicating with relevant personnel, owner/operators and the general public, as required
    - completing reporting requirements
- work with others to consult on all WHS issues, including:
    - identifying and mitigating risks and hazards
    - complying with written and verbal reporting requirements and procedures

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- safety features of personal protective clothing (PPC) and personal protective equipment (PPE), and when and how it should be used
- work health and safety requirements associated with the use of equipment, including:
    - safety data sheets and materials handling methods
    - job safety analysis (JSAs), job safety environmental analysis (JSEAs), and safe work method statements (SWMSs)
- key risks and hazards relating to underground utility services, including those associated with:
    - traffic
    - asbestos
    - contaminated waste
    - confined spaces

© Commonwealth of Australia, 2026 BuildSkills Australia

    - falls
    - water/sewage
    - locating near other works in progress
    - manual handling
    - railway entry requirements
- common control methods to mitigate key risks and hazards, including:
    - environmental protection
    - key indicators of work quality and accuracy
- key standards, policies and procedures, regulations, codes of practice and established requirements for utility locating services
- communication requirements, including:
    - safety signs
    - operational role communication
    - owner/operator communication
    - general public communication
    - authority reporting requirements
- key factors affecting WHS, including:
    - types of underground services and, owner/operators
    - traffic management issues associated with working in a road reserve
    - awareness of overhead utility assets
    - equipment types, characteristics, technical capabilities and limitations
    - asset specific clearance distances
    - non-destructive excavation methods for exposing underground services
- manufacturer specifications for transmitter connection methods and use of equipment associated with utility locating
- procedures for accidents or damages.

Assessment Conditions

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- underground utility standards
- appropriate site, documents, equipment and personal protective equipment (PPE) currently used in industry
- requirements of WHS for locating, workplace policies, and procedures.

1. Identify and access regulatory underground utility information.	1.1 Obtain, interpret and confirm work requirements with appropriate authority or relevant person. 1.2 Access and interpret different quality levels (QL) when marking services in accordance with regulations and codes of practice. 1.3 Identify Australian standard QL marking service requirements. 1.4 Identify Australian standard colour codes for the different utilities. 1.5 Identify and apply environmental protection requirements for task in accordance with Australian standards. 1.6 Obtain service and utility location details and identify specific requirements of service and utility owner/operators.
2. Access the plans.	2.1 Identify the process to access the plan formats from the utility owner/operators or supporting organisations. 2.2 Determine plan format requirements in accordance with the work. 2.3 Determine the utility providers' information and Duty of Care requirements. 2.4 Identify symbols on the utility plan in accordance with the map legend.
3. Identify scope and assets in the field.	3.1 Determine worksite and scope of works from plan to actual locate site. 3.2 Identify different asset objects from plan to actual locate site. 3.3 Identify unknown or unregistered assets in the locate site area. 3.4 Identify various cable and pipe types in the field.
4. Apply regulatory underground utility information.	4.1 Identify work health and safety (WHS) requirements as they relate to the worksite and underground services. 4.2 Identify risks and hazards and report to appropriate person in accordance with workplace requirements. 4.3 Select, use and fit suitable personal protective equipment (PPE) correctly. 4.4 Use appropriate equipment to mark out area on map for locate worksite.

© Commonwealth of Australia, 2026 BuildSkills Australia

	4.5 Apply different colour codes for the different utilities and mark site conditions in accordance with the Australian standards. 4.6 Apply the QL on the worksite in accordance with the Australian standards.
5. Conduct housekeeping activities.	5.1 Clear work area and dispose of and recycle materials in accordance with worksite procedures. 5.2 Clean, check and maintain condition of equipment, and report issues as required or address within scope of own role. 5.3 Manage and report hazards in accordance with worksite procedures. 5.4 Finalise documentation as required according to workplace procedures.

Foundation skills

Skill	Description
Numeracy	Adjusts activities given tolerances of plan details and equipment.
Oral communication	Acquires details and reports problems and/or hazards to a supervisor or service and/or asset owner/operator.
Reading	Identifies, interprets and implements requirements from at times complex workplace procedures, documentation, legislation and regulations.
Writing	Records information relating to underground utility.

Range of conditions

Assessment Requirements for CPCLOC3002 Interpret plans and apply markings for underground services on a locate site

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- access, interpret and apply markings for underground services on two occasions for two sites with different marking opportunities and conditions.

During the above, the candidate must:

- access, apply and retain underground utility standards and site documentation
- access plans and identify scope and assets in the field
- implement the requirements, procedures and techniques to apply markings for underground services, including:
    - selecting and using required equipment
    - complying with Australian standard quality level (QL) marking service requirements
    - complying with Duty of Care requirements
    - communicating to clarify instructions and information
    - completing housekeeping activities
- work with others to identify, apply markings for underground services that meets required outcomes, including:
    - using a range of communication techniques and equipment
    - identifying risks and hazards
    - complying with written and verbal reporting requirements and procedures
- employ required techniques, and equipment to search for services and utilities
- identify services and owner/operators of that service.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- safety features of personal protective equipment (PPE), and when and how it should be used
- key indicators of work quality and accuracy, including:
    - different asset pits and connection
    - the difference in quality levels (QL)

© Commonwealth of Australia, 2026 BuildSkills Australia

    - different symbols and colour codes based on current Australian standards
    - identification of cable or pipes types from plans
- processes for planning and organising underground service work activities
- equipment including:
    - marking equipment
    - tools
    - locating equipment
- authority reporting requirements
- Duty of Care requirements
- job safety analysis (JSAs), job safety environmental analysis (JSEAs), and safe work method statements (SWMSs)
- key risks relating to underground utility services, including those associated with:
    - traffic
    - asbestos
    - contaminated waste
    - confined spaces
    - falls
    - locating near other works in progress
    - manual handling
    - environmental protection
- key standards, policies and procedures, legislation and established requirements for identifying, locating and protecting underground services
- housekeeping activities, including:
    - disposal of and recycle materials
    - cleaning, checking and maintaining condition of equipment
    - communicating with relevant personnel and owner/operators
    - reporting risks hazards and issues as required
    - completing documentation
- key factors affecting work activities described, including:
    - types of services, utilities and providers
    - working in a road reserve
    - equipment types, characteristics, technical capabilities and limitations
    - asset specific clearance distances
    - awareness of overhead utility assets

© Commonwealth of Australia, 2026 BuildSkills Australia

- non-destructive excavation methods for exposing underground services.

Assessment Conditions

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- relevant Australian Standards
- underground utility standards
- appropriate site, documents, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and plans.

Mandatory Workplace Requirements

Assessment of performance evidence may be in a workplace setting or an environment that accurately represents a real workplace.

CPCLOC3003 Locate using ground penetrating radar (GPR)

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit describes the skills and knowledge required to use a Ground Penetrating Radar (GPR) to locate underground services.

It applies to those working in operational roles in utility location work. They generally work under supervision and hold some responsibility for the use of GPR to locate and protect underground services.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and utility operators. It is a requirement to check with the relevant body before applying this unit.

Licensing/Regulatory Information

A White Card must be attained when working on a construction site.

Pre-requisite unit(s)

No pre-requisite units

Competency field(s)

Utility Locating

Unit sector(s)

Construction

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare GPR.	1.1 Identify the key components of the GPR device.

© Commonwealth of Australia, 2026 BuildSkills Australia

	1.2 Check the condition of components of the GPR device in accordance with manufacturer specifications. 1.3 Access personal protective equipment (PPE) and ensure they are fitted correctly on the worksite. 1.4 Test basic functions of the GPR device to ensure working order in accordance with manufacturer specifications. 1.5 Identify any faults or damage to the GPR device and report to relevant person in accordance with worksite reporting requirements.
2. Identify GPR features.	2.1 Identify the antennas orientation and frequency to determine depth penetration. 2.2 Determine the surface soil types in terms of how they affect GPR. 2.3 Identify hyperbola size, shape and contrast to determine suitability to the ground conditions. 2.4 Identify layers to determine the use of GPR to meet underground service requirements.
3. Utilise GPR in the field.	3.1 Identify and observe work health and safety (WHS) requirements associated with the use of the GPR device. 3.2 Determine the best scan methods, including grid and transversal to meet the underground service needs and discuss with relevant person(s) to ensure appropriate action is taken. 3.3 Determine the soil velocity on the worksite to facilitate appropriate use of GPR. 3.4 Position the GPR over a pipe or cable appropriately in accordance with WHS requirements. 3.5 Assess soil properties and conduct penetrative underground tests if soil properties are poor. 3.6 Mark ground services in accordance with regulations and codes of practice.
4. Locate unknown services in worksite area.	4.1 Determine appropriate grid search methods to scan for unknown services in the scope of works. 4.2 Determine the methods to look for unknown services noting that ground conditions may preclude the use of GPR. 4.3 Implement search methods identified to locate unknown services in accordance with worksite and WHS requirements.
5. Complete services.	5.1 Ensure the GPR battery is secure and safe in vehicle for transport. 5.2 Clean the debris from the GPR device on completion of works.

© Commonwealth of Australia, 2026 BuildSkills Australia

	5.3 Conduct documentation as required according to workplace procedures.

Foundation skills

Skill	Description
Numeracy	Calculates tolerances to determine the requirements of the location worksite.
Oral communication	Acquires details and reports problems and/or hazards to a supervisor or service and/or utility owner/operator.
Reading	Identifies, interprets and implements requirements from at times complex workplace procedures, documentation, legislation and regulations
Writing	Records information relating to GPR.

Assessment Requirements for CPCLOC3003 Locate using ground penetrating radar (GPR)

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- Access and interpret calibration documentation and use GPR in the field on two occasions for two sites with different conditions.

During the above, the candidate must:

- implement the requirements, procedures and techniques to use GPR for underground services, including:
    - communicating to clarify instructions and information
    - identifying and reporting faults
    - completing documentation
- work with others to identify and use GPR or underground services that meets required outcomes, including:
    - using a range of communication techniques and equipment
    - complying with written and verbal reporting requirements and procedures
- employ required techniques and equipment to search for services and utilities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- safety features of personal protective equipment (PPE), and when and how it should be used
- work health and safety (WHS) requirements associated with the use of GPR, including:
    - safety data sheets and materials handling methods
    - job safety analysis (JSAs), job safety environmental analysis (JSEAs), and safe work method statements (SWMSs)
- key risks relating to underground utility services when using GPR
- communication processes in utility locating when using GPR, including:
    - pre-field communication with relevant person to test GPR
    - on-site communication to coordinate practices, clarify instructions and observe GPR safety issues
    - reporting and documentation

© Commonwealth of Australia, 2026 BuildSkills Australia

- key indicators of work quality and accuracy, including:
    - antennas orientation and frequency to determine depth penetration
    - appropriate position the GPR over a pipe or cable
    - appropriate scan methods, grid and transversal
    - cleaning the debris from the GPR device following use
    - ensuring GPR battery is secure and safe in vehicle for transport
- key standards, policies and procedures, legislation and established requirements for identifying, locating and protecting underground services with the use of GPR
- GPR use methods to identify unknown services, including:
    - dielectrics in soil types and how they could affect GPR signal
    - resistivity in soils and moisture content and how this affects the signals
    - how material types can affect results and contrast of an image
    - how a GPR works out depth using soil velocity
    - hyperbola fitting and how this adjusts soil velocity
    - contrast and reflection of image
- methods to look for unknown services, in addition to GPR:
    - electromagnetic field (EMF) locator
    - other non-metallic technologies
- limitations for the use of GPR if the ground conditions include long grass, mud or if the ground is too rough
- key factors affecting work activities, including:
    - types of services, utilities and providers
    - working in a road reserve
    - equipment types, characteristics, technical capabilities and limitations
- manufacturer specifications for GPR use
- additional equipment, including:
    - marking equipment
    - safety equipment.

Assessment Conditions

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- underground utility standards
- appropriate site, documents, equipment and personal protective equipment (PPE) currently used in industry

CPCLOC3004 Locate using electromagnetic field (EMF) locator and auxiliary locating equipment

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit describes the skills and knowledge required to use an electromagnetic field (EMF) locator and auxiliary locating equipment, including sondes, trace rods and transponders for underground services.

It applies to those working in operational roles in utility location work. They generally work under supervision and hold some responsibility for the use of an EMF locator and auxiliary equipment to locate and protect underground services.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and utility operators. It is a requirement to check with the relevant body before applying this unit.

Licensing/Regulatory Information

A White Card must be attained when working on a construction site.

Pre-requisite unit(s)

No pre-requisite units

Unit sector(s)

Construction

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 BuildSkills Australia

1. Prepare EMF locator and auxiliary locating equipment.	1.1 Identify and observe work health and safety (WHS) requirements associated with the use of an EMF locator and auxiliary locating equipment. 1.2 Access required personal protective equipment (PPE) and ensure that PPE is in good condition and fit for purpose. 1.3 Check the functionality of the EMF locator and auxiliary locating equipment to ensure they are within manufacturer calibration requirements. 1.4 Determine how to charge/change batteries on the transmitter, receiver and sonde. 1.5 Select and activate different EMF locator modes to ensure functions are activated. 1.6 Test direct connect leads for continuity and conduct an audio test on the induction clamp. 1.7 Test internal transmitter induction with receiver in accordance with manufacturer specifications. 1.8 Test passive modes to ensure that they can be activated on the receiver to find an available signal.
2. Determine electromagnetic locating requirements.	2.1 Identify how an electromagnetic field is created using an EMF locator. 2.2 Determine effects on current of far end earthing. 2.3 Determine the effects different conductive materials have on the EMF signal. 2.4 Determine the limitations of the different methods of applying current to a service. 2.5 Determine the position and orientation of the different antennas in the EMF locator to identify which antennas are used by the different modes. 2.6 Determine an appropriate connection method and an appropriate frequency for initial transmitter setup on each utility. 2.7 Determine current at the transmitter taking into account resistance and voltage for a direct connection.
3. Utilise an EMF locator	3.1 Assess the signal strength at the receiver in an electromagnetic field generated by the transmitter. 3.2 Check for EMF distortion using different antenna modes in accordance with workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

	3.3 Identify the current reading on the receiver and monitor it throughout the locate taking into account EMF distortion in accordance with workplace requirements. 3.4 Trace and monitor signal strength, EMF distortion, current and depth along the length of the asset in accordance with workplace requirements. 3.5 Trace signal to a visual and logical end point to confirm identification of service. 3.6 Discuss requirements with relevant person(s) and produce a plan of the services identified at the locate site in accordance with work requirements.
4. Outline the reasons for locating unknown services in worksite area.	4.1 Outline why locating unknown and abandoned services is a crucial part of the locating process. 4.2 Outline passive and active sweep methods using an EMF locator and display those methods in the locate site. 4.3 Outline the limitations of passive and active sweep modes.
5. Use auxiliary locating equipment on a locate site.	5.1 Outline the correct transmitter setup to reliably create a detectable signal on trace rods to the relevant person. 5.2 Identify and observe WHS requirements, including PPE associated with the use of traceable rods, sondes and transponders. 5.3 Test the required auxiliary locating equipment in accordance with manufacturer specifications. 5.4 Test trace rods for correct functionality in accordance with manufacturer specifications. 5.5 Outline how capacitance effect relates to locating trace rods to relevant person and demonstrate two methods to improve or eliminate capacitance. 5.6 Detect a sonde transmitter with a locator receiver and outline how many peak signals are typically transmitted by a sonde transmitter to a relevant person. 5.7 Use a locator receiver to detect the location of a transponder in accordance with manufacturer specifications.
6. Complete documentation.	6.1 Document each service in the plan as required in accordance with workplace procedures. 6.2 Document each detected unknown service and incorporate in the plan and report to relevant person.

Assessment Requirements for CPCLOC3004 Locate using electromagnetic field (EMF) locator and auxiliary locating equipment

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- access and interpret calibration documentation and use electromagnetic field (EMF) locating equipment in a locate site using:
    - an electromagnetic field (EMF) locating on two occasions for two sites with different conditions
    - sondes, trace rods and transponders, each one on two occasions for two sites with different conditions.
- During the above, the candidate must:
    - outline two methods of applying voltage via the transmitter to the target which results in a current that creates the electromagnetic field (the signal)
    - describe the relationship between resistance, current and voltage and the effects they can have on one another
    - access plans and identify scope and assets and use plans to identify assets shown in the locate site
    - describe the quality level attainable by the electromagnetic locator for each of the assets shown in the assessment area on utility plans
    - observe work health and safety (WHS) requirements
- use reliable techniques to create a signal on a target utility, incorporating:
    - an appropriate method for applying current to a service
    - appropriate frequency and power output settings used on transmitter
    - appropriate placement of the induction clamp or direct connect leads and earth
- use reliable techniques to detect a signal created by a locator transmitter, incorporating:
    - matching receiver frequency to transmitter output frequency
    - performing an initial sweep around the connection point to determine the signal strength, distortion and current
    - determining the most appropriate method to determine the signal path/s of the most likely target signal and effective method/s as a final check to determine that the generated signal has stayed in the target line and is functioning correctly
    - performing passive and active sweeps to determine unknown services

© Commonwealth of Australia, 2026 BuildSkills Australia

- implement the requirements, procedures and techniques to use EMF locators and auxiliary equipment, including:
    - communicate to clarify instructions and information
    - complete required documentation including producing two plans that show services in accordance with Australian standards.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- safety features of personal protective equipment (PPE), and when and how it should be used
- work health and safety (WHS) requirements associated with the use of an EMF locator and auxiliary equipment
- key details of identified utility to be documented including:
    - pipe size
    - material
    - quality level achieved in locate
- processes for planning and organising work activities
- key risks relating to underground utility services when using an EMF locator and auxiliary equipment, including those associated with:
    - traffic
    - confined spaces
    - falls
    - locating near other works in progress
    - manual handling
- reasons why locating unknown and abandoned services is a crucial part of the locating process
- key standards, policies and procedures, legislation and established requirements for identifying, locating and protecting underground services with the use of an EMF locator and auxiliary equipment, including:
    - obtaining and preparing the required information from the appropriate membership organisation
    - damage to services and utilities
- communication processes in utility locating when using an EMF locator and auxiliary equipment, including:
    - pre-field communication with relevant person to test the equipment

© Commonwealth of Australia, 2026 BuildSkills Australia

  - on-stie communication to coordinate practices, clarify instructions and observe safety issues
  - reporting and documentation
- methods to look for unknown services:
  - EMF locating
  - other non-metallic technologies
  - ground penetrating radar (GPR)
- key factors affecting work activities, including:
  - types of services, utilities and providers
  - working in a road reserve
  - equipment types, characteristics, technical capabilities and limitations
  - observing equipment and operational requirements to ensure accuracy
- manufacturer specifications for an EMF locator and auxiliary equipment including specifications for:
  - transponders
  - trace rods
  - sondes
- plans that detail:
  - services identified on plans
  - services identified as part of an EMF locate
  - the highest quality level achieved on each individual asset
  - a legend outlining how attributes are labelled and drawn, compass orientation, date and author
- key accessories in auxiliary locating equipment, including:
  - safety barriers
  - clamp extension pole
  - gas detector
- EMF locating device different functions and modes:
  - low medium and high matching frequency for transmitter (tx) and receiver (rx) peak, null and sonde modes for receiver (rx.)
  - passive modes including power and radio
  - power output levels on transmitter (tx)
- different frequency transponders typically found in conjunction with services
- additional equipment, including:
- marking equipment

© Commonwealth of Australia, 2026 BuildSkills Australia

- safety equipment.

Assessment Conditions

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- Australian Standards
- underground utility standards and calibration documentation
- appropriate documents, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and plans.

Mandatory Workplace Requirements

Assessment of performance evidence may be in a workplace setting or an environment that accurately represents a real workplace.

CPCLOC3005 Locate and manage the utility locating worksite

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit describes the skills and knowledge required to conduct locating activities and manage all aspects of the utility locating worksite.

It applies to individuals who take responsibility for their own work and for the quality of the work of others within known parameters. They use discretion and judgment to interpret worksite scopes and direct personnel to apply marking and use available utility locating technologies to locate and protect underground services.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and utility operators. It is a requirement to check with the relevant body before applying this unit.

Licensing/Regulatory Information

A White Card must be attained when working on a construction site.

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 BuildSkills Australia

1. Prepare utility locating activity at the worksite.	1.1 Communicate effectively with utility asset owner(s) or appropriate person(s), relevant personnel and the general public to coordinate activities so as to ensure safety and compliance with duty of care and industry codes of practice. 1.2 Confirm worksite scope of utility locating services with the asset owner(s) or appropriate person(s) in accordance with workplace requirements. 1.3 Ensure ground disturbance plans from the relevant authority are correct for the worksite. 1.4 Conduct a worksite safety and environmental analysis and, in doing so, manage any risk and hazards and required changes to the worksite scope in accordance with work health and safety (WHS) requirements. 1.5 Select and correctly fit personal protective equipment (PPE) in accordance with manufacturer specifications. 1.6 Ensure worksite emergency contact details of asset owner(s) or appropriate person(s) are accessible in accordance with workplace requirements.
2. Manage, prepare and use utility locating technology.	2.1 Communicate utility location standards and specific requirements of service to site personnel or excavator operators in accordance with workplace requirements. 2.2 Confirm the utility locating technology to be used on the worksite is in working order by checking pre-test results. 2.3 Determine the appropriate locating device to be used for the service being located. 2.4 Confirm signal connections and transmitter connections for electromagnetic field (EMF) locating. 2.5 Determine if traceable rods, sondes or transponder locators are required. 2.6 Confirm soil conditions and determine if ground penetrating radar (GPR) should be used. 2.7 Locate services to required standards using appropriate technology in accordance with workplace requirements. 2.8 Confirm and mark location points using appropriate quality level (QL) and colours in accordance with regulations and codes of practice when performing locate.
3. Locate and manage the location of services in the worksite.	3.1 Monitor risks and hazards and take appropriate action in accordance with workplace requirements and WHS standards. 3.2 Manage changes to worksite locating requirements in accordance with the scope of the work.

© Commonwealth of Australia, 2026 BuildSkills Australia

	3.3 Ensure the appropriate methodology is used for quality levels A to D in accordance with worksite requirements. 3.4 Ensure services are marked in accordance with the regulations and codes of practice colours. 3.5 Manage the use of electromagnetic field (EMF) locating and GPR in accordance with the worksite scope to locate unknown services. 3.6 Ensure the worksite is cleared and that recyclable materials are disposed of as required. 3.7 Check the condition of the equipment and technology to ensure functionality and cleanliness in accordance with maintenance requirements.
4. Document and report services.	4.1 Document and report services found on plans and unknown services found in the worksite area in accordance with workplace requirements. 4.2 Maintain a log of the locate area and the time in accordance with workplace requirements. 4.3 Communicate findings to asset owner(s) or appropriate person(s) and issue utility location report in accordance with workplace requirements.

Foundation skills

Skill	Description
Numeracy	Adjusts activities given tolerances of plan details and equipment.
Oral communication	• Acquires details and advises what action is required to mitigate hazards. • Builds rapport with personnel. • Manages conflict and facilitates resolution of issues. • Provides feedback to foster confidence and appropriate workplace behaviours.
Reading	Identifies, interprets and implements requirements from at times complex workplace procedures, documentation, legislation and regulations
Writing	Records information relating to underground utility.

Assessment Requirements for CPCLOC3005 Locate and manage the utility locating worksite

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- interpret worksite scopes and direct personnel to apply marking and use available utility locating technologies to locate and protect underground services on two occasions for two sites with different conditions.

During the above, the candidate must:

- access plans and identify scope and assets in the field
- supervise the implementation of the requirements, procedures and techniques to apply markings for underground services, including:
    - managing location works on the worksite
    - conducting an environmental analysis
    - managing worksite locating changes or contingency issues
    - communicating to relay instructions and information
    - ensuring work health and safety (WHS) requirements and codes of practice are adhered to
    - completing documentation
- communicate required techniques, plant and equipment and metrology to search for services and utilities, including:
    - appropriate technology for quality levels (QL) A to D
- document and report services found on plans and unknown services found in the worksite area to asset owner(s) or appropriate person(s)
- identify services and asset owner(s) or appropriate person(s)s of that service.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- management obligations under industrial arrangements and training agreements in relation to the provision of (workplace) training and employee requirements
- supervisory methods to establish and maintain effective workplace relationships, including:
    - methods to foster confidence and appropriate workplace behaviours
    - conflict resolution strategies

© Commonwealth of Australia, 2026 BuildSkills Australia

    - ways to promote effective teamwork with worksite crews
    - ways to maintain currency of knowledge and techniques through informal learning, regular professional development or personal research
    - methods to monitor individual performance and identify performance gaps
    - methods for providing structured feedback
- safety features of personal protective equipment (PPE), and when and how it should be used
- utility location documenting requirements, including:
    - format
    - presentation to asset owner(s) or appropriate person(s)
    - required inclusion
    - retention of records
- communication protocols for the approval and dissemination of utility locating reporting
- processes for planning and organising work activities
- locating equipment, including:
    - marking equipment
    - electromagnetic field (EMF) detectors and auxiliary equipment
    - ground penetrating radar (GPR)
    - other non-metallic technologies
- asset material types and how they affect the locate works using both EMF detectors and GPR
- work health and safety (WHS) requirements, including:
    - job safety analysis (JSAs)
    - job safety environmental analysis (JSEAs)
    - safe work method statements (SWMSs)
- worksite plans including supplied maps identifying key elements and asset types and materials
- duty of care and cover sheets for asset specific requirements and how they apply to the worksite
- key risks relating to underground utility services, including those associated with
    - traffic
    - confined spaces
    - falls
    - locating near other works in progress

© Commonwealth of Australia, 2026 BuildSkills Australia

    - manual handling
- key standards, policies and procedures, legislation, codes of practice and established requirements for identifying, locating and protecting underground services, with the use of technology, including those for:
    - required information from utility asset owner(s) or appropriate person(s) and supporting organisations
    - damage to services and utilities
    - quality levels (QL) A to D and why locating services to the highest QL level possible is preferred
- disposal of recycle material appropriately
- key factors affecting work activities, including:
    - types of services, utilities and providers
    - working in a road reserve
    - communication with the general public to ensure safety
    - equipment types, characteristics, technical capabilities and limitations
    - awareness of overhead utility assets
    - asset specific clearance distances
    - non-destructive excavation methods for exposing underground services
    - environmental protection.

Assessment Conditions

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- Australian Standards
- underground utility standards
- appropriate site, documents, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and plans.

Mandatory Workplace Requirements

Assessment of performance evidence may be in a workplace setting or an environment that accurately represents a real workplace.

CPCLOC3006 Prepare for ground disturbance activity

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit describes the skills and knowledge required to prepare for ground disturbance activity.

It applies to those working in operational roles that impact upon utility location. They generally work under supervision and will be introduced to ground disturbance.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and utility operators. It is a requirement to check with the relevant body before applying this unit.

Licensing/Regulatory Information

A White Card must be attained when working on a construction site.

Pre-requisite unit(s)

No pre-requisite units

Competency field(s)

Ground Disturbance

Unit sector(s)

Construction

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify activity that is classified as ground disturbance.	1.1 Identify activity that entails moving, removing or penetrating the earth’s surface.

© Commonwealth of Australia, 2026 BuildSkills Australia

	1.2 Identify activity that may cause ground disturbance issues and challenges.
2. Determine ground disturbance compliance and communication requirements.	2.1 Identify Australian standards that relate to ground disturbance activity. 2.2 Determine the utility providers' information and Duty of Care requirements. 2.3 Identify utility owner/operators' responsibilities. 2.4 Identify procedures for obtaining and managing permits, authorisations, utility plans and specific owner/operator instructions relevant to the site. 2.5 Determine effective communication requirements with utility owner/operators, supervisors, team members and the general public to coordinate activities to ensure safety and compliance.
3. Access plans for ground disturbance activity.	3.1 Assess what type of excavation or disturbance should take place. 3.2 Determine the features of the locate site and the specific ground disturbance requirements in terms of the nature of the work, area and depth. 3.3 Access relevant plan formats from the utility owner/operators or supporting organisations. 3.4 Access and interpret different quality levels (QL) when marking services in accordance with the Australian standards. 3.5 Determine what equipment will be used considering the terrain, vegetation, overhead obstructions and nearby infrastructure. 3.6 Identify work health and safety (WHS) requirements and personal protective equipment (PPE) requirements.
4. Identify the risk factors in ground disturbance activity.	4.1 Identify potential risks and hazards in the plans for the locate site by referring to past work records and available geotechnical reports. 4.2 Assess the likelihood of contact with underground facilities and the consequence of damage. 4.3 Plan risk mitigation by choosing safe work methods. 4.4 Determine safety exclusion zone requirements in line with utility owner/operator instructions.

© Commonwealth of Australia, 2026 BuildSkills Australia

5. Determine operational ground disturbance requirements.	5.1 Determine worksite and scope of works from plan to actual locate site. 5.2 Identify Australian standard QL marking service requirements. 5.3 Identify Australian standard utility location colour codes for the different utilities. 5.4 Identify environmental protection requirements for the task. 5.5 Identify different assets objects from plan to actual locate site. 5.6 Identify unknown or unregistered assets in the locate site area.
6. Identify documentation and reporting requirements.	6.1 Identify requirements for maintaining accurate records of ground disturbance activities in accordance with workplace procedures. 6.2 Identify procedures for reporting incidents and hazards. 6.3 Determine procedures for reporting ground disturbance activity and who to report to.

Foundation skills

Skill	Description
Numeracy	Estimates tolerances of plan details and equipment.
Oral communication	Clarifies details and reports problems and/or hazards to a supervisor or service and/or utility owner/operator.
Reading	Identifies and interprets information from at times complex workplace procedures, documentation, legislation and regulations.

Range of conditions

N/A

Assessment Requirements for CPCLOC3006 Prepare for ground disturbance activity

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify activity that is classified as ground disturbance and outline the following requirements associated with ground disturbance activity on two occasions for two sites with different conditions.

During the above, the candidate must identify the following aspects of ground disturbance activity:

- utility plans
- compliance with Australian standard requirements
- operational requirements
- risk factors and environmental hazards
- work health and safety (WHS) requirements
- communication processes with relevant personnel, owner/operators and the general public
- equipment use
- documentation requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- ground disturbance activity, including:
    - mechanical
    - manual
    - vertical and horizontal drilling
    - non-destructive digging
    - load bearing equipment
- equipment including:
    - marking equipment
    - tools
    - locating equipment

© Commonwealth of Australia, 2026 BuildSkills Australia

- safety features of personal protective equipment (PPE), and when and how it should be used
- key indicators of work quality and accuracy
- utility types associated with ground disturbance hazards, including:
    - communication and data utilities
    - electricity utilities
    - water utilities
    - sewer and drainage utilities
    - gas utilities
    - petroleum and chemical pipelines
    - other specialised or local infrastructure
- key risks/hazards relating to underground utility services, including those associated with:
    - traffic
    - asbestos
    - contaminated waste
    - confined spaces
    - falls
    - locating near other works in progress
    - manual handling
    - ground stability
    - environmental hazards
- communication requirements for ground disturbance, including:
    - with owner/operators
    - general public
    - relevant personnel
- key ground disturbance standards, policies and procedures, legislation and established requirements for identifying, locating and protecting underground services, including those for:
    - compliance with Australian standards
    - Australian quality levels (QL)
    - locate site plans
    - operating and maintaining equipment
    - fault checking and checking for calibration
    - marking underground asset locations

© Commonwealth of Australia, 2026 BuildSkills Australia

- obtaining emergency numbers and contact details of service and utility owner/operators
- obtaining and preparing information required from utility owner/operators and supporting organisations
- damage to services and utilities
- unknown or unregistered assets.

Assessment Conditions

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

- Australian Standards
- ground disturbance standards
- appropriate site, documents, equipment and personal protective equipment (PPE) currently used in industry
- requirements of workplace policies, procedures and plans.

Mandatory Workplace Requirements

Assessment of performance evidence may be in a workplace setting or an environment that accurately represents a real workplace.

CPCLOC3007 Control excavations in the vicinity of utility assets

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit describes the skills and knowledge required to plan, control and monitor excavations in the vicinity of utility assets to ensure their integrity is not compromised.

It applies to those working in operational roles in utility location work. They generally work under supervision and hold responsibility for interpreting plans, accessing resources to locate and protect utility assets during excavation.

It includes applying relevant legislation, code of practice, regulations and workplace procedures, and completing work and relevant documentation.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and utility operators. It is a requirement to check with the relevant body before applying this unit.

Licensing/Regulatory Information

A White Card must be attained when working on a construction site.

Pre-requisite unit(s)

CPCLOC3006 Prepare for ground disturbance activity

Competency field(s)

Utility Locating

Unit sector(s)

Construction

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 BuildSkills Australia

1. Plan for ground disturbance in the vicinity of utility assets.	1.1 Determine workplace safety, environmental and sustainability energy practices for the site by communicating with stakeholders and relevant person(s). 1.2 Obtain job requirements and interpret plans, specifications and instructions. 1.3 Discuss job requirements and workplace procedures with relevant person(s) to determine and confirm work schedule and were individual activity fits into team responsibilities. 1.4 Identify and assess hazards, workplace safety and environmental risks in accordance with work health and safety (WHS) standards and exclusion zone requirements. 1.5 Implement and prioritise control methods to mitigate risks in accordance with workplace procedures. 1.6 Check that all required work permits are obtained and determine scope of responsibility under the relevant job requirements. 1.7 Identify and access equipment and tools needed to carry out work activities. 1.8 Confirm and access material plans and resources required for the work in accordance with marking requirements and workplace procedures. 1.9 Access personal protective equipment (PPE) and ensure they are fitted correctly on the worksite. 1.10 Obtain site relevant instructions and permits from the utility asset owner/operators.
2. Monitor and control excavation in the vicinity of utility assets.	2.1 Select and use tools and equipment and use in accordance with workplace procedures, manufacturer specifications and asset owner/operators' work permits and instructions. 2.2 Conduct work activities within the agreed timeframe, to industry standards and in accordance with workplace procedures and WHS standards. 2.3 Determine correct response to alarms, codes and hazard warnings and conduct work activity accordingly. 2.4 Monitor operating conditions of equipment in accordance with utility and workplace procedures, and manufacturer specifications. 2.5 Conduct excavation control in accordance with relevant legislation and requirements. 2.6 Continually confirm the location of utility assets during work activities in accordance with workplace procedures

© Commonwealth of Australia, 2026 BuildSkills Australia

	considering the limitations and tolerances of underground service information. 2.7 Identify faults and operational conditions affecting pipelines or utility assets and report to relevant person(s) in accordance with workplace procedures. 2.8 Identify and incorporate reporting unplanned events and non-routine issues in accordance with workplace procedures. 2.9 Complete appropriate potholing techniques in line with utility owner/operator instructions and workplace procedures.
3. Complete work and relevant documentation.	3.1 Conduct quality and safety checks in accordance with industry standards and workplace procedures. 3.2 Comply with asset owner/operator work completion instructions in accordance with workplace procedures. 3.3 Clean the worksite and make it safe in accordance with workplace procedures. 3.4 Check and clean and store tools, equipment and surplus resources/materials in accordance with workplace procedures. 3.5 Complete documentation, including incident reporting, if relevant in accordance with workplace requirements.

Foundation skills

Skill	Description
Numeracy	Adjusts activities given tolerances of plan details and equipment.
Oral communication	Acquires details and reports problems and/or hazards to a supervisor or service and/or utility owner/operator.
Reading	Identifies, interprets and implements requirements from at times complex workplace procedures, documentation, legislation and regulations
Writing	Records information relating to underground utility.

Range of conditions

Assessment Requirements for CPCLOC3007 Control excavations in the vicinity of utility assets

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- control excavations in the vicinity of utility assets on two occasions.

During the above, the candidate must:

- access, apply and retain underground utility standards and site documentation
- access plans and resources required to identify scope and utility assets in the field
- implement the requirements, procedures and techniques to control excavations to protect utility assets, including:
    - obtaining work permits
    - selecting and using required equipment
    - inspecting and testing equipment
    - communicating to clarify instructions and information
    - confirming role in the team
    - conducting quality and safety checks
    - monitoring excavation control in the vicinity of utility assets
    - demonstrating appropriate potholing techniques
    - dealing with unplanned events and non-routine issues
    - cleaning worksite
    - completing documentation
- work with others to meet required outcomes, including:
    - using a range of communication techniques and equipment
    - complying with written and verbal reporting requirements and procedures
    - reporting risks and hazards
    - mitigating environmental risks
    - maintain a clean worksite
- employ required techniques, plant and equipment to search for services and utilities
- identify services and owner/operators of that service.

© Commonwealth of Australia, 2026 BuildSkills Australia

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- utility types, including:
  - communication and data utilities
  - electricity utilities
  - water utilities
  - sewer and drainage utilities
  - gas utilities
  - petroleum and chemical pipelines
  - other specialised or local infrastructure
- safety features of personal protective equipment (PPE), and when and how it should be used
- key indicators of work quality and accuracy
- processes for planning and organising work activities
- safety data sheets and materials handling methods, including:
  - job safety analysis (JSAs)
  - job safety and environmental analysis (JSEAs)
  - safe work method statements (SWMSs)
- excavation equipment including:
  - marking equipment
  - tools
  - metallic and non-metallic locating equipment
  - fault checking and calibrating locating equipment
- manufacturer specifications for excavation equipment
- communication processes in the control of excavations, including:
  - pre-field communication with stakeholders to request plans
  - on-site communication to coordinate practices, clarify instructions and safety issues
  - marking and visual communication
  - reporting and documentation
  - post-project communication for final reports, feedback loops and record keeping
- key risks relating to underground utility services, including those associated with:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - traffic
    - live services and abandoned services
    - confined spaces
    - asbestos
    - contaminated waste
    - falls
    - locating near other works in progress
    - manual handling
- key standards, policies and procedures, legislation and established requirements for identifying, locating and protecting underground services, including those for:
    - exclusion zones
    - obtaining work permits
    - on-site inductions
    - equipment operations and monitoring
    - fault checking and calibrating locating equipment
    - risk and hazard reporting
    - utility asset location marking
    - site isolation and traffic control
    - excavation and finished surfaces reinstatement
    - obtaining and preparing the required information from the utilities or the appropriate supporting organisations
    - damage to services and utilities
- key factors affecting work activities, including:
    - limitations and tolerances of the underground utility information
    - types of services, utilities and providers
    - working in a road reserve
    - potholing
    - equipment types, characteristics, technical capabilities and limitations
    - asset specific clearance distances
    - awareness of overhead utility assets
    - non-destructive excavation methods for exposing underground services.

Assessment Conditions

Assessors are responsible for ensuring that the candidate demonstrating competency has access to:

CPCMCM8001 Plan and manage complex projects

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 1.0.

Application

This unit of competency specifies the outcomes required to identify, plan, control and finalise complex projects.

The unit addresses the management of projects of significant scope and duration, for example developing and implementing a major new program or service, or constructing or designing a significant new piece of infrastructure.

The environment in which the project is managed is also complex and involves managing a project team which typically includes staff with diverse skill sets. Managing complex projects also involves significant reporting requirements.

This unit supports the attainment of skills and knowledge required for competent workplace performance in organisations of all sizes. It will support senior managers in all sectors of the construction industry who must exercise the skills needed to ensure projects are planned and managed effectively in order to deliver the required outcomes on time and within budget.

The unit may be contextualised to suit the strategic context in which the unit is applied, which may be across all sectors in the construction industry provided the essential outcomes of the unit are not changed.

No licensing, legislative, accreditation, regulatory or certification requirements apply to this unit at the time of endorsement.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Unit sector(s)

Common

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.	
1.	Identify strategic and operational needs of the project during planning phase.	1.1.	Project's strategic context and operational requirements are identified and analysed.
		1.2.	Organisation's strategic and business plans and their output requirements are identified and analysed.
		1.3.	Client requirements and impact of ***legislation and industry codes and standards*** are identified and fully explored.
		1.4.	***Risk management analysis*** is conducted and risk management plan is developed and documented.
2.	Prepare project plan.	2.1.	Precise ***specifications and terms of reference*** for the project are defined and documented.
		2.2.	Project budget is developed, specified to a level that can be used for managing sub-tasks, and documented.
		2.3.	Skills needed for successful completion of project are defined.
		2.4.	Physical and other resources required to support project are defined and documented and processes to secure them are commenced.
		2.5.	Timelines, schedules and critical path for the project are developed and documented, taking into consideration contingencies and time slippages.
		2.6.	Reporting and communication strategy or process is defined and documented.

© Commonwealth of Australia, 2026 BuildSkills Australia

3.	Assemble project team and commence work.	3.1.	Appropriate project team members are secured and briefed regarding the project, their roles, levels of delegated responsibility, and outcomes to be achieved.
		3.2.	Communication processes are put in place to coordinate work and inform team members of progress.
		3.3.	Clear reporting processes for team members are communicated.
4.	Manage project.	4.1.	Project progress is monitored according to project plan requirements, using appropriate ***project management tools*** and methodologies.
		4.2.	Team members are supported and their output is managed against key performance indicators identified in project plan.
		4.3.	Corrections, changes and additions are made to project plan in light of changing circumstances to ensure project aims and outcomes are met.
		4.4.	Resourcing to support project is monitored and corrections are made to reflect changing circumstances.
		4.5.	Reporting of overall project progress is made to senior management or client as required and in line with project plan.
5.	Finalise project.	5.1.	Required handover to staff members responsible for ongoing implementation or maintenance of project products or services is conducted efficiently, effectively and in line with organisational procedures.
		5.2.	Project team members and relevant stakeholders are debriefed about conduct of project and outcomes achieved.
		5.3.	Report is prepared analysing strengths and weaknesses of project plan and conduct of project.
6.	Use project to improve future processes.	6.1.	Learning outcomes are identified and analysed to inform future complex projects.
		6.2.	Strategic impact of project is considered and fed into the organisation’s ongoing strategic planning processes.

© Commonwealth of Australia, 2026 BuildSkills Australia

Foundation Skills

This section describes core skills that are essential to performance and not explicit in the performance criteria. Employment skills essential to performance are explicit in the performance criteria of this unit of competency.

Skill	Performance feature
Learning skills to:	• engage in processes designed to research and update own knowledge of products, software systems and technology used in managing complex projects • reflect on and critically analyse experiences of planning and managing complex projects to determine training and development required to improve future performance of self, others and the organisation.
Numeracy skills to:	• represent and monitor projected resource costs in the form of budgets over the life of a complex project • estimate, monitor and manage the allocation of own time on project tasks and supervise the use of others' time to allocated project tasks.
Oral communication skills to:	• liaise with clients and other stakeholders on project progress using appropriate vocabulary and technical terminology.
Reading skills to:	• interpret and engage in analysis of documentation, including legislation, drawings, plans and specifications.
Writing skills to:	• organise and present data in reports and strategy documents that respond to complex project requirements and include project plans and communication strategies involving analysis and recommendations.

Range of conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

Legislation and industry codes and standards must include:	• Australian and international standards applicable to the project • building Acts and regulations • infrastructure supply regulations • National Construction Code.

© Commonwealth of Australia, 2026 BuildSkills Australia

Risk management analysis must include:	• analysing potential for workers' compensation claims • assessing public liability requirements • establishing or confirming business continuity plans • considering changing government policy or funding arrangements • identifying environmental obligations • identifying and mitigating work health and safety risks • identifying property development and maintenance requirements.
Specifications and terms of reference must include:	• defining project aims • describing outcomes to be achieved using clear metrics • describing all stakeholders • describing project parameters and scope of operations.
Project management tools must include:	• critical path analysis • Gantt or PERT charts or other industry-accepted project management tools • in-house or proprietary software • scheduling and reporting templates.

Assessment Requirements for CPCMCM8001 Plan and manage complex projects

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 1.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must successfully design, implement, manage and finalise two complex projects.

For each project, the person must produce a detailed project plan outlining a process and methodology for the planning, scheduling and sourcing of human and other resources. Each plan must also:

- specify how the project team members will be resourced, assembled and briefed on roles, responsibilities and deliverables
- outline processes for managing and communicating with a team of diverse skills and roles, including:
    - architects
    - lead contractors
    - mechanical engineers
    - hydraulic engineers
    - electrical engineers
- specify a process for project reporting that details frequency and format of reports
- ensure the project aligns to and supports organisational strategies and requirements.

For each project, the person must identify:

- at least one key learning outcome from the project
- where this learning could refine and improve future complex project management processes.

Knowledge Evidence

A person demonstrating competency in this unit must be able to demonstrate knowledge of:

- processes and practices involved in developing budgets

© Commonwealth of Australia, 2026 BuildSkills Australia

- principles of team leadership and human resource management relating to managing others working on a complex project
- processes involved in risk management, risk analysis and planning
- legislation, codes and standards relevant to the specific project:
    - Australian standards
    - building Acts and regulations
    - infrastructure supply regulations
    - international standards
    - the National Construction Code
- reporting mechanisms relevant to updating and informing clients and other stakeholders of project progress
- roles and responsibilities of relevant building project personnel
- sustainability requirements relevant to the project:
    - energy conservation
    - water conservation
- tools and models of project management used in managing complex construction projects.

Assessment Conditions

Assessment must be conducted in the workplace or a close simulation of the workplace.

Suitable assessment of performance would require:

- equipment:
    - computer with internet and email access
    - proprietary software with spreadsheet and word processing functionality and project management capabilities
- materials:
    - current legislation, codes and standards relevant to the specific project and the jurisdiction in which the project work is taking place, including:
        - building Acts and regulations
        - infrastructure supply regulations
        - Australian standards
        - international standards
    - project documentation, including design or project briefs, drawings, specifications, construction schedules and other supporting documents
    - research resources, including product information and data.

© Commonwealth of Australia, 2026 BuildSkills Australia

Assessor requirements

Assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

Link

Companion volumes, including implementation guides, are found on the national training register - https://training.gov.au/training/details/CPC.

CPCMCM8002 Manage the quality of projects and processes

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 1.0.

Application

This unit of competency specifies the outcomes required to establish performance measures of projects and processes, and review and improve their management and accountability.

The unit covers the need for quality control and responsibility for providing service outcomes to customers. Managing organisational change is a major focus of the unit.

This unit supports the attainment of skills and knowledge required for competent workplace performance in organisations of all sizes. It will support senior managers with responsibility in all sectors.

The unit may be contextualised to the specific needs and knowledge and skill requirements of all industries, provided the essential outcomes of the unit are not changed.

No licensing, legislative, accreditation, regulatory or certification requirements apply to this unit at the time of endorsement.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

		text is used, further information is detailed in the range of conditions.	
1.	Establish parameters for delivery of a quality project or process.	1.1.	***Concepts, principles and tools of quality management and continuous improvement*** are researched and analysed.
		1.2.	Extensive research is undertaken to determine current and future service requirements of customers.
		1.3.	Recommended or anticipated changes to services and their processes are communicated to senior management for review and negotiated with stakeholders.
2.	Establish and implement performance measurement strategies.	2.1.	Financial and ***non-financial performance indicators*** and evaluation criteria for specific project are established and agreed upon with relevant stakeholders and communicated to relevant staff and service providers.
		2.2.	Appropriate financial and non-financial benchmarks are determined and agreed to with relevant stakeholders.
		2.3.	Project and services are monitored to ensure they meet identified needs and service expectations.
		2.4.	Feedback from customers is communicated to relevant areas in the organisation and incorporated into performance reviews.
		2.5.	Trends in ***customer or stakeholder satisfaction*** and service use are monitored to identify opportunities for improvements to services or processes.
		2.6.	Issues of responsiveness and accessibility are reviewed and reported.
3.	Facilitate accountability for project and service outcomes.	3.1.	Project management systems, ***reporting mechanisms*** and processes are established and communicated to staff and service providers.
		3.2.	Results of service reviews against desired targets are reported according to standard organisational procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3.	Tenders and contracted works are regularly monitored and adverse variations in established performance targets are immediately addressed.
		3.4.	Quality and efficiency of operational processes are measured and documented.
		3.5.	Service shortfalls are analysed and resolved in line with organisational policies and procedures, including customer service standards.
4.	Develop and implement change management processes.	4.1.	Need for change in organisational processes and work culture to support project or service delivery is identified.
		4.2.	Change process to address the need is identified, developed and implemented.
		4.3.	Staff members are informed of implemented changes and provided with training, coaching and other assistance as required.
		4.4.	Appropriate methods are employed to gain commitment for change.
		4.5.	Effectiveness and benefits of implemented changes are monitored and reported.
		4.6.	Outcomes of improvements are reviewed and shared across the organisation to support further learning and continuous improvement.

Foundation Skills

This section describes core skills that are essential to performance and not explicit in the performance criteria. Employment skills essential to performance are explicit in the performance criteria of this unit of competency.

Skill	Performance feature
Learning skills to:	• attempt complex tasks requiring sophisticated conceptualisation and analysis and employ lateral thinking and problem solving strategies • use formal approaches to critically reflect, gain insights and learn from project outcomes, refine and improve future processes, and consider and respond to performance feedback from stakeholders.

© Commonwealth of Australia, 2026 BuildSkills Australia

Numeracy skills to:	• extract, interpret and comprehend a range of mathematical information to calculate benchmarks, analyse financial reports, and monitor the performance of the project or process.
Oral communication skills to:	• liaise with management and other stakeholders on project progress using appropriate vocabulary.
Reading skills to:	• synthesise and critically evaluate information from a range of sometimes complex sources, including organisational systems, processes and activities to support the implementation of a quality project or process.
Writing skills to:	• collate and organise data to produce reports on customer service review and implementation success.

Range of conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.	
Concepts, principles and tools of quality management and continuous improvement must include at least one of the following:	• benchmarking • continuous improvement methodologies • failure mode and effects analysis • ISO 9000 Quality Management Systems and processes for certification • lean transformation processes • total quality management.
Non-financial performance indicators must include at least two of the following:	• completion times for projects measured against project plans • customer satisfaction ratings

© Commonwealth of Australia, 2026 BuildSkills Australia

	• demonstrated compliance of work with codes and standards • industry awards received • number of business referrals • performance in industry benchmarking studies • volume of repeat business.
Methods of measuring ***customer or stakeholder satisfaction*** must include:	• gap analysis approach • customer satisfaction monitoring approach, such as: o questionnaires o face-to-face interviews • customer-focused key performance indicators.
Reporting mechanisms must include:	• financial and non-financial system reports, including budgets • informal reporting methods, including: o regular team meetings o departmental meetings.

Assessment Requirements for CPCMCM8002 Manage the quality of projects and processes

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 1.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. The person must manage the development and delivery of two projects:

- one project requiring the person to review a proposed new process in an organisation or department
- one project requiring the person to oversee the development and delivery of quality outcomes.

For each project, the person must:

- provide a detailed overview of the project and identify a set of performance measures and evaluation criteria for the project
- select or develop appropriate reporting mechanisms which will assist in identifying project progress against agreed quality and service levels
- develop strategies to communicate the change to stakeholders
- monitor project progress against agreed performance measures and evaluation criteria
- outline key learning outcomes from the project that will enhance or contribute to the implementation of future projects.

For each project the person must also develop a change management process that identifies:

- changes to be introduced
- key stakeholders who will be affected by the change
- a communication strategy for informing all stakeholders throughout the implementation phases of the project
- strategies for training or mentoring stakeholders during the implementation phases of the project.

Knowledge Evidence

A person demonstrating competency in this unit must be able to demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- principles of change management processes and their application
- principles of quality management and continuous improvement processes
- organisational policies and procedures:
    - customer service standards
    - procedures for reporting on review of services
- functions and limitations of relevant project management software.

Assessment Conditions

Assessment must be conducted in the workplace or a close simulation of the workplace.

Suitable assessment of performance would require:

- equipment:
    - computer with internet and email access
    - software that enables the development of spreadsheets and word processing
- materials:
    - project documentation, including project briefs, drawings, specifications, construction schedules and other relevant supporting documentation.

Assessor requirements

Assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

CPCPCM2039 Carry out interactive workplace communication

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to carry out effective communication techniques underpinning work in the plumbing and services industry.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
1	Plan workplace communication.	1.1 Identify information and/or instructions to be communicated and received.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify workplace context and personnel with whom to communicate.
		1.3	Identify and select suitable forms of communication and method(s) for workplace context.
2	Apply oral communication.	2.1	Communicate clearly and orally using language and method consistent with workplace context and procedures.
		2.2	Adjust oral communication delivery where intent of communication was not received correctly.
		2.3	Confirm communication is received by recipient as intended.
3	Apply non-verbal communication.	3.1	Communicate non-verbally using body language and gestures consistent with workplace context and procedures.
		3.2	Adjust non-verbal communication delivery where intent of communication was not received correctly.
		3.3	Use visual communication that follows accepted industry practice or social convention in accordance with workplace context and procedures.
		3.4	Confirm communications are received by recipient as intended.
4	Use written communication.	4.1	Identify workplace activities requiring written communication to be applied.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Read and interpret workplace information or requirements from relevant job plans and specifications, codes, Australian standards, manufacturer’s specifications and jurisdictional requirements.
		4.3	Identify and apply regulatory and work activity signage in accordance with workplace procedures.
		4.4	Complete regulatory authorities' and workplace documentation in accordance with workplace procedures.
		4.5	Record and report work activities in accordance with workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPCM2039 Carry out interactive workplace communication

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- communicating with others orally and non-verbally in a clear and accurate manner
- reading and interpreting workplace procedures, job instructions, job processes and equipment and operator instructions
- applying work activity signage in accordance with regulatory and workplace requirements
- completing regulatory and workplace documentation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- types of communication
- non-verbal communication
- standardised signage
- visual signalling procedures
- types of workplace documentation
- how instructions are conveyed in the workplace
- how work schedules, charts, bulletins and memos are used
- industry-relevant technology to support oral communication
- industry terminology
- job safety analyses (JSAs) and safe work method statements (SWMSs).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

© Commonwealth of Australia, 2026 BuildSkills Australia

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Establish job requirements.	1.1	Access, read and determine requirements from plumbing plans and specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
		1.2	Obtain, interpret and follow organisational work health and safety (WHS) and environmental requirements.
		1.3	Identify amendments to ensure plans and specifications are the most current version.
		1.4	Confirm drawing conventions used and their application.
		1.5	Select appropriate tools and equipment.
		1.6	Determine type of materials.
		1.7	Calculate dimensions and material quantities.
		1.8	Document materials list to workplace requirements.
2	Mark out job.	2.1	Read and determine job dimensions from relevant plans and specifications.
		2.2	Mark out materials using appropriate marking tools.
		2.3	Check markings for accuracy and compliance with planned dimensions.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Clean up.	3.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state/territory legislation and workplace policies and procedures.
		3.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPCM2040 Read plans, calculate quantities and mark out materials

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by referring to plans and specifications for at least three different plumbing or plumbing services tasks to:

- develop a full materials and specifications list, including lengths, diameters and quantities
- transfer requirements from the plans to accurately mark out materials.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types of plans and their purpose
- parts of a plan and their function
- conventions and scales used in plans and specifications
- calculation principles used in the plumbing sector:
    - converting millimetres to metres
    - converting metres to millimetres
    - length
    - perimeter
    - circumference
    - area
    - volume
    - pressure
    - addition, subtraction, multiplication and division
    - ratio
    - percentage
- how to access relevant information, including codes and standards

© Commonwealth of Australia, 2026 BuildSkills Australia

- tools, materials and equipment used to read plans, calculate quantities and mark out materials
- work health and safety (WHS) requirements for reading plans, calculating quantities and marking out materials.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
Comply with work requirements.	1.1	Identify plumbing and services sector employment conditions, responsibilities and obligations.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Access the requirements of relevant plumbing legislation, regulations, standards and codes of practice through a variety of mediums.
		1.3	Participate in identifying and pursuing own development needs and processes.
		1.4	Follow and apply the specific work health and safety (WHS) requirements of the plumbing industry when preparing for and undertaking work activities.
		1.5	Follow and apply workplace quality assurance and sustainability principles and concept requirements.
2	Work in a team.	2.1	Identify workplace goals and contributions to be made by teams.
		2.2	Identify and agree on individual contributions to teamwork activities.
		2.3	Organise and accept responsibility for own workload.
		2.4	Complete work activities to the standard expected in the workplace.
		2.5	Report safety risks in the work area based on identified hazards to designated personnel.
		2.6	Review team activities periodically with the team according to workplace procedures.
		2.7	Implement team activity review findings to facilitate effective work practices.

Assessment Requirements for CPCPCM2041 Work effectively in the plumbing services sector

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- complying with relevant work health and safety (WHS) requirements
- identifying relevant standards and industry codes of practice in the plumbing services sector
- applying the relevant regulatory requirements within the plumbing services industry
- working collaboratively as part of the plumbing services workplace processes
- identifying actions to manage workplace and personal conflict situations.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- basic job and skill analysis techniques
- workplace meeting procedures
- plumbing and services streams and career structure and requirements, including business opportunities and requirements
- regulatory and legislative standards and codes of conduct pertaining to the plumbing services sector
- relevant industrial awards and agreements
- relevant legislative provisions covering discrimination and equal employment opportunity
- site and teamwork structure and methods
- important contribution of the plumbing and services sector to public health and safety
- employment awards and conditions and their source
- types of workplace codes of conduct
- safe work practices in a normal working environment.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Participate in workplace induction procedures.	1.1	Familiarise self on workplace induction procedures.
		1.2	Identify location of emergency equipment, designated personnel and current workplace emergency and evacuation procedures.
2	Plan and prepare for safe work practices.	2.1	Identify and apply safe work practices when preparing for and undertaking work process.
		2.2	Select personal protective equipment (PPE) and ensure it is correctly fitted and used according to the requirements of the job.
		2.3	Select tools and equipment consistent with safe work requirements and check for serviceability, reporting any faults.
		2.4	Determine and erect required barricades, hoardings and signage at job location where required.
		2.5	Identify and apply relevant safety data sheets (SDSs), job safety analyses (JSAs), safe work method statements (SWMSs) and standard operating procedures (SOPs).
3	Identify and assess risks.	3.1	Identify, assess and report hazards in the work area to designated personnel.
		3.2	Report safety risks in the work area based on identified hazards to designated personnel.
		3.3	Follow safe work practices, duty of care requirements and safe work instructions for controlling risks.
		3.4	Contribute to WHS, hazard, accident or incident reports in accordance with workplace procedures, Australian government and state/territory WHS legislation, and relevant information.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Identify hazardous materials and other hazards on work sites.	4.1	Identify and apply appropriate procedures to handle and use hazardous materials on a work site in accordance with legislative requirements and workplace policies and procedures.
		4.2	Apply measures for controlling risks and construction hazards effectively and immediately.
		4.3	Use appropriate signs and symbols to secure hazardous materials that have safety implications for self and other workers immediately after they are identified.
5	Apply safe work practices.	5.1	Carry out tasks in a manner that is safe for operators, other personnel and the general community, in accordance with legislative requirements and workplace policies and procedures.
		5.2	Use fit-for-purpose tools, plant and equipment in accordance with manufacturers' specifications, work site regulations and Australian Standards.
		5.3	Follow procedures and report any hazards, incidents and injuries to designated personnel.
		5.4	Identify and follow requirements of work site safety signs and symbols.
		5.5	Clear and maintain work site area to prevent and protect self and others from incidents and accidents and to meet environmental requirements.
		5.6	Follow workplace emergency procedures where required.

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Knowledge Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- applying work health and safety (WHS) requirements, policies and procedures on three separate and different occasions in the plumbing and services work environment.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- procedures and policies for identifying and reporting hazards, safety risks and hazardous materials, including asbestos and silica in the workplace
- job safety analyses (JSAs) and safe work method statements (SWMSs)
- safe manual handling techniques
- purpose and application of safety data sheets (SDSs) when working with different materials
- relevant legislation, regulations and workplace requirements relating to WHS, including hazard reduction and personal safety
- the requirements for working in confined spaces
- the requirements for working at heights, including on roofs
- electrical safety requirements, including but not limited to:
    - tag and test
    - residual current devices
    - equipotential (electrical) bonding
    - electrical earthing

		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE).
		2.2	Check levelling equipment for current calibration in accordance with state and territory legislation and workplace policies and procedures.
3	Perform levelling.	3.1	Identify levels to be transferred from relevant job plans and specifications.
		3.2	Set up and operate levelling equipment according to manufacturer's specifications, workplace procedures and standards.
		3.3	Record and mark levels according to job requirements and workplace procedures, ensuring the required tolerance and specifications.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPCM2047 Carry out levelling

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using either a pipe laser, rotary laser or automatic level
- grading a pipe or gutter for a minimum of 5 metres to a tolerance of + or - 5 mm.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- different types of levelling tools and equipment and their application and method of operation:
    - laser level
    - automatic level
    - spirit level
    - water level
    - string line
    - staff
- safe work procedures relating to the use, handling and storage of levelling equipment
- process of establishing, recording and checking levels and alignment
- basic calculations relating to carrying out levelling
- how to access relevant information, including relevant job plans and specifications, codes and standards manufacturer’s specifications and jurisdictional requirements
- tools, materials and equipment used to carry out levelling operations
- work health and safety (WHS) requirements for carrying out levelling operations.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

© Commonwealth of Australia, 2026 BuildSkills Australia

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM2048 Cut and join sheet metal

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to cut and join sheet metal in the plumbing and services industry.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
1 Identify cutting and joining requirements.	1.1	Access, read and determine sheet metal cutting and joining requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply organisational work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Determine material quantities.
		2.2	Create a materials list and collect materials.
		2.3	Select appropriate tools and equipment including personal protective equipment (PPE).
3	Cut and join sheet metal.	3.1	Mark out sheet metal in accordance with relevant job plan and specifications.
		3.2	Check measurements and cut sheet metal.
		3.3	Clean and prepare surfaces for joining.
		3.4	Align, fasten and join sheet metal using an appropriate sealing method.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Assessment Requirements for CPCPCM2048 Cut and join sheet metal

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- constructing two different sheet metal products, using two of the following joining techniques:
    - grooved seam
    - knock up joint
    - peened joint
    - simple lap
    - Pittsburgh lock
- and two of the following fastening techniques:
    - spot weld
    - riveted
    - screwed
    - bolted
- including the application of one approved sealing method.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the characteristics of different sheet metal materials
- electrolysis and the problems associated with using incompatible products
- preparation of material for sealing
- approved sheet metal sealants
- how to access relevant information, including codes and standards
- tools, materials and equipment used to cut and join sheet metal
- work health and safety (WHS) requirements for cutting and joining sheet metal.

CPCPCM2049 Cut using oxy-acetylene equipment

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Minor title change. Changes to Elements and Performance Criteria 2.3 and 3.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to use oxy-acetylene equipment to carry out basic cutting of mild steel.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Minor title change. Changes to Elements and Performance Criteria 2.3 and 3.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- marking out and cutting the following materials from relevant job plans and specifications, using hand-held oxy-acetylene cutting equipment:
    - cut 150 mm x 150 mm mild steel plate (up to 8 mm thick) into three equal pieces
    - cut (up to 8 mm thick) mild steel disc to fit a DN40 to DN100 diameter mild steel pipe
    - cut three holes to fit up to DN50 branch pipes into a length of up to DN100 diameter mild steel pipe.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the safe and operating principles of oxy-acetylene equipment
- the potential fumes and health and safety risks from high temperatures on materials
- the properties of materials and the effect of heat on the properties of metal
- hot work permit
- types of gases used for cutting mild steel
- how to access relevant information from relevant job plans and specifications, codes, Australian Standards, manufacturer’s specifications and jurisdictional requirements
- tools, materials and equipment to cut mild steel using oxy-acetylene equipment

Assessment Requirements for CPCPCM2052 Weld mild steel using oxy-acetylene equipment

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using oxy-acetylene welding equipment to weld the following:
  - a flat butt weld up to 6 mm mild steel plate, 150 mm long
  - a vertical butt weld up to 6 mm mild steel plate, 150 mm long
  - a rotated butt weld around up to DN100 mild steel pipe located in a horizontal position and rotated during welding.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the dangers associated with oxy-acetylene welding in the fabrication and installation of plumbing systems
- the properties of materials and the effect of heat on properties of metal
- the set-up and operating principles of oxy-acetylene welding equipment
- types of gases used for welding mild steel
- hot work permit
- uses and characteristics of mild steel in the plumbing and services industry
- how to access relevant information, including codes and standards
- tools, materials and equipment used to weld mild steel using oxy-acetylene equipment
- work health and safety (WHS) requirements for welding mild steel using oxy-acetylene equipment.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

Assessment Requirements for CPCPCM2054 Carry out simple concreting and rendering

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- carrying out one of the following:
  - bench an access chamber a minimum of 600 mm square or diameter
  - install two thrust blocks
  - cement render pipe penetration through a floor or wall
  - pour a concrete slab to minimum of 600 mm square
  - repair a concrete slab to minimum of 600 mm square
  - repair pipe chases in a brick wall a minimum of 600 mm long.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- basic levelling techniques
- categories of materials and their safe handling, storage and transport requirements
- concrete and rendering materials
- plans, drawings and specifications
- simple formwork and reinforcing
- different types of concreting tools and equipment
- how to access relevant information, including codes and standards
- tools, materials and equipment used to carry out simple concrete and rendering
- work health and safety (WHS) requirements for carrying out simple concrete and rendering.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

Assessment Requirements for CPCPCM2055 Work safely on roofs

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Correction to add missing text in Performance Criteria 1.3, 3.2 and 4.1.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- identifying correct and safe access and egress to and from roof area
- working safely on roofs above two meters on a minimum of two occasions, using different fall protection equipment/devices on each occasion.

One of the above occasions must include a restraint technique (anchor point) system with a minimum of two anchor points. The candidate must access the work area, traverse between anchor points, and exit from the work area.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- statutory jurisdictional regulations and workplace safety requirements relevant to working safely on roofs, including but not limited to:
    - limited freefall
    - anchor points
    - lanyards and energy absorbers
    - rescue plan and suspension trauma
    - scaffolds and guardrails

© Commonwealth of Australia, 2026 BuildSkills Australia

    - safety mesh
    - ladders
    - hazardous and fragile materials
    - manual handling
    - electrical hazards, including overhead cables
    - falling objects
- how to access relevant information, including relevant codes and Australian standards
- tools, materials and equipment used to work safely on roofing structures
- work health and safety (WHS) requirements for working safely on roofing structures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
1. Identify installation requirements.	1.1	Access, read and determine flashing penetration requirements from relevant job plans and specifications, codes, Australian standards, manufacturer’s specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment, including personal protective equipment (PPE).
3	Flash penetrations.	3.1	Identify location of wall and roof penetrations, allowing for existing and future services.
		3.2	Set out and cut penetrations.
		3.3	Install supports as required and fit the penetrating product.
		3.4	Fit and fix purpose-made or proprietary flashing as per relevant job plans and specifications, codes, Australian standards manufacturer's specifications and jurisdictional requirements.
		3.5	Apply fire resistant requirements to penetrations to meet standards and codes where required.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, store and secure.

Assessment Requirements for CPCPCM3021 Flash penetrations through roofs and walls

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- flashing the following penetrations:
    - a square/rectangular penetration with sides greater than 300 mm through wall cladding
    - a square/rectangular penetration with sides greater than 300 mm through roof sheeting
    - a circular penetration greater than 200 mm diameter through roof sheeting.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to flashing penetrations
- electrolysis and the problems associated with using incompatible products
- compatibility of various roofing and wall cladding materials with different joining methods
- processes, procedures and techniques for:
    - flashing penetrations on various roof coverings
    - flashing penetrations on various wall claddings
    - fabricating and installing flashings to prevent leaking
- principles of:
    - capillary actions
    - thermal expansion
    - corrosion and preventative treatments
    - electrolysis and impact of using dissimilar metals and products
- how to access relevant information, including job plans and specifications, codes, Australian Standards, manufacturer’s specifications and jurisdictional requirements

© Commonwealth of Australia, 2026 BuildSkills Australia

- tools, materials and equipment used to set out, cut and flash roof and wall penetrations
- work health and safety (WHS) requirements for setting out, cutting and flashing roof and wall penetrations.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM3022 Weld polymer pipes using fusion method

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Pre-requisite unit.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to fusion weld polymer pipes.

In some jurisdictions, this unit of competency may form part of accreditation, licencing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Prepare for work.	1.1	Access, read and determine welding requirements for polymer pipes and installation methods from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Determine job priorities and sequence job tasks in consultation with others on the worksite.
		1.3	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.4	Select and check the serviceability of the appropriate tools, equipment and personal protective equipment (PPE).
2	Identify welding requirements.	2.1	Create a materials list and collect materials.
		2.2	Check welding equipment for correct operation according to manufacturer instructions.
3	Weld and inspect pipe joints.	3.1	Prepare joints using tools and techniques according to manufacturer specifications and relevant standards.
		3.2	Conduct test welds and verify according to job specifications.
		3.3	Carry out fusion welds according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		3.4	Visually inspect fusion welds for compliance with relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Pre-requisite unit.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- butt welding three joints up to DN110 (OD) for a non-pressure application
- electro-fusion welding one socket joint up to DN110 (OD) for a pressure application.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- safe operation procedures for fusion welding of polymer pipe
- effect of heat and other products on the properties of polymer pipe
- operating principles of fusion welding equipment
- characteristics and limitations of materials
- surface preparation in the welding process
- identification of welding requirements
- how to access relevant information, including codes and standards
- tools, materials and equipment used to fusion weld polymer pipes
- work health and safety (WHS) requirements for fusion welding polymer pipes.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify installation requirements.	1.1	Access, read and determine requirements to fabricate and install non-ferrous pressure piping from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Set up silver brazing equipment according to workplace and WHS procedures.
		2.3	Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE).
3	Fabricate, install and test pipe system.	3.1	Set out pipelines and connection points according to drawings and specifications or job instructions.
		3.2	Use silver brazing equipment according to workplace and WHS procedures.
		3.3	Install pipework in accordance with relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		3.4	Test installed pipework according to s relevant codes, Australian standards, manufacturer's specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.5	Shut down and dismantle silver brazing equipment according to workplace and WHS procedures.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPCM3023 Fabricate and install non-ferrous pressure piping

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Performance Criteria 3.2.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Element and Performance Criteria 2.2 and 3.5.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- fabricating, installing and testing a DN20 copper line from a supply point to three fixed outlets, supported and clipped according to relevant job plans and specification, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements with a minimum:
    - one 15 mm mechanical bend
    - one 20 mm mechanical bend
    - one 15 mm spring bend
    - one 20 mm spring bend
    - one 15 mm capillary elbow
    - one 20 mm capillary elbow
    - one expanded silver brazed joint
    - one silver brazed copper to brass joint
    - two branch formed silver brazed joints
    - one mechanical flared joint
    - branches connecting at least two other non-ferrous materials, ensuring branches and bends are square.

© Commonwealth of Australia, 2026 BuildSkills Australia

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- fabrication, installation and testing process for non-ferrous pressure pipe systems
- relevant statutory authorities' requirements and standards related to fabricating, installing and testing non-ferrous pressure pipe systems
- effect of heat and other products on the properties of polymer pipe
- types of non- ferrous materials, including joining techniques
- hot works permit
- how to access relevant information, including codes and standards
- tools, materials and brazing equipment used to fabricate and install non-ferrous pressure piping
- work health and safety (WHS) requirements to fabricate and install non-ferrous pressure piping.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Create simple sketches and drawings.	1.1	Identify key features required through consultation with associated persons and reference to plans.
		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
		1.3	Select suitable views to create simple sketches and drawings.
		1.4	Use standard drawing conventions, incorporating relevant codes and standards to create simple sketches and drawings.
2	Notate and process drawings.	2.1	Record essential information on the drawing with symbols and abbreviations according to standard drawing conventions.
		2.2	Store drawings according to organisational administration and quality procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Assessment Requirements for CPCPCM3024 Prepare simple drawings

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Knowledge Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- producing three drawings for plumbing services work from any of the following:
    - a sanitary plumbing installation
    - a sanitary drainage installation
    - a mechanical services installation
    - a gas installation
    - a roofing installation
    - a fire services installation
    - a water services installation.

The drawings must:

- include 2D plan, schematic or isometric, and sectional drawings
- be presented clearly with appropriate notations and labelling.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- drawing conventions and features, including direction, scale, key, contours, symbols and abbreviations
- drawing techniques
- types of drawings required:
    - floor plans

© Commonwealth of Australia, 2026 BuildSkills Australia

    - land boundaries and footprint of building
    - schematic drawings of pipework
    - sectional
    - isometric
- how to access relevant information, including codes and standards
- tools, materials and equipment used for creating drawings
- work health and safety (WHS) requirements where measurements are to be taken and recorded.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Prepare for work.	1.1	Access, read and determine installation requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
		1.3	Plan and sequence tasks in conjunction with others involved in or affected by the work.
		1.4	Select and check tools and equipment, including personal protective equipment (PPE), for serviceability.
		1.5	Identify the location of underground services.
		1.6	Prepare work area to support efficient installation of trench support systems.
2	Identify installation requirements.	2.1	Source equipment required for the excavation.
		2.2	Identify potential hazards and determine and implement control measures.
		2.3	Set out trench support installation according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		2.4	Consider the location of existing services and any traffic control requirements during installation.
3	Install trench support.	3.1	Determine and transfer installation requirements for installing trench support.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Install trench support according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements and without damage to surrounding environment, existing structures or other services.
		3.3	Check installation for compliance with relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
4	Clean up.	4.1	Remove trench support equipment, backfilling trench and return support equipment to storage area in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPCM3025 Install trench support

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical errors corrected in Element 1.3 and 3.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and removing as a minimum, two trench support systems using an approved shoring method and equipment to a minimum depth of 1.5 metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- types of trench support systems including:
  - aluminium shoring shields
  - close timber shoring
  - drag boxes
  - fixed and/or adjustable trench boxes
  - hydraulic vertical shoring
  - lite box aluminium panels
  - powerbrace
  - slide rails
  - raking shoring
- hazards associated with excavation including:
  - soil types and the likelihood of sudden changes in soil
  - presence of ground water and water entering cracks in soil adjacent to the excavation

© Commonwealth of Australia, 2026 BuildSkills Australia

    - effects on ground material by exposure to the air after excavation
    - vibration due to machinery, plant, motor vehicles and machinery
    - excavation depth and shape
    - presence or proximity of other underground services
    - presence of excavation, backfill material or equipment placed near an excavation
    - excavation within public property requirements
    - excavation close to footings and buildings
- work health and safety (WHS) requirements associated with the installation of trench support systems
- how to access relevant information, including job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used for the installing trench support.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Identify risks.	1.1	Obtain information and data to determine the nature and scope of workplace risks and risk controls.
		1.2	Inspect site conditions and functions for potential hazards.
		1.3	Document potential hazards.
		1.4	Access relevant information to determine situations covered by existing procedures.
		1.5	Classify type and scope of hazards not covered by existing procedures.
2	Assess risk.	2.1	Consider and determine the likelihood of an event happening.
		2.2	Evaluate and determine consequences of the potential event.
		2.3	Consider and determine risk level by combining likelihood and consequence evaluations.
		2.4	Refer unacceptable risk to the appropriate person or action according to own authority and capacity.
3	Apply a course of action for acceptable risks.	3.1	Conduct a detailed analysis of options.
		3.2	Identify resource requirements to manage risks.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Select the most appropriate action to manage or resolve the risk.
4	Complete records and reports.	4.1	Document actions resulting from the risk assessment activity according to workplace procedures and regulatory authorities' requirements.
		4.2	Document safety information and procedures.
5	Review effectiveness of risk control measures.	5.1	Establish a systematic review process of risk control measures.
		5.2	Identify appropriate communication methods to inform associated persons of the control measures to safe operating procedures.
		5.3	Develop a risk control policy and procedure based on the findings of the risk control review process.

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Unit Sector added to unit.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting a plumbing and services work-based risk assessment
- documenting and evaluating a risk management process
- locating, interpreting and applying relevant information
- complying with work health and safety (WHS) regulations and Commonwealth, state and territory legislation applicable to workplace operations
- identifying WHS duty holders and their duties
- developing a risk control policy and procedure.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- risk management theory and risk assessment terminology, including the hierarchy of controls
- reporting and recording procedures
- quality assurance systems and standards
- regulatory requirements related to obligations and risk management
- personal risk assessment and control processes
- how to access relevant information, including codes and standards
- tools, materials and equipment used for carrying out work-based risk control processes
- WHS requirements for carrying out work-based risk control processes.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Gather information.	1.1	Determine customer requirements.
		1.2	Access plans and specifications to determine work requirements.
		1.3	Consider sustainability principles and concepts applicable to proposed work.
		1.4	Determine source of products and services to be provided.
		1.5	Determine delivery point and methods of transportation.
2	Estimate materials, labour and time.	2.1	Plan and sequence work, including preparatory tasks.
		2.2	Calculate types and quantities of materials required.
		2.3	Determine plant and equipment requirements to perform work.
		2.4	Assess labour requirements to perform work.
		2.5	Determine time requirements to perform work.
		2.6	Calculate sundry costs to perform work.

© Commonwealth of Australia, 2026 BuildSkills Australia

3	Calculate costs.	3.1	Estimate total cost of materials, plant, equipment, sundry costs and labour according to workplace procedures.
		3.2	Apply overheads and mark-up percentages to calculate total work cost.
		3.3	Produce final cost for work.
4	Document and verify details.	4.1	Record details of services, costs and charges according to workplace procedures.
		4.2	Apply terms, inclusions and exclusions according to workplace procedures.
		4.3	Present quotation according to workplace procedures.
		4.4	Store quotations and documentation for future reference according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPCM4012 Estimate and cost work

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 2.6.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- providing detailed quotations from a set of plans for three varied jobs for a Class 1 building to customer requirements.

The quotes and tenders must include two of the following:

- sanitary/drainage installation
- mechanical services installation
- a gas installation
- a roofing installation
- a fire services installation
- a water services installation

The quotes and tenders must:

- include accurate and industry realistic estimates and costs for labour, materials, overheads and timing
- be reflective of the clients' needs
- be presented in according to workplace procedures.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- how to read plans and specifications to determine requirements
- process for estimating, managing and costing work

© Commonwealth of Australia, 2026 BuildSkills Australia

- calculating material requirements
- relevant statutory requirements related to estimating and costing work
- tendering and quotations
- contracting processes
- factors for estimating and costing:
    - labour
    - awards and workplace agreements

CPCPCM4013 Produce 2-D architectural drawings using design software

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to produce two-dimensional (2-D) architectural drawings using computer-aided design (CAD) software. It includes preparing drawings from project briefs, sketches, drawings and plans for residential and commercial projects.

This unit applies to those who work are responsible for preparing architectural drawings.

This unit is suitable for people operating with some autonomy. A person working at this level would be expected to take responsibility for organising and completing tasks assigned to them without needing close supervision.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Create a drawing template file.	1.1	Confirm and clarify drawing requirements with relevant personnel.
		1.2	Access and refer to current building and plumbing standards and regulations.
		1.3	Set up a basic drawing environment.
		1.4	Create a layering strategy for drawing, viewing and editing.
		1.5	Create an architectural library.
		1.6	Create suitable styles for title block, hatch patterns, dimension lines and thicknesses and text.
2	Produce architectural drawings.	2.1	Produce drawings using appropriate layers.
		2.2	Add relevant notations to the drawing as required.
		2.3	Add dimensions, using appropriate scales, to the drawing.
		2.4	Use editing commands to modify drawing elements and existing text.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Delete elements that are not required from the existing drawing.
3	Print CAD drawings.	3.1	Set printing requirements to suit page layout for drawings.
		3.2	Set print parameters for printer.
		3.3	Print drawings on the correct media.
		3.4	Observe sustainability principles and concepts when preparing for and undertaking work process.
4	Save and back up files.	4.1	Create suitable directories for the drawing project.
		4.2	Save and back up drawing files into specific drives or directories.
		4.3	Retrieve, rename and edit saved files as required.
5	Import files.	5.1	Insert drawing files into other software applications.
		5.2	Import text files from other software application into CAD.

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- producing one 2-D architectural drawing of a plumbing and services layout for a single dwelling (Class 1a) building, including:
    - the use of a computer-aided design (CAD) architectural program
    - compliance with current standards and codes
    - develop accompanying specifications.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types and application of drawings, including:
    - elevations or projections
    - floor plans
    - site plans
    - sections
    - details
- drafting and drawing protocols/conventions, including:
    - abbreviations
    - commonly used symbols
    - legends / keys
    - lettering standards

© Commonwealth of Australia, 2026 BuildSkills Australia

    - scale
    - SI units of measurement
    - paper size
- current building and plumbing codes, standards and regulations
- construction terminology
- structural systems and construction technology
- characteristics and application of building and plumbing materials
- sustainability principles and concepts which cover:
    - social, economic and environmental use of resources to meet current and future needs
    - energy efficiency
    - disposing of waste material to ensure minimum environment impact
    - relevant work health and safety (WHS) principles and responsibilities.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM4015 Access and interpret regulatory requirements for the plumbing and services industry

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to identify and apply the plumbing regulatory requirements to design and planned work activities for the plumbing and services industry, including the National Construction Code (NCC).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Access and identify the National Construction Code (NCC).	1.1	Identify the hierarchical relationship of legislation, Acts, regulations, codes and standards in the plumbing and services industry.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Determine building classification and type in accordance with the National Construction Code (NCC).
		1.3	Identify plumbing and services covered by the National Construction Code (NCC).
2	Interpret the National Construction Code (NCC).	2.1	Identify and interpret the requirements of jurisdictional variations and additions in the (NCC).
		2.2	Identify the difference between Performance Solutions and Deemed to Satisfy (DTS) installations.
		2.3	Identify jurisdictional documentation requirements for Performance Solutions and Deemed to Satisfy (DTS) for plumbing installations.
		2.4	Determine relevant certification requirements for use of materials and products.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPCM4015 Access and interpret regulatory requirements for the plumbing and services industry

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- Locating, downloading and identifying the different volumes of the National Construction Code (NCC)
- Identifying ten (10) different Australian Standards referenced in the National Construction Code volume 3 "Plumbing Code of Australia" (PCA) and the area of plumbing they cover, including jurisdictional variations and additions
- Identifying the official location where to obtain five (5) current versions of Australian Standards referenced in the PCA
- Determining classes and type of buildings referenced in the National Construction Code (NCC)
- Identifying the cross-volume considerations in the PCA, locating their location within NCC volumes 1 or 2.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the different sections, parts and their purpose contained in each volume of the National Construction Code (NCC)
- the difference between Performance Solutions and Deemed to Satisfy (DTS) installations
- the hierarchy of legislation and relationship between Acts, regulations, codes and standards
- jurisdictional requirements and application process for a performance solution
- jurisdictional requirements and process to lawfully carry out plumbing and services work
- WaterMark certification scheme and its relevance to installation and design of plumbing systems, or

© Commonwealth of Australia, 2026 BuildSkills Australia

- a metal cladding system on a building to meet compliance for three of the following provisions:
    - structural
    - sound transmission
    - energy efficiency
    - bushfire
    - condensation management
    - weatherproofing
    - fire resistance.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPCM5010 Design complex sanitary plumbing and drainage systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 3.1 and 3.5.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to undertake the hydraulic engineering design of complex sanitary plumbing and drainage installation and to prepare specifications for a range of wide-span and high-rise building applications up to 25 metres, including basement for residential, commercial and industrial buildings.

The unit requires application of technical skills and knowledge to prepare plans, specifications and operating and maintenance manuals.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for complex sanitary plumbing and drainage systems for wide-span and high-rise building projects.
		1.2	Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
		1.3	Interpret statutory and regulatory requirements for the design of complex sanitary plumbing and drainage systems.
		1.4	Analyse and apply Australian Standards and codes for the design of complex sanitary plumbing and drainage systems.
		1.5	Interpret manufacturer requirements and trade and technical manuals.
		1.6	Conduct additional research, including a desktop study to outline design parameters.
		1.7	Conduct a cost–benefit analysis comparing a range of pipe materials and system designs.
2	Plan and detail system components.	2.1	Plan layout of pipework systems, type and location of fittings and valves.
		2.2	Assess existing utilities services capacity and sizes.
		2.3	Calculate pipe sizes, pipe grades and trapping and ventilation requirements for a range of applications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Plan pipe support for a range of applications.
		2.5	Size and detail pump well, pump and pump control requirements.
		2.6	Specify approved materials, jointing methods and installation requirements for complex sanitary plumbing and drainage systems.
		2.7	Plan and detail acoustic performance of the sanitary plumbing and drainage system within the system design.
1	Design and size systems.	3.1	Design complex sanitary plumbing and drainage systems for a range of wide-span and high-rise building applications.
		3.2	Design rising main systems.
		3.3	Design and size a fully vented or fully vented modified system.
		3.4	Design and size a reduced velocity aerator stack system.
		3.5	Design and size complex sanitary plumbing and drainage systems using computer-aided design and drafting packages.
4	Prepare documentation.	4.1	Prepare client brief of the preferred design.
		4.2	Prepare plans and specifications for a range of complex sanitary plumbing and drainage systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPCM5010 Design complex sanitary plumbing and drainage systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 3.1 and 3.5.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of complex sanitary systems for a 25-metre high-rise mixed development building inclusive of a basement, using two approved sanitary plumbing systems, including:
    - fixtures on each level
    - specification and plans which include:
        - inspection openings and drainage cleaning provisions
        - overflow relief provisions
        - proprietary air admittance and relief systems
        - proprietary velocity reduction fittings
        - sewerage pumping stations (wet wells)
        - piping systems
        - venting systems.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in design of complex sanitary plumbing and drainage systems for all classes of building
- National Construction Code (NCC)
- other relevant Australian standards, codes or standard operating procedures (SOPs)
- principles of technology in the design of hydraulic systems

© Commonwealth of Australia, 2026 BuildSkills Australia

- procedures for maintaining air balance within the systems
- workplace safety requirements, including relevant statutory regulations, codes and standards
- scope of work:
    - interpretation of plans and specifications
    - sizing and documenting layout of complex sanitary plumbing and drainage systems for applications, including residential, commercial and industrial
- design requirements:
    - architectural plans
    - building specifications
    - fire rating of penetrations
    - owner requirements
    - pipework identification
    - soil quality
    - specialist waste applications
    - unstable or water-charged ground
- cost–benefit analysis considerations
- Australian Standards, codes, statutory and regulatory requirements:
    - NCC
    - relevant Australian Standards and codes, including AS/NZS 3500 Plumbing and drainage set
    - AS 2200 Design charts for water supply and sewerage
    - local government and health department requirements
    - state/territory government requirements
    - preparation of documentation for authorities' approval
- requirements from manufacturers:
    - material specifications
    - pump tables
    - sizing tables
    - recommended specific fixings for pipework
    - technical and trade manuals
- information gathered through desktop study:
    - architectural and building plans
    - developer plans

© Commonwealth of Australia, 2026 BuildSkills Australia

  - manufacturers' data
  - applications
  - brochures
  - forms
  - policies
  - other reports as available
- performance requirements, which must include flow, velocity, pressure and discharge requirements established using relevant Australian standards, codes and local authority plans
- layout of pipework systems based on principles of economy, serviceability, durability and fitness for use:
  - drainage
  - elevated pipework
  - low pressure pump
  - vacuum
  - vented stack systems
- types of fittings and valves
- access chamber details:
  - benching requirements
  - flow
  - gradient requirements
  - inlet and outlet connections
  - ladder access
  - lids
- cost–benefit analysis considerations
- gullies covering details such as size, location, bedding and concrete support:
  - boundary traps
  - disconnector gullies (DG)
  - floor waste (FW)
  - overflow relief gullies (ORG)
- types of calculations for complex sanitary plumbing and drainage systems:
  - determination of flow and fixture loadings
  - gradient calculations
  - interpretation of design charts and tables

© Commonwealth of Australia, 2026 BuildSkills Australia

    - pipe sizing calculations
    - reduced level calculations
    - self-cleaning velocities
- design elements of anchor blocks:
    - flow forces to be resisted
    - keying and anchorage points
    - sizes
    - soil characteristics
- types of pipe support:
    - anchors
    - bedding
    - bracket spacing
    - concrete support
    - corrosion protection
    - cover
    - hanging brackets
    - manufacturer-recommended specific fixings
    - material requirements
    - provision for expansion
    - saddles
    - wall and ceiling brackets.
- pump well, pump and pump control requirements:
    - access covers
    - automatic controls
    - capacity
    - chains
    - corrosion-resistant materials
    - detailing
    - emergency storage
    - high- and low-level water controls and alarms
    - impeller sizing
    - inlet and outlet design requirements
    - installation and mounting requirements
    - ladder access

© Commonwealth of Australia, 2026 BuildSkills Australia

    - macerator requirements
    - odour control
    - pump selection
    - pump sizing
    - pump well sizing
    - space requirements
    - step irons
    - valve requirements
    - ventilation
    - warning system
- sanitary and plumbing drainage system materials:
    - cast iron (Fe)
    - concrete
    - copper (CU)
    - vitrified clay pipe (VCP)
    - high density polyethylene (HDPE)
    - unplasticised polyvinyl chloride (uPVC)
    - other approved material
    - fittings and fixtures
    - measures to prevent the spread of fire
    - sound attenuation requirements.
- jointing methods:
    - brazing and threading
    - electrofusion welding
    - mechanical joints
    - rubber ring
    - solvent cement welding
- installation requirements:
    - bedding
    - clipping
    - concrete support
    - fire rating of penetrations
    - installation details
    - jointing requirements

CPCPCM5011 Design complex cold water systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Change to Elements and Performance Criteria 3.6.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design complex cold water distribution systems in commercial and high-rise mixed development building to a minimum of 29 floors inclusive of a basement. The unit requires application of technical skills and knowledge to design and size systems and prepare operational and compliance documentation.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit requirements are typically carried out by a consultant or design engineer.

Application of the unit is relevant to multi-storey residential, commercial and industrial buildings with or without connection to reticulated water supply.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Identify and establish scope of work from preliminary information and in consultation with associated persons.
		1.2	Determine design parameters from relevant Australian Standards, codes, plans, specifications, statutory and regulatory requirements and client brief.
		1.3	Apply sustainability principles and concepts as part of the design process.
		1.4	Establish performance requirements, considering safety of system users or building occupants.
		1.5	Determine available pressure and flow rates at site location.
		1.6	Conduct research, including a desktop study to outline design parameters.
		1.7	Interpret manufacturer requirements and trade and technical manuals.
		1.8	Conduct a cost-benefit analysis to compare a range of materials and system designs.
2	Plan and detail system components.	2.1	Plan layout of pipework systems, including the type and location of fittings and valves and acoustic performance of the system.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.2	Detail type, location and requirements for backflow prevention devices.
		2.3	Specify flush valve system types and operation.
		2.4	Calculate pipe sizes, velocities, flows and residual pressures for a range of applications.
		2.5	Detail or design cold water system components.
		2.6	Size and detail pump, pump controls and pump room requirements.
		2.7	Specify approved materials, jointing methods and installation requirements.
1	Design and size systems.	3.1	Design systems for a range of wide-span and high-rise building applications.
		3.2	Design flush valve distribution systems for sanitary ablutions.
		3.3	Design a range of delivery systems.
		3.4	Design and size complex cold water distribution systems using computer software packages.
		3.5	Design water storage and break tanks.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.6	Design cold water pressure systems and incorporate into building supply system.
		3.7	Design backflow penetration systems associated with cold water systems.
		3.8	Calculate pipe sizes, velocities and pressures.
		3.9	Calculate system pressures, pressure losses and pressure reduction measures.
4	Prepare documentation.	4.1	Prepare client brief for the preferred design.
		4.2	Prepare plans and specifications for designing complex cold water systems.
		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual for maintaining cold water systems.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Change to Elements and Performance Criteria 3.6.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of two methods of providing a cold water supply for a high-rise mixed development building to a minimum of 29 floors inclusive of a basement, including:
    - fixtures on each level
    - a non-drinking supply system
    - a flush valve system
- planning system detail components, including:
    - authorities' connection
    - backflow prevention requirements
    - fixtures and fitments
    - flush valves
    - meter assemblies
    - storage tanks
    - piping systems
    - pumps
- applying sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- evaluating health risks associated with drinking and non-drinking water supplies and actioning as required within the system design.

© Commonwealth of Australia, 2026 BuildSkills Australia

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- AS/NZS 3500 Plumbing and drainage set
- AS 2200 Design charts for water supply and sewerage
- common terminology and definitions used in design of cold water reticulation systems
- National Construction Code (NCC)
- local and state government requirements
- preparation of documentation for authorities' approval
- nature of materials used and the effects of performance under various conditions
- other relevant Australian Standards, codes or standard operating procedures
- principles of technology used in design of cold water reticulation and hydrant and hose reel systems for all classes of building
- requirements of state regulatory authorities and manufacturer specifications, including hazards identified in relation to devices and systems used
- water quality requirements
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- methods to apply sustainability principles and concepts:
    - selecting appropriate material to ensure minimal environmental impact
    - efficient use of material
    - efficient energy usage/capital outlay comparison
    - effect on the environment due to overflow or leakage
    - water efficiency
    - consideration of the Green Building Council of Australia rating scheme
- information on design requirements:
    - architectural plans
    - building specifications
    - effect of water quality on pipework, plant and equipment
    - owner requirements
    - pipework and valve identification
    - soil quality
    - specialist water use applications
    - unstable or water-charged ground
- specifications for:

© Commonwealth of Australia, 2026 BuildSkills Australia

  - bedding
  - flow requirements
  - jointing
  - manufacturer requirements
  - materials
  - residual pressures
  - WHS
  - specialised components
  - support
  - testing
  - valve selection
  - water treatment
  - workmanship
- locating information on systems and components from a variety of sources such as:
  - manufacturer's websites
  - trade meetings and exhibitions
  - brochures
  - trade outlets
  - other design projects
- cost-benefit analysis considerations for the selection of materials and system:
  - enabling cost effective choices without compromising the integrity of the project
  - expected design life
  - associated labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitability of materials
  - range of system choices
- manufacturer's requirements:
  - flow and pressure requirements for fixtures and appliances
  - material specifications
  - pump tables
  - sizing tables

CPCPCM5012 Design complex stormwater and roof drainage systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Application and Elements and Performance Criteria 4.4.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design complex stormwater and roof drainage systems for commercial, industrial and residential properties.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit requirements are typically carried out by experienced people such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify design parameters.	1.1	Determine design scope from plans, specifications and client brief.
		1.2	Identify applicable regulatory and legislative requirements for the design of complex stormwater and roof drainage systems.
		1.3	Apply sustainability principles and concepts as part of the design process.
		1.4	Account for the safety of system users or building occupants.
		1.5	Determine and estimate rainfall intensity and volume using measurements of different catchment areas.
		1.6	Analyse overland flood path affecting the property and buildings.
		1.7	Research and evaluate other information likely to impact the stormwater and roof drainage system design.
2	Plan system components.	2.1	Plan and evaluate strategies for harvesting and re-using rainwater.
		2.2	Plan and evaluate methods of collection and disposal of roof surface run-off water.
		2.3	Plan and evaluate stormwater detention and retention systems and first-flush stormwater systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Determine and specify the most suitable methods of preventing backflow of sub-soil and stormwater into buildings.
		2.5	Plan and evaluate treatment and disposal options for stormwater discharge.
		2.6	Plan layout of system components according to design parameters and site limitations and coordinate with other services.
3	Design and size systems.	3.1	Apply regulatory requirements, Australian Standards and codes to all aspects of the stormwater and roof drainage system design.
		3.2	Calculate and specify storage volume, pump capacity and discharge pipe size required for stormwater pumping systems as necessary.
		3.3	Design stormwater systems requiring pumping.
		3.4	Design, select, size and detail system components using appropriate calculations, software applications and approved materials.
		3.5	Specify correct installation, laying and jointing procedures for approved materials and components.
4	Prepare documentation.	4.1	Prepare client brief of the preferred design.
		4.2	Prepare plans and specifications.
		4.3	Prepare testing and commissioning schedule.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.4	Produce operation and maintenance manual, including information on how to properly and safely maintain the system.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPCM5012 Design complex stormwater and roof drainage systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Application and Elements and Performance Criteria 4.4.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of a complex stormwater and roof drainage system for a site incorporating a high-rise mixed development building within a wide-span multiple building project (such as a school), including:
    - specification
    - access chambers
    - grade of drains
    - holding pits
    - collection sumps
    - detention, retention and harvesting systems
    - disposal methods for stormwater catchments to council or utility provider's drainage network or disposal on-site
    - other system components
- using appropriate design software to produce detailed drawings and layout plans, including long sections and cross-sections of the designed system
- applying sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- evaluating health risks associated with stormwater and roof drainage systems and action as required within the system design.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- relevant codes, Australian standards and specifications:
    - Australian rainfall and run-off (ARR) guidelines
    - AS/NZS 3500 Plumbing and drainage set
    - manufacturer specifications
    - National Construction Code (NCC)
    - building codes
    - work health and safety (WHS) and environmental requirements
    - plumbing regulations
- terminology and definitions used in hydraulic design
- computer-aided design (CAD) software
- installation methods used in hydraulic systems
- hazards associated with devices and systems used in the hydraulic sector
- environmental requirements:
    - clean-up protection
    - stormwater protection
    - waste management
    - water quality management
- quality assurance requirements:
    - Environmental Protection Agency (EPA)
    - internal company quality assurance policy and risk management strategies
    - International Standards Organisation (ISO)
    - site safety plan
    - workplace operations and procedures
- safe work procedures relating to planning, sizing and documenting layout of pipework and fixtures
- local government requirements:
    - Integrated Planning Act (IPA)
    - standard drawings and details
    - town planning requirements
- treatment requirements such as:
    - screens
    - silt traps
    - solid removal systems
- plans and documentation relevant to the design:

© Commonwealth of Australia, 2026 BuildSkills Australia

  - site plans
  - cross-sections
  - details
  - elevations
  - sections
  - civil drawings
  - contour levels
  - existing services
  - reduced levels
  - manufacturer requirements and specifications
  - catchment area analysis
  - stormwater design
  - surveys
- system components:
  - access chambers (manholes)
  - channels
  - culverts
  - downpipes
  - fire rating of penetrations
  - grated pits
  - gullies
  - guttering
  - inspection chambers
  - inspection openings
  - kerbs
  - piping
  - pits
- treatment options for stormwater discharge:
  - grass and rock swales
  - lagoons
  - momentum diffusers
  - ponds
  - screens
  - silt traps

    - traps
    - other removal systems as determined
- disposal options for stormwater discharge:
    - connection to stormwater mains
    - creeks
    - harbour
    - kerb and street channels
    - lakes
    - on-site harvesting and reuse
    - rainwater collection systems, including tanks and dams
    - rivers
    - streams
- determining rainfall intensities by:
    - average rainfall intervals
    - roof, surface and subsurface calculations
    - site location
    - time and concentration
- catchment areas:
    - land surface catchment areas, including a variety of surface conditions such as grassed and paved areas
    - roof catchment areas
- stormwater drainage systems:
    - access chambers (manholes)
    - collection sumps
    - detention and retention
    - grade of drains
    - harvesting
    - holding pits
    - pump discharge
- approved piping materials:
    - concrete
    - earthenware or vitrified clay pipe (VCP)
    - fibre cement (FRC)
    - polyvinyl chloride (PVC)

© Commonwealth of Australia, 2026 BuildSkills Australia

    - other approved materials
- approved fittings:
    - bends
    - grates
    - gullies
    - junctions
    - non-return valves
- stormwater systems requiring pumping:
    - holding tanks
    - overflow provisions
    - pump and controls
    - rising main
- methods of applying sustainability principles and concepts:
    - selecting appropriate material to ensure minimal environmental impact
    - harvesting and reuse
    - efficient use of material
    - efficient energy usage/capital outlay comparison
    - effect on the environment due to overflow or leakage
    - consideration of the Green Building Council of Australia rating scheme
- specification and user manuals which include information on:
    - commissioning
    - bedding
    - support
    - concrete support and detailing specialised components
    - jointing
    - access chambers (manholes)
    - manufacturer requirements
    - materials
    - pumps
    - WHS
    - testing
    - workmanship.

CPCPCM5013 Design complex (non-solar) heated water systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 1.8.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design complex (non-solar) heated water supply and distribution systems for buildings with 29 floors, inclusive of basement and fixtures on each level for residential, commercial and industrial applications. The unit includes circulating systems, fuel and energy loads and system selection.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires sound understanding of applicable legislation, standards and codes.

This unit's requirements are typically carried out by experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for heated water supply and distribution systems from relevant Australian Standards, codes, plans, specifications and client brief.
		1.2	Analyse and apply statutory and regulatory requirements for the design of complex (non-solar) heated water supply and distribution systems.
		1.3	Apply sustainability principles and concepts as part of the design process.
		1.4	Establish performance requirements considering the safety of system users and building occupants, including the control of Legionella bacteria.
		1.5	Conduct research, including a desktop study to outline design parameters.
		1.6	Interpret manufacturer requirements and trade and technical manuals for the design of heated water systems.
		1.7	Conduct a cost-benefit analysis to compare a range of materials and system designs.
2	Plan and detail system components.	2.1	Plan layout of pipework systems and type and location of fittings and valves.
		2.2	Detail thermostatic mixing, tempering and control valves for a range of applications using appropriate symbols.
		2.3	Plan and detail circulating heated water supply systems.
		2.4	Plan and detail warm water systems, including disinfection and biocontrol measures.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Conduct calculations to determine water heating sizing and detail methods for the control of expansion.
		2.6	Calculate pipe sizes and design pipe supports for a range of applications.
		2.7	Detail manifolding heated water units for a range of water heaters and specify safe trays and overflows.
		2.8	Specify approved materials and jointing methods and insulation materials and installation requirements for a range of water heaters and heated water systems.
		2.9	Provide allowance for expansion and contraction.
		2.10	Include acoustic performance of the system in plans.
3	Design and size systems.	3.1	Design complex (non-solar) heated water supply and distribution systems using plans and details of system components and established design parameters.
		3.2	Design suitable system approaches.
		3.3	Design and size system using manufacturer's design information and calculations.
		3.4	Calculate pipe sizes, velocities and pressures according to manufacturer's piping design requirements.
4	Prepare documentation	4.1	Prepare client brief of the preferred design.
		4.2	Prepare plans and specifications.
		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual.

Assessment Requirements for CPCPCM5013 Design complex (non-solar) heated water systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 1.8.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and planning the layout details for complex (non-solar) heated water systems for a high-rise mixed development building to a minimum of 29 floors inclusive of a basement, including fixtures on each level and using two methods of providing heated water:
    - one system to be gas only
    - one system incorporating an alternative energy efficient heat source, for example, a commercial heat pump with boosted system
- preparing documentation, including:
    - heat source
    - flue arrangements
    - flow and return systems
    - insulation requirements
    - manifolding systems
    - provision for expansion
    - temperature control device
- applying sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- evaluating health risks associated with heated water supplies and actioning as required within the system design.

© Commonwealth of Australia, 2026 BuildSkills Australia

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- common terminology and definitions used in design of complex (non-solar) heated water systems
- application of National Construction Code (NCC), relevant Australian Standards, codes and manufacturer specifications, including:
    - Acts and regulations
    - AS/NZS 3500 Plumbing and drainage set
    - local government and health department requirements
- installation methods and hazards identified in relation to devices and systems used according to relevant Australian Standards, codes and standard operating procedures
- nature of materials used and effects of performance under various conditions
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- cost–benefit analysis considerations for the selection of materials and systems:
    - enabling cost effective choices without compromising the integrity of the project
    - expected design life
    - design style
    - associated labour costs
    - material costs
    - safety factors
    - speed of installation
    - suitability of materials
    - range of system choices
- requirements from manufacturer:
    - material specifications
    - heater maintenance and servicing
    - provision for heater pressure and temperature discharge
    - pump tables
    - sizing tables
    - recommended specific fixings for pipework
    - technical and trade manuals
- sources of information to support the design process:
    - architectural and building plans

CPCPCM5014 Design sewer infrastructure systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 5.4.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design and document sewer infrastructure systems for residential development of 50 properties. This includes specifying responsibilities, procedures and safety standards for sewerage equipment, construction, soil classification, pipe laying techniques and trench construction. The unit also covers analysing factors relating to pumping and tunnelling and supervising the installation of a sewer infrastructure system.

This unit covers requirements for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare and implement sewer contracts.	1.1	Identify and apply main utility sewer design and sizing procedures.
		1.2	Document required qualifications, roles and responsibilities of local authority personnel and contracted parties qualified to install sewers.
2	Plan and detail system components.	2.1	Analyse soil classification, characteristics and types from test results.
		2.2	Detail trenching safety procedures, specifying backfilling and compaction methods.
		2.3	Plan layout of pipework systems, including the type and location of fittings, valves and controls.
		2.4	Specify pipe laying, dewatering and testing procedures for installation of pipework of varying sizes.
		2.5	Calculate self-cleaning velocities, pipe size and grade, and ventilation requirements for a range of systems.
		2.6	Detail sewer connections, access chambers, bedding material and support systems.
		2.7	Determine size and detail requirements for pump station, pumps, controls and equipment.
		2.8	Specify approved materials, jointing methods and installation requirements for sewer infrastructure systems.
		2.9	Identify maintenance procedures of the system.
3	Evaluate design parameters.	3.1	Establish scope of work for sewer infrastructure systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Determine design requirements from relevant Australian standards, codes, plans, specifications and client brief.
		3.3	Conduct cost–benefit analysis comparing a range of pipe materials and system design.
		3.4	Analyse and apply statutory and regulatory requirements and relevant Australian Standards and codes for the design of sewer infrastructure systems.
		3.5	Obtain trade and technical manuals and interpret manufacturer requirements.
		3.6	Conduct additional research, including a desktop study to outline design parameters.
		3.7	Determine factors that contribute to quality, safety and time efficiency.
		3.8	Determine point of connection to the authority's system.
		3.9	Specify safety procedures and regulations for trench safety and for pumping stations and establish performance requirements.
		3.10	Assess pipe sizes using equivalent population (EP) density.
4	Design and size systems.	4.1	Identify easements and location for sewer infrastructure systems, including pumping rising mains.
		4.2	Design sewer infrastructure systems for a range of applications.
		4.3	Design and detail sewer long sections.
		4.4	Design pump rising main systems.
		4.5	Design pumping stations.
		4.6	Apply computer software packages to design and size sewer infrastructure system.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.7	Determine and design ventilation requirements.
		4.8	Apply sustainability principles and concepts throughout the design process.
5	Prepare documentation.	5.1	Prepare client brief of the desired design.
		5.2	Prepare plans and specification for a range of sewer infrastructure systems.
		5.3	Prepare testing and commissioning schedule.
		5.4	Produce operation and maintenance manual, including information on how to properly and safely maintain the system.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPCM5014 Design sewer infrastructure systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 5.4.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the installation and layout details for a sewer infrastructure system for a residential development of 50 properties, incorporating a gravity system and pumping station, to include:
    - sewer reticulation mains
    - pump station
    - pump rising main
    - ventilation
    - odour control
- evaluating and documenting design parameters to relevant Australian standards and codes, and regulatory, client and manufacturer requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the design of sewer infrastructure systems
- application of statutory and regulatory requirements and relevant Australian standards and codes:
    - Acts, regulations and Commonwealth, state or territory and local government policies
    - AS/NZS 3500 National plumbing and drainage
    - AS 2200 Design charts for water supply and sewerage

© Commonwealth of Australia, 2026 BuildSkills Australia

  - Environmental Protection Authority (EPA)
  - National Construction Code (NCC)
  - Sewerage Code of Australia
  - other relevant Australian standards and codes
  - utility provider's design standards -e.g. Water Corporation (WA), Urban Utilities (QLD)
- scope of work requirements:
  - interpreting plans and specifications
  - sizing and documenting layout sewer infrastructure system
- design requirements:
  - architectural plans
  - builder specifications
  - fire safety requirements
  - owner requirements
  - pipework identification
  - flow requirements and sizing of pipework
  - ventilation requirements
- cost–benefit analysis comparing the range of suitable materials and system choices available to enable cost-effective choices without compromising the integrity of the project
- nature of materials used and effects of performance under various conditions:
  - cast iron
  - concrete
  - vitrified clay pipes (VCP)
  - polyethylene (PE)
  - polypropylene (PP)
  - unplasticised polyvinyl chloride (uPVC)
  - other approved materials
- manufacturer requirements:
  - material specifications
  - collection and storage systems
  - design and installation
  - equipment installation
  - pump installation

© Commonwealth of Australia, 2026 BuildSkills Australia

    - technical manuals
- trench safety procedures:
    - conditions affecting trench stability
    - condition of soils disturbed by previous excavations
    - effect of water on excavations
    - effects of moisture content on excavated trenches
    - traffic and vibrations
    - confined space safety requirements e.g. for exhaust emissions
    - prevention of trench collapse
    - trench collapse procedures
    - trench collapse inspection procedures
    - trench excavation methods used for different:
        - backfilling methods
        - bedding methods
        - depth
        - slope
        - support systems
        - types
    - safety procedures with reference to:
        - advisory standards
        - compliance standards
        - industry standards
        - Work Health and Safety Act
        - other acts, codes or regulations relating to trenching
        - working in confined spaces
- layout of pipework systems:
    - gravity
    - pumped and rising mains
    - vacuum
    - identification of easements and location for sewer infrastructure systems, including pumping rising mains
    - layout requirements to:
        - not unduly affect building integrity and aesthetic appeal

© Commonwealth of Australia, 2026 BuildSkills Australia

        - apply principles of economy, serviceability, durability and fitness for use
- characteristics and application of different fittings, valves and controls:
    - fittings
    - bends
    - flanges
    - junctions
    - inspection openings
    - unions
    - valves non-return and isolation
    - controls
    - level
    - alarms
    - management communication systems
- pipelaying procedures:
    - cutting, handling and storage procedures
    - fittings used for sewerage work
    - jointing methods and procedures
    - laying procedures for pipework
    - methods of dewatering trenches
    - methods of grading and maintaining pipe direction and reduced levels
    - methods of placing bedding materials, encasing pipes, backfilling and compacting
    - methods of testing sewer drains
    - methods of pressure testing pump rising mains
- processes for calculating pipe size, pipe grade and ventilation requirement:
    - determination of flow and loadings
    - gradient calculations
    - equivalent population (EP) density
    - interpretation of design charts and tables
    - pipe sizing calculations
    - projected flows
    - pumping flow rates
    - reduced level calculations

CPCPDR2021 Locate and clear blockages

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Change to Elements and Performance Criteria 1.2 and 3.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to locate and clear blockages in sanitary plumbing and drainage systems, using a range of equipment, including closed-circuit television (CCTV).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Prepare for work.	1.1	Determine location of blockage and clearing requirements.
		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
		1.3	Select appropriate tools and equipment, including personal protective equipment (PPE).
2	Locate and clear blockage.	2.1	Identify pipe section containing blockage using closed-circuit television (CCTV), as appropriate.
		2.2	Select and use appropriate blockage clearing equipment according to the job requirements and manufacturer's requirements.
		2.3	Remove blockage without causing damage to pipework and fittings.
		2.4	Flush and test system to ensure adequate operation.
3	Clean up.	3.1	Clear the work area and dispose of materials in accordance with state and territory legislation and workplace policies and procedures.
		3.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using a closed-circuit television (CCTV) camera to locate the cause of the blockage in drainage pipework
- using a mechanical method to clear blockage in drainage pipework.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics of different pipes and fittings.
- different types of tools and equipment, their application and method of operation:
    - manually operated drain cleaning, including plungers and rods
    - mechanically operated drain clearing machines and attachments
    - CCTV
    - pipe locating equipment
    - chemical applications for cleaning
- processes for clearing blockages
- how to access relevant drainage layout information for the job
- work health and safety (WHS) requirements for locating and clearing blockages.

CPCPDR2025 Install stormwater and sub-soil drainage systems and drain work site

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 4.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install stormwater and sub-soil drainage systems to an approved point of discharge.

It includes the operation of pumps to temporarily or permanently drain a work site of unscreened roof water, sub-soil water and surface water.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan the work.	1.1	Access, read and determine stormwater and drainage requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select and check serviceability of appropriate tools and equipment, including personal protective equipment (PPE).
3	Install storm water and sub-soil drainage.	3.1	Locate and set out position of stormwater and drainage and determine levels and gradients from set points.
		3.2	Excavate trench to specified depth and width and grade using manual or mechanical means.
		3.3	Measure, cut and install pipework to align with connection points.
		3.4	Conduct a pressure test on the stormwater installation.
		3.5	Fit covers and inspection openings.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Drain worksite.	4.1	Position and construct sediment controls to meet environmental requirements.
		4.2	Install submersible pump in a sump or well with inlet and discharge point to the specified location and levels.
5	Clean up.	5.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		5.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 4.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a stormwater and a sub-soil drainage system, including:
    - connecting stormwater from two downpipes to an approved point of discharge with a minimum length of 5 metres
    - connecting sub-soil drainage to a stormwater pit with a minimum length of 5 metres
- draining a work site, including:
    - using a submersible pump to drain water with a depth of at least 500 mm from a pit, trench or excavation to an approved point of discharge.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to the installation of stormwater and subsoil drainage systems and to draining a work site
- processes, procedures and techniques for installing stormwater drainage systems
- approved points of discharge
- retention and detention systems and charged systems
- excavation techniques and shoring methods and systems
- site isolation and traffic control responsibilities and authorities
- stormwater pits
- how to locate underground services

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Knowledge Evidence.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Pre-requisite unit and Elements and Performance Criteria 1.3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- planning the layout and install a vented below-ground sanitary drainage system with a minimum length of 10 metres to connect a:
    - bathroom group including floor waste gully with fixtures connected
    - WC
    - laundry trough
    - kitchen sink
    - soil or waste stack to a minimum of two floor levels

The system must include inspection openings and shafts and connection to an approved point of discharge, provision for an overflow relief gully or reflux valve as required, and provision for articulation in drainage for soil movement.

- testing a sanitary drainage system
- cutting in a branch to an existing drain to connect a new WC or another fixture.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- terminology relating to the installation of below-ground sanitary drainage systems
- principles of drainage design and working drawings conventions, symbols and abbreviations
- trench support
- how to obtain, transfer and record levels and heights
- sewerage inspection chambers
- approved materials and their characteristics and application for the installation of below-ground sanitary drainage systems
- processes, procedures and techniques for the installation of below-ground sanitary draining systems, including identification of underground services and testing
- how to access relevant information, including location of underground services and codes and standards
- work health and safety (WHS) requirements for planning the layout and for installation of below-ground sanitary drainage systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPDR3023 Install on-site domestic wastewater treatment plants and disposal systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install an approved prefabricated wastewater treatment plant and on-site effluent disposal.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

essential outcomes.			
	Prepare the work.	1.1	Access, read and determine treatment plant and disposal system type installation requirements from relevant job plans and specifications, codes Australian standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Create a materials list and collect materials.
		1.4	Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE).
2	Install treatment plant and disposal system.	2.1	Set out and excavate site to required depth.
		2.2	Prepare the excavated base for installation.
		2.3	Install a treatment plant and on-site disposal system.
3	Clean up.	3.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		3.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Assessment Requirements for CPCPDR3023 Install on-site domestic wastewater treatment plants and disposal systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing an approved domestic wastewater treatment plant
- installing an on-site disposal system with connection to the outlet of the treatment plant, including an irrigation system or a transpiration or absorption trench with a minimum length of 3.0 metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- effluent treatment and disposal
- types of domestic treatment plants
- types of onsite effluent disposal systems
- treated-water irrigation systems in accordance to relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- approval requirements for onsite treatment plants including soil testing requirements and procedures
- system operations and characteristics of sewage treatment
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install an on-site domestic wastewater treatment plant and disposal system including levelling and alignment processes
- work health and safety (WHS) requirements for installing an on-site domestic wastewater treatment plant and disposal system.

CPCPDR3024 Maintain and service domestic treatment plants and onsite sewerage facilities

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to maintain and service domestic treatment plants and onsite sewerage facilities.

The unit covers maintaining system components, conducting and analysing effluent quality tests and maintaining systems on new or existing domestic or commercial structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPDR4013 Design and size domestic treatment plant disposal systems

Competency field(s)

N/A

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Prepare for work.	1.1	Identify and arrange work health and safety (WHS) and environmental requirements necessary to undertake the work.
		1.2	Complete a site risk assessment, including hazards associated with exposure to wastewater and wastewater treatment facilities.
		1.3	Develop procedures to minimise risk associated with identified hazards.
2	Maintain components.	2.1	Check operation of pumps and aerators to identify maintenance requirements.
		2.2	Perform maintenance of pump systems and components and aerators and replace as required.
		2.3	Clean membranes, filters, UV light tubes and ozone-producing equipment where appropriate.
		2.4	Measure sludge and scum levels in septic tanks and treatment plants.
		2.5	Analyse and maintain land application areas and piping systems.
		2.6	Determine appropriate procedures for loss of power and equipment failure.
		2.7	Perform maintenance of relevant components and replace system devices where required.
3	Conduct and analyse effluent quality tests.	3.1	Calibrate and use commercial testing equipment to conduct water quality tests and record results in accordance with legislative requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Collect, prepare and send water samples to an accredited laboratory for effluent quality tests where appropriate.
		3.3	Identify rectification work required from effluent quality test results.
		3.4	Perform rectification work as required.
4	Maintain systems.	4.1	Analyse and determine the correct treatment processes for a range of small decentralised treatment facilities.
		4.2	Maintain a range of wastewater treatment facilities in compliance with legislation.
		4.3	Maintain black and/or grey water systems to comply with end user, water and regulatory quality parameters.
5	Complete documentation and report outcomes.	5.1	Complete service reports and correspondence outlining maintenance issues.
		5.2	Provide advice to end user.
		5.3	Produce an operation and maintenance schedule for end user.
		5.4	Document and report outcomes to local authorities and property owners.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPDR3024 Maintain and service domestic treatment plants and onsite sewerage facilities

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- applying an operation and maintenance procedure for three of the following systems, ensuring a primary, secondary and tertiary system is selected:
    - primary treatment conventional septic tank
    - primary biological filter
    - secondary treatment aerated wastewater treatment plant
    - secondary treatment sand filter
    - tertiary ultraviolet (UV) disinfection and ozone oxidation
    - tertiary chlorine.

For each procedure the person must identify and report faults to appropriate person.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- disinfection technologies and land application systems
- system processes to reduce nutrients
- interpreting and applying test results for:
    - dissolved oxygen readings
    - clarity readings of wastewater
    - various air pressures on aerator
    - rectification of incorrect residual chlorine readings
    - calculation of pump duty
    - rectification of incorrect pH readings
- microbiology of wastewater constituents
- SI system of measures

© Commonwealth of Australia, 2026 BuildSkills Australia

- work health and safety procedures
- dissolved oxygen
- pH parameters
- air pressure from the aerator
- residual chlorine parameter
- pump operation
- pump duty
- infectious diseases
- types of wastewater treatment processes
- risks with working with wastewater
- types of land application areas
- maintenance procedures
- legislation and regulations relating to wastewater
- wastewater quality parameters
- areas of consideration for health and safety:
    - protective clothing and equipment
    - use of tools and equipment
    - workplace environment and safety
    - handling of materials
    - hazardous materials
    - handling of materials
    - hazard control
    - electrical
    - lifting safety
    - first aid requirements for injuries
    - personal hygiene
- areas of potential risk:
    - hygiene
    - biological
    - health
    - chemical
    - electrical
- types of hazards:

    - chlorine
    - influent
    - effluent
    - electrical
    - UV
    - ozone
    - pH correction chemicals
- correct operation of filters and pumps
- types of land application:
    - absorption trenches and beds
    - evapotranspiration beds
    - mounds
    - shallow sub-surface irrigation systems
    - covered surface drip irrigation
    - low pressure effluent drip irrigation systems
    - above-ground irrigation
- constructed wetlands:
    - reed beds
    - lagoons
- devices used in effluent systems:
    - sludge recycling device
    - disinfecting device
    - dosing device
    - pumps
    - aerators
    - valves
- tests for effluent quality:
    - biochemical oxygen demand (BOD)
    - sludge
    - suspended soils
    - clarity
    - pH
    - dissolved oxygen
    - bacterial content (pathogenic organisms)

© Commonwealth of Australia, 2026 BuildSkills Australia

    - free chlorine
    - total nitrogen
    - total phosphorous
- rectification solutions:
    - recommended use of household products
    - adjustments to system
    - improvements to system
- result information inclusions:
    - summary of own investigations
    - local authority reports
    - reports by other testing agencies or authorities
- end users such as:
    - landowners
    - tenants
- how to access relevant information, including codes and standards
- tools, materials and equipment used to maintain and service domestic treatment plants and onsite sewerage facilities
- work health and safety (WHS) requirements for maintaining and servicing domestic treatment plants and onsite sewerage facilities.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

CPCPDR3025 Plan layout and install vacuum drainage systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to prepare for the layout and installation of sewage and waste discharge from fixtures to the point of connection in new or existing, domestic and commercial structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
Identify installation requirements.	1.1	Access, read and determine installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Plan and record layout of vacuum drainage system.
2	Prepare for work.	2.1	Establish fixtures and materials and calculate quantities.
		2.2	Create a materials list and collect materials.
		2.3	Select appropriate tools and equipment including personal protective equipment (PPE).
3	Install vacuum drainage.	3.1	Establish and set out levels and heights to align with existing or new connection points.
		3.2	Perform installation of above ground vacuum drainage pipes in accordance with AS/NZS 3500.2 Plumbing and drainage – Sanitary plumbing and drainage.
		3.3	Excavate trench to specified depth and grade using manual tools and equipment or mechanical means.
		3.4	Compact and fill trench base to determined height.
		3.5	Measure, cut and install vacuum drainage pipework.
		3.6	Connect to new or existing system.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.7	Check and test installation.
		3.8	Prepare an as constructed drawing.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPDR3025 Plan layout and install vacuum drainage systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing an as constructed drawing to jurisdictional requirements
- planning and installing a vacuum drainage system with a minimum drain length of 3 metres vertical and 5 metres horizontal to connect a:
    - vacuum water closet (VWC) pan
    - buffer, both gravity drainage inlet and vacuum waste outlet
    - vacuum automatic interface unit (VAIU)
    - vacuum main pipeline to a vacuum station
- cutting in a branch to an existing drain connecting a new VWC pan and another buffer
- joining two branches together
- fabricating a vacuum reforming pocket both open and closed.

All installations must comply with and support fixings of pipe works.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- terminology relating to the installation of below- and above-ground vacuum drainage systems
- principles of vacuum drainage design, working drawings conventions, symbols and abbreviations
- trench support where applicable
- inspection openings
- approved materials, their characteristics and application for the installation of below- and above-ground vacuum drainage systems
- processes, procedures and techniques for the installation of below- and above-ground vacuum drainage systems, including testing

© Commonwealth of Australia, 2026 BuildSkills Australia

- how to access relevant information, including codes and standards
- tools, materials and equipment used to plan the layout and installation of below- and above-ground vacuum drainage systems
- work health and safety (WHS) requirements for planning the layout and installation of below- and above-ground vacuum drainage systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPDR4011 Design and size sanitary drainage systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of a sanitary drainage system to an approved point of connection for:
    - a residential design that comprises at least eight dwellings (Class 1a), incorporating at least the following in each:
        - bath
        - two showers
        - three WCs
        - three basins
        - floor waste gullies
        - kitchen sink
        - laundry tub
        - clothes washing machine
    - a commercial design that comprises at least one water/oil separator
    - one commercial kitchen connecting to an approved trade waste facility and incorporating at least:
        - one commercial dishwasher
        - one commercial pot wash facility
        - one commercial glasswasher
        - bucket trap floor waste gullies
        - basin

© Commonwealth of Australia, 2026 BuildSkills Australia

        - a disabled bathroom incorporating a WC and basin
        - three WCs across separate male and female toilet areas
        - four basins across separate male and female toilet areas
        - urinal
- completing design, sizing and documentation to meet regulatory requirements and client specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- processes to apply for trade waste installations
- characteristics and application of different pipe systems, including their fittings
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers for documentation
- computer-aided design (CAD) software
- impact of venting on design
- contour, reduced and invert levels
- process of treating trade waste to acceptable levels for discharge
- non-gravitational sewage systems
- properties and characteristics of trade waste applications:
    - grease arrestors
    - acid neutralisers
    - dry basket arrestors
    - oily water separators
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of sanitary drainage systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of sanitary drainage systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPDR4013 Design and size domestic treatment plant disposal systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout of a treatment plant disposal system for a residential design that comprises a dwelling (Class 1a), including details of:
    - treatment plant
    - disposal field
    - relationship of the above to any buildings, property boundaries, easements and other structures.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- design concepts and performance measures for domestic treatment plant disposal systems
- principles of the assessment of land capability for application of effluent
- principles, techniques and characteristics of effluent treatment and disposal, including the purpose of anaerobic bacteria
- properties and characteristics of landscape application areas
- site characteristics that may influence planning:
    - contour, reduced and invert levels
    - type of system chosen
    - soil category
    - design loading rates (DLR)
    - long term acceptance rate (LTAR)
    - number of people the system is to cater for
- identifying scope of work by waste processing method:
    - absorption by absorption trenches or transpiration beds

© Commonwealth of Australia, 2026 BuildSkills Australia

    - disposal by absorption, spray or recycling
    - anaerobic or aerobic action
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers for documentation
- computer-aided design (CAD) software
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of domestic treatment plant disposal systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of domestic treatment plant disposal systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS2021 Connect static storage tanks for fixed fire protection systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Duplicate Element and Performance Criteria 1.3 deleted.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to connect storage tanks to fixed fire protection systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

N/A

Unit sector(s)

essential outcomes.			
	Identify installation requirements.	1.1	Determine storage tank for fixed fire protection systems requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select and check the serviceability of appropriate tools and equipment including personal protective equipment (PPE).
	Install and test storage tank.	3.1	Connect storage tank and associated pipework.
		3.2	Apply pipe supports and fixings.
		3.3	Connect tank piping, associated valves and materials to the suction side of the fire pumpset.
		3.4	Connect make up and quick fill pipework, associated valving and supports according to job specifications, relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		3.5	Check jointing systems to ensure compliance with relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		3.6	Conduct pressure testing on installed system.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.7	Test and confirm correct operation of quick fill and make up lines and valving.
		3.8	Record test data in required format.
		3.9	Complete documentation according to relevant job plans and specifications,codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS2021 Connect static storage tanks for fixed fire protection systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Duplicate Element and Performance Criteria 1.3 deleted.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- connecting and testing an approved static storage tank to a fire protection pumpset in accordance with the relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements of a fire protection system
- connecting static storage tank downstream from backflow protection
- applying safety requirements throughout the work sequence, including electrical safety requirements
- communicating and working effectively and safely with others
- installing, setting and confirming operation of quick fill and make up lines and associated valving.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, application and limitations of different pipe fittings and fixture supports:
    - sectional tanks
    - steel or polymer storage tanks
    - tank linings
- processes, procedures and techniques of:
    - construction of fire protection tanks

© Commonwealth of Australia, 2026 BuildSkills Australia

    - fixing and joining
    - levelling and alignment
    - using measurements and formulas for calculating materials
    - pressure test systems
    - connecting static storage tanks
- function and operation of a range of valves, including backflow, associated with quick fill and make up lines and pump installations
- functional and operational factors of tools and equipment:
    - cutting
    - hand and power tools
    - lifting and load shifting equipment
    - testing equipment
- operation and components of fire sprinkler system pumpsets
- access relevant information, including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
- work health and safety (WHS) requirements for connecting static storage tanks for fixed fire protection systems
- installation requirements for connecting static storage tanks for fixed fire protection systems, above and below ground pipework.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

essential outcomes.			
	Plan the work.	1.1	Access, read and determine portable fire equipment requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
		1.3	Identify extinguishing agents, weight and materials.
		1.4	Calculate and order materials and portable fire equipment.
		1.5	Determine priorities and plan and sequence tasks with others on site.
	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Check portable fire equipment against relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements, delivery docket and order form and report faults, as appropriate.
		2.3	Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
		2.4	Prepare work area to support efficient installation of portable fire equipment.
	Install portable fire equipment.	3.1	Set out installation location ensuring it is free of obstruction.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Perform installation of supports, fixings and signage.
		3.3	Perform installation and verify working order of portable fire equipment.
		3.4	Commission installation according to yearly requirement of AS 1851 Routine service of fire protection systems and equipment.
		3.5	Complete installation or service report and submit within specified timeframes.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 2.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing for, installing and verifying the working order of the following fire equipment for an office complex (class 5 building):
    - portable water fire extinguisher
    - portable carbon dioxide (CO2) fire extinguisher
    - portable powder fire extinguisher
    - fire blankets
    - signage.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- processes, procedures and techniques of:
    - installing and commissioning portable fire extinguishers according to regulatory requirements
- characteristic, application and limitation of approved materials and components
- statutory and authorities' requirements related to installing and commissioning portable fire equipment:
- SI system of measurement
- structural systems, building materials and building services related to the installation of fire extinguishers in accordance with AS 2444 Portable fire extinguishers and fire blankets

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for work.	1.1	Obtain scope of work requirements from information and quality requirements, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Set up work area to enable sprinkler system to be designed efficiently.
2	Identify design requirements.	2.1	Obtain data from relevant job specifications required to prepare design.
		2.2	Identify building classification and hazard ratings that apply to the fire sprinkler system being designed.
		2.3	Identify ceiling type and constructions material.
		2.4	Identify all features of that building that might obstruct the spray pattern of the sprinkler, i.e. bulkheads, beams, columns, etc.
		2.5	Identify sprinkler head type from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		2.6	Identify the requirement for concealed space sprinklers.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.7	Water supply needs are established and graphs are drawn for the automatic fire sprinkler system.
1	Design sprinkler system.	3.1	Identify and locate the control valves.
		3.2	Lay out sprinkler locations according to AS 2118.1 Automatic fire sprinkler systems – General systems and manufacturer data sheets.
		3.3	Lay out the range and distribution pipework in an economical manner.
		3.4	Determine the most remote last range type.
		3.5	Locate the design points.
		3.6	Size all range pipes in the installation using the pre-calculated tables.
		3.7	Size the distribution pipework up to the design point using the pre-calculated tables.
		3.8	Size the distribution pipework from the design point to the control valve using hydraulic calculations.
		3.9	Prepare fabrication design sheets and material lists.
4	Finalise work.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Apply workplace recording and reporting procedures where required.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS3030 Design fire sprinkler systems using pre-calculated charts and tables

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Performance Criteria and Knowledge Evidence.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing a fire sprinkler system using plans and specifications provided for an ordinary III hazard classification building, including:
    - at least 25 sprinkler heads and two branches
    - spacing and location of sprinkler heads
    - specifications for the size and layout of all pipework
    - layout drawings, fabrication sheets and materials lists.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- legal responsibilities of people related to designing fire sprinkler systems
- legislation, regulations, standards and codes relating to designing a fire sprinkler system
- general fire protection systems and design terminology and symbols
- structural systems, building materials and building services of buildings and structures that require fire sprinkler systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

- characteristics, application and limitations of approved materials and components of fire sprinkler systems
- identifying and explaining the difference between deemed to satisfy installations and performance-based solutions
- functional and operational features of tools and equipment used to design fire sprinkler systems
- processes, procedures and techniques of:
    - applying pre-calculated charts and tables in the design of fire sprinkler systems
    - hydraulic calculations associated with pre-calculated design
- properties of water, including pressure and flow rates.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPFS3031 Fabricate and install fire hydrant and hose reel systems

Modification History

Release	Comments
2	--
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and performing hydrostatic testing of a fire hydrant and a hose reel system to the relevant codes, Australian Standards, manufacturer's specifications and jurisdictional requirements from an existing branch in a water supply using approved materials that contains:
    - a fire brigade booster and suction arrangement
    - a fire hydrant landing valve
    - a fire hose reel in copper
    - a fire hose reel in galvanised mild steel.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- processes, procedures and techniques of:
    - fabricating and installing fire hydrant and hose reel systems
    - pressure testing systems
    - pipe thread sealing methods
    - pipe jointing, involving:
        - threading
        - roll grooving
        - silver soldering
        - compression unions
        - press fit and flanges
- characteristics, application and limitations of approved materials and components used in fire hydrant and hose reel systems, above and below ground

CPCPFS3036 Install special hazard systems

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. • Sprinkler and delivery systems removed from the Knowledge Evidence. • The word 'purging' replaced by 'cleaning' in the Knowledge Evidence.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Change to Elements and Performance Criteria 2.3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install special hazard extinguishing systems, including decommissioning gaseous agent containers and actuation devices.

All technicians performing work described in this unit that involves the handling of prescribed ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) extinguishing agents must hold an appropriate extinguishing agent handling licence (EAHL).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify installation requirements.	1.1	Obtain, read and apply special hazard systems requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, organisational work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect components.
		2.2	Select and check the serviceability of appropriate tools and equipment including personal protective equipment (PPE).
		2.3	Prepare work area to support efficient installation of special hazard extinguishing systems.
3	Decommission gaseous agent containers and actuation devices.	3.1	Confirm and isolate all interface systems and put in place appropriate signage, lock-off and documentation.
		3.2	Physically disconnect manual, electrical and mechanical actuation devices.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Identify and disconnect pneumatic actuation devices and pilot and slave tubes and fittings.
		3.4	Connect transport caps on all outlets, plugs and locking devices, according to manufacturer's specifications.
		3.5	Disconnect container bank manifold connection components.
		3.6	Install transport caps on valve outlets.
		3.7	Organise removal and transportation of gaseous agent containers to storage or reclaim facility.
		3.8	Complete documentation and decommissioning sign-off requirements and confirm with relevant persons.
4	Install and test special hazard systems.	4.1	Set out system and install fixings.
		4.2	Check pipe supports and install pipes, fittings, nozzles and components.
		4.3	Perform piping system pressure testing.
		4.4	Connect cylinder manifold and cylinder hoses.
		4.5	Connect cylinder supports and cylinders and secure in brackets.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.6	Remove transport caps and connect cylinder hoses.
		4.7	Connect actuators.
		4.8	Complete documentation according to relevant regulatory requirements.
	Clean up.	5.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		5.2	Clean tools and equipment, check for serviceability, and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS3036 Install special hazard systems

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. • Sprinkler and delivery systems removed from the Knowledge Evidence. • The word 'purging' replaced by 'cleaning' in the Knowledge Evidence.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Change to Elements and Performance Criteria 2.3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a special hazards fire suppression system (not prescribed ozone depleting substances (ODS) or synthetic greenhouse gases (SGG) extinguishing agent), incorporating a storage cylinder connected by piping to a simple distribution system incorporating two nozzles and one actuating device
- complying with ODS or SGG legislation, codes and regulations
- decommissioning a gaseous system comprising of at least three cylinders and prepare the cylinders for transport
- correctly selecting and using tools and equipment used for installation of gaseous agent containers and actuation devices.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- ODS and SGG legislative and industry requirements for special hazard fire suppression systems installation activities

© Commonwealth of Australia, 2026 BuildSkills Australia

- characteristics, application and limitations of approved materials and components used in special hazardous systems actuating devices:
    - prescribed ODS and SGG materials
    - extinguishing agents, including or other approved materials
    - pipes
- hazard categories, classes of fire hazard and extinguishing agents
    - workplace and safety including dangerous goods
    - transportation of dangerous goods
- processes, procedures and techniques of:
    - installing and testing special hazard systems
    - pressure test systems
    - cylinder anchorage
    - cleaning
- relevant statutory and authorities' requirements related to installing special hazard systems:
    - requirements for room ventilation and integrity
    - structural systems, building materials and building services
- functional and operational features of tools and equipment used to install special hazard systems:
    - cutting and threading equipment
    - roll grooving equipment
    - hand and power tools
    - ladders
    - testing equipment
- types of special hazard extinguishing systems:
    - carbon dioxide - high and low pressure
    - naturally occurring blended gasses (Proinert, Argonite, Inergen)
    - chemical reaction and explosion suppression systems
    - dry chemical
    - foam
    - prescribed ODS and SGG extinguishing agents
    - deluge
    - water mist
- types of operation of actuation devices (also known as actuators):

© Commonwealth of Australia, 2026 BuildSkills Australia

    - electrical
    - manual
    - mechanical
    - pneumatic
- special hazard system components, including:
    - directional valves
    - lock off valves
    - pyrotech actuators
    - nozzles
    - manifolds
    - hoses
    - cylinders
    - cylinder manifold brackets
    - pressure relief vents
    - dirt traps
    - bracketing and pipe supports
    - foam generators
    - foam monitors
    - foam proportioning equipment
    - foam indicators
    - aspirating foam nozzles
    - foam storage vessels, including bladder tanks
- relevant documentation required when installing special hazard systems
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements for installation of special hazard systems
- tools, materials and equipment used for installation of special hazard systems
- work health and safety (WHS) requirements for installation of special hazard systems
- installation requirements for installation of special hazard systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

© Commonwealth of Australia, 2026 BuildSkills Australia

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Identify installation requirements.	1.1	Obtain, read and apply residential sprinkler systems requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select and check the serviceability of appropriate tools and equipment including personal protective equipment (PPE).
		2.3	Prepare work area.
3	Install and test system components.	3.1	Set out system and apply fixings.
		3.2	Connect assemblies, devices, alarms, piping and materials.
		3.3	Apply jointing systems to components
		3.4	Install relevant fire sprinkler heads according to plans and specifications.
		3.5	Undertake a hydrostatic pressure-test to ensure integrity of pipework.
		3.6	Record test data in required format.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.7	Complete documentation according to relevant regulatory requirements.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability, report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS3037 Install residential life safety sprinkler systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Performance Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- given the floor plan of a residential building of at least five (5) rooms correctly locating the sprinkler heads according to relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- installing and testing a residential life safety sprinkler system in Class 2 and 3 buildings not more than 25 metres in effective height with a rise up to 4 storeys, using plans and specifications, incorporating fit off to:
    - one sprinkler head in steel pipe
    - one sprinkler head in chlorinated polyvinyl chloride (CPVC) piping
    - one sprinkler head in copper pipe
- These must include:
    - water supply
    - piping and pipe supports
    - control valves assembly
    - actuating devices
    - alarms
    - three sprinkler heads
    - remote test point.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- legislation, regulations, codes and standards relating to installing fire sprinkler system
- workplace and safety requirements
- sustainability concepts and principles and environmental requirements relating to water and resource usage
- processes, procedure and techniques of:
    - installation and testing of residential fire sprinkler systems
    - applying fire ratings
    - hydraulic testing
    - pipe jointing including hemps, Teflon tape and CPVC solvent
    - roll grooving
    - brazing
    - press fits (copper)
- functional and operational features of tools and equipment used to install life safety fire sprinkler systems
- structural systems, building materials and building services of buildings and structures that require life safety fire sprinkler systems
- operation and function of the following components:
    - residential sprinkler heads
    - flow switches
    - check valves
    - remote test points
    - concealed space sprinkler heads
    - waste, test and drain valves
    - pipe supports
- characteristics, application and limitations of materials, including:
- steel and CPVC pipe used in residential sprinkler systems
- manufacturers' specifications and their purpose in fire sprinkler system installation
- how to access relevant information, including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
- tools, materials and equipment used for installing residential life safety sprinkler systems
- work health and safety (WHS) requirements for installing residential life safety sprinkler systems
- installation requirements for residential life safety sprinkler systems.

CPCPFS3038 Test and maintain fire hydrant and hose reel installations

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. PC2.1 Identify and calculate materials required to complete the task. PC2.2 Identify potential hazards and determine and implement control measures and personal protective equipment (PPE) requirements. PC2.3 Determine job priorities and sequence job tasks in consultation with others on site. The PCs have been repositioned to be consistent with the related CPCPFS sector units of competency.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Knowledge Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to conduct routine service, maintain and repair fire hydrant and hose reel installations, in accordance with AS 1851 Routine inspection of fire protection systems and equipment. It excludes fire pump performance and booster connection flow testing. It applies to people who work on new or existing structures in commercial and residential settings.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan the work.	1.1	Access, read and apply fire hydrant and hose reel requirements relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply organisational work health and safety (WHS), including sign in, environmental requirements.
2	Prepare for work.	2.1	Identify and calculate materials required to complete the task.
		2.2	Identify potential hazards and determine and implement control measures and personal protective equipment (PPE) requirements.
		2.3	Determine job priorities and sequence job tasks in consultation with others on site.
		2.4	Select and check serviceability of appropriate tools, equipment and PPE.
		2.5	Receive and check materials against the docket and order form for correct product, compliance with standards and acceptable condition and action discrepancies.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.6	Apply AS 1851 Routine service of fire protection systems and equipment (Section 1) and routine service requirements for fire hydrant and hose reel installation.
		2.7	Confirm correct location of fire protection systems and equipment in accordance with AS 2419 Fire hydrant installations system design, installation and commissioning.
3	Test, repair and replace faulty components and perform systems checks.	3.1	Isolate system interfaces.
		3.2	Carry out routine service up to five yearly frequency and maintenance tasks as detailed in AS 1851 Routine service of fire protection systems and equipment.
		3.3	Identify faulty items or components and choose appropriate service procedure.
		3.4	Remove faulty items or components, using appropriate tools and equipment and rectify.
		3.5	Complete documentation according to workplace procedures and submit within specified timeframes.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Assessment Requirements for CPCPFS3038 Test and maintain fire hydrant and hose reel installations

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. PC2.1 Identify and calculate materials required to complete the task. PC2.2 Identify potential hazards and determine and implement control measures and personal protective equipment (PPE) requirements. PC2.3 Determine job priorities and sequence job tasks in consultation with others on site. The PCs have been repositioned to be consistent with the related CPCPFS sector units of competency.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Knowledge Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting routine testing and maintenance up to five yearly frequency, excluding fire pump performance and booster connection flow testing on two different fire hydrants and hose reel installations
- diagnosing a critical defect and non-conformance and:
    - report as per AS 1851 Routine service of fire protection systems and equipment requirement
    - repair each defect and non-conformance
    - conduct testing to ensure rectification is effective
    - reinstate installations and complete a service report

© Commonwealth of Australia, 2026 BuildSkills Australia

- replacing all serviceable components as per preventative maintenance requirements of AS 1851 Routine service of fire protection systems and equipment on:
    - three hydrant valves
    - two hose reels
- replacing one faulty hose reel drum
- setting a pressure reducing valve according to relevant specifications
- performing system interfaces isolation of fire detection control and indicating equipment (FDCIE) and fire pumpsets
- confirming correct location of hydrants, attack and feed hydrant and hose reels in accordance with AS 2419 Fire hydrant installations system design, installation and commissioning from a site or plan of 2000 square metres.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- responsibilities relating to quality requirements for testing and maintaining fire hydrants and hose reel installations:
    - documentation and information systems and processes
    - policies and guidelines relating to work roles and responsibilities
    - workplace reporting
- operational knowledge of hydrant and hose reel systems
- purpose, function and maintenance requirements of the following components in hydrant and hose reel systems:
    - hydrant valves
    - hose reels
    - check valves
    - booster assemblies
    - gate valves
    - gauges
    - pipework
    - hydrant cabinets
    - booster cabinets
    - hose reel cabinets
    - hydrant and hose reel signage
    - isolation valves
    - pipe supports

© Commonwealth of Australia, 2026 BuildSkills Australia

    - anti-tamper switches
    - pump start initiating devices
    - block plans
- processes, procedures and techniques of:
    - testing and maintaining fire hydrant and hose reel installations
    - system interfaces with hydrants and hose reels
    - water flow testing of hydrants and hose reels
- how to access relevant information, including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.to test and maintain fire hydrant and hose reel installations
- tools, materials and equipment used to test and maintain fire hydrant and hose reel installations
- work health and safety (WHS) requirements for performing tests and conducting fire hydrant and hose reel installations.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and apply compliance requirements to service operations.	1.1	Determine current legislative and industry requirements against organisational service operations and adjust as required to ensure compliance.
		1.2	Interpret and follow the requirements of section one of AS 1851 Routine service of fire protection systems and equipment.
		1.3	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.4	Prepare for functional testing of water-based fire-suppression systems according to identified requirements.
2	Conduct monthly and six-monthly routine service inspections and record results.	2.1	Notify appropriate site contact of entry and follow site procedures for notifying occupants and/or staff of planned fire sprinkler system test.
		2.2	Apply appropriate workplace procedures and risk control measures when inspecting water-based fire-suppression systems.
		2.3	Identify plant and other system interfaces that must be isolated to allow for inspection activities.
		2.4	Identify key control valves and determine their functions with reference to manufacturer instructions to allow for routine inspection activities.
		2.5	Perform and record visual inspections and results according to AS 1851 Routine service of fire protection systems and equipment.

© Commonwealth of Australia, 2026 BuildSkills Australia

3	Conduct monthly and six-monthly testing and record results.	3.1	Implement test methods for monthly and six-monthly testing.
		3.2	Perform routine testing procedures according to the required frequency schedule determined by AS 1851 Routine service of fire protection systems and equipment to verify the system functions as intended.
		3.3	Compare test results with manufacturer, legislative and industry requirements.
		3.4	Document results in accordance with AS 1851 Routine service of fire protection systems and equipment.
		3.5	Identify, record and report any defects or non-conformances in accordance with AS 1851 Routine service of fire protection systems and equipment.
		3.6	Prepare and forward reports to relevant persons for action.
		3.7	Reinstate system according to organisational and manufacturer requirements.
		3.8	Notify site contact of completion of test and follow site procedures for notifying occupants and staff.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures.

Assessment Requirements for CPCPFS3040 Conduct basic functional testing of water-based fire-suppression systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 1.1, 2.1, 3.5 and 3.8.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit and must:

- conduct inspections and perform routine services for three scheduled monthly activities and two scheduled six-monthly activities on:
  - two different wet systems
  - two different pre-action systems
  - two different deluge systems
- perform six monthly tests to include:
  - main drain test and floor zone flow switch test, one manually operated and one solenoid operated on wet set
  - two different pre-action systems, including full trip test
- include all of the following water-based fire-suppression systems:
  - deluge
  - wet or general system
  - residential system
  - combined sprinkler and hydrant system
  - double interlock pre-action
- ensure all systems are interfaced to a fire indicator panel (FIP) and connected to alarm signalling equipment
- comply with all relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

- complete reports and work according to customer and organisational expectations within accepted timeframes.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- the basic principles of operation and purpose of components of water-based fire suppression systems:
    - accelerators and exhausters
    - alarm ‘dry’ (i.e. deluge) control valve assembly components
    - alarm ‘wet’ control valve assembly components
    - batteries
    - circulation and system pressure relief valves
    - isolation and control valves
    - pressure and flow switches
    - pressure gauges
    - pump controllers and ancillary equipment for control and indication
    - pumpsets
    - retard chambers
    - solenoid valves
    - sprinkler heads
    - system block plans
    - system pressure gauge schedules
    - water motor alarm gong
    - water supply tanks: atmospheric and suction with priming tanks
- the general operation of water-based systems
- the general operation of a gauge
- the key features of legislation, regulations and codes applicable to inspecting and testing water-based fire-suppression systems
- metric and imperial pressure gauge readings
- systems and components of water-based fire-suppression systems:
    - air compressors fitted to systems
    - circulation and system pressure relief valves
- controls on the pumpset controller panel:
    - fuel gauges

© Commonwealth of Australia, 2026 BuildSkills Australia

    - indicators
    - main isolating switch
    - flow switches and associated testing equipment
    - isolating valves associated with water-based fire-suppression system
    - main water supply underground key-operated valve location
    - pressure gauges
    - pumpsets associated with water-based fire-suppression system
    - pump starting switches
    - suction inlet strainers or screen on a static water supply for the water-based fire-suppression system
    - system block plan requirements for design details of systems installed since 1972
    - system main alarm bell and/or alarm strobe indicating building entry point for emergency personnel
    - system pressure gauge schedules, where required
    - system pressure maintenance or jacking pumps
    - water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication/interface
    - water supply tanks, water level indicators and automatic inflow valves
- key control valves which may include those specified in AS 2118 Automatic fire sprinkler systems installed in:
    - associated control valve trim
    - activation small bore pipework to the alarm and control valve assembly
- terminology used in relation to water-based fire-suppression systems
- types of water supply tanks:
    - atmospheric
    - suction with priming
- applications of water-based systems
- water-based fire-suppression systems:
    - alternate wet or dry systems
    - combined sprinkler or hydrant systems
    - deluge systems
    - dry systems
    - pre-action and double interlock pre-action systems
    - residential and domestic systems

    - tail-end systems
    - wet and general systems
- legislative and industry requirements:
    - dangerous goods regulations
    - licensing arrangements
    - environmental regulations
    - work health and safety (WHS) legislation, regulations and codes
    - relevant Commonwealth and state or territory building acts, regulations and codes, such as National Construction Code (NCC)
    - AS 1851 Routine service of fire protection systems and equipment
- other relevant legislation relating to fire suppression equipment
- organisational requirements:
    - client-specific contractual requirements
    - documentation and information systems and processes
    - legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
    - use of electronic job scheduling and communication devices
- system interfaces:
    - flow switches
    - pressure switches
    - tamper switches
    - valve positioning switches
    - control and indicating equipment (CIE)
    - plant shutdowns
- devices that operate signals between the water-based fire-suppression system and other services:
    - building heating, ventilation and air conditioning (HVAC) services
    - fire brigade monitoring providers
    - CIE
- other life safety systems:
    - warning systems
    - fire indicator panel (FIP)
- methods to apply sustainability principles and concepts
- testing procedures for:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - checking desiccant condition (air dryer or crystals, water separator bowl) and cleaning or replacing as required
    - checking oil level and visually assessing condition of oil on air compressor
- routine service frequency schedules including reference to AS 1851 Routine service of fire protection systems and equipment schedules of work conducted at regular frequencies that relate to the work scope for weekly, monthly, and six-monthly inspection and testing schedules
- how to access relevant information, including codes and standards
- tools, materials and equipment used for testing and maintaining water-based fire-suppression systems
- WHS requirements for testing and maintaining water-based fire-suppression systems
- installation requirements for water-based fire-suppression systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and apply compliance requirements to service operations.	1.1	Identify and confirm current legislative and industry requirements against organisational service operations and adjust as required to ensure compliance.
		1.2	Interpret and follow the requirements of section 1 of AS 1851 Routine service of fire protection systems and equipment.
		1.3	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements and sustainability principles.
		1.4	Confirm schedule and entry to premises at arranged time with appropriate personnel and site contact.
		1.5	Check location and equipment for compliance with legislative and industry requirements and take action according to organisational requirements to ensure compliance.
		1.6	Prepare for functional inspection and testing according to identified requirements.
2	Conduct monthly and six-monthly inspections and record results.	2.1	Notify appropriate site contact of entry and follow site procedures for notifying occupants and/or staff of planned fire sprinkler system test.
		2.2	Apply appropriate workplace procedures and risk control measures when inspecting fire pumpsets.
		2.3	Use manufacturers' instructions to identify functions of fire pumpset controls and conduct inspections and tests.
		2.4	Isolate or disable plant and other system interfaces.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Perform visual inspections according to AS 1851 Routine service of fire protection systems and equipment.
		2.6	Record fire pumpset inspection results according to AS 1851 Routine service of fire protection systems and equipment.
3	Conduct monthly and six-monthly tests and record results.	3.1	Implement test methods for monthly and six-monthly testing.
		3.2	Perform routine test procedures according to the required frequency schedule to verify that the system functions as intended.
		3.3	Compare test results with manufacturer, legislative and industry requirements.
		3.4	Document results according to AS 1851 Routine service of fire protection systems and equipment.
		3.5	Identify, record and report any defects or non-conformances in accordance with AS 1851 Routine service of fire protection systems and equipment.
		3.6	Complete and forward report to relevant persons for action.
		3.7	Reinstate system and system interfaces according to organisational requirements.
		3.8	Notify site contact of completion of test and follow site procedures for notifying occupants and/or staff.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS3041 Inspect and test fire pumpsets

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 2.1, 2.3 and 3.8. Performance Evidence is formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency in this unit a candidate must meet the performance criteria for this unit by:

- conducting four routine services on a fire pumpset, including:
    - three scheduled monthly, and
    - one scheduled six-monthly activities

and include:

- compression ignition pumpsets used as a booster pumpset on a sprinkler/hydrant system
- an electrical pumpset used as a:
    - booster pumpset on a sprinkler/hydrant system fed from a town mains supply or a static water supply
- conducting all routine service in compliance with current Australian standards, regulations, codes and organisational requirements
- completing work according to customer and organisational expectations within accepted timeframes.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of fire pumpsets as defined in AS 2941 Fixed fire protection installations – Pumpset systems and AS 2118 Automatic fire sprinkler systems
- terminology used in relation to pumpsets

© Commonwealth of Australia, 2026 BuildSkills Australia

- basic principles of hydraulics:
    - basic head or pressure calculation for height per metre
    - metric and imperial pressure scales
- basic principles of operation and purpose of components:
    - accumulators
    - batteries
    - circulation and system pressure relief valves
    - compression ignition pumpset drivers
    - electrical pumpset drivers
    - engine starting and control or monitor batteries
    - header tanks
    - impellers
    - isolating valves associated with pumpsets
    - jacking or jockey pumps
    - multi-stage pumps
    - pressure gauges
    - pump controllers and ancillary equipment for control and indications
    - pump drivers
    - pump glands and seals
    - pump performance curves
    - pump starting devices
    - pumpset couplings
    - safety guards
    - system pressure gauge schedules
- water supply tanks:
    - atmospheric
    - suction with priming tanks
- general operation of pumpsets:
    - cooling systems
    - design speed requirements
    - exhaust systems
    - fuel systems
    - full load operation
    - normal running operation

© Commonwealth of Australia, 2026 BuildSkills Australia

  - pre-start and post-start checks
  - pumpset controllers
  - starting and stopping methods
  - suction and discharge connections and pressure readings
- pumpset types which may include those used in fire protection systems that comply with Australian standards such as:
  - AS 1851 Routine service of fire protection systems and equipment
  - AS 2118 Automatic fire sprinkler systems
  - AS 2419 Fire hydrant installations
  - AS 2941 Fixed fire protection installations - Pumpset systems
  - AS CA16-1962 Automatic sprinkler installations
  - NFPA 20 Standard for the installation of stationary fire pumps for fire protection (US)
- system interfaces:
  - flow switches
  - pressure switches
  - tamper switches
  - valve positioning switches
  - control and indicating equipment (CIE)
- devices that operate signals between pumpset and other services such as building monitoring services
- other life safety systems:
  - warning systems
  - fire indicator panel (FIP)
  - security monitoring services
- legislative and industry requirements:
  - dangerous goods regulations
  - licensing arrangements
  - environmental regulations
  - work health and safety (WHS) legislation, regulations and codes associated with fire pump rooms such as: working in isolation, lighting, fumes, trip hazards
  - relevant Commonwealth and state or territory building acts, regulations and codes, such as National Construction Code (NCC)
  - AS 1851 Routine service of fire protection systems and equipment

© Commonwealth of Australia, 2026 BuildSkills Australia

- organisational requirements:
    - client-specific contractual requirements
    - documentation and information systems and processes
    - legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
    - use of electronic job scheduling and communication devices
- documentation to review and verify that installed systems comply with legislative and industry requirements such as:
    - building's essential services or fire safety measures listing
    - relevant commonwealth and state or territory building acts, regulations and codes
    - relevant Australian standards listed on essential service listing
    - environmental regulations
- methods of applying sustainability principles and concepts
- testing procedures and activities that comply with requirements of AS 1851 Routine service of fire protection systems and equipment to verify the following pump functions:
    - pump starts at correct pressure
    - pump supplies correct kPa at no flow condition requirements
- routine service frequency schedules:
    - reference to AS 1851 Routine service of fire protection systems and equipment schedules of work conducted at regular frequencies that relate to the work scope for monthly and six-monthly routine service schedules
- how to access relevant information, including codes and standards
- tools, materials and equipment used for inspecting and testing test fire pumpsets
- WHS requirements for inspecting and testing test fire pumpsets.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3042 Conduct annual routine service of complex water-based fire-suppression systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 1.3, 2.1, and 2.2.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to conduct annual routine service procedures to verify that complex water-based fire-suppression system equipment functions as designed for a Class 2-9 building greater than 5000 square metres.

It includes isolating systems to visually inspect and identify non-compliance defects and resetting systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan the work.	1.1	Determine and apply annual routine service operations requirements from AS 1851 Routine service of fire protection systems and equipment (section 1) and appropriate legislative and industry codes.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Arrange and confirm appropriate time for conducting the annual routine service with the site contact.
		1.4	Select and check tools, equipment and personal protective equipment (PPE) for serviceability and report any faults.
2	Conduct inspections and record results.	2.1	Confirm attendance on site with site contact and follow workplace and organisational procedures for signing in.
		2.2	Follow site procedures for notifying occupants and/or staff of annual routine service.
		2.3	Isolate control and indicating equipment (CIE), system interfaces and other plant according to site requirements.
		2.4	Apply appropriate workplace procedures and risk control measures when inspecting water-based fire-suppression systems.
		2.5	Identify key control valves and determine their functions regarding installation drawings to conduct routine inspection and tests.
		2.6	Identify all defects and non-conformances and report according to AS 1851 Routine service of fire protection systems and equipment requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.7	Perform and record visual inspections on complex components.
		2.8	Perform visual installation and design survey inspections.
		2.9	Prepare installation and design survey report.
1	Conduct full function test on water-based components only.	3.1	Confirm appropriate time to conduct full function test with client and discuss the process and shutdowns likely to occur during test.
		3.2	Confirm coordination of other trades and technicians required to conduct full function test.
		3.3	Determine from system interface diagram the interfaced system required to operate.
		3.4	Isolate alarm signalling equipment.
		3.5	Perform annual testing according to AS 1851 Routine service of fire protection systems and equipment requirements.
		3.6	Conduct test and confirm operation of all required water-based fire protection system according to the system interface diagram.
		3.7	Reinstate systems.
		3.8	Identify and document all defects and non-conformances and report according to AS 1851 Routine service of fire protection systems and equipment requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.9	Prepare and forward to persons for action.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability reporting any damage, store and secure according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPFS3042 Conduct annual routine service of complex water-based fire-suppression systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 1.3, 2.1, and 2.2.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting relevant an annual routine service (other than water flow testing) on water-based fire suppression systems with complex components for all the following systems:
    - a general sprinkler system with pumpset system
    - a combined sprinkler and hydrant systems
    - a deluge system
    - a pre-action system
    - a pressure reducing valve
    - a pressure relief valve
- performing two installation and design surveys, one physical and one desktop survey (e.g. plans, specifications, photographic evidence, case studies) on a Class 2-9 building greater than 5000 square metres to produce an inspection report on the following elements:
    - pipework external condition
    - sprinkler head condition
    - sprinkler head obstructions
    - sprinkler head location and spacing
    - sprinkler head compatibility and ambient conditions (response time index (RTI) and sprinkler head and spray pattern)
    - external sprinkler requirements

© Commonwealth of Australia, 2026 BuildSkills Australia

- design standard suitable for current building occupation requirements, such as classification and storage height.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- definitions of basic principles of operation and purpose of components of complex water-based fire protection systems
- general operation of a gauge
- general operation of complex water-based fire-suppression systems
- metric and imperial pressure gauge readings
- system components:
  - air compressors fitted to systems
  - circulation and system pressure relief valves
  - flow switches and associated testing equipment
  - isolating valves associated with water-based fire-suppression system
  - pressure gauges
  - pressure reducing equipment
  - pumpsets associated with water-based fire-suppression system
  - pump starting switches
  - purpose and key requirements of system block plan for installations installed since 1972
  - suction inlet strainers and screens on a static water supply for water-based fire-suppression system
  - system main alarm bell and/or alarm strobe indicating building entry point for emergency personnel
  - system pressure gauge schedules, where required
  - water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication/interface
  - water supply tanks, water level indicators and automatic inflow valves
  - water supply underground key-operated valve location
- controls on the pumpset controller panel:
  - fuel gauges
  - indicators
  - main isolating switch
- terminology used in relation to water-based fire-suppression systems

© Commonwealth of Australia, 2026 BuildSkills Australia

- water-based fire-suppression system applications as defined in AS 2118 Automatic fire sprinkler systems or AS 2419 Fire hydrant installations \-- System design, installation and commissioning
- legislative and industry requirements:
    - dangerous goods regulations
    - licensing arrangements
    - environmental regulations
    - work health and safety (WHS) legislation, regulations and codes
    - relevant Commonwealth and state or territory building acts, regulations and codes, such as National Construction Code (NCC)
    - AS 1851 Routine service of fire protection systems and equipment
- organisational requirements, including:
    - client-specific contractual requirements
    - documentation and information systems and processes
    - legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
    - use of electronic job scheduling and communication devices
- system interfaces, including:
    - flow switches
    - pressure switches
    - tamper switches
    - valve positioning switches
- devices that operate signals between the water-based fire-suppression system and other services such as:
    - building heating, ventilation and air conditioning (HVAC) services
    - fire brigade monitoring providers
- other life safety systems, including:
    - warning systems
    - fire indicator panel (FIP)
- applying inspections, tests and survey requirements to equipment and systems, according to relevant Australian standards, to determine that they are:
    - capable of operating as intended when originally installed
    - still suitable for the fire hazard or risk being protected, as no change in occupancy or use of the area protected has occurred since the equipment or system was installed or last modified

© Commonwealth of Australia, 2026 BuildSkills Australia

    - providing the coverage and protection needed to meet original design and performance requirements
- reviewing documentation to verify that installed systems comply with legislative and industry requirements such as:
    - building's essential services or fire safety measures listing
- annual routine service, inspection, testing and surveying as referred to in AS 1851 Routine service of fire protection systems and equipment, including:
    - annual frequency inspection, testing and surveying activities, except water flow proving testing
    - operating pressure reducing valves to verify operation is at required pressures
    - operating pressure relief valves to verify operation is at required pressures
    - operating accelerator/exhauster and double interlock valves to verify operation is at required pressures and delivery time on dry pipe or pre-action systems
- complex components of a water-based fire-suppression systems, including:
    - double interlock systems
    - pressure reducing systems
    - accelerator/exhauster systems
- key control valves which may include those specified in AS 2118 Automatic fire sprinkler systems installed in:
    - associated control valve trim
    - activation small bore pipework to the alarm and control valve assembly
- water-based fire-suppression systems, including:
    - alternate wet or dry systems
    - combined sprinkler or hydrant systems
    - deluge systems
    - dry systems
    - pre-action or recycle systems
    - residential and domestic systems
    - tail-end systems
- installation and design survey information which may include the annual survey required by AS 1851 Routine service of fire protection systems and equipment, to determine that water-based fire-suppression systems design and installation are not impaired by changes to:
    - building structure
    - occupant use
    - environment

© Commonwealth of Australia, 2026 BuildSkills Australia

- installation and design surveys conducted from floor level to identify design standard suitable for current building occupation requirements:
    - building classification
    - storage heights
    - external sprinkler requirements
    - pipework corrosion or damage
- installation and design surveys conducted from floor level to identify design standard suitable for current building occupation:
    - sprinkler head requirements
    - compatibility and ambient conditions
    - head condition
    - head location and spacing
    - head obstructions
    - spray pattern
    - temperature rating and RTI
- methods of applying sustainability principles and concepts
- testing procedures for:
    - checking desiccant condition (air dryer or crystals, water separator bowl) and cleaning or replacing as required
    - checking oil level and visually assessing condition of oil on air compressor
- routine service frequency schedules:
    - reference to AS 1851 Routine service of fire protection systems and equipment schedules of work conducted at regular frequencies that relate to the work scope for weekly, monthly, and six-monthly inspection and testing activities
- how to access relevant information, including codes and standards
- tools, materials and equipment used for conducting routine services of complex water-based fire-suppression systems
- WHS requirements for conducting routine services of complex water-based fire-suppression systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS3043 Conduct functional water flow testing

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 1.6.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to complete functional water flow proving and load tests on water-based fire-suppression systems.

It includes identifying compliance requirements, isolating relevant plant and system interfaces, conducting functional water flow testing, resetting the system and completing mandatory reporting requirements.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan the work.	1.1	Identify, confirm and apply water flow testing requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Check location and equipment against legislative and industry requirements and take action according to organisational requirements to ensure compliance.
		1.4	Select and check serviceability of tools, equipment and personal protective equipment (PPE).
		1.5	Identify and isolate relevant plant and system interfaces.
		1.6	Confirm that wastewater from flow test will not cause any damage or issues to site or surrounding area.
		1.7	Identify appropriate test points and required water flow test equipment.
		1.8	Locate and identify types of water supply isolating valves.
2	Prepare for work.	2.1	Apply appropriate workplace procedures and risk control measures.
		2.2	Depressurise flow test point pipework.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Attach water flow test equipment according to manufacturer instructions and organisational requirements.
		2.4	Install gauges of known accuracy.
		2.5	Determine system water pressure and flow requirements from block plan.
		2.6	Select and chart at least four points to take readings when flow testing according to manufacturer's charts for the flow test equipment.
		2.7	Operate valves to isolate water supplies.
		2.8	Document all information from site block plan.
1	Conduct functional water flow proving and load test, and record results.	3.1	Perform tests on each water supply to verify that systems function as intended, stopping at a minimum of four points and recording installation, town’s main and/or pump suction and discharge pressures.
		3.2	Record pump driver RPM at the drive shaft, temperature of driver and oil pressure.
		3.3	Monitor cooling system closely while conducting flow test.
		3.4	Record temperature of pump room when conducting test.
		3.5	Compare test results with legislative and industry requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.6	Identify all defects and nonconformances and report according to AS 1851 Routine service of fire protection systems and equipment.
		3.7	Document and graph results and forward report to relevant persons for action.
		3.8	Reinstate system according to organisational requirements.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPFS3043 Conduct functional water flow testing

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 1.6.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting a load test on a wet and general electrical pumpset according to AS 1851 Routine service of fire protection systems and equipment
- conducting a load test on a wet and general diesel pumpset according to AS 1851 Routine service of fire protection systems and equipment
- conducting a functional water-flow test on a hydrant system incorporating a pumpset
- conducting two functional water-flow tests on a hydrant system:
    - one with a portable flow meter
    - one connected by a length of fire hose.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- basic principles of hydraulics
- basic principles of operation and purpose of components of a water-based fire protection system:
    - deluge control valve assembly components
    - alarm wet control valve assembly components
    - booster valve assembly
    - circulation and system pressure relief valves
    - compression ignition engine governing controls
    - differential pressure gauges

© Commonwealth of Australia, 2026 BuildSkills Australia

  - hand tachometers
  - hydrant landing valve assembly
  - isolation and control valves
  - manometers
  - orifice plates
  - pitot tube water flow test instrument
  - pressure and flow switches
  - pressure gauges
  - pump controllers and ancillary equipment for control and indication
  - pumpsets

CPCPFS3044 Install distribution and range pipes

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5 • Amended Performance Criteria 3.2. • Amended Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to install distribution and range pipes to carry all commonly used fire extinguishing agents, above and below ground. The installation may involve a new system or an alteration (extension or modification) to an existing system.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify installation requirements.	1.1	Obtain, read and determine distribution and range pipes requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select and check the serviceability of appropriate tools and equipment, including personal protective equipment (PPE).
		2.3	Prepare work area to support efficient installation of distribution and range pipes.
3	Install piping system.	3.1	Set out pipework and install pipe supports and fixings.
		3.2	Piping and materials are installed according to design drawings, job specifications and standards.
		3.3	Attach mechanical jointing systems.
		3.4	Isolate and drain down system prior to installing pipework to avoid water damage when altering existing systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.5	Reinstate after completing works for water tightness.
		3.6	Complete documentation and submit within required timeframes.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS3044 Install distribution and range pipes

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5 • Amended Performance Criteria 3.2. • Amended Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing distribution and range pipes in both:
  - a new automated fire sprinkler system
  - an existing automated fire sprinkler system, incorporating two rolled grooves, three threaded joins, one mechanical Tee and one barrel union
- providing a free-flowing and leak-free water supply to at least three branches of new and an existing system
- installing a range to feed two sprinkler heads using a mechanical Tee and support all pipework according to AS 2118 Automatic fire sprinkler systems
- relocating two sprinklers in an existing system, including draining down the system.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- legislation, regulations, standards and codes
- processes, procedures and techniques of:
  - installing distribution and range pipes
  - fixing and joining of pipes
  - levelling and alignment
  - roll grooving

© Commonwealth of Australia, 2026 BuildSkills Australia

- applications of sustainability concepts and principles relating to plumbing, encompassing water and resource usage
- materials storage and environmentally responsible waste disposal relating to distribution and range pipe installation
- general fire protection systems terminology
- functional and operational features of tools and equipment used to install distribution and range pipes:
    - threading machines
    - roll grooving machines
    - roll grooving measuring devices
    - ladders
    - pipe wrenches
    - steel pipe
    - roll grooved and threaded fittings and valves
    - elevated work platform (EWP)
    - sockets
    - impact drills
    - threaded rod cutters
    - hammers and punches
- identification of incorrect roll grooving
- characteristics, application and limitation of approved materials and components:
    - pipe fittings and fixture supports
- how to access relevant information including job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used for installing distribution and range pipes
- work health and safety (WHS) requirements for installing distribution and range pipes
- installation requirements for installing distribution, pipework and range pipes.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPFS3045 Fit off sprinkler heads, controls and ancillary equipment

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 9.0. Changes to Performance Evidence and Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing sprinkler heads, controls, and ancillary equipment in both a new and existing system including:
    - three different sprinkler heads with three different escutcheon assemblies: two hard piped drop; one flexible tube assembly, installed and branched according to manufacturer's specifications
    - a mechanical flow switch, incorporating a test arrangement
    - two pressure switches, one pressure switch used for rising pressure alarm and one used for a fall in pressure loop
- producing a plan containing four sprinkler heads spaced according to Ordinary Hazard III
- rectifying a tenancy floor plan that includes:
    - two new sprinkler heads
    - two relocated sprinkler heads
    - two deleted sprinkler heads.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- legislation, regulations, standards and codes relating to fitting off sprinkler heads, controls and ancillary equipment:
- processes, procedures and techniques of:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - fitting off sprinkler heads, controls and ancillary equipment
    - levelling and alignment for installing pipework associated with sprinkler heads, controls and ancillary equipment
- general fire protection systems terminology
- characteristics, application and limitations of different approved materials and components
- design requirements, functions and limitations of the following components:
    - sprinkler heads of at least 6 different types
    - escutcheon plates
    - flexible tube assemblies and their mounting brackets
    - pressure switches
    - flow switches
    - pipe supports and anchors
    - pipe jointing techniques including threading and roll grooving
- functional and operational features of tools and equipment used to fit off sprinkler heads, controls and ancillary equipment
- materials storage and environmentally responsible waste disposal relating to installation of sprinkler heads, controls and ancillary equipment
- how to access relevant information including, job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
- tools, materials and equipment used for installing sprinkler heads, system controls and ancillary equipment for sprinkler fire protection systems
- work health and safety (WHS) requirements for installing sprinkler heads, system controls and ancillary equipment for sprinkler fire protection systems
- installation requirements for installing sprinkler heads, system controls and ancillary equipment for sprinkler fire protection systems.

CPCPFS3046 Test the integrity of water-based fire protection systems using pressure

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to test the integrity of water-based fire protection systems using pressure.

It includes performing water pressure testing on fire safety sprinkler and hydrant systems to establish the integrity of the water-based system or to identify and rectify leaks.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan the work.	1.1	Obtain, read and apply water-based fire protection systems requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Identify materials and components and calculate quantities.
2	Prepare for work.	2.1	Check material and components for conformity and action any discrepancies.
		2.2	Select and check serviceability of tools, equipment and personal protective equipment (PPE) and rectify or report any faults.
		2.3	Prepare work area to efficiently test fire protection system.
		2.4	Determine the type of test to be performed and prepare appropriate testing equipment.
3	Test fire protection systems.	3.1	Connect air test equipment to system using pressure test not exceeding 50KPa.
		3.2	Connect water test equipment and conduct hydrostatic test according to relevant codes and Australian Standard.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Record readings from each pressure gauge in format determined by job specifications and quality assurance requirements.
		3.4	Isolate water supply and open all water outlets to drain down system.
		3.5	Recharge and restore system to operational condition.
		3.6	Complete documentation and submit within required timeframe.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPFS3046 Test the integrity of water-based fire protection systems using pressure

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- testing the integrity of water-based fire protection systems:
    - one water pressure test on a fire sprinkler system
    - one water pressure test on a fire hydrant system.

Note: Tests may be conducted during installation or maintenance of jobs.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- legislation, regulations, standards and codes relating to pressure testing water-based fire protection systems:
- policies, procedures and environmental requirements and sustainability principles relating to pressure testing water-based fire protection systems
- functional and operational features of tools and equipment used in pressure testing water-based fire protection systems
- safety requirements when using compressed air
- processes, procedures and techniques of:
    - testing water-based fire protection systems
- characteristics, application and limitations of approve materials and components:
    - sprinkler heads
    - roll groove and threaded joints
    - steel pipe

CPCPFS3047 Test and maintain automatic fire sprinklers

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to conduct up to, and including five yearly routine service preventative maintenance, fault identification and repair of automatic fire sprinkler installations in new or existing, domestic or commercial structures.

It includes performing maintenance tasks following specifications detailed in maintenance schedules, removing faulty items or components and replacing equipment or components to meet specifications.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements
CPCPFS3034 Install control valve assemblies, actuating devices and local alarms

essential outcomes.			
	Plan for work.	1.1	Access, read and apply automatic fire sprinkler maintenance requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
		2.2	Identify materials and components and calculate quantities.
		2.3	Check materials and components for conformity with delivery docket and report any inconsistencies.
		2.4	Carry out preparation of work area to support efficient service maintenance of automatic fire sprinklers.
3	Perform routine maintenance tasks.	3.1	Isolate system interfaces.
		3.2	Apply maintenance tasks, following specifications detailed in maintenance schedule and AS 1851 Routine service of fire protection systems and equipment.
		3.3	Check mechanical equipment and system components using appropriate instruments.
		3.4	Identify faulty items or components and select appropriate service procedure.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Repair or replace faulty components and test job.	4.1	Isolate system and drain down, as required, to complete tasks without causing water damage.
		4.2	Remove faulty items or components without damage to other components.
		4.3	Select replacement items or components to meet manufacturer's specifications.
		4.4	Adjust equipment or components as required.
		4.5	Recharge system with water.
		4.6	Carry out operational system check to ensure job specifications and quality requirements are met.
		4.7	Prepare maintenance report in appropriate format.
5	Clean up.	5.1	Clear the work area, and dispose of or recycle materials as applicable, following quality and work requirements and job specifications.
		5.2	Clean, check, maintain and store tools and equipment following manufacturer's and workplace requirements.

Assessment Requirements for CPCPFS3047 Test and maintain automatic fire sprinklers

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting routine service and maintenance up to five-year frequency of the following sprinkler systems:
    - wet system
    - deluge system
    - pre-action system, and applying the following tasks to all three systems:
        - replacing the seating rubber/diaphragm
        - replacing the face gasket/rubber
        - replacing any serviceable gaskets or rubbers on the drain and test valves
        - repacking an O, S & Y valve to manufacturer's specification
        - replacing all serviceable components on a gate valve
- performing the following on two different systems:
    - diagnose and repair faults
    - service relevant components as required
    - replace components as required
- performing system interfaces isolation of fire detection control indicating equipment (FDCIE) and fire pumpsets.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- documentation and reporting of defects and repairs in accordance with AS 1851 Routine service of fire protection systems and equipment
- characteristics, applications and limitations of approved materials and components, including:
    - alarm valves, wet, dry, deluge and pre-action

© Commonwealth of Australia, 2026 BuildSkills Australia

    - isolation valves, gate, butterfly and O, S & Y
    - drain and test valves
    - sluice valves
    - water motor alarms
    - pressure gauges
    - air compressors
    - air dryers
    - pressure switches
    - flow switches
    - jacking pumps
    - fire Sprinkler heads
- AS 1851 Routine service of fire protection systems and equipment preventative maintenance requirements of sprinkler systems:
    - valve overhauls
    - sprinkler samples
    - kitchen hood sprinklers
    - duct sprinklers
    - spray booth sprinklers
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements for conducting routine service maintenance of automatic fire sprinklers
- tools, materials and equipment used for conducting routine service maintenance of automatic fire sprinklers
- work health and safety (WHS) requirements for conducting routine service maintenance of automatic fire sprinklers.

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by installing fixed fire pumpsets to *AS 2419 Fire hydrant installations system design, installation and commissioning*, including:

- installing pump base and pump
- installing pipework and associated valves and components
- installing pressure relief valve and line
- pressure testing piping system and pumpset
- pressure maintenance pump (jockey pump)
- pump start arrangement (pressure switch loop).

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- procedures and techniques for:
    - installation of fixed fire pumpset
    - pressure testing equipment
    - aligning pump and driver
- structural systems, building materials and services that support or surround fixed fire pumpsets
- characteristics, applications and limitations of approved materials and components of fixed fire pumpsets, above and below ground
- types and operation of pumps used in fire protection:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - end suction
    - multistage multi outlet centrifugal
    - split case
    - turbine
    - screw
    - jacking pumps
    - jockey pumps
- types, requirements and operation of pump control panels
- pump room requirements
    - ventilation requirements
- atmospheric pressure measurements and principles in relation to fixed fire pumpset performance
- performance measures for fixed fire pumpsets
- power sources for fixed fire pumpsets, including operation and interaction of power sources
- properties of water, including pressure and flow rates
- vibration dampening
- flexible tube vibration isolation
- diesel driver exhaust sizing requirements
- materials storage and environmentally responsible waste disposal relating to installing fixed fire pumpsets
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements to install fixed fire pumpsets
- tools, materials and equipment used to install fixed fire pumpsets
- work health and safety (WHS) requirements to install fixed fire pumpsets.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for work.	1.1	Access, read and apply preventative maintenance on fixed pumpset requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Sequence tasks specified in relevant maintenance schedules.
		1.4	Identify materials and components and calculate quantities.
		1.5	Select and check serviceability of tools, equipment and personal protective equipment (PPE).
		1.6	Carry out preparation of work area for efficient preventive maintenance of fixed fire pumpsets.
		1.7	Check materials and components for conformity with delivery docket.
2	Perform preventive maintenance tasks on pump circulatory system.	2.1	Isolate pump following workplace requirements before conducting maintenance tasks.
		2.2	Disassemble cooling line strainer, remove and inspect screen, and identify and report faulty materials.
		2.3	Clean screen and reassemble strainer following workplace procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Check operation of circulatory valve and replace valve if required.
		2.5	De-isolate pump, conduct start test, and check water flow at tundish or sight glass.
3	Perform preventive maintenance tasks on packing glands.	3.1	Disassemble pump packing gland housing and remove gland plate.
		3.2	Remove and dispose of packing using appropriate packing extractors and following quality and environmental requirements.
		3.3	Repack gland following manufacturer's instructions.
		3.4	Reinstall gland plate and adjust as required.
		3.5	De-isolate, operate and check pump to ensure packing gland leak rate meets manufacturer's instructions and quality requirements.
4	Perform preventive maintenance tasks on special pump valves.	4.1	Drain down pump pipework and check to ensure there is no residual water pressure.
		4.2	Disassemble special valves and inspect housing.
		4.3	Inspect internal components of special valves and install replacements.
		4.4	Reassemble special valves, de-isolate pump and check system to ensure it is operating correctly.

© Commonwealth of Australia, 2026 BuildSkills Australia

5	Report anomalies and complete documentation.	5.1	Record inspection and testing results and report anomalies following quality requirements.
		5.2	Complete preventive maintenance documentation and forward to relevant persons for action.
6	Clean up.	6.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		6.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS3049 Conduct preventive maintenance on fixed fire pumpsets

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical errors corrected in Pre-requisite unit and Element and Performance Criteria 1.3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- performing preventive maintenance on a diesel-driven, packed gland fixed fire pumpset in accordance with AS 2941 Fixed fire protection installations across two different jobs and include:
    - a circulatory system
    - a packing gland
    - a pressure relief valve, and
    - a pressure reducing valve
- performing system interfaces isolation of fire detection control indicating equipment (FDCIE) and fire pumpsets.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- processes, procedures and techniques of:
    - conducting preventive maintenance on fixed fire pumpsets
    - isolating and draining down pump pipework
- characteristics, applications and limitations of approved materials and components:
    - end suction pumps
    - multistage multioutlet pumps
    - screw pumps

© Commonwealth of Australia, 2026 BuildSkills Australia

    - turbine pumps
    - split case pumps
    - pressure relief valves
    - pressure reducing valves
    - circulatory system
- how to access relevant information, including relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements. to conduct preventive maintenance on fixed fire pumpsets
- tools, materials and equipment used to conduct preventive maintenance on fixed fire pumpsets
- work health and safety (WHS) requirements to conduct preventive maintenance on fixed fire pumpsets.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS4021 Commission domestic and residential fire suppression sprinkler systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to test and commission domestic and residential fire suppression sprinkler systems in buildings up to four storeys in height containing communal catering and residential quarters.

It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of the systems, and work finalisation processes including records and documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable legislation including work health and safety (WHS).

Site locations for work application are domestic and residential and may be a new work site or an existing structure, including minimum of a communal catering and living area and multiple residential quarters (or equivalent), and a fire suppression sprinkler system for a domestic residence containing a minimum of two rooms.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for work.	1.1	Obtain current approved plans and specifications.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Apply quality assurance requirements to comply with internal and external policies, procedures, standards and authorities.
		1.4	Consult with associated persons to plan and sequence tasks.
		1.5	Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
		1.6	Prepare work area to support effective commissioning process.
2	Identify system requirements.	2.1	Identify and confirm system design requirements using job specifications, authorities' requirements and standards.
		2.2	Identify commissioning requirements using job specifications, authorities' requirements and standards.
3	Test and commission system.	3.1	Check sprinkler systems to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Test system operation and adjust as required to meet all requirements and specifications.
		3.3	Commission and maintain system to ensure correct operation according to standards, and manufacturer and job specifications.
4	Clean up work area.	4.1	Clear the work area of materials and dispose of, reuse or recycle materials according to legislation, regulations, environmental codes of practice and job specifications.
		4.2	Clean tools and equipment check for damage and malfunction and store according to manufacturer recommendations and workplace procedures.
		4.3	Access information to complete documentation according to workplace requirements and submit within specified timeframes, including all required information.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS4021 Commission domestic and residential fire suppression sprinkler systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To determine competency in this unit a candidate must meet the performance criteria for this unit by:

- commissioning and testing a fire suppression sprinkler system for a domestic and residential fire suppression sprinkler systems in buildings up to four storeys in height containing communal catering and residential quarters and a fire suppression sprinkler system for a domestic residence containing a minimum of two rooms
- correctly interpreting plans and specifications to complete work to the specified standard within accepted timeframes
- complying with appropriate legislation, organisational processes and regulatory requirements.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- components and materials of fire suppression sprinkler systems including:
    - actuating devices
    - alarms
    - control valve assemblies
    - piping
    - sprinkler heads
    - unplasticised polyvinyl chloride (uPVC), steel or copper pipes and other approved materials
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- pressure test systems and procedures
- process of installing, testing and commissioning domestic and residential fire suppression sprinkler systems

© Commonwealth of Australia, 2026 BuildSkills Australia

- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- SI system of measurements
- safe work practices relating to testing and commissioning domestic and residential fire suppression sprinkler systems including:
    - hazard control
    - personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
    - handling of materials
    - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- environmental requirements including:
    - water quality management
    - clean-up protection
    - stormwater protection
    - waste management
- quality assurance information including:
    - Australian standards
    - Environment Protection Authority (EPA)
    - internal company quality assurance policy and risk management strategy
    - International Standards Organisation (ISO)
    - site safety plan
    - workplace operations and procedures
- tools and equipment including:
    - hand and power tools
    - test equipment
- sustainability principles and concepts including efficient:
    - water usage
    - harvesting
    - disposal
- planning and site information including:
    - charts and hand drawings
    - instructions issued by authorised organisational or external personnel
    - job drawings and specifications

© Commonwealth of Australia, 2026 BuildSkills Australia

    - manufacturer specifications and instructions
    - safety data sheets (SDS)
    - organisation work specifications and requirements
    - work schedules, plans and specifications
    - spoken, written and graphical instructions
- regulatory and legislative requirements, particularly those pertaining to:
    - building codes
    - work health and safety (WHS) and environmental requirements
    - plumbing regulations
    - relevant Australian standards, including AS 2118.1 Automatic fire sprinkler systems
    - signage
    - local authorities' requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS4022 Commission and maintain special hazard fire suppression systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Foundation Skills. Typographical error corrected in Elements and Performance Criteria 4.2.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to test, commission and maintain special hazard fire suppression systems.

It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of the systems, and conduct of systems maintenance and work finalisation processes, including records and documentation.

Site location for work application may be either domestic or residential and may be a new work site or an existing structure being renovated, extended, restored or maintained.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

All technicians performing work described in this unit that involves the handling of prescribed ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) extinguishing agents must hold an appropriate extinguishing agent handling licence (EAHL).

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for work	1.1	Obtain plans and specifications.
		1.2	Apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Identify and adhere to quality assurance requirements to according to workplace requirements.
		1.4	Commission, inspect, test and maintain ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) legislative and industry requirements to activities for special hazard fire suppression systems.
		1.5	Plan and sequence tasks in conjunction with others involved in or affected by the work.
		1.6	Select and check tools, equipment and materials for serviceability prior to commissioning and maintaining special hazard fire suppression systems, including personal protective equipment.
		1.7	Prepare work area to support efficient commissioning process.
2	Identify system	2.1	Identify and confirm service design requirements from job specifications and are according to standards.

© Commonwealth of Australia, 2026 BuildSkills Australia

	requirements.		
		2.2	Identify testing and commissioning requirements of special hazard fire suppression systems according to standards, authorities' requirements and job specifications.
3	Test and commission system.	3.1	Check special hazard fire suppression systems to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.
		3.2	Test operation of system according to job specifications, manufacturer recommendations and authorities' requirements, including ODS and SGG legislative requirements, and is adjusted as required.
		3.3	Commission system to ensure correct operation according to standards, and manufacturer and job specifications.
4	Maintain system.	4.1	Identify service and maintenance requirements from manufacturer specifications or authorities' requirements.
		4.2	Check and fit replacement components periodically and as required according to specifications.
		4.3	Conduct maintenance and repair of system observing maintenance schedule described in current Australian standard, and manufacturer and/or authorities' requirements, including ODS and SGG legislative requirements.
		4.4	Observe sustainability principles and concepts when preparing for and undertaking work process.
5	Clean up work area.	5.1	Clear work area and dispose of reused or recycled materials, according to legislation, regulations, codes of practice and job specification.
		5.2	Clean, check, maintain and store tools and equipment according to manufacturer recommendations and workplace procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

		5.3	Access information and complete documentation according to workplace requirements.

Foundation Skills

A person demonstrating competency in this unit must have the following language, literacy, numeracy and employment skills:

- technical skills to test, commission and maintain a special hazard protection system consisting of an extinguishing agent, piping, actuating devices and sprinkler delivery
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS4022 Commission and maintain special hazard fire suppression systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Foundation Skills. Typographical error corrected in Elements and Performance Criteria 4.2.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- locating, interpreting and applying relevant information, standards and specifications to testing and commissioning special hazard fire suppression systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- testing and commissioning one special hazard fire suppression system (not prescribed ODS or SGG extinguishing agent), being a gaseous, chemical or fluid-based system; and inspect, test and maintain one prescribed ODS or SGG system, ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design specification and details of proposed service
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, standards and organisational quality procedures and processes
    - communicating and working effectively and safely with others.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- work health and safety are to be according to commonwealth, state and territory legislation and regulations:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - handling of materials
    - hazard control
    - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
    - safe operating procedures, including recognising and preventing hazards associated with:
        - electricity
        - hazardous materials and substances
        - other machines
        - surrounding structures and facilities
        - trip hazards
        - underground services
        - use of tools and equipment
        - work site visitors and the public
        - working at heights
        - working in confined spaces
        - working in proximity to others
    - use of firefighting equipment
    - use of first aid equipment
    - workplace environment and safety
- environmental requirements cover water quality management:
    - clean-up protection
    - complying with ODS and SGG legislation, codes and regulations, e.g. Ozone Protection and Synthetic Greenhouse Gas Management Act 1989
    - preventing emissions of prescribed ODS and SGG extinguishing agents
    - stormwater protection
    - waste management
- materials:
    - actuating devices
    - alarms
    - control valve assemblies
    - unplasticised polyvinyl chloride (PVC-U), steel or copper pipes or other approved materials
    - special hazard fire suppression agents, including prescribed ODS and SGG materials

© Commonwealth of Australia, 2026 BuildSkills Australia

    - sprinkler heads
- special hazard fire suppression systems:
    - carbon dioxide and other gases (such as inergen and argonite)
    - chemical reaction and explosion suppression systems
    - dry chemical
    - foam
    - prescribed ODS and SGG extinguishing agents (such as halon and NAF S-III)
    - water
    - water mist
- information:
    - charts and hand drawings
    - instructions issued by authorised organisational or external personnel
    - job drawings
    - manufacturer specifications and instructions
    - material safety data sheets (MSDS)
    - memos
    - organisation work specifications and requirements
    - plans and sketches
    - regulatory and legislative requirements, particularly those pertaining to:
        - building codes
        - WHS and environmental requirements, including ODS and SGG legislation, codes and regulations
        - plumbing regulations
    - relevant Australian standards, including AS2118 Automatic fire sprinkler systems and AS1851 Maintenance of fire protection systems and equipment
    - safe work procedures relating to testing and commissioning special hazard fire suppression systems
    - signage
    - verbal, written and graphical instructions
    - work bulletins
    - work schedules, plans and specifications.

CPCPFS4023 Commission fire system pumpsets

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to test and commission a fire system pumpset.

It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of systems, and finalisation of work processes, including the completion of records and documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable standards and legislation including work health and safety (WHS).

This unit's requirements may be carried out by experienced tradespersons such as hydraulic design consultants, plumbers or plumbing contractors who employ a team of plumbers.

Site location for work application may be either domestic or residential and may be a new work site or an existing structure.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for CPCPFS4023 Commission fire system pumpsets

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- testing and commissioning one fire system pumpset, and
    - interpreting plans and specifications correctly to complete work to the specified standard within accepted timeframes
    - complying with appropriate legislation, organisational processes and regulatory requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- performance measures for fire system pumpsets
- process to install, test and commission fire system pumpsets
- processes for accessing information and for calculating material requirements
- types of fire system pumpsets including:
    - centrifugal
    - close coupled, long coupled with mechanical joints or belt driven by an electric or petrol and diesel motor
    - multi-stage turbine
    - positive displacement
    - submersible and electric and compression ignition driven pumps
- pump controls including:
    - automatic, including float, level, flow or pressure switches
    - manual

CPCPFS4024 Design residential fire sprinkler systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Pre-requisite unit.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design domestic and residential fire sprinkler systems using hydraulic calculations.

It includes determination of system requirements, detailed design and recording of system plans.

In some jurisdictions this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPFS3037 Install residential life safety sprinkler systems

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for design process.	1.1	Identify and confirm the nature and scope of design task from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Consult with stakeholders as required.
		1.4	Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
		1.5	Prepare the work area in which the design process is to be conducted.
2	Determine system requirements.	2.1	Obtain and confirm information specifications for the required work.
		2.2	Specify regulations and standards relevant to the work.
		2.3	Identify and extract relevant data from relevant job plans and specifications, codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		2.4	Identify and establish building classification and hazard ratings according to standards and other relevant regulations.

© Commonwealth of Australia, 2026 BuildSkills Australia

3	Design sprinkler system.	3.1	Establish water supply needs and draw graphs for the automatic fire sprinkler system.
		3.2	Size pipework to manufacturer specifications and standards using hydraulic calculations.
		3.3	Design sprinkler system to meet plan specifications, standards, manufacturer's recommendations and water supply data.
		3.4	Select sprinkler heads of appropriate size, spray pattern, temperature and finish.
		3.5	Plot sprinkler spacing according to manufacturer's specifications, standards and relevant statutory and regulatory authority regulations.
		3.6	Create pipe layout drawings according to standards and workplace requirements.
4	Finalise work.	4.1	Document calculations and other supporting evidence to support design.
		4.2	Optimise material specifications according to standards from the proposed design.
		4.3	Prepare fabrication sheets and material lists.
		4.4	Record plans according to regulatory authorities' and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPFS4024 Design residential fire sprinkler systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Pre-requisite unit.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- using hydraulic calculations to design a fire sprinkler system for a residential complex containing a minimum of a communal catering and living area and multiple residential quarters (or equivalent) and also a fire sprinkler system for a domestic residence containing a minimum of two rooms.

In doing so the person must:

- correctly interpret plans and specifications to complete work to the specified standard within accepted timeframes
- comply with appropriate legislation, organisational processes and regulatory requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- calculating and measuring techniques and their application:
  - SI system of measurements
  - calculating material requirements
- components and materials of fire suppression sprinkler systems and their operating characteristics:
  - actuating devices
  - alarms
  - control valve assemblies

© Commonwealth of Australia, 2026 BuildSkills Australia

    - piping
    - sprinkler heads
- process and design techniques, materials and technology:
    - calculators
    - design data
    - design tables
    - drawing and drafting equipment
    - reference materials
    - computers running appropriate computer-aided design (CAD) software
    - drafting materials
    - plans
- job safety analysis (JSA) and safe work method statements (SWMSs)
- accessing and using information:
    - charts and hand drawings
    - instructions issued by authorised organisational or external personnel
    - job drawings
    - manufacturer specifications and instructions
    - organisation work specifications and requirements
    - plans and sketches signage
    - verbal, written and graphical instructions
    - work bulletins
    - work schedules, plans and specifications
- regulatory and legislative requirements
- properties of water including pressure and flow rates
- work health and safety (WHS) related to designing residential and domestic fire sprinkler systems
- environmental requirements and sustainability principles
- quality assurance requirements.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS4025 Commission fire alarm and detection system interface devices

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to commission fire alarm and detection interface systems.

It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of the system interface devices, and work finalisation processes, including records and documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable legislation including work health and safety (WHS).

This units' requirements may be carried out by experienced tradespeople such as hydraulic design consultants, plumbers or plumbing contractors who employ a team of plumbers.

Site location for work application may be a new work site or an existing structure.

The skills and knowledge described in this unit require a licence to practice in a workplace where plant and equipment interface devices operate at voltages above extra low voltage (above 50 V AC or 120 V DC).

Other regulations related to electrical and plumbing work may apply in some jurisdictions.

Practice in the workplace and during training is also subject to work health and safety regulations and contractual training obligations, such as those required under apprenticeship agreements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

	requirements.		
		2.2	Identify and determine system commissioning requirements using relevant Australian standards, statutory and regulatory authorities' requirements and job specifications.
3	Test and commission system.	3.1	Check fire alarm and detection system interface devices to ensure type and installation conform to relevant Australian standard, job specifications, manufacturer recommendations and authorities' requirements.
		3.2	Test operation of system interface devices and adjust as required according to Australian standard, job specifications, manufacturer recommendations and authorities' requirements.
		3.3	Commission and maintain system interface devices to ensure correct operation according to relevant standards, and manufacturer and job specifications.
4	Clean up work area.	4.1	Clear the work area of materials and dispose of, reuse or recycle materials according to legislation, regulations, environmental codes of practice and job specifications.
		4.2	Clean tools and equipment, check for damage and malfunction and store according to manufacturer recommendations and workplace procedures.
		4.3	Access information to complete documentation according to workplace requirements and submit within specified timeframes.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS4025 Commission fire alarm and detection system interface devices

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- commissioning a fire alarm and detection system interface device, including a pressure switch and a flow switch, plus an actuator and a control and indicating panel and in doing so:
    - correctly interpret plans and specifications to complete work to the specified standard within accepted timeframes
    - comply with appropriate legislation, organisational processes and regulatory requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- components and materials of fire alarm and detection system interface devices including:
    - pressure switches
    - flow switches
    - actuators
    - solenoids
    - valve monitoring devices
- verifying interface device operations, including:
    - alarm volume
    - annunciators

  - audible, visible and combination alarms
  - controls
  - coordination of alarm signals with other services
  - dispatching systems
  - public reporting systems
  - signal transmission
  - tactile alarm appliances for people with disabilities
  - zone alarms
- correct location and setting of interface devices to meet system design standards
- difference between extra low voltage and low voltage system interface wiring connection
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing, testing and commissioning fire alarm and detection system interface devices
- systems operations and procedures
- properties of water including pressure and flow rates
- relevant statutory requirements related to commissioning fire alarm and detection system interface devices including:
  - automatic smoke and heat venting systems
  - air handling systems
  - emergency warning and intercommunication systems
- statutory and regulatory authorities including:
  - Commonwealth government
  - state or territory governments
  - local authorities
- sources of information and processes for calculating suitable replacement of interface devices
- SI system of units
- standards applicable to the service including:
  - AS 1670.1 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Part 1 Fire
  - AS2118.1Automatic fire sprinkler systems Part 1: General systems
  - AS1851Routine service of fire protection systems and equipment
- safe work practices associated with commissioning fire alarm and detection interface systems including:

Assessment Requirements for CPCPFS4026 Commission firefighting appliances

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- commissioning firefighting appliances, including portable fire appliances, wheeled fire extinguishers, delivery lay flat hose and fire hose reel systems for a residential building of a minimum four storeys on a new or existing structure.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- current Australian standards applicable to relevant appliances including:
    - AS/NZS 1841.1 Portable fire extinguishers General requirements
    - AS/NZS 1850 Portable fire extinguishers - Classification, rating and performance testing
    - AS 1851-2012 Routine service of fire protection systems and equipment
    - AS2441 Installation of fire hose reels
    - AS2444 Portable fire extinguishers and blankets -selection and location
    - AS/NZS3504 Fire blankets
    - AS3565 Meters for water supply
    - AS4077 Fire protection fire extinguishing media: halogenated hydrocarbons Specifications for halon 1211 and halon 1301
    - AS4077 Fire protection fire extinguishing media: Code of practice for safe handling and transfer procedures of halon 1211 and halon 1301
    - AS4078 Fire protection fire extinguishing media: carbon dioxide
    - AS4265 Wheeled fire extinguishers
    - AS/NZS4353 Portable fire extinguishers - aerosol type
- components and materials of firefighting equipment and appliances including:
    - delivery lay flat fire hose
    - fire blankets

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for work	1.1	Consult with approving authority to determine commissioning inspections and tests required to validate fire sprinkler system performance meet design requirements.
		1.2	Obtain and review documentation required for commissioning.
		1.3	Consult with all associated persons to plan and sequence tasks.
		1.4	Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
		1.5	Prepare work area to support efficient commissioning process.
2	Confirm that installation of system components correspond to design requirements.	2.1	Identify fire sprinkler system components and locations on drawings and specifications.
		2.2	Inspect building to confirm that locations of system components correspond to design requirements and report any variances.
		2.3	Confirm types of sprinkler heads are compatible and report if determined as incompatible.
		2.4	Confirm spaces between sprinkler heads are correct and report any variances.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Inspect and confirm that pipework is functional and report any jointing and supporting defects.
		2.6	Inspect valves for different commissioning tests to confirm correct type, labelling, and position.
		2.7	Confirm pressure gauge schedule, block plan and interface diagram correspond to design requirements.
		2.8	Check and verify water supply components, including any installed pumpsets against design requirements.
		2.9	Identify changes to the building or existing conditions that could affect component performance.
3	Conduct pressure tests and restore system to normal pressure.	3.1	Conduct static air-pressure test to confirm integrity of the system, record results according to relevant standards and workplace requirements.
		3.2	Conduct high pressure hydraulic test to confirm integrity of the system, record results according to relevant standards and workplace requirements.
		3.3	Identify and report leaks.
		3.4	Drain system and re-charge at normal pressure according to relevant standards and workplace requirements.
4	Conduct functional tests.	4.1	Conduct water supply functional proving test and record results according to relevant standards.
		4.2	Conduct functional tests of system components and interfaces, record results according to relevant standards and design requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.3	Conduct tests according to environmental and sustainability requirements.
5	Finalise commissioning process.	5.1	Confirm system functionality and compliance with design specifications.
		5.2	Confirm componentry is set to operational function and pipework is charged with water according to specifications.
		5.3	Clean tools and equipment, check for damage and malfunction and store according to manufacturer recommendations and workplace procedures.
		5.4	Access information to complete documentation according to workplace requirements and submit within specified timeframes.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPFS4027 Commission fire sprinkler systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Knowledge Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To determine competency in this unit, a person must demonstrate they can commission one wet system connected to fixed pumpsets, one wet system connected to town main supply and one pre-action fire sprinkler system, and in doing so:

- correctly interpret plans and specifications to complete work to the specified standard within accepted timeframes
- comply with appropriate legislation, organisational processes and regulatory requirements.

In doing this, the person must meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- design and installation performance requirements of relevant installation standards including:
    - National Fire Protection Association (NFPA)
    - Factory Mutual performance-based codes of practice
    - AS 2118.1 Automatic fire sprinkler systems - General systems
- industry and regulatory requirements for commissioning fire sprinkler systems including:
    - codes and standards
    - environmental and sustainability
    - licensing
    - quality assurance

    - work health and safety (WHS)
- job safety analyses (JSA), safety data sheets (SDS) and safe work method statements (SWMS)
- performance measures for fire sprinkler systems as referenced in design drawings and specifications
- properties of water, including pressure, flow rates and atmospheric pressure
- SI system of measurements
- workplace and equipment safety requirements, including personal protective equipment (PPE) requirements relevant to the job
- fire sprinkler systems including:
    - deluge
    - dry pipe
    - pre-action
    - storage sprinklers
    - wall wetting
    - water mist
    - wet pipe
- approving authorities including:
    - client representative
    - council representative
    - fire brigade official
    - fire protection consultant engineer
    - insurance company representative
    - system designer
- documentation including:
    - as-installed drawings
    - design calculations
    - logbooks
    - operator manuals
- tools and equipment including:
    - digital tachometers
    - flow testing equipment
    - hand tools
    - laser levels

CPCPFS5010 Design fire-compliant hydraulic services

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to design fire protection systems for hydraulic services in wide span and high-rise buildings. The fire protection systems ensure that hydraulic services maintain integrity, insulation and structural adequacy in case of fire.

It involves interpretation of plans and specifications and the design, detailing and documentation of fire-compliant hydraulic services for applications including residential, commercial and industrial and may be for new projects or an existing structure being renovated, extended, restored or maintained.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Evaluate fire and non-fire-rated compartments of buildings and specify the application of evaluation to hydraulic services.
		1.2	Determine design requirements from plans, specifications and client brief.
		1.3	Conduct cost-benefit analysis, comparing a range of pipe materials, system designs and penetration protection systems.
		1.4	Interpret and apply statutory, regulatory, Australian and New Zealand standards and relevant building code requirements for the design of fire-compliant hydraulic services.
		1.5	Interpret and apply manufacturer requirements and trade and technical manuals.
		1.6	Conduct additional research, including a desktop study, and establish performance requirements.
2	Plan and detail system components.	2.1	Plan layout of pipework systems and type and location of fire check materials.
		2.2	Specific approved fire-rated materials, penetration techniques, insulation and filler materials to appropriate fire-resistance level.
		2.3	Design pipe fixings for a range of applications.
		2.4	Design pipework for sprinklered and non-sprinklered areas for a range of applications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Specify installation requirements.
		2.6	Conduct compliance inspection in accordance with workplace procedures.
3	Design and size systems.	3.1	Design fire-compliant hydraulic services for a range of wide span and high-rise building applications.
		3.2	Design a range of fire-compliant duct systems using fire-rated building materials.
		3.3	Design hydraulic services using non fire-rated materials to comply with building fire ratings.
		3.4	Design and size fire-compliant hydraulic distribution systems using computer software packages.
		3.5	Apply sustainability principles and concepts when preparing for and undertaking work process.
4	Prepare documentation.	4.1	Prepare and detail plans for a range of fire-compliant hydraulic services.
		4.2	Prepare specifications for fire-compliant hydraulic services.
		4.3	Prepare compliance report in accordance with workplace procedures.
		4.4	Produce operation and maintenance manual in accordance with workplace procedures.

Assessment Requirements for CPCPFS5010 Design fire-compliant hydraulic services

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- evaluating and documenting design parameters, including client, regulatory, manufacturer, NCC and Australian and New Zealand standard requirements for a range of fire-compliant hydraulic services
- planning and detailing system components, including:
    - applying sustainability principles and concepts
    - conducting a compliance inspection
    - designing fire-compliant hydraulic systems
    - designing fire-compliant systems for fire-rated materials
    - designing fire-compliant systems for non-fire-rated materials
    - ducts
    - fire check collars
    - insulation and filler materials
    - penetrations
    - preparing a compliance report
    - preparing a specification for fire-compliant hydraulic services
    - preparing an operation and maintenance manual.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- sustainability principles and concepts covering the current and future social, economic and environmental use of resources:
    - selecting appropriate material to ensure minimal environmental impact
    - efficient use of material
    - efficient energy usage

© Commonwealth of Australia, 2026 BuildSkills Australia

    - efficient use and recycling of material
    - disposing of waste material to ensure minimal environmental impact
    - efficient water usage, harvesting and/or disposal
    - lifecycle cost-benefit analysis
    - consideration of the Green Building Council of Australia rating scheme.
- design requirements:
    - architectural specifications
    - builder specifications
    - design of fire-compliant hydraulic services should ensure that hydraulic services maintain the integrity, insulation and structural adequacy of a building in case of fire
    - owner requirements
    - specialist design applications
- statutory, regulatory, Australian and New Zealand standards and relevant building code requirements:
    - AS/NZS3500 National plumbing and drainage
    - manual of authorisation procedures for plumbing and drainage products (MP52)
    - material and authorisation standards specified by:
        - statutory plumbing authority
        - local authority
        - National Construction Code (NCC)
    - relevant Acts, regulations and local and state government policies
    - relevant fire standards
- manufacturer requirements:
    - material specifications
    - technical and trade manuals
- layout of pipework systems:
    - car park systems
    - concealed pipework
    - duct systems
    - exposed pipework
    - fire-rated pipework
    - non fire-rated pipework
    - sprinklered and non-sprinklered areas

© Commonwealth of Australia, 2026 BuildSkills Australia

    - should have principles of economy, serviceability, durability and fit for use applied
- fire check materials:
    - fire pillows
    - fire-rated sealants
    - smoke seals
    - range of intumescent collars
- fire-rated materials:
    - fittings
    - pipework
    - valves
- penetration techniques:
    - concrete floors
    - fire and smoke doors
    - fire dampers
    - galvanised decking systems
    - ply formwork systems
    - post and pre-tensioned concrete flooring systems
    - pre-cast flooring systems
- insulation and fill materials:
    - caulking compounds
    - fibreglass
    - fire pillows
    - foams
    - proprietary fill materials
    - rock wool
- fire-resistance level:
    - insulation
    - integrity
    - structural adequacy
- pipe fixings may include fire and load-rated:
    - bedding and thrust blocks
    - corrosion protection
    - cover

© Commonwealth of Australia, 2026 BuildSkills Australia

    - masonry fixing
    - material requirements
    - pipe supports spacings and locations
    - vertical support fixing
- installation requirements may include:
    - corrosion and element protection
    - installation details
    - jointing requirements
    - supports
    - workmanship and quality control
- compliance inspection:
    - approved materials appropriate to fire-rated compartments and required fire-resistance level are used
    - clipping and insulation comply with regulatory requirements
    - fire compartments are not compromised by hydraulic services
    - installation is appropriate for the fire-resistance level
- fire-compliant duct systems:
    - brick
    - concrete
    - masonry
    - plasterboard
- fire-rated building materials:
    - brick
    - concrete
    - masonry
    - plasterboard
    - other building materials as applicable.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS5011 Design fire sprinkler systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. • Change to first paragraph of the Application. • Change to Performance Criteria 3.3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design and size fire sprinkler systems and prepare operational documentation.

The role may involve interaction with architects, builders, suppliers and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit's requirements are typically carried out by experienced hydraulic design consultants or fire systems designers on a new or existing domestic or residential structure.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for design of fire sprinkler systems for wide span and high-rise building projects.
		1.2	Determine design requirements from plans, specifications and client brief.
		1.3	Interpret and apply fire department, statutory, regulatory, Australian and New Zealand standards and relevant building code requirements.
		1.4	Interpret trade and technical manuals and manufacturer requirements and apply to design.
		1.5	Apply sustainability principles and concepts as part of the design process.
		1.6	Establish flow and pressure requirements.
		1.7	Conduct flow and pressure tests and establish council main flows and pressures.
		1.8	Conduct research including a desktop study and establish performance requirements.
		1.9	Conduct a cost-benefit analysis to compare a range of pipe materials and system designs.
2	Plan and detail system components.	2.1	Plan layout of pipework systems including type and location of fittings and valves.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.2	Detail type, location and requirements for backflow prevention devices and alarm and valve assemblies.
		2.3	Calculate pipe sizes, velocities, flows and pressures for a range of applications.
		2.4	Specify approved materials, jointing methods and sprinkler heads for fire sprinkler systems.
		2.5	Plan and detail smoke alarm systems, booster assemblies, booster relay and jacking pumps.
		2.6	Plan pipe fixings for a range of applications.
		2.7	Plan and size water storage systems and pump, pump controls and pump room requirements.
		2.8	Plan and size test points and associated drainage systems.
		2.9	Specify installation requirements.
1	Design and size systems.	3.1	Design fire sprinkler systems for a range of wide span and high-rise building applications.
		3.2	Design combined water supply, fire hydrant and hose reel and sprinkler systems for a range of wide span and high-rise building applications.
		3.3	Design sprinkler systems for a single and dual water supplies.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.4	Design a range of sprinkler system configurations.
		3.5	Design and size fire sprinkler systems using computer software packages.
4	Prepare documentation.	4.1	Prepare and detail plans for a range of fire sprinkler systems.
		4.2	Prepare specification for a fire sprinkler system.
		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPFS5011 Design fire sprinkler systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. • Change to first paragraph of the Application. • Change to Performance Criteria 3.3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- sizing and designing two different categories of fire sprinkler systems for high-rise buildings, including:
    - plan and detail all system component
    - meet the performance criteria for this unit.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- requirements of state regulatory authorities, Australian standards and manufacturer specifications:
    - AS/NZS 2118.1 Automatic fire sprinkler systems - General systems
    - AS/NZS 3500 Plumbing and drainage set
    - AS 2200 Design charts for water supply and sewerage
    - AS 2419 Fire hydrant installations - system design, installation and commissioning
    - material and authorisation standards specified by:
        - National Construction Code (NCC)
        - statutory authorities
    - environmental requirements
    - hazards associated with devices and systems used in the hydraulic sector

© Commonwealth of Australia, 2026 BuildSkills Australia

    - installation methods used in hydraulic systems
    - other standards, codes or standard operating procedures
- terminology and definitions used in hydraulic design
- quality assurance requirements:
    - Environment Protection Authority (EPA)
    - internal company quality assurance policy and risk management strategy
    - International Standards Organisation (ISO)
    - nature of materials used and effects of performance under various conditions
    - site safety plan
    - workplace operations and procedures
- variety of applications of technology principles in design of fire sprinkler, hydrant and hose reel systems for all classes of building
- workplace safety requirements, including relevant statutory regulations, codes and standards
- scope of work:
    - interpretation of plans and specifications
    - sizing and documenting layout of fire sprinkler systems for applications, including residential, commercial and industrial
- design requirements:
    - architectural specifications
    - builder specifications
    - owner requirements
    - relevant statutory authorities
    - specialist design applications
- cost-benefit analysis including comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising project integrity
- manufacturer requirements:
    - material specifications and standards
    - pump tables
    - sizing tables
    - sprinkler heads and components
    - technical and trade manuals
- flow and pressure tests such as:
    - results of flow and pressure tests conducted by a contractor

© Commonwealth of Australia, 2026 BuildSkills Australia

  - on-site measurement of flow (l/s) and pressure (kPa)
- desktop study to collect and interpret existing data for design purposes from:
  - architectural and building plans
  - council requirements
  - developer requirements
  - regulatory requirements
  - environmental, social and economic considerations
  - other documents and reports as appropriate
- performance requirements including flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards and local statutory authorities' plans
- layout of pipework systems:
  - appropriate water supply
  - grid systems
  - ring main
  - tree system
  - should have principles of economy, serviceability, durability and fit for use applied
- types of fittings:
  - mechanical fittings
  - bends
  - elbows
  - tees
  - unions
- types of valves:
  - backflow prevention
  - pressure relief
  - isolating
  - pressure limiting
  - pressure reduction
  - strainers
  - water-saving devices
- backflow prevention devices, which may be testable or non-testable devices and installed as:
  - individual protection

© Commonwealth of Australia, 2026 BuildSkills Australia

    - zone protection
    - containment protection
- types of alarm and valve assemblies:
    - wet
    - dry
    - deluge
    - pre-action
    - mechanical and electrical alarms
    - ancillaries and trims
- calculations used to identify:
    - hazard classification
    - hydraulic
    - pressure and flow
    - density of discharge
    - velocity
    - volume
    - friction
    - area of operation (including shapes)
- materials used:
    - chlorinated polyvinyl chloride (CPVC)
    - copper
    - steel
    - fittings and fixtures
    - other approved materials
- jointing methods:
    - silver braze
    - welded
    - solvent welded
    - flanged
    - mechanical joints
    - threaded
    - other approved methods of jointing
- booster assemblies:
    - cabinet and block plans

© Commonwealth of Australia, 2026 BuildSkills Australia

    - non-return and isolating valves
    - fire appliance (hard stand) access
    - pressure gauges
    - appropriate booster assembly
- fire and load rated pipe fixings:
    - masonry fixing
    - vertical support fixing
    - pipe supports spacings and locations
    - bedding and thrust blocks
    - corrosion protection
    - cover
    - material requirements
- water storage systems considerations:
    - automatic controls
    - inlet valve design and sizing
    - outlet valve design and sizing
    - overflow requirements
    - safe tray requirements
    - tank sizes
    - vortex plates
    - tank siting
- pump, pump controls and pump room requirements:
    - manual and/or automatic controls
    - inlet and outlet design requirements
    - installation and mounting requirements
    - pump selection
    - space requirements
    - electrical supply requirements
    - valve requirements
    - ventilation requirements
    - heating
    - exhaust extraction
- test points and associated drainage systems:

© Commonwealth of Australia, 2026 BuildSkills Australia

  - design and sizing of collection points and tundishes to prevent spillage, overflow and damage to building finishes
  - design and sizing of drainage systems to cater for maximum flow conditions
  - specification of materials for systems, including copper, polyvinyl chloride (PVC) and galvanised piping
  - other approved materials
- installation requirements:
  - corrosion and elements protection
  - installation details
  - jointing requirements
  - supports
  - workmanship and quality control
- sprinkler system configurations:
  - deluge
  - drencher
  - dry
  - pre-action
  - special hazard
  - wet
- methods to apply sustainability principles and concepts:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact
  - efficient water usage, harvesting and/or disposal
  - life cycle cost-benefit analysis
  - consideration of the Green Building Council of Australia rating scheme
- plan inclusions:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics

© Commonwealth of Australia, 2026 BuildSkills Australia

    - sections
    - submission for client approval
    - pipework fabrication sheets and stores lists
    - service coordination
- schematics produced using:
    - computer generation
    - drawing equipment
- specification inclusions:
    - support and specialised components
    - jointing
    - manufacturer
    - materials
    - valve selection
    - quality control/workmanship
- types of testing:
    - air pressure test
    - hydrostatic test
    - flush system
    - quality assurance (QA) audit
- commissioning schedule inclusions:
    - direct inspection
    - flow test
    - system operation
- operation and maintenance manual inclusions:
    - hydraulic calculations and water supply details
    - as installed drawings
    - relevant standards of maintenance of all maintainable equipment
    - manufacturer data
    - system description and operating instructions
    - certificate reference.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

© Commonwealth of Australia, 2026 BuildSkills Australia

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPFS5012 Design fire hydrant and hose reel systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Foundation Skills. Typographical errors corrected in Elements and Performance Criteria 2.1, 2.2, and 2.7.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design fire hydrant, hose reel and storage systems to Australian and New Zealand standards, the National Construction Code (NCC) and other relevant legislative requirements in order to meet fire protection standards for a range of wide span and high-rise building applications.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

The design of fire hydrants, hose reels and storage systems must comply with Australian and New Zealand standards, the National Construction Code (NCC) and other relevant legislative requirements in order to meet fire protection standards.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for fire hydrants, hose reels and distribution systems for wide span and high-rise building projects.
		1.2	Determine design requirements from plans, specifications and client brief.
		1.3	Conduct cost-benefit analysis comparing a range of pipe materials and system designs.
		1.4	Interpret manufacturer requirements and trade, technical and sizing manuals for the design parameters.
		1.5	Conduct research to outline design parameters.
		1.6	Conduct flow and pressure tests.
		1.7	Establish performance requirements.
2	Plan and detail system components.	2.1	Plan layout of pipework and type and location of fittings and valves.
		2.2	Detail type, location and requirements for backflow prevention devices.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Calculate pipe sizes, velocities, flows and pressures for a range of applications.
		2.4	Specify approved materials, jointing methods and installation requirements.
		2.5	Detail hydrant booster, standpipe and hose reel assemblies.
		2.6	Design thrust blocks and pipe fixings for a range of applications.
		2.7	Size and detail pump, pump controls and pump room requirements.
		2.8	Design and detailed water storage systems.
1	Design and size systems.	3.1	Design fire hydrant and hose reel systems for a range of wide span and high-rise building applications.
		3.2	Design combined water supply, fire hydrant, hose reel and sprinkler systems for a range of wide span and high-rise building applications.
		3.3	Design a range of delivery systems.
		3.4	Design and size Fire hydrant and hose reel systems using computer software packages.
		3.5	Apply sustainability principles and concepts when preparing for and undertaking work process.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Prepare documentation.	4.1	Prepare plans for a range of fire hydrant and hose reel systems.
		4.2	Prepare block plan booster cabinet according to Australian and New Zealand standards.
		4.3	Prepare specification for a fire hydrant and hose reel system.
		4.4	Prepare testing and commissioning schedule.
		4.5	Produce operation and maintenance manual.

Foundation Skills

A person demonstrating competency in this unit must have the following language, literacy, numeracy and employment skills:

- problem-solving skills to:
  - analyse requirements
  - carry out tests
  - consider options
  - design an appropriate system
  - identify typical faults and action required to rectify problems
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

CPCPGS3026 Assess operational risk when working with hydrogen

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit describes the skills and knowledge required to identify, analyse and evaluate risks associated with hydrogen storage systems, pipework and appliances in a plumbing and services environment, including establishing the risk context and determining appropriate control measures.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No pre-requisite units

Competency field(s)

Unit sector(s)

Plumbing and services

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Required knowledge, skills and application should be considered and clearly articulated.*

© Commonwealth of Australia, 2026 BuildSkills Australia

1. Establish the risk context for hydrogen-related work	1.1 Identify risk assessment objectives and the scope of the risk assessment in accordance with safety regulations and relevant standards 1.2 Identify and document risk criteria, including likelihood, consequence and acceptability thresholds, in accordance with workplace risk management procedures and work health and safety (WHS) requirements
2. Identify hazard	2.1 Identify and record hazards associated with hydrogen storage, pipework and appliances in accordance with safety regulations and standards 2.2 Identify and record potential consequences of identified hazards, including safety, environmental and operational impacts, in accordance with WHS requirements
3. Analyse risk	3.1 Assess the likelihood of each identified consequence occurring using workplace risk assessment methods and criteria 3.2 Assess the severity of potential consequences using workplace-approved or industry-recognised risk matrices relevant to hydrogen systems 3.3 Determine and document the inherent level of risk for each identified hazard in accordance with established risk criteria and workplace procedures
4. Evaluate risk	4.1 Identify and select control measures for each identified hazard in accordance with the hierarchy of control, WHS requirements and relevant standards 4.2 Re-evaluate the severity and level of residual risk after controls are applied using workplace-approved risk matrices and risk criteria 4.3 Document risk assessment outcomes, including identified hazards, applied controls and residual risk levels, in accordance with workplace documentation requirements

Assessment Requirements for CPCPGS3026 Assess operational risk when working with hydrogen

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by completing at least **two** (2) documented hydrogen risk assessments, covering:

- **one** (1) new installation scenario that includes cylinder, pipework and appliance, and
- **one** (1) existing installation scenario that includes either conversion of gas type, maintenance, or purging processes, and
- identify at least **five** (5) hazards per scenario.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- work health and safety (WHS) regulations for hazard identification, risk assessment and control measures relevant to hydrogen work
- relevant Australian Standards for gas installations as they relate to assessing risk and determining appropriate controls
- risk profiles or criteria including:
    - how likelihood is defined
    - the level at which risk becomes acceptable or tolerable
    - the nature and types of causes and consequences that can occur and how they will be measured
    - risk mitigation and how the level of risk is determined
- hydrogen properties and behaviour, including:
    - flammability limits
    - ignition temperature
    - low ignition energy and implications for static control and exclusion zones
    - flame temperature and heat radiation considerations
    - flame speed and implications for flashback risk
    - invisibility/low visibility of hydrogen flames and detection/response implications
    - relative density low molecular weight and buoyancy, and implications of accumulation
    - permeability of hydrogen through materials
- hazards associated with hydrogen and their implications for risk assessment including:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - leak detection limitations for non-odorised hydrogen
    - fire, explosion, and asphyxiation risks
    - effects of leaks and high-pressure release
    - elevated storage pressures
    - static electricity and other ignition sources
    - material compatibility and potential issues, including hydrogen embrittlement affecting metals and seals
- safe work practices relevant to assessing risk and determining appropriate control measures when working with or near hydrogen sources, including:
    - exclusion zones
    - ventilation
    - detection of non-odourised gas
- storage and handling considerations relevant to risk assessment and control selection, including:
    - approved storage vessels (cylinders)
    - site selection
    - pressure ratings
    - certification
    - separation distances and clearances for hydrogen storage
    - supports and bases
    - ventilation requirements
    - static control
    - protection of stored hydrogen from damage or tampering.

Assessment Conditions

Assessment must occur in workplace operational situations where appropriate; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Mandatory Workplace Requirements

Assessment of performance evidence may be in a workplace setting or an environment that accurately represents a real workplace.

CPCPGS3046 Install LPG systems in caravans, mobile homes and mobile workplaces

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install and commission liquefied petroleum gas (LPG) systems in caravans, mobile homes and mobile workplaces.

It includes identifying LPG system requirements, installing of LPG system including flue and ventilation, and testing and commissioning LPG systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements.

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Identify LPG system requirements.	1.1	Access, read and determine LPG system installation requirements from relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment including personal protective equipment (PPE).
		2.3	Calculate pipe sizing and ventilation requirements.
3	Install, test and commission LPG system, including flue and ventilation.	3.1	Perform installation of cylinders, regulators, associated pipework, appliances and ventilation, complying relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		3.2	Select appropriate equipment to conduct testing.
		3.3	Perform test and commission system according to relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		3.4	Affix compliance plates and signage according relevant job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		3.5	Complete documentation according to regulatory requirements and/or workplace procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPGS3046 Install LPG systems in caravans, mobile homes and mobile workplaces

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing, testing and commissioning a liquefied petroleum gas (LPG) system, including two type A gas appliances, in either a caravan, mobile home or mobile workplace.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- pipe sizing and ventilation requirements
- installation requirements for ventilation, appliances, LPG cylinder, regulators, piping materials and jointing techniques
- how to access relevant information, including job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
- tools and equipment used for the installation and commissioning of LPG systems in caravans, mobile homes and mobile workplaces
- work health and safety (WHS) requirements for the installation and commissioning of LPG systems in caravans, mobile homes and mobile workplaces
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3047 Install LPG systems in marine craft

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install and commission gas detection systems and liquefied petroleum gas (LPG) systems with an operating pressure not exceeding 3.0 kPa in marine craft.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify LPG installation requirements in a marine craft.	1.1	Access, read and determine LPG system installation requirements from relevant Job plans and specifications, codes, Australian standards, manufacturer’s specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment, including personal protective equipment (PPE).
		2.3	Calculate pipe size and ventilation requirements.
3	Install LPG system, including flue and ventilation.	3.1	Perform installation of cylinders, regulators, associated pipework, appliances and fixings.
		3.2	Perform installation of a gas detection system according to relevant Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
4	Test and commission LPG and detection systems.	4.1	Select appropriate equipment to conduct testing.
		4.2	Perform test and commissioning of system according to relevant Job plans and specifications codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		4.3	Affix compliance plates and signage according to relevant codes, Australian standards, manufacturer's specifications and jurisdictional requirements.
		4.4	Complete documentation according to regulatory requirements and/or workplace procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

5	Clean up.	5.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		5.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPGS3047 Install LPG systems in marine craft

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing, testing and commissioning liquefied petroleum gas (LPG) and gas-detection systems including installing pipework, connecting a type A gas appliance in a marine craft, including determining the gas load, storage capacity and ventilation requirements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- pipe size and ventilation requirements
- installation requirements for ventilation, appliances, LPG cylinder, regulators and piping
- how to access relevant information, including relevant Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements
- properties of gas, gas safety, combustion principles, gas pressures and detection systems
- tools, materials and equipment used for the installation and commissioning of gas detection systems and LPG systems in marine craft
- work health and safety (WHS) requirements for the installation and commissioning of gas detection systems and LPG systems in marine craft.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPGS3048 Install gas pressure control equipment

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing one single and one two-stage system connecting to an appliance that includes an internal relief and over-pressure shut off valve.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- how to access relevant information, including codes and standards
- tools, materials and equipment used for the installation and commissioning of gas control and regulating equipment
- work health and safety (WHS) requirements for the installation and commissioning of gas control and regulating equipment
- properties of gas, gas safety, combustion principles, pressure and flow rates.
- processes, procedures and techniques for installing, testing and commissioning gas pressure control equipment
- installation and ventilation requirements of over-pressure regulators, including internal relief and over-pressure shut off (OPSO) valves.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by

- installing, testing and flashing as required:
  - a fan-assisted flue
  - a natural draft flue
  - a mild steel flue from a boiler flue spigot to terminate above the roofline.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- properties of gas, gas safety, combustion principles, pressure and flow rates
- types of approved flues for appliances, including:
  - balanced
  - individual appliance
  - multiple flues
  - natural draft
  - twin wall flues
- how to access relevant information, including codes and standards
- tools, materials and equipment used for the installation and testing of gas appliance flues
- work health and safety (WHS) requirements for the installation and testing of gas appliance flues.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
Identify purge requirements.	1.1	Access, read and determine requirements for consumer piping requirements from relevant job plans and specifications, codes, Australian Standards, manufacturer’s specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply organisational work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Identify potential hazards and determine and implement control measures including electrical safety.
		2.2	Calculate and record volume of the piping system.
		2.3	Select medium and method for purging a consumer piping system.
		2.4	Select appropriate tools and equipment including personal protective equipment (PPE).
3	Carry out and test purge operation.	3.1	Perform purge in accordance with relevant codes, Australian standards and jurisdictional requirements.
		3.2	Complete documentation according to regulatory requirements and/or workplace procedure.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Assessment Requirements for CPCPGS3051 Purge consumer piping

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- undertaking purge operations for a consumer gas piping system of greater than 0.03 cubic metres (30 L in volume) which includes a subsidiary meter including:
    - one fuel gas purge
    - one inert gas purge.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics of gases used in the purging process, including:
    - inert gas
    - fuel gas
- electrical safety and required precautions
- procedures for purging gas piping systems, including isolation processes and procedures
- properties of gas, gas safety, combustion and ignition principles, purge pressure and flow rates
- tools, materials and equipment used to purge consumer piping:
    - purge stack
    - gas detector
    - purge bucket
- safe work practices associated with purging consumer piping systems
- how to access relevant information, including Job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements
- work health and safety (WHS) requirements for purging consumer gas piping systems.

Assessment Requirements for CPCPGS3052 Maintain Type A gas appliances

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 3.4.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- maintaining two different certified Type A gas appliances, including:
    - cleaning and routine basic adjustment
    - checking gas supply pressures
    - inspecting flue for operation and condition
- conducting at least one carbon monoxide test
- correctly and safely applying the maintenance process.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- scope of work relating to certified Type A gas appliance maintenance
- processes, procedures and techniques for:
    - maintaining certified Type A appliances, including:
        - checking for adequate gas pressure
        - cleaning and adjusting gas components such as:
            - burners
            - pilots
            - regulators
            - fans

© Commonwealth of Australia, 2026 BuildSkills Australia

    - temperature and pressure relief (TPR) valves
- properties of gas, gas safety, combustion principles and pressure and flow rates including carbon monoxide testing
- electrical safety and requisite precautions
- how to access relevant information, including codes and standards
- tools, materials and equipment used for the maintenance on Type A appliances
- work health and safety (WHS) requirements for the maintenance on Type A appliances.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS3053 Disconnect and reconnect Type A gas appliances

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Knowledge Evidence.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. Removed reference to ‘power supply’ in Knowledge Evidence, duplicates ‘electrical supply including direct wired appliances’ already noted in Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to disconnect and reconnect Type A gas appliances operating on natural gas (NG) or liquefied petroleum gas (LPG). The work is confined to disconnecting and reconnecting the appliance.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPGS3054 Calculate and install natural ventilation for Type A gas appliances

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to calculate and install natural ventilation for certified Type A gas appliances.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the	Performance criteria describe what needs to be done to demonstrate achievement of the element.

essential outcomes.			
	Identify natural ventilation requirements.	1.1	Access, read and determine ventilation installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Identify potential hazards and determine and implement control measures.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment including personal protective equipment (PPE).
		2.3	Determine gas load and determine path of air supply.
		2.4	Calculate free ventilation area and ventilation openings.
3	Install ventilation and test appliance.	3.1	Install ventilation without damage to the building structure, surrounding environment or other services.
		3.2	Test ventilation operations according to job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPGS3054 Calculate and install natural ventilation for Type A gas appliances

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- calculating natural ventilation for a minimum of three different installations including one pre-standard adoption and one post-standard adoption
- calculating natural ventilation for one flue-less installation where jurisdictional requirements allow
- installing one natural ventilation system for a Type A appliance.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to natural ventilation for gas appliances
- processes, procedures and techniques for:
    - calculating and installing natural ventilation to a variety of gas appliances
    - using measurements and formulas to calculate free ventilation and ventilation openings
- organisational policies and procedures on how to access relevant information, including codes and standards
- tools, materials and equipment used to install natural ventilation, mechanical ventilation and associated interlocks for Type A gas appliances
- work health and safety (WHS) requirements to install natural ventilation, mechanical ventilation and associated interlocks for Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates

© Commonwealth of Australia, 2026 BuildSkills Australia

- consumer safety requirements to maintain permanent free ventilation for correct operation of appliance/s.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- sizing and installing, in accordance with manufacturers specifications, Australian standards and jurisdictional requirements:
    - one natural gas (NG) consumer piping systems supplying three certified Type A appliances using two different piping systems, one of which must be a composite material
    - one single stage liquid petroleum gas (LPG) consumer piping systems supplying three certified Type A appliances using two different piping systems, one of which must be a composite material.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- pipe sizing including:
    - appliance pressure and gas consumption requirements
    - properties of gas
    - length of run

© Commonwealth of Australia, 2026 BuildSkills Australia

    - allowable pressure drop
    - available pressure
- approved materials, their limitations and application for installing gas piping systems, including:
    - testing for gas-tightness
    - using current testing equipment
- electrical safety and required precautions
- how to access relevant information, including codes and standards
- tools, materials and equipment used to size and install consumer gas piping
- work health and safety (WHS) requirements to size and install consumer gas piping
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Change to Pre-requisite unit.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a liquefied petroleum gas (LPG) storage facility of capacity greater than 500 litres (but less than 8 kl) to a consumer point of connection, including:
    - a tank or a manifold installation connecting a minimum of three cylinders with a storage capacity greater than 500 litres (but less than 8 kl)
    - installation of a first and second stage regulator
    - testing first and second stage piping installation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- LPG storage requirements
- characteristics, application and limitations of approved materials and components including:
    - vaporisation rates
    - manifold
    - tank/cylinder support(s) and bases
    - approved piping materials
    - approved fitting and fixing materials
    - gas storage containers (500 l – 8 kl)
    - gas regulators

© Commonwealth of Australia, 2026 BuildSkills Australia

    - non-metallic hose assemblies
- processes, procedures and techniques for:
    - installing and connecting LPG supply
    - determining and calculating material quantities
- how to access relevant information, including job plans and specifications, codes, Australian standards, manufacturer's specifications and jurisdictional requirements
- tools, materials and equipment used to install LPG storage
- work health and safety requirements for installing LPG storage
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Requirements for CPCPGS3061 Install and commission Type A gas appliances

Modification History

Release	Comments
4	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. • Amended Performance Criteria 3.2, 3.4 and 3.5. • Amended Knowledge Evidence.
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. Amended Element 1 as follows: Identify installation requirements for Type A gas appliances.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Elements and Performance Criteria 1 and 4.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and commissioning three certified Type A gas appliances:
    - one must be a fan assisted flued appliance
    - one must be installed in a domestic setting
    - one must be installed in a commercial setting
- calculating natural ventilation for at least one Type A gas appliance
- conducting a carbon monoxide test.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- types of approved flues for Type A appliances, including:
    - balanced
    - individual appliance
    - multiple flues
    - natural draft
    - twin wall flues
    - fan assisted flues
    - power flues
    - other approved flues
- working drawings conventions, symbols and abbreviations
- results of carbon monoxide poisoning and how it can occur
- reasons for testing for carbon monoxide
- consequences of carbon monoxide poisoning:
    - ill health
    - death
- processes, procedures and techniques for:
    - installing and commissioning Type A appliances and ventilation
    - using carbon monoxide testing equipment to check appliance for spillage
- existing consumer piping is checked to ensure its compliance with relevant Australian standards and that its capacity is adequate for the additional load
- size of branch line is calculated according to regulating authorities' requirements
- properties of gas, gas safety, combustion principles, pressure and flow rates.
- how to access relevant information, including codes and standards
- tools, materials and equipment used for the installation and commissioning of Type A gas appliances
- work health and safety (WHS) requirements for the installation and commissioning of Type A gas appliances.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design and size consumer gas installation and includes consumer piping, flueing and ventilation.

It covers preparation for the work, determination of gas installation requirements, detailed planning of the layout and completing work.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.	
Identify system requirements.	1.1	Access, read and determine design requirements from plans, specifications, relevant manufacturer's requirements, Australian standards and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Select appropriate tools and equipment including personal protective equipment (PPE).
2	Design and size system layout.	2.1	Determine quantity, location and type of take-off points and appliances from plans and specifications.
		2.2	Produce and size consumer gas installations in accordance with relevant manufacturer's requirements, Australian Standards and jurisdictional requirements.
		2.3	Use the proposed design to identify and specify optimal materials required.
		2.4	Produce final system layout plans to relevant drawing design standards.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Assessment Requirements for CPCPGS4011 Design and size consumer gas installations

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout of four gas installations for:
- a caravan installation
- a marine installation, including the installation of an LPG leak detection system
- a commercial installation, including:
    - a gas hot-water plant incorporating a common flue design
    - a gas range
    - deep fryer
    - salamander grill
- a domestic installation with a minimum of two dwellings with at least three or more Type A gas appliances in each and incorporating subsidiary gas meters

Each installation must include:

- pipe sizing and pressures up to 200 kPa
- at least one natural gas installation
- at least one liquefied petroleum gas (LPG) installation
- a two-stage system
- an over-pressure protection device
- a minimum of two piping materials
- certified Type A gas appliances.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- drawing instruments and sketching techniques, including the use of conventional symbols

© Commonwealth of Australia, 2026 BuildSkills Australia

- use of computers for documentation
- computer-aided design (CAD) software
- impact of ventilation on design
- types, characteristics, uses and limitations of gas pipe work and consumer piping materials, including joining techniques and systems
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design and size consumer gas installations
- work health and safety (WHS) requirements for designing and sizing consumer gas installations
- properties of gas, gas safety, combustion principles, pressure and megajoule rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS4022 Service Type A gas appliances

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to diagnose and repair faults on certified Type A gas appliances.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements
CPCPGS3053 Disconnect and reconnect Type A gas appliances

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify service requirements.	1.1	Access, read and determine service requirements for Type A gas appliances from job specifications, relevant Australian Standards, codes, manufacturers' specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Prepare work area and materials to service the Type A gas appliance.
		1.4	Locate gas and electrical isolation points.
		1.5	Complete electrical and gas safety checks before commencing servicing work.
2	Determine faults associated with gas appliances and recommission.	2.1	Identify potential electrical fault pathways and confirm assembly and disassembly techniques and sequences.
		2.2	Complete diagnosis on electrical faults on electrical systems that do not exceed 50 volt (V) alternating current (AC) or 120 V direct current (DC).
		2.3	Complete gas diagnosis and select most appropriate corrective action as required.
		2.4	Repair, replace and/or make adjustments as required.
		2.5	Commission and return to service.
		2.6	Analyse flue gases and check ventilation requirements according to Australian Standards and jurisdictional requirements.
		2.7	Complete and submit documentation according to installation requirements and workplace procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Clean up.	3.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		3.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Assessment Requirements for CPCPGS4022 Service Type A gas appliances

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- diagnosing and rectifying faults in, and testing and recommissioning, four different faulty Type A appliances, including two electrical faults and two gas faults and with the following components:
    - burners and rail cocks
    - combination controls
    - pilots
    - thermostats and components
    - solenoid valve regulators not exceeding 50 volt (V) alternating current (AC) or 120 V direct current (DC) (ripple free)
    - solenoid valves
    - thermocouples
- conducting evaluative tests on electrical and electronic components not exceeding 50 V AC. or 120 V DC (ripple free) to diagnose and remedy faults and malfunctions, including:
    - central processing units
    - printed circuit boards and associated parts
- converting a Type A gas appliance to operate on another gas type.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- basic electrical theory:
    - electrical safety checks
    - characteristics of fuses, circuit breakers, residual current devices and earthing systems
    - ignition systems

© Commonwealth of Australia, 2026 BuildSkills Australia

    - insulation resistance test
    - isolation procedures
    - solenoids
    - thermocouples
    - thermopiles
- appliance operations
- burners and burner adjustment
- characteristics of conversion from one gas type to another
- ignition systems (pilot, ignition and re-ignition, flame safeguard systems, hot surface ignition)
- gas appliance regulators
- gas appliance thermostats
- gas safety:
    - combustion characteristics and effects
    - isolation procedures
    - operation of flame failure systems used in Type A gas appliances
- correct operation of the flue, including carbon monoxide testing
- how to access relevant information, including codes and standards
- tools, materials and equipment used to service Type A gas appliances
- work health and safety (WHS) requirements for servicing Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and megajoule rates.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPGS4023 Install, commission and service Type B gas appliances

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. Updated imported prerequisite unit UEENEEP012A Disconnect/reconnect composite appliances connected to low voltage installation wiring to UEERL0004 Disconnect-reconnect electrical equipment connected to low voltage (LV) installation wiring.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element and Performance Criteria 6.2.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install, commission and service Type B gas appliances, from the gas isolation valve and electrical isolation switch to the flue spigot on the appliance.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043	Carry out WHS requirements
UEERL0004	Disconnect-reconnect electrical equipment connected to low voltage (LV) installation wiring.

© Commonwealth of Australia, 2026 BuildSkills Australia

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Obtain authority to undertake work on Type B gas appliances	1.1	Conduct a detailed site inspection to assess, analyse, interpret and confirm design specification.
		1.2	Liaise with designer and gas authorities to clarify and resolve identified design specification matters.
		1.3	Obtain formal authority to proceed with installation and commissioning before commencing work.
2	Prepare for work.	2.1	Access, read and determine installation, commissioning and service requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
		2.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		2.3	Conduct gas system and electrical safety checks and isolation procedures and record to manufacturer and other authorities' requirements before commencing work.
		2.4	Select appropriate tools and equipment, including personal protective equipment (PPE).

© Commonwealth of Australia, 2026 BuildSkills Australia

3	Obtain materials and install Type B gas appliances.	3.1	Identify and obtain gas system components, electrical or electronic components and controls and other required installation materials from the job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
		3.2	Obtain component specifications and manufacturers' installation and servicing manuals.
		3.3	Perform installation of appliance components, including valve trains, burners and associated pipework and flue systems.
		3.4	Calculate and identify ventilation systems.
		3.5	Check suitability of electrical components, including terminations and electrical wiring and wiring enclosures.
		3.6	Visually inspect installations at each stage of work to ensure compliance with specifications and absence of damaged or faulty equipment and materials.
4	Commission and test Type B gas appliances.	4.1	Select testing and servicing equipment appropriate to the requirement and check and prepare for use.
		4.2	Conduct gas and electrical safety checks and isolation procedures, including purging, and record as required before testing and commissioning is commenced.
		4.3	Perform test operational parameters of individual components and adjust to conform to specifications.
		4.4	Perform test appliance operations with and without fuel and adjust as necessary and record results.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.5	Set air flow rate and gas rate in accordance with relevant standards.
		4.6	Analyse flue gases according to recognised industry practice.
		4.7	Perform test operations of critical safety interlocks to ensure they are operational and set points are as per relevant standards.
5	Service Type B gas appliances.	5.1	Analyse defect reports or operational records to identify the nature and possible cause of faults or out-of-specification performance.
		5.2	Conduct electrical and gas safety checks and isolation procedures and record before servicing work is commenced.
		5.3	Read and correctly interpret plans and diagrams to identify potential gas system and electrical fault pathways and locations.
		5.4	Select and apply appropriate testing techniques, procedures and equipment to diagnose system faults or discrepancies.
		5.5	Identify and confirm cause of fault or out-of-specification performance.
		5.6	Analyse options for correction and select the most appropriate corrective action.
		5.7	Conduct repair, replacement or adjustment according to manufacturer specifications or service manuals.
		5.8	Test to ensure critical safety interlocks are operational and set points are as per relevant standard.

© Commonwealth of Australia, 2026 BuildSkills Australia

		5.9	Assess appliance to ensure compliance with relevant standards and manufacturer specifications prior to recommissioning and returning to service.
	Finalise work.	6.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		6.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.
		6.3	Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. Updated imported prerequisite unit UEENEEP012A Disconnect/reconnect composite appliances connected to low voltage installation wiring to UEERL0004 Disconnect-reconnect electrical equipment connected to low voltage (LV) installation wiring.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element and Performance Criteria 6.2.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- planning, installing, commissioning and maintaining one Type B gas appliance.

In doing so the person must:

- complete all work according to approved design specifications, workplace procedures, standards, codes and regulatory and manufacturer requirements within agreed timeframes
- apply safety requirements throughout the work sequence.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant standards:
    - AS 3814 Industrial and commercial gas-fired appliances
    - AS/NZS 5601 Gas installations set
    - AS1375 Industrial fuel fired appliances

© Commonwealth of Australia, 2026 BuildSkills Australia

    - AS 2593 Boilers - Safety management and supervision systems
    - AS/NZS 3000 Electrical installations (known as the Australian/New Zealand Wiring Rules)
    - AS/NZS 4836 Safe working on low-voltage electrical installations
- flue gas analysis techniques and processes
- gas terminology and conventional symbols
- gas safety and isolation procedures
- combustion characteristics and effects
- purging requirements, techniques and critical calculation processes
- types, characteristics, uses and limitations of Type B gas appliance components
- ventilation techniques and calculation processes
- workplace and equipment safety requirements
- design specification:
    - air controls
    - combustion air blowers
    - flame safeguards
    - gas pressure regulation
    - gas valve trains
    - manual shut-off valves
    - markings and instructions
    - materials
    - over-pressure protection systems
    - process controls
    - safety shut-off valve systems
- Type B gas appliances:
    - those above 10 megajoules (MJ) for which a certification scheme does not exist
    - gas types:
        - combination fuels
        - liquefied petroleum gas (LPG)
        - natural gas (NG)
        - tempered LPG
        - bio-gas
    - special requirements for design and operation:

© Commonwealth of Australia, 2026 BuildSkills Australia

        - after burners - process
        - air gas mixing machines and mixing blowers
        - atmosphere generators and special atmospheres
        - direct gas fired air heaters
        - high input gas fired appliances
        - incinerators and generators
        - multi-fuel firing systems
        - ovens - direct fired
        - smoke ovens - direct fired
        - stationary gas engines and turbines
        - steam and heated water boilers
        - water heaters
- Type B appliance operation specifications:
    - flame establishment periods
    - interlocks
    - operation of gas appliance and burners
    - operational sequences
    - pre-purging
    - start gas rates
- determination of site suitability for installation
- commissioning procedure for a Type B appliance in accordance with relevant standard
- types of valve trains
- types of burners:
    - atmospheric
    - nozzle mix
    - package
    - pre-mix
- testing and servicing of Type B gas appliances requirements
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install, commission and service Type B gas appliances
- work health and safety (WHS) requirements for installing, commissioning and servicing Type B gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Prepare for work.	1.1	Conduct site survey of proposed irrigation area according to client requirements.
		1.2	Adhere to work health and safety (WHS) and environmental requirements associated with design of domestic irrigation systems throughout the work.
		1.3	Identify and adhere to quality assurance requirements according to workplace requirements.
		1.4	Plan and sequence tasks in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.
		1.5	Select and check tools and equipment for preparing basic irrigation designs and drawings for serviceability.
		1.6	Prepare work area to support efficient design of domestic irrigation systems.
2	Identify drawing requirements.	2.1	Identify areas requiring irrigation and system design components.
		2.2	Obtain information on the soil type, ground slope, contours and prevailing wind.
		2.3	Locate and note underground services, buildings, paths and other permanent structures.
		2.4	Determine and locate water supply and its influence on design requirements.
		2.5	Select appropriate emitters to suit function and design requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

3	Design irrigation system.	3.1	Draw site plan to include structures, paths and property boundaries.
		3.2	Sketch garden areas to include locations of lawns, garden beds, trees, vegetable patches or ferneries.
		3.3	Sketch pipe runs and water emitters to design requirements.
		3.4	Calculate sizes of pipes using standard data and record information in required format.
		3.5	Compile list of materials to include number and type of water emitters, control valves, quantities of pipes, fittings and components.
		3.6	Apply sustainability principles and concepts throughout the design process.
		3.7	Submit drawing and design for approval.
4	Clean up.	4.1	Clear work area and dispose of reused or recycled materials according to legislation, regulations, codes of practice and job specification.
		4.2	Clean, check, maintain and store tools and equipment according to manufacturer recommendations and workplace procedures.
		4.3	Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Application and Elements and Performance Criteria 1.6.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing and preparing a drawing of the system, incorporating automatic timers and controls, varying sprinkler heads and zones, and indicating the materials required (by number and type), to comply with a site plan and specifications for the irrigation of a 200 square metre garden of lawn, shrubs, trees and flowers.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to drawing and installing irrigation systems
- SI system of measurement
- specifications of the range of irrigation products available
- standards applicable to the installation
- technologies for irrigation measurement and drawings
- various types of irrigation systems, including types of materials and components used
- workplace and equipment safety requirements.

Assessment Requirements for CPCPIG3021 Set out, install and commission irrigation systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- determining the system requirements, setting out, installing and commissioning an irrigation system sourced from an isolating valve to supply four water emitters of varying type and requiring a solenoid valve to comply with given plans and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of setting out, installing and commissioning irrigation systems
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- protection of drinking water supplies
- relevant statutory and authority requirements related to installing and commissioning irrigation systems
- SI system of measurement
- standards applicable to the installation
- various types of irrigation systems, including types of materials and components used
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for work.	1.1	Obtain irrigation plans and specifications and inspect site.
		1.2	Adhere to work health and safety (WHS) and environmental requirements associated with installing and commissioning domestic irrigation pumps throughout work.
		1.3	Identify and adhere to quality assurance requirements according to workplace requirements.
		1.4	Plan and sequence tasks in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.
		1.5	Select and check tools and equipment, including personal protective equipment (PPE), for installing and commissioning domestic irrigation pumps for serviceability.
		1.6	Prepare work area to support efficient installation and commissioning of domestic irrigation pumps.
2	Identify installation requirements.	2.1	Identify irrigation system requirements from plans, specifications and relevant information.
		2.2	Select pump and installation materials according to type, installation, range of flow rates, operating head and delivery distance.
		2.3	Identify, order and collect pump, according to workplace procedures.
		2.4	Check pump for compliance with standards, docket and order form, and for acceptable condition.

© Commonwealth of Australia, 2026 BuildSkills Australia

3	Install and commission pump.	3.1	Set out pump position to comply with irrigation plans and manufacturer recommendations.
		3.2	Install pump base according to plans and specifications and sustainability principles and concepts.
		3.3	Position and fix pump onto base.
		3.4	Connect suction and discharge lines to pump according to manufacturer specifications.
		3.5	Pressure test piping according to job specifications.
		3.6	Test and adjust operation of pump to achieve effective operation according to job and manufacturer specifications.
		3.7	Record and document test data in format required by quality assurance procedures.
4	Clean up.	4.1	Clear work area and dispose of reused or recycled materials according to legislation, regulations, codes of practice and job specification.
		4.2	Clean, check, maintain and store tools and equipment according to manufacturer recommendations and workplace procedures.
		4.3	Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPIG3022 Install and commission domestic irrigation pumps

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.3. Changes to Knowledge Evidence.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Knowledge Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and commissioning for operation, a centrifugal pump (25 mm suction and 25 mm delivery) to comply with given plans and specifications for a domestic irrigation system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics and application of different pipes and fittings, including:
  - fixing and joining techniques and methods
  - flow rates
- various types of domestic irrigation pumps
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to installing and commissioning domestic irrigation pumps
- SI system of measurement
- mechanical, hydraulic and electrical principles

© Commonwealth of Australia, 2026 BuildSkills Australia

- standards applicable to the installation
- levelling and alignment processes
- process of installing and commissioning domestic irrigation pumps
- workplace and equipment safety requirements.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS2021 Assemble mechanical services components

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to assemble mechanical services components for heating and cooling systems prior to their installation.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify installation requirements.	1.1	Access, read and determine assemble mechanical services components installation requirements from relevant Job plans and specifications, codes, Australian standards, manufacturer’s specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment including personal protective equipment (PPE).
3	Assemble components.	3.1	Determine and transfer dimensions for fabrication and assembly.
		3.2	Interpret relevant standards, codes and symbols.
		3.3	Perform calculations to determine job requirements.
		3.4	Mark out material in conformance with determined measurements.
		3.5	Check dimensions for accuracy and compliance with plans and specifications.
		3.6	Identify and apply selected development method to task according to workplace procedures and sustainability principles and concepts.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPMS2021 Assemble mechanical services components

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- assembling and connecting a heating coil to a boiler and a fan and duct work for a warm air heating system given the plans and specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics of materials used in the required assembly
- classification of assembly types and identification of assembly components
- levelling and alignment processes
- mechanical and hydraulic principles
- operation requirements of equipment used for fabricating and assembling components
- types of fasteners, fixings and sealants
- work health and safety (WHS) regulations relevant to assembly of mechanical services components
- workplace operating procedures, including required standards for assembly
- how to access relevant information, including codes and standards
- tools, materials and equipment used to assemble mechanical services components
- WHS requirements to assemble mechanical services components.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS3031 Fabricate and install steel pressure piping

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to determine installation requirements and to fabricate up to DN50, install and test steel pressure piping.

It applies to pipe systems with operating pressures not exceeding 1750 kPa and 200ºC.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

N/A

Unit sector(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
Identify installation requirements.	1.1	Access, read and determine steel pressure pipe installation requirements from job specifications, relevant Australian Standards, codes, manufacturer’s specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE).
3	Fabricate, install and test pipe system.	3.1	Set out pipework configuration.
		3.2	Perform installation of fixings and supports to manufacturer requirements, job plans, specifications and workplace requirements.
		3.3	Fabricate and joint pipe system according to job plans, specifications and manufacturer requirements for mechanical type joints.
		3.4	Perform installation of pipe system in specified location without damage or distortion to pipework or surrounding environment or other services.
		3.5	Perform testing of pipe system.
		3.6	Complete documentation according to relevant regulatory requirements and or workplace requirements.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPMS3031 Fabricate and install steel pressure piping

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- applying pipe cutting and welding skills by using oxy-acetylene and arc welding equipment for piping up to DN50 and must include:
    - butt welding a pipe joint in DN40 piping in the fixed horizontal position
    - welding DN40 and 50 mild steel branch joints
    - constructing a DN80 header with DN20, 40 and 50 branch joints using the oxy-acetylene method
    - welding 50 mm and 80 mm flanges to mild steel pipe
    - welding blank ends into DN80 mild steel pipe
- fabricating, installing and testing a DN40 steel pipeline from a supply point to an outlet, incorporating two changes of direction with one position butt welded with oxy welding, plus an arc welded flange incorporating a branch for testing purposes
- testing completed task to ensure required pressure and the soundness of all joints within the system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the characteristics and the application of approved materials and components for the fabrication and installation of pressure piping
- processes, procedures and techniques of:
    - installation of steel pressure piping
    - calculating material quantities
- pressure, flow rates, temperature requirements and properties of conveyed materials including:
    - cutting and welding gases
    - mechanical joint systems and fittings with variable diameters up to DN100

© Commonwealth of Australia, 2026 BuildSkills Australia

    - steel pipes
    - threaded pipe fittings
    - weldable pipe fittings
- how to access relevant information, including codes and standards
- tools, materials and equipment used to fabricate and install steel pressure piping
- work health and safety (WHS) requirements to fabricate and install steel pressure piping.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS3032 Select and fit insulation and sheathing

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Change to Knowledge Evidence.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Application and Typographical errors corrected in Elements and Performance Criteria 3.3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install insulating sheathing on hot and cold piping, fittings and vessels. It includes the selection of insulation materials.

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for work.	1.1	Access and read job plans and specifications.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements and sustainability associated with the installation of insulating sheathing.
		1.3	Apply quality assurance requirements in accordance with workplace requirements.
		1.4	Plan and sequence tasks in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.
		1.5	Prepare work area to support efficient installation of insulating sheathing.
		1.6	Select appropriate tools and equipment including personal protective equipment (PPE) and check for serviceability.
		1.7	Identify materials and equipment required to complete the task.
2	Identify insulation requirements.	2.1	Create a materials list and collect materials.
		2.2	Determine fabrication requirements from job plans, specifications and relevant information.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Calculate quantity and type of materials and components.
1	Install insulation.	3.1	Clean and prepare surfaces of dirt, rust, scale and grease.
		3.2	Install insulating materials, including sheathing, according to plans and specifications.
		3.3	Select and install appropriate thermal insulation sheathing to sections of both hot and cold piping, fittings and vessels associated with refrigeration and cooling and heating systems.
		3.4	Apply vapour barriers to suit job requirements.
		3.5	Apply sustainability principles and concepts throughout the installation.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment check for serviceability reporting any damage, store and secure.
		4.3	Complete documentation according to workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Change to Knowledge Evidence.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Application and Typographical errors corrected in Elements and Performance Criteria 3.3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- locating, interpreting and applying relevant information, standards and specifications to selecting, installing, insulating sheathing to piping, fittings and vessels
- given the plans and specifications, insulating two metres of small-bore heating line with at least one change in direction
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective equipment (PPE)
- two metres of refrigeration line with metal sheath and at least one change in direction.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- processes of selecting and insulating pipes, fittings and vessels
- techniques for cutting, fabricating and assembling metal sheathing
- techniques for fixing insulating materials to piping
- understanding of fire rating

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a two-pipe heating system to two panel radiators, skirting convector or a unit heater, including:
    - using a combination of copper tube and non-metallic piping
    - a minimum of DN20 flow and return with DN15 branches connected to a heating source.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, application and limitations of approved materials and components
- processes, procedures and techniques of:
    - effective isolation heating electrical systems
    - installing and commissioning small bore heating systems:
        - panel radiators
        - skirting convectors

Assessment Requirements for CPCPMS3034 Install and test medical gas pipeline systems

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Performance Criteria 3.3 Perform testing of installed pipework according to standards and manufacturer's specifications removed and numbering corrected.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Application and Elements and Performance Criteria 1, 2, 3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and testing three medical gas pipeline systems (each with a different medical gas) from a manifold system to terminal units and fittings ensuring:
    - the inclusion of purged silver brazed joint(s)
    - a minimum of 1.5 metres of approved copper tube per medical gas pipeline incorporating a minimum of two changes of direction using a mechanical bender
    - test and document results are recorded
    - cleanliness and sterility of finished system
    - correct identification of requirements and details of proposed installation
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specifications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- pressure testing procedures and equipment
- processes and requirements of installing, testing and purging medical gas pipeline systems
- types of information on medical gas pipelines systems
- materials for installing medical gas pipeline systems
- types of medical gas and pipelines:
    - medical breathing air
    - medical suction
    - standard oxygen
- components of medical gas pipeline systems:
    - fixtures and labels
    - medical gas pipeline materials and supports
    - terminal units and fittings
- how to access relevant information, including codes, standards and manufacturer's specifications
- tools, materials and equipment used to install and test medical gas pipeline systems
- work health and safety (WHS) requirements to install and test medical gas pipeline systems
- properties of gas, gas safety, combustion principles, pressure and flow rates.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

	Identify installation requirements.	1.1	Access, read and determine install and test ducting systems installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE).
3	Install and insulate duct system.	3.1	Set out system to comply with plans and specifications.
		3.2	Position duct supports and fixings to comply with plans, job requirements and manufacturer's specifications.
		3.3	Install duct work in accordance with plans and specifications.
		3.4	Assemble and seal joints in accordance with plans and manufacturer's specifications.
		3.5	Install duct system in specified location without damage or distortion to surrounding environment or other services and in accordance with relevant standards.
		3.6	Install insulation materials in specified location without damage or distortion to surrounding environment or other services and in accordance with relevant standards.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.7	Install diffusers and terminal devices in accordance with plans and specifications and job requirements.
4	Test duct work.	4.1	Determine test requirements from plans and specifications.
		4.2	Select and test duct work under pressure in accordance with instructions and workplace procedures.
		4.3	Identify and repair leaks using specified procedures and materials to ensure correct flow operation.
		4.4	Complete documentation according to relevant regulatory requirements and or workplace requirements.
5	Clean up.	5.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		5.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPMS3035 Install and test ducting systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element and Performance Criteria 3.4.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- locating, interpreting and applying relevant information, standards and specifications to install and test small ducting systems
- installing, insulating, testing and balancing ductwork from a fan coiled unit to three outlet grilles given the plans and specifications.

The installation must incorporate hard and flexible duct work, including one transition piece and air control dampers.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of flow rates, pressure and volume principles to testing procedures
- characteristics of materials used in the system being tested
- processes of installing, insulating and testing ducting
- system types and identification of system components
- techniques for setting out, assembling, fixing and jointing duct work systems and components, including insulation and acoustic materials
- types of repairs for detected leaks in the duct work system
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install and test ducting systems
- work health and safety (WHS) requirements to install and test ducting systems.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Identify installation requirements.	1.1	Access, read and determine install air handling unit installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE).
3	Set out, assemble and test air handling units.	3.1	Set out air handling unit in compliance with plans and specifications.
		3.2	Position components and equipment according to plans and specifications.
		3.3	Install equipment according to job and manufacturer specifications.
		3.4	Check assembly for compliance with plans and specifications.
		3.5	Test air handling unit for correct operation.
		3.6	Complete documentation according to relevant regulatory requirements and/or workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure according to workplace procedures.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- locating, interpreting and applying relevant information, standards and specifications to installing air handling units
- installing a plenum chamber that includes a fan, coil, filter and dampers, including supports and brackets and any fixing requirements, allowing for anti-vibration.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- effects of machinery vibrations on structures, ducts and fittings
- processes of installing and testing air handling unit
- techniques for setting out, assembly and fixing and jointing requirements for duct work systems
- equipment installation techniques that limit the transfer of vibrations from plant and equipment to other component
- testing, balancing and commissioning of air handling units
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install air handling units
- work health and safety (WHS) requirements to install air handling units.

essential outcomes.			
	Identify installation requirements.	1.1	Access, read and determine a single head split system air conditioning installation and commissioning requirements from relevant plans, job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select and check serviceability of appropriate tools, equipment and personal protective equipment (PPE).
	Install and test system.	3.1	Set out and install indoor and outdoor unit according to drawings and job and manufacturer's specifications.
		3.2	Set out pipework and connection points according to drawings and job and manufacturer's specifications.
		3.3	Perform testing of installed pipework.
		3.4	Remove moisture from pipework.
		3.5	Charge pipework.
		3.6	Perform installation of condensate drain.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.7	Perform installation of insulation and casing.
		3.8	Perform testing of operation of unit according to relevant standards and manufacturer's specifications.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Elements and Performance Criteria 3.9 and 3.10 is deleted.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing, testing and commissioning a single-head split system air conditioner.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- electrical safety requirements
- operating principles of air conditioning and refrigeration systems
- processes of installing, testing and commissioning split air conditioning systems
- types of information on split system air conditioning systems, including types of refrigerant gases and their characteristics
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install and commission a single head split system air conditioning
- work health and safety (WHS) requirements to install and commission a single head split system air conditioning.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- maintaining one air distribution systems, including:
  - replacing, realigning and tensioning pullies and belts as required
  - checking the integrity of mounting and check for excessive vibration and noise
  - checking flexible connections
  - lubricating bearings
  - cleaning filters, coils and blades
  - checking system for leaks
- maintaining one hydronic system, including:
  - replacing gland valves and O rings where required on system
  - replacing and adjusting pump glands
  - checking functionality of and cleaning drain
  - adjusting operating control valves and settings
  - replacing chemical dosing systems when required and checking water system for leaks.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- air conditioning and refrigeration principles
- effect of bacteria in water, and potential impact on health

Assessment Requirements for CPCPMS3040 Install and commission evaporative air cooling systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and commissioning an evaporative air cooling system on a roof including:
  - flashing the roof penetration
  - installing a plenum box and duct work to three diffusers with at least one diffuser positioned three metres from the plenum box, including appropriate duct work support
  - connecting cold water to an isolation valve within one metre of the appliance
  - install drain to approved point of discharge
  - connecting and completing installation testing and commissioning the systems operation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- characteristics and application of approved materials and components
- terminology relating to evaporative air cooling systems
- effect of bacteria in water, and health implications
- processes, procedures and techniques of:
  - effective isolation
  - installing and testing evaporative air cooling systems
  - roof penetration and flashing
  - system of measurement and calculations
- types of evaporative air cooling system materials:
  - control panels
  - diffusers
  - ducting materials

© Commonwealth of Australia, 2026 BuildSkills Australia

    - evaporative air cooling systems
    - grilles
    - insulation
- considerations for work site preparation:
    - ensuring structural integrity of roof
    - installing piping and isolating valve
    - installing piping and isolating valve in roof cavity
    - installing plinths
    - installing structural supports
- other services connections to units:
    - electrical connections
    - water supply.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS3041 Install domestic solid fuel burning appliances

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install domestic solid fuel burning appliances.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements
CPCPCM2055 Work safely on roofs
CPCCWC2001 Complete penetrations and flashings

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Prepare for installation.	1.1	Access, read and determine domestic solid fuel burning appliances requirements from job specifications, relevant Australian Standards, codes, manufacturer`s specifications and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Inspect installation sites and confirm appliance installation locations as suitable or negotiate alternative locations with clients.
		1.4	Confirm heat sensitivities of building materials at appliance installation locations and confirm heat protection strategies with clients.
		1.5	Select and check the serviceability of the appropriate tools, equipment and personal protective equipment (PPE).
2	Install appliance.	2.1	Measure and mark appliance location according to compliance requirements.
		2.2	Measure, cut or make up floor and wall protection materials and install according to compliance requirements.
		2.3	Position appliance and check clearance distances to confirm compliance.
		2.4	Install appliance according to compliance and organisational requirements.
3	Install flue.	3.1	Check flue dimensions and components and obtain additional sections or components as required to meet compliance requirements.
		3.2	Calculate, measure, mark and check locations and dimensions of ceiling and roof penetrations according to compliance and organisational requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Make penetrations to host materials with minimal damage and according to specifications and organisational requirements.
		3.4	Install structural supports according to plans and specifications.
		3.5	Prepare opening in compliance with specifications, manufacturer recommendations and regulations.
		3.6	Install flue and associated components according to compliance and organisational requirements.
		3.7	Apply flashings and sealants to restore integrity of ceilings and roofs according to compliance and organisational requirements.
		3.8	Performance test penetration to ensure correct fit of completed installation, and take remedial action as required.
4	Finalise installation and clean up.	4.1	Install appliance and associated components and check for complete and correct installation and operation according to compliance and organisational requirements.
		4.2	Demonstrate operation of appliance to clients and explain factors that affect optimum performance.
		4.3	Restore installation site and clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPMS3041 Install domestic solid fuel burning appliances

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing at least two different domestic solid fuel burning appliances according to client, compliance, workplace and manufacturer requirements. Appliances may be for:
    - central heating
    - cooking
    - space heating
    - water heating
- a combination of applications, which includes:
    - fireplace inserts
    - free-standing
    - in-built
    - non-tested
- installing flue and associated flashings through a tiled and metal roof system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- factors affecting selection of installation locations for appliances
- factors affecting compliance and non-compliance of domestic solid fuel burning appliances
- factors affecting optimum performance:
    - general cleaning and maintenance requirements
    - type and condition of fuel used in appliances
- heat damage protection requirements for appliances:
    - compliant floor protection
    - compliant clearance distances

© Commonwealth of Australia, 2026 BuildSkills Australia

    - additional shielding
    - reduced compliant clearance distances
- legislation, regulations and standards that apply to the installation and emissions of domestic solid fuel burning appliances
- heat-response categories of construction materials:
    - heat sensitive
    - heat tolerant
    - heat resistant
- installation requirements for different types of domestic fuel burning appliances:
    - appliances for:
        - central heating
        - cooking
        - space heating
        - water heating
        - combinations of applications
    - fireplace inserts
    - free-standing
    - in-built
    - non-tested
    - tested
- principles and products of combustion
- requirements and methods for maintaining structural integrity of buildings, roof structures and existing roof coverings
- structure and function of flue elements and principles of flue draw, and effects of:
    - bends and horizontal sections
    - climatic conditions
    - surrounding buildings and trees
- types of domestic solid fuel burning appliances and methods for safe operation
- types and condition of wood used as fuel and impacts on:
    - efficiency of appliances
    - emissions
- compliance requirements:
    - clearance distances to heat sensitive materials:
        - ceilings

© Commonwealth of Australia, 2026 BuildSkills Australia

        - curtains
        - furniture
        - timbers
        - walls
    - emissions compliance certification plate
    - manufacturer specifications
    - types and dimensions of floor protection.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS4011 Design, size and lay out heating and cooling systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of heating and cooling systems for multi-floor structures.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
Identify system requirements.	1.1	Access, read and determine heating and cooling installation requirements from job specifications, relevant Australian Standards, codes, manufacturer’s specifications and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Determine quantity, location, fixtures and legal points of discharge.
2	Design and size system layout.	2.1	Review building drawings plans and specifications to determine heating and cooling requirements.
		2.2	Perform sizing of air conditioning or small-bore heating system to provide for required heating and cooling load and to determine required piping and ducting.
		2.3	Produce final system layout plans according to job specifications, relevant Australian Standards, codes, manufacturer's specifications and jurisdictional requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPMS4011 Design, size and lay out heating and cooling systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of a domestic heating and cooling system requiring a minimum heat load of 150 megajoules (MJ) per hour
- designing, sizing and documenting the layout details of a commercial heating and cooling system for a structure with at least four floors.

The performance applies to:

- ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75 kPa and a maximum velocity of 12.5 metres per second
- piping systems conveying heating and chilled water operating at a maximum pressure of 700 kPa or a maximum temperature of 100°C
- systems having a maximum output of 50 kW and total air quantities not exceeding 950 litres per second.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- principles, operation and characteristics of heating and cooling systems
- characteristics and application of different fixing and joining techniques and methods
- characteristics and application of pipe and ducting systems, including their fittings and fixture supports and fixing and joining techniques
- design concepts and performance measures for heating and cooling systems
- effective isolation processes and procedures
- electrical and electronic principles and safety requirements
- process of designing, sizing and documenting the layout of heating and cooling systems
- properties of water and air, including pressure and flow rates

© Commonwealth of Australia, 2026 BuildSkills Australia

- air conditioning systems:
    - evaporative cooling system
    - hydronic heating system
    - hydronic cooling system
    - warm air system
    - refrigerated air conditioning system
- small-bore heating systems:
    - boilers
    - piping
    - radiators
- design materials:
    - use of computers and relevant computer-aided design (CAD) software
    - drafting materials and equipment
    - relevant structure plans and specifications
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of heating and cooling systems
    - work health and safety (WHS) requirements for designing, sizing and documenting the layout of heating and cooling systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Prepare for work.	1.1	Obtain current authorised information, plans and specifications.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements and sustainability principles.
		1.3	Select and check the serviceability of appropriate tools, equipment and personal protective equipment (PPE).
		1.4	Prepare work area to support an efficient testing and commissioning process.
2	Determine testing requirements.	2.1	Check equipment performance data against plans, specification requirements and other relevant information.
		2.2	Select suitable instruments and associated equipment to measure quantities.
3	Prepare system for balancing.	3.1	Set dampers in the open or specified position and conduct an operational check of system-related fans and ducting according to workplace procedures.
		3.2	Energise automatic control devices to provide maximum demand for airflow.
		3.3	Check piping system for flow direction and leaks and conduct an operational check of system and related pumps.
		3.4	Set all manual and automatic valves in the specified position.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Balance, test and commission system.	4.1	Adjust valves or throttling devices to achieve specified water flow ratings.
		4.2	Measure air volumes moved by system fans.
		4.3	Adjust dampers and terminal devices to achieve specified airflow ratings.
		4.4	Set automatic controls and devices to specified settings.
		4.5	Test and balance system according to job specification, manufacturer recommendations and sustainability principles and concepts.
		4.6	Test and monitor results and document in the format required by job or manufacturer’s specification.
		4.7	Complete documentation according to workplace requirements and submit within specified timeframes.
5	Restore work area.	5.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		5.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPMS4022 Commission air and water systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Knowledge Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by balancing and commissioning:

- an air conditioning system (up to 150 megajoules) for a domestic installation
- a commercial air conditioning system for a structure of at least four floors
- a hydronic water heating system for a structure of at least four floors.

The performance applies to:

- ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75 kPa and a maximum velocity of 12.5 metres per second
- piping systems conveying heating and chilled water operating at a maximum pressure of 700 kPa or a maximum temperature of 100°C
- systems having a maximum output of 50 kW and total air quantities not exceeding 950 litres per second.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of mechanical, hydraulic, electric and electronic principles and safety requirements
- design concepts, tests and performance standards for measuring various water and air systems
- SI system of measurements
- effect of bacteria in water and potential impact on health

© Commonwealth of Australia, 2026 BuildSkills Australia

- waste management
- operating principles and characteristics of system components used in water and air systems
- performance standards for balancing systems
- processes of commissioning air and water systems
- relevant statutory authorities:
    - Commonwealth government
    - state and territory governments
    - local authorities
- how to access relevant information, including codes and standards
- tools, materials and equipment used to commission air and water heating and cooling systems
- work health and safety (WHS) requirements for commissioning air and water heating and cooling.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPMS4023 Design compressed air systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- evaluating and documenting design parameters including client, Australian Standards, codes, manufacturers' instructions and jurisdictional requirements for at least two (2) compressed air systems.

The design must include evidence of the application of sustainability principles and concepts, manufacturer and regulatory requirements and identification of electrical hazards.

Design, sizing layouts and plans must include:

- industry standard layouts for compressed air systems
- pipe sizes according to regulations and manufacturers' requirements
- specifications for compressed air systems
- testing and commissioning schedules
- operation and maintenance manuals.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- architectural specifications
- builders' specifications
- owner requirements
- specialist use applications
- cost-benefit analysis which compares the range of suitable treatment and disposal options, materials, system choices, disinfection options, water savings and environmental benefits compared to initial and ongoing maintenance costs
- design and performance requirements for compressed air systems
- relevant manufacturers' requirements, Australian Standards and jurisdictional requirements

© Commonwealth of Australia, 2026 BuildSkills Australia

- job specifications
- system testing
- commissioning schedule requirements
- operation and maintenance manual information
- tools, materials and equipment used to design, size and document the layout of compressed air systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of compressed air systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS5010 Design steam generation and distribution systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design steam generation and distribution systems, including pipe and valve sizing, material selection, and the preparation and specification of documentation for steam distribution systems for a multi-level building with a minimum of 100 beds, such as a hospital, that incorporates a commercial steam-fed laundry.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires sound understanding of applicable legislation, standards and codes.

This unit is suitable for experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

© Commonwealth of Australia, 2026 BuildSkills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for steam generation and distribution systems.
		1.2	Determine design requirements from relevant Australian Standards, codes, plans, specifications, manufacturer requirements and client brief.
		1.3	Analyse and apply statutory and regulatory requirements and relevant Australian Standards and codes required for the design.
		1.4	Apply sustainability principles and concepts throughout the design process.
		1.5	Establish performance requirements, considering safety of system users or building occupants.
		1.6	Conduct research to outline design parameters.
		1.7	Determine factors that contribute to quality, safety and time efficiency.
		1.8	Conduct a cost-benefit analysis comparing a range of pipe materials and system designs.
2	Plan, size and detail system components.	2.1	Plan layout of pipework systems and type and location of fittings and valves.
		2.2	Perform pipe size calculations.
		2.3	Design and size steam distribution system using calculations and computer software packages.
		2.4	Specify steam appliances, calculate steam consumption and size and specify boilers required.
		2.5	Detail steam circuits and specify distribution pressures.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.6	Specify and detail steam trap types and their operation.
		2.7	Specify steam injection systems.
		2.8	Specify insulation requirements.
		2.9	Plan pipe supports and expansion systems.
		2.10	Specify approved materials, jointing methods and installation requirements for steam generation and distribution systems.
1	Prepare documentation.	3.1	Prepare plans for steam generation and distribution system.
		3.2	Prepare specification for steam generation and distribution system.
		3.3	Prepare testing and commissioning schedule.
		3.4	Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPMS5010 Design steam generation and distribution systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting an approved layout for a multi-level building with a minimum of 100 beds, such as a hospital, that incorporates a commercial steam-fed laundry.

The design must:

- meet all regulatory, manufacturer and Australian and New Zealand Standard requirements for steam generation and distribution systems
- incorporate a specification covering all works
- incorporate sustainability principles and concepts.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in design of steam generation and distribution systems for all classes of building
- manufacturer specifications, including hazards identified in relation to devices and systems used
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- principles of technology in the design of steam generation and distribution systems
- terms, including relevant Australian Standard and code definitions, manufacturer terms and naming conventions
- statutory and regulatory requirements and relevant Australian Standards and codes
- plans and specifications, and sizing and documenting layout of steam generation and distribution systems for residential, commercial and industrial applications
- principles and properties of steam systems
- types of steam and steam quality

© Commonwealth of Australia, 2026 BuildSkills Australia

- sustainability principles and concepts
- cost–benefit analysis of steam designs
- performance requirements, including steam generation and consumption and steam and pressure quality established using relevant Australian Standards, codes and manufacturer information.
- use of steam appliances
- types of steam circuits
- steam trap types and their operation
- types of insulation protection and applications.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPMS5011 Design air conditioning and ventilation systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit applies to individuals responsible for the evaluation and design of air conditioning and ventilation systems.

The unit requires application of technical skills and knowledge to design, size and document details for complex air conditioning and ventilation systems for residential and commercial applications.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically carried out by a consultant or person in a supervisory capacity in relation to plumbing services and hydraulics.

It applies to those who design air conditioning on a new project or an existing structure.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, and regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

© Commonwealth of Australia, 2026 BuildSkills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
	Evaluate design parameters.	1.1	Clarify and establish scope of work for the design of air conditioning and ventilation systems.
		1.2	Determine design requirements using relevant Australian standards, codes, plans, specifications, manufacturer instructions and client briefs, including factors that contribute to quality, safety and time efficiency.
		1.3	Apply sustainability principles and concepts throughout the design.
		1.4	Evaluate user comfort and specific use conditions to calculate psychrometric evaluation and heat loads.
		1.5	Evaluate building heat losses.
		1.6	Specify distribution requirements for air conditioning and ventilation system applications.
		1.7	Evaluate air conditioning and ventilation systems according to given applications.
		1.8	Evaluate and interpret mechanical services drawings.
		1.9	Evaluate health risks that may arise due to poor maintenance of air conditioning and ventilation systems.
		1.10	Specify minimum performance requirements for several different air conditioning and ventilation systems.
		1.11	Evaluate the suitability of manufacturer specifications and technical manuals for a range of design applications.
		1.12	Carry out research including a desktop study to outline design parameters.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.13	Consider the safety of system users or building occupants.
2	Plan system components.	2.1	Plan appropriate zoning of air conditioning and ventilation systems to comply with performance objectives.
		2.2	Specify air conditioning units for optimum performance.
		2.3	Specify fan types for a range of applications.
		2.4	Plan air diversion systems, including registers, to ensure a balanced system.
		2.5	Plan ventilation and duct work components and specify locations.
		2.6	Specify approved materials for planned design.
		2.7	Complete plans and drawings using relevant Australian standards, codes, manufacturer installation requirements and drawing symbols.
3	Design and size systems.	3.1	Calculate volume of air changes per hour from given floor plans and details.
		3.2	Specify methods for eliminating health risks from existing or proposed systems, with reference to relevant authority.
		3.3	Design and size air conditioning and ventilation systems for the required applications.
4	Prepare documentation.	4.1	Prepare client brief for the selected design.
		4.2	Prepare plans and specifications for of air conditioning and ventilation systems.
		4.3	Develop an appropriate checklist, including the formulas required to carry out an air balance to a given specification.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.4	Prepare a testing and commissioning schedule.
3	Test systems.	5.1	Evaluate test procedures for air conditioning and ventilation.
		5.2	Conduct tests using appropriate testing equipment, ensuring tests are conducted for air pressure, air velocity, air volume, humidity, pitot tubes, sound power levels and temperature.
		5.3	Record test results and prepare a report.
		5.4	Design, plan and specify adjustments as required.
		5.5	Produce an operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPMS5011 Design air conditioning and ventilation systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details for an air conditioning and ventilation system for a 10-storey residential building with ground floor commercial premises and basement car park and include:
    - air conditioning units
    - ducting systems
    - controls
    - fans
    - zones.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- methods of determining scope of work by:
    - interpreting plans and specifications
    - reviewing sizing and documenting layout for air conditioning and ventilation systems, including residential and commercial systems
    - analysing new projects or an existing structure being renovated, extended, restored or maintained
- design requirements:
    - architectural plans
    - building specifications
    - fire safety
    - the National Construction Code (NCC)
    - owners
    - tenants

© Commonwealth of Australia, 2026 BuildSkills Australia

    - air-flow requirements and sizing of duct work
- specific use conditions:
    - age and activity of occupants
    - computer requirements
    - food preparation
    - smoke exhaust
    - wet-bulb and dry-bulb temperature and humidity
- psychrometric evaluation:
    - absolute, specific and relative humidity
    - air composition
    - air properties:
        - density
        - expansion coefficient
        - kinematic viscosity
        - Prandtl number
        - specific heat
        - temperature
        - thermal conductivity
- altitude, density and volume
- determination of the air condition using a psychrometric or Mollier chart, showing:
    - dewpoint temperature
    - dry-bulb temperature
    - enthalpy
    - humidity ratio
    - relative humidity
    - specific volume
    - wet-bulb temperature
- assessment of factors affecting heat load:
    - building materials
    - insulation
    - number of personnel
    - number of windows
    - room dimensions
    - usage

CPCPMS5012 Design sound attenuated hydraulic services

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Knowledge Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design sound attenuated hydraulic services, determine relevant installation details and prepare specifications for a range of residential, commercial and industrial buildings 29 floors in height or greater.

The unit requires application of technical skills and knowledge to evaluate design requirements, plan and detail system components, design and size systems and prepare operational and compliance documentation.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit is suitable for experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services who work on new or existing sites.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
	Evaluate design parameters.	1.1	Establish scope of work for sound attenuated hydraulic services for wide span and high-rise building projects.
		1.2	Determine design requirements from relevant Australian standards, codes, plans, specifications and the client brief.
		1.3	Identify sound transmission categories and levels from relevant acts, codes and standards and evaluate for the relevant premises.
		1.4	Evaluate sound transmission values of building and structural elements and materials.
		1.5	Analyse and apply the National Construction Code (NCC), statutory and regulatory requirements and Australian standards for the design of sound attenuated hydraulic services.
		1.6	Apply sustainability principles and concepts throughout the design process.
		1.7	Establish performance requirements considering safety of system users or building occupants.
		1.8	Interpret manufacturer requirements and trade and technical manuals to comply with design parameters.
		1.9	Conduct research to outline design parameters.
		1.10	Determine factors that contribute to quality, safety and time efficiency.
		1.11	Conduct cost-benefit analysis comparing a range of pipe materials and system designs.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Plan and detail system components.	2.1	Identify and analyse causes of noise generation in hydraulic services.
		2.2	Plan layout of sound-attenuated pipework systems.
		2.3	Perform system calculations for a range of sound attenuated hydraulic services.
		2.4	Attenuate sound for pumped hydraulic systems.
		2.5	Plan pipe supports for a range of applications.
		2.6	Specify approved materials and installation requirements for sound attenuated hydraulic services.
1	Design and size systems.	3.1	Design and size sound attenuated hydraulic services for a range of applications.
		3.2	Identify and document material combinations to achieve sound attenuation requirements.
		3.3	Attenuate sound for pump installations.
		3.4	Design and evaluate sound attenuated hydraulic services using calculations and computer software packages.
4	Prepare documentation.	4.1	Prepare a client brief for the preferred design.
		4.2	Prepare plans and specifications for a range of sound attenuated hydraulic services.
		4.3	Prepare reports on sound attenuated hydraulic services for a range of applications.
		4.4	Prepare testing and commissioning schedule.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.5	Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPMS5012 Design sound attenuated hydraulic services

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Knowledge Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing an approved sound attenuated system for an approved sanitary plumbing system and a domestic drinking water system installation incorporating a pumping system to a building 29 floors in height or greater.

The design must include:

- clipping details
- pipe enclosures details
- insulation of pipework details
- vibration elimination method details
- documenting a hydraulic works specification for the above design including:
    - clipping procedures and products to be used
    - pipe enclosure and duct work requirements relating to sound attenuation
    - pumping details including sound attenuation methods, vibration methods and products
    - pipe insulation details and products to be used
    - sound attenuated hydraulic services calculations for the design.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- application of relevant Australian standards and codes, the National Construction Code (NCC), manufacturer specifications, and other relevant standard operating procedures (SOPs) relevant to the sector
- industry terminology and definitions used in the design of sound attenuated hydraulic services for all classes of building
- drafting principles
- design principles and concepts
- relevant quality assurance requirements
- relevant Environment Protection Authority (EPA) requirements
- sustainability principles and concepts
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of sound attenuated hydraulic services
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- cost-benefit analysis considerations
- noise rating of habitable areas, including compliance requirements
- types of noise generation:
    - applications of system calculations:
        - sound criteria for habitable rooms
        - noise insulation characteristics of materials
        - sound transmission values of plumbing pipework and building materials
- types of pumped hydraulic systems
- pipe supports cover fixings that do not impinge on sound attenuation of the hydraulic service:
    - materials for sound attenuated hydraulic services:
    - commissioning schedule information
- operation and maintenance manuals.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for gas bulk storage systems.
		1.2	Establish system performance requirements.
		1.3	Determine design requirements from plans, specifications and client brief.
		1.4	Review and analyse statutory and regulatory requirements and Australian and New Zealand Standards for the design of gas bulk storage systems.
		1.5	Conduct research, including a desktop study to identify a range of system options.
		1.6	Interpret manufacturer requirements and trade and technical manuals for installing gas bulk storage systems.
		1.7	Conduct a cost-benefit analysis to compare a range materials and system designs.
2	Plan and detail system components.	2.1	Determine layout of a liquefied petroleum gas (LPG) bulk storage installation according to regulatory authorities.
		2.2	Prepare site plans for bulk installations, including layout of pipework systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Specify fire protection systems according to Australian and New Zealand standards and provide detail of deluge systems.
		2.4	Plan and detail control valves and fittings.
		2.5	Analyse and locate content gauges according to code requirements and specify meters and regulators.
		2.6	Evaluate and specify vaporisers and calculate vaporisation rates.
		2.7	Perform system calculations for a range of applications according to regulations and manufacturer requirements.
		2.8	Determine pipe fixings for a range of applications.
		2.9	Specify approved materials, jointing methods and installation requirements for gas bulk storage systems.
3	Design and size systems.	3.1	Design complex gas bulk storage systems using plans and details of system components and established design parameters.
		3.2	Design a range of suitable system approaches.
		3.3	Design and size systems using computer software packages.
4	Prepare documentation.	4.1	Prepare system plans.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Prepare system specifications.
		4.3	Prepare system testing and commissioning schedule.
		4.4	Produce operation and maintenance manual.

Foundation Skills

CPCPPS5001 Design industrial gas systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design industrial gas fuel systems including the design of valve trains, interlocks, pipework and equipment in compliance with regulatory requirements.

The unit covers determining installation requirements, preparing plans and system specifications, producing testing and commissioning schedules and creating operation and maintenance manuals.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation including work health and safety (WHS).

This unit is suitable for experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to gas and plumbing services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for CPCPPS5001 Design industrial gas systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- planning, detailing, designing and sizing three of the following industrial gas systems:
- drying and treatment of solvents
- specialist atmospheres
- heat exchanger transfers
- air heating

and include the following components in each system design:

- burners
- controls
- regulators
- gas piping systems operating at greater than 200 KPa
- gas tightness testing for piping volumes greater than 30 litres
- appliances that include solvent or dust atmospheres
- dual fuel appliances
- flue and exhaust requirements for forced draught burners
- ensuring the systems:
    - meet all regulatory, manufacturer and Australian and New Zealand Standard requirements
    - are completed to client specifications
    - are presented in a professional manner using computer aided design and word-processing programs.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- Australian Standards, codes, statutory and regulatory requirements:
    - AS/NZS 5601.1 Gas installations - General installations
    - AS/NZS1596 The storage and handling of LP gas
    - AS 3814 Industrial gas-fired appliances
    - AS 1375 Industrial fuel fired appliances
    - AS 61508 Functional safety
    - AS 31000 – Risk management
    - National Gas Law (NGL)
    - National Construction Code (NCC)
    - Acts, regulations and local and state government policies, including group and strata titling
- manufacturer specifications, including hazards identified in relation to devices and systems used
- other codes or standard operating procedures
- common terminology, symbols and definitions used in the design of industrial gas systems
- principles of technology in the design of industrial gas systems
- workplace safety requirements, including relevant statutory regulations, codes and standards
- cost-benefit analysis
- inclusions for establishing scope of work:
    - interpreting plans and specifications
    - sizing and documenting layout of industrial gas systems:
        - characteristics
        - compatibility

CPCPPS5002 Design gas reticulation systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design and size gas reticulation systems, including determining material, placement and ventilation requirements.

The unit also covers the analysis and interpretation of relevant gas codes and standards, the preparation of documentation for testing and commissioning and creating associated operation and maintenance manuals.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This units applies to experienced people such as hydraulic design consultants and plumbers or persons in a supervisory capacity who work in plumbing services on new or existing sites.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for gas reticulation systems.
		1.2	Establish system performance requirements.
		1.3	Determine design requirements from plans, specifications and client brief.
		1.4	Review and analyse statutory and regulatory requirements and Australian and New Zealand Standards for the design of gas reticulation systems.
		1.5	Conduct research, including a desktop study to identify a range of system options.
		1.6	Interpret manufacturer requirements and trade and technical manuals for gas reticulation systems.
		1.7	Conduct a cost-benefit analysis to compare materials and system designs.
2	Plan and detail system components.	2.1	Plan layout of pipework systems including the type and location of fittings and valves.
		2.2	Calculate pipe sizes for a range of applications.
		2.3	Specify ventilation and flue requirements of applications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Conduct gas metering and measurement of gas consumption.
		2.5	Detail distribution pressures and specifications of regulators and appliances for applications.
		2.6	Design and detail cylinder and tank systems.
		2.7	Specify safety, ignition, thermostat and gas control devices in compliance with relevant standards and codes.
		2.8	Plan pipe fixings for applications.
		2.9	Specify approved materials, jointing methods and installation requirements for gas reticulation systems.
3	Design and size systems.	3.1	Design and size range of gas reticulation systems.
		3.2	Design and size pressure loss through pipework, valves and meters.
		3.3	Design and size ventilation systems for gas systems and appliances.
		3.4	Design and layout plantroom containing liquefied petroleum gas (LPG) appliances.
4	Prepare documentation.	4.1	Prepare plans for gas reticulation systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Prepare specification for gas reticulation systems.
		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPPS5002 Design gas reticulation systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- evaluating and documenting design parameters for at least two gas reticulation systems, including:
    - preparing and producing a plan for layout of gas reticulation systems using appropriate software.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in design of gas reticulation systems for all classes of building
- principles of technology used in design of gas reticulation systems
- requirements of state regulatory authorities, Australian Standards and manufacturer specifications, including hazards identified in relation to devices and systems
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
    - interpretation of plans and specifications
    - sizing and documenting layout of gas reticulation systems for applications, including residential, commercial and industrial
    - new projects or existing structures being renovated, extended, restored or maintained
- design requirements:
    - architectural specifications
    - builder specifications
    - owner requirements
    - specialist use applications

© Commonwealth of Australia, 2026 BuildSkills Australia

- cost-benefit analysis
- statutory and regulatory requirements and Australian and New Zealand Standards:
    - Acts, regulations and local and state government policies, including group and strata titling
    - AS/NZS 1596 The storage and handling of LP gas
    - AS/NZS 5601.1 Gas installations - General installations
    - National Construction Code (NCC)
    - gas utility and supplier information and requirements
    - industry standards
- requirements from manufacturers:
    - material specifications
    - pump tables
    - sizing tables

CPCPPS5014 Locate and maintain piping systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to locate and maintain piping systems.

The unit includes a range of applications including pipe freezing equipment and procedures, sewer and drain camera equipment and procedures, under-road boring equipment and procedures, robotic sewer repair, chemical grout systems and procedures and high-pressure drain cleaning equipment and procedures.

The unit applies to consultants or supervisors in plumbing services and hydraulics on new or existing sites.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for locating and maintaining hydraulic and plumbing systems.
		1.2	Determine relevant design requirements from relevant Australian standards, codes, plans, specifications and in accordance with work health and safety (WHS) and environmental requirements.
		1.3	Identify and plan tasks in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.
		1.4	Evaluate impact of works on buildings and structural elements and underground services.
		1.5	Analyse and apply the National Construction Code (NCC), statutory and regulatory requirements and Australian standards for the scope of works.
		1.6	Apply sustainability principles and concepts throughout the design process.
		1.7	Establish performance requirements considering safety of system users or building occupants.
		1.8	Interpret manufacturer requirements, trade and technical manuals to comply with design parameters.
		1.9	Conduct cost-benefit analysis comparing a range of pipe materials and system designs.
2	Plan and assess systems.	2.1	Identify and analyse applications of maintaining hydraulic and plumbing systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.2	Specify approved materials, methods and installation requirements for maintaining hydraulic services.
1	Prepare documentation.	3.1	Prepare a client brief for the preferred system of maintaining hydraulic and plumbing systems.
		3.2	Prepare plans and specifications for a range of scenarios relating to maintaining hydraulic and plumbing systems.
		3.3	Prepare testing and commissioning schedule.
		3.4	Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Evidence formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing a client brief, plans and specifications, testing and commissioning schedule and producing an operation and maintenance manual for each of the following:
    - pipe-freezing of an existing 100 mm copper water mains requiring a new 100 mm tee connection
    - a sewer line inspection using closed-circuit television (CCTV) drain camera equipment through a sewer inspection point and a sewer manhole and the removal of a blockage with high-pressure drain cleaning equipment
    - use of under-road boring equipment to install a 150 mm sewer line across a local council road containing a minimum of two lanes in width
    - an approved trenchless robotic and chemical repair system to incorporate a straight-line section of 100 mm sewer pipe and a 100 mm sewer junction repair.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the specification of piping system maintenance procedures
- nature of materials used and effects of performance under various conditions
- requirements of state and territory regulatory authorities, Australian Standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- applications for pipe and servicing locating equipment

© Commonwealth of Australia, 2026 BuildSkills Australia

- uses and limitations of pipe-freezing equipment
- uses and limitations of sewer and drain cameras
- uses and limitations of under-road boring equipment
- uses and limitations of trenchless, robotic sewer repair and chemical grout systems including re-lining
- uses and limitations of high-pressure drain cleaning equipment
- safety procedures relating to maintaining hydraulic and plumbing systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPPS5015 Inspect plumbing and drainage systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to conduct inspections of hydraulic systems for a range of residential, commercial and industrial buildings to ensure compliance with Australian and New Zealand Standards and local authority and operational performance requirements.

This unit covers requirements for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics on a new or existing site.

Inspections of hydraulic systems must comply with Australian and New Zealand Standards and local authority and operational performance requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Specify local authority inspection requirements.	1.1	Specify local authority inspection requirements for hydraulic systems according to legislation and standards.
		1.2	Identify and specify approved materials for different applications.
		1.3	Specify installation requirements complying with manufacturer manuals and regulatory requirements.
2	Develop inspection procedures.	2.1	Develop and document administrative procedures for inspection projects.
		2.2	Develop inspection checklists.
3	Conduct inspections.	3.1	Establish effective communication channels with relevant site personnel and stakeholders.
		3.2	Plan and detail inspection routes and schedules.
		3.3	Identify and apply work health and safety (WHS) guidelines and sustainability principles to inspections and wear appropriate personal protective equipment (PPE).
		3.4	Conduct inspection to assess compliance with regulatory requirements and professional workmanship standards.
		3.5	Hand sketch onsite as-constructed plans and take measurements.
		3.6	Use dispute resolution techniques as required when non-compliance is identified.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.7	Implement testing procedures.
		3.8	Accurately record inspection and testing results.
4	Prepare reports.	4.1	Prepare inspection reports using onsite records, including as-constructed plans.
		4.2	Report and detail identified recommendations.
		4.3	Produce rectification schedules.
5	Enforce compliance.	5.1	Detail breaches of relevant regulation or standards.
		5.2	Issue infringement notices and implement relevant follow-up procedures.
		5.3	Implement enforcement action issuing infringement notices in cases of non-compliance.
6	Maintain records.	6.1	Maintain inspection diary.
		6.2	Process inspection records according to established administrative procedures.

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency in this unit, a person must meet the performance criteria for this unit by:

- conducting a compliance inspection on four different hydraulic systems and prepare a report on each instance to ensure compliance.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the design of plumbing and drainage systems
- use of approved materials identified from Australian and New Zealand Standards and effects of performance under various conditions:
    - fixtures
    - fittings
    - pipes
- principles of technology used in the design of hydraulic systems:
    - fire services
    - gas services
    - mechanical services
    - sanitary plumbing and drainage
    - stormwater drainage
    - trade waste
    - water supply
- administrative procedures required for the inspection of hydraulic systems:
    - file management
    - inspection allocation

© Commonwealth of Australia, 2026 BuildSkills Australia

    - inspection records
    - logging inspections
- inspection checklists requirements:
    - approved installation methods
    - authorised materials
    - project section
    - compliance with:
        - Australian and New Zealand Standards
        - distances
        - limitations
        - National Construction Code (NCC)
        - other regulatory requirements
- Inspection reports requirements:
    - defect
    - inspection
    - performance
    - quality assurance
- as-constructed plans including layout of:
    - fire services pipework
    - gas pipework
    - mechanical services pipework
    - sanitary plumbing and drainage pipework
    - stormwater pipework
    - trade waste drainage systems
    - water supply pipework
- effective dispute resolution techniques when non-compliance is identified:
    - active listening techniques
    - non-threatening body language
    - power neutral relationships
    - other recognised dispute avoidance and resolution techniques
- testing procedures:
    - air pressure tests
    - compliance checklist
    - gas leak detection

CPCPPS5023 Design solar water heating systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Change to Performance Criteria 4.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design efficient cost-effective solar water heating systems for residential, commercial and industrial applications for buildings with a minimum of 29 floors and a wide span, multi-building project, using proprietary components and manufacturer design information.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit applies to people such as hydraulic design consultants, plumbers or persons in a supervisory capacity in plumbing services working on new or existing sites.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for solar water heating system design using codes, plans, specifications manufacturer requirements and client brief.
		1.2	Assess locations of solar collectors and evaluate effect of each location on efficiency.
		1.3	Analyse and identify statutory and regulatory requirements and relevant Australian Standards and codes for the design of solar water heating systems.
		1.4	Establish performance requirements considering safety of system users or building occupants.
		1.5	Evaluate environmental and community benefits of solar water heating systems.
		1.6	Apply sustainability principles and concepts as part of the design process.
		1.7	Conduct research including a desktop study to outline design parameters.
		1.8	Determine factors that contribute to quality, safety and time efficiency.
		1.9	Conduct cost-benefit analysis to compare a range of materials and system designs.
2	Plan and detail system components.	2.1	Plan layout of pipework systems including type and location of fittings and valves.
		2.2	Select and evaluate the configuration and application of a range of proprietary solar heated water systems, materials and valves.
		2.3	Perform calculations for solar water heating systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Plan and detail typical configuration of a hydraulic circuit (flow and return) and its components for a pumped-storage solar water heating system.
		2.5	Specify water quality and water pre-treatment methods.
		2.6	Specify suitable types and levels of insulation for system components and detail a range of methods to protect from freezing and over performance.
		2.7	Calculate pipe size, velocity, flow and pressure for a range of applications.
		2.8	Plan pipe supports for a range of applications.
		2.9	Specify approved materials, jointing methods and installation requirements.
		2.10	Provide allowance for expansion and contraction.
3	Design and size systems.	3.1	Select solar collectors to meet identified installation requirements.
		3.2	Design and size solar water heating, solar pre-heat and solar pool and spa heating systems to meet requirements.
		3.3	Consider legionella bacteria mitigation design principles in the design of solar water heating systems.
4	Prepare documentation.	4.1	Prepare a return client brief for the preferred design.
		4.2	Prepare plans and specifications for solar water heating systems.
		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual.

Assessment Requirements for CPCPPS5023 Design solar water heating systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Change to Performance Criteria 4.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting an approved layout using two methods of solar heated water systems with:
    - one gas-boosted commercial solar system
    - one heat pump-boosted system
- for:
    - a high-rise unit development building to a minimum of 29 floors including sanitary fixtures on each floor level
    - a wide span, multi-building project such as a school, nursing home or university incorporating a solar pre-heat systems and heating systems.

Each project is to include a specification and maintenance manual.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- application of the National Construction Code (NCC) and relevant Australian standards and codes, manufacturer specifications and operating procedures relevant to the sector
- common terminology and definitions used in design of solar water systems
- work health and safety (WHS) requirements, relevant statutory regulations, codes and standards
- cost-benefit analysis

© Commonwealth of Australia, 2026 BuildSkills Australia

- inclusions for establishing scope of work:
    - interpreting plans and specifications
    - sizing and documenting layout solar water heating systems:
        - characteristics
        - compatibility
        - dimensions
        - location
        - patterns
        - quantities
        - sizes
        - surfaces
        - types of product and service
- design requirements:

CPCPPS5024 Conduct a water audit and identify water-saving initiatives

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to conduct water audits in residential buildings with a minimum of 50 units; commercial buildings with a minimum of 20 floors, including a commercial laundry for hospital or nursing home.

This unit also specifies the skills and knowledge required to propose types of water-saving devices that are appropriate where water use reductions are possible.

The role involves interaction with builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

This unit applies to experienced people such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Calculate water use.	1.1	Establish scope of work for conducting water audits.
		1.2	Identify requirements from relevant Australian Standards, codes, plans, specifications, manufacturer requirements and client brief.
		1.3	Apply sustainability principles and concepts throughout water audit process.
		1.4	Specify types of flow and pressure-measuring devices including their location and use.
		1.5	Conduct flow and pressure tests and measure flows at outlets.
		1.6	Compare actual water use to ideal use and calculate the difference.
2	Identify excessive water and energy use.	2.1	Implement leak identification processes considering safety of system users or building occupants.
		2.2	Measure and evaluate flows against relevant standards and user requirements.
		2.3	Evaluate suitability of existing fixtures and fittings against new technology.
		2.4	Identify and compare water use times against optimal timing.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Identify and analyse existing inefficient system conditions.
		2.6	Conduct pressure test and identify and compare consequences of high and low pressures to industry standards.
		2.7	Evaluate energy saving associated with reduction in water use.
1	Evaluate methods to conserve water and energy.	3.1	Identify flow restrictors, sensors, pressure-limiting devices and automatic systems for a range of applications.
		3.2	Evaluate alternative processes and practices for optimum water and energy savings.
		3.3	Evaluate alternative fixtures and fittings for optimum water and energy savings.
		3.4	Apply rainwater harvesting techniques and processes.
		3.5	Design recycling and re-use processes.
		3.6	Design water metering strategies to monitor and problem solve water saving systems.
4	Report findings.	4.1	Conduct a cost-benefit analysis including the investment return period.
		4.2	Prepare water and energy audit report.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.3	Identify and report resulting environmental benefits and water and energy savings.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPPS5024 Conduct a water audit and identify water-saving initiatives

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- conducting a water audit, identifying water-saving initiatives for the following building types:
    - a minimum 50-unit residential building
    - a minimum 20 floor commercial office building incorporating a minimum of one toilet block per floor
    - a commercial laundry in a hospital or nursing home
- documenting and reporting on an audit report for each of the above building types.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- hazards associated with devices and systems used in the hydraulic sector
- installation methods used in hydraulic systems
- nature of materials and effect of their performance in a variety of conditions
- preparation and interpretation of plans and specifications
- requirements of Commonwealth, state or territory regulatory authorities, relevant Australian Standards and codes, manufacturer specifications, National Construction Code (NCC) and other relevant codes, standards and operating procedures
- terminology and definitions used in hydraulic design
- variety of applications of technology principles in design of water and energy-efficient usage systems for all classes of building
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- performance requirements including maintenance of flow, velocity, pressure and discharge requirements of the client, using relevant Australian Standards, NCC or other relevant codes and standards

© Commonwealth of Australia, 2026 BuildSkills Australia

- alternative processes and practices for water saving
- rainwater harvesting which must include collection, storage and distribution of rainwater, including the use of tanks and dams
- water and energy audit reports.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPPS5025 Design grey water re-use systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 1.7.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design grey water re-use systems. The unit addresses the collection, treatment, diversion and storage options for the design of grey water re-use systems for wide span and high-rise mixed development building projects.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The requirements of this unit are typically carried out by experienced people such as hydraulic design consultants or design engineers.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for design of grey water re-use systems for wide span and high-rise building projects.
		1.2	Establish performance requirements considering the safety of system users or building occupants.
		1.3	Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
		1.4	Identify potential household or community health and environmental risks and take measures to protect public health that impact the design parameters.
		1.5	Apply sustainability principles and concepts as part of the design process.
		1.6	Conduct additional research to outline design parameters.
		1.7	Interpret manufacturer requirements and trade and technical manuals for grey water re-use systems.
		1.8	Conduct cost-benefit analysis for implementing the proposed design.
2	Plan and detail system components.	2.1	Detail primary, secondary and advanced secondary treatment and tertiary systems.
		2.2	Plan layout of pipework systems including type and location of fittings, valves, controls and other system components.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Design and detail changes to building drainage system and identify inspection requirements.
		2.4	Evaluate and detail grey water land application, disposal, diversion, storage and wet weather storage options to identify problems and plan solutions.
		2.5	Plan and detail stored and pressurised grey water systems for irrigation, sanitary flushing and other approved uses.
		2.6	Plan and detail storage tanks and approved disposal options.
		2.7	Calculate pipe size and pump duty and size and detail pumpwell, pump and pump control requirements.
		2.8	Evaluate approved materials and jointing methods for grey water re-use systems, design pipe supports and specify installation requirements.
3	Design and size systems.	3.1	Design grey water re-use systems for residential, commercial and industrial applications which include water treatment and backflow protection of drinking and non-drinking water supply systems.
		3.2	Design grey water re-use systems to ensure that the systems can be properly and safely maintained.
		3.3	Design and size grey water re-use systems using relevant computer software packages.
4	Prepare documentation.	4.1	Prepare client brief of the proposed design.
		4.2	Prepare plans and specifications for grey water re-use systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual including information on how to properly and safely maintain the system.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPPS5025 Design grey water re-use systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 1.7.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details of a greywater re-use system for a high-rise mixed development building and a wide span project, including:
    - a specification for both
    - planning and detailing systems components, including:
        - storage tanks
        - system overflow
        - treatment systems
        - piping systems
        - plumbing systems
        - usage systems
    - designing and sizing a grey water re-use system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- approved installation methods
- hazards associated with devices and systems used in the hydraulic sector
- nature of materials and effect of their performance in a variety of conditions
- organisational quality procedures and processes

© Commonwealth of Australia, 2026 BuildSkills Australia

- principles of technology in the design of grey water re-use systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
- terminology and definitions used in hydraulic design
- work drawings and specifications
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
    - interpretation of plans and specifications
    - sizing and documenting layout of grey water re-use systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
- design requirement:
    - architectural plans
    - building specifications
    - owner requirements
    - pipework identification
    - sizing of pipework
    - backflow protection of drinking and non-drinking water supply systems
    - water treatment
    - specialist water use applications
- health risks:
    - abdominal pain
    - acute enteritis
    - bacillary dysentery
    - chest pain
    - cholera
    - common colds
    - coughing
    - diarrhoea
    - digestive and nutritional disturbances
    - dysentery
    - fever
    - gastroenteritis
    - giardiasis

  - helminthes, including flukes and worms
  - hepatitis
  - hookworm disease
  - infectious hepatitis
  - meningitis
  - muscle aches
  - neurological symptoms, including nervousness and insomnia
  - poliomyelitis
  - respiratory infections, such as pneumonia
  - restlessness
  - salmonellosis (food poisoning)
  - taeniasis
  - toxoplasmosis
  - typhoid fever
  - vomiting
  - weight loss
- environmental risks:
  - algal blooms
  - excess nutrient loads
  - fish kills
  - oxygen depletion
- measures to protect public health:
  - auditing
  - contact avoidance
  - contact minimisation
  - disinfection and sterilisation
  - education
  - legislation
  - licensing
  - maintenance
  - separation barriers
  - set back distances
  - timing discharges
  - wet weather storage

© Commonwealth of Australia, 2026 BuildSkills Australia

- cost-benefit analysis comparing:
    - the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
    - water savings and environmental benefits against initial and ongoing maintenance costs
- national water programs, statutory and regulatory requirements, relevant Australian Standards, and codes:
    - AS/NZS 1546 On-site domestic wastewater treatment units
    - AS/NZS 1547 On-site domestic wastewater management
    - AS/NZS 3500 Plumbing and drainage set
    - AS 2200 Design charts for water supply and sewerage
    - National Construction Code (NCC)
    - Commonwealth, state or territory government policies, including health departments
- manufacturer requirements:
    - material specifications
    - grey water treatment systems
    - pump installation
    - pipe sizing
    - storage systems
    - technical and trade manuals

    - phosphates
- performance requirements established using relevant Australian Standards, codes and local authority plans:
    - cover
    - discharge
    - flow conditions
    - pipe grades
- layout of pipework systems:
    - drainage systems
    - elevated pipework systems
    - gravity systems
    - pumped and rising mains
    - requirements for irrigation systems
    - requirements for flushing water systems
- stack systems:
    - fully vented
    - fully vented modified
    - single stack
    - single stack modified
    - waste stack
    - two-pipe system
    - reduced velocity aerator system
- layout of pipe work system design:
    - designing pipework systems to not unduly affect building integrity and aesthetic appeal
    - location of pipework (fire rating of enclosure)
    - demonstrating principles of economy, serviceability, durability and fit for use
- fittings, valves and controls:
    - backflow prevention devices
    - irrigation control systems
    - isolating valves
    - level indicators
    - pump controls
- land application options:

CPCPPS5026 Design rainwater collection, storage, distribution and re-use systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design systems for the collection, storage, distribution and re-use of rainwater for drinking and non-drinking uses, including irrigation, toilet flushing and other uses approved by relevant authorities for high-rise mixed development buildings and wide span projects, such as a school or industrial complex.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically carried out by experienced people such as hydraulic design consultants or design engineers.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for rainwater harvesting systems for wide span and high-rise building projects.
		1.2	Establish performance requirements considering safety of system users or building occupants.
		1.3	Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
		1.4	Apply sustainability principles and concepts as part of the design process.
		1.5	Analyse potential contamination sources and create design solutions.
		1.6	Establish rainfall patterns and required rainwater storage volumes.
		1.7	Interpret manufacturer requirements and trade and technical manuals for rainwater harvesting systems.
		1.8	Conduct research to outline design parameters.
		1.9	Conduct cost-benefit analysis to compare a range of pipe materials and system designs.
2	Plan and detail system.	2.1	Specify tank type and location.
		2.2	Plan layout of pipework systems including type and location of fittings, valves and controls.
		2.3	Plan and detail first-flush systems.
		2.4	Specify water contamination solutions and filtration systems.
		2.5	Calculate pipe size for a range of applications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.6	Plan and detail separation of services and backflow prevention devices.
		2.7	Specify approved non-contaminating materials and jointing methods for rainwater harvesting and design pipe supports.
		2.8	Size and detail pump and ancillary requirements.
		2.9	Specify installation requirements.
		2.10	Specify water treatment according to state and territory health requirements.
		2.11	Specify vermin protection according to manufacturer and state and territory requirements.
		2.12	Provide allowance for expansion and contraction.
3	Design and size systems.	3.1	Design and detail rainwater harvesting systems.
		3.2	Design and detail rainwater re-use systems.
		3.3	Design and size rainwater harvesting systems using calculations and manufacturer's data sheets.
4	Prepare documentation.	4.1	Produce client brief of the preferred design.
		4.2	Prepare plans and specifications for a range of rainwater harvesting systems.
		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual.

Assessment Requirements for CPCPPS5026 Design rainwater collection, storage, distribution and re-use systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details for:
  - a high-rise mixed development building, and
  - a wide span project such as a school or industrial complex
- preparing plans and specifications for each of the above projects and include the following system components:
  - authority connection
  - backflow prevention requirements
  - filters
  - fixtures and fitments
  - piping systems
  - pumps
  - storage
  - water treatment
- documenting the evaluation of design parameters including rainfall, client, regulatory, manufacturer and relevant Australian Standard requirements and storage capacity for each design
- preparing plans and specifications for rainwater harvesting and re-use systems to industry standards.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the design of rainwater collection, storage, distribution and re-use
- key features of work plans and specifications

© Commonwealth of Australia, 2026 BuildSkills Australia

- nature of materials used and effects of performance under various conditions
- organisational quality procedures and processes
- principles of technology in the design of rainwater collection, storage, distribution and re-use for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
- terminology and definitions used in hydraulic design
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
    - interpreting plans and specifications
    - rainfall analysis
    - sizing and documenting layout of rainwater harvesting systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
- design requirements:
    - architectural plans
    - building specifications
    - owner requirements
    - pipework identification
    - sizing of pipework
    - backflow protection of drinking and non-drinking water supply systems
    - water treatment
    - specialist water use applications

CPCPPS5027 Design irrigation systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design irrigation systems to relevant Australian Standards, codes, the National Construction Code (NCC) and other relevant legislative requirements to meet occupier needs and industry standards.

This unit covers requirements for work in a consultancy or supervisory capacity in relation to the design of irrigation systems for residential, commercial, industrial, sporting ovals and agricultural properties with or without connection to reticulated supply.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
1	Evaluate design parameters.	1.1 Identify and confirm the scope of work for irrigation systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
		1.3	Conduct cost-benefit analysis comparing a range of pipe materials and system designs.
		1.4	Interpret, analyse and apply statutory and regulatory requirements and relevant Australian Standards and codes for the design of irrigation systems.
		1.5	Obtain trade and technical manuals and interpret manufacturer requirements for irrigation systems.
		1.6	Conduct research to outline design parameters.
		1.7	Conduct flow and pressure tests for the irrigation systems.
		1.8	Establish water sources, volumes and areas to be irrigated.
		1.9	Analyse and categorise soil types, documenting the impacts on irrigation systems as per workplace procedures.
2	Plan and detail system components.	2.1	Plan layout of pipework systems including the type and location of fittings, valves and controls.
		2.2	Detail the type, location and requirements for backflow prevention devices.
		2.3	Calculate pipe sizes, velocities, flows and pressures for a range of applications.
		2.4	Specify the approved materials and jointing methods for irrigation systems.
		2.5	Detail sections and components of the irrigation system.
		2.6	Design pipe supports for a range of applications.
		2.7	Size and detail pump enclosure and control requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.8	Specify installation requirements for irrigation management system.
		2.9	Determine water storage requirements.
		2.10	Make allowance for pipe movement.
3	Design and size systems	3.1	Analyse requirements and consider options available to design irrigation systems.
		3.2	Design delivery systems and layout.
		3.3	Design and size irrigation systems.
		3.4	Determine required water application to establish and maintain plant life.
		3.5	Apply sustainability principles and concepts throughout the design process.
4	Prepare documentation.	4.1	Prepare and document client brief of the desired design.
		4.2	Prepare and document plans and specifications for a range of irrigation systems.
		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPPS5027 Design irrigation systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting layout details of an irrigation system including specification for a:
    - sports oval incorporating stormwater collection and use, with a mains pressure drinking water top-up and with chemical additives
    - a landscaped area for a mixed development site connected to a main pressure recycled (non-drinking) water main
- evaluating and documenting design parameters to relevant Australian Standards and codes, and regulatory, client and manufacturer requirements
- planning and detailing system components that include:
    - backflow prevention devices
    - irrigation management-control system
    - pumping requirements
    - water delivery outlets
    - piping requirements
- designing and sizing two irrigation systems, using appropriate calculations and computer software for specific applications.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- statutory and regulatory requirements related to designing irrigation systems including:
    - Commonwealth government
    - state or territory governments
    - local authorities
    - AS/NZS 3500 National plumbing and drainage

© Commonwealth of Australia, 2026 BuildSkills Australia

  - AS2200 Design charts for water supply and sewerage
  - National Construction Code (NCC)
  - state or territory health departments
- common terminology and definitions used in the design of irrigation systems
- design requirements including:
  - architectural plans
  - backflow requirements
  - interpretation and application of irrigation services, drawings and symbols
  - irrigation management system
  - owner requirements
  - precipitation and evaporation rates
  - pumping requirements
  - required water application to establish and maintain plant life
  - source of irrigation water
  - sprinkler head systems
  - system requirements
  - water storage requirements
- cost-benefit analysis comparing the range of suitable materials and system choices available to enable cost-effective choices without compromising the integrity of the project
- manufacturer requirements including:
  - irrigation management system
  - material specification
  - pump tables
  - sprinkler head performance
  - sub-surface irrigation
  - technical and trade manuals
- nature of materials used and effects of performance under various conditions including:
  - composite pipework
  - copper (Cu)
  - cross-linked polyethylene (PE-X)
  - polypropylene (PP)
  - polybutylene (PB)

    - polyvinyl chloride (PVC)
- characteristics and application of different backflow prevention devices including:
    - double-check valve assembly (DCV)
    - dual-check valve with intermediate vent (DuCV)
    - pressure type vacuum breaker (PVB)
    - reduced pressure zone device (RPZD)
    - registered air gap (RAG)
    - registered break tank (RBT)
    - reduced pressure detector assembly (RPDA)
    - reduced pressure zone device (RPZD)
    - other approved backflow prevention devices
- layout of pipework systems including:
    - distribution
    - dual feed systems
    - range pipes
    - ring main
    - single pipe
    - control stations
- sections and components of the irrigation systems including:
    - irrigation stations
    - manifold systems
    - sensors
    - automatic controls
    - sprinklers, drippers and irrigators
    - sprinkler patterns
- testing and commissioning schedule requirements including:
    - defect inspection
    - hydrostatic
    - mains pressure
    - performance
    - quality assurance (QA) audit
    - system certification
    - flow test
    - leak check

CPCPPS5028 Design trade waste pre-treatment systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Change to Performance Criteria 4.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design trade waste pre-treatment systems for commercial and industrial premises, such as commercial kitchens and laundries, mechanical workshops and commercial swimming pools, prior to discharge to authority's point of sewer connection.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically undertaken by experienced tradespeople such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for trade waste pre-treatment systems prior to discharge to authority's point of sewer connection.
		1.2	Establish performance requirements considering safety of system users or building occupants.
		1.3	Determine design requirements from relevant Australian Standards, codes, plans, specifications, authorities' requirements and client brief.
		1.4	Apply sustainability principles and concepts as part of the design process.
		1.5	Interpret manufacturer requirements and trade and technical manuals.
		1.6	Conduct research to outline design parameters.
		1.7	Analyse trade waste applications and conduct a cost-benefit analysis to compare a range of pipe materials and system designs.
2	Plan and detail system components.	2.1	Plan layout of pipework systems including type and location of fittings and controls.
		2.2	Plan and detail solid removal systems.
		2.3	Plan and detail grease and oil interceptors, neutralising chambers and wash-down areas incorporating stormwater exclusion.
		2.4	Plan and detail diffused air flotation systems.
		2.5	Detail bacterial treatment processes and combined and specialised treatment processes for a range of commercial and industrial applications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.6	Incorporate general housekeeping procedures to minimise discharge of trade waste.
		2.7	Perform system calculations for a range of applications.
		2.8	Size and detail pump well, pumps, controls and equipment requirements.
		2.9	Design pipe supports for a range of applications.
		2.10	Specify approved materials, jointing methods and installation requirements for trade waste pre-treatment systems.
3	Design and size systems.	3.1	Design and size trade waste pre-treatment systems for commercial and industrial premises.
		3.2	Design and size trade waste pre-treatment systems using calculations and local authorities and regulators' policies and requirements.
		3.3	Design flow monitoring systems for trade waste applications.
		3.4	Design venting of trade waste systems to comply with local authority requirements.
4	Prepare documentation.	4.1	Produce a return client brief of the preferred design.
		4.2	Prepare plans and specifications for trade waste pre-treatment systems.
		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual including information on how to properly and safely maintain the system.

Assessment Requirements for CPCPPS5028 Design trade waste pre-treatment systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Change to Performance Criteria 4.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the installation and layout details for two trade waste pre-treatment systems from the following:
    - chemical facilities
    - commercial kitchen
    - commercial and industrial facilities that produce a liquid waste stream
    - commercial and industrial laundry
    - food preparation facilities
    - laboratories
    - motor vehicle workshops
    - photography development facilities
    - commercial swimming pool
    - wash-down facilities
- preparing plans and specifications to industry standards for both selections
- documenting the evaluation of design parameters including client, regulatory, manufacturer and relevant Australian Standard requirements for each design.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- hazards associated with devices and systems used in the hydraulic sector

© Commonwealth of Australia, 2026 BuildSkills Australia

- design of the options for the pre-treatment of trade waste
- approved installation methods for trade waste pre-treatment systems
- key features of work plans and specifications
- nature of materials and effect of their performance in a variety of conditions
- organisational quality procedures and processes
- terminology and definitions used in hydraulic design
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
    - interpreting plans and specifications
    - sizing and documenting layout of trade waste pre-treatment systems for commercial and industrial applications
- design requirements:
    - architectural plans
    - building specifications
    - cleaning and maintenance procedures
    - installation requirements
    - odour control
    - owner requirements
    - pipework identification
    - sizing
    - trade waste treatment
    - ventilation
- statutory and regulatory requirements and relevant Australian Standards and codes which may include:
    - AS/NZS 3500 Plumbing and drainage set
    - AS 2200 Design charts for water supply and sewerage
    - Commonwealth, state or territory and local governments requirements
    - National Construction Code (NCC)
    - utility provider's trade waste regulations
    - other relevant Australian Standards and codes
- trade waste applications:
    - chemical facilities
    - commercial kitchen

  - coalescing plate separators (CPS)
  - vertical gravity separators (VGS)
  - dissolved air flotation (DAF)
  - grease arrestors
  - skimmers
- neutralising chambers which neutralise:
  - acid
  - alkaline
  - chemicals
- wash-down areas:
  - bin
  - commercial and industrial wash-down processes that may or may not require stormwater diversion
  - floor
  - vehicle
  - machinery
- bacterial treatment processes:
  - aerobic
  - anaerobic
  - facultative and specialised bacteria for the removal of grease and other contaminants
- combined and specialised treatment processes:
  - bacterial treatment
  - cooling pits
  - diffused air flotation systems
  - neutralising chambers
  - solid removal systems
  - specialised treatment
- system calculations:
  - calculating gradient
  - interpreting design charts and tables
  - calculating pipe sizing
  - calculating reduced level
  - determining flow and fixture loadings

CPCPPS5030 Design pump systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Change to Performance Criteria 4.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to undertake the specification, selection and sizing of pumps and the design of associated piping and components for inclusion in hydraulic systems in high-rise mixed development building to a minimum of 29 floors and wide span projects, such as schools.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically carried out by experienced people such as hydraulic design consultants, plumber or persons in a supervisory capacity in relation to plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for pump system requirements for wide span and high-rise building projects.
		1.2	Determine design requirements from plans, specifications, system demands and client brief.
		1.3	Identify statutory and regulatory requirements and Australian Standards and codes for the design of pump systems.
		1.4	Apply sustainability principles and concepts as part of the design process.
		1.5	Conduct flow and pressure tests of hydraulic system.
		1.6	Establish pump duties for the design application.
		1.7	Establish performance requirements considering safety of system users or building occupants.
		1.8	Interpret manufacturer requirements, trade, sizing and technical manuals.
		1.9	Conduct research to outline design parameters.
		1.10	Conduct cost-benefit and life cycle analysis to compare a range of pump alternatives, materials and system designs.
2	Plan and detail system components.	2.1	Size and detail pump, controls and pump room requirements.
		2.2	Plan layout of pipework systems including type and location of fittings, valves and controls.
		2.3	Calculate pipe sizes, velocities, flows and pressures for applications.
		2.4	Specify energy sources for hydraulic pumping applications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Plan pump plinths and pump mountings for applications.
		2.6	Size and select pump impellers.
		2.7	Specify approved materials, jointing methods and installation requirements.
		2.8	Provide allowance for vibration.
3	Design and size systems.	3.1	Design pump systems for wide span and high-rise building applications.
		3.2	Evaluate pump acoustic performance.
		3.3	Perform wastewater pump dynamic suction head and flow rate calculations.
		3.4	Apply design principles for optimal performance of pump systems.
		3.5	Design delivery systems for the design application.
		3.6	Design and size pump systems using calculations and computer software packages.
		3.7	Perform domestic water pump flow rate and pressure head calculations.
		3.8	Perform stormwater pump dynamic suction head and flow rate calculations.
4	Prepare documentation.	4.1	Prepare a return client brief of the preferred design.
		4.2	Prepare plans and specification details for a range of pump systems.
		4.3	Prepare testing and commissioning schedule.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.4	Produce operation and maintenance manual.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPPS5030 Design pump systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Change to Performance Criteria 4.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting water and wastewater pumping systems required for the hydraulic services installation of:
    - a high-rise mixed development building to a minimum of 29 floors, including a basement with fixtures on all levels, and
    - a wide span project (such as a school or industrial complex)
- planning and detailing both system components and include:
    - ancillaries
    - control panel
    - fittings
    - flow switches
    - mounting
    - piping
    - plinths
    - pressure switches
    - pump duty.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- hazards associated with pumping equipment used in hydraulic systems
- key features of work plans and specifications

© Commonwealth of Australia, 2026 BuildSkills Australia

- approved installation methods for pump systems
- principles of technology in the design of pump installations for hydraulic systems
- research methods
- terminology and definitions used in pump installation
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
    - interpretation of plans and specifications
    - sizing and documenting layout of pump systems for wide span and high-rise building projects
- pump types:
    - centrifugal
    - circulating
    - constant flow variable speed
    - macerator
    - multiple stage
    - piston
    - positive displacement
    - submersible
    - vacuum
    - variable speed control
- pump duties:
    - constant pressure
    - flow rate
    - head
    - velocity
- design requirements:
    - acoustic performance
    - architectural plans
    - available flow and pressure from authority's main
    - building specifications
    - fire safety
    - owner's requirements
    - pipework identification

© Commonwealth of Australia, 2026 BuildSkills Australia

  - pump duty
  - sizing of pipework
  - ventilation
  - vibration
  - viscosity of fluids
- cost-benefit and life cycle analysis:
  - balancing initial cost with durability, longevity, maintenance and ongoing fuel and energy cost requirements
  - comparing the range of suitable materials, pumps and system designs available to enable cost-effective choices to be made without compromising integrity of project
- cost-benefit considerations:
  - design
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitable materials
- statutory and regulatory requirements which may include Acts and regulations Commonwealth, state or territory and local government requirements
- Australian Standards and codes:
  - AS/NZS 3500 Plumbing and drainage set
  - AS 2419 Fire hydrant installations system design, installation and commission
  - AS/NZS 1547 On-site domestic wastewater management
  - AS 2200 Design charts for water supply and sewerage
  - National Construction Code (NCC)
  - other relevant Australian Standards
- manufacturer requirements:
  - material installation specifications
  - pump tables
  - pipe sizing
  - recommended installation and fixings for pipework
  - technical and trade manuals

    - ventilation requirements
- information gathered during desktop study to support design research:
    - architectural and building plans
    - developer plans
    - manufacturer data
    - applications
    - brochures
    - forms
    - policies
    - reports
- flow and pressure tests which may include on-site measurement of flow (l/s), velocity (m/s) and pressure (kPa)
- performance requirements including flow, velocity, pressure and discharge requirements, to satisfy the requirements of the hydraulic system
- pump, controls and pump room requirements:
    - acoustics
    - ancillaries
    - automatic controls
    - inlet and outlet design
    - installation and mounting
    - plinths
    - pump sizing and selection
    - space
    - ventilation
    - vibration
- layout of pipework systems:
    - access
    - identification
    - insulation
    - isolation
    - maintenance
    - principles of economy, serviceability, durability and fit for use
    - replacement
- fittings:

CPCPPS5032 Design siphonic stormwater drainage systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design siphonic stormwater drainage systems, determine installation details, and prepare specifications for a range of residential, commercial and industrial buildings.

The role involves interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes.

The unit requirements are typically carried out by experienced people such as hydraulic design consultants or persons in a supervisory capacity in relation to plumbing services on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Evaluate design parameters.	1.1	Establish scope of work for siphonic stormwater drainage systems.
		1.2	Determine design parameters from relevant statutory and regulatory requirements, codes, plans, specifications and client brief.
		1.3	Establish performance requirements considering safety of system users or building occupants.
		1.4	Apply sustainability principles and concepts as part of the design process.
		1.5	Interpret stormwater design manuals, manufacturer requirements and trade and technical manuals
		1.6	Conduct additional research, including a desktop study, to outline design parameters.
		1.7	Determine factors that contribute to quality, safety and time efficiency.
		1.8	Evaluate siphonic system attributes and conduct cost-benefit analysis, comparing a range of pipe materials and system designs.
2	Plan and detail system components.	2.1	Integrate siphonic stormwater drainage systems with the building structure.
		2.2	Calculate volume of roof water and stormwater using approved methods.
		2.3	Plan layout of pipework systems including type and location of fittings.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Calculate pipe size and flow requirements for applications according to stormwater collection requirements.
		2.5	Plan pipe supports for applications.
		2.6	Specify approved materials and components, jointing methods and installation requirements for siphonic stormwater drainage systems.
3	Design and size systems.	3.1	Design siphonic stormwater drainage systems for applications.
		3.2	Calculate catchment areas, determine collection points and size siphonic systems.
		3.3	Design and size siphonic stormwater drainage systems using calculations and computer software packages.
4	Prepare documentation.	4.1	Prepare client brief of the preferred design.
		4.2	Prepare plans and specification for siphonic stormwater drainage systems.
		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual, including information on how to properly and safely maintain the system.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPPS5032 Design siphonic stormwater drainage systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout details, including a specification for two siphonic stormwater drainage system that include:
    - a site incorporating a high-rise mixed development building
    - a wide span project (such as a large bulk goods warehouse)
- preparing documentation which includes:
    - evaluation and details of design parameters relevant to codes and manufacturer requirements for siphonic stormwater drainage systems
    - evaluation of health risks associated with the siphonic system
    - materials and components that are compliant, fit for purpose, durable, compatible and cost-effective.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- common terminology and definitions used in the design of siphonic stormwater drainage systems for residential, commercial and industrial buildings
- drafting principles
- nature of materials used and effects of performance under various conditions
- procedures for estimating volume of stormwater run-off from rainwater collection areas
- principles of technology in the design of siphonic stormwater drainage systems
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
- scope of work:
    - calculation of rainfall intensities in given catchment areas:
        - average rainfall intervals

© Commonwealth of Australia, 2026 BuildSkills Australia

        - meteorological information
        - rainfall intensities
        - stormwater collection area calculations
        - time and concentration
    - interpretation of plans and specifications
    - sizing and documenting layout of siphonic stormwater drainage systems for residential, commercial and industrial applications
- design requirements:
    - owner requirements
    - architectural plans
    - building specifications
    - pipework identification
    - catchment area
    - approved point of discharge
    - acoustic performance
- siphonic system attributes:
    - availability
    - cost
    - installation requirements
    - risks
    - site conditions
- cost–benefit analysis to enable cost-effective choices to be made without compromising integrity of project:
    - design styles
    - expected design life
    - labour costs
    - material costs
    - safety factors
    - speed of installation
- statutory and regulatory requirements and relevant Australian Standards and codes:
    - AS/NZS 3500 Plumbing and drainage set
    - AS 2200 Design charts for water supply and sewerage
    - Geberit or equivalent approved siphonic drainage system design criteria

CPCPPS5033 Design vacuum drainage systems

Modification History

Release	Comments
3	--
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. Removed duplicated heading from Performance Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design vacuum drainage systems, determine installation details, and prepare specifications for 50 residential properties and industrial high-rise mixed development buildings with a minimum of 29 floors using proprietary components.

This unit relates to work in a consultancy or supervisory capacity in relation to plumbing services and hydraulics on a new or existing site.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate design parameters.	1.1	Establish scope of work for vacuum drainage systems designed for vacuum sewer infrastructure systems and high-rise building projects.
		1.2	Determine design requirements from relevant Australian Standards, codes, plans, specifications and client brief.
		1.3	Evaluate vacuum drainage system attributes and conduct a cost–benefit analysis comparing a range of pipe materials and system designs.
		1.4	Interpret, analyse and apply statutory and regulatory requirements, including relevant Australian Standards and codes for the design of vacuum drainage systems.
		1.5	Obtain trade and technical manuals and interpret manufacturer requirements for the design of vacuum sewer infrastructure systems.
		1.6	Conduct additional research including a desktop study to outline design parameters.
		1.7	Determine factors that contribute to quality, safety and time efficiency.
		1.8	Establish performance requirements considering safety of system users or building occupants.
2	Plan and detail system components.	2.1	Plan layout of pipework systems including the type and location of fittings, valves and controls.
		2.2	Calculate vacuum loading units (VLU) using equivalent population (EP) density for a residential development in excess of 50 dwellings in accordance with the National Construction Code (NCC) for a high-rise project with a minimum of 29 floors.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Perform pipe size calculations for applications according to regulations and manufacturer requirements.
		2.4	Design pipe supports for applications.
		2.5	Size and detail vacuum pumping station and pump control requirements.
		2.6	Specify approved materials, jointing methods and installation requirements for vacuum drainage systems.
		2.7	Determine approved point of discharge to the authority’s main.
		2.8	Identify acoustic performance of the system and document in the plan.
1	Design and size systems.	3.1	Design vacuum drainage system for residential, commercial and industrial building applications.
		3.2	Design and size vacuum drainage system using EP density calculations and in accordance with NCC.
		3.3	Apply sustainability principles and concepts throughout the design process.
4	Prepare documentation.	4.1	Prepare and document client brief of the desired design in accordance with workplace procedures.
		4.2	Prepare plans and specifications vacuum drainage systems.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.3	Prepare testing and commissioning schedule.
		4.4	Produce operation and maintenance manual including information on how to properly and safely maintain the system.

Foundation Skills

Assessment Requirements for CPCPPS5033 Design vacuum drainage systems

Modification History

Release	Comments
3	--
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. Removed duplicated heading from Performance Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the installation and layout details for a vacuum infrastructure sewer system for:
    - a residential development of 50 properties incorporating:
        - vacuum sewage collection chambers
        - vacuum sewer mains
        - vacuum pump station
        - pump rising main
        - ventilation
        - odour control
    - a high-rise mixed development building, to a minimum of 29 floors, inclusive of a basement, to include fixtures on each floor level, incorporating:
        - vacuum pump station
        - vacuum sanitary drainage system
        - pump rising main
        - ventilation
        - odour control
- applying sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme

© Commonwealth of Australia, 2026 BuildSkills Australia

- evaluating and documenting design parameters, including client, regulatory and manufacturer requirements and relevant Australian Standards and codes complex sanitary plumbing and drainage systems
- evaluating health risks associated with the sanitary plumbing and drainage system
- selecting materials and components for compliance, fitness for purpose, durability, compatibility and cost-effectiveness.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- common terminology and definitions used in the design of vacuum drainage systems
- application of statutory and regulatory requirements and relevant Australian Standards and codes including:
    - Acts, regulations and Commonwealth, state or territory and local government policies
    - AS/NZ 3500 National plumbing and drainage
    - AS 2200 Design charts for water supply and sewerage
    - Environmental Protection Authority (EPA)
    - National Construction Code (NCC)
    - Sewerage Code of Australia
    - other relevant Australian Standards and codes
- scope of work requirements:
    - interpreting plans and specifications
    - sizing and documenting layout of vacuum drainage systems including residential, commercial and industrial
- design requirements:
    - acoustic performance
    - architectural plans
    - building specifications
    - fire safety requirements
    - flow requirements and sizing of pipework
    - odour control
    - owner requirements
    - pipework identification

CPCPRE2001 Brace and prop prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to brace and prop prefabricated concrete elements. It requires using appropriate tools, equipment and material and working in a team environment on prefabricated concrete activities.

It applies to those who work under the direction of a licensed rigger or who hold a rigging licence.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCCWHS2001 Apply WHS requirements policies and procedures in the construction industry

Competency field(s)

N/A

Unit sector(s)

Prefabricated concrete

© Commonwealth of Australia, 2026 BuildSkills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Access requirements to brace and prop prefabricated concrete elements.	1.1	Review and clarify prefabricated concrete installation task.
		1.2	Review erection design documentation including task specifications and check to make sure they are in accordance with regulations and codes of practice.
		1.3	Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.
		1.4	Identify safety signage and barricade requirements.
		1.5	Review environmental requirements for the task in accordance with environmental plans and legislative requirements.
		1.6	Access plant, tools, equipment, braces props, the required material and their respective safety specifications to carry out task.
		1.7	Access set-out drawings and the erection design documentation to verify the location of prefabricated concrete installations.
2.	Prepare to brace and prop prefabricated concrete elements.	2.1	Erect identified safety signage and barricade requirements, and fit personal protective equipment (PPE).
		2.2	Obtain plant, tools, equipment, check for serviceability and rectify or report any faults.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Check braces and props for serviceability and rectify or report any faults.
		2.4	Check braces and/or props are correctly labelled with working load limit (WLL) in accordance with AS 3850 Prefabricated concrete elements.
		2.5	Review erection plan and access information on job sequencing, team roles and coordinated activities.
		2.6	Verify that the concrete strength of the elements to be braced and the concrete supporting elements for the braces and props have attained the specified minimum strength in accordance with the erection design documentation.
3.	Conduct bracing and propping of prefabricated concrete elements.	3.1	Position braces and/or props in accordance with the erection design documentation and AS 3850 1,2 & 3 Prefabricated concrete elements.
		3.2	Position levelling shims/packers to the nominated reduced level (RL) in accordance with the erection design documentation.
		3.3	Prepare and install temporary and/or permanent braces and props, incorporating modifications, correct bolt and installation procedures in accordance with the erection design documentation and standards.
		3.4	Clear all personnel from the drop zone during all lifting, handling and rotation operations.
		3.5	Check that all support fixings are all correctly installed, checked and secured in accordance with the erection design documentation, with the correct tightening torque.
		3.6	Confirm that the element is either adequately braced or fixed to and incorporated into the supporting structure prior to releasing the lifting equipment.
		3.7	Check that the installed element is in the specified position and in accordance with the set-out drawings and erection design documentation.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.8	Safely access lifting points and release lifting device in accordance with the instructions provided by the lifting clutch manufacturer.
4.	Clean up.	4.1	Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
		4.2	Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPRE2001 Brace and prop prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by:

- bracing two prefabricated concrete elements of a height not less than 7 metres and width 3 metres:
    - one of which must be a prefabricated concrete wall panel braced with two braces
    - one of which must include both primary and secondary bracing elements (knee, end and lateral-bracing or double knee-braces)
- propping two prefabricated concrete elements, one of which must end propping only, and the other to be continuously shored.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes and Australian Standards relevant to brace and prop of prefabricated concrete elements:
    - AS 3850.1, 2 & 3 Prefabricated concrete elements
    - environmental protection and waste disposal
- work health and safety (WHS) regulations, including:
    - Safe Work Australia ‘Guide to managing risk in construction: prefabricated concrete’ 2019
    - use of personal protective equipment (PPE)
    - fall protection
    - drop zones
    - hazardous substances
    - safe manual handling techniques
    - safe manual lifting procedures

© Commonwealth of Australia, 2026 BuildSkills Australia

- risk assessment process for lifting and securing prefabricated elements erection design documentation:
    - set-out details
    - element mass
    - rigging diagrams
    - component geometry
- the strength of concrete at the time of lifting and handling from the manufacturers' "birth certificate" contained in the erection documentation
- faulty manufacturing and concrete defects which could compromise the strength of the prefabricated elements and pose a potential safety issue for lifting and handling
- types of drawings and specifications used to interpret concrete installation requirements
- erection documentation
- prefabricated concrete brace and prop specifications, including:
    - erection sequence
    - orientation of prefabricated concrete elements
    - bracing details, including type and angle
    - requirement for erection brace and prop footings
    - levelling shims
    - drawings
- types of bracing, including:
    - single storey (drop-in) panel propping
    - double storey (spin-up) panel propping
    - panel to panel propping
    - beam propping
    - spandrels propping
    - column bracing
    - lateral bracing
    - end bracing
    - main bracing
    - knee bracing
    - deadman bracing
- types of propping, including:
    - single props (Acrow)
    - single frame

© Commonwealth of Australia, 2026 BuildSkills Australia

    - continuous frame
- types of concrete prefabricated elements, including:
    - dowell bar
    - panels
    - columns
    - beams
    - planks
    - stairs
    - barriers
- workplace requirements when working with prefabricated concrete elements:
    - cleaning up the work area
    - maintaining and storing plant, labelling, tools and equipment
    - adhering to manufacturer specifications
    - reporting problems
    - quality
- types of prefabricated concrete elements
- types of support fixings, including:
    - brace footing
    - ferrule bolts
    - brace pins
- fire rating requirements relevant to concrete prefabricated element rectification
- workplace procedures related to communication protocols
- principles of sustainability relevant to material reuse
- logical task sequencing
- types, characteristics and limitations of tools, equipment and materials required for propping and bracing prefabricated concrete elements, including:
    - hammers
    - jacks
    - podgers
    - spanners
    - spirit levels and automatic levels
    - tape measures
    - trolleys
    - wedges

© Commonwealth of Australia, 2026 BuildSkills Australia

  - wrenches
  - hammer lock
  - theodolite
  - post-installed anchors
  - bolting procedures
  - cast-in-threaded inserts for Class 4.6 bolts
- concrete supporting elements, including:
  - floor slabs
  - piers
  - footings.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to erection design documentation, materials, manufacturer specifications, plant, tools and equipment required to achieve the performance evidence.

CPCPRE2002 Remove temporary supports from prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to remove temporary bracing and propping supports from prefabricated concrete elements. It requires using appropriate tools, equipment, materials and working in a team environment to remove temporary supports.

A person who has achieved this unit of competency would be expected to follow safety regulations and relevant specifications.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Access the requirements to remove temporary supports from prefabricated concrete elements.	1.1	Check the erection design documentation, review task specifications and seek written approval of the project design engineer for the removal of temporary supports from relevant personnel.
		1.2	Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.
		1.3	Conduct working at heights risk assessment and follow appropriate WHS processes.
		1.4	Identify safety signage and barricade requirements.
		1.5	Review environmental requirements for the task in accordance with environmental plans and legislative requirements.
		1.6	Access plant, tools and equipment required to carry out task.
		1.7	Verify the location of prefabricated concrete elements in accordance with design documentation.
2.	Prepare to remove temporary supports from prefabricated concrete elements.	2.1	Erect identified safety signage and barricade requirements, and fit personal protective equipment (PPE).
		2.2	Obtain plant, tools, equipment, check for serviceability and rectify or report any faults.
		2.3	Ensure the structural work is complete and that written approval from the in-service design engineer has been

© Commonwealth of Australia, 2026 BuildSkills Australia

			obtained so that removal of temporary supports can commence.
3.	Conduct the removal of temporary supports from prefabricated concrete elements.	3.1	Review the approved removal plan and access information on job sequencing and team roles.
		3.2	Assemble and erect lifting/handling devices for movement of loads.
		3.3	Follow load slinging and shifting requirements and conduct removal activity in accordance with erection design documentation, job safety and environmental analysis (JSEA) and safe work method statement (SWMS).
		3.4	Maintain stability of the braces and props during lifting and transportation.
		3.5	Systematically remove braces and associated parts from prefabricated concrete elements and footings in accordance with the erection design documentation, the JSEA and SWMS.
		3.6	Systematically dismantle and remove props and associated parts from prefabricated concrete elements in accordance with the erection design documentation, the JSEA and SWMS.
4.	Clean up.	4.1	Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
		4.2	Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

CPCPRE2003 Grout prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to grout load bearing and non-load bearing prefabricated concrete elements according to specified requirements.

It requires using tools and equipment appropriate for grouting.

A person who has achieved this unit of competency would be expected to apply grouting techniques to load bearing and non-load bearing vertical and horizontal joints between prefabricated concrete elements.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

- CPCCWHS2001 Apply WHS requirements policies and procedures in the construction industry
- CPCCCM2012 Work safely at heights

Competency field(s)

N/A

Unit sector(s)

Prefabricated concrete

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Access requirements to grout prefabricated concrete elements.	1.1	Review and clarify grouting task and accessibility to enable the grouting to be placed in accordance with the erection prefabricated design documentation and material data sheets.
		1.2	Review erection design documentation for task specifications and check to make sure they are in accordance with regulations, standards and codes of practice.
		1.3	Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.
		1.4	Identify safety signage and barricade requirements.
		1.5	Review environmental requirements for the task in accordance with environmental plans and legislative requirements.
		1.6	Access plant, tools, equipment and materials required to carry out task.
		1.7	Locate the joints and confirm safety requirements, including working aloft, fall protection
2.	Prepare to grout prefabricated concrete elements.	2.1	Erect identified safety signage and barricade requirements, and fit personal protective equipment (PPE).
		2.2	Obtain plant, tools, equipment, check for serviceability and rectify or report any faults.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Identify materials and associated quantities/measurements required for grouting according to specifications and material data sheets.
		2.4	Review the erection design documentation and the material data sheets and check if removal of shims or levelling packers are required after initial grouting has cured.
		2.5	Review the erection design documentation and the material data sheets to verify which gaps are to be grouted.
3.	Mix dry pack or trowelable grout.	3.1	Check the erection design documentation and the material data sheets to confirm compliance with compressive and tensile strength grout requirements.
		3.2	Establish the volume of dry pack grout required and mix in accordance with specifications and material data sheet to ensure it is the desired consistency.
4.	Mix flowable grout.	4.1	Establish the volume of flowable grout required and mix in accordance with specifications and material data sheet to ensure it is the desired consistency so as to be free flowing and bleed from grout breathers and/or flow tubes.
		4.2	Check that all grout tubes, breathers and areas to be grout filled are clear and free from debris, contaminants and/or loose materials.
		4.3	Check the grout mixture for the desired consistency and flow property and adjust accordingly in accordance with the erection design documentation and the material data sheets.
5.	Prepare prefabricated concrete joint and apply grouting.	5.1	Ensure that all prefabricated concrete joint surfaces are prepared in accordance with the specifications and material data sheets.
		5.2	Ensure all surfaces are clean, sound and free from dust, oils or other contaminants.

© Commonwealth of Australia, 2026 BuildSkills Australia

		5.3	Prepare the grouting surface in accordance with the erection design documentation and the material data sheets.
		5.4	Seal perimeter of the area to be grouted in accordance with specifications.
		5.5	Apply grout in accordance with the project specifications.
		5.6	Ensure that dry pack or trowelable grout is placed in a manner that ensures consolidation by tamping/rodding to eliminate any air voids.
		5.7	Once complete, compare the actual volume of grout to the calculated volume of grout required to ensure no blockage and/or air voids have formed.
6.	Clean up.	6.1	Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
		6.2	Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPRE2003 Grout prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by:

- grouting two prefabricated concrete elements, either horizontal or vertical including:
    - grouting a 25 mm gap below a 150 mm thick prefabricated concrete element for a length of 3 m, using dry-pack or trowelable grout, and
    - grout filling 3 grout tubes within a prefabricated concrete element, each being at least 50 mm diameter x 500 mm high, using flowable grout.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes and Australian Standards relevant to grouting of prefabricated concrete elements, including:
    - environmental protection and waste disposal
    - work health and safety (WHS) regulations, including:
        - use of personal protective equipment (PPE)
        - fall protection
        - drop zones
        - hazardous substances
        - safe manual handling techniques
        - respirable crystalline silica
- erection design documentation
- material data sheets
- effects of temperature, wind and low humidity on the properties of prefabricated concrete:
    - detrimental effect of water addition to concrete properties

© Commonwealth of Australia, 2026 BuildSkills Australia

    - precautions that should be taken to minimise any potential adverse effects when finishing concrete
- health risks associated with silica dust exposure
- types of drawings and specifications used to interpret concrete installation requirements
- characteristics of grouting materials and the difference between grouting materials properties, including:
    - dry pack
    - plastic
    - trowelable
    - flowable
- grouting process, including:
    - use of anchor bolts in preformed pockets
    - formwork installation
    - pre-soaking the substrate when using cement-based grout
    - use of suitable equipment to mix the grout to dry pack or trowelable consistency
    - shrinkage
    - placement of grout
    - curing and protecting the grout to prevent loss of moisture which could lead to shrinkage and loss of strength
- grouting requirements, including:
    - use of pre-packaged, dry powder blend of cements, graded fillers and chemical additives of proprietary grout
    - mixing with clean water to required consistency according to manufacturer specifications
    - fluid consistency for application
- grouting tool types and their purpose, including:
    - wire brush
    - soft brush
    - scraper
    - sander/grinder
    - spatula
    - roller
    - putty knife
    - grouting gun

© Commonwealth of Australia, 2026 BuildSkills Australia

    - power leads
    - testing equipment (moisture meter)
- workplace requirements for grouting prefabricated concrete elements:
    - cleaning up the work area
    - maintaining and storing plant, labelling, tools and equipment
    - reporting problems
    - quality
- terminology used for grouting
- specifications used for grouting
- fire rating requirements relevant to prefabricated concrete element rectification
- workplace procedures related to communication protocols
- problems associated with the use of donuts
- principles of sustainability relevant to material reuse
- work planning and logical task sequencing
- types of concrete surface variables that reduce optimal sealant adhesion
- prefabricated concrete release agent residue
- laitance
- dirt and dust
- processes for calculating material measurements and quantities.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to erection design documentation, material data sheets, materials, manufacturer specifications, plant, tools and equipment required to achieve the performance evidence.

CPCPRE2004 Caulk prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to caulk concrete prefabricated elements according to specified requirements.

It requires using tools and equipment appropriate for caulking prefabricated concrete elements.

A person who has achieved this unit of competency would be expected to apply caulking techniques to vertical and horizontal joints between concrete prefabricated elements.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

- CPCCWHS2001 Apply WHS requirements policies and procedures in the construction industry
- CPCCCM2012 Work safely at heights

Competency field(s)

N/A

Unit sector(s)

Prefabricated concrete

© Commonwealth of Australia, 2026 BuildSkills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Access requirements to caulk prefabricated concrete elements.	1.1	Review the erection design documentation and construction drawings to clarify caulking task specifications.
		1.2	Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.
		1.3	Conduct working at heights risk assessment and follow appropriate WHS processes.
		1.4	Identify safety signage and barricade requirements.
		1.5	Review environmental requirements for the task in accordance with environmental plans and legislative requirements.
		1.6	Access tools, equipment and materials required to carry out task.
		1.7	Locate the joints and confirm safety requirements, including working aloft, fall protection, accessibility and drop zones.
2.	Prepare to caulk prefabricated concrete elements.	2.1	Erect identified safety signage and barricade requirements, and fit personal protective equipment (PPE).
		2.2	Obtain plant, tools, equipment, check for serviceability and rectify or report any faults.
		2.3	Identify materials and associated quantities/measurements required for caulking according to specifications.

© Commonwealth of Australia, 2026 BuildSkills Australia

3.	Prepare concrete prefabricated joint and apply caulking and finishing technique.	3.1	Remove any existing fill and clean joint between concrete prefabricated elements to ensure the surface area is free from laitance, dust and dirt in accordance with manufacturer technical data sheet.
		3.2	Review need for bond break tape and install backing rod using a blunt edged tool into joint between concrete prefabricated elements in accordance with manufacturer technical data sheet to control depth of injected caulking material.
		3.3	Check backing rod installation to ensure material is firmly secured within the joint, at the depth specified in the erection design documentation.
		3.4	Check backing rod installation is free of punctures and air pockets and complies with fire rating and acoustic requirements.
		3.5	Assess if priming agent is required and, if so, apply to both edges/sides of the backing rod and concrete prefabricated elements in accordance with the manufacturer technical data sheets.
		3.6	Access approved sealant and apply in a constant motion using steady pressure, filling the required void, to achieve a uniform appearance in accordance with the manufacturer technical data sheet.
		3.7	Back tool the sealant immediately after caulking, using an appropriate caulking tool in accordance with the manufacturer technical data sheet to achieve a smooth and uniform finish, ensuring both sides of the joint are flush with sealant chamfer end.
4.	Clean up.	4.1	Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
		4.2	Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Assessment Requirements for CPCPRE2004 Caulk prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by:

- caulking a 20 mm nominal gap between two prefabricated concrete elements, for at least 3 m.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes and Australian Standards relevant to joint caulking of concrete prefabricated elements, including:
    - environmental protection and waste disposal
    - work health and safety (WHS) regulations, including:
        - use of personal protective equipment (PPE) as specified on the safety data sheet (SDS)
        - risk when working at heights/on ladders
        - fall protection
        - drop zones
        - hazardous substances
        - safe manual handling techniques
        - respiratory crystalline silica
- detrimental effect of water addition to concrete properties
- precautions that should be taken to minimise any potential adverse effects when finishing concrete
- caulk manufacturer technical data sheet
- types, characteristics and purposes of construction drawings to confirm:
    - caulking thickness

CPCPRE3000 Lift and place prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to lift and place prefabricated concrete elements.

It requires using appropriate tools, equipment, materials and working in a team environment to lift and place concrete elements.

A person who has achieved this unit of competency would be expected to be able to correctly interpret and execute erection design documentation, including drawings; follow safety regulations and relevant specifications; and lead a team.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

- CPCCLRG3002 Licence to perform rigging intermediate level
- CPCCCM2012 Work safely at heights

Competency field(s)

N/A

Unit sector(s)

Prefabricated concrete

© Commonwealth of Australia, 2026 BuildSkills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Determine the requirements to lift, place and unload prefabricated concrete elements.	1.1	Determine the requirements to lift and place prefabricated concrete elements from the erection design documentation and check that they are in accordance with AS 3850 Prefabricated concrete elements.
		1.2	Review and clarify prefabricated concrete installation task.
		1.3	Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.
		1.4	Conduct working at heights risk assessment and follow appropriate WHS processes.
		1.5	Identify safety signage and barricade requirements.
		1.6	Review environmental requirements for the task in accordance with environmental plans and legislative requirements.
		1.7	Assess and apply environmental factors, including ground conditions, road permits, and public and vehicle access to carry out task.
		1.8	Hook-up concrete elements prior to unchaining from the supporting frames/trailer, ensuring other panels on the trailer are still separately restrained.
		1.9	Determine plant, tools, rigging equipment and support requirements to carry out task.
		1.10	Determine the location of prefabricated concrete element installation from set-out drawings.
2.	Comply with prefabricated concrete	2.1	Erect identified safety signage and barricade requirements, and fit personal protective equipment (PPE).

© Commonwealth of Australia, 2026 BuildSkills Australia

	element erection requirements.		
		2.2	Obtain plant, tools, equipment, check for serviceability and rectify or report any faults.
		2.3	Check all lifting equipment components to ensure that they are compatible and meet all of the requirements of AS 3850 Prefabricated concrete elements and are correctly marked with working load limit (WLL).
		2.4	Check lifting and rigging equipment to ensure that they match the specifications set out in the erection documentation and manufacturer specifications.
		2.5	Check lifting and rigging equipment to ensure they are serviceable and if not, quarantine, report faulty items and replace with new equipment.
		2.6	Check that the erection documentation and erection drawings or concrete element shop drawings, provide rigging configurations and all required information as set out in AS 3850 Prefabricated concrete elements.
		2.7	Ensure that erection documentation is on-site, available to the erectors and the requirements are fully understood.
		2.8	Check that the brace fixings installers have been trained and are experienced in the installation of the specified fixing in accordance with the requirements of AS 3850 Prefabricated concrete elements.
3.	Prepare to lift, place and support prefabricated concrete elements.	3.1	Review erection plan and determine job sequencing and team roles, including supervision and confirm with builder and crane operator that the crane set-up is clearly detailed in the erection documentation.
		3.2	Confirm load mass and load distribution of element to be lifted.
		3.3	Assemble the rigging and confirm that the rigging configuration is in accordance with the rigging diagrams set out in the erection design documentation.
		3.4	Check that the position of the temporary supports (braces and/or props) are in accordance with the erection design documentation.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.5	Position levelling shims/packers to the nominated reduced level (RL) in accordance with the erection design documentation.
		3.6	Check that any temporary supports and/or strong backs attached to the elements have been secured in accordance with the erection design documentation and safety standards.
		3.7	Attach the compatible lifting devices to the lifting inserts embedded in the prefabricated concrete element in accordance with the manufacturer specifications.
		3.8	Check that the included angle of the rigging is in accordance with the acceptable limits as set out in AS 3850 Prefabricated concrete elements.
		3.9	Ensure all personnel are clear of the drop zone.
4.	Conduct lifting and placing of prefabricated concrete elements.	4.1	Lift and place the load with the crane in accordance with job safety and environmental analysis (JSEA) and safe work method statement (SWMS).
		4.2	Coordinate with the crane driver to maintain stability of load during lifting, transportation and positioning.
		4.3	Direct load to landing position in accordance with the erection design documentation and specifications.
		4.4	Check to ensure that the temporary supports are placed and fixed in accordance with the erection design documentation and safety standards.
		4.5	Check that the installed component is both level and plumb and in accordance with the set-out drawings and erection design documentation.
		4.6	When the load has been fully secured and supported by the temporary supports, release the load from the crane, safely access lifting points and disconnect the lifting devices attached to the prefabricated concrete elements.

© Commonwealth of Australia, 2026 BuildSkills Australia

5.	Clean up.	5.1	Clear work area and dispose of, reuse or recycle materials in accordance with regulatory and workplace requirements.
		5.2	Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPRE3000 Lift and place prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by:

- determining the requirements for, and preparing for the lifting and placing of three prefabricated concrete elements in coordination with the crane driver and crane crew:
    - unloading, lifting, placing and temporarily securing one prefabricated element (that is at least 4 m x 3 m) by face-lifting the element
    - unloading, lifting and placing and temporarily securing one prefabricated element (that is at least 4 m x 3 m) by edge-lifting the element, and
    - unloading, lifting and conducting a mid-air rotation, placing and temporarily securing one prefabricated element (that is at least 7 m x 3 m).

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes of practice and Australian Standards relevant to the erection of prefabricated concrete elements, including:
    - AS 3850.1, 2 & 3 Prefabricated concrete elements re the types of rigging.
    - environmental protection and waste disposal
    - work health and safety (WHS) regulations, including:
        - Safe Work Australia ‘Guide to managing risk in construction: prefabricated concrete’ 2019
        - use of personal protective equipment (PPE)
        - risk when working at heights/on ladders
        - fall protection
        - drop zones
        - hazardous substances
        - safe manual handling techniques

© Commonwealth of Australia, 2026 BuildSkills Australia

- principles of effective team leadership
- erection design documentation
- the strength of concrete at the time of lifting and handling from the manufacturers' "birth certificate" contained in the erection documentation
- faulty manufacturing and concrete defects which could compromise the strength of the prefabricated elements and pose a potential safety issue for lifting and handling
- serviceability of temporary erection supports, including:
    - braces
    - props
    - working load limit (WLL)
- erection documentation, including:
    - manufacturer specification
    - element drawings
    - rigging configurations and drawings
    - layout drawings
    - specifications required for the lifting and placing of prefabricated concrete elements
- types of prefabricated concrete elements, including:
    - panels
    - columns
    - beams
    - planks
    - stairs
    - barriers
    - poles
    - pipes
    - box culverts
    - pits
    - wall elements
- relevant types and procedures for the temporary support of prefabricated concrete elements, including:
    - erection sequence
    - orientation of prefabricated concrete components
    - bracing details, including type and angle
    - requirement for temporary brace and prop footings

© Commonwealth of Australia, 2026 BuildSkills Australia

    - placement and positioning of propping systems
    - levelling
- crane operations, including:
    - crane standing
    - suspended slab operations
    - hoist reeving for single and multi-winch operations
    - requirements for single and multi-crane mid-air rotations
- types, characteristics and limitations of tools, equipment and materials required for rigging, lifting and placing prefabricated concrete elements, including:
    - chain slings
    - flexible steel wire rope (FSWR) slings
    - concrete lifting clutches and compatible lifting inserts
    - post-installed lifting plates
    - hooks, shackles, chain links, swivels and lifting rings
    - sheaves and pulley blocks
    - lifting beams
    - equalising beams
    - spanners
    - spirit levels and automatic levels
    - tape measures
    - wrenches
    - heights access equipment, such as elevated work platforms (EWPs)
- load slinging methods:
    - straight sling
    - adjustable sling
    - reeved sling
    - inclined sling
    - multi-point lift
    - balanced load and CoG
- load equalisation and methods
- advanced lifting techniques:
    - standard lift from a truck
    - load balancing when lifting from vehicles
    - flat lifting from supports or on ground

© Commonwealth of Australia, 2026 BuildSkills Australia

    - edge lifting and tilting by rotation about one edge
    - face lifting and tilting by rotation about one edge
    - single crane and multi-crane mid-air rotation
    - multi-crane lifts
- workplace requirements when working with prefabricated concrete components:
    - cleaning up the work area
    - maintaining and storing plant, labelling, tools and equipment
    - material reuse
    - reporting problems
    - quality
- workplace procedures related to communication protocols
- principles of sustainability relevant to material reuse
- work planning and logical task sequencing.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to erection design documentation, materials, manufacturer specifications, plant, tools and equipment required to achieve the performance evidence.

CPCPRE3001 Patch prefabricated components of concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to patch prefabricated components of concrete elements, including determining requirements, preparing patching components, conducting the patching activity and cleaning up upon completion.

It requires using appropriate tools, equipment, materials and working at heights and in a team environment to patch prefabricated components of concrete elements.

A person who has achieved this unit of competency would be expected to follow safety regulations and relevant specifications.

Completion of the general construction induction training program, specified in the Safe Work Australia model Code of Practice: Construction Work, is required by anyone carrying out construction work. Achievement of CPCWHS1001 Prepare to work safely in the construction industry meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

- CPCCWHS2001 Apply WHS requirements policies and procedures in the construction industry
- CPCCCM2012 Work safely at heights

Competency field(s)

N/A

© Commonwealth of Australia, 2026 BuildSkills Australia

Unit sector(s)

Prefabricated concrete

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Determine requirements to patch prefabricated components of concrete elements.	1.1	Review and clarify prefabricated concrete element patch task according to the approved repair procedure, project specifications and safety data sheets (SDS).
		1.2	Determine location of the components of prefabricated concrete elements from drawings and/or patching schedule.
		1.3	Determine the materials and patching procedures and check to ensure they comply with the approved repair procedure and are in accordance with relevant legislation, regulations, standards and codes of practice.
		1.4	Review work health and safety (WHS) requirements for the task in accordance with safety plans and policies.
		1.5	Conduct working at heights risk assessment and follow appropriate WHS processes.
		1.6	Assess the risk of respirable crystalline silica and follow jurisdictional regulations.
		1.7	Identify safety signage and barricade requirements.
		1.8	Review environmental requirements for the task in accordance with environmental plans and legislative requirements.
		1.9	Determine plant, tools, equipment, and materials required to carry out task.

© Commonwealth of Australia, 2026 BuildSkills Australia

2.	Prepare to patch prefabricated components of concrete elements.	2.1	Erect identified safety signage and barricade requirements, and fit personal protective equipment (PPE).
		2.2	Obtain plant, tools, equipment, check for serviceability and rectify or report any faults.
		2.3	Check panels for damage or cracks and report to appropriate person.
3.	Mix prefabricated concrete patch agents.	3.1	Access patching substance for prefabricated concrete components in accordance with safety requirements and hazardous substances code of practice.
		3.2	Measure liquid and powdered substance ratios according to manufacturer specifications and pour into mixing container without spillage.
		3.3	Check mix is lump free, impose curing times with cognisance to environmental variables and attain the required consistency in accordance with manufacturer specifications.
4.	Undertake the patching of prefabricated components of concrete elements.	4.1	Determine the position of the prefabricated components of concrete elements that require patching.
		4.2	Provide suitable access to work zone in accordance with the specifications and safety standards.
		4.3	Review the approved patching procedure and specifications and determine job sequencing and team roles.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.4	Access correct/approved patching materials and tools, including adequate quantity.
		4.5	Complete patching in accordance with the approved repair procedures, including curing as specified.
		4.6	Once complete, undertake sign-off procedures in accordance with approved workplace requirements.
5.	Clean up.	5.1	Clear work area and dispose of, re-use or recycle materials in accordance with regulatory and workplace requirements.
		5.2	Clean, check, maintain and store tools and equipment in accordance with manufacturer and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPRE3001 Patch prefabricated components of concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by patching components within a precast element, including:

- a Stitch Plate recess (200mm x 200mm x 35mm deep min.)

and any two of the following:

- a lifting insert void former (5 tonne lifting insert recess min.)
- a cast-in-insert recess (M20 ferrule nailing plate recess)
- a grouting duct (50mm diameter grout duct recess).

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes and Australian Standards relevant to concrete patching, in particular for the repair of prefabricated concrete elements:
    - environmental protection and waste disposal
    - work health and safety (WHS) regulations, including:
        - use of personal protective equipment (PPE)
        - fall protection
        - risk when working at heights/on ladders
        - drop zones
        - hazardous substances
        - safe manual handling techniques
        - safety when working at heights
        - respirable crystalline silica
    - SA HB 84-2018 Guide to Concrete Repair and Protection
- detrimental effect of water addition to concrete properties

© Commonwealth of Australia, 2026 BuildSkills Australia

- precautions that should be taken to minimise any potential adverse effects to the use of varying patching materials
- types of procedures, drawings and specifications used to interpret prefabricated concrete element patching requirements
- approved repair procedure
- material data sheets
- manufacturer specifications for patching agents
- types of prefabricated concrete element patching, including:
    - treatment of cracks
    - surface preparation for volume replacements
    - cosmetic volume replacements
    - structural volume replacements
    - priming and surface preparation
    - installation of supplementary reinforcement
    - repair layering and build-up
    - fairing coats, colour and texture matching
    - concrete sealing and methods of injection
- prefabricated component of concrete element patching considerations, including:
    - physical/permeability compatibility
    - chemical compatibility
    - electrochemical compatibility
    - dimensional stability – coefficient of thermal expansion, modulus of elasticity and drying shrinkage
- prefabricated component of concrete element patching evaluation methods, including:
    - visual inspection and recording
    - hammer sounding/rebound hammer test
    - phenolphthalein test for carbonation
    - half-cell potential measurement
    - core-cutting
    - chemical analysis of prefabricated concrete element at different depths
- workplace requirements when working with prefabricated concrete components and elements:
    - cleaning up the work area
    - maintaining and storing plant, labelling, tools and equipment
    - reporting problems

    - quality
- fire rating requirements relevant to concrete prefabricated concrete elements rectification
- workplace procedures related to communication protocols
- repair procedure approval
- principals of sustainability relevant to material reuse
- work planning and logical task sequencing
- types, characteristics and limitations of tools, equipment and materials required for the repair of prefabricated concrete elements, including:
    - stitch plate
    - ferrules
    - grout tubes
    - lifting points
    - hammers
    - jacks
    - podgers
    - spanners
    - tape measures
    - turn buckles
    - wedges
    - wrenches
    - jackhammer
    - scabbler
    - bush hammer
    - needle scaler
    - primers
    - low viscosity epoxy adhesives
    - curing compounds.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

© Commonwealth of Australia, 2026 BuildSkills Australia

Candidates must have access to documentation, approved repair procedure, manufacturer specifications, material data safety sheets, materials, plant, tools and equipment required to achieve the performance evidence.

CPCPRE4001 Inspect the erection of prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Application

This unit of competency specifies the skills and knowledge required to inspect the erection of prefabricated concrete elements on a construction site. It includes the inspection of safe work practices during the erection and temporary support of prefabricated concrete elements and the inspection of the erected elements.

It requires overseeing the use of plant, tools and equipment appropriate for the installation of prefabricated concrete elements and associated structural components, including temporary supports (propping and bracing), temporary and permanent connections, grouting, and vertical and horizontal joints.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code ofPractice: Construction Work,* is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing, legislative, regulatory or certification requirements apply to this unit of competency in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

- CPCCLRG3002 Licence to perform rigging intermediate level
- CPCCCM2012 Work safely at heights

Competency field(s)

N/A

© Commonwealth of Australia, 2026 BuildSkills Australia

Unit sector(s)

Prefabricated concrete

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1.	Prepare to inspect the erection of prefabricated concrete elements.	1.1	Check the prefabricated concrete element records to ascertain progress and prepare for the physical inspection of the prefabricated concrete elements.
		1.2	Check prefabricated concrete element records to ensure that safe systems of work and safe work practices have been enforced and followed.
		1.3	Check prefabricated concrete element manufacturing and inspection records to confirm design specifications have been followed in accordance with AS 3850 Prefabricated concrete elements during manufacture, storage, lifting and handling through to installation and final fixing.
2.	Conduct inspection of the erection of prefabricated concrete elements.	2.1	Inspect safety systems and ensure that workers and contractors are following safety requirements during the erection of the prefabricated concrete elements.
		2.2	Inspect placement and storage arrangements of prefabricated concrete elements onsite and ensure they conform to the erection documentation as detailed in AS 3850 Prefabricated concrete elements.
		2.3	Inspect processes to ensure erection areas are cleared, exclusion zones set up, barriers erected, and site personnel advised of restricted access areas prior to erection of prefabricated concrete elements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Inspect and confirm that fixings supplied for attachments to the permanent structure and for temporary supports comply with the requirements of the erection documentation approved by relevant personnel, AS 3850 Prefabricated concrete elements and the project specifications.
		2.5	Inspect and confirm that temporary supports, dowels and shims are correctly placed, and components positioned in accordance with the erection documentation as detailed in AS 3850 Prefabricated concrete elements and project specifications.
3.	Inspect prefabricated concrete element stability.	3.1	Inspect and confirm that the erected prefabricated concrete elements comply with the erection documentation approved by relevant personnel as detailed in AS 3850 Prefabricated concrete elements and engineering specifications.
		3.2	Inspect and confirm that fixtures between structural steel components and temporarily supported elements comply with the erection documentation approved by relevant personnel and as detailed in AS 3850 Prefabricated concrete elements and engineering specifications.
		3.3	Inspect and confirm that all grouting, including breathers and grout tubes, are sufficiently filled and gained suitable strength.
		3.4	Ensure that temporary supports are removed and/or moved, re-positioned or replaced only with the written approval of the project design engineer in accordance with AS 3850 Prefabricated concrete elements.
		3.5	Oversee the safe removal of temporary bracing, plant and equipment from site.
		3.6	Check if damage has occurred and if so, identify and consult the appropriate person to arrange for repair.
		3.7	Inspect the completion of the erection work and clearing and cleaning of work areas prior to other trades being permitted to enter work zones.

Assessment Requirements for CPCPRE4001 Inspect the erection of prefabricated concrete elements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 9.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by:

- inspecting three prefabricated concrete elements, including one braced prefabricated concrete wall panel with completed connections, grouting and caulking to ensure that the elements are compliant with AS 3850 Prefabricated concrete elements
- identifying reporting arrangements and rectification processes for occasions when damage has occurred, and repair is required.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance requirements of legislation, regulations, codes of practice and Australian Standards relevant to the erection of prefabricated concrete elements, including:
    - AS 3850.1, 2 & 3 Prefabricated concrete elements
    - environmental protection and waste disposal
    - work health and safety (WHS) regulations, including:
        - Safe Work Australia ‘Guide to managing risk in construction’ 2019
        - hierarchy of control
        - hazard identification
        - emergency first aid
        - emergency shutdown and stopping
        - risk when working at heights/on ladders
        - fall arrest equipment
        - scaffolding
        - access equipment
        - electrical hazards
        - overhead hazards

© Commonwealth of Australia, 2026 BuildSkills Australia

        - confined spaces
- relevant WHS policies and codes of practice, including:
    - national standard for construction work and the code of practice for construction work
    - use of personal protective equipment (PPE)
    - fall protection
    - drop zones
    - hazardous substances
    - safe manual handling techniques
    - health risks associated with silica dust exposure
- erection design documentation
- inspection site requirements:
    - administrative
    - training and risk management
    - consultation and cooperation
    - scheduling and contract adherence
    - safe work method statements (SWMS)
    - drawings and specifications for prefabricated concrete installation requirements
- effects of temperature, wind and low humidity on the properties of prefabricated concrete:
    - detrimental effect of water addition to concrete properties
    - precautions that should be taken to minimise any potential adverse effects when finishing concrete
- prefabricated concrete element records, including:
    - set-out and marking plans
    - element manufacturing records
- temporary prefabricated concrete element supports, including:
    - braces
    - props
- prefabricated concrete brace and prop specifications, including:
    - placement of props
    - erection sequence
    - orientation of prefabricated concrete components
    - bracing details, including type and angle

CPCPRF2022 Select and install roof sheeting and wall cladding

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Performance Criteria 2.2, 4.2 and 5.2.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 5 and Performance Evidence reformatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge to select and install insulation, roof battens and wall cladding involving metallic, non-metallic or other approved roof covering materials.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements
CPCPCM2055 Work safely on roofs

Competency field(s)

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify installation requirements.	1.1	Access, read and determine roof sheeting and wall cladding installation requirements from job specifications, relevant Australian Standards, codes, manufacturer's instructions and jurisdictional requirements.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements.
		1.3	Identify whether materials to be used are compatible with the surrounding environment and other materials within the installation.
		1.4	Determine material types and calculate quantities from plans and specifications.
		1.5	Identify roof insulation and wall cladding to meet thermal, acoustic, moisture and bushfire control requirements.
		1.6	Identify safety mesh requirements to support the installation requirements.
2	Receive delivery of materials.	2.1	Provide safe access for delivery vehicles and on-site workers.
		2.2	Ensure the point of delivery can support the load and assist in the unloading and transfer of materials.
		2.3	Check conformity of materials against the delivery docket and specifications and report any shortfalls or damage.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Secure materials and protect from moisture and mechanical damage.
1	Prepare for work.	3.1	Identify and check condition of plant, equipment and tools required for the installation.
		3.2	Select, fit and use appropriate personal protective equipment (PPE).
		3.3	Check fall protection system is in place and secure.
4	Install roof sheeting.	4.1	Perform installation and fix selected insulation ensuring acoustic, thermal, moisture and bushfire control.
		4.2	Measure, cut and fix roof battens for the installation at correct spacings to match plans, in accordance with jurisdictional legislation.
		4.3	Measure, cut, weather and install roof sheets using appropriate fastening spacings and methods.
		4.4	Remove swarf end of installation.
5	Install wall cladding.	5.1	Perform installation and fix selected insulation ensuring acoustic, thermal, moisture and fire control.
		5.2	Measure, cut and fasten battens at correct spacings to match plans, in accordance with jurisdictional legislation.

© Commonwealth of Australia, 2026 BuildSkills Australia

		5.3	Measure, cut and install wall cladding and flashings using appropriate fastening spacing and methods.
		5.4	Install thermal breaks as required.
	Clean up.	6.1	Remove swarf off cladding, flashings and gutter and clear any rivet stems and fasteners.
		6.2	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
		6.3	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing steel claddings to structures not less than 2 metres wide and 1.5 metres long including:
    - a flat deck roof system to a pitch ≥ 1° using concealed fixing method and installing safety wire mesh, blanket and foil
    - a pitched roof system ≥ 5° using an approved pierced fixing method and incorporating:
        - a valley, hip, ridge and barge
        - thermal insulation containing a blanket and foil for fire management
        - a non-structural cladded roof over rigid support using concealed fixing method including valley, hip, ridge, barge and roof discharge detail and moisture control pliable membrane
        - a sandwich panel roof or wall over supports using pierced fixing method with a minimum of two panels
        - a non-metallic roof sheet using pierced fixing and installing safety wire mesh

© Commonwealth of Australia, 2026 BuildSkills Australia

- wall cladding incorporating side lapping with one external and internal corner and toe mould and including:
  - an opening of 300 x 600 mm
  - pliable building membrane.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- reading and interpreting plans, including electronic plans
- current standards and codes for roof sheeting and insulation:
  - HB39 Installation Code for metal roof and wall cladding
  - National Construction Code (NCC)
  - AS 1562 Design and installation of sheet roof and wall cladding
  - AS 4200.2 Pliable building membranes and underlays - Installation
  - AS 3999 Bulk thermal insulation - Installation
- calculation of material quantities
- receival, storage, protection and checking quantities for delivery of roofing materials
- roof components:
  - insulation to meet thermal acoustic, moisture and fire control
  - safety mesh
  - rigid supports
  - roof and safety battens
  - fixings and fasteners
  - metal and non-metallic roofing sheets
  - sandwich panel
  - thermal breaks and approved sealants
- capillary action and thermal expansion
- corrosion control
- weathering
- unloading and storage of roof materials following manufacturers' instructions:
  - stacking dunnage
  - environmental protection
- conformity of materials against the delivery docket
- work health and safety (WHS) requirements:
  - working at heights

© Commonwealth of Australia, 2026 BuildSkills Australia

    - fragile materials
    - asbestos containing materials
    - selecting and installing roof sheeting and wall cladding
- overhead hazards
- installation in bushfire prone areas and requirements of The National Association of Steel-Framed Housing (NASH) Standard for construction in bushfire areas or AS 3959 *Construction of buildings in bushfire-prone areas*
- how to access relevant information, including codes and standards
- tools, materials and equipment used to select and install roof sheeting and wall cladding.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

essential outcomes.			
	Identify water storage system requirements.	1.1	Access, read and determine water storage installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
		1.2	Obtain, interpret and follow workplace, work health and safety (WHS) and environmental requirements.
		1.3	Site's annual rainfall is determined from meteorological or other relevant data.
		1.4	Roof catchment area is determined from plans or site inspection.
		1.5	Water consumption requirements for the installation are determined.
		1.6	Total water storage requirements for the installation are determined.
2	Plan and prepare for installation.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment including personal protective equipment (PPE).
3	Install storage system.	3.1	Prepare the worksite including installation of tank stand or base according to specifications, minimising damage to surrounding structures or existing services.
		3.2	Install inlet connections and relevant flushing devices to gutters, incorporating leaf catchers and downpipes into the storage tank.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Connect storage tank overflow to an approved stormwater point of discharge.
		3.4	Perform and review installation of storage tank according to job specification and current statutory and regulatory authority requirements.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.
		4.3	Documentation is completed according to workplace requirements.

Assessment Requirements for CPCPRF2023 Collect and store roof water

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Performance Criteria and Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing a water tank to collect and store water from a roof catchment area
- installing a tank stand or supporting base
- installing a storage tank of not less than 500 litres' capacity
- installing inlet connection and a first flush device connected to a gutter and incorporating a leaf catcher and downpipe to direct rainwater into the storage tank
- connecting the storage tank overflow to an approved stormwater point of discharge.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- procedures for commissioning water storage tanks for use
- characteristics of materials and components of authorised materials that comply with local authority requirements:
    - brackets and supports
    - metal guttering
    - polyvinyl chloride (PVC)
    - sealants, adhesives and fasteners
    - tank stands
- properties of water:
    - effect of gravity and atmospheric pressure

© Commonwealth of Australia, 2026 BuildSkills Australia

    - procedures for maintaining water quality
    - sources of contamination and impurities
- restriction on the use of lead within the roof catchment area
- regulations and identification requirements pertaining to collecting and storing drinking water and non-drinking water
- how to access relevant information, including codes and standards
- tools, materials and equipment used to collect and store roof water
- work health and safety (WHS) requirements for collecting and storing roof water.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPRF2024 Fabricate roof coverings for curved structures

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element and Performance Criteria 3.4.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design and fabricate curved industrial roof coverings.

It covers drawing fabrication patterns based on sketches of roof coverings, calculating curve dimensions and selecting roofing materials for new or existing, domestic or commercial structures.

The unit is suitable for people with basic skills and knowledge who undertake routine work tasks under the direction of more experienced workers.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for work.	1.1	Determine requirements roof coverings to be designed and fabricated based on plans and specifications.
		1.2	Identify and apply workplace policies and procedures, work health and safety (WHS) and environmental requirements and sustainability principles associated with fabricating roof coverings for curved structures.
		1.3	Consult with relevant personnel to plan and sequence tasks.
		1.4	Prepare work area to support efficient fabrication of roof coverings.
2	Identify installation requirements.	2.1	Select roofing material that is suitable for the fabrication process, job requirements and relevant information.
		2.2	Ascertain curvature of roof covering and use to determine the starting and finishing points of curves.
		2.3	Create design and freehand sketch of the roof covering to form the basis of fabrication patterns.
		2.4	Draw fabrication patterns based on design and freehand sketch of roof covering.
3	Fabricate covering.	3.1	Determine material list from patterns and calculations.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Determine method of fabrication, tools and machinery for fabrication to suit job requirements.
		3.3	Select and check the serviceability of the appropriate tools, equipment and PPE reporting any faults according to workplace procedures.
		3.4	Mark out and fabricate roof covering according to drawings, patterns or calculations.
		3.5	Access information to complete documentation according to workplace procedures and submit within specified timeframes.
4	Clean up.	4.1	Clear the work area, and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace policies and procedures.
		4.2	Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPRF3021 Receive roofing materials

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. Correction to prerequisite unit code from *CPCPCM2043A Carry out WHS requirements* to *CPCPCM2043 Carry out WHS requirements.*
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to coordinate the delivery, receipt and handling of roofing materials on a site.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Prepare for work.	1.1	Obtain and confirm plans and specifications by site visit.
		1.2	Adhere to work health and safety (WHS) and environmental requirements and materials handling throughout the work.
		1.3	Identify and adhere to quality assurance requirements according to workplace requirements.
		1.4	Select and check tools and equipment, including personal protective equipment (PPE) and barricades and signs, for serviceability.
		1.5	Prepare work area to support efficient receipt of roofing materials.
2	Plan delivery.	2.1	Interpret plans, specifications, material quantity details and other relevant information to determine amount and type of material to be delivered to site.
		2.2	Inspect site to determine capacity, identify risks and hazards, and identify load-handling methods and techniques.
		2.3	Obtain spot load limits on roof frame structure from structural engineer.
		2.4	Sequence loads according to job requirements and work site capacity.
		2.5	Place orders specifying items, quantities and sequence of delivery of each load.
		2.6	Plan and sequence deliveries in conjunction with others involved in or affected by their arrival.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Receive delivery of materials.	3.1	Inform employees of delivery process.
		3.2	Clear and provide access to site for crane and other support vehicles and equipment.
		3.3	Prepare delivery sites and spot load sites and material securing equipment.
		3.4	Position safety barricades and signs.
		3.5	Move loads from delivery vehicle to spot load positions or other determined site location.
		3.6	Cover and secure loads to prevent damage according to standards and manufacturer requirements, and report faults.
		3.7	Apply sustainability principles and concepts when preparing for and undertaking work process.
4	Clean up.	4.1	Remove safety barricades and signs.
		4.2	Clear work area and dispose of, re-use or recycle materials according to legislation, regulation, codes of practice and job specification.
		4.3	Clean, check, maintain and store tools and equipment according to manufacturer recommendations and workplace procedures.
		4.4	Complete documentation according to workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPRF3021 Receive roofing materials

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. Correction to prerequisite unit code from *CPCPCM2043A Carry out WHS requirements* to *CPCPCM2043 Carry out WHS requirements.*
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- assessing roofing material requirements from the plans and specifications of a roofing project
- locating, interpreting and applying relevant information, standards and specifications to receiving roofing materials
- sequencing material delivery to correspond with a planned construction project
- receiving the materials (including the location of spot points) and securing arrangements, ensuring:
    - application of sustainability principles and concepts
    - correct identification of requirements and details of their delivery
    - correct selection and use of appropriate processes, tools and equipment
    - completing all work to specification
    - compliance with safety regulations, standards and organisational quality procedures and processes
    - communicating and working effectively and safely with others.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- work health and safety (WHS), Commonwealth, state and territory legislation and regulations relating to:

CPCPRF3022 Fabricate and install roof drainage systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to fabricate and install roof drainage systems and associated rainwater components.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements
CPCPCM2055 Work safely on roofs

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
1	Identify installation	1.1 Access, read and determine roof drainage system installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

	requirements.		
		1.2	Identify and apply workplace, work health and safety (WHS) and environmental and sustainability requirements.
		1.3	Calculate material quantities from plans and specifications.
		1.4	Draw fabrication pattern based on plans and specifications as required.
		1.5	Determine type and size of gutters, downpipes and support system from plans and specifications and to comply with relevant Australian Standards.
		1.6	Confirm materials are compatible with the roof in accordance with workplace procedures.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment including personal protective equipment (PPE).
		2.3	Identify materials and equipment required to complete work tasks.
		2.4	Inspect access to roof work area and ensure fall protection equipment is in place if required.
3	Fabricate roof drainage components.	3.1	Mark out material according to pattern drawings or plans and specifications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Perform fabrication of roof drainage component in accordance with current Australian Standards and manufacturers' instructions.
		3.3	Fasten and seal the roof drainage component to comply with current Australian Standards and manufacturers' instructions if required.
4	Install roof drainage components.	4.1	Set out the location of roof drainage components according to plans and specifications.
		4.2	Install the support system to suit the roof drainage component if required.
		4.3	Install the roof drainage component in accordance with current Australian Standards and manufacturers' instructions.
5	Clean up.	5.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
		5.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPRF3022 Fabricate and install roof drainage systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by using metal to fabricate and install:

- a valley gutter
- a fascia, including one internal and one external angle, that is attached to an approved support system and a minimum of three metres in length
- an eaves gutter, including:
    - gutter support system
    - nozzle
    - stop end
    - internal and external angle
    - fall
    - overflow measure
    - expansion allowance
- a downpipe, including:
    - offset
    - spreader
    - fixings
- a box gutter, including:
    - overflow measures
    - sump or rainwater head
    - expansion allowance
    - gutter support system
    - ridged support
    - fasteners and sealants.

© Commonwealth of Australia, 2026 BuildSkills Australia

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- current standards and codes for roof drainage systems:
  - National Construction Code (NCC)
  - AS/NZS 3500 Plumbing and drainage Set
  - HB39 Installation code for metal roof and wall cladding
- types and sizes of gutters, downpipes and support system
- installation requirements:
  - appropriate falls
  - pitches
  - overflow measures
  - support and fixings
  - cross-sectional area
  - expansions allowances
  - environmental conditions
  - approved sealants and fixings
  - capillary action
  - electrolysis
- tools, materials and equipment used to fabricate and install roof drainage systems
- work health and safety (WHS) requirements for fabricating and installing roof drainage systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPRF3023 Fabricate and install external flashings

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to fabricate and install external flashings.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements
CPCPCM2055 Work safely on roofs

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
1	Prepare for work.	1.1 Access, read and determine installation requirements and methods from relevant plans, specifications, current codes, Australian Standards and manufacturers' instructions.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Check that the materials used are compatible with the surrounding environment and other materials associated within the installation.
		1.3	Identify, interpret and follow workplace policies and procedures, work health and safety (WHS), environmental and sustainability requirements associated with the fabrication and installation of external flashings.
		1.4	Determine job priorities and sequence job tasks in consultation with others onsite.
		1.5	Identify potential hazards and determine and implement control measures and personal protective equipment (PPE) requirements.
		1.6	Check fall protection system is in place and secure.
		1.7	Select and check serviceability of appropriate tools, equipment and PPE.
2	Identify installation requirements.	2.1	Locate external flashings to be installed from relevant working drawings, plans, specifications, site measurements, codes, Australian Standards and manufacturers' instructions.
		2.2	Locate and select materials required for the installation.
		2.3	Order and receive required materials and equipment according to workplace requirements.
		2.4	Check materials and equipment against the docket and order form for correct product, compliance with Australian Standards and acceptable condition and action discrepancies according to workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

3	Fabricate and install external flashings.	3.1	Fabricate external flashings ensuring compliance with relevant working drawings, plans, specifications, site measurements, codes, Australian Standards and manufacturers' instructions.
		3.2	Install external flashings using appropriate fastening and sealing methods.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPRF3023 Fabricate and install external flashings

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- measuring site for external flashings with appropriate angles, cover and cutting allowance for fabrication
- fabricating and installing roof flashings to include:
    - an apron, parapet, soaker, hanging or barge with two flashings:
        - that are a minimum length of 600 mm
        - one with an external angle and one with an internal angle
    - a roll top ridge and hip junction capping with three flashings that are each a minimum length of 600 mm
    - hip or barge termination at eave with one flashing that is a minimum length of 600 mm.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- capillary action, thermal expansion and fabrication techniques to maintain weathertightness
- corrosion control
- appropriate fastening, spacing and sealing methods to ensure compliance with relevant current codes, standards and manufacturers' instructions and jurisdictional requirements:
    - National Construction Code (NCC)
    - AS 1562.1 *Design and installation of sheet roof and wall cladding*
    - HB39 *Installation code for metal roof and wall cladding*
- materials and their application for the fabrication and installation of external flashings including suitability for water harvesting
- how to access relevant information, including codes and standards

© Commonwealth of Australia, 2026 BuildSkills Australia

- tools, materials and equipment used to fabricate and install external flashings
- work health and safety (WHS) requirements for fabricating and installing external flashings.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPRF3024 Install roof components

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 8.0. Update to Performance Criteria 3.2.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element and Performance Criteria 1.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing and sealing two of the following roof components, one to include a soaker tray and one to include a back-pan over flashing:
    - thermal vent or skylight
    - non-mechanised ventilator unit
    - manual box type louvre unit
    - continuous roof ventilator
- installing batten, trimmer or soaker support
- installing one vent that includes non-combustible mesh to be bushfire compliant.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- terminology relating to installation of roof rainwater drainage and roof components
- approved materials, their characteristics and application relating to the installation of roof components:
    - anti-capillary breaks

© Commonwealth of Australia, 2026 BuildSkills Australia

    - thermal expansion
    - flashing and capping cover
    - flashing jointing
    - sealants
    - fasteners and fixings
    - trimmer and soaker support
    - non-combustible mesh
    - tools
- electrolysis and problems associated with the use of dissimilar metals
- processes, procedures and techniques for installing roof components:
    - bushfire compliance including National Association for Steel-Framed Housing (NASH) Standard for construction in bushfire areas or AS 3959 *Construction of buildings in bushfire-prone areas*
    - adequate structural supports
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install roof components
- work health and safety (WHS) requirements for installing roof components.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

CPCPRF3025 Install roof coverings to curved roof structures

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Performance Evidence and Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to set out and install a curved roof on a roof structure. It includes drawing fabrication patterns based on sketches of roof coverings, calculating curve dimensions and sheet lengths, and selecting required roofing materials.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements
CPCPCM2055 Work safely on roofs

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify installation requirements.	1.1	Access, read and determine curved roof covering installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
		1.2	Obtain, interpret and follow workplace, work health and safety (WHS), environmental and sustainability requirements associated with selecting and receiving materials and installing curved roof structures.
2	Prepare for work.	2.1	Ascertain curvature of roof covering and use to determine the starting and finishing points of curves.
		2.2	Create design and freehand sketch of the roof covering to form the basis of fabrication patterns.
		2.3	Draw fabrication patterns based on design and freehand sketch of roof covering.
		2.4	Calculate the quantity and type of manufactured roof covering.
		2.5	Create a materials list and collect materials.
		2.6	Select and check proposed sealant, fixing, roofing and flashing materials for compatibility.
		2.7	Select appropriate tools and equipment including personal protective equipment (PPE).

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Install roof coverings.	3.1	Fix safety mesh and thermal insulation according to relevant Australian Standards, job specifications and manufacturers' instructions.
		3.2	Mark and trim sheets prior to fixing and treat cut edges according to manufacturers' instructions.
		3.3	Perform installation of roof covering according to manufacturers' instructions.
		3.4	Performance-test roof covering and make required adjustments.
		3.5	Access installation information to complete documentation according to workplace requirements.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPRF3025 Install roof coverings to curved roof structures

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Performance Evidence and Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- determining sheet length and developing a pattern or drawing for the manufacture of the curved roof components
- installing pre-curved roof covering to a bullnose or curved roof structure of a minimum eave width of three metres, incorporating:
    - one internal or one external corner
    - curved flashing or valley
- determining sheet length for a sprung-curved or sprung-arched roof
- installing pierced-fixed convex sprung-curved or sprung-arched roof covering to a curved roof structure, incorporating a minimum width of two sheets.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- processes for fixing covering to curved roof structures
- characteristics and limitations of materials for installing roof coverings to curved roofs:
    - blanket and batt types
    - curved metal roof covers of concealed or pierce-fixed types
    - metal rainwater goods

© Commonwealth of Australia, 2026 BuildSkills Australia

    - metal self-drilling and tapping screws
    - non-metallic sheets for walls and roofs
    - rivets and sealants
    - thermal insulation of reflective foil laminates
- other approved materials
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install roof coverings to curved roof structures
- work health and safety (WHS) requirements for installing roof coverings to curved roof structures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify installation requirements.	1.1	Access, read and determine installation requirements for roof sheets, wall cladding and complex flashings from job plans and specifications, codes, relevant Australian Standards, manufacturer's specifications and jurisdictional requirements.
		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
		1.3	Identify whether the materials used are compatible with the surrounding environment and other material within the installation, in accordance with workplace procedures.
		1.4	Identify roof insulation to meet energy efficient and moisture control (i.e. breathable membrane) requirements.
		1.5	Identify safety mesh requirements.
2	Prepare for work.	2.1	Determine material types and calculate quantities from job plans and specifications and in accordance with truss and/or batten spacings.
		2.2	Prepare roof and wall coverings, sealant, non-metallic materials, fixing materials, roofing and catchments to comply with job plans and specifications, relevant codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		2.3	Create a materials list and collect materials.
		2.4	Select and check serviceability of appropriate tools, plant and equipment including application of personal protective equipment (PPE).

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Check fall protection system is in place and secure.
1	Install roof sheeting.	3.1	Fix safety mesh and insulation according to job plans and specifications, relevant codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
		3.2	Mark and trim roof sheets prior to installation in accordance with truss and roof batten spacings.
		3.3	Treat cut edges of roof sheets according to manufacturer's specifications.
		3.4	Fix roof sheeting, cladding and non-metallic materials in accordance with relevant codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
4	Install wall cladding and complex roof flashings.	4.1	Measure, cut and fasten support battens, where required, in accordance with relevant codes, Australian Standards, manufacturer's specifications and jurisdictional requirements, where permitted by the regulatory authority.
		4.2	Measure, cut and weather roof sheets and wall cladding in accordance with relevant codes, Australian Standards and manufacturer's specifications.
		4.3	Install complex flashing using approved joining and fastening techniques.
		4.4	Roof sheets and wall cladding to be sealed and weatherproof according to relevant codes, Australian Standards, manufacturer's specifications and jurisdictional requirements.
5	Clean up.	5.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state and territory legislation and workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		5.2	Clean tools and equipment, check for serviceability reporting any damage, store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPRF3026 Install roof sheets, wall cladding and complex flashings

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. • Amended Performance Criteria 1.4, 2.2, 3.2, 4.1 through 4.4. • Amended Performance Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing roof sheeting, wall cladding and insulation to a steep pitch roof structure not less than two metres wide and 1.5 metres long incorporating a dorma window or portico, draining onto a flat roof.
- installing the following complex flashings to a roof structure incorporating a
    - complex junction with two barges and a rolled ridge over a dormer roof; and
    - dorma or portico valley installation penetrating and terminating through a steep pitched roof; and
    - a transition flashing to seal between the steep pitch roof and the flat roof.

Note: Jointing and sealing to be weatherproof.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Safe Work Australia - Managing the risk of falls in housing construction, Code of Practice
- sequential installation
- battens and/or safety battens required spacings for:
    - 600 mm truss spacing
    - >900 mm truss spacing
- batten fixing requirements to roof trusses

© Commonwealth of Australia, 2026 BuildSkills Australia

- roof components:
    - roof sheeting
    - wall cladding
    - flashing and capping
    - complex flashing
    - roof battens
    - fixings and fasteners
    - weathering
    - approved sealants
- installation in bushfire prone areas
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install roof sheeting, wall cladding and complex flashings
- work health and safety (WHS) requirements to install roof sheeting, wall cladding and complex flashings.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

essential outcomes.			
	Identify installation requirements.	1.1	Access, read and determine heritage roof sheeting installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
		1.2	Identify and apply workplace, work health and safety (WHS), environmental and sustainability requirements associated with selecting and receiving materials and installing heritage roofing systems.
		1.3	Check whether the materials used are compatible with the surrounding environment and other materials within the installation.
		1.4	Determine heritage material types and calculate quantities from plans and specifications.
2	Receive delivery of materials.	2.1	Provide safe access for delivery vehicles and onsite workers.
		2.2	Check conformity of materials against the delivery docket and specifications and report any shortfalls or damage.
		2.3	Secure materials and protect from moisture and mechanical damage.
3	Prepare for work.	3.1	Identify and check serviceability of plant, equipment and tools required for installation and maintenance activities.
		3.2	Select, fit and use appropriate personal protective equipment (PPE).

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Install heritage roof sheeting.	4.1	Measure, cut and fix relevant substrate or roof battens for heritage roofing installation at correct spacings to match plans and job requirements.
		4.2	Measure, cut, weather and install heritage roof sheets using appropriate fastening spacing and methods.
		4.3	Remove any swarf at end of installation.
5	Fabricate and install flashings.	5.1	Fabricate the required heritage roof flashings.
		5.2	Measure, cut, fasten and seal the flashing onto a heritage roof structure matching plans and job specifications.
6	Clean up.	6.1	Remove any swarf off cladding, flashings and gutters.
		6.2	Clear any rivet stems and fasteners.
		6.3	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
		6.4	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPRF3027 Select and install a heritage roof system

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 1.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing either copper, lead or galvanised roof cladding to a roof structure not less than 2 metres wide and 1.5 metres long:
    - installing onto appropriate substrate or hardwood timber battens to suit heritage roofing support methods
    - installing a flat or pitched roof system using an approved fixing and sealing method as per heritage requirements
    - selecting and installing 4 short sheet lengths applying laying pattern and end-lap protection
- fabricating and installing the following flashings not less than 600 mm long:
    - one hip or ridge intersection flashing using bossed lead
    - a galvanised steel intersection valley with a soldered saddle
    - a chimney flashing, including soaker tray, back gutter, and hanging and stepped flashing using either lead, zinc or galvanised steel
    - a rolled barge gable intersection with conical end capping
- fabricating and installing at least 600 mm length of galvanised OR lead box gutter including soldered stop ends, round spout, overflow and an external OR internal 45 OR 300 degree angle
- fabricating and installing a round galvanised downpipe offset with soldered joints
- fabricating and installing a bossed OR welded lead collar flashing to suit a 50 mm round penetration
- fabricating and installing a rainwater head from one of the following:

© Commonwealth of Australia, 2026 BuildSkills Australia

- zinc, copper or galvanised steel and soldered
- manufactured in lead, and welded
- manufactured galvanised
- copper finial.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- plans and specifications
- current standards and codes for roof sheeting and insulation:
  - HB39 *Installation code for metal roof and wall cladding*
  - National Construction Code (NCC)
- receiving roofing materials
- materials and details required to replace heritage roof systems
- heritage cladding profiles, coatings and material-grade roof components:
  - batten types to match existing including Oregon and hardwood
  - lead or galvanised flashing into brickwork or chimneys
  - heritage fixings, fasteners and seals
  - heritage sealing methods
  - vents, finials and decorative features
  - hand bossing
  - lead welding
  - compatibility of materials weathering
  - ventilation
- how to access relevant information, including codes and standards to select and install a heritage roof system
- tools, materials and equipment used to select and install a heritage roof system
- work health and safety (WHS) requirements for installing and maintaining a heritage roof system.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPRF4011 Design and size roof drainage systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of roof drainage systems for Class 1 and 6 buildings as defined in the National Construction Code (NCC).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
Identify roof drainage system requirements.	1.1	Access, read and determine design and size of roof drainage system from plans, job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
2	Design and size system layout.	2.1	Design and size system layout in accordance with relevant manufacturers' instructions, Australian Standards and jurisdictional requirements.
		2.2	Determine roof catchment areas and design flows from rainfall data and current Australian standards.
		2.3	Determine quantity and size of gutters, sumps, rain heads, overflows and downpipes.
		2.4	Produce final roof drainage system layout plans according to relevant drawing design standards.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPRF4011 Design and size roof drainage systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- designing, sizing and documenting the layout of a roof drainage system including overflows for two varied roof types:
    - one incorporating eaves gutter for a residential (Class 1) building, and
    - one for a commercial (Class 6) building incorporating a box gutter and sumps or rain heads.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- relevant information sources for designing and sizing roof drainage systems
- processes for calculating catchment areas and design flows
- quantity and size of gutters, sumps, rain heads and downpipes determined according to relevant Australian Standards, plans and specifications
- environmental requirements and sustainability principles including efficient design principles
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers and computer-aided design (CAD) software for documentation
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of roof drainage systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of roof drainage systems.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- planning the layout for residential sanitary plumbing systems, from given plans and specifications for a three-storey residence, including the following fixtures on each floor:
    - a bath
    - a shower
    - a water closet
    - a basin
    - a floor waste gully
    - a kitchen sink
    - a laundry tub
- fabricating and installing, from a given set of plans and job specifications, three different installations of sanitary plumbing systems across a minimum of two building levels including the following fixtures on each level:
    - a bath

© Commonwealth of Australia, 2026
BuildSkills Australia

    - a shower
    - a water closet
    - a basin
    - a floor waste gully
    - a kitchen sink
    - a laundry tub
- fabricating and installing each planned sanitary system including:
    - using two different materials
    - connecting the discharge piping at each floor
    - preparing stack connection to below ground drain
    - testing the sanitary system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- terminology relating to sanitary plumbing systems
- installation requirements of sanitary plumbing fixtures
- properties of soil and waste discharges, including temperature and corrosive discharges
- approved materials and components, their characteristics and application relating to sanitary plumbing systems
- how to access relevant information, including codes and standards
- materials and equipment used for planning the installation of residential sanitary plumbing systems
- work health and safety (WHS)requirements for planning the installation of residential sanitary plumbing systems
- principles of sanitary plumbing systems:
    - elevated pipework
    - fully vented modified
    - reduced velocity aerated stack systems
    - single stack
    - single stack modified
- tools, materials and equipment used to fabricate and install sanitary stacks.

Assessment Requirements for CPCPSN3025 Install pre-treatment facilities

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 8.0. Typographical error corrected in Knowledge Evidence.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.5. Amended Performance Criteria 3.3.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing, commissioning and testing two different pre-treatment facilities for a sanitary plumbing or drainage system.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- processes for materials handling when installing pre-treatment facilities
- process for installing pre-treatment facilities:
    - acid traps and neutralisers
    - cooling interceptors
    - grease traps
    - plaster and clay traps
    - silt interceptors
    - solid traps
    - solvent and oil interceptors
- properties and effects of prohibited waste discharges to sewers

CPCPSN3026 Install sewerage pumpsets

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 1.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

The unit specifies the skills and knowledge required to install sewerage pumps including installing and testing small bore macerators.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Identify requirements.	1.1	Access, read and determine sewerage pumpset installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
		1.2	Identify and follow workplace, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment including personal protective equipment (PPE).
3	Install sewerage pump equipment.	3.1	Set out pump according to plans, specifications, site requirements or job instructions, with consideration given to the location of existing services.
		3.2	Install pumping equipment in specified locations using required fixings.
		3.3	Connect pipework and pump controls according to plans, manufacturers' instructions and Australian Standards.
		3.4	Operate and test installed sewerage pump equipment and related pipework according to relevant Australian Standards and manufacturers' instructions.
		3.5	Complete documentation according to workplace requirements.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Assessment Requirements for CPCPSN3026 Install sewerage pumpsets

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 1.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- installing a small-bore macerator including rising main to an approved point of discharge
- using a submersible sewerage pump and correctly installing pump on an approved base
- ensuring correct operation of pump, float valves and alarm functions.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- methods of fixing techniques
- levelling and alignment processes
- performance measures for various sewerage pumpsets:
    - small bore macerators
    - submersible pumps
- properties of sewerage
- tools and equipment used to install sewerage pumpsets including lifting and load-shifting equipment
- how to access relevant information, including codes and standards
- work health and safety (WHS) requirements for installing sewerage pumpsets.

CPCPSN4011 Design and size sanitary plumbing systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to design, size and document the layout of sanitary plumbing systems for multi-floor residential buildings and commercial buildings.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1 Identify sanitary plumbing system requirements.	1.1	Access, read and determine design and size of sanitary plumbing system from plans, job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
		1.3	Determine quantity, location, fixtures and legal points of discharge.
2	Design and size system layout.	2.1	Design and size system layout in accordance with relevant manufacturers' instructions, Australian Standards and jurisdictional requirements.
		2.2	Use the proposed design to identify and specify optimal material requirements.
		2.3	Produce final system layout plans according to relevant drawing design standards.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPSN4011 Design and size sanitary plumbing systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout and schematic details for a commercial building with the design incorporating:
    - an approved sanitary plumbing system to a minimum of seven floor levels. The design must incorporate the following fixtures on each floor level:
        - a disabled bathroom including a water closet (WC) and basin
        - male toilet facilities including 3 WCs, 3 basins and 3 individual urinals or an equivalent sized urinal slab
        - female toilet facilities including 5 WCs and 3 basins
        - a shower
        - kitchen sink for tea-making purposes
    - one floor level must contain a commercial kitchen with food preparation area including at least:
        - one commercial dishwasher
        - one commercial pot wash facility
        - one commercial glasswasher
        - one bucket trap
        - one basin
    - one floor level must be below the approved point of connection (a basement) and involve an approved trade waste facility
- designing, sizing and documenting the layout and schematic details for a residential building incorporating an approved sanitary plumbing system to a minimum of six floor levels, including a basement and the following fixtures on each floor level, excluding the basement:
    - 3 baths
    - 6 showers

© Commonwealth of Australia, 2026 BuildSkills Australia

- 6 WCs
- 6 basins
- 3 kitchen sinks
- 3 dishwashers
- 3 laundry tubs
- 3 clothes washing machines.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- relevant manufacturers' instructions, Australian Standards and jurisdictional requirements
- properties of soil and waste discharges, including temperature and corrosive discharges
- approved materials and components, their characteristics and application relating to sanitary plumbing systems
- acoustic treatment of sanitary pipework
- principles of sanitary plumbing systems:
  - elevated pipework
  - fully vented modified
  - reduced velocity aerated stack systems
  - single stack
  - other approved systems
- reduced and invert levels
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers and computer-aided design (CAD) software for documentation
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design, size and document the layout of sanitary drainage systems
- work health and safety (WHS) requirements for designing, sizing and documenting the layout of sanitary drainage systems.

Assessment Conditions

Assessors must satisfy the requirements for assessors listed in the Standards for Registered Training Organisations.

CPCPWT3020 Connect and install storage tanks to a domestic water supply

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to connect and install storage tanks to a domestic water supply.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements
CPCPCM3023 Fabricate and install non-ferrous pressure piping

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Identify installation requirements.	1.1	Access, read and determine storage tank installation requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select and check serviceability of appropriate tools and equipment including personal protective equipment (PPE).
3	Install and test storage tank.	3.1	Install storage tank and associated pipework according to job instructions or plans, manufacturers' instructions, relevant Australian Standards and jurisdictional requirements.
		3.2	Pressure test and commission installed storage tank according to relevant manufacturers' instructions, Australian Standards, job specifications and jurisdictional requirements.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCPWT3020 Connect and install storage tanks to a domestic water supply

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- connecting and commissioning an approved static water storage tank to a water distribution pipe system
- meeting the specified location and installation requirements including:
    - correct air gap
    - operational water level
    - overflow requirements
    - minimum outlet size
    - tank placement
    - safe tray and safe waste.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- uses and limitations of materials involved in connecting and installing water storage tanks
- process for connecting static water storage tanks
- statutory and regulatory authority requirements:
    - correct air gap
    - operational water level
    - overflow requirements
    - minimum outlet size
    - tank placement
    - safe tray and safe waste
    - testing and commissioning
- how to access relevant information, including codes and standards

© Commonwealth of Australia, 2026 BuildSkills Australia

- tools, materials and equipment used to connect and install storage tanks to a domestic water supply
- work health and safety (WHS) requirements for connecting and installing storage tanks to a domestic water supply.

Assessment Conditions

Assessment Requirements for CPCPWT3021 Set out and install water services

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by setting out, installing and testing:

- water services from a cold drinking water supply line to a shower, basin, bath, laundry trough and kitchen sink, and include a provision for a water heater
- a heated water supply line to a kitchen sink and laundry trough
- a tempered water supply line to a basin, shower and bath
- a non-drinking water supply to a water closet and hose tap.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- processes and requirements of installing water piping systems:
    - proximity to other services
    - location of piping
    - depth of cover, bedding and backfill
    - insulation
    - protection
    - pipe support
    - identification of piping
    - sizing
- properties of water including density, viscosity, compressibility, boiling point and freezing point
- pressure and flow rates
- water supply backflow and cross-connection
- how to access relevant information, including codes and standards
- tools, materials and equipment used to set out and install water services

© Commonwealth of Australia, 2026 BuildSkills Australia

- work health and safety (WHS) requirements for setting out and installing water services.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Minor change in Performance Evidence for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and commissioning three different water heaters, including one manifold system from the following:
    - a vented storage water heater
    - an unvented storage water heater
    - a continuous flow water heater
    - a solar water heater
    - a heat pump
    - a water service consisting of a tempering valve
- adjusting water service controls and devices from the above installations to manufacturers' instructions, Australian Standards and jurisdictional requirements.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- approved materials and components of water heating systems and control devices
- processes, procedures and techniques for:
    - installing water heaters
    - using testing equipment
- properties of water, including pressure and flow rates
- water service controls and mixing devices

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by installing, commissioning and maintaining one of the following:

- a cartridge water filter
- a water cooler
- a water softener
- a water conditioner
- a reverse osmosis filter
- a sand filter.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- characteristics, applications and installation requirements:
    - cartridge filters
    - water softeners
    - water coolers
    - water conditioners
    - reverse osmosis filters
    - sand filters
- osmosis and reverse osmosis, filtration and purification
- properties of hard and soft water
- sources of contamination and impurities
- pressure and flow rates
- how to access relevant information, including codes and standards

Assessment Requirements for CPCPWT3025 Install water pumpsets

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- planning layout, installing, testing and commissioning a centrifugal pump.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- atmospheric pressure
- fixing techniques and pump connections
- process for installing and application of water pumpsets:
    - circulating
    - pressure
    - submersible
- properties of water, including pressure, flow rate and velocity
- basic pump sizing
- characteristics and use of pump controls:
    - automatic controls which may float, level or flow switches
    - manual
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install water pumpsets
- work health and safety (PPE) requirements for installing water pumpsets.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

© Commonwealth of Australia, 2026 BuildSkills Australia

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT3026 Install and fit off sanitary fixtures, water services and adjust water service controls

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to fit off and commission heated, tempered and cold-water services to sanitary fixtures. It includes installing and fitting sanitary fixtures and adjusting water service controls and devices.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.
Identify installation	1.1	Access, read and determine fixture and service installation requirements from plans, job specifications, codes, relevant Australian Standards, manufacturers' instructions and jurisdictional requirements.

	requirements.		
		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment including personal protective equipment (PPE).
3	Install and connect fixtures.	3.1	Set out, position, assemble and install sanitary fixtures in accordance with plans, job specifications, codes, relevant Australian Standards, manufacturers' instructions and jurisdictional requirements.
		3.2	Position and install flushing device.
		3.3	Flush service lines and connect to fixtures and devices.
		3.4	Test water service, fixtures and devices for correct function.
		3.5	Adjust controls and devices to operate with even and consistent flow.
		3.6	Test installed pipework in accordance with codes, relevant Australian Standards and manufacturers' instructions.
		3.7	Maintain tapset and mixer tap in accordance with relevant Australian Standards, codes and manufacturers' instructions.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.8	Complete documentation according to relevant regulatory requirements.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPWT3026 Install and fit off sanitary fixtures, water services and adjust water service controls

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- setting out, installing and fitting off sanitary fixtures and tapware from an approved point of connection to a:
    - water closet (WC)
    - shower
    - sink
    - bath
    - basin
    - dishwashing machine
    - wall hung urinal
    - non-drinking water hose tap
- installing and adjusting a programmed flushing device for a cold-water service
- adjusting and commissioning two different WC cisterns
- reseating a brass tap and installing an approved jumper valve
- removing and replacing a mixer tap cartridge with a replacement cartridge.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- properties of water, including pressure and flow rates
- approved materials, components, their characteristics and their application for installing sanitary fixtures, cold water systems and water service controls and devices
- water service controls and mixing devices
- working drawing conventions, symbols and abbreviations
- how to access relevant information, including codes and standards

© Commonwealth of Australia, 2026 BuildSkills Australia

- tools, materials and equipment used to fit off and commission heated, tempered and cold-water services to sanitary fixtures
- work health and safety (WHS) requirements for fitting off and commissioning heated, tempered and cold-water services to sanitary fixtures.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPWT3027 Install backflow prevention devices

Modification History

Release	Comments
3	This version first released with CPC Construction, Plumbing and Services Training Package Release 6.2. Correction to prerequisite unit code from *CPCPCM2043A Carry out WHS requirements* to *CPCPCM2043 Carry out WHS requirements.*
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error in Elements and Performance Criteria 1 corrected.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing three different backflow prevention devices one being low hazard rating, one being a medium hazard rating, and one being a high hazard rating from the list below, including pipework to inlet of the backflow device and ancillary equipment.
- Low hazard device defined as:
    - dual-check valve with atmospheric port
    - dual-check valve
    - dual-check valve with intermediate vent
    - atmospheric vacuum breaker
    - single check valve (testable)
    - single check detector assembly (testable).
- Medium hazard testable device defined as:
    - double-check valve assembly
    - double-check detector assembly
    - pressure type vacuum breaker.

© Commonwealth of Australia, 2026 BuildSkills Australia

- High hazard testable device defined as:
    - registered break tank
    - registered air gap
    - reduced pressure zone device
    - reduced pressure detector assembly.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- pressure and flow rates
- types of backflow prevention devices such as:
    - testable
    - non-testable
- backflow hazard ratings
- suitability of backflow prevention devices
- types of irrigation systems
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install backflow prevention devices
- work health and safety (WHS) requirements to install backflow prevention devices.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPWT3028 Install property service

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by installing a property service, involving:

- determining installation requirements
- tapping into a minimum DN100 mm water main
- connecting a property service to a water meter assembly
- testing and commissioning the installation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- water meter installation
- drilling and tapping water main
- approved property service materials
- property service installation requirements
- types of water main materials
- corrosion control
- how to access relevant information legislation, including codes and standards
- tools, materials and equipment used to install a property service
- work health and safety (WHS) requirements for installing a property service.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Changes to Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing and testing a large water service using a length of mains pressure pipe no less than four metres at a minimum of DN65, including:
    - two materials
    - a change of direction or a tee junction
    - one isolation valve.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- types of water mains
- methods of connection to water main or large water service
- installation of large water services
- corrosion control
- how to access relevant information, including codes and standards
- tools, materials and equipment used to install and test water pipe system
- work health and safety (WHS) requirements for installing and testing water pipe systems.

Assessment Conditions

Assessment Requirements for CPCPWT3030 Install home fire sprinkler systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Typographical error corrected in Element 1.1.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- installing a home fire sprinkler system in a single-storey Class 1a building using a length of piping a minimum of four metres and including:
    - a water service using a minimum of two materials
    - a control valve
    - an actuating device
    - an alarm
    - two sprinkler heads
    - one sprinkler head using cross-linked polyethylene (PEX) pipe.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- installation, testing and commissioning requirements of home fire sprinkler systems
- operation and function of purging drain valves
- processes, procedures and techniques of:
    - installing a home fire sprinkler system in a Class 1a building
    - testing and commissioning
    - actuating device
    - control valve assembly
    - alarm systems

© Commonwealth of Australia, 2026 BuildSkills Australia

    - approved piping and fittings
    - sprinkler heads
    - pressure and flow requirements
    - building classification
    - push-fit and crimp-fit PEX pipe and fitting systems
- domestic sprinkler systems as required by the Deemed-to Satisfy NCC provisions
- how to access relevant information, including codes and standards manufacturers' instructions, codes, relevant Australian Standards and jurisdictional requirements
- tools, materials and equipment used to install home fire sprinkler systems, including testing and commissioning
- work health and safety (WHS) requirements for installing, testing and commissioning home fire sprinkler systems.

Assessment Conditions

Assessment Requirements for CPCPWT4011 Design and size heated and cold-water services and systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- designing, sizing and documenting the layout and schematic details for a commercial building with the design incorporating:
    - an approved heated/tempered circulating system and cold-water system to a minimum of seven floor levels. Each floor level must include a hydrant and hose reel system
    - at least five levels with the following fixtures on each floor level:
        - a disabled bathroom incorporating a water closet (WC) and basin
        - male toilet facilities including three WCs, three basins and three individual urinals or an equivalent sized urinal slab incorporating a mains pressure flush valve system
        - female toilet facilities including five WCs and three basins
        - a shower
        - a kitchen sink for tea making purposes
    - one floor level containing a commercial kitchen with food preparation area including at least:
        - a commercial dishwasher
        - a commercial pot wash facility
        - a commercial glasswasher
        - a basin
    - one floor level containing a plant room
- designing, sizing and documenting the layout and schematic details for a residential building with the design incorporating:
    - an approved heated/tempered water system and a drinking and non-drinking cold water system to a minimum of seven floor levels, inclusive of basement, to include fixtures on each floor level (excluding the basement).
    - at least the following fixtures on each floor level:

© Commonwealth of Australia, 2026 BuildSkills Australia

- three baths
- six showers
- six WCs
- six basins
- three kitchen sinks
- three dishwashers
- three laundry tubs
- three clothes washing machines.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- process of designing, sizing and documenting the layout of heated, tempered and cold-water services and systems
- properties of water, including pressure and flow rates
- heated, tempered and cold-water services and flushing systems, and fire hydrant and hose reel systems, including non-drinking water requirements
- mains pressure flushing devices
- selection requirements for installing:
  - thermostatic mixing valves
  - backflow prevention devices
- drawing instruments and sketching techniques, including the use of conventional symbols
- use of computers for documentation
- computer-aided design software
- how to access relevant information, including codes and standards
- tools, materials and equipment used to design and size heated and cold-water services and systems
- work health and safety (WHS) requirements for designing and sizing heated and cold-water services and systems.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Assessment Requirements for CPCPWT4022 Commission and maintain backflow prevention devices

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- testing and commissioning the following backflow prevention devices:
  - three different double check valves
  - one single (testable) check valve
  - two different registered air gaps (including different orifice sizes and inlet pressures)
  - three different reduced pressure zone devices
- removing and maintaining:
  - one double check valve
  - one reduced pressure zone device.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- basic hydraulics and mechanics relevant to backflow prevention devices in water services
- process of testing, commissioning and maintaining backflow prevention devices
- properties of water, including pressure and flow rates
- types of backflow prevention devices
- electrical safety
- how to access relevant information, including codes and standards
- tools, materials and equipment used to test, commission and maintain backflow prevention devices in water services
- work health and safety (WHS) requirements for testing, commissioning and maintaining backflow prevention devices in water services.

© Commonwealth of Australia, 2026 BuildSkills Australia

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCPWT4023 Commission and maintain hot and heated water temperature control devices

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to test, commission and maintain hot and/or heated water temperature control devices, including thermostatic mixing valves in water services.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

CPCPCM2043 Carry out WHS requirements
CPCPWT3022 Install and commission water heating systems and adjust controls and devices

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Identify commissioning and maintenance requirements.	1.1	Access, read and determine device commissioning and maintenance requirements from job specifications, relevant Australian Standards, codes, manufacturers' instructions and jurisdictional requirements.
		1.2	Identify and apply workplace, work health and safety (WHS) and environmental requirements.
2	Prepare for work.	2.1	Create a materials list and collect materials.
		2.2	Select appropriate tools and equipment including personal protective equipment (PPE).
3	Commission and maintain device.	3.1	Commission and maintain device in compliance with manufacturers' instructions, relevant Australian Standards and jurisdictional requirements.
		3.2	Complete documentation according to regulatory requirements.
4	Clean up.	4.1	Clear the work area and dispose of, reuse or recycle materials in accordance with state or territory legislation and workplace requirements.
		4.2	Clean tools and equipment, check for serviceability and report any damage, and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCPWT4023 Commission and maintain hot and heated water temperature control devices

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- testing and commissioning three different types of thermostatic mixing valves in accordance with manufacturers' instructions and relevant Australian Standards
- maintaining three different types of thermostatic mixing valves in accordance with manufacturers' instructions and relevant Australian Standards.

Knowledge Evidence

To be competent in this unit, a person must demonstrate knowledge of:

- bacteria in water and its effect on health
- characteristics and applications of different types of hot and/or heated water temperature control valves and devices
- process of commissioning hot and/or heated water temperature control devices
- properties of water, including pressure and flow rates
- how to access relevant information, including codes and standards
- tools, materials and equipment used to test, commission and maintain hot and/or heated water temperature control devices, including thermostatic mixing valves in water services
- work health and safety (WHS) requirements for testing, commissioning and maintaining hot and/or heated water temperature control devices, including thermostatic mixing valves in water services.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5001 Define scope and hazard level of fire systems design projects

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to interpret briefs and specifications for fire systems design projects to define the scope and hazard level of projects.

This unit of competency supports the role of fire system designers and design consultants who need to determine the nature and purpose of a fire systems design concept.

The role may involve interaction with architects, builders, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes, including the National Construction Code (NCC).

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Interpret fire systems design concept, brief or specification.	1.1	Gather and interpret design concepts and brief, specifications and recommendations for fire systems design project.
		1.2	Determine and outline the nature, purpose and location of proposed fire systems.
2	Establish building classifications and hazard levels for fire systems design project.	2.1	Determine size and type of buildings from initial project documentation.
		2.2	Determine function and occupancy of buildings from initial project documentation.
		2.3	Obtain clarification of specific building details from client or other relevant persons within project timelines.
		2.4	Research and confirm building classifications and hazard levels according to relevant codes and standards.
3	Determine and verify the applicable legislation, codes and standards.	3.1	Determine and verify regulatory requirements applicable to the fire systems design project.
		3.2	Determine and confirm the codes and standards applicable to the location and classification of buildings included in fire systems design project.
		3.3	Determine and verify insurance requirements impacting on applicable codes and standards for fire systems project.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCSFS5001 Define scope and hazard level of fire systems design projects

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- interpreting design concepts, briefs and specifications
- establishing hazard levels and building classifications
- identifying relevant localised legislation, codes and standards for each of the following project types:
    - low-rise building
    - medium-rise building
    - high-rise building (over 25 metres)
    - building over 50 metres in height
    - building classifications in the National Construction Code (NCC)
- selecting and applying one of the following locations to the each of the above project types ensuring all locations have been used at least once:
    - local
    - involving more than one state or territory
    - international.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- fire engineering principles:
    - innovative fire systems
    - relevant computer-aided design (CAD) programs such as:
        - archi CAD
        - Revit
- relevant current legislation, codes and standards:
    - building acts

© Commonwealth of Australia, 2026 BuildSkills Australia

    - building regulations
    - infrastructure supply regulations
    - the Building Code of Australia (BCA)
    - NCC
    - jurisdictional authorities in addition to the BCA and NCC
    - Australian standards for fire systems
    - international standards for fire systems
    - other fire systems standards commonly required by building insurers
- fire systems technology and components:
    - water-based systems
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
    - water supply tanks
    - fire pump sets
    - high-pressure water mist systems
    - gas suppression
- detection and warning systems:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
- purpose and operation of fire systems:
    - layout
    - system operation
    - performance requirements
    - maintenance standards
    - system activation and operation
- passive fire safety elements:
    - identification of passive elements
    - impact of fire systems design on passive elements

© Commonwealth of Australia, 2026 BuildSkills Australia

    - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems:
    - cause and effect matrix
    - interface with other services
- construction industry terminology
- different types of buildings for fire systems design projects:
    - residential
    - commercial
    - industrial
    - mixed classification
- building classifications:
    - classifications in the BCA such as:
        - occupancy classes
        - multiple classifications
        - parts with more than one classification
    - classifications specified in relevant Australian or international standards
    - classifications relating to standards or codes applied by building insurers
- how to access relevant information, including codes and standards
- relevant work health and safety (WHS) requirements to define scope and hazard level of fire systems design projects.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSFS5002 Research and interpret detailed fire systems design project requirements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the outcomes required to obtain and process design drawings and documentation required for the preparation of detailed fire systems designs and to make an initial assessment of how the fire systems are affected by other aspects of the project. The unit also covers researching detailed fire systems compliance requirements and regulatory processes and negotiating solutions to conflicts arising between the design brief and compliance or installation requirements.

This unit of competency supports the role of fire systems designers who need to gather and process fire systems design project drawings and documentation and establish the detailed design and compliance requirements for fire systems. The role also involves assessing the impact of building construction and services installation on the detailed fire systems design and negotiating solutions to any conflicts arising.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Gather and interpret project initiation documentation.	1.1	Gather and check fire systems design briefs, plans and specifications for currency and completeness.
		1.2	Interpret the specific requirements of engineered or innovative solutions, designed and specified by fire engineers.
		1.3	Request, obtain and file relevant drawings, plans and schedules for the building project according to workplace and project procedures.
		1.4	Assess impacts of building construction and the installation of other services on fire systems design to pre-empt possible issues.
2	Research the detailed requirements of relevant legislation and regulatory processes.	2.1	Investigate legislation impacting on design compliance in different project locations and interpret and note variations in requirements.
		2.2	Interpret regulatory requirements impacting on fire systems designs and project processes and specific requirements in different states, territories and jurisdictional locations.
		2.3	Identify different climatic or locational conditions and their impact on the operational performance of the designed fire systems.
3	Research the detailed requirements of applicable codes and standards.	3.1	Gather and check applicable codes and standards for currency.
		3.2	Research and interpret requirements relating to specific fire systems in different types of buildings and situations.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Determine and apply the appropriate code requirements for the building and situation.
4	Consult and negotiate to clarify and finalise project details.	4.1	Confirm the interpretation of the required fire systems design and intended layout and interconnection with relevant personnel.
		4.2	Undertake consultation and negotiations with relevant personnel to resolve conflicts between the design brief, regulatory or insurance requirements, the requirements of building construction, and the installation of the fire systems and other services.
		4.3	Clarify aesthetic requirements relating to the location of fire system components and installation methods and negotiate solutions.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCSFS5002 Research and interpret detailed fire systems design project requirements

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- establishing the detailed design requirements of fire systems design projects, including discretionary client requirements for four different types of buildings, including:
    - commercial building
    - factory
    - residential nursing home
    - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- drawings, plans and schedules for the building project:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
    - layout
    - section
    - detail
    - project schedule or construction program
    - design brief
    - design specifications
- level of accuracy required in detailed design drawings

© Commonwealth of Australia, 2026 BuildSkills Australia

- compliance requirements for fire systems design projects in different locations
- aesthetic requirements relating to the location of fire system components
- relevant current legislation, codes and standards:
    - building Acts
    - building regulations
    - infrastructure supply regulations
    - the Building Code of Australia (BCA)
    - the Plumbing Code of Australia
    - Australian standards for fire systems
    - National Construction Code (NCC)
    - jurisdictional authorities in addition to the BCA and NCC
    - international standards for fire systems
- regulatory requirements, systems and processes:
    - mandatory requirements
    - design approval
    - fire brigade requirements
    - certification of installation
    - infrastructure supply regulations
- protection requirements for different buildings
- fire systems' technology and components:
    - water-based systems:
        - wet pipe sprinkler systems
        - deluge and drencher systems
        - dry pipe sprinkler systems
        - pre-action sprinkler systems
        - early suppression fast response (ESFR)
        - hydrants, hose reels and monitors
        - water supply tanks
        - fire pump sets
        - high pressure water mist systems
        - gas suppression systems
    - detection and warning systems:
        - occupant warning systems

    - impact of fire systems design on passive elements
    - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems:
    - cause and effect matrix
    - interface with other services
- construction industry terminology
- roles and responsibilities of relevant building project personnel:
    - builders
    - consultants
    - trades
    - commissioning personnel
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods:
    - access requirements
    - work health and safety (WHS) requirements
- fluid mechanics and hydraulics relating to
    - water supply
    - pressure
    - pump selection

© Commonwealth of Australia, 2026 BuildSkills Australia

    - tank selection
    - pressure vessels
    - pipe range
- sustainability requirements and ratings:
    - energy conservation
    - water conservation
- types of fire systems for projects and classifications, including:
    - low-rise buildings
    - processing building applications
    - warehouse buildings under 13.7 m high
    - warehouse buildings over 13.7 m high
    - medium-rise buildings
    - high-rise buildings (over 25 metres)
    - buildings over 50 metres in height
- types of buildings and situations:
    - different types of buildings:
        - residential
        - commercial
        - industrial
        - warehouse
        - mixed classification
    - buildings in different locations:
        - local
        - involving more than one state or territory
    - classifications of buildings in the BCA:
        - occupancy classes
        - multiple classifications
        - parts with more than one classification
        - fire hazard properties of materials and smoke growth rate
    - classifications of buildings specified in relevant Australian or international standards
    - classifications of buildings relating to standards or codes applied by building insurers.

CPCSFS5003 Develop plans and methodology for fire systems design projects

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the outcomes required to ensure a quality result for the detailed design of fire systems through work organisation, planning and methodology.

This unit of competency supports the role of fire systems designers who manage their own work and take responsibility for ensuring that detailed designs of fire systems are produced within required timeframes and to the standards required for approval of such designs.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Identify and apply procedures for initiating fire systems design projects.	1.1	Identify various project file-sharing and communication systems, tools and methods to ensure efficient and effective operation.
		1.2	Use project and file-naming systems according to workplace and project requirements.
		1.3	Identify efficient and effective document filing and storage systems according to workplace and project requirements.
		1.4	Identify systems for efficient tracking and filing of project communications according to workplace and project requirements.
		1.5	Identify a system for ensuring relevant project documentation is requested, received, named and filed according to workplace procedures.
2	Develop a plan for setting up fire systems design projects.	2.1	Develop plan for setting up correct computer-aided design (CAD) backgrounds according to workplace and project requirements.
		2.2	Develop systematic processes for identifying and importing the correct layer drawings into CAD according to workplace and project requirements.
3	Develop a plan and methodology for designing fire systems.	3.1	Develop actions and timeframes in the design process for fire systems according to workplace, project requirements, quality assurance and other regulatory approval, as required.
		3.2	Determine stages where regulatory or other approval is required for the design and establish procedures to ensure that these are obtained.
		3.3	Identify applicable fire codes, standards and data sheets from relevant authorities and underwriters.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Develop a plan and methodology for finalising fire systems design projects.	4.1	Establish actions and timeframes in the fabrication and installation support process according to workplace and project requirements.
		4.2	Establish final drawing and documentation requirements according to workplace and project requirements.
		4.3	Establish timelines for long lead items such as fire tanks, fire pumps and specialist overseas equipment.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

CPCSFS5005 Research and evaluate fire system technologies and components

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the outcomes required to research, evaluate and select existing, new and incoming technologies and components for fire system detection and suppression systems. The unit also involves developing a broad understanding of the range of products available and their application, operation, performance and interaction.

This unit of competency supports the work of fire systems' designers and certifiers who need to:

- understand the characteristics, operation and interaction of fire system technologies and components
- select and assess fire system technologies and components.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Research and evaluate fire suppression systems.	1.1	Research and identify the range of technologies and components for fire suppression systems.
		1.2	Assess the suitability of fire suppression systems to different types of buildings and situations with reference to relevant legislation, codes and standards and client requirements.
		1.3	Determine the performance characteristics and limitations of fire suppression systems.
		1.4	Analyse fire suppression system failures and propose appropriate design solutions.
		1.5	Select suitable and cost-effective fire suppression system technologies and components for buildings, situations and climatic conditions.
2	Research and evaluate fire detection and occupant warning systems.	2.1	Identify technologies and components available for fire detection and occupant warning systems.
		2.2	Assess the suitability of fire detection and occupant warning systems to different types of buildings and situations with reference to relevant legislation, codes and standards.
		2.3	Determine the performance characteristics and limitations of fire detection and occupant warning systems.
		2.4	Select suitable and cost-effective fire detection and occupant warning system technologies and components for buildings and situations.
3	Analyse and specify the interaction of fire systems.	3.1	Analyse and specify the required interactions for effective operation of fire systems in different types of buildings and situations.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Identify and examine the interfaces that affect interactions between fire systems in different types of buildings and situations.
		3.3	Select suitable fire detection and suppression systems for buildings and situations and specify the interactions and interfaces required for effective performance.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCSFS5005 Research and evaluate fire system technologies and components

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- researching, evaluating and selecting fire detection and suppression systems for four types of fire systems design applications, including:
    - sprinklers
    - water mist
    - deluge/pre-action
    - gas suppression.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- drawings, plans, reports and specifications
- manufacturer specifications and technical performance data for fire detection and suppression technologies and components
- applications for different fire systems design projects:
    - low-rise buildings
    - processing building applications
    - warehouse buildings under 13.7 m high
    - warehouse buildings over 13.7 m high
    - medium-rise buildings
    - high-rise buildings (over 25 metres)
    - buildings over 50 metres in height
- interactions and interfaces between fire detection and suppression systems
- suitability of fire detection and suppression systems technology and components
- performance and cost-effectiveness of different technologies and components

© Commonwealth of Australia, 2026 BuildSkills Australia

- workplace design tools and processes
- computer software functions and operation:
    - word processing
    - spreadsheet
    - email

    - energy conservation
    - water conservation
- electrical and electronics theory:
    - units used to measure current (alternating current (AC) and direct current (DC)), power, capacitance, inductance and sound attenuation
    - definition of voltage ratings and requirements applicable to fire detection and warning systems as defined in communication and electrical safety regulations, including extra-low voltage (ELV), low voltage (LV) and hazardous voltages
    - basic operation of common electronic and electrical components used in fire detection and warning systems including:
        - basic operation of communication protocols on addressable systems
        - peripheral devices (printers)
        - interfaces to other communication systems to high level or low level
- communication technologies:
    - data transfer
    - networking
    - communication protocols
    - radio frequency technologies.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Link

Companion volumes, including implementation guides, are found on the national training register - https://training.gov.au/training/details/CPC.

CPCSFS5006 Create detailed designs for fire sprinkler systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the outcomes required to obtain, process and set up drawings for the detailed design of fire sprinkler systems. The unit also involves assessing and selecting component requirements, setting out the locations of components, and creating final notated drawings.

This unit of competency supports the role of fire systems designers with responsibility for creating detailed designs for sprinkler fire suppression systems.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Set up fire systems design drawings.	1.1	Request, receive, name and file relevant project drawings and documentation according to workplace procedures.
		1.2	Clean drawings to leave minimal essential information.
		1.3	Import layers showing designs of other services into clean architectural or structural drawings.
		1.4	Add details from drawings of the floor of the level above, if these affect the design.
		1.5	Name, file and back up the detailed design drawings according to workplace procedures.
2	Calculate preliminary data.	2.1	Develop floor area calculations to determine the number of sprinkler zones.
		2.2	Determine the sprinkler occupancy classifications, minimum sprinkler flow and initial fire flow demands based on classifications for the site.
		2.3	Determine and analyse the town main water capabilities for the fire services serving the site to identify if fire pumps and fire tanks are required.
		2.4	Calculate the proposed fire pump flow and pressure and fire tank sizes.
		2.5	Prepare a comparison list of equipment which can be used across the site.
3	Lay out the fire sprinkler system design.	3.1	Determine and notate the exact location of sprinklers on the drawing according to relevant codes and standards.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Determine and notate the most efficient and workable layout and location of sprinkler system components on the drawing according to regulatory requirements, standards and regulations.
		3.3	Design pipework layout and coordinate with building elements and services and identify pipework sizes and elevations across the systems.
		3.4	Calculate, check and notate dimensions on the drawing according to regulatory requirements, standards and regulations.
		3.5	Undertake hydraulic analysis of the fire systems using both hand calculation procedures and computer modelling programs.
		3.6	Validate fire pump and tank sizes with initial estimates.
		3.7	Develop detailed designs of pipework for complicated interaction of pipework and building elements and services.
		3.8	Develop detailed designs of pipework configurations for fire tanks, fire pumps, brigade booster and suction points and alarm valves, including manifold systems and flow switch arrangements.
4	Submit drawings for approval and finalise design process.	4.1	Submit fire sprinkler system design drawings to relevant personnel within the scheduled timeframe.
		4.2	Make or negotiate required amendments to design drawings as required.
		4.3	Process and distribute final approved design drawings according to project and regulatory requirements, standards and regulations.
		4.4	Select fittings and components according to project and regulatory requirements, standards and regulations.

CPCSFS5007 Create detailed designs for hydrant and hose reel systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to obtain, process and set up drawings for the detailed design of hydrant and hose reel systems for low to high-rise buildings over 25 metres and 45 metres in height.

This unit of competency supports the role of fire systems designers and hydraulic design consultants who manage their own work and take responsibility for assessing and selecting component requirements, setting out the locations of components and creating final notated drawings for hydrant and hose reel systems.

The role may involve interaction with fire engineers, architects, contractors, suppliers, clients and relevant planning authorities and requires a sound understanding of applicable legislation, standards and codes, including the National Construction Code (NCC).

This unit does not apply to fire systems for special hazard locations.

Licensing, legislative, regulatory or certification requirements may apply to this unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for CPCSFS5007 Create detailed designs for hydrant and hose reel systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- producing fully compliant designs for hydrant and hose reel systems for the following sites:
    - low-rise building
    - medium-rise building
    - high-rise building (over 25 metres)
    - building over 45 metres in height
    - building classifications in the National Construction Code (NCC).
- processing design drawings using parametric modelling software and workplace procedures.

Designs for all the above include:

- fire engineer's designs for alternative solutions
- technical issues impacting on hydrant and hose reel system designs
- relevant regulatory approval and fire systems design certification processes.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science:
    - fire behaviour and dynamics
    - impact of fire on structures and materials
    - products of combustion

CPCSFS5009 Create detailed designs for fire systems' water supplies

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the outcomes required to obtain, process and set up drawings for the detailed design of water supplies for fire systems. The unit also involves assessing and selecting component requirements, setting out the locations of components and creating final notated drawings.

This unit of competency supports the role of fire systems designers with responsibility for creating detailed designs for water supplies for fire systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Unit sector(s)

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Confirm water-based fire systems designs.	1.1	Request, receive, name and file relevant project drawings and documentation according to workplace procedures.
		1.2	Confirm details and dimensions and to assess water supply installation risks and constraints.
		1.3	Notate the exact location of fire system components on detailed design drawings according to relevant codes and standards.
		1.4	Name, file and back up the detailed design drawings according to workplace procedures.
2	Calculate pipe sizes and pump and tank requirements.	2.1	Determine the initial fire flow demands for the site based on the occupancy classifications.
		2.2	Analyse water flow and pressure test results to establish the minimum levels of available supply in accordance with local jurisdictional requirements.
		2.3	Determine and analyse the town main water capabilities for the fire services serving the site to identify if fire pumps and fire tanks are required.
		2.4	Consider options for cost-effective and efficient solutions with reference to manufacturer specifications for the performance of components and according to workplace policies.
3	Lay out the water supply design.	3.1	Identify methodologies used in making town main connections.
		3.2	Determine and notate the most efficient and workable layout and location of water supply components on the drawings according to workplace procedures.
		3.3	Calculate, check and notate dimensions on the drawings according to relevant codes and standards and component manufacturer's recommendations and workplace procedures.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.4	Determine the locations of backflow prevention devices and their accessibility.
		3.5	Review proposed locations of booster connections with local fire authority.
4	Submit drawings for approval and finalise design process.	4.1	Submit water supply design drawings to relevant personnel within the scheduled timeframe.
		4.2	Make or negotiate required amendments to design drawings as required.
		4.3	Process and distribute final approved design drawings according to relevant codes and standards and component manufacturer's recommendations workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- effectively applying principles relating to the design of water supplies for fire systems for four types of buildings including a:
    - commercial building
    - factory
    - residential nursing home
    - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- project drawings and documentation:
    - proposed water-based fire system designs
    - mechanical
    - electrical
    - hydraulic
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- computer software functions and operation:
    - word processing
    - spreadsheet
    - email
    - internet
- relevant current legislation, codes and standards:

CPCSFS5010 Provide documentation and support for fabrication of fire sprinkler systems

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the outcomes required to assess issues relating to on-site installation of pipework for sprinkler systems. The unit also involves producing specifications and supporting documentation for the cost-effective fabrication of manageable pipework sections.

This unit of competency supports the role of fire systems designers with responsibility for creating specifications and drawings for the fabrication of pipework sections for fire sprinkler systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Determine the impact on fabrication plans of installation risks and constraints.	1.1	Identify on-site work health and safety (WHS) risks relating to the installation of sprinkler systems.
		1.2	Identify constraints relating to access to on-site installation locations for sprinkler system pipes and components.
		1.3	Consider impact of installation risks and constraints on fabrication plans for fire sprinkler system pipes and components and determine cost-effective and manageable solutions.
2	Plan and specify pipes, fittings and components.	2.1	Obtain and analyse current accurate drawings and documentation, and take measurements on-site during construction if possible, to confirm the accuracy of building dimensions.
		2.2	Check and confirm the dimensions and design drawing locations of the selected fittings and components.
		2.3	Plan and specify fittings and components for ease and safety of installation and to provide cost-effective solutions.
		2.4	Calculate, specify and number pipe lengths on relevant drawings.
		2.5	Review and apply efficiency and cost effectiveness of relevant pipe materials, pipe fitting methodologies for design.
3	Produce fabrication documentation.	3.1	Confirm and specify appropriate pipe materials and features.
		3.2	Consult supplier as necessary to discuss and negotiate efficient and cost-effective pipe fabrication options.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Number and detail individual pipe specifications on fabrication lists.
		3.4	Supply drawings to support fabrication specifications, as required.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

CPCSFS5011 Provide design documentation and review and support fire system installation processes

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the outcomes required to develop detailed drawings and notes for the fire systems installation team from approved detailed fire systems design drawings. The unit also covers the outcomes required to assist and support the installation team when changes to detailed designs may be required owing to contingencies encountered on-site.

This unit of competency supports the role of fire systems designers whose work involves the preparation of detailed documentation to support the installation of fire systems and the provision of troubleshooting advice and drawings for solutions to on-site issues.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.			
	Produce installation drawings and documentation.	1.1	Check approved detailed design drawings of fire systems to ensure that installation implications of required changes have been addressed.
		1.2	Use approved detailed design drawings of fire systems to create installation drawings.
		1.3	Use detailed design specifications of fire systems to notate the installation drawings with the location of specific components of the fire system.
2	Review drawings prior to installation.	2.1	Monitor and record ongoing changes to detailed structural or other services' design drawings regularly.
		2.2	Consider the impact of structural and other services design changes on fire systems design and installation and propose and negotiate appropriate solutions with relevant project team members, as required.
		2.3	Amend fire systems installation drawings and documentation to incorporate accepted solutions according to workplace and project procedures.
3	Resolve on-site installation problems.	3.1	Record, prioritise and consider on-site installation issues in line with project timeframes.
		3.2	Propose and negotiate appropriate solutions with relevant project team members, as required.
		3.3	Amend fire systems installation drawings and documentation to incorporate accepted solutions as required.
		3.4	Communicate solutions to on-site fire system installation team members and supply amended documentation according to workplace and project procedures.

CPCSFS5013 Support commissioning processes and finalise fire systems design projects

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the outcomes required to confirm the post-installation details of fire systems and produce amended drawings and documentation, and to prepare detailed commissioning procedures and specifications. The unit also covers reviewing issues and solutions arising during fire systems design projects and making subsequent improvements to fire systems design project processes.

This unit of competency supports the role of fire systems designers with responsibility for producing 'as built' drawings, block plans, tactical fire plans, and operations and maintenance manuals for fire systems.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

	Produce accurate final drawings for fire systems.	1.1	Document progressive changes to fire systems design drawings resulting from construction phase issues according to workplace and project procedures.
		1.2	Confirm and record final component sizes, locations and building dimensions.
		1.3	Prepare, name, notate, file and submit accurate 'as built' drawings according to workplace procedures and project requirements.
		1.4	Produce appropriate block plans and tactical fire plans as required.
2	Prepare commissioning details, and operation and maintenance manuals for fire systems.	2.1	Prepare system performance requirements and commissioning procedures and specifications according to relevant codes and standards and component manufacturer's recommendations and workplace and project requirements.
		2.2	Prepare standard operating procedures (SOPs) for the fire system based on relevant codes and standards and component manufacturer's recommendations.
		2.3	Produce regular maintenance procedures for the fire system based on codes and standards component manufacturer's recommendations and relevant regulatory requirements.
		2.4	Install operation and maintenance signage as required, according to relevant workplace, project and regulatory requirements codes and standards.
3	Review and evaluate the fire systems design process.	3.1	Review and process project documentation including issues and their solutions.
		3.2	Discuss project issues and solutions with relevant workplace personnel and explore process improvement strategies.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Amend project planning, methodologies and quality assurance systems to incorporate agreed process improvement strategies.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCSFS5013 Support commissioning processes and finalise fire systems design projects

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing four final fire systems design project documentation, including drawings, specifications and commissioning support documentation, including for a:
    - commercial building
    - factory
    - residential nursing home
    - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes
- drawings, plans, reports and specifications
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- relevant regulatory approval and fire systems design certification processes
- relevant current legislation, codes and standards:
    - building Acts
    - building regulations
    - infrastructure supply regulations
    - the Building Code of Australia (BCA)
    - National Construction Code (NCC)
    - Australian standards for fire systems
    - international standards for fire systems
    - jurisdictional authorities in addition to the BCA and NCC

© Commonwealth of Australia, 2026 BuildSkills Australia

    - other fire system standards commonly required by building insurers
- protection requirements for different buildings including low-rise, medium-rise, high-rise (over 25 metres) and buildings over 45 metres in height
- fire systems' technology and components:
    - water-based systems:
        - wet pipe sprinkler systems
        - deluge and drencher systems
        - dry pipe sprinkler systems
        - pre-action sprinkler systems
        - early suppression fast response (ESFR)
        - water spray systems
        - water mist systems
    - gaseous suppression systems
    - wet chemical suppression systems
    - foam suppression systems
    - hydrants, hose reels and monitors
    - water supply tanks
    - fire pump sets
    - detection and warning systems:
        - occupant warning systems
        - emergency warning and intercommunications systems (EWIS)
        - fire detection and alarm systems
        - smoke control systems
        - emergency lighting systems
- purpose and operation of fire systems:
    - layout
    - special products and hazards
    - system operation
    - performance requirements:
        - for water-based systems:
            - speed of response
            - time taken to reach full-flow conditions
            - area of coverage
            - nozzle locations

© Commonwealth of Australia, 2026 BuildSkills Australia

- droplet profile and characteristics
- duration of response

- for detection and warning systems:
  - correct sensors
  - sensitivity to fire size
  - speed of detection and response
  - fire location coverage

- maintenance standards
- system activation and operation

- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- maintenance procedures:
  - site-specific maintenance instructions
  - manufacturer's specific maintenance instructions
  - local government regulations
  - Australian standards, such as:
    - AS 1851 Routine service of fire protection systems and equipment
  - safety data sheets (SDS).
- interconnection of fire systems:
  - cause and effect matrix
  - interface with other services
- instruments used in commissioning and measuring fire system performance:
  - commissioning procedures and specifications:
    - procedures listed in Australian standards, such as:
      - AS 2118.1 Automatic fire sprinkler systems - General Systems
      - AS 2118.4 Automatic fire sprinkler systems - Sprinkler protection for accommodation buildings not exceeding for storeys in height
      - AS 2118.6 Automatic fire sprinkler systems - Combined sprinkler and hydrant systems in multi-storey buildings

CPCSFS5014 Conduct annual fire systems inspections

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the outcomes required to assess all types of fire systems in all types of buildings to ensure that the systems comply with applicable legislation and will perform in the event of a fire.

This unit of competency supports the role of annual inspectors of fire systems with responsibility for inspecting existing fire systems; assessing compliance with the relevant applicable legislation, codes and standards; and advising whether they continue to perform to current fire safety standards.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Prepare for annual fire systems inspections.	1.1	Schedule annual fire systems inspections in a timely manner and in consultation with relevant stakeholders, as required.
		1.2	Obtain and review current building plans and identify and note modifications made to the building since the last inspection.
		1.3	Review and use information regarding the current and historical legislation, codes and standards and fire engineered solutions applicable to fire systems to inform inspection planning.
		1.4	Review and use information regarding the validity of fire systems' compliance documentation to inform inspection planning.
		1.5	Plan fire systems certification inspections to ensure efficient and comprehensive implementation.
2	Conduct annual fire systems inspections.	2.1	Inspect and assess each aspect of each fire system for compliance with the applicable current and historical legislation, codes, standards, regulatory requirements and document findings.
		2.2	Assess and record the current performance level of each fire system.
3	Produce annual fire systems inspection reports and communicate findings.	3.1	Analyse the findings of inspections and identify and record works required to address shortfalls in fire systems' compliance or performance according to regulatory requirements.
		3.2	Produce and process reports according to regulatory requirements.
		3.3	Communicate the findings of the report to relevant stakeholders according to regulatory requirements, and carefully explain works required to rectify fire systems.

Assessment Requirements for CPCSFS5014 Conduct annual fire systems inspections

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria for this unit by:

- preparing for, conducting and reporting on annual fire systems inspections for four types of fire systems in buildings with different construction and modification histories, including:
    - commercial building
    - factory
    - residential nursing home
    - high-rise building.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- auditing processes and protocols:
    - compliance documentation:
        - fire safety schedules
        - inspection and testing logbooks
        - maintenance, repair and replacement documentation
    - roles and responsibilities of relevant professional personnel:
        - fire engineer
        - fire brigade personnel
        - building surveyor or certifier
        - persons with regulatory authority
        - architect

CPCSFS5015 Prepare documentation for annual fire systems inspections

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency supports annual inspections of fire systems. The unit of competency specifies the outcomes required to research the applicable regulatory requirements for existing fire systems in all types of buildings and to assess compliance documentation to determine whether requirements are met.

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Determine the installation dates for fire systems.	1.1	Access, interpret and document the construction dates and modification histories of buildings to be inspected.
		1.2	Identify the types of fire systems installed in buildings to be inspected from compliance documentation.
		1.3	Identify the installation dates for individual fire systems in buildings to be inspected.
2	Research and interpret the applicable codes and standards.	2.1	Research and identify the current and historical legislation, codes and standards applicable to individual fire systems at the time of installation, or modification of the building.
		2.2	Research and interpret the detailed requirements of applicable historical legislation, codes and standards and fire engineered solutions.
		2.3	Document and report any disparity between historical legislation, codes and standards applicable and fire engineered solutions applicable at the installation or modification date and current fire safety requirements to relevant stakeholders.
		2.4	Prepare checklists and notes on applicable current and historical codes and standards to assist the annual inspection process.
3	Assess and report on fire system compliance documentation.	3.1	Review and check schedules for the inspection, testing and maintenance of fire safety systems for compliance with current regulatory requirements.
		3.2	Review and check documentation for regular fire systems inspection and testing activities for currency and completeness.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Identify and note information regarding non-compliance issues and defects.
		3.4	Request and review documentary evidence of resolution of non-compliance issues and defects if available.
		3.5	Prepare checklists and notes on non-compliance issues and defects identified from compliance documentation to assist the annual inspection process.
		3.6	Prepare and process reports detailing anomalies and omissions in fire systems' compliance documentation according to workplace and regulatory requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCSFS5015 Prepare documentation for annual fire systems inspections

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- preparing relevant documentation of annual fire systems inspections that apply to existing fire systems in a range of buildings, including:
    - commercial building
    - factory
    - residential nursing home
    - high-rise building.

The activity should include preparation of fire safety schedules and inspection, testing and maintenance documentation.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- compliance documentation:
    - fire safety schedules
    - inspection and testing logbooks
    - maintenance, repair and replacement documentation
- computer software functions and operation, including relevant proprietary software
- reading and interpreting drawings and reports
- relevant current and historical legislation, codes and standards:

CPCSFS5017 Create detailed designs for foam suppression systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Application reformatted and typographical error in Knowledge Evidence corrected.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to obtain, process and set up drawings for the detailed design of foam suppression systems. The unit also involves assessing and selecting component requirements, setting out the locations of components, and creating final notated drawings.

This unit of competency supports the role of fire systems designers with responsibility for creating detailed designs for sprinkler fire suppression systems.

Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia (BCA) or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Plumbing and Fire Services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Set up fire systems design drawings.	1.1	Request, receive, name and file relevant project drawings and documentation according to workplace procedures.
		1.2	Clean drawings to leave minimal essential information.
		1.3	Import layers showing designs of other services into clean architectural or structural drawings.
		1.4	Add details from drawings of the floor of the level above, if these affect the design.
		1.5	Name, file and back up the detailed design drawings according to workplace procedures.
2	Perform preliminary data and calculations.	2.1	Develop floor area calculations to determine the number of sprinklers zones and required fire hydrant to be considered flowing.
		2.2	Determine the town main capabilities for the fire services serving the site.
		2.3	Determine the types of foams applicable for the site.
		2.4	Determine the minimum hydrant flow for the site.
		2.5	Determine the initial fire flow demands for the site based on the occupancy classifications.
		2.6	Analyse the town main water supply capabilities to determine if fire pumps and fire tanks are required.
		2.7	Calculate the proposed fire pump flows and pressure and fire tanks sizes.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.8	Prepare dimensional drawings for equipment spatial allocations.
		2.9	Sight fire brigade response point, boosters and tank suction points with stakeholders.
		2.10	Prepare a comparison list of equipment which can be used across the site.
3	Lay out the foam suppression system design.	3.1	Confirm dimensions and assess installation risks and constraints.
		3.2	Determine and notate the exact location of foam nozzles on the drawing according to relevant codes and standards.
		3.3	Determine and notate the most efficient and workable layout and location of sprinkler system components on the drawing according to workplace procedures.
		3.4	Design pipework layout and coordinate with building elements and services and identify pipework sizes and elevations across the system(s).
		3.5	Calculate, check and notate dimensions on the drawing according to workplace procedures.
		3.6	Undertake hydraulic analysis of the fire systems using both hand calculation procedures and computer modelling programs.
		3.7	Validate fire pump and tanks sizes versus initial estimates.
		3.8	Develop detail designs of pipework for complicated interaction of pipework and building elements and services.
		3.9	Develop detail designs of pipework configurations for fire tanks, fire pumps, brigade booster and suction points, alarm valves including manifold systems, and flow switch arrangements.
		3.10	Develop detail designs of pipework configurations for the foam tanks, foam pumps, injections devices and alarm valves.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Submit drawings for approval and finalise design process.	4.1	Submit foam suppression system design drawings to relevant personnel within the scheduled timeframe.
		4.2	Make or negotiate required amendments to design drawings as required.
		4.3	Process and distribute final approved design drawings according to project and workplace requirements.
		4.4	Select and order fittings and components according to project and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCSFS5017 Create detailed designs for foam suppression systems

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Application reformatted and typographical error in Knowledge Evidence corrected.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- effectively designing three different foam suppression systems for three different building types.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace design tools and processes:
    - effective and workable layout and location:
        - selection of cost-effective components and materials
        - consideration of:
            - penetrations
            - conflict with other services
            - work health and safety risks
            - access constraints
            - installation problems
            - aesthetic requirements
            - efficiencies to facilitate work on site and reduce labour costing
    - negotiations regarding amendments:
        - non-compliance with applicable legislation, codes and standards

© Commonwealth of Australia, 2026 BuildSkills Australia

        - impact on installation risks and constraints
        - impact on cost-effectiveness
- relevant regulatory approval and fire systems design certification processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- foam suppression systems using a range of water supplies, including:
    - town main
    - town main and elevated tank
    - town main with a 100% capacity tank
    - town main with a partial capacity tank
    - tank supply with multiple tank
    - water supply using dams, rivers and sea water

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

CPCSHP3001 Fabricate shopfitting components using CNC machines

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to program and use computer numerically-controlled (CNC) machines to fabricate components for shopfitting units. It includes inputting correct data into selected software programs and sequencing the fabrication process.

It applies to those who fabricate components for a range of shopfitting units in an off-site manufacturing premises ready for installation on commercial sites.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of C*PCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Unit sector(s)

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
	Plan and prepare to use CNC machines.	1.1	Identify, read and interpret details of shopfitting components from job requirements, plans and specifications.
		1.2	Produce a full size set out of all shopfitting components and detail fabrication method, joint type, grain direction, and drawer and door clearance.
		1.3	Calculate material quantities for fabrication of shopfitting components from dimensions on plans.
		1.4	Develop an efficient cutting list to minimise waste.
		1.5	Determine job priorities and sequence job tasks in consultation with others in the workplace.
		1.6	Identify workplace hazards and conditions, assess risks and implement risk controls following work health and safety requirements and environmental practices.
		1.7	Select, fit and used personal protective equipment (PPE) required for the task.
		1.8	Obtain, safely handle and prepare materials appropriate to the work application and locate ready for use.
		1.9	Check serviceability of CNC machinery, and identify, report and rectify faults.

© Commonwealth of Australia, 2026 BuildSkills Australia

2	Prepare CNC program.	2.1	Select appropriate CNC machine and software program for the task.
		2.2	Define the machine functions and select the appropriate program commands for the machine control system in preparation to perform and save programming operations for the fabrication process.
		2.3	Determine and check that programming terms, methods and data storage capacity are consistent with job requirements and machine specifications.
		2.4	Identify and select method of transferring programs into machine memory.
		2.5	Edit machine specification program, compensating for tool profiles, to produce the required straight and circular tool movements.
3	Transfer and test machine controls.	3.1	Load appropriate program into machine memory using selected method.
		3.2	Enter program following machine specifications to fabricate shopfitting components.
		3.3	Conduct a dry run simulation to test program operations.
		3.4	Recognise minor faults and problems with CNC machine operation, and select and apply appropriate action to overcome issues and meet project schedules.
		3.5	Edit program and alarm settings as required using the control station.
4	Fabricate components.	4.1	Follow manufacturer specifications to fabricate components using automatic mode.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Identity and legibly mark face and edge of each component following design specifications to assist with efficient and accurate assembly.
		4.3	Locate and arrange components ready for assembly to align with relevant plans and specifications.
		4.4	Store plans, specifications and set-outs for future reference.
5	Clean up.	5.1	Clean CNC machinery, tools and equipment, check for serviceability and report damage or faults.
		5.2	Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
		5.3	Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCSHP3001 Fabricate shopfitting components using CNC machines

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by selecting, programming and using a computer numerically-controlled (CNC) machine to fabricate components as outlined below:

- select, edit, produce and trial a CNC machine program
- use a CNC machine to fabricate components for:
    - one point of sale counter with a minimum size of 2.4 metres in length
    - one showcase with a minimum size of 2.0 metres high and 1.8 metres wide, with doors and glass
    - and one of the following, which must include a stone or acrylic surface:
        - cabinet with a minimum size of 750 mm high and 2.4 metres wide
        - wall unit with shelves and a minimum size of 1.8 metres high and 1.2 metres wide
        - workstation with a 90-degree return
- utilise milling, boring and pocketing operations during the fabrication process of the above shopfitting components.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards relevant to fabricating components on a CNC machine
- organisation’s quality assurance requirements relating to fabricating components on a CNC machine
- sustainable shopfitting practices
- CNC machine manufacturer specification

    - common conventions used in CNC
    - purpose of the zero point
    - axes of movement
    - data input to achieve job requirements
    - range of software applications
    - sequence of machine operations
    - correction of tool data to match selected tool
    - reasons for selecting tool paths:
        - tool cutter rotational direction and speed
        - lead in and lead out types
    - testing and proving the CNC program
    - procedures for editing and effects on finished products
- induction and safe operation of CNC equipment:
    - guarding and safe use of woodworking machinery
    - start-up and shutdown procedures
    - reduced speed dry run to check functions and alarms
    - faults and problems and actions to rectify
- types, functions and uses of CNC machinery.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting regulations, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation
- shopfitting drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to program equipment and to develop and save documents electronically.

CPCSHP3002 Fabricate and assemble shopfront structures

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Rectified numbering of Performance Criteria.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to set out, fabricate and assemble internal and external entries for shopping centres, commercial and industrial buildings. It includes off-site assembly of the structure to ensure correct fit and to allow for preparation for transport.

It applies to shopfitters who fabricate street fronts, bulk heads and entries that form a total shopfront structure for all applications.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative or certification requirements may apply to this unit of competency in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
	Undertake on-site measurements	1.1	Identify, read and interpret work plans and specification to confirm job requirements.
		1.2	Implement on-site work health and safety requirements.
		1.3	Locate on-site datum, gridlines and reference points from site plan.
		1.4	Use levelling techniques to check surrounding structures and surfaces for plumb, level, line and square.
		1.5	Measure and record internal width and height dimensions.
		1.6	Mark position of proposed frames and fittings on surrounding structure using non-permanent marker.
		1.7	Note, rectify and report inconsistencies to appropriate person in dimensions, layout or location of structure outside the specified tolerances.
		1.8	Notify glazier of site measurements for glass.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Plan and prepare for the project.	2.1	Inspect and identify offsite work area hazards and conditions and implement risk control measures.
		2.2	Prepare detailed working drawings from design drawings to comply with job requirements.
		2.3	Prepare an efficiency cutting plan and list and calculate materials for the project.
		2.4	Determine job priorities and sequence job tasks in consultation with others in the workplace.
		2.5	Select, fit and use personal protective equipment (PPE) required for the task.
		2.6	Identify, obtain, safely handle, prepare and locate materials ready for use.
		2.7	Set out components following workplace procedures.
		2.8	Select tools and equipment and check for serviceability.
		2.9	Conduct a pre-start check and rectify and report faults.
1	Fabricate project components.	3.1	Produce specified components using static machines in accordance with job and organisational quality requirements.
		3.2	Program CNC machine to manufacturer and produce specified components.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Test CNC machine program operations in dry run simulation mode, and edit program and alarm settings as required, using the control station.
		3.4	Recognise minor faults and problems with CNC machine operation, and select and apply appropriate action to overcome issues and meet project schedules.
		3.5	Produce specified work pieces using CNC machine automatic mode.
		3.6	Cut straight and curved lines in small sections of glass.
		3.7	Check components for correct measurements and compliance with quality and job requirements.
4	Assemble components of shopfront structure.	4.1	Select appropriate area to lay out and assemble material components.
		4.2	Use appropriate fixings and fasteners to assemble frame and check overall dimension for conformity with location and design.
		4.3	Check frame for parallel and square and adjust as required.
		4.4	Laminate required areas and fix fittings to components.
		4.5	Assemble shopfront free of scratches, dents, blemishes and damage.
5	Prepare for transport to worksite.	5.1	Disassemble shopfront components that are too large for transport to worksite or too heavy for safe lifting, into smaller sections.

© Commonwealth of Australia, 2026 BuildSkills Australia

		5.2	Identify and arrange packaging requirements for separate components and sections.
		5.3	Label and place components and sections in an appropriate workplace area in preparation for collection and transport to site.
		5.4	Number assembly diagram and locate for inclusion in delivery instructions.
6	Clean up.	6.1	Clean CNC and static machinery, tools and equipment, check for serviceability and report damage or faults.
		6.2	Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
		6.3	Store and secure tools and equipment following workplace procedures.

Assessment Requirements for CPCSHP3002 Fabricate and assemble shopfront structures

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Rectified numbering of Performance Criteria.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit of competency by fabricating and assembling a shopfront for one of the following as a minimum:

- shopping centre with a minimum size of 2.4 metres high and 3.0 metres wide
- commercial building with a minimum size of 2.4 metres high and 3.0 metres wide
- industrial building with a minimum size of 2.4 metres high and 3.0 metres wide.

The shopfronts must:

- include the entry, bulkheads and component fittings
- be constructed using aluminium, glass and timber
- comprise of one special finish.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfront regulations, codes and standards, in particular:
    - Australian Standard (AS) 1288 Glass in buildings
- organisation’s quality assurance requirements relating to fabricating and assembling shopfront structures
- sustainable shopfitting practices

CPCSHP3003 Assemble and install shopfront structures

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to assemble and install internal and external prefabricated components, sections and fittings, which form the bulkheads and shopfront structure opening on to a street or shopping centre walkway. It includes assembling and installing shopfronts to new or existing premises.

It applies to shopfitters responsible for receiving, assembling and installing shopfronts.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative or certification requirements may apply to this unit of competency in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan for the work.	1.1	Read and interpret job requirements in conjunction with shopfitting plans and specifications.
		1.2	Identify and apply organisational quality procedures and processes.
		1.3	Inspect onsite conditions and identify and report hazards and implement risk control measures.
		1.4	Determine job priorities and sequence job tasks in consultation with others in the workplace.
		1.5	Select, fit and use personal protective equipment (PPE).
		1.6	Select tools, equipment and plant required for the job, check for serviceability, rectify and report faults.
		1.7	Receive delivered shopfront components, sections and fittings, check for completeness and report any shortages or damaged materials to appropriate person.
2	Prepare for installation.	2.1	Check datum, shopfront opening dimensions and levels against construction plan.
		2.2	Check and compare overall shopfront structure dimensions with installation specifications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Identify lease line and boundary from certified construction plans and confirm with building contractor or relevant person.
		2.4	Remove protrusions, and identify and rectify shopfront opening irregularities and dimensions, and check for plumb and level.
		2.5	Prepare suitable packing for level and plumb.
		2.6	Check location of services, prepared supports and bracing for shopfront structure installation.
1	Assemble and install shopfront structure.	3.1	Assemble components, fittings and pre-assembled frames and place into position in preparation for installation.
		3.2	Raise bulkhead into position using mechanical lifting equipment and support, and brace shopfront structure.
		3.3	Check and adjust shopfront structure for position, level, plumb and winding.
		3.4	Anchor and secure shopfront structure using specified fixing methods.
		3.5	Fit doors, door furniture and closures and ensure that they operate freely.
		3.6	Scribe fillers and seal remaining gaps with approved sealant.
		3.7	Measure, compile and send glazing order to appropriate person.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Clean up.	4.1	Remove excess sealant and clean shopfront of marks, masking tape and protective layers.
		4.2	Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
		4.3	Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCSHP3003 Assemble and install shopfront structures

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by assembling and installing one shopfront structure, incorporating a bulkhead and an opening for a roller, pivot or concertina doors, with a minimum overall height of 3.0 metres and a minimum width of 3.6 metres.

In doing this, the candidate must:

- schedule shopfront work to accommodate client requirements and minimise disruption to the business operations
- maintain public safety during the use of mobile scaffold, elevated work platform, power tools and equipment.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfront regulations, codes and standards, in particular:
    - Australian Standard (AS) 2047 Windows and external glazed doors in buildings
    - AS 1288 Glass in buildings
- organisation’s quality assurance requirements relating to the assembling and installing of shopfront structures
- sustainable shopfitting practices
- key features of working drawings and specifications
- workplace processes and procedures and environmental requirements
- characteristics, applications and limitations of materials used in shopfront structures:

CPCSHP3004 Assemble internal shopfitting units and prepare for transport

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to assemble internal pre-cut components in an off-site manufacturing premises. It includes attaching fittings to the shopfitting units and preparing them for safe transport to the installation worksite.

It applies to shopfitters involved in the final production stages of assembling shopfitting units prior to installation on a commercial site.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing/Regulatory Information

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and prepare to assemble internal shopfitting units.	1.1	Identify, read and interpret job requirements from plans and specifications.
		1.2	Apply organisational quality procedures and processes for assembling shopfitting units.
		1.3	Determine job priorities and sequence job tasks in consultation with others in the workplace.
		1.4	Identify workplace hazards and conditions and implement risk control measures following work health and safety requirements.
		1.5	Select, fit and use personal protective equipment (PPE) required for the task.
		1.6	Select tools and equipment for the task, check for serviceability, rectify and report faults.
		1.7	Identify components for shopfitting units, safely handle and locate ready for assembling.
2	Assemble carcase.	2.1	Assemble carcase with faces and edges flush, and secure joints with specified fixings.
		2.2	Square carcase, temporary brace and fix back, position and install shelves and mullions/divisions.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Square and wind adjoining surfaces, close fit face panels flush with surfaces.
		2.4	Position and fix plinth or kicker to specified location.
		2.5	Prepare and secure external fixed panels to carcase using specified method and fixings.
3	Fit bench and assemble and fit drawers.	3.1	Assemble bench or countertop components in preparation for installation.
		3.2	Position bench or countertop on carcase to specified dimensions and fix using specified fixings and fasteners.
		3.3	Edge drawer fronts, assemble drawers with bottoms fitted and fixed, and fit handles.
		3.4	Determine drawer runner type from job requirements and install to manufacturer specifications.
		3.5	Apply specified clearances to install drawers parallel to carcase bottom.
4	Fit doors.	4.1	Edge doors and drill for and fix hinges and handles.
		4.2	Hang doors to carcase with faces flush and allow specified clearances.
		4.3	Sand surface edge finishes to job requirements and clean unit in preparation for coated finish.

© Commonwealth of Australia, 2026 BuildSkills Australia

5	Prepare units for transport.	5.1	Disassemble internal shopfitting units that are too large for transport or too heavy for safe lifting into smaller components and sections.
		5.2	Determine and arrange packaging requirements for smaller and separate components.
		5.3	Label disassembled components and sections, and place in a safe and appropriate area ready for collection.
		5.4	Number and locate assembly diagram for inclusion in delivery instructions.
		5.5	Safely store shopfitting units and components to avoid damage to surfaces.
6	Clean up.	6.1	Clean tools, equipment and machinery, check for serviceability and report damage or faults.
		6.2	Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
		6.3	Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by assembling and preparing for transport as outlined below:

- one point of sale counter with a minimum size of 2.4 metres in length
- one showcase with a minimum size of 2.0 metres height and 1.8 metres wide, including doors and glass
- one of the following, which must include a stone or acrylic surface:
    - cabinet with a minimum size of 750 mm high and 2.4 metres wide
    - wall unit with shelves and a minimum size of 1.8 metres high and 1.2 metres wide
    - workstation with a 90-degree return.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards
- organisation's quality assurance requirements relating to the assembling of internal shopfitting units and preparation of units for transport
- sustainable shopfitting practices
- key features of working drawings and specifications
- workplace processes and procedures and environmental requirements
- shopfitting units:
    - cabinet
    - counter
    - showcase

- screws
- timber biscuits.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting legislation, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation
- shopfitting drawings and specifications, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to program equipment and to develop and save documents electronically.

CPCSHP3005 Apply and trim decorative additions to shopfittings and components

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to apply and trim specifically designed decorative panelling, frames, borders and mirrors to shopfittings and components to ensure a quality finish. It includes offsite work on units being fabricated for installation and on-site installation of units and internal walls.

It applies to shopfitters who also work concurrently with clients and associated contractors to accommodate client requirements where the shop is operational.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing/Regulatory Information

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and prepare to apply decorative additions.	1.1	Identify, read and interpret decorative additions from job requirements, plans and specifications.
		1.2	Determine type of decorative addition to be applied and calculate material quantities using measurements and formulas.
		1.3	Identify worksite hazards and conditions and implement risk control measures following work health and safety and environmental requirements.
		1.4	Determine job priorities and sequence job tasks in consultation with others in the workplace.
		1.5	Obtain materials, check for conformity and safely handle and locate materials ready for use.
		1.6	Establish appropriate method for fixing decorative additions to the substrate.
		1.7	Select, fit and use personal protective equipment (PPE) required for the task.
		1.8	Select tools and equipment for the task, check for serviceability, and rectify and report faults.
2	Fix and finish decorative additions.	2.1	Set out position of decorative additions in accordance with plan and job description and confirm with client.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.2	Draw a plan to develop a true mitre for a compound angle and a mitre of different material widths and calculate angles by dissection.
		2.3	Set out, mark and cut to length decorative additions.
		2.4	Follow specifications to cut curved decorative additions work.
		2.5	Fit decorative additions and use established method to fix to substrate.
		2.6	Trim and finish decorative additions to meet organisational quality requirements.
1	Clean up.	3.1	Clean tools and equipment, check for serviceability and report damage or faults.
		3.2	Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
		3.3	Store and secure tools and equipment following workplace procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

CPCSHP3006 Prepare shopfittings and surfaces and apply liquid finishes

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to prepare new and previously coated shopfittings and surfaces, and to apply stains, lacquers, paint or sealer to create a specified finish. It includes scheduling work, which may be carried out off-site on units being fabricated for installation and other work completed on-site concurrently with other shopfitting work.

It applies to shopfitters who prepare metal, timber, timber product or concrete surfaces of shop doors, windows, walls, ceilings, partitions and other shopfittings, and apply a range of liquid finishes to these surfaces.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing/Regulatory Information

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and prepare to apply finishes.	1.1	Read and interpret job description for preparing surfaces and applying finishes and confirm with relevant person.
		1.2	Identify surfaces to be covered, method of surface preparation, liquid finishes and application methods from job requirements.
		1.3	Select liquid finish, sealants and other surface preparation products and calculate material quantities.
		1.4	Obtain and follow manufacturer specifications and safety data sheet (SDS) for applying liquid finishes.
		1.5	Determine job priorities and sequence job tasks in consultation with others in the workplace.
		1.6	Inspect workplace conditions, identify and report hazards, and implement risk control measures.
		1.7	Select, fit and use personal protective equipment (PPE) required for the task.
		1.8	Select, tools and equipment for the job, check for serviceability and rectify and report faults.
		1.9	Obtain liquid finishes and preparation products, safely handle and locate ready for use.

© Commonwealth of Australia, 2026 BuildSkills Australia

2	Prepare surfaces.	2.1	Identify and determine condition of new and existing surfaces.
		2.2	Prepare new or uncoated surfaces and substrates following manufacturer specifications to meet job requirements.
		2.3	Remove unwanted coatings and loose debris from previously coated surfaces and prepare for specified finish.
		2.4	Repair surface defects and imperfections by stopping, filling and sanding smooth, ready for required finish.
3	Apply stains and lacquers to surfaces.	3.1	Apply stain evenly and consistently using specified application method and equipment.
		3.2	Check stained surfaces for consistent colour and dryness, and wipe to provide a clean surface for the application of lacquer.
		3.3	Apply consistent coverage of lacquer to surfaces using specified application method following manufacturer instructions.
4	Apply sealers and paint to surfaces.	4.1	Apply sealer using specified application method and equipment to obtain an even coverage.
		4.2	Allow drying time for painted sealed surface and check for consistent coverage.
		4.3	Lightly sand and wipe surfaces to provide a clean surface for repeat paint applications.

© Commonwealth of Australia, 2026 BuildSkills Australia

5	Clean up.	5.1	Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
		5.2	Seal and store unused liquid finishes, sealers and paints following workplace procedures and manufacturer instructions.
		5.3	Clean application tools and equipment following environmental requirements.
		5.4	Maintain, store and secure tools and equipment, and rectify and report faults.

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing new and previously coated surfaces for staining and painting to meet product specifications by:

- staining and spraying a lacquer finish to a new timber surface with a minimum of two square metres
- priming and painting a metal or concrete surface
- preparing and painting a previously painted surface
- painting a surface using a roller and brush.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards relevant to preparing and finishing surfaces
- relevant organisation’s quality assurance requirements relating to the preparation and application of liquid finishes to shopfittings and surfaces
- sustainable shopfitting practices
- workplace processes and procedures and environmental requirements
- construction and shopfitting terminology relating to preparing and applying finishes to surfaces, including technical data for various surface finishes
- characteristics, applications and limitations of materials used for preparing and applying finishes to surfaces:

CPCSHP3007 Install prefabricated internal shopfitting units

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to receive, position and install prefabricated shopfitting units. It includes assembling large units delivered to the worksite in sections.

It applies to shopfitters responsible for installing internal shopfitting units onsite concurrently with other shopfitting work that must be scheduled to accommodate client requirements, the shop when it is operational, and the requirements of other shopfitters and associated contractors.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative or certification requirements may apply to this unit of competency in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit sector(s)

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and prepare to install prefabricated internal shopfitting units.	1.1	Read and interpret plans and specifications to confirm job requirements.
		1.2	Interpret and apply organisational quality assurance requirements appropriate for the project.
		1.3	Receive and check delivered materials for completeness and conformity with job requirements and identify and report any damage.
		1.4	Unload delivered internal shopfitting units, place in safe area onsite ready for installation, and protect unit finishes from damage.
		1.5	Determine job priorities and sequence job tasks in consultation with others in the workplace.
		1.6	Inspect workplace conditions, identify and report hazards, and implement risk control measures.
		1.7	Select, fit and use personal protective equipment (PPE) required for the task.
		1.8	Select tools and equipment and check for serviceability.
		1.9	Conduct a pre-start check and rectify and report faults.

© Commonwealth of Australia, 2026 BuildSkills Australia

2	Check location of units and prepare for installation.	2.1	Set out and mark position for installation, strike datum to check level, and plumb and confirm with original site measurements.
		2.2	Remove protrusions, install structural elements required to support the shopfitting unit and prepare positon for unit installation.
		2.3	Level and plumb irregularities to meet job requirements and record any discrepancies.
3	Assemble and fix shopfitting unit.	3.1	Assemble large unit components in a position for ease of installation.
		3.2	Check overall measurements of assembled unit against specification and address any anomalies.
		3.3	Prepare shopfitting units with drilled holes and check fixings are appropriate to connect to brickwork, timber, metal and stone surfaces.
		3.4	Install assembled unit and pack level, plumb and square using appropriate levelling equipment and process.
		3.5	Anchor assembly at drilled connecting points, fit and align doors with specified parallel gaps.
		3.6	Scribe and fix beading and apply sealants to meet job requirements and specifications.
		3.7	Remove excessive sealant, protective covering and masking tape, and clean marks and markings from unit.
4	Clean up.	4.1	Clear work area, and dispose of, reuse or recycle materials following workplace and environmental requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Clean tools and equipment, check for serviceability and report damage or faults.
		4.3	Store and secure tools and equipment following workplace procedures.

Assessment Requirements for CPCSHP3007 Install prefabricated internal shopfitting units

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing four internal shopfitting units. One of these units must be assembled with smaller disassembled components to create a larger unit.

In doing this, the candidate must install:

- one point of sale counter with a minimum size of 2.4 metres in length
- one showcase fitted between walls, floor and ceiling, with a minimum size of 2.0 metres high and 1.8 metres wide, including doors and glass
- one of the following:
    - cabinet with a minimum size of 750 mm high and 2.4 metres wide
    - wall unit with shelves and a minimum size of 1.8 metres high and 1.2 metres wide
    - workstation with a 90-degree return.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards
- organisation’s quality assurance requirements relating to installation of units
- sustainable shopfitting practices
- content of and terms, symbols and conventions used in working drawings and specifications
- workplace processes and procedures and environmental requirements
- shopfitting units:
    - cabinet

CPCSHP3008 Install internal shop walls and fixtures

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to prepare, set out and install wall frames, partitions and wall linings to areas such as fitting or treatment rooms in internal shop areas. It includes fitting doors and windows, fixing mouldings and installing fixtures.

It applies to shopfitters engaged in creating new shops or renovating existing shops. The work is completed onsite concurrently with other shopfitting work that must be scheduled to accommodate client requirements, the shop when it is operational, and the requirements of other shopfitters and associated contractors.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing/Regulatory Information

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and prepare to install internal shop walls and fixtures.	1.1	Read and interpret plans and specifications to confirm job requirements.
		1.2	Interpret and apply organisational quality assurance requirements appropriate for the project.
		1.3	Determine material type and calculate quantities to complete the task.
		1.4	Determine job priorities and sequence job tasks in consultation with others in the workplace to ensure timeframes are met.
		1.5	Inspect worksite conditions, identify hazards and implement risk control measures following work health and safety requirements and environmental practices.
		1.6	Select, fit and use personal protective equipment (PPE) for the task.
		1.7	Select tools and equipment for the task.
		1.8	Check for serviceability and rectify and report faults.
		1.9	Receive and check delivered materials for completeness and conformity with job requirements and identify and report any discrepancies or damage.
		1.10	Place materials in a safe and secure position ready for use.
2	Install internal wall framing and lining.	2.1	Set out Internal wall framing parallel and square to existing structure.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.2	Set out frame with door and window openings, cut frame members and assemble ready to erect.
		2.3	Stand frame into position, level, square and plumb and use appropriate fixing method and fastenings appropriate for the existing structure.
		2.4	Mark and cut lining material to length, and shape and fix to frame to meet job requirements.
3	Install partitions.	3.1	Set out and mark position of pre-assembled or onsite assembled partitions to plan dimensions.
		3.2	Cut partition components accurately to size and locate connection points.
		3.3	Install and secure each component junction tight together and flush with face using specified fixings and fastenings.
		3.4	Secure, square and plumb assembled partitions within accepted industry tolerances.
4	Cut and fix decorative mouldings.	4.1	Mark, cut to length, fit and fix specified mouldings.
		4.2	Fit and fix mitre joints flush to face and true.
		4.3	Mark and cut to length scribed joints.
		4.4	Set out, mark and fix specified fixtures.
5	Clean up.	5.1	Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
		5.2	Clean tools and equipment, check for serviceability and report damage or faults.
		5.3	Store and secure tools and equipment following workplace procedures.

Assessment Requirements for CPCSHP3008 Install internal shop walls and fixtures

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- setting out, erecting and fixing a full height internal wall frame, which includes an internal and external corner and a door
- setting out, assembling and fixing partitions, which include one external and one internal corner and a T intersection.

In doing this, the candidate must:

- use timber or metal to construct the full height wall frame
- line wall with both decorative timber panelling and plasterboard
- set out, fit and fix the door jamb, fit and fix profiled architraves, hinge door and fit door furniture
- fit and fix profiled skirting with one external mitred and one internal scribed joint
- set out, assemble and fit a removable pelmet with two return ends.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards relevant to internal shop walls and fixtures
- organisation’s quality assurance requirements
- sustainable shopfitting practices
- content of and terms, symbols and conventions used in working drawings and specifications
- workplace processes and procedures and environmental requirements
- manufacturer specification for setting out, assembling and fixing selected partitions

© Commonwealth of Australia, 2026 BuildSkills Australia

- characteristics, applications and limitations of materials used in internal shop walls and fixtures:
    - fibre cement board
    - hardboard
    - timber lining boards
    - medium density fibreboard (MDF)
    - particle board
    - plasterboard
    - plywood
    - glass
    - solid timber
    - metal
    - adhesives and gap fillers
- workplace safety:
    - job safety and environmental analysis (JSEA)
    - safe work method statements (SWMSs)
    - hierarchy of control
    - safety data sheets (SDSs)
    - hazardous manual tasks
    - hazardous chemicals
    - exposure to excessive noise
    - exposure to dust
    - electrical safety
    - working safely at heights
    - emergency procedures (evacuation, location and use of firefighting equipment, first aid)
    - safety of public, visitors and others in the workplace
- processes and techniques for installing internal shop walls and fixtures:
    - cutting, assembling and fixing walls and partitions
    - lining walls using various products
    - using geometry to calculate irregular angles for cutting materials
    - mitring, scribing and fitting decorative mouldings and profiled timber
- construction terminology used in shopfitting

- types of fixings and fasteners used when installing internal shop walls and fixtures, and their application
- operational and functional features of tools and equipment:
    - air compressor
    - battery and gas-powered nail guns
    - drop saws
    - hand tools
    - laser, spirit and water levels
    - power drills
    - power planers
    - power saws
    - routers and trimmers
    - screw guns
    - battery operated tools.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- relevant shopfitting regulations, codes and Australian Standards
- current workplace procedures, workplace safety and environmental documentation
- shopfitting drawings and specifications, job requirements, organisational policies, procedures and equipment to undertake the performance criteria and assessment requirements
- digital technology, devices and software to communicate with others and to develop and save documents electronically.

CPCSHP3009 Demolish shopfronts and bulkheads

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Performance Criteria numbering rectified and Modification History rectified.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to demolish sections of existing shop buildings and to dispose of demolished materials and waste. It includes completing the required demolition work to schedule and following specific plans and specifications.

It applies to shopfitters who demolish old shop building components to make alterations, extensions and additions to the shop. Work may be completed onsite concurrently with other shopfitting work that must be scheduled to accommodate client requirements, the shop when it is operational, and the requirements of other shopfitters and associated contractors.

This demolition work is limited to non-load-bearing shop building structures, including:

- external walls and cladding
- suspended ceiling structures
- shopfronts and glazed sections
- joinery and fixtures
- high level bulkheads.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

Licensing, legislative or certification requirements may apply to this unit of competency in some states and territories. Relevant state and territory regulatory authorities should be consulted to confirm those requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Shopfitting

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
	Plan shop demolition work.	1.1	Identify, read and interpret shopfront demolition details from plans and specifications, and confirm against job requirements.
		1.2	Interpret and apply organisational quality assurance requirements appropriate for scope of work.
		1.3	Determine designated demolition area of shopfront and bulkhead, identify hazards and assess risks.
		1.4	Establish, and confirm with team members, risk management and hazard control measures and manage the status of existing services.
		1.5	Apply and document health, safety and environmental requirements for the worksite and for individual demolition tasks.
		1.6	Sequence and schedule demolition tasks in consultation with team members, others onsite and client, to ensure work is completed within given timeframe.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.7	Select, fit and use personal protective equipment (PPE) required for the task.
		1.8	Select plant, tools and equipment suited to the demolition work, check for serviceability, and rectify and report faults.
		1.9	Arrange and organise scaffolding and lifting equipment to meet job requirements.
		1.10	Plan the handling, removal and disposal of identified demolition materials to meet work health and safety (WHS) and environmental requirements.
2	Prepare demolition worksite.	2.1	Erect hoardings, barricades and signage as specified in work instructions.
		2.2	Erect and check scaffolding, fall protection and props to ensure they are installed against demolition plan.
		2.3	Set out and mark building components to be demolished and removed.
		2.4	Check site preparation and safety meet workplace safety and environmental requirements before starting work.
		2.5	Cover and protect existing structure, furniture and equipment from dust and damage.
		2.6	Identify, isolate or disconnect services for safety and to avoid damage.
3	Apply demolition procedures.	3.1	Assess individual tasks immediately before demolition work to identify potential hazards, and review and amend safety procedures in consultation with relevant personnel.
		3.2	Install propping required to prevent collapse of overhead non-load-bearing elements.
		3.3	Follow demolition procedures for safely dismantling and demolishing building structure.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.4	Handle and remove demolished materials using appropriate handling techniques from location to designated storage area or skip bin.
		3.5	Handle, store and stack demolished materials and components identified for salvage ready for reuse or transport.
		3.6	Maintain effective verbal and non-verbal communication, including the use of mobile technology, with team members and others onsite to monitor and manage demolition procedures.
4	Clean up.	4.1	Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
		4.2	Clean and maintain tools and equipment and rectify and report faults.
		4.3	Store and secure tools and equipment following workplace procedures.

Foundation Skills

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by dismantling and demolishing a shopfront and internal cabinet.

In doing this, the candidate must:

- dismantle and demolish a shopfront of a minimum of 3.6 metres high and 3.6 metres wide, including a bulkhead, glazing, door closure and joinery
- dismantle one internal cabinet or fixture of a minimum of 3.6 metres high and 2.4 metres wide, which is attached to the building structure
- protect surrounding structure, floor covering, existing furniture and fixtures from damage
- plan and schedule the demolition work to maintain continuity of business operations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- shopfitting regulations, codes and standards relating to shopfront and bulkhead demolition
- organisation’s quality assurance requirements relating to demolition of shopfronts and bulkheads
- sustainable shopfitting practices

CPCSHP3010 Prepare shop floors for new coverings

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Minor edits to formatting.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to remove existing shop floor coverings and prepare and apply primer and cementitious products to patch and smooth shop floors ready for the installation of new selected floor coverings.

It applies to those who work in new or existing retail environments where shopfitters need to prepare concrete or timber floors using smoothing and skim coating techniques.

The unit supports shop floor preparation work which is completed onsite and may be undertaken concurrently with other shopfitting work. Where the shop is operational, work is scheduled to accommodate client requirements and coordinate with other shopfitters and associated contractors.

Individuals at this level take responsibility for organising and completing these tasks with a high degree of self-direction.

No licensing, legislative or certification requirements apply to this unit of competency at the time of publication.

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Achievement of *CPCWHS1001 Prepare to work safely in the construction industry* meets this requirement.

Licensing/Regulatory Information

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
	Plan and prepare shop floors.	1.1	Identify, read and interpret shop floor preparation and coverings from plans and specifications and confirm against job requirements.
		1.2	Interpret and apply organisational quality assurance requirements appropriate for scope of work.
		1.3	Calculate materials required to prepare shop floors for new coverings.
		1.4	Determine job priorities and sequence job tasks in consultation with others in the workplace to ensure work is completed within given timeframes.
		1.5	Inspect workplace conditions, identify hazards and apply risk control measures to meet work health and safety and environmental requirements.
		1.6	Select, fit and use personal protective equipment (PPE) for the task.
		1.7	Select plant, tools and equipment suited to shop floor preparation work.

© Commonwealth of Australia, 2026 BuildSkills Australia

		1.8	Check for serviceability and rectify and report faults.
2	Remove existing shop floor coverings.	2.1	Select starting point to ensure entry and exit access is available during removal process.
		2.2	Lift sections of floor coverings following job specifications and stack existing removed and rolled floor coverings in preparation for removal.
		2.3	Remove and dispose of existing floor coverings using safe manual handling techniques.
		2.4	Clear remnants of floor coverings or fixings from exposed sub-floor surface.
3	Apply floor surface covering.	3.1	Clean sub-floor surfaces following manufacturer recommendations.
		3.2	Apply trial applications of primer and smoothing compound to the sub-floor.
		3.3	Confirm suitability and compatibility of primer, smoothing and levelling compounds, and review and retrial until job requirements are met.
		3.4	Apply surface covering to required floor area ensuring specified depth and coverage is achieved.
		3.5	Check surfaces for contamination, moisture content and suitability of finish, and complete rectification to meet job requirements.
		3.6	Seal and store unused products following workplace and environmental requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

4	Clean up.	4.1	Clear work area and dispose of, reuse or recycle materials following workplace and environmental requirements.
		4.2	Clean and maintain tools and equipment, and rectify and report faults.
		4.3	Store and secure tools and equipment following workplace procedures.

Foundation Skills

Assessment Requirements for CPCSHP3010 Prepare shop floors for new coverings

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Minor edits to formatting.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by removing four different types of shop floor coverings and preparing the existing surface for a new covering. Each area must be a minimum of 10 square metres.

In doing this, the candidate must:

- remove three of the following surfaces once:
    - carpet tiles
    - vinyl tiles
    - resilient tiles
    - adhesive bonded carpet
    - parquetry with hard underlay
    - floating engineered floor
- clear and clean the exposed surface
- mix and test compounds for suitability and compatibility
- apply primers, and cementitious and levelling compounds to patch and smooth the existing surface.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- shopfitting regulations, codes and standards, in particular:
    - Australian Standard (AS) 2455.1 Textile floor coverings – Installation practice General
    - AS 1884 Floor coverings – Resilient sheet and tiles – Installation practices
- organisation's quality assurance requirements relating to shop floor preparation
- sustainable shopfitting practices
- procedures and techniques for removing existing floor coverings and preparing shop floors for new covering:
    - types and methods of fixing various floor coverings
    - identifying and resolving relevant problems relating to floor preparation
- environmental protection requirements relevant to preparing shop floors for new coverings
- functional and operational features of tools and equipment:
    - vacuum cleaners
    - vinyl tile lifter
    - mixing drills
    - hand and power tools
    - battery operated tools
- characteristics, applications and limitations of materials and products used for floor preparation:
    - smoothing compounds
    - levelling compounds
    - bulk fillers
    - repair/patching compounds
    - binding agents
    - mineral compounds
- workplace safety:
    - job safety and environmental analysis (JSEA)
    - safe work method statements (SWMSs)
    - hierarchy of control
    - safety data sheets (SDSs)
    - hazardous manual tasks

CPCSIL1001 Identify products and materials containing crystalline silica

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Unit outcomes

This unit of competency specifies the application of the knowledge and skills to identify products and materials containing crystalline silica (CS).

This unit is primarily knowledge-based, focused on providing candidates with the underpinning knowledge and skills to safely identify products and materials containing CS under supervision, and describe appropriate risk control measures to manage respirable crystalline silica (RCS) exposure in the workplace.

This unit does not prepare the candidate to work with products containing crystalline silica or generating respirable crystalline silica, which is covered in the unit CPCSIL3002 Work with products and materials containing crystalline silica.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this unit. Relevant work health and safety (WHS) state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Knowledge

Upon successful completion of this unit, a candidate must be able to demonstrate knowledge and understanding of:

- products and materials containing CS.
- features, commonalities and differences between CS and RCS.
- what to do if you can’t identify whether products and materials contain CS.
- tasks and processes that may generate respirable crystalline silica RCS dust, tasks and processes that may generate respirable crystalline silica RCS dust, including clean-up and disposal of silica contaminants.
- hierarchy of controls.
- engineering controls including tools and equipment, on-tool dust capture devices and dust suppression (with water) for working with products containing CS.

© Commonwealth of Australia, 2026 BuildSkills Australia

- personal protective equipment (PPE) and respiratory protective equipment (RPE) used while working with products and materials containing CS.
- safe storage and maintenance of equipment used in tasks involving CS.

Skills

Upon successful completion of this unit, a candidate must be able to:

- identify and confirm with supervisor products and materials containing CS features, commonalities and differences between CS and RCS.
- access Safety Data Sheets and technical specifications.
- identify and confirm with supervisor tasks and processes that may result in exposure to silica dust, including clean-up and disposal of silica contaminants.
- describe health hazards of RCS.
- describe the basic principles of risk management when working with CS.
- identify and describe the engineering controls used while working with products and materials containing CS.
- identify and describe tools and equipment including on-tool dust capture devices and dust suppression (with water) for working with products containing CS.
- identify and describe the purpose, use and limitations of personal protective equipment (PPE) and respiratory protective equipment (RPE) used while working with products and materials containing CS.
- describe the safe storage and maintenance requirements of equipment used in tasks involving CS.

Application of Knowledge & Skills

The candidate, under close supervision, identifies products and materials containing crystalline silica (CS) within a designated worksite, utilising Safety Data Sheets (SDS) and technical specifications.

They describe tasks and processes that may generate respirable crystalline silica (RCS) dust, confirming findings with a supervisor.

The candidate describes the hierarchy of controls, appropriate risk control measures, suitable personal protective equipment (PPE) and respiratory protective equipment (RPE), and safe storage and maintenance of equipment.

The candidate identifies CS containing materials and describes associated risks with guidance from a supervisor.

The candidate describes appropriate control measures to manage RCS exposure, according to workplace safety protocols and supervisor instructions.

Assessment Requirements for CPCSIL1001 Identify products and materials containing crystalline silica

Performance Evidence

A person demonstrating competency in this unit must satisfy the knowledge and skill requirements of this unit.

Specifically, the candidate must:

- describe the hierarchy of controls and identify and discuss the risk management strategies and control measures for at least three different work activities that can generate respirable crystalline silica (RCS) dust.
- recognise at least five different materials that may contain crystalline silica (CS).
- describe the clean-up and disposal of silica contaminants from a work area, according to jurisdictional regulatory and legislative requirements.

Knowledge Evidence

To be competent in this unit a candidate must demonstrate knowledge of:

- health and safety risks of working with products and materials containing CS, including the health hazards of RCS
- products and materials containing crystalline silica, such as:
    - engineered stone
    - concrete
    - mortar
    - bricks
    - pavers
    - reconstituted stone
    - tiles
    - natural stone materials
    - cement sheeting
    - aerated concrete
    - sand
    - mulch
    - porcelain
- features, commonalities and differences between CS and RCS
- how to identify whether products and materials contain crystalline silica

© Commonwealth of Australia, 2026 BuildSkills Australia

- processes that generate silica dust RCS, such as:
    - cutting
    - crushing
    - drilling
    - grinding
    - chiselling
    - abrasive polishing
    - exfoliating or flaming
    - demolition activities
- worksites where silica dust can be found, such as:
    - manufacturing environment
    - residential construction
    - commercial construction
    - civil construction
    - mine sites
    - quarries
- employee responsibilities and requirements
- types and applications of personal protective equipment (PPE) and respiratory protective equipment (RPE) used when working with CS, including:
    - disposable PPE
    - half-face reusable RPE
    - full-face reusable RPE
    - powered air purifying respirators
- safe maintenance, cleaning and storage methods for reusable PPE and RPE
- safe disposal methods for disposable PPE and RPE
- safe disposal of CS waste
- safe cleaning methods with silica dust
- dust control measures
- where to find information on safe work practices and technical information on products containing CS, including:
    - workplace health and safety policies and procedures
    - codes of practice and jurisdictional legislation
    - safe work method statements (SWMS)
    - Job Safety and Environmental Analysis (JSEA)

© Commonwealth of Australia, 2026 BuildSkills Australia

- Safety Data Sheets (SDS)
- product manuals and labels.

Assessment Conditions

Candidates must not be exposed to CS or RCS risks when undertaking this unit of competency.
Candidates **must be** provided with access to:

- appropriate documents, including SDS, manufacturer's instructions, product manuals and labels, and relevant codes of practice, Australian Standards, legislation, regulations and requirements of workplace policies and procedures as required by Commonwealth, state and territory regulators.

Assessors must hold the following current qualification or its successor:

- BSB41419 Certificate IV in Work Health and Safety or equivalent/higher relevant work health and safety qualification.

Mandatory Workplace Requirements

There are no mandatory workplace requirements for assessment. Assessment of performance must be conducted in a simulated environment.

CPCSIL2002 Use and maintain respiratory protective equipment

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit of competency specifies the skills and knowledge required to use and maintain respiratory protective equipment (RPE), in the workplace.

The unit includes preparing for the use of RPE, correctly fitting and using equipment, and cleaning, inspecting, and storing RPE after use.

The unit is suitable for those working with products and materials containing crystalline silica (CS) or removing asbestos and using RPE to mitigate exposure to respirable crystalline silica (RCS) and other dust particles that are a health hazard.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this unit. Relevant work health and safety (WHS) state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

1. Prepare and plan to use RPE.	1.1 Check for RCS and asbestos hazards and risks to be managed, including whether RPE is required in accordance with worksite WHS procedures.
	1.2 Confirm scope of work and identify required RPE to perform work in accordance with WHS procedures.
	1.3 Review WHS procedures and manufacturer instructions to identify any additional training required to use RPE for the work activity.
2. Use required RPE.	2.1 Select and check serviceability of RPE in accordance with WHS procedures and manufacturer instructions.
	2.2 Confirm that a successful individual quantitative facial fit test has been undertaken with the selected RPE prior to use according to Australian Standards.
	2.3 Conduct fit-check before each use of RPE in accordance with WHS procedures and manufacturer instructions.
	2.4 Use, don and doff required RPE in accordance with WHS procedures and manufacturer instructions.
3. Maintain RPE.	3.1 Dispose of used disposable RPE in accordance with WHS procedures and manufacturer instructions.
	3.2 Clean, inspect, assess for serviceability, and store reusable RPE in accordance with WHS procedures and manufacturer instructions.
	3.3 Record and report findings of serviceability inspections in accordance with WHS procedures and manufacturer instructions.

Assessment Requirements for CPCSIL2002 Use and maintain respiratory protective equipment

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements and performance criteria of this unit.
Specifically, the candidate must:

- check serviceability, clean, maintain, use and store three different types of respiratory protective equipment (RPE), including a powered air purifying respirator, in accordance with manufacturer instructions.
- confirm fit test of RPE relevant for use with crystalline silica (CS) and asbestos.
- record and report findings of serviceability inspections.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- work health and safety (WHS) risks working with products and materials containing CS or asbestos
- range of fit-for-purpose types of RPE
- types of RPE, including:
    - disposable
    - half-face reusable
    - full-face reusable
    - powered air purifying respirators
- RPE manufacturer instructions
- characteristics, limitations and application of RPE and factors affecting effectiveness of RPE such as beards and facial hair, sweat due to heat and humidity, and the requirement for a clean-shaven face when using tight-fitting models to ensure an effective seal
- the possible health implications of incorrect use of RPE
- compatibility of RPE with other personal protective equipment (PPE)
- RPE types compliant with Australian Standards, and their selection, use and maintenance in accordance with relevant Australian Standards
- RPE fit checking and fit testing requirements, according to manufacturer instructions

© Commonwealth of Australia, 2026 BuildSkills Australia

- maintenance and inspection requirements of RPE, including replacement of filters and batteries, and repair or replacement of RPE
- WHS recording and reporting requirements.

Assessment Conditions

Candidates must be provided with access to:

- appropriate documents, materials, tools, RPE and other PPE currently approved for use in industry
- relevant codes of practice, Australian Standards, requirements of legislation, regulations and requirements of workplace policies and procedures as required by Commonwealth, state and territory regulators.

Mandatory Workplace Requirements

Assessment of performance evidence may be in a workplace setting or an environment that accurately represents a real workplace.

CPCSIL3002 Work with products and materials containing crystalline silica

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit of competency specifies the skills and knowledge required to work with products and materials containing crystalline silica (CS) and respirable crystalline silica (RCS).

The unit includes preparing for work, identifying and using appropriate tools and equipment, including personal protective equipment (PPE) and respiratory protective equipment (RPE).

The unit also covers reviewing work activities involving products and materials containing CS.

Work may be carried out in factory or workshop settings, construction sites, commercial or residential settings, and sites such as mines, quarries and demolition sites.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this unit. Relevant work health and safety (WHS) state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe what needs to be done to demonstrate achievement of the element.*
1. Prepare to handle products and materials containing CS.	1.1 Interpret work requirements and instructions to handle identified products containing CS.
	1.2 Seek supervisor advice if the CS content of a product or material is unknown or unclear.
	1.3 Read and interpret specifications for products or materials containing CS to identify the type of product, level of risk, and required risk controls to reduce personal exposure.
	1.4 Discuss health and safety matters related to exposure to RCS with supervisor.
	1.5 Assess the risk of exposure to airborne respirable crystalline silica (RCS) for all identified products, materials and task to determine the risk level in accordance with WHS requirements.
	1.6 Select required plant, tools, equipment, PPE and RPE to carry out work in accordance with the hierarchy of controls and WHS regulatory requirements.
	1.7 Review relevant safety documentation for the planned work and work environment and report any identified issues to supervisor.
	1.8 Check serviceability of plant, tools, equipment, PPE and RPE used in the work activity in accordance with WHS procedures and manufacturer instructions before starting work.

© Commonwealth of Australia, 2026 BuildSkills Australia

	1.9 Report any faults or damage to plant, tools, equipment, PPE and RPE in accordance with WHS procedures.
2. Perform work.	2.1 Inspect worksite, locate services, assess hazards and apply risk controls, including required signage and barricades.
	2.2 Conduct fit check of fit-tested RPE in accordance with WHS procedures and manufacturer instructions.
	2.3 Confirm risk control measures for planned work are in accordance with WHS procedures and manufacturer instructions.
	2.4 Use the required plant, tools, equipment, PPE and RPE to complete work activity in accordance with WHS procedures and manufacturer instructions.
	2.5 Monitor and adjust risk control measures if required while completing work activity in accordance with WHS procedures.
3. Perform maintenance activities and clean-up of work area.	3.1 Identify manufacturer requirements and workplace procedures for maintaining, storing and disposing of PPE and RPE.
	3.2 Clean up and dispose of dust and slurry from work area in accordance with WHS procedures.
	3.3 Clean and inspect PPE, RPE, tools and equipment, and check their serviceability in accordance with

© Commonwealth of Australia, 2026 BuildSkills Australia

	WHS procedures and manufacturer instructions.
	3.4 Maintain, store and secure PPE, RPE, tools and equipment used in work activity in accordance with WHS procedures and manufacturer instructions.
	3.5 Record and report serviceability inspection results in accordance with WHS procedures and manufacturer instructions.
4. Review working with products containing CS.	4.1 Assess how effectively PPE, RPE, plant, tools and equipment mitigated exposure risks from working with products containing CS.
	4.2 Record and report WHS incidents involving work activities using products and materials containing CS as required.
	4.3 Record and report how products and materials containing CS were handled and used to support workplace continuous improvement in accordance with WHS procedures.

Assessment Requirements for CPCSIL3002 Work with products and materials containing crystalline silica

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements and performance criteria of this unit.

Specifically, the candidate must:

- demonstrate safe use, cleaning and maintenance of personal protective equipment (PPE) and respiratory protective equipment (RPE), including fit checking of disposable and re-usable devices for three different work activities in accordance with manufacturer instructions
- demonstrate three different work activities, such as cutting, drilling or grinding products or materials containing crystalline silica (CS) while applying all relevant work health and safety (WHS) risk controls, including dust capture, suppression, removal and disposal measures
- demonstrate the correct selection, fitting and use of PPE and RPE
- review and report on how effective the control measures were.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- mandatory control measures, including the hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls
    - administrative controls
    - PPE/RPE
- WHS risks working with products and materials containing CS, including features, commonalities and differences between CS and respirable crystalline silica (RCS)
- products containing CS, such as:
    - engineered stone
    - concrete
    - mortar
    - bricks

© Commonwealth of Australia, 2026 BuildSkills Australia

  - pavers
  - tiles
  - natural stone materials
  - cement sheeting
  - aerated concrete
  - sand
  - mulch
- silica dust generated by workplace processes, including:
  - cutting
  - crushing
  - drilling
  - grinding
  - chiselling
  - abrasive polishing
  - exfoliating or flaming
  - demolition activities
- additional work activities that could generate respirable silica dust particles, may include:
  - excavation, earth moving and drilling plant operations
  - clay and stone processing machine operations
  - paving and surfacing
  - mining, quarrying and mineral ore treating processes
  - tunnelling
  - construction labouring activities
  - brick, concrete or stone cutting; especially using dry methods
  - abrasive blasting (blasting agent must not contain greater than 1 per cent of CS) foundry casting
  - angle grinding, jack hammering, chiselling, tuck pointing and wall chasing of concrete or masonry
  - hydraulic fracturing of gas and oil wells
  - removing form work
  - cleaning activities
  - pottery making
- worksites where silica dust can be found:
  - manufacturing environment

© Commonwealth of Australia, 2026 BuildSkills Australia

  - residential construction
  - commercial construction
  - concrete mixing plants
  - civil construction
- RPE types, and their selection, use and maintenance in accordance with Australian Standards
- Australian Standards, regulations and codes of practice relevant to working with products and materials containing CS
- WHS procedures
- relevant legislation governing handling and working with products containing CS, including monitoring requirements
- employer responsibilities and duty of care requirements:
  - consultation and communication processes
  - health monitoring
  - personal exposure monitoring
- use of PPE and compliant RPE, including disposable and re-usable devices in accordance with Australian Standards
- types of RPE, including:
  - disposable
  - half-face reusable
  - full-face reusable
  - powered air purifying respirators
- characteristics, limitations and application of RPE and factors affecting effectiveness of RPE such as beards and facial hair, sweat due to heat and humidity, and the requirement for a clean-shaven face when using tight-fitting models to ensure an effective seal
- the possible health implications of incorrect use of RPE
- range of compliant plant, tools and equipment used with products containing CS
- relevant documents with information on safe work practices and technical information on products containing CS, such as:
  - WHS policies and procedures
  - relevant jurisdictional legislation
  - relevant codes of practice
  - safe work method statements (SWMS)
  - job safety and environmental analysis (JSEA)
  - safety data sheets (SDS)

© Commonwealth of Australia, 2026 BuildSkills Australia

    - silica risk control plan
    - silica risk assessment
    - product manuals
    - technical specifications
    - product labels
- maintenance requirements on respirators for RCS and for power tools, plant and equipment
- safe cleaning and housekeeping methods with silica dust, including cleaning and managing wet or dry material on clothing
- dust control measures.

Assessment Conditions

Candidates must be provided with access to:

- real or simulated worksites
- environmental requirements and sustainability principles
- relevant tasks or work specifications
- appropriate documents, plant, materials, tools, equipment, PPE and RPE currently approved for use in industry and worksite according to jurisdictional work health and safety requirements
- relevant codes of practice, Australian Standards, legislation, regulations and requirements of workplace policies and procedures as required by Commonwealth, state and territory regulators.

Mandatory Workplace Requirements

Assessment of performance evidence may be in a workplace setting or an environment that accurately represents a real workplace.

CPCSIL4002 Supervise and manage work with products and materials generating respirable crystalline silica

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 11.0.

Application

This unit of competency specifies the skills and knowledge required to supervise and manage work involving products and materials that generate respirable crystalline silica (RCS).

The unit includes planning for and supervising the use of compliant plant, tools and equipment when working with products and materials containing crystalline silica (CS).

The unit also includes briefing workers on compliant and safe work requirements and establishing appropriate risk control measures to manage potential exposure to RCS, and reviewing work practices to support continuous improvement processes for work health and safety (WHS).

The unit applies to people with responsibility for managing health and safety, such as persons conducting a business or undertaking (PCBU), employers, supervisors and managers of employees, contractors, sub-contractors and suppliers working with products and materials containing CS.

The work may be carried out in factory or workshop settings, construction sites, commercial or residential settings, and sites such as tunnels, mines, quarries and demolition sites.

Licensing/Regulatory Information

Completion of the general construction induction training program, specified in the Safe Work Australia model *Code of Practice: Construction Work*, is required by anyone carrying out construction work. Additional Licensing, legislative, regulatory or certification requirements may apply in some states and territories. For further information, check with the relevant regulatory authority.

Building and Construction

Elements and Performance Criteria

Elements describe the essential outcomes.	*Performance criteria describe what needs to be done to demonstrate achievement of the element.*
1. Plan and prepare for work.	1.1 Check work or design requirements and workplace environment to determine level of exposure to RCS from work activity in accordance with WHS requirements, and manufacturer instructions.
	1.2 Conduct a risk assessment before work starts in accordance with WHS requirements.
	1.3 Check whether air monitoring is required and if needed, arrange appropriate air monitoring processes in accordance with WHS requirements.
	1.4 Identify WHS requirements for working with products containing CS, including relevant codes of practice, guidance material, safety data sheets (SDS), and standards, where available.
	1.5 Check relevant safety documentation is available.
	1.6 Analyse SDS or relevant technical data sheets to identify products and materials containing CS to meet work specifications and requirements.
	1.7 Plan how to implement and manage an appropriate combination of risk controls in accordance with WHS requirements.
	1.8 Check that relevant engineering controls, plant, tools, equipment, personal protective equipment (PPE) and respiratory protective equipment (RPE) eliminate or minimise worker exposure to

© Commonwealth of Australia, 2026 BuildSkills Australia

	RCS for the planned work, in accordance with WHS requirements and manufacturer specifications.
	1.9 Determine competency requirements for all workers performing the specified work and arrange for training, where required, in accordance with WHS requirements.
	1.10 Prepare briefing information, records and communication protocols, including management of contingencies, to cover the project's duration.
2. Conduct workplace briefings and consultations.	2.1 Explain how work activities will be monitored, including work schedules, products and materials to be used, and the related risk control measures, to all workers, and how secondary exposure risks to other workers and the public will be managed in accordance with WHS requirements.
	2.2 Assign work roles and responsibilities to workers and confirm their understanding of health and safety risks when working with products and materials containing CS.
	2.3 Discuss communication and reporting processes with workers, including responsibilities and when to seek expert or authoritative advice when working with products and materials containing CS.
	2.4 Confirm with workers what action to take if they are unsure whether products and materials contain CS, in accordance with workplace WHS requirements.
	2.5 Discuss expected safe work practices with workers, including correct use of PPE, RPE and safe work practices for working with products and materials containing CS in accordance with WHS

© Commonwealth of Australia, 2026 BuildSkills Australia

	requirements and manufacturer instructions.
	2.6 Explain RPE fit-testing requirements to workers and confirm their responsibilities for carrying out fit checking RPE before use, in accordance with WHS requirements and manufacturer instructions.
3. Implement safety requirements.	3.1 Develop and implement relevant safety documentation for work activity.
	3.2 Confirm workers are appropriately trained in the use of RPE, fit testing results, fit checking, maintenance, serviceability and storage, in accordance with WHS requirements and manufacturer instructions.
	3.3 Check that plant, tools and equipment meet workplace WHS requirements and that dust capture, extraction, suppression and management measures are in place and operational.
	3.4 Apply an appropriate combination of control measures based on the duration of work activity.
	3.5 Conduct or arrange fit testing for operators and other workers, where applicable, in accordance with Australian Standards and manufacturer instructions.
4. Manage worksite operations.	4.1 Confirm with workers that PPE and relevant RPE are suitable and serviceable for the type and scope of work, in accordance with WHS requirements and manufacturer specifications.
	4.2 Monitor that plant, tools, equipment and work activities are compliant with processes used to manage RCS risks, in accordance with WHS requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

	4.3 Conduct ongoing monitoring and assessment checks to confirm safe work practices and control measures are being complied with in accordance with WHS requirements.
	4.4 Conduct ongoing worksite consultation and communication to ensure compliance with agreed control measures and WHS requirements when working with products and materials containing CS.
	4.5 Apply appropriate escalation processes where control measures or mitigation strategies are deemed to be ineffective, compromised and/or beyond scope of supervisor's authority, in accordance with WHS requirements.
	4.6 Coordinate relevant manufacturers, suppliers, installers and other relevant trades in accordance with work schedules, product and material use and relevant risk control measures.
	4.7 Manage changes to work practices and risk controls to address varying weather and site conditions in accordance with WHS requirements.
5. Oversee compliant clean-up, maintenance and storage operations.	5.1 Check that on completion of the work activity, the work area has been cleaned, plant, tools, equipment and PPE have been cleared, and dust and slurry has been disposed of in accordance with WHS requirements.
	5.2 Check reusable RPE has been cleaned, maintained and stored correctly in accordance with manufacturer instructions.
	5.3 Check that disposable RPE and PPE are disposed of in accordance with WHS requirements and manufacturer instructions.

© Commonwealth of Australia, 2026 BuildSkills Australia

6. Review workplace operations.	6.1 Review work practices used when working with products and materials containing CS and confirm they comply with WHS requirements, including employee regulatory requirements.
	6.2 Review how effective the control measures were in managing exposure risks during workplace operations.
	6.3 Review the serviceability and effectiveness of the PPE, including RPE, used to reduce exposure risks for the duration of the work.
	6.4 Record, report and recommend actions to address compliance findings in accordance with workplace continuous improvement processes and requirements.
	6.5 Record and report high risk work relating to CS in accordance with WHS requirements.
	6.6 Record and store air monitoring and worker health monitoring reports in accordance with WHS requirements.

Assessment Requirements for CPCSIL4002 Supervise and manage work with products and materials generating respirable crystalline silica

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements and performance criteria of this unit.

Specifically, the candidate must:

- demonstrate compliance with employer responsibilities, including compulsory reporting requirements
- select and supervise the application of a combination of control measures for three different work activities, such as cutting, drilling or grinding of products or materials containing crystalline silica (CS).

In doing so, the candidate must:

- confirm that suitable respiratory protective equipment (RPE) is selected and used correctly by all workers for the work activity
- verify that fit testing and fit checking of RPE have been completed and that all workers have been trained in the use, maintenance and storage of RPE
- confirm RPE fit testing results and currency where required
- verify that plant, tools and equipment are setup, used and maintained in line with selected control measures.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- mandatory control measures, including the hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls
    - administrative controls
    - personal protective equipment (PPE)/RPE
- health risks working with products and materials containing CS
- health effects from inhaling respirable crystalline silica (RCS)
- products containing CS, including:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - engineered stone
    - concrete
    - mortar
    - bricks
    - pavers
    - tiles
    - natural stone material
    - cement sheeting
    - aerated concrete
    - sand
    - mulch
- work health and safety (WHS) policies, procedures, regulations and legislation
- how and when to access the silica register, including:
    - to confirm that required health monitoring has been completed before assigning any worker to high-risk silica work
    - providing information from the register to authorised persons or regulatory authorities upon request, according to privacy and legislative requirements
- Australian Standards, regulations and codes of practice relevant to supervising and managing work with products and materials generating RCS
- persons conducting a business or undertaking (PCBU), employers, supervisors and managers responsibilities and duty of care requirements:
    - consultation and communication processes
    - WHS regulations and legislation, and health monitoring requirements
    - related to secondary exposure of other workers and general public
    - air monitoring
    - referral for medical assessment according to jurisdictional regulatory requirements
- safety information documents:
    - codes of practice
    - guidance notes
    - job safety analysis (JSA)
    - safety data sheets (SDS)
    - safe work method statement (SWMS)
- types of silicosis based on frequency of exposure and level of dust
- industries impacted by potential exposure to RCS

© Commonwealth of Australia, 2026 BuildSkills Australia

- compliant use of a range of plant, tools and equipment used with products and materials containing silica content
- maintenance requirements of respirators for RCS and for power tools, plant and equipment
- maintenance and storage requirements for reusable PPE and RPE
- RPE fit testing and fit checking requirements
- manufacturer requirements
- training for RPE use, maintenance and storage
- safe use and disposal of disposable PPE and RPE
- housekeeping methods:
    - regular cleaning practices
    - wearing RPE during cleaning
    - not sweeping or blowing of dust
    - a minimum class of vacuum cleaner, according to Australian Standards
    - wet wiping
    - use of water filtration
- dust control measures
- engineering controls, including maintenance:
    - dust capture extraction
    - wet cutting methods and water suppression
    - respiratory protection
    - local exhaust ventilation
- activities generating RCS health hazards and risks may include:
    - cutting
    - crushing
    - drilling
    - grinding
    - chiselling
    - abrasive polishing
    - exfoliating or flaming
    - demolishing
    - excavating, earth moving and drilling plant operations
    - clay and stone processing machine operations
    - paving and surfacing

© Commonwealth of Australia, 2026 BuildSkills Australia

    - mining, quarrying and mineral ore treating processes
    - tunnelling
    - construction labouring activities
    - brick, concrete or stone cutting; especially using dry methods
    - abrasive blasting (blasting agent must not contain greater than 1 per cent of CS) foundry casting
    - angle grinding, jack hammering, and chiselling, tuck pointing and wall chasing of concrete or masonry
    - hydraulic fracturing of gas and oil wells
    - removing form work
    - cleaning activities
    - pottery making
- WHS policies and procedures
- reporting notifiable incidents
- WHS recording, reporting and audit requirements of records
- environmental guidelines regarding waste disposal of slurry mixtures and dust containment strategies.

Assessment Conditions

Candidates must be provided with access to:

- real or simulated worksites
- relevant tasks or work specifications
- appropriate documents, materials, tools, equipment, PPE and RPE currently approved for use in industry
- relevant codes of practice, Australian Standards, legislation, regulations and requirements of workplace policies and procedures as required by Commonwealth, state and territory regulators
- relevant environmental guideline requirements.

Mandatory Workplace Requirements

Assessment of performance evidence may be in a workplace setting or an environment that accurately represents a real workplace.

CPCSPS4001 Investigate and prepare swimming pool site

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to prepare a site for swimming pool construction. It includes investigating the site to confirm site levels and pool height and supervising the excavation.

This unit applies to a range of contexts and reflects the role of those who are responsible for preparing sites for the installation or construction of:

- private swimming pools
- public swimming pools, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit sector(s)

Swimming Pool and Spa Building

© Commonwealth of Australia, 2026 BuildSkills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate site conditions.	1.1	Read and interpret relevant site and swimming pool construction information from plans, specifications, codes and standards.
		1.2	Interpret and apply work health and safety and environmental requirements.
		1.3	Evaluate site access, delivery service requirements and space for storage of materials.
		1.4	Apply relevant WHS regulations and codes when locating and preparing for work near existing underground and overhead services.
		1.5	Assess and resolve site issues that may impact pool construction.
		1.6	Calculate amount of excavation spoil and plan the removal.
2	Prepare site for pool excavation.	2.1	Prepare procedures for onsite and public safety during project work.
		2.2	Design site access and egress and arrange temporary site fencing.
		2.3	Set out pool position, finish height of pool and depth of excavation from Australian Height Datum (AHD).
		2.4	Organise plant, machinery and equipment for the excavation process.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Coordinate and manage excavation.	3.1	Check local government and certifier approval and detail drawings to confirm structural requirements.
		3.2	Oversee the excavation process ensuring adherence to plan specifications and safety requirements.
		3.3	Examine soil stability and take necessary steps to avoid soil collapse.
		3.4	Verify soil compaction complies with soil test report, standards and codes.
4	Prepare site for pool construction.	4.1	Oversee the removal of excess soil and cleaning of public areas.
		4.2	Prepare site for delivery of swimming pool construction materials.
		4.3	Complete necessary documentation and notify relevant person of next stage of pool construction.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- reading skills to interpret soil test reports
- oral communication skills to interact with clients from diverse backgrounds
- numeracy skills to use measurements and apply formulas to calculate levels
- technology skills to use digital measuring devices.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCSPS4001 Investigate and prepare swimming pool site

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by preparing two sites for pool construction, one level site and one with sloping/uneven ground.

In doing this, the candidate must:

- determine site contours, datum mark and finished height of pool from project plans
- control risks relating to excavation work.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to excavation for of swimming pools
- relevant sections of the National Construction Code (NCC)
- excavation work code of practice
- Guide for working in the vicinity of overhead and underground electric lines
- features of project plans and specifications
- processes, procedures and techniques for:
    - levelling using a water level and laser level
    - pool excavation
    - installing ancillary pipework
- operational and functional features of plant, tools and equipment
- workplace procedures and workplace safety:
    - hierarchy of control
    - hazardous manual tasks
    - competency requirements for operating pumping equipment
    - temporary safety barriers and fences around swimming pool construction sites
- workplace and environmental requirements relating to waste disposal and clean up.

© Commonwealth of Australia, 2026 BuildSkills Australia

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to preparation and excavation of sites for swimming pools
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace safety and environmental requirements.

CPCSPS4002 Select, procure and store construction materials for swimming pool and spa projects

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Minor edits to formatting.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to supervise the systems by which construction materials are selected, acquired and stored on site for swimming pool and spa projects. It includes identifying non-compliant materials to ensure the delivered construction materials meet the requirements of the National Construction Code (NCC) and contract and service specifications.

This reflects the role of builders, managers and related construction industry professionals responsible for applying quality standards to the procurement and onsite storage of materials for the construction of swimming pools in a range of contexts:

- private swimming pools
- public swimming pools, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate suitability of swimming pool and spa building materials.	1.1	Obtain and ensure currency of relevant project plans, specifications, codes and construction requirements.
		1.2	Identify materials specified in project plans and specifications and assess their compliance and suitability for the project and the region.
		1.3	Establish environmental impacts of different materials.
		1.4	Confirm material installation and assembly tolerances to meet requirements of relevant construction industry standards and codes.
2	Select and procure materials.	2.1	Choose materials for their compliance with structural requirements, durability, sustainability, safety and cost effectiveness.
		2.2	Consider short- and long-term degradation of materials in relation to the project’s proposed life cycle.
		2.3	Evaluate and select alternative materials if specified materials are unavailable.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Finalise selection of materials for use in accordance with contractual requirements and in consultation with relevant professionals and the client.
		2.5	Procure and order materials following workplace purchasing procedures.
1	Supervise onsite delivery and storage of materials.	3.1	Determine limitations and effects of transportation on materials and components and investigate potentially damaging circumstances.
		3.2	Instruct relevant persons of workplace safety requirements when handling and storing delivered materials.
		3.3	Implement procedures for inspecting all materials delivered onsite for quantity, quality, defects and damage.
		3.4	Inform relevant persons of actions required to deal with quality inconsistencies of delivered building materials.
		3.5	Supervise and allocate safe storage space, security and protection of materials to meet manufacturer specifications and site safety requirements.
		3.6	Maintain records of delivery, variations, damage and inferior materials.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- reading skills to interpret information on materials and to evaluate their suitability for the job
- oral communication skills to use questioning and active listening when clarifying procurement requirements
- numeracy skills to calculate material quantities
- technology skills to use devices to record and track orders and deliveries.

Assessment Requirements for CPCSPS4002 Select, procure and store construction materials for swimming pool and spa projects

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Minor edits to formatting.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by selecting, procuring and organising the delivery and safe onsite storage for projects covering two of the following:

- one swimming pool
- one spa
- one swimming pool and spa.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to concrete swimming pools and spas
- relevant sections of the National Construction Code (NCC)
- features of swimming pool and spa project plans and specifications
- pool fencing requirements
- properties, applications and limitations of swimming pool and spa materials, products and components
- workplace quality assurance systems
- processes, procedures and techniques for:
    - building swimming pools and spas
    - calculating concrete quantities
    - using digital devices to track, monitor and control concrete delivery

© Commonwealth of Australia, 2026 BuildSkills Australia

    - applying ‘shotcrete’
    - applying internal finishes to concrete swimming pools and spas
- type, nature and performance of concrete:
    - properties and uses of cement
    - principles of reinforced concrete using steel, wire, fibres
    - effects of impurities in concrete
    - causes of surface defects during concrete placement
    - compaction of concrete
    - detrimental effects on concrete of poor or no curing
- types of curing methods:
    - accelerated curing
    - continuously wetting concrete
    - impermeable membrane curing
- finishing processes and surface treatments for swimming pool and spa shell
- operational and functional features of tools and equipment
- relevant sections of work health and safety regulations
- workplace procedures and workplace safety:
    - hierarchy of control
    - hazardous manual tasks
    - hazardous chemicals
    - falls from heights
    - temporary safety barriers and fences around pools
    - competency requirements for operating pumping equipment
- workplace and environmental requirements relating to waste disposal and clean-up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to swimming pools and spas
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace policies and procedures for procuring and storing construction materials

CPCSPS4003 Install swimming pool and spa subsoil drainage

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install subsoil drainage to variously shaped in-ground swimming pools and spas. It includes preparing and installing the drainage during excavation.

This reflects the role of those who are responsible for diverting subsoil water away from the swimming pool and spa construction site. It applies to a range of contexts:

- private swimming pools
- public swimming pools, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan the sub-soil drainage.	1.1	Access, read and interpret relevant information from plans, specifications, codes and standards.
		1.2	Interpret and apply work health and safety and environmental requirements.
		1.3	Locate existing underground services and avoid during excavation and construction works.
		1.4	Identify type, dimensions and area of subsoil drainage.
		1.5	Calculate and order materials.
		1.6	Determine commencement date and schedule delivery of material, components and required plant and equipment.
		1.7	Determine job priorities and sequence job tasks in consultation with others on site.
2	Prepare for and install subsoil drainage.	2.1	Set out position and depth of drainage.
		2.2	Select, fit and use personal protective equipment appropriate for the activity.
		2.3	Conduct a pre-operation check of plant and equipment.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Excavate trench depth and width to set out position.
		2.5	Install and compact specified drainage material to determined levels.
		2.6	Install drainage pipework and backfill trenches.
1	Clean up site.	3.1	Clear the work area and reuse, recycle or dispose of materials in accordance with workplace and environmental requirements.
		3.2	Clean tools and equipment, check for serviceability, report any damage or faults and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCSPS4003 Install swimming pool and spa subsoil drainage

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing subsoil drainage for two different swimming pool construction projects.

In doing this, the candidate must lay drainage and components to set heights, levels and falls.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to drainage and construction of swimming pools and spas
- relevant sections of the National Construction Code (NCC)
- features of swimming pool and spa project plans and specifications
- properties, applications and limitations of subsoil drainage materials, products and components:
    - perforated pipes and jointing materials
    - geo-textile fabric
    - granular materials
- processes, procedures and techniques for:
    - subsoil drainage excavation
    - installing various types of drainage materials and products
- effects of excessive water on soil and swimming pools
- operational and functional features of tools and equipment
- workplace procedures and workplace safety:
    - hierarchy of control
    - hazardous manual tasks
    - competency requirements for operating excavation equipment
    - temporary safety barriers and fences around pools

CPCSPS4004 Install swimming pool and spa circulation systems and components

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install pipework to swimming pool and spa circulation systems and components. It includes installing and connecting pool pipework to pumps, filtration and heating systems.

This unit applies to a range of contexts and reflects the role of those who are responsible for the installation process of pipework to above-ground and in-ground:

- private swimming pools
- public swimming pools, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

CPCSPS4005 Install prefabricated fibreglass swimming pools

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 8.0. Amended Performance Criteria 1.6.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install variously shaped in-ground prefabricated fibreglass swimming pools. It includes preparing for filtration and circulation systems and luminary bonding for equipment and lighting.

This unit applies to a range of contexts and reflects the role of those who are responsible for the installation process and the management of excavation and heavy lifting equipment to complete the installation of prefabricated fibreglass:

- private swimming pools
- public swimming pools, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

CPCSPS4006 Apply sprayed concrete to shape and finish swimming pools and spas

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Correction to Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to apply the process of spraying concrete to variously shaped in-ground swimming pool and spa shells using high pressure equipment. It includes knowledge of structural principles and properties and the performance of concrete.

This unit reflects the role of those who are responsible for the process of applying, shaping and finishing pool and spa shells. It applies in a range of contexts:

- private swimming pools
- public swimming pools, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan to spray concrete for swimming pool and spa shells.	1.1	Access, read and interpret relevant concrete swimming pools and spas information from plans, specifications, codes and standards.
		1.2	Interpret and apply work health and safety and environmental requirements relating to concrete spraying of swimming pool and spa shells.
		1.3	Identify shape and finish of sprayed concrete and confirm with relevant person.
		1.4	Determine concrete properties from specifications and calculate quantity.
		1.5	Determine job priorities and sequence job tasks in consultation with others on site.
		1.6	Schedule delivery of concrete and required plant and equipment in consultation with equipment operators.
2	Determine compliance with structural principles.	2.1	Establish swimming pool and spa reinforcing design meets the structural principle requirements for the shape, size and capacity of the swimming pool and spa.
		2.2	Inspect reinforcement and components and check they are fixed as specified in structural plans and comply with standards and codes.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Prepare for concreting work.	3.1	Test delivered concrete for swimming pool and spa shell meets the stated specifications, standards and codes.
		3.2	Conduct a pre-operation check on plant and equipment.
		3.3	Check luminaires bonding, other cabling services, filtration and recirculation plumbing are correctly installed.
		3.4	Confirm accuracy, stability and strength of formwork as required.
		3.5	Mask and protect ancillary installations from concrete overspray.
4	Supervise spray and finish process to concrete shell.	4.1	Select, fit and use personal protective equipment appropriate for activity.
		4.2	Establish starting point for application of concrete.
		4.3	Direct the application of concrete to specified thickness and reinforcement coverage.
		4.4	Control the spraying and shaping of pool shell contours, stairs and landing.
		4.5	Observe and direct the even finish of walls, base, coving and stairs to specified dimensions and falls.
		4.6	Check cleanliness and operation of recirculation system.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Clean up site.	5.1	Clear the work area and reuse, recycle or dispose of materials following workplace and environmental requirements.
		5.2	Clean tools and equipment, check for serviceability, report any damage or faults and store and secure.

Assessment Requirements for CPCSPS4006 Apply sprayed concrete to shape and finish swimming pools and spas

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Correction to Knowledge Evidence.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying the operations of spraying and finishing for one of the following:

- one swimming pool
- one spa.

In doing this, the candidate must:

- evaluate the properties and performance of concrete and impacts on concrete integrity, and analyse the ability of concrete shell to withstand imposed forces and pressures
- ensure consistent concrete thickness and coverage on steel reinforcing as specified
- direct the shaping of concrete pool shell and finishing to obtain an even and defect-free surface in preparation for interior finish
- apply specified concrete curing methods.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to concrete swimming pools and spas
- relevant sections of the National Construction Code (NCC)
- features of swimming pool and spa project plans and specifications
- pool fencing requirements
- properties, applications and limitations of swimming pool and spa materials, products and components
- workplace quality assurance systems

CPCSPS4007 Commission ancillary swimming pool and spa systems and hand over to client

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to commission ancillary swimming pool and spa systems. It includes the testing of filtration, heating and lighting systems.

This unit reflects the role of those who are responsible for commissioning ancillary pool systems and finalising hand over to clients. It applies to a range of contexts:

- private swimming pools
- public swimming pools, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Collate project and client information.	1.1	Review client information to ensure client requirements have been met.
		1.2	Review contractual conditions to determine final payment.
		1.3	Compile client information and instructions for operation of swimming pool and spa equipment and systems.
		1.4	Contact client and arrange suitable time to meet for handover.
2	Connect and test ancillary equipment.	2.1	Test operation of filtration, heating, lighting and cleaning control systems.
		2.2	Conduct adjustment in line with pool environment, conditions and operating specifications.
		2.3	Set equipment timers to accommodate pool environment and conditions.
		2.4	Inspect workmanship and ensure all inclusions are supplied and fitted.
		2.5	Record outcomes and complete necessary documentation.
3	Conduct client handover.	3.1	Confirm project completion and supply of inclusions with client.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Demonstrate operation and inform client of settings, adjustments and routine maintenance requirements.
		3.3	Supply owner with swimming pool and spa equipment guarantees, warranties and manufacturer operating instructions.

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria:

- oral communication skills to instruct client on operation of ancillary pool systems
- technology skills to set digital control systems.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCSPS4007 Commission ancillary swimming pool and spa systems and hand over to client

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- commissioning ancillary and control systems for one of the following:
    - one swimming pool
    - one spa
    - one swimming pool and spa
- carrying out handover to client.

The commissioning must include a:

- circulation system
- dosing system
- filtration system
- cleaning system.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, codes and standards relevant to swimming pools and spas
- pool fencing requirements
- pool cover requirements
- operational and functional features of ancillary pool systems
    - heating
    - filtration
    - lighting
    - cleaning
- features of contracts
- contractual requirements for pool builder and client.

© Commonwealth of Australia, 2026 BuildSkills Australia

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to swimming pools and spas
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace policies and procedures relevant to project handover
- workplace safety and environmental requirements.

CPCSPS4008 Install above-ground swimming pool

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to install variously shaped above-ground swimming pools. It includes preparing level and sloping sites and ancillary equipment for connection.

This unit applies to a range of contexts and reflects the role of those who are responsible for installation processes involving excavation and base preparation for above-ground:

- private swimming pools
- public swimming pools, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan to install above-ground swimming pool.	1.1	Access, read and interpret relevant information from plans, specifications, codes and standards.
		1.2	Interpret and apply work health and safety and environmental requirements.
		1.3	Confirm type and location of pool with client.
		1.4	Calculate and order base materials and filtration components.
		1.5	Determine commencement date and schedule delivery of material and components and required plant and equipment.
		1.6	Apply relevant WHS regulations and codes when locating and preparing for work near existing underground and overhead services.
		1.7	Determine job priorities and sequence job tasks in consultation with others on site.
2	Prepare for pool installation.	2.1	Select, fit and use personal protective equipment appropriate for the activity.
		2.2	Select and check tools and equipment for serviceability.
		2.3	Set out and mark pool position and finish height.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Remove grass and topsoil and excavate to the determined depth and level.
		2.5	Fill, spread, screed and compact base to specified level.
3	Assemble pool.	3.1	Determine starting point and prepare pool base and wall components.
		3.2	Assemble wall material following manufacturer instructions.
		3.3	Complete all fixtures and mask to protect internal lining.
		3.4	Install, without damage, internal pool liner in accordance with manufacturer instructions.
		3.5	Secure lining and finish pool capping.
4	Install recirculation system.	4.1	Measure, locate and fit skimmer and return.
		4.2	Locate and install pump, plumbing pipes and filtration system accordance with specifications.
		4.3	Fill pool and check pool and ancillary equipment for leaks.

© Commonwealth of Australia, 2026 BuildSkills Australia

5	Clean up site.	5.1	Clear the work area and reuse, recycle or dispose of materials in accordance with workplace and environmental requirements.
		5.2	Clean tools and equipment, check for serviceability, report any damage or faults and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCSPS4008 Install above-ground swimming pool

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing two above-ground swimming pools. The installations must involve:

- differently sized and shaped above-ground swimming pools
- the use of different prefabricated materials on each pool.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to above-ground swimming pools and spas
- pool fencing requirements
- types and materials of pool covers
- relevant sections of the National Construction Code (NCC)
- manufacturer instructions for installing above-ground swimming pools
- properties, applications and limitations of swimming pool and spa fabrication materials, products and components
- processes, procedures and techniques for:
    - levelling pool and spa base
    - installing and assembling pools and spas
    - connecting filtration, recirculation, heating and lighting systems
- licensing and competency requirements for installing swimming pool and spa ancillary equipment
- operational and functional features of tools and equipment
- relevant sections of work health and safety (WHS) Acts and regulations
- workplace procedures and workplace safety:
    - hierarchy of control

© Commonwealth of Australia, 2026 BuildSkills Australia

    - hazardous manual tasks
    - temporary safety barriers and fences around pools
- workplace and environmental requirements relating to waste disposal and clean-up.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or in a simulated workplace environment.

Candidates must have access to:

- regulations, standards and codes relevant to above-ground swimming pools and spas
- relevant sections of the NCC
- project plans, specifications and manufacturer instructions
- workplace safety and environmental requirements.

CPCSPS4009 Undertake interior finishing of swimming pools and spas

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to undertake interior finishes to variously shaped swimming pools and spas. It includes applying interior finishes to concrete and fibreglass swimming pools and spas.

This unit reflects the role of those who are responsible for the application of interior finish to swimming pools and spas. It applies in a range of contexts:

- private swimming pools
- public swimming pools, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Swimming Pool and Spa Building

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan interior finishing of swimming pool and spa.	1.1	Access, read and interpret relevant swimming pool and spa information from plans, specifications, codes and standards.
		1.2	Interpret and apply work health and safety and environmental requirements.
		1.3	Identify properties of materials and requirements for application and installation for internal finish of the project.
		1.4	Calculate material quantities required as specified.
		1.5	Determine project timeframes, job priorities and sequence of job tasks in consultation with others on site.
		1.6	Schedule delivery of material and components and required plant and equipment.
2	Prepare for the finishing work.	2.1	Confirm materials match the delivery docket and comply with job specifications.
		2.2	Select, fit and use personal protective equipment appropriate for activity.
		2.3	Check plant and equipment for serviceability.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Drain excess water from swimming pool and spa.
		2.5	Protect lighting and recirculation system components against damage from subsequent works.
3	Finish pool and spa interior.	3.1	Repair damage to or imperfections in swimming pool and spa surface.
		3.2	Use appropriate techniques to wash, seal and bond surface.
		3.3	Protect and maintain pool shell to avoid premature drying of pool finish.
		3.4	Establish a starting point for application of interior finish and ensure correct process and sequence are followed.
		3.5	Check application techniques for consistent thickness, colour, shape and smoothness.
		3.6	Confirm interior finish is completed to specifications and to manufacturer guidelines.
4	Clean up site.	4.1	materials in accordance with workplace and environmental requirements.
		4.2	Clean tools and equipment, check for serviceability, report any damage or faults and store and secure.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCSPS4009 Undertake interior finishing of swimming pools and spas

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by applying an interior finish to two different swimming pool or spa projects.

One project must use concrete and one project must use fibreglass.

As a minimum, the finish must be applied to a corner of a pool or spa, extending one metre deep and one metre wide in all directions, including the radius on the floor of the pool.

In doing this, the candidate must:

- prepare the work area to meet safety requirements
- clean and prepare surface to key and bond interior finish
- apply material maintaining a uniform interior surface finish
- protect finished surface to maintain quality until dry.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards and codes relevant to interior finishing of swimming pools and spas
- swimming pool and spa project plans, specifications, standards and codes
- National Construction Code (NCC)
- properties, applications and limitations of swimming pool and spa materials, products and components used for interior finishing
- processes, procedures and techniques for:
    - measuring and installing vinyl liner to variously shaped swimming pools and spas
    - applying interior finishes to pools and spas:
        - marblesheen
        - pebblecrete

CPCSPS4011 Install precast concrete swimming pools

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to

install precast concrete swimming pools (precast pools). A precast pool must have a total mass not greater than 12,000 kg (delivered weight). Products of a greater mass are not considered a precast pool.

It includes preparing for and installation of filtration, circulation, heating and lighting systems.

This unit reflects the role of those who are responsible for the installation process and the management of excavation and heavy lifting equipment to complete the installation. It applies in a range of contexts:

- private swimming pools
- public swimming pools, including:
    - hotels, motels and apartments.

This unit is suitable for those using specialised knowledge to complete routine and non-routine tasks, and their own judgement to deal with predictable and sometimes unpredictable problems.

No licensing or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan installation of precast pool.	1.1	Access, read and interpret relevant information from plans, specifications, codes and standards.
		1.2	Interpret and apply work health and safety and environmental requirements.
		1.3	Identify and confirm with client type and location of filtration and circulation system.
		1.4	Calculate and order materials and components.
		1.5	Determine commencement date and schedule delivery of precast pool and required plant and equipment.
		1.6	Locate existing underground and overhead services prior to commencement.
		1.7	Determine job priorities and sequence job tasks in consultation with others on site.
2	Prepare to install precast pool.	2.1	Select, fit and use personal protective equipment appropriate to activity.
		2.2	Set out and mark pool position, finish height and excavation depth.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.3	Excavate to set-out depth and side clearance, allowing for backfill.
		2.4	Select and prepare base in accordance with soil classifications of site.
		2.5	Confirm installation of circulation pipework to precast pool.
		2.6	Confirm traffic management requirements for location.
3	Install precast pool and commission ancillary systems.	3.1	Implement requirements for managing traffic during precast pool installation.
		3.2	Communicate with crane service provider to lift, position and set precast pool to the specified level.
		3.3	Attach ancillary equipment and piping to precast pool.
		3.4	Fill pool with water and balance water chemistry.
		3.5	Commission filtration, circulation, heating and lighting systems.
		3.6	Clean up the work area in accordance with workplace and environmental requirements.
4	Conduct client handover.	4.1	Confirm project completion and supply of inclusions with client.

© Commonwealth of Australia, 2026 BuildSkills Australia

		4.2	Demonstrate operation and inform client of settings, adjustments and routine maintenance requirements.
		4.3	Supply client with precast pool equipment guarantees, warranties and

Modification History

Release	Comments
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by installing one precast concrete swimming pool.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- regulations, standards, codes and permits relevant to installation of precast concrete swimming pools:
    - National Code of Practice for Precast Tilt-Up and Concrete Elements in Building Construction
    - Australian Standards
- relevant sections of the National Construction Code (NCC)
- precast pool project plans and specifications
- properties, applications and limitations of precast concrete swimming pool materials and swimming pool products and components
- processes and procedures for:
    - pool excavation
    - types of base preparations – screed and compact base, concrete slab
    - lifting, setting and levelling precast concrete swimming pools
    - connecting filtration and circulation systems
- licensing and competency requirements for installing swimming pool and spa ancillary equipment
- operational and functional features of tools and equipment
- workplace safety:
    - hierarchy of control
    - temporary safety barriers and fences around pools

CPCSUS4001 Implement and monitor environmentally sustainable work practices

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to effectively analyse, implement and monitor environmentally sustainable work practices and their effectiveness in the workplace. It includes contributing to consumer environmental efficiency.

This unit of competency applies to those with responsibility for a specific work group, area or worksite, who develop processes and tools and lead a work group or team to improve environmental sustainability.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Sustainability

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Investigate current practices in relation to resource usage.	1.1	Identify current and relevant environmental regulations applying to the organisation.
		1.2	Assess procedures and practices for ensuring compliance with environmental regulations.
		1.3	Collect data and information on environmental and resource efficiency systems and procedures.
		1.4	Analyse and document current purchasing strategies.
		1.5	Access and analyse information and data for current work processes and products.
		1.6	Measure and document current resource usage of the work area, site or group and provide findings to stakeholders, key personnel and specialists.
2	Set targets for improvement.	2.1	Seek input and feedback regarding process inefficiencies, environmental hazards and risks and opportunities for improvements from stakeholders, key personnel and specialists.
		2.2	Source external information and data from supplier and contractor invoices, tenders and quotes.
		2.3	Evaluate alternative solutions to worksite environmental issues.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Set efficiency targets.
1	Implement performance improvement strategies.	3.1	Source and implement techniques, tools, technology and strategies to assist in achieving targets.
		3.2	Apply workplace continuous improvement strategies and communicate solutions to stakeholders, key personnel and specialists.
		3.3	Integrate and implement workplace environmental and resource efficiency improvement plans in conjunction with other operational activities.
		3.4	Cost full value of environmental strategies against current assets and expenditure.
		3.5	Seek feedback, ideas and suggested actions regarding implemented environmental and resource efficiency plans from management, stakeholders, key personnel and specialists.
4	Monitor performance.	4.1	Document outcomes and communicate reports on targets to key personnel and stakeholders.
		4.2	Re-evaluate environmental strategies.
		4.3	Review and readjust targets and modify new tools and strategies.
		4.4	Promote successful strategies and, where possible, reward participants.

© Commonwealth of Australia, 2026 BuildSkills Australia

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to:
  - collect, interpret and measure data to identify and improve sustainable practices
- technology skills to:
  - use communication tools and devices to communicate and collaborate effectively with others
  - use equipment and programs to access, extract information and develop relevant documentation.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCSUS4001 Implement and monitor environmentally sustainable work practices

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by analysing and monitoring effective sustainable workplace practices on at least one worksite, area or construction work group.

In doing this, the candidate must:

- access, collect, analyse and organise data from a variety of sources to inform and advise opportunities for improvement
- devise strategies and practices to improve environmental and resource efficiency
- develop and implement improvement plan and introduce tools and technology.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- government legislation, regulations, codes and standards:
    - environmental protection
    - Biodiversity Conservation Act
    - National Construction Code (NCC)
- environmental and sustainability practices:
    - efficient use of resources and materials
    - maximising opportunities to use renewable, recyclable, reusable and recoverable resources
    - management and treatment of waste and waste products
    - implementing and using alternative practices, procedures or materials to reduce or eliminate resource consumption on worksite
    - eliminating the use of hazardous and toxic materials

© Commonwealth of Australia, 2026 BuildSkills Australia

    - addressing environmental and resource sustainability initiatives
    - referring to federal government five-star rating for all new homes
- workplace environmental and sustainability issues:
    - how tradespersons can contribute to environmental sustainability
    - hazards and risks associated with worksite supervision
    - job specifications and strategies and procedures to maximise opportunities and minimise impacts
- environment industry associations
- methods, techniques and tools to measure environmental impact:
    - accessing the skills of others as appropriate to the specific industry context
    - environmental site management plans
    - examination of invoices from suppliers
    - examination of relevant information and data
    - integration of environmental and sustainability specifications in quotes and tenders
    - measurements made under different conditions
    - recommendation of sustainable products and practices to stakeholders
- workplace safety requirements:
    - hierarchy of control
    - risk management.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- government legislation
- current industry and Australian codes and standards
- current project plans, specifications and manufacturer’s product information
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- equipment, technology, applications and software to collect, interpret and measure data and develop costings and reports.

CPCSUS4002 Use building science principles to construct energy efficient buildings

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to incorporate building science principles into the construction of energy efficient buildings. It includes the ability to research, use constructive thinking and problem-solving processes to identify appropriate sustainable solutions.

This unit of competency applies to those who apply building science principles to construction of energy efficient residential and commercial buildings.

This unit of competency is suitable for those using specialised knowledge to complete routine and non-routine tasks and using their own judgement to deal with predictable and sometimes unpredictable energy efficient building problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Sustainability

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Determine the building envelope expectations.	1.1	Identify type of use and energy efficiency expectations of the building.
		1.2	Identify risks associated with occupants' indoor activities and health and safety considerations.
		1.3	Determine environmental and climatic conditions that impact the resilience of building materials.
		1.4	Identify construction methods that factor in durability of materials.
		1.5	Consult relevant legislation, standards, regulations and codes to identify minimum energy efficient standards to be met.
		1.6	Consult relevant domestic and international codes, standards and examples of best practice that meet or exceed current energy efficient standards.
2	Assess energy efficiency construction.	2.1	Research building science principles supporting energy efficiency.
		2.2	Review embodied energy of the specified products or materials to evaluate the energy efficiency.
		2.3	Research heating, ventilation and air conditioning (HVAC) systems to identify levels of energy efficiency, ventilation and indoor air quality.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Review mechanical ventilation systems and equipment to aid air flows for appropriateness and operational costs.
		2.5	Research and identify durability and appropriateness of moisture and vapour barriers to gain high levels of energy efficiency.
1	Decide on method of construction.	3.1	Identify site location and building position to maximise energy efficiency relating to environmental factors, climatic conditions and use of building.
		3.2	Identify and assess energy efficiency of thermal energy, heating and cooling, air and moisture flows throughout the building.
		3.3	Develop strategies to minimising unwanted air leakages.
		3.4	Evaluate and select mechanical ventilation systems and equipment for appropriateness to the site and operational costs.
		3.5	Evaluate and select materials for interior and exterior barriers for energy efficiency, durability and appropriateness for building site climate.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
  - use digital tools and devices to communicate and collaborate effectively with others
  - use technology and programs to access and extract information and develop relevant documentation.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCSUS4002 Use building science principles to construct energy efficient buildings

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by using building science principles in the development of recommendations for the use of energy efficient materials, products and construction methods for one residential construction project and one commercial construction project.

In doing this, the candidate must:

- incorporate building science principles for energy efficient materials and products used in the building envelope
- research and report on a range of energy efficient design and construction methods with a specific focus on:
    - energy efficient heating, cooling and ventilation
    - energy efficient construction methods and systems
    - effects of condensation, dampness, weatherproofing and waterproofing when preventative measures are incorrectly installed or ignored during construction.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- the National Construction Code (NCC)
- processes for the evaluation of energy efficiencies in buildings:
    - local and international research into building science methods
    - systems theory and analysis
    - manufacturer websites and technical data for energy efficient construction materials and systems
- theories and principles of efficient energy use of building and construction processes

© Commonwealth of Australia, 2026 BuildSkills Australia

- the impact on occupant's health and the adverse effect on material integrity and structural components by failing to meet design principles
- types, application and limitations of different construction materials when selecting construction materials and products for energy efficient buildings
- the role of embodied energy when selecting construction materials and products for energy efficient buildings
- general and environmental construction terminology
- effective energy efficient treatment of the building envelope:
    - gaps around ceiling downlights
    - gaps around insulating material
    - gaps under and around doors
    - openings for floor or ceiling ducts used to transmit heating or cooling
    - wall, floor or ceiling cracks
    - window seals
    - thermal mass
- extreme weather conditions impacting on a building:
    - cyclonic activity
    - extreme heat
    - risk of fire
    - heavy rain and flooding
    - storm weather
- work place safety requirements:
    - working with insulation
- digital tools and devices to communicate and collaborate effectively with others
- a range of digitally-based technology and applications for researching information.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- relevant government building and construction legislation

© Commonwealth of Australia, 2026 BuildSkills Australia

- current building and construction codes and Australian Standards
- the NCC
- construction drawings and specifications, organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- digital technology to research information and devices, applications and software to develop and save documents electronically.

CPCSUS4003 Maximise energy efficiency through applied trade skills

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to undertake trade work using techniques and practices aimed at achieving high levels of energy efficiency in the finished work. It includes identifying and applying principles or techniques designed to maximise the energy efficiency characteristics of a building or project.

This unit of competency applies to builders and tradespeople who identify opportunities for energy efficiency gains during construction of the building envelope or finishing work within the residential or commercial construction work.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Sustainability

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Identify energy efficiency aims of the project.	1.1	Use building science principles to identify efficiency expectations from plans, drawings and specifications.
		1.2	Confirm building envelope, energy efficiency requirements and specific instructions on priority areas in consultation with relevant personnel and stakeholders.
		1.3	Identify limitations and determine appropriate solutions to achieving energy efficiency requirements with relevant personnel.
2	Prepare for task.	2.1	Identify comparable products and materials based on building science knowledge and project energy efficiency specifications.
		2.2	Check substituted materials and products for comparable energy efficiency characteristics for approval with relevant person.
		2.3	Identify and factor into work plan differences in standard practice to achieving energy efficient outcome, gain approval and adjust task timeframe.
		2.4	Calculate material quantity from plans and specifications.
		2.5	Locate materials ready for use in proximity to the work area.
		2.6	Select energy efficient plant, tools and equipment appropriate to carry out specified tasks.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Perform tasks using energy efficient techniques.	3.1	Eliminate greenhouse gas emissions and avoid unnecessary waste of products and materials during the use of energy efficient techniques.
		3.2	Handle and use products and materials according to manufacturer specifications to ensure energy efficiency ratings are maintained when installed.
		3.3	Treat cavities and openings created in the building envelope during the project to avoid unnecessary air leakages.
		3.4	Maximise opportunities for achieving energy efficiency outcomes by minimising energy leakages.
4	Finalise and evaluate work.	4.1	Arrange assessment of work undertaken with qualified energy assessor to confirm extent of energy efficiency outcomes achieved.
		4.2	Identify and note improvements in own work practices to ensure energy efficiency outcomes for future development.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- technology skills to:
  - use mobile and communication tools and devices to communicate and collaborate effectively with others
  - use equipment and programs to access and extract information and develop relevant documentation.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by undertaking and completing three different activities to maximise energy efficiency of the process or finished product. The three activities may be related to or on the same construction project.

In doing this, the candidate must:

- use principles or techniques that are designed to maximise the energy efficiency characteristics of the building or project
- apply their trade skills to energy efficient practices during the project.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- general construction terminology
- building science principles:
    - building envelope
    - effective ventilation
    - heat, air and moisture flows:
        - conduction
        - convection
        - radiation
    - interaction between occupants, building components and systems, and the environment both indoors and out
    - moisture management and condensation
- energy efficient techniques:

© Commonwealth of Australia, 2026 BuildSkills Australia

  - advanced framing or optimal value engineering for energy efficient framing
  - appropriate selection and installation of insulation without compressing it
  - conserving energy by effectively sealing the building envelope to minimise air leakage (exfiltration and infiltration) in the building envelope, shell or enclosure
  - effectively installing windows and flashing without breaking the building envelope
  - effectively selecting and installing thermal insulation
  - minimising embodied energy
  - sealing, insulating and minimising duct leakage
  - sealing leaky joints
  - selecting recycled materials to minimise production energy
  - sourcing materials or products locally to minimise transport energy
- energy efficiency expectations:
  - acoustic and thermal insulation between zones and rooms
  - achieving relevant energy efficient requirements in the National Construction Code (NCC), and other relevant codes and regulations
  - achieving or maintaining a home energy rating, commercial building rating, or equivalent energy rating
  - effectively selecting and using thermal mass
  - energy conservation
  - minimising infiltration
  - minimising the heat loss and maximising the heat gain based on the requirements of the building reflective of the climatic zones
  - minimising thermal bridging
  - passive solar design approach
  - reducing or minimising energy costs and consumption to heat and cool the building
  - thermal resistance
  - ventilation, heat and energy recovery
  - zero energy homes
- workplace safety:
  - hierarchy of control
  - hazardous manual tasks
- processes, procedures and techniques for:
  - calculating material for the task

© Commonwealth of Australia, 2026 BuildSkills Australia

- organisation's project quality requirements
- environmental requirements and sustainability principles
- properties, characteristics and limitations of approved materials, products and components:
    - structural insulated panels
    - mud bricks
    - solar panels and battery storage
    - glazing
    - straw bale building products
- functional and operational features of tools and equipment.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- government building and environmental legislation
- relevant industry codes and standards
- current project plans, specifications and manufacturer's product information
- organisational policies, procedures and other quality documentation to undertake the performance criteria and assessment requirements
- business equipment, technology, applications and software to research product and material information and calculate energy gains.

CPCSUS5001 Develop workplace policies and procedures for sustainability

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.0. Knowledge Evidence updated for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to develop and implement organisational policies and procedures to continuously support resource efficiency and environmentally sustainable work practices. It includes sourcing and gathering information, including from regulatory sources and relevant stakeholders, to plan, develop and implement policies.

This unit of competency applies to those with managerial responsibilities for identifying approaches to create strategies and develop, implement and review workplace policies and procedures for sustainability.

The context of this unit applies to all industry sectors and sections within an organisation, including a worksite, designated work area, in transit and/or an office.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Sustainability

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Develop a workplace sustainability policy.	1.1	Define the scope of sustainability policy.
		1.2	Identify and consult with key stakeholders to gather input and feedback as part of the policy development process.
		1.3	Compile information and strategies relating to essential sustainability objectives to structure policies and procedures.
		1.4	Make recommendations for policy options based on likely effectiveness, timeframes and cost.
		1.5	Develop policy that reflects an organisation's commitment to sustainability as an integral part of business planning and business opportunity.
		1.6	Agree on appropriate methods of implementation.
2	Communicate the policy.	2.1	Promote the policy, including its expected outcome, to key stakeholders.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.2	Inform those involved in implementing the policy of responsibilities, activities to be undertaken and expected outcomes.
1	Implement and monitor the policy.	3.1	Develop and communicate procedures to assist in the implementation of the policy.
		3.2	Implement continuous improvement strategies for resource efficiency.
		3.3	Establish record systems for tracking approaches to sustainability continuous improvements.
4	Review policy implementation.	4.1	Document outcomes and provide feedback to key personnel and stakeholders.
		4.2	Investigate the success or otherwise of the policy.
		4.3	Monitor records to identify trends requiring remedial action and use information to promote continuous improvement of performance.
		4.4	Modify policies and procedures as required to ensure improvements are made and compliance is maintained.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- writing skills to:
  - prepare written reports, policies and procedures requiring precision of expression and language and structure suited to intended audience
- communication skills to:
  - manage different points of view and dissenting stakeholders
  - present information

© Commonwealth of Australia, 2026 BuildSkills Australia

- technology skills to:
    - use communication tools and devices to communicate and collaborate effectively with others
    - use equipment and programs to access and extract information and develop relevant documentation.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing and implementing policies and procedures for sustainable work practices for one of the following:

- a construction project worksite
- a designated work area
- an office

In doing this, the candidate must:

- gather and compile information from various sources
- engage with stakeholders and key personnel to plan the policy development process and identify requirements and issues that may cause disputes
- integrate into the sustainability policy:
    - minimising resource use
    - applying waste recovery strategies
    - reducing or eliminating use of hazardous chemicals and toxic materials
    - employing lifecycle management approaches at all stages of work
- review policies using performance indicators against measurable benchmarks to identify improvements.

© Commonwealth of Australia, 2026 BuildSkills Australia

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- environmental and sustainability legislation, requirements, policies, standards and guidelines including:
    - Environmental Protection and Biodiversity Conservation Act
    - *ISO 14001 Environmental Management Systems*
- government building legislation, codes and standards
- the National Construction Code (NCC)
- organisational policies and procedures, quality systems and best practice approaches
- addressing sustainability initiatives:
    - lifecycle management and thinking
    - elimination or reduction of greenhouse gases
    - star rating for all new homes
    - green purchasing programs to purchase sustainable products
    - green plumbing
    - product stewardship
    - supply chain management to influence suppliers to take up sustainability approaches
    - sustainability action plans or frameworks
    - sustainability covenants and compacts
    - triple bottom line reporting
    - purchasing of carbon credits or green power
    - raising awareness among stakeholders through product advice and user recommendations
    - reduce the consumption of non-renewable resources
    - reducing or eliminating the use of hazardous and toxic materials
    - resource, water and energy audits included in quote or tender
    - training of staff in principles and techniques of sustainability
    - use of solar or renewable energies and water
    - waste treatment initiatives (materials, resources and water)
    - maximising the use of recycled, renewable, reusable and reclaimed resource opportunities
    - efficient use of resources, energy and water
    - environmental site management to minimise stormwater pollution

© Commonwealth of Australia, 2026 BuildSkills Australia

    - installation of efficient appliances, techniques and recommendations for consumer use and opportunities
- properties, characteristics and limitations of approved building materials and components
- sustainability principles and concepts
- workplace safety requirements:
    - hierarchy of control
    - hazardous substances
    - risk management
- industry associations, such as:
    - Housing Industry Association (HIA)
    - Master Builders Association
    - Green Building Council of Australia (GBCA)
- sustainability schemes and rating systems:
    - HIA – GreenSmart
    - Master Builders Association of Victoria – Green Living
    - GBCA – Green Star
    - National Australian Building Environmental Rating Scheme (NABERS)
    - Australian Building Greenhouse Rating
    - Leadership in Energy and Environmental Design (LEED)
    - Passive House.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and relevant environmental and sustainability legislation, requirements, policies, standards and guidelines
- national, state and territory and local government building codes and standards
- technology, applications and software systems for recording and filing documentation, researching, extracting, analysing and presenting information, interpreting data and developing documents and reports.

CPCSUS5002 Develop action plans to retrofit existing buildings for energy efficiency

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to develop plans to improve the energy efficiency of an existing building. It includes researching appropriate products, materials and systems and engaging with clients and stakeholders when retrofitting a building.

The unit of competency applies to building designers, tradespeople and building project managers involved in the design or development of retrofits for energy efficiency.

This unit of competency applies to those who apply skills and knowledge to identify, analyse and evaluate approaches to sometimes unpredictable problems.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Sustainability

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan retrofit processes.	1.1	Discuss client's use of the building and specific expectations of energy efficient retrofit priorities and incorporate into planning.
		1.2	Initiate energy assessment or review report from a prior assessment and discuss with key stakeholders to determine energy conservation measures.
		1.3	Provide a client with an overview of recommended processes and information relevant to generating an energy efficient retrofit.
2	Evaluate opportunities to improve energy conservation and efficiency of an existing building.	2.1	Review and evaluate recommendations from energy efficiency assessor for input into the retrofit action plan.
		2.2	Identify limitations and obstacles involved in the energy efficiency upgrade of a building and develop appropriate solutions.
		2.3	Identify and manage risks of retrofitting an existing building for improved energy efficiency, including possible installation of mechanical ventilation systems.
		2.4	Develop and cost strategies that provide a measurable increase in the operational energy efficiency of an existing building.
		2.5	Assess structural adequacy of the existing building to determine appropriateness of retrofit solutions for energy efficiency.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Research and select energy efficient materials, products and systems.	3.1	Research materials, products and systems specifications for appropriateness to the energy efficiency for the existing building.
		3.2	Source literature and consult with manufacturer representatives to identify installation and operational specifications.
		3.3	Check compliance requirements for selecting and installing materials, products and systems.
		3.4	Assess thermal and acoustic insulation of the building to determine energy efficiency rating.
		3.5	Determine quality of insulation and installation to improve insulating properties of the building.
4	Finalise a retrofit action plan.	4.1	Develop final a retrofit action plan to comply with organisational procedures.
		4.2	Explain projected benefits of undertaking each of the proposed retrofit measures to a client.
		4.3	Obtain client sign-off and finalise documentation of the agreed plan.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to:
  - calculate areas, volume and mass to determine dimensions and plan design
  - convert data into measurable and comparable information
- problem-solving skills to:
  - recognise and overcome design and structural construction problems
- technology skills to:

© Commonwealth of Australia, 2026 BuildSkills Australia

- use communication tools and devices to communicate and collaborate effectively with others
- use equipment and programs to access and extract information and develop relevant documentation.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCSUS5002 Develop action plans to retrofit existing buildings for energy efficiency

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing an action plan to retrofit and improve the energy efficiency of an existing residential or commercial building up to a maximum of three storeys.

In doing this, the candidate must:

- determine class, type, condition and use of a building
- produce energy efficiency comparison of an existing building and retrofitted building
- produce costing, timelines and products and materials for the retrofit project
- source applications for permits and service connections
- identify limitations and obstacles to retrofit and determine solutions
- develop a process for project risk management.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building science principles and their application to the retrofitting of existing buildings for improved energy efficiency
- environmental and sustainability legislation, requirements, policies, standards and guidelines:
    - environmental protection
    - biodiversity conservation
- national, state and territory and local government building codes and standards
- the National Construction Code (NCC)
- organisational policies and procedures, quality systems and best practice approaches
- addressing retrofitting expectations and benefits:

© Commonwealth of Australia, 2026 BuildSkills Australia

    - improved levels of comfort for the occupants
    - increased air changes per hour to improve indoor air quality
    - increased durability of the building
    - potential for improved return on investment
    - reduction in and prevention of mould
    - reduction in heating and cooling costs
    - fire resistance and resistance from bushfire attack
- risks of retrofitting:
    - budget constraints
    - condition of existing building
    - local council planning provisions
    - land overlays and requirements relating to neighbourhood character
    - orientation of the existing building
    - original design and construction of existing building
    - position of existing services to the building
    - presence of protected vegetation adjacent to existing building
    - protection of existing building under heritage listing
    - proximity of other buildings or structures
    - sealing the building envelope:
        - air pressure differentials
        - combustion
        - moisture and mould
        - poor indoor air quality
- properties, characteristics and limitations of selected building materials and components
- processes, procedure and techniques of:
    - energy assessment to develop energy efficient strategies
    - calculating using measurements and formulas
- retrofitting strategies:
    - light fittings
    - smart technology or motion sensors
    - insulation
    - sealing building envelope

    - energy sources
- sustainability principles and concepts
- workplace safety:
    - hierarchy of control
    - hazardous manual tasks
    - working at heights
- project plans, specifications and working drawings
- general construction terminology.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and appropriate environmental and sustainability legislation, requirements, policies, standards and guidelines
- government building and environmental requirements, codes and standards
- project plans, specifications and material manufacturer’s specifications
- technology, applications and software systems for researching, extracting, analysing and presenting information, interpreting data and developing documents and reports to facilitate the development of an action plan to retrofit an existing building for energy efficiency.

CPCSUS5003 Manage energy efficient building methods and strategies

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to ensure that energy efficient building methods and strategies on new or existing building projects, designed to satisfy energy efficient ratings and requirements, are supported by employees and contractors. It includes conducting appropriate performance testing of the construction to determine adherence to energy efficiency methodologies and techniques.

The unit of competency includes ensuring that work undertaken to construct an energy efficient building, or to retrofit an existing building for improved energy efficiency, is performed as designed and reflects energy efficient specifications.

This unit of competency applies to builders and site managers overseeing the construction of buildings designed to meet energy efficient ratings or improve the energy efficiency characteristics of a residential or commercial building.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of *CPCWHS1001Prepare to work safely in the construction industry* meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Sustainability

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
	Plan and prepare to construct an energy efficient building.	1.1	Review plans, drawings and specifications to identify energy efficient requirements of finished building or works.
		1.2	Determine the building class and type.
		1.3	Consult relevant stakeholders to identify the purpose and use of the building and the energy efficiency expectations of its owners or occupiers.
		1.4	Source, select and cost construction materials and products to conform to energy efficiency expectations of the building or works.
		1.5	Schedule works to be undertaken to support the energy efficient building strategy.
		1.6	Resource the project with appropriately skilled tradespeople with energy efficiency competency.
		1.7	Develop strategies for the disposal, recovery or reuse of waste materials for the project.
		1.8	Communicate budget, timelines and impact of energy efficiency of the project to the owner, occupier and other stakeholders.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Monitor project energy efficiency.	2.1	Evaluate and quantify the impact on energy efficiency against the expectations to assist in decision-making processes of construction methods, materials selection and alteration of works.
		2.2	Assess the capacity to maximise energy efficiency by improving building envelope sealing prior to other work commencing.
		2.3	Brief trades and other workers on the building project regarding expected energy efficiencies, quality of work, methods and techniques to be used.
		2.4	Monitor the project and maintain communication with subsequent trades to ensure benefits of energy efficient requirements and techniques are not lost or diminished.
1	Evaluate and communicate energy efficiency outcomes.	3.1	Assess works undertaken for adherence to energy efficiency processes.
		3.2	Conduct and record handheld thermal imaging assessment of building or works to determine presence of unwanted heat and air leakages and address findings where necessary.
		3.3	Conduct duct testing to identify the location of leakages and implement remedial work to address findings.
		3.4	Seek external expert verification of star ratings for building energy efficiency.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- numeracy skills to:
  - use statistical data to measure and compare energy efficiency
- oral communication skills to:
  - use appropriate technical language to convey a design and construction brief to a work group, client and stakeholders
- technology skills to:

© Commonwealth of Australia, 2026 BuildSkills Australia

- use communication tools and devices to communicate and collaborate effectively with others
- use equipment and programs to access and extract information and develop relevant documentation.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPCSUS5003 Manage energy efficient building methods and strategies

Modification History

Release	Comments
2	Updated reference to general construction induction training program.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by managing energy efficient building methods and strategies for two building and construction projects:

- one residential - Class 1 or 10 to a maximum of two storeys
- one commercial - Class 2 to 9, Type B or C.

In doing this, the candidate must:

- prepare costing of energy efficient materials, products and labour
- prepare a project schedule with techniques and strategies, products and time lines to communicate to stakeholders and on-site tradespeople
- determine processes for minimising, reusing or reclaiming waste.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building science principles and their application for improved energy efficiency
- environmental and sustainability legislation, requirements, policies, standards and guidelines
- Environment Protection and Biodiversity Conservation Act
- government building and environmental requirements, codes and standards
- the National Construction Code (NCC)
- organisational policies and procedures, quality systems and best practice approaches
- properties, characteristics and limitations of approved building materials and component:
    - structural insulated panels

© Commonwealth of Australia, 2026 BuildSkills Australia

    - glazing
    - thermal mass
    - impacts on materials and products used in different climate zones and environmental conditions
- processes, procedure and techniques of:
    - building methods and installation of products
    - evaluating energy efficiencies in buildings
    - sealing the building envelope
- sustainability principles and concepts
- approaches to waste management consistent with principles of energy efficiency:
    - processes for minimising, reusing, recycling and recovering waste materials
- workplace safety:
    - hierarchy of control
- project plans, specifications and working drawings
- general construction terminology
- benchmarks to meet standards and rating systems for energy efficiency, such as:
    - Green Star requirements
    - WELL buildings
    - Passive House
- techniques which support energy efficiency:
    - protecting the air barrier by minimising and sealing gaps using advanced framing techniques to increase construction productivity, reduce thermal bridging and increase operational energy efficiency
    - installing insulation on the outside of the frame and in the roof, walls and floor
    - reducing the effect of thermal bridging
    - selecting appropriately sized heating, ventilation and air conditioning (HVAC) system, which considers the tightness of the structure and incorporates heat or energy recovery systems as appropriate for ventilation
    - using air or vapour barriers to ensure the entire building envelope is sealed, separating the inside environment from the outside
    - using thicker insulation to improve the building’s thermal performance.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment can be undertaken in the workplace or in a simulated workplace environment.

© Commonwealth of Australia, 2026 BuildSkills Australia

A simulated environment is one that realistically replicates workplace conditions, materials and equipment, interactions with others and workplace irregularities, and which meets industry standards for safety and environmental practices.

Candidates must have access to:

- current and appropriate building, environmental and sustainability legislation, requirements, policies, standards, guidelines and accreditation/certification requirements
- Australian Standards and building industry codes of practice
- project plans, specifications and manufacturer's product and installation specifications
- business equipment, technology, applications and software systems for recording and filing documentation, researching, extracting, analysing and presenting information, interpreting performance data and developing documents and reports.

CPCWHS1001 Prepare to work safely in the construction industry

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 8.0. Minor typographical error corrected in Release 1 Modification History under Amended Performance Evidence. Changed from *Added reference to 'shirt of jacket'* to *Added reference to 'shirt or jacket'.*
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 7.0.

Application

This unit of competency specifies the mandatory work health and safety training required prior to undertaking construction work. The unit requires the person to demonstrate personal awareness and knowledge of health and safety legislative requirements in order to work safely and prevent injury or harm to self and others. It covers identifying and orally reporting common construction hazards, understanding basic risk control measures, and identifying procedures for responding to potential incidents and emergencies. It also covers correctly selecting and fitting common personal protective equipment (PPE) used for construction work.

This unit meets the general construction induction training requirements of:

- Part 1.1 Definitions and Part 6.5 of the Model Work Health and Safety Regulations;
- Division 11 of Part 3 of the Occupational Safety and Health Regulations 1996 for Western Australia; and
- Division 3 of Part 5.1 of the Occupational Health and Safety Regulations 2007 for Victoria.

It is expected that site-specific induction training will be conducted prior to conducting construction work.

Licensing, legislative, regulatory or certification requirements apply to this unit. Relevant work health and safety state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Construction

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.	
1.	Identify health and safety legislative requirements of construction work.	1.1.	Basic roles, responsibilities and rights of duty holders are identified and explained according to **jurisdictional health and safety legislative requirements.**
		1.2.	Duty of care requirements are identified.
		1.3.	Construction safe work practices are identified and explained.
2.	Identify construction hazards and risk control measures.	2.1.	Basic principles of risk management are identified.
		2.	Construction hazards are identified and discussed.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.	
		2.3.	Purpose and use of PPE are identified and demonstrated.
		2.4.	Measures for controlling hazards are identified.
3.	Identify health and safety communication and reporting processes.	3.1.	Health and safety documents are identified and discussed.
		3.2.	Roles of designated health and safety personnel are identified and explained.
		3.3.	Safety signs and symbols are identified and explained.
		3.4.	Procedures for reporting hazards, incidents and injuries are identified.
4.	Identify incident and emergency response procedures.	4.1.	Procedures for responding to incidents and emergencies are identified and explained.
		4.2.	Procedures for accessing first aid are identified.
		4.	Types and purpose of fire safety equipment are identified and discussed.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.	

Foundation Skills

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.	
Skill	**Performance feature**
Numeracy skills to:	• locate and recognise numbers commonly used in safety signs.
Oral communication skills to:	• ask questions to clarify instructions • listen to instructions to identify key safety information • tell another person about a construction problem or hazard.
Reading skills to:	• follow simple pictorial safety instructions • follow simple safety instructions that are written in English.
Problem-solving skills to:	• select risk control measures.
Written skills to:	• complete a basic form.

Range of conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.	
Jurisdictional health and safety legislative requirements must include at least one of the following state and territory Acts or their equivalent:	• Australian Capital Territory: Work Health and Safety Act 2011 • New South Wales: Work Health and Safety Act 2011 • Northern Territory: Work Health and Safety (National Uniform Legislation) Act 2011

© Commonwealth of Australia, 2026 BuildSkills Australia

	• Queensland: Work Health and Safety Act 2011 • South Australia: Work Health and Safety Act 2012 • Tasmania: Work Health and Safety Act 2012 • Victoria: Occupational Health and Safety Act 2004 • Western Australia: Occupational Safety and Health Act 1984.

Assessment Requirements for CPCWHS1001 Prepare to work safely in the construction industry

Modification History

Release	Comments
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 8.0. Minor typographical error corrected in Release 1 Modification History under Amended Performance Evidence. Changed from *Added reference to 'shirt of jacket'* to *Added reference to 'shirt or jacket'.*
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 7.0.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria, foundation skills, and range of conditions of this unit, in addition to the specific performance and knowledge evidence described below.

The person must:

- identify and orally report two construction hazards
- explain how risk could be reduced or removed in relation to those two hazards
- select appropriate personal protective equipment (PPE) to control the risk
- explain basic procedures for responding to incidents and emergencies, including types and purpose of the following fire safety equipment:
    - fire blankets
    - fire-extinguishers, including water, carbon dioxide, powder and foam
    - hose reels and mains
- identify and orally explain the meaning of required safety signs and symbols
- explain the purpose of job safety analyses (JSAs), safe work method statements (SWMS) and safety data sheets (SDS)
- explain the roles of the following designated health and safety personnel:
    - first aid officers
    - work health and safety (WHS) representatives
    - WHS committee members

© Commonwealth of Australia, 2026 BuildSkills Australia

- supervisors.

The person must also demonstrate correctly fitting to themselves the PPE listed below:

- eye protection
- hearing protection
- hard hat
- high visibility vest, shirt or jacket.

Knowledge Evidence

A person must demonstrate knowledge of:

- basic duty of care, and the roles, rights and responsibilities of business owners and workers in relation to working safely while undertaking construction work
- basic meaning of the terms ‘hazard’ and ‘risk’
- basic principles of risk management, including the following five steps in order:
  - identify hazard
  - assess risk
  - consult and report
  - control hazard
  - review
- basic procedures for accessing first aid
- construction hazards, including those relating to:
  - asbestos
  - confined spaces
  - electrical: power lines, cords and equipment
  - excavations and trenches, including underground services
  - dust
  - falling objects
  - hazardous substances and dangerous goods
  - hot and cold work environments
  - manual handling
  - noise
  - plant and equipment operation
  - traffic and mobile plant
  - unplanned collapse
  - ultraviolet (UV) radiation

© Commonwealth of Australia, 2026 BuildSkills Australia

    - working at heights, including scaffolding
- construction work that requires a high-risk work licence
- types, purpose and use of PPE used in construction, as specified in the performance evidence, and including safety footwear, harnesses and respiratory protection, and UV protective clothing and sunscreen
- construction emergencies, including:
    - chemical spill
    - fire
    - injury to personnel
    - structural collapse
    - toxic or flammable vapour emission
    - vehicle or mobile plant accident
- construction incidents, including:
    - incidents resulting in personal injury or damage to property
    - near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence
- safe work practices that should be followed in construction work, including:
    - accessing and using site amenities for drinking water, hand washing and toilets
    - following safety procedures when performing work tasks and using equipment
    - identifying and reporting hazards, incidents and injuries in the workplace
    - keeping the work area clean, tidy and free from debris
    - not using or being affected by drugs and/or alcohol while at work
    - preventing bullying and harassment in the workplace
    - selecting and using required PPE
    - smoking only in designated areas
    - storing and removing waste and debris in designated areas
- meanings and symbols associated with construction safety signs, symbols and tags, including:
    - emergency information signs: exits, emergency equipment and first aid
    - fire signs: location of fire alarms and firefighting equipment
    - hazard signs and symbols: danger and warning
    - regulatory signs and symbols: prohibition, mandatory and limitation or restriction
    - safety and lockout tags: danger and out-of-service tags.

© Commonwealth of Australia, 2026 BuildSkills Australia

Assessment Conditions

The following must be present and available to learners during assessment activities:

- equipment:
    - all of the PPE listed in the performance evidence
- specifications:
    - state or territory Act relevant to the location of the learner, as specified in the range of conditions.

The assessment must reflect a range of methods including practical demonstration, oral and written reporting.

The assessment of performance evidence must be conducted by direct observation of the learner by an assessor, either by an assessor observing the learner physically and/or by an assessor observing the learner via audio and visual media in real time.

Assessor requirements

As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

Assessors must hold the unit *CPCCWHS2001 Apply WHS requirements, policies and procedures in the construction industry*, or its successor.

CPCWHS3001 Identify construction work hazards and select risk control strategies

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Minor typographical error corrected in Elements and Performance Criteria 3.5. Knowledge Evidence is formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Application

This unit of competency specifies the skills and knowledge required to participate in preparing a job safety analysis (JSA) for general hazards, and a safe work method statement (SWMS) for high risk work hazards on construction sites as specified in work health and safety (WHS) legislation. It includes meeting all relevant requirements of the National Construction Code (NCC), Australian Standards and Commonwealth and state or territory legislation.

Completion of the general construction induction training program specified by the model Code of Practice for Construction Work is required for any person who is to carry out construction work. Achievement of CPCWHS1001 Prepare to work safely in the construction industry meets this requirement.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and prepare.	1.1	Review job task, work site and compliance requirements.
		1.2	Select and use personal protective equipment (PPE) for each part of the task.
		1.3	Inspect work site and identify hazards relevant to job task.
		1.4	Determine and record level of risk for each identified hazard.
2	Prepare and implement job safety analysis (JSA).	2.1	Review requirements of work health and safety legislation for preparation of job safety analysis (JSA) using template.
		2.2	Break job task into logical steps, determine tools, equipment, plant and materials to be used for each step, and record on JSA.
		2.3	Identify work site and task-related hazards and levels of risk relating to each step, and record on JSA.
		2.4	Apply hierarchy of controls to determine risk control strategies for each hazard in each step of the job task, discuss and confirm with relevant personnel, and record on JSA.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.5	Review work site and job task immediately before starting work and discuss JSA with relevant personnel to confirm as still applicable, or to amend as required.
		2.6	Store JSA securely on site in accordance with compliance requirements.
1	Prepare and implement safe work method statement (SWMS) for high risk work.	3.1	Review requirements of work health and safety legislation for preparation of safe work method statements (SWMS).
		3.2	Determine work site conditions and job task requirements.
		3.3	Determine and record high-risk work site and task hazards relevant to job task.
		3.4	Break job task into logical steps, determine tools, equipment and materials to be used for each step, and record on SWMS.
		3.5	Identify high-risk work site and task-related hazards and levels of risk relating to each step, and record on SWMS.
		3.6	Apply hierarchy of controls to determine risk control strategies for each high-risk hazard in each step of the job task, discuss and confirm with relevant personnel, and record on SWMS.
		3.7	Review work site and job task immediately before starting work and discuss SWMS with relevant personnel to confirm as still applicable, or to amend as required.
		3.8	Store SWMS securely on site in accordance with compliance requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPCWHS3001 Identify construction work hazards and select risk control strategies

Modification History

Release	Comments
3	Updated reference to general construction induction training program.
2	This version first released with CPC Construction, Plumbing and Services Training Package Release 5.1. Minor typographical error corrected in Elements and Performance Criteria 3.5. Knowledge Evidence is formatted for clarity.
1	This unit of competency was first released in CPC Construction, Plumbing and Services Training Package Release 5.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- developing, in consultation with relevant personnel, two Job Safety Analysis (JSA) for general hazards. Each JSA should be for a different job task and on a different work site
- revising a JSA prior to starting work, identifying changed conditions and where appropriate, amending the JSA to reflect changed hazards and risk control strategies
- developing, in consultation with relevant personnel, two Safe Work Method Statements (SWMS) for high-risk work. Each SWMS should be for a different job task and on a different work site.
- revising a SWMS prior to starting work, identifying changed conditions and where appropriate, amending the SWMS to reflect changed hazards and risk control strategies.

All work must be performed to the standard required in the workplace and must meet the requirements of work health and safety (WHS), the National Construction Code (NCC), Australian Standards, Commonwealth and state or territory legislation, manufacturers' specifications, and environmental plans and obligations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

© Commonwealth of Australia, 2026 BuildSkills Australia

- Australian standards, industry guidelines, National Construction Code requirements, and codes of practice, including the Model Code of Practice for Construction Work when identifying construction site hazards and selecting risk control strategies
- format and content requirements for JSAs and SWMSs:
    - environmental requirements
    - public health and safety requirements
    - WHS requirements, including safe operating procedures
    - safety data sheets (SDS)
    - taking into account other work going on near the work area
    - common hazards and causes of incidents and near misses on construction sites
    - compliance requirements in relation to identified job tasks and work sites
    - construction hand and power tools, and equipment relevant to the identified job tasks, and requirements for their safe handling and operation
- processes for preparing SWMSs for high risk work in the construction industry:
    - principles and application of the hierarchy of controls
    - purpose and application of SDS when working with different materials
    - risk management strategies relevant to identified job tasks specified in the performance evidence
    - types of construction methods and materials used in both general hazards and high-risk construction work and risk factors inherent in their use and application
    - use and meaning of construction terminology used on construction work sites relevant to identifying site hazards and selecting suitable risk control strategies.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation reflecting workplace conditions and standards, materials, equipment, activities, responsibilities, procedures, safety requirements and environmental considerations.

Link

Companion volumes, including implementation guides, are found on the national training register - https://training.gov.au/training/details/CPC.

CPPACC6002 Apply performance-based codes and risk management principles when assessing buildings for access

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 14.0.

Application

This unit of competency specifies the skills and knowledge required to apply performance-based codes and risk assessment and risk management principles to accessibility features of buildings. It includes comparing proposed performance solutions to the prescriptive deemed-to-satisfy (DTS) requirement of the National Construction Code (NCC) and other requirements of relevant legislation, regulations and standards for the provision of access for people with disability, and summarising assessment results in a report which may be considered by an Access Panel.

This unit is for access consultants who use their broad theoretical and technical skills and knowledge to analyse information, provide advice and devise solutions to sometimes complex access problems in compliance with regulatory requirements for the provision of access for people with disability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Evaluate performance-based codes relevant to building access issues.	1.1	Evaluate role of regulation associated with buildings and the built environment within society in relation to building access issues.
		1.2	Evaluate societal goals related to the construction and use of buildings and apply in relation to building access issues.
		1.3	Identify and record the hierarchy of Commonwealth, state and territory building access legislation and the role of NCC objectives, functional statements and performance requirements.
		1.4	Identify and record the differences between public policy and professional judgement in relation to building access issues.
2	Apply performance-based codes to building access issues.	2.1	Identify and record NCC assessment methods relevant to building access issues and requirements for their application.
		2.2	Apply methodologies to determine correct performance requirements required to be satisfied to meet NCC requirements.
		2.3	Determine, apply and document processes for involving relevant parties in decision-making processes associated with proposed performance solution.
		2.4	Evaluate and document impacts of proposed performance solution on building maintenance and alterations.
		2.5	Store all documentation and records used to evaluate proposed performance solution for future reference and retrieval according to regulatory and workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

3	Assess risk.	3.1	Identify and apply methodology for determining and assessing risks associated with building access issues.
		3.2	Use technologies to research and apply information to support risk assessment according to workplace requirements.
		3.3	Identify and report consequences of various forms of identified risk associated with building access issues.
		3.4	Apply basic probability analysis and interpret statistics according to risk assessment principles.
4	Document findings.	4.1	Prepare report describing the suitability of proposed performance solutions to building access issues according to regulatory and workplace requirements.
		4.2	Maintain copies of the report and associated documentation for future reference according to regulatory and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPPACC6002 Apply performance-based codes and risk management principles when assessing buildings for access

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 14.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying performance-based codes and risk management principles to assess access issues and performance solutions associated with two different buildings.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- anthropometric and ergonomic principles of accessible building design and fitout
- Commonwealth, state and territory legislation, regulations, codes and standards relevant to access consulting activities:
    - anti-discrimination and disability discrimination
    - building control including local government regulations and by-laws
    - heritage
    - National Construction Code (NCC) building classifications and access requirements
    - National Disability Insurance Scheme (NDIS) Specialist Disability Accommodation Design Standard (or its successor)
    - Livable Housing Australia Livable Housing Design Guidelines (or its successor)
    - principles of universal design
    - privacy and confidentiality
    - Process to Administer Access to Buildings (The Protocol) for the purpose of considering building upgrade plans
- industry codes of practice and ethics

CPPACC6003 Apply unjustifiable hardship principles to assess solutions for access

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 14.0.

Application

This unit of competency specifies the skills and knowledge required to apply the principles of unjustifiable hardship to the regulatory requirements for existing buildings undergoing building work. Principles of unjustifiable hardship are set out in the Process to Administer Access to Buildings (The Protocol) and the *Disability Discrimination Act 1992* (DDA). The unit includes assessing any unjustifiable hardship component of a proposed building upgrade plan, performance solution or application for exception from a requirement of the National Construction Code (NCC), and summarising assessment results in a report which may be considered as part of an Access Panel case.

This unit is for access consultants who use their broad theoretical and technical skills and knowledge to analyse information, provide advice and devise solutions to sometimes complex access problems in compliance with regulatory requirements for the provision of access for people with disability.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Assess proposal from building control authority.	1.1	Interpret proposal documentation to clarify classification as building upgrade plan, performance solution or application for exception from a requirement of the NCC.
		1.2	Assess and document issues raised by building control authority.
		1.3	Identify grounds for request for unjustifiable hardship from proposal documentation.
2	Apply unjustifiable hardship principles to assess building upgrade plan.	2.1	Interpret building upgrade plan to identify key access components.
		2.2	Conduct technical assessment of issues in building upgrade plan according to The Protocol requirements.
		2.3	Determine level of access resulting from building upgrade plan according to regulatory requirements.
		2.4	Assess the appropriateness of timeframes proposed by building upgrade plan and document findings according to unjustifiable hardship considerations, regulatory and workplace requirements.
3	Apply unjustifiable hardship principles to assess performance solution.	3.1	Assess performance of solution for providing access outcomes equivalent to NCC deemed-to-satisfy (DTS) provisions.
		3.2	Conduct technical assessment of issues identified in the application for performance solution according to The Protocol requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Assess the ability of the performance solution to provide access and document findings according to unjustifiable hardship considerations, regulatory and workplace requirements.
4	Apply unjustifiable hardship principles to application for exception from an NCC requirement.	4.1	Identify issues in the proposal nominated as preventing the provision of access.
		4.2	Conduct technical assessment of issues identified in the application for exception from a requirement of the NCC according to The Protocol requirements.
		4.3	Assess the validity of issues presented in the application for exception from a requirement of the NCC and document findings according to unjustifiable hardship considerations, regulatory and workplace requirements.
5	Document findings.	5.1	Assess unjustifiable hardship decisions and document findings according to regulatory and workplace requirements.
		5.2	Maintain copies of the findings and associated documentation for future retrieval according to regulatory and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 14.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by applying unjustifiable hardship principles to assess solutions for access related to one building project.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- anthropometric and ergonomic principles of accessible building design and fitout
- Commonwealth, state and territory legislation, regulations, codes and standards relevant to access consulting activities:
    - anti-discrimination and disability discrimination
    - building control including local government regulations and by-laws
    - heritage
    - National Construction Code (NCC) building classifications and access requirements
    - National Disability Insurance Scheme (NDIS) Specialist Disability Accommodation Design Standard (or its successor)
    - Livable Housing Australia Livable Housing Design Guidelines (or its successor)
    - principles of universal design
    - privacy and confidentiality
- definition of unjustifiable hardship as set out in the Process to Administer Access to Buildings (The Protocol) (or its successor) and application classifications:
    - building upgrade plan
    - performance solution
    - application for exception from a requirement of the NCC
- functional systems of the human body

CPPBDN5101 Produce digital 3-D models of building designs

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 11.0.

Application

This unit specifies the skills and knowledge required to produce three-dimensional (3-D) models for small-scale building design projects involving residential projects and commercial or industrial projects up to 2,000m^2 floor area and buildings of Type B and C construction, as defined in the National Construction Code (NCC).

This unit is suitable for drafters and building designers who apply technical and theoretical knowledge and skills to building design work tasks.

This unit forms part of the licensing requirements for people engaged in building design in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Building Design

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Set up and manage digital files.	1.1	Create, name, save and retrieve files for digital 3-D models of small-scale building design project.
		1.2	Import digital drawing files using appropriate file transfer protocols.
		1.3	Use appropriate file transfer protocols to export and transfer files in required formats for client and consultant use.
2	Create digital 3-D models of building design.	2.1	Access sources of customised architectural objects for digital 3-D models.
		2.2	Operate 3-D modelling functions of design software to create 3-D model and additional objects.
		2.3	Apply architectural objects to 3-D models to meet project requirements.
3	Produce 3-D model presentation.	3.1	Manipulate 3-D models to create a range of views.
		3.2	Apply dimensions and notations to views as required.
		3.3	Check 3-D models for accuracy, completeness, quality and compliance.
		3.4	Select and apply presentation styles and display controls according to project and workplace requirements.
		3.5	Save and file 3-D models according to workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- reading skills to interpret:
    - complex technical information and instructions in software manuals
    - and apply compliance requirements and drawing standards to 3-D models
- numeracy skills to calculate dimensions and scales for models.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPPBDN5101 Produce digital 3-D models of building designs

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 11.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by producing digital 3-D models of two different building designs. Designs must include:

- one residential project
- one commercial or industrial project of up to 2,000m^2 floor area.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant legislation, codes and standards
- workplace and building design project requirements
- client requirements for building design
- architectural styles:
    - terminology
    - objects
    - views
    - notation
- building design data
- contextual and site constraints
- design drawing and representation methods
- functions and operation of 3-D modelling software programs including display controls.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations. Competency is to be assessed in the workplace or a simulated

CPPBDN5110 Inspect and assess sites to inform the design process

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 11.0.

Application

This unit specifies the skills and knowledge required to examine building design project sites and surveyor's drawings to identify contours and measurements, existing conditions, structures, features and services and neighbourhood characteristics. It includes determining site orientation and layout, access and egress points, and existing utilities and services infrastructure, and producing measured drawings. It includes using basic measuring equipment and recording and interpreting data.

The unit does not apply to construction Type A buildings. Building classifications and construction Types are set out in the National Construction Code (NCC).

This unit is suitable for drafters and building designers who apply technical and theoretical knowledge and skills to building design work tasks.

This unit forms part of the licensing requirements for people engaged in building design in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare to carry out site measure-up.	1.1	Plan site inspection tasks for small-scale building design project with reference to relevant site information and workplace requirements.
		1.2	Identify and document work health and safety (WHS) hazards and implement required controls.
		1.3	Identify required devices and equipment for measure-up.
		1.4	Perform desk-top assessment prior to site visit using online resources to obtain relevant site information.
2	Assess and record site and building information.	2.1	Establish context of development by identifying relationship of site to adjoining properties and surrounding environment.
		2.2	Note physical characteristics and local climate conditions of site.
		2.3	Produce field sketches which accurately record site and building elements that are transferable to accurate, scaled measured drawing format.
		2.4	Take digital images of relevant site and building elements to assist in development of accurate scaled and measured drawings.
		2.5	Use basic measuring equipment to measure and record accurate linear site dimensions according to workplace requirements.
3	Produce measured drawings and documentation for existing conditions.	3.1	Collate site analysis data to determine site features, existing conditions and contour levels.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Clearly and accurately document results of analysis for interpretation by others.
		3.3	Apply site survey and site analysis data to measured drawings.
		3.4	Produce accurate representation of site and building elements for measured drawings.
4	Use land surveyor's drawings to plot contours and cut and fill areas.	4.1	Examine site survey from registered land surveyor to plot spot levels.
		4.2	Interpolate contour lines from spot level values and plot on site plan.
		4.3	Measure or calculate cut and fill areas and plot in plan and section drawings.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- reading skills to:
  - interpret complex documents, including client briefs, land titles and site plans
  - correlate site information from different sources
- written and oral skills to communicate appropriately for the audience and situation.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 11.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by inspecting two sites for small-scale building design projects, each site having different features and characteristics and including the following:

- undertake a basic measure-up and a detailed site analysis
- produce measured drawings and documentation detailing site information and building elements.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- relevant measuring equipment and application:
    - measuring tape
    - laser distance measurer
    - string line
- contemporary, new and emerging measuring equipment used by building designers
- work health and safety (WHS) requirements for inspecting and assessing sites
- operating procedures for basic devices and measuring equipment
- architectural styles and terminology
- features of surveyors' drawings
- different sources of site information.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations. Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting where these skills and knowledge would be performed. This includes access to:

CPPCMN2002 Participate in workplace safety arrangements

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 5.0.

Application

This unit of competency specifies outcomes required to participate in predetermined workplace safety arrangements in a range of workplace contexts.

The unit applies to personnel who participate in workplace safety arrangements in a cleaning work context. It includes identifying workplace hazards, basic knowledge, and application of workplace emergency procedures.

It applies to individuals who perform their duties alone or in a team environment, under routine supervision and without supervisory responsibilities.

No licensing, legislative or certification requirements apply to this Unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

1.	Identify and report workplace hazards.	1.1	Assess work area and identify workplace hazards.
		1.2	Assess workplace hazards and work restrictions affecting completion of work order.
		1.3	Communicate and clarify issues with supervisor, team member or client.
		1.4	Refer to Safety Data Sheets (SDS) and follow safe work methods.
		1.5	Position safety signage and barriers to control hazards.
2.	Follow workplace WHS procedures.	2.1	Follow work health and safety (WHS) legislation requirements in accordance with workplace procedures.
		2.2	Participate in WHS workplace practices within scope of own role and responsibilities.
		2.3	Actively follow emergency procedures as required by workplace standards.
		2.4	Complete workplace safety checklist.

Foundation Skills

This section describes language, literacy, numeracy, and employment skills that are essential to the performance in this unit, but not explicit in the performance criteria.	
Skill	**Performance Feature**
Reading skills to:	Interpret workplace safety procedures Interpret Safety Data Sheets (SDS) Interpret workplace signs and safety plans

Assessment Requirements for CPPCMN2002 Participate in workplace safety arrangements

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 5.0.

Performance Evidence

A person who demonstrates competency in this unit must participate in two different workplace safety arrangements.

Performance must include:

- communicating effectively with supervisors;
- understanding workplace safety procedures;
- applying basic safety principles in the workplace; and
- assessing and controlling workplace risks.

Knowledge Evidence

A person demonstrating competency in this unit must identify:

- cleaning workplace safety policies and procedures, WHS standards, supervisory instructions relating to safety measures and PPE.
- workplace hazards and risk control measures in cleaning workplaces, including:
    - equipment and material use, storage, cleaning and disposal procedures
    - range and meaning of workplace safety signs and symbols
    - site safety plan
    - types and purpose of personal protective equipment (PPE)
    - ways to maintain WHS in emergency situations
- workplace requirements for undertaking all aspects of workplace safety arrangements tasks including;
    - key workplace safety policies and procedures,
    - work health and safety standards,
    - supervisory instructions relating to safety measures and PPE.
- workplace procedures for;
    - basic assessment of cleaning work areas for workplace hazards

© Commonwealth of Australia, 2026 BuildSkills Australia

    - basic health and safety including:
        - emergency response and evacuation procedures
        - injury, dangerous occurrence and incident reporting
        - reporting workplace hazards
- communicating and clarifying work requirements with supervisor, team members or client

Assessment Conditions

As a minimum, assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which reflect:

- cleaning workplace safety policies and procedures, WHS standards, supervisory instructions relating to safety measures and PPE.
- performing tasks/activities to the level of proficiency and within timelines that would be expected in a workplace; and
- following standard and authorised work practices, safety requirements and environmental constraints.

Assessors are responsible for ensuring that candidates have access to:

- appropriate documents, materials, tools equipment and personal protective equipment currently used in industry;
- legislation and regulations; and
- workplace policies and procedures.

CPPDSM5022 Develop and implement asset management plans

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 15.0.

Application

This unit of competency specifies the skills and knowledge required to develop a plan for the management of assets. It includes interpreting asset performance needs, developing effective strategies to manage the operational, resource and maintenance needs of assets and reviewing and evaluating the implementation of those strategies.

This unit is for individuals who are self-directed and have substantial depth of knowledge and skills to make independent judgements in the provision of property services.

Legislative, regulatory or certification requirements apply to work in property services in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Strata Community Management

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Interpret asset performance needs.	1.1	Establish asset performance needs using relevant industry benchmarks and criteria in consultation with relevant persons.
		1.2	Conduct risk assessment of asset management outcomes according to regulatory and workplace requirements.
		1.3	Analyse and determine expected asset performance in varying conditions according to workplace requirements.
		1.4	Establish user, contractual and regulatory requirements for asset performance.
		1.5	Identify relevant specifications, conditions and manufacturer requirements for asset maintenance and operation.
2	Prepare plan and establish support arrangements.	2.1	Prepare detailed asset management plan based on established asset performance needs according to workplace requirements.
		2.2	Incorporate operational and maintenance schedule, activities and timelines into asset management plan.
		2.3	Present asset management plan to client for review and seek feedback according to workplace requirements.
		2.4	Discuss quality assurance goals and strategies for plan implementation with relevant persons.
		2.5	Establish and document arrangements for monitoring and reporting implementation outcomes according to client and workplace requirements.
		2.6	Identify and arrange financial, physical and human resources required for plan implementation.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.7	Identify and document roles and responsibilities for establishing and maintaining asset register according to client, workplace and regulatory requirements.
1	Review and evaluate asset management plan processes and outcomes.	3.1	Review and evaluate maintenance strategies in consultation with relevant persons according to workplace requirements.
		3.2	Systematically review and evaluate asset management planning processes and outcomes and document the results according to workplace requirements.
		3.3	Present evaluation findings to relevant persons within agreed timeframes and use feedback to improve asset management planning according to workplace requirements.
		3.4	Securely maintain asset management plan and related documentation according to regulatory and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 15.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing and implementing two written asset management plans.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- asset performance assessment criteria:
    - age
    - condition
    - cost
    - depreciation
    - down time
    - functionality
    - life span
    - maintenance requirements and cost
    - replacement
    - security
    - service levels
- building practices in relevant property types
- building services and operation methods and practices
- compliance requirements of legislation, regulations, codes and standards relevant to developing and implementing asset management plans:
    - anti-discrimination
    - building control legislation
    - consumer protection
    - environmental protection

© Commonwealth of Australia, 2026 BuildSkills Australia

    - financial probity
    - franchise and business structures
    - National Construction Code (NCC) and relevant Australian Standards
    - privacy
    - work health and safety (WHS)
- industry benchmarks for determining asset performance needs:
    - discounted cash flow
    - employment rates
    - industry association performance index
    - inflation rate
    - internal rate of return
    - life cycle costing
    - published vacancy factors
    - tenancy mix
- monitoring and evaluation methods and systems related to asset management planning
- purpose and content of an asset register
- purpose and content of operational and maintenance schedules
- relevant industry codes of practice and ethics
- risk assessment and risk management strategies associated with asset management
- types of assets:
    - buildings
    - business and marketing contracts
    - equipment
    - furniture
    - goodwill
    - land
    - property
    - vehicles
- types of risks associated with asset management
- workplace requirements for developing and implementing asset management plans:
    - client service
    - documentation and reporting
    - work role boundaries – responsibilities, limitations and professional abilities.

CPPDSM6002 Conduct property investment feasibility study

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 15.0.

Application

This unit of competency specifies the skills and knowledge required to assess property investment feasibility. It includes establishing study requirements, conducting research, analysing comparative market data, formulating investment scenarios, and documenting findings and conclusions.

This unit is for individuals who use their broad theoretical and technical skills and knowledge to analyse information, provide advice and devise solutions to sometimes complex problems in compliance with regulatory requirements for the provision of property services.

Legislative, regulatory or certification requirements apply to work in property services in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Strata Community Management

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe what needs to be done to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 BuildSkills Australia

	Establish study requirements.	1.1	Establish aims and objectives of property investment feasibility study according to client and workplace requirements.
		1.2	Negotiate and agree study objectives and timelines in consultation with relevant persons.
		1.3	Gather and review relevant information to identify regulatory compliance and other critical requirements of the study.
		1.4	Conduct initial comparisons with similar properties to allow effective comparison with client expectations.
		1.5	Identify situations requiring specialist advice and seek support as required according to workplace requirements.
2	Conduct research to access relevant information.	2.1	Use technologies to conduct research and access information relevant to study according to workplace requirements.
		2.2	Access market information and evaluate its validity, reliability and relevance according to identified analysis requirements.
		2.3	Consult with relevant persons to gather additional information to support study.
		2.4	Conduct environmental scan to identify and assess factors that may impact study.
		2.5	Document research findings in a format suitable for analysis according to workplace requirements.
3	Analyse investment information.	3.1	Undertake quantitative and qualitative analysis of comparative market data using standard financial analysis techniques.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Identify and evaluate relevant economic trends and market developments to determine potential implications and impact on study objectives.
		3.3	Identify and analyse factors increasing or diminishing investment risk and discuss findings with client.
		3.4	Apply sound reasoning to analysis findings to ensure interpretations and decisions are supported by rationale.
4	Formulate investment scenarios.	4.1	Develop alternative investment scenarios to meet study requirements.
		4.2	Use consultative processes to obtain relevant expertise to support formulation of investment scenarios.
		4.3	Verify investment scenarios against prescribed criteria and analyse to minimise subjective assessment.
		4.4	Perform sensitive analysis on data to identify degree of convergence within identified industry and market benchmarks.
		4.5	Identify property trends and market conditions and evaluate against study requirements.
5	Finalise property investment feasibility study.	5.1	Prepare comprehensive property investment feasibility study in an appropriate format, style and structure according to client and workplace requirements.
		5.2	Distribute study to relevant persons within agreed timeframes according to workplace requirements.
		5.3	Document conclusions that are verifiable, current and sufficiently detailed to meet identified client and workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		5.4	Securely maintain investment feasibility study and related documentation according to regulatory and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPPDSM6002 Conduct property investment feasibility study

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 15.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by conducting two property investment feasibility studies.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- alternative property uses
- analysis methods and techniques:
    - computer modelling
    - examination of cash flows and other financial projections
    - examination of collected data
    - quantitative and qualitative analysis
    - probability analysis
    - time series recognition
- compliance requirements of legislation, regulations, codes and standards relevant to conducting property investment feasibility studies:
    - anti-discrimination
    - building control legislation
    - consumer protection
    - environmental protection
    - financial probity
    - franchise and business structures
    - National Construction Code (NCC) and relevant Australian Standards
    - privacy
    - property sales, leasing and management
    - work health and safety (WHS)

© Commonwealth of Australia, 2026 BuildSkills Australia

- factors that might increase or diminish property investment risk:
    - constraints on use
    - existing land use and ownership
    - government zoning and restrictions
    - project financing
    - staging of investment or development
    - structure of leases
    - type and number of tenants
- project assessment methods
- risks associated with property investment:
    - asset allocation and investment spread
    - borrowing
    - gearing
    - economics
    - lifestyle choices
    - market and property sector risks: fluctuations in the economic cycle, interest rates and stock market
    - client return expectations
    - volatility of income and capital
- sources of industry and market information related to property investment
- types of property markets
- value management associated with property investment
- workplace requirements for conducting property investment feasibility studies:
    - client service
    - documentation and reporting
    - work role boundaries - responsibilities, limitations and professional abilities.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, information and technologies required to achieve the performance criteria and performance evidence.

CPPDSM6008 Develop and implement strategic facilities management plans

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 15.0.

Application

This unit of competency specifies the skills and knowledge required to develop and implement a strategic facilities management plan. It includes determining facilities management requirements, conducting a life cycle analysis, planning appropriate investment and disposal strategies, and identifying resource requirements. It also includes reviewing and evaluating implementation of the plan to incorporate corrective actions.

This unit is for individuals who use their broad theoretical and technical skills and knowledge to analyse information, provide advice and devise solutions to sometimes complex problems in compliance with regulatory requirements for the provision of property services.

Legislative, regulatory or certification requirements apply to work in property services in some states and territories. For further information, check with the relevant regulatory authority.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Strata Community Management

© Commonwealth of Australia, 2026 BuildSkills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Establish facilities management requirements.	1.1	Determine facilities management performance needs in consultation with relevant persons.
		1.2	Conduct risk assessment of facilities management outcomes according to regulatory and workplace requirements.
		1.3	Analyse relevant industry benchmarks to assess expected performance of assets in varying market conditions.
		1.4	Identify relevant industry, workplace and regulatory requirements to establish user, contractual and legal compliance for facilities performance.
2	Prepare facilities management plan.	2.1	Prepare comprehensive facilities management plan to meet facilities management aims and objectives according to client and workplace requirements.
		2.2	Establish quality assurance goals and strategies according to facilities management plan.
		2.3	Determine monitoring and reporting arrangements for facilities management plan to meet client requirements.
		2.4	Conduct life cycle analysis and plan capital investment and disposal strategies according to workplace requirements.
3	Organise resources and support processes.	3.1	Organise financial, physical and human resource requirements for facilities management plan implementation ensuring efficient use of time and resources.
		3.2	Disseminate information to support implementation of facilities management plan according to workplace requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Clearly define and document roles and responsibilities associated with facilities management plan implementation.
4	Review, evaluate and modify facilities management plan.	4.1	Review and evaluate facilities management plan in consultation with relevant persons according to workplace requirements.
		4.2	Evaluate facilities management plan outcomes using systematic review processes and suitable evaluation methods according to workplace requirements.
		4.3	Review evaluation findings and incorporate recommended modifications and corrective actions into facilities management plan.
		4.4	Securely maintain facilities management plan and related documentation according to regulatory and workplace requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPPDSM6008 Develop and implement strategic facilities management plans

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 15.0.

Performance Evidence

To demonstrate competency, a candidate must meet the elements and performance criteria of this unit by developing and implementing one comprehensive written strategic facilities management plan.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- building services and operation methods and practices relevant to facilities management
- compliance requirements of legislation, regulations, codes and standards relevant to developing and implementing strategic facilities management plans:
    - anti-discrimination
    - building control legislation
    - consumer protection
    - environmental protection
    - financial probity
    - franchise and business structures
    - National Construction Code (NCC) and relevant Australian Standards
    - privacy
    - property sales, leasing and management
    - work health and safety (WHS)
- financial analysis and forecasting principles
- impact analysis and investment scenario planning
- industry performance benchmarks, including use and application of value analysis and benchmarking techniques
- long-range and annual facility planning techniques and practices

© Commonwealth of Australia, 2026 BuildSkills Australia

- methods for conducting life cycle analysis in facilities management:
    - computer modelling
    - examination of cash flows and other financial projections
    - quantitative and qualitative analysis
    - probability analysis
    - time series recognition
- principles and practices of performance measurement, including review and evaluation procedures, processes and techniques
- principles and processes of objective setting
- types of assets associated with facilities management:
    - buildings
    - business and marketing contracts
    - equipment
    - furniture
    - goodwill
    - land
    - property
    - vehicles
- workplace requirements for developing and implementing strategic facilities management plans:
    - client service
    - documentation and reporting
    - quality systems
    - work role boundaries - responsibilities, limitations and professional abilities.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Assessment must be conducted in the workplace or a simulated workplace using realistic conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to documentation, information and technologies required to achieve the performance criteria and performance evidence.

CPPHES4005 Assess household energy use and efficiency improvements

Modification History

Release	Comments
2	This version first released with CPP Property Services Training Package Release 14.0. Updated reference to reflect correction in Modification History from CPC Property Services 5.0 to CPP Property Services 9.0.
1	This unit of competency was first released in CPP Property Services Training Package Release 9.0.

Application

This unit specifies the skills and knowledge required to source and analyse information on household energy use and to advise on ways to improve energy efficiency and reduce energy costs in the home.

This unit is for individuals who work independently as home sustainability assessors using specialised knowledge to complete household energy assessments. It involves completing routine and non-routine tasks and dealing with predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

None.

Competency field(s)

N/A

Unit sector(s)

Home Sustainability

© Commonwealth of Australia, 2026 BuildSkills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and organise energy assessment.	1.1	Consult with client to clarify purpose of energy use assessment and respond to questions and concerns.
		1.2	Confirm assessment requirements in line with client needs, legislation, regulations, standards, codes and government incentive programs for energy efficiency.
		1.3	Plan energy use assessment in consultation with client and according to work health and safety (WHS) procedures.
		1.4	Prepare energy use assessment documentation.
		1.5	Confirm that required tools and equipment are available and in working order.
2	Compile information on household energy generation, use, and costs.	2.1	Gather information on energy use, onsite energy production and storage and energy costs.
		2.2	Access and interpret energy bills and metering data.
		2.3	Identify main sources of energy use.
		2.4	Carry out measurements and observations safely during on-site inspection to estimate energy usage for key energy using appliances.
		2.5	Gather information on household occupant behaviours and preferences that impact energy use.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.6	Record gathered information using suitable data collection tool.
1	Analyse data on household energy use.	3.1	Identify key features of household energy usage and estimate costs and greenhouse gas emissions for key appliances.
		3.2	Reconcile energy use with energy billing data.
		3.3	Identify cost effective measures and behavioural opportunities for improving energy efficiency.
		3.4	Identify government rebates and other assistance programs for improving household energy efficiency.
		3.5	Estimate energy, emissions and cost savings to be gained by implementing measures for improving energy efficiency.
4	Provide information on residential renewable energy.	4.1	Source technical information on renewal energy production and storage technologies and inform client.
		4.2	Evaluate suitability of using residential property for renewable energy systems and discuss with client.
		4.3	Identify feed in tariffs, government rebates and other assistance programs for installing energy production and storage technologies.
5	Report findings of household energy assessment.	5.1	Collate results, recommendations and supporting evidence of energy use assessment.

© Commonwealth of Australia, 2026 BuildSkills Australia

		5.2	Document options and potential savings and prioritise recommendations for energy efficiency measures in line with client needs.
		5.3	Explain report, indicative costs and improvements in household energy efficiency to client.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to interact with clients from diverse social, economic and cultural backgrounds
- numeracy skills to interpret data from gas and electricity meters and accounts and calculate costs and greenhouse gas emissions
- reading skills to interpret data from gas and electricity meters and the outputs of energy measuring tools, technical data from product specifications
- technology skills to use basic computer functions, calculators and measuring tools.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Assessment Requirements for CPPHES4005 Assess household energy use and efficiency improvements

Modification History

Release	Comments
2	This version first released with CPP Property Services Training Package Release 14.0. Updated reference to reflect correction in Modification History from CPC Property Services 5.0 to CPP Property Services 9.0.
1	This unit of competency was first released in CPP Property Services Training Package Release 9.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by safely conducting energy use assessments and identifying efficiency improvements for three different households.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- alternative energy production and storage technologies applicable to residential buildings
- energy ratings and power consumption of common household appliances
- energy types and units of measurement
- hazards and risks and types of personal protective equipment (PPE) to be used when conducting on-site assessments of household energy use
- key requirements of relevant codes, standards, regulations and government incentive programs for household energy efficiency
- major systems and other sources of household energy use:
    - cooking
    - refrigeration
    - washing and drying
    - home entertainment and home office equipment
    - heating and cooling

© Commonwealth of Australia, 2026 BuildSkills Australia

    - internal and external appliances
    - lighting
    - swimming pools and spas
    - water heating
    - water pumps
- methods for interpreting household energy bills:
    - actual and estimated bills
    - plans
    - tariffs
- strategies for improving household energy efficiency including impact of building shell on heating/cooling energy use, upgrade options and behavioural changes
- trends in energy use and emissions
- types and uses of energy measuring tools.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- residential buildings to allow achievement of the performance evidence
- codes, standards, legislation and government programs relevant to energy efficiency
- manufacturers' product information on domestic appliances, water heating systems, heating and cooling systems, lighting and electronic products
- technical information on energy production and storage technologies
- personal protective equipment and energy measurement and data collection tools and documentation.

CPPHES4007 Assess thermal performance of existing residential buildings

Modification History

Release	Comments
2	This version first released with CPP Property Services Training Package Release 14.0. Updated reference to reflect correction in Modification History from CPC Property Services 5.0 to CPP Property Services 9.0.
1	This unit of competency was first released in CPP Property Services Training Package Release 9.0.

Application

This unit specifies the skills and knowledge required to source and analyse information on the thermal performance of existing residences. It includes providing advice on ways to improve thermal performance accounting for ownership and type of building, costs and practicalities of implementing improvement recommendations.

This unit is for individuals who work independently as home sustainability assessors using specialised knowledge to complete thermal performance assessments. It involves completing routine and non-routine tasks and dealing with predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan and organise thermal performance assessment.	1.1	Consult with client to clarify purpose of thermal performance assessment and respond to questions and concerns.
		1.2	Confirm assessment requirements in line with client needs, legislation, regulations, standards, codes and government incentive programs for improving thermal performance of existing residential buildings.
		1.3	Plan thermal performance assessment in consultation with client and according to work health and safety (WHS) requirements.
		1.4	Prepare thermal performance assessment documentation and confirm that required tools and equipment are available and in working order.
2	Compile and analyse information on thermal performance of residence.	2.1	Gather information from client to clarify building use and construction details.
		2.2	Select and fit required personal protective equipment (PPE).
		2.3	Carry out measurements and observations during on-site inspection to confirm factors impacting thermal performance.
		2.4	Record information using appropriate data collection tool.
		2.5	Analyse information to identify strengths and weaknesses in thermal performance of residence.

© Commonwealth of Australia, 2026 BuildSkills Australia

3	Analyse options for improving thermal performance of residence.	3.1	Source technical information on building thermal performance and evaluate suitability for existing residence.
		3.2	Identify government rebates and other assistance programs for thermal performance of existing residential buildings.
		3.3	Evaluate options for improving thermal performance and reducing emissions of the residence.
		3.4	Identify cost effective measures for improving thermal performance of the residence according to organisational requirements.
4	Report findings of thermal performance assessment.	4.1	Collate results, recommendations and supporting evidence of thermal performance assessment.
		4.2	Write up options and prioritise recommendations for thermal performance improvements.
		4.3	Discuss report and indicative costs and improvements in thermal performance with client.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- oral communication skills to interact with clients from diverse social, economic and cultural backgrounds
- numeracy skills to interpret different units of measurement associated with existing residential buildings and their construction features.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPPHES4007 Assess thermal performance of existing residential buildings

Modification History

Release	Comments
2	This version first released with CPP Property Services Training Package Release 14.0. Updated reference to reflect correction in Modification History from CPC Property Services 5.0 to CPP Property Services 9.0.
1	This unit of competency was first released in CPP Property Services Training Package Release 9.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by conducting thermal performance assessments and identifying thermal performance improvements for a minimum of two different existing residential buildings.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- Australian climate zones, characteristics and data used in thermal performance assessments:
    - diurnal temperature range
    - humidity
    - irradiance
    - minimum and maximum temperature
    - solar geometry
    - wind speed and direction
- building thermal performance principles:
    - glazing, shading and insulation for controlling temperature
    - orientation impacts
    - thermal mass for storing
    - ventilation
- definition of thermal comfort and its role in thermal performance assessments

© Commonwealth of Australia, 2026 BuildSkills Australia

- hazards and risks and types of personal protective equipment (PPE) to be used when conducting on-site thermal performance assessments
- impact of building design and materials on thermal performance:
    - condensation
    - constraints on choice of building materials
    - embodied energy and lifecycle properties of building materials
    - thermal performance properties of common building materials
- key requirements of codes, standards, regulations and government incentive programs associated with improving the thermal performance of existing residences
- options for improving thermal performance of existing residences
- passive energy design principles
- physical factors that influence thermal comfort
- relationship between building design, energy consumption and greenhouse gas emissions
- relationship between building thermal performance and thermal comfort
- requirements, documentation and uses of thermal performance ratings
- safe work requirements for on-site thermal performance assessments
- types, advantages and disadvantages of non-rating tools and techniques used to assess thermal performance of residential buildings
- units of measurement for energy and power associated with thermal performance assessments.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

This unit must be assessed in the workplace or a close simulation using realistic workplace conditions, materials, activities, responsibilities, procedures, safety requirements and environmental considerations.

Candidates must have access to:

- existing residential buildings to allow achievement of the performance evidence
- codes, standards, legislation and government programs relevant to thermal performance of buildings
- required tools and equipment including PPE
- technical reference library and/or (online) access to current technical publications on:
    - building design and materials
    - house energy rating schemes (HERS)

© Commonwealth of Australia, 2026 BuildSkills Australia

- building thermal performance for existing buildings
- Australian climate zones
- manufacturers' product information on building products and materials.

CPPSPS4017 Detect leaks in swimming pools and spas

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 9.0.

Application

This unit specifies the outcomes required to detect leaks in swimming pools and spas. It includes operating leak-detection equipment and reporting on leak-detection activities.

This unit is suitable for swimming pool and spa technicians who work independently using specialised knowledge and skills to solve predictable and unpredictable problems in:

- private swimming pools and spas
- public swimming pools and spas, including:
    - hydrotherapy and therapeutic exercise pools
    - wading and receiving pools associated with water slides
    - wave pools.

All work must be carried out to comply with workplace procedures, in accordance with state/territory work health and safety (WHS), regulations and legislation that applies to the workplace. Legislative and regulatory requirements apply to swimming pool and spa technicians but vary according to state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Service technicians are not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

© Commonwealth of Australia, 2026 BuildSkills Australia

Unit sector(s)

Swimming pool and spa service

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Assess job requirements.	1.1	Identify relevant Australian standards and regulatory, manufacturer and enterprise requirements related to leak detection.
		1.2	Review work instructions and test to confirm that swimming pool and/or spa is leaking in line with enterprise procedures.
		1.3	Confirm location of related services in line with enterprise procedures.
		1.4	Identify hazards and assess and control risks in the work area in line with WHS and enterprise requirements.
2	Detect leaks.	2.1	Apply relevant regulations, Australian standards and manufacturer, client and enterprise requirements throughout leak detection.
		2.2	Implement leak detection process using appropriate leak-detection equipment.
		2.3	Seek advice from relevant personnel for activities outside scope of own expertise or licensing.
		2.4	Arrange leak repair in line with testing outcomes and enterprise and statutory requirements.
3	Complete leak detection activities.	3.1	Clean and store leak-detection equipment in line with enterprise and manufacturer requirements

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.2	Review and report on work in line with enterprise procedures.

Foundation Skills

As well as the foundation skills explicit in the performance criteria of this unit, candidates require:

- reading skills to source and interpret technical information, regulations, standards and codes of practice
- oral communication skills to interact with clients from diverse social, economic and cultural backgrounds
- numeracy skills to:
    - perform calculations related to water loss in swimming pools and spas
    - interpret data output from electronic leak-detection equipment.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Current Code and Title	Previous Code and Title	Comments	Equivalence
CPPSPS4017 Detect leaks in swimming pools and spas	CPPSPS4017A Detect leaks in swimming pools and spas	Supersedes and equivalent to CPPSPS4017A Detect leaks in swimming pools and spas.	Equivalent

Assessment Requirements for CPPSPS4017 Detect leaks in swimming pools and spas

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 9.0.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by:

- Determine job requirements, detect leak and organise repair of leaks in:
    - one swimming pool and one spa made from fibreglass
    - one swimming pool and one spa made from concrete.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- key requirements of relevant commonwealth, state or territory, and local government regulations and Australian standards related to swimming pool and spa servicing:
    - work health and safety
    - public health
    - dangerous goods
    - environment and waste disposal
    - Australian Competition and Consumer Commission product safety guidelines
    - electrical and plumbing regulations related to own work
- enterprise policies and procedures related to:
    - compliance with regulations
    - maintenance of knowledge of regulations
    - roles, responsibilities and limitations of own role
- work instructions:
    - site requirements, including access
    - personal protective clothing and equipment requirements
    - equipment and systems location information
    - warranties and guarantees

© Commonwealth of Australia, 2026 BuildSkills Australia

- hazards and risks associated with swimming pool and spa leak detection
- common structural leak areas:
    - cracks
    - lights
    - main drain and hydrostatic valve
    - pipe openings into pool
    - skimmer bond to pool
    - skimmer throat
    - tile line
    - vinyl liners
- leak-detection equipment:
    - types
    - operating principles
    - safety
    - maintenance procedures
- leak-detection procedures
- signs of potential pool and spa leaks:
    - algae growth or discoloration of water
    - cracks
    - equipment loses prime
    - excess chemical usage
    - excessive water loss
    - pool deck is sinking or lifting
    - pool has air in the system
    - soggy spots around the pool
    - visible equipment leaks
- types of leaks in swimming pools and spas:
    - plumbing leaks
    - pressure leaks
    - static leaks.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

© Commonwealth of Australia, 2026 BuildSkills Australia

Assessment must be undertaken in the workplace or in a simulated workplace environment.

Candidates must be provided with:

- relevant manufacturer instructions, regulations, codes, standards and enterprise policies and procedures
- relevant tools and equipment, personal protection equipment (PPE)
- technical references with current information on leak detection techniques for swimming pools and spas.

CPPSSI3015 Collect basic surveying data

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 12.0.

Application

This unit specifies the skills and knowledge required to collect basic surveying data using measurements taken in the field. Basic surveying data refers to measurements of distances, angles and height.

It includes operating equipment to take basic surveying measurements and performing required data computations and reductions to establish accurate data before leaving the field.

This unit is suitable for surveying or spatial information services assistants working under supervision. They use cognitive, technical and communication skills to select and apply a range of methods, tools, materials and information to complete routine activities and provide solutions to predictable and sometimes unpredictable problems.

All work must be carried out to comply with workplace procedures, in accordance with relevant state/territory regulations that govern surveying work, as well as work health and safety (WHS) legislation and regulations that apply to the workplace.

Cadastral surveying must be undertaken under the supervision of a registered surveyor. Users must check with the relevant regulatory state/territory authority before delivery.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Nil.

Competency field(s)

N/A

Unit sector(s)

Surveying and spatial information services

© Commonwealth of Australia, 2026 BuildSkills Australia

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for data collection.	1.1	Clarify data collection requirements for basic surveying tasks with appropriate persons.
		1.2	Identify organisational, legislative and manufacturer requirements for safe data collection.
		1.3	Select equipment and collection method to meet task requirements in consultation with appropriate persons.
		1.4	Implement safe work practices and use of personal protective equipment (PPE) to mitigate identified hazards and risks, according to organisational requirements.
2	Carry out basic data collection.	2.1	Set up and use selected equipment, according to manufacturer specifications and standard operating procedures, to collect basic surveying data to meet task requirements.
		2.2	Comply with relevant safe work method statements (SWMSs) during data collection.
		2.3	Collect measurements and data accurately using organisational procedures and proformas.
		2.4	Determine position for survey station, perform and record a traverse, and collect designated attributes for designated features.
		2.5	Record, calculate, reduce and check measurements before leaving site, according to organisational requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Finalise data collection.	3.1	Complete documentation and store data, according to organisational requirements.
		3.2	Clean, pack and store equipment, according to manufacturer and organisational requirements.
		3.3	Report any equipment faults or operational problems, according to organisational requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPPSSI3015 Collect basic surveying data

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 12.0.

Performance Evidence

To demonstrate competency a candidate must meet the elements and performance criteria of this unit by accurately recording basic surveying data for two field projects.

Each field project must cover:

- closed traverse
- detail survey
- contour survey
- closed level run.

Each project must use a global navigation satellite system (GNSS) or total station and one piece of equipment from the following:

- measuring tape
- automatic, digital or laser level
- ground penetrating radar
- terrestrial laser scanner
- survey drone or unmanned aerial vehicle (UAV).

Knowledge Evidence

To be competent in this unit a candidate must demonstrate knowledge of:

- uses and features of data collection equipment
- care of data collection equipment
- factors affecting equipment use and accuracy of data
- attributes associated with a dataset
- accepted industry standards for recording surveying metadata
- organisational and industry procedures relating to:
    - collecting, recording and storing surveying data

© Commonwealth of Australia, 2026 BuildSkills Australia

    - work tasks, including equipment use
- work health and safety (WHS) procedures relating to data collection activities.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting where these skills and knowledge would be performed.

Candidates must have access to:

- surveying data collection equipment.

CPPSSI3020 Perform simple surveying and spatial computations

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 12.0.

Application

This unit specifies the skills and knowledge required to perform simple computations used in surveying and spatial information services. It includes computations and conversions based on algebra, geometry, trigonometry and statistics. Computations are done on simple regular geometric figures, traverses, angles, bearings, distances, plane coordinates, heights, perimeter and area.

This unit is suitable for surveying or spatial information services assistants working under supervision to perform simple computations associated with field work and data collection. They use cognitive, technical and communication skills to select and apply a range of methods, tools, materials and information to complete routine activities and provide solutions to predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Prepare for simple surveying computations.	1.1	Identify computational requirements for surveying and spatial tasks.
		1.2	Interpret computational data provided in diagrammatic form.
		1.3	Select appropriate tool, handheld device or computer software appropriate for computational task requirements.
2	Calculate simple surveying data.	2.1	Perform computations on angles and bearings using a calculator or surveying computations program.
		2.2	Apply the basic concepts of algebra, geometry and trigonometry to plane geometry and simple regular figures.
		2.3	Perform calculations relating to geometric figures, areas, angles, bearings, distances, traverses, plane coordinates, heights, perimeters and statistics.
		2.4	Perform conversions between polar and rectangular coordinates.
		2.5	Perform computations on the coordinates of a simple closed traverse.
3	Finalise work processes.	3.1	Systematically and legibly lay out computations according to organisational requirements and industry-accepted methods.
		3.2	Record computations and results in an appropriate format according to organisational requirements.

© Commonwealth of Australia, 2026 BuildSkills Australia

		3.3	Develop and implement checks to Identify errors in computations.
		3.4	Finalise computations and conversions and confirm their accuracy.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CPPSSI3020 Perform simple surveying and spatial computations

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 12.0.

Performance Evidence

To demonstrate competency a candidate must meet the elements and performance criteria of this unit by accurately performing and checking simple computations, including:

- two calculations of perimeters and areas of simple regular figures
- two calculations of angular misclose and adjusted angle on a closed traverse
- two calculations of bearing misclose and adjusted bearings on a closed traverse
- two calculations of traverse misclose and accuracy ratio
- two calculations of coordinates of points on a closed traverse
- two conversions between:
    - polar and rectangular coordinates
    - vertical angles and gradients
    - gradients and vertical angles
- two calculations of simple statistics, including mean, mode and median
- two calculations of heights using trigonometric heighting.

Knowledge Evidence

To be competent in this unit a candidate must demonstrate knowledge of:

- common surveying and mathematical terms used in simple surveying computations
- industry-accepted methods for performing, laying out and checking different types of simple surveying computations.

Assessment Conditions

Assessors must satisfy the requirements for assessors contained in the Standards for Registered Training Organisations.

CPPSSI4030 Operate surveying equipment

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 12.0.

Application

This unit specifies the skills and knowledge required to use a range of surveying equipment for data capture or spatial data set-out. It includes selecting, setting up and operating surveying equipment to perform basic measurements, and recording and calculating horizontal and vertical information. It also includes validating and checking data accuracy and performing basic data reductions and manipulation using software.

This unit is suitable for entry-level technicians who use a broad range of cognitive, technical and communication skills to select and apply a range of methods, tools, materials and information to complete routine and non-routine activities and provide and transmit solutions to a variety of predictable and sometimes unpredictable problems.

Surveying and spatial information skills are applied in a range of industry contexts, including town planning, civil construction, mining, engineering, health, agriculture and defence.

All work must be carried out to comply with workplace procedures, in accordance with relevant state/territory regulations that govern surveying work, as well as work health and safety (WHS) legislation and regulations that apply to the workplace.

Cadastral surveying must be undertaken under the supervision of a registered surveyor. Users must check with the relevant regulatory state/territory authority before delivery.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Surveying and spatial information services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan surveying tasks.	1.1	Identify and clarify task requirements with appropriate persons.
		1.2	Interpret technical and diagrammatic information in task specifications and designs.
		1.3	Review design information to identify components to be measured in consultation with appropriate persons.
		1.4	Select and check surveying equipment to meet task requirements and report problems according to manufacturer and organisational requirements.
		1.5	Identify hazards associated with task, implement control measures to manage risks and report problems according to organisational requirements.
2	Execute surveying tasks.	2.1	Set up and adjust equipment required to measure identified survey components according to standard operating procedures.
		2.2	Operate equipment and software to manipulate basic spatial data.
		2.3	Cooperate with on-site personnel according to task requirements.
		2.4	Comply with organisational, legislative and manufacturer requirements for working safely.

© Commonwealth of Australia, 2026 BuildSkills Australia

1	Calculate surveying data.	3.1	Reduce and manipulate measured surveying data for comparison with design to meet task and organisational requirements.
		3.2	Confirm that measurements and computations meet industry-accepted standards for accuracy.
		3.3	Check data against task requirements and identify and resolve errors in consultation with appropriate persons.
		3.4	Validate and record clear and accurate measurements, computations and field checks according to industry-accepted standards and organisational requirements.
4	Finalise surveying tasks.	4.1	Finalise surveying activities and process data according to task and organisational requirements.
		4.2	Record and document measurements and data according to organisational requirements.
		4.3	Pack up and store equipment according to manufacturer specifications and organisational requirements.
		4.4	Report any identified faults and problems with equipment.
		4.5	Complete documentation and store data according to organisational requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Assessment Requirements for CPPSSI4030 Operate surveying equipment

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 12.0.

Performance Evidence

To demonstrate competency a candidate must meet the elements and performance criteria of this unit for two different surveying tasks.

In completing the surveying tasks the candidate must operate a total station and an automatic, digital or laser level as well as one other item of surveying equipment for spatial data capture or data set-out from the following:

- real-time kinematic (RTK) equipment/global navigation satellite system (GNSS)
- terrestrial laser scanner
- unmanned aerial vehicle (UAV).

The candidate must use two of the following while capturing or setting out surveying data for each of the above surveying tasks:

- compass
- data-recording equipment
- digital or hard-copy map or image
- distance-measuring wheel
- hand-held laser measuring device
- measuring tape
- prism with prism pole
- levelling staff
- retro targets.

Knowledge Evidence

To be competent in this unit a candidate must demonstrate knowledge of:

- types, functions and limitations of surveying equipment
- methods for setting up, levelling, checking calibration and using the surveying equipment

© Commonwealth of Australia, 2026 BuildSkills Australia

- techniques to solve basic problems relating to height, dimension, direction and position
- key features of geographic and projected spatial reference systems
- key features of the Australian Height Datum
- acquisition methods for surveying data
- attributes associated with a spatial dataset
- methods for downloading spatial data collected using the surveying equipment
- accepted organisational standards for recording metadata
- use of personal protective equipment (PPE)
- relevant safe work method statements (SWMS) and job safety analyses (JSA).

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting where these skills and knowledge would be performed.

Candidates must have access to:

- equipment
- equipment operating manuals
- standard operating procedures and documentation relating to work tasks.

CPPSSI5061 Survey subsurface utility information

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 12.0.

Application

This unit specifies the skills and knowledge required to survey subsurface utility information (SUI) in surveying practice. It includes analysing utility plans from asset owners and using specialised locating equipment. The unit also includes applying surveying and computer-aided design (CAD) and drafting skills to define the corresponding surface location of subsurface utilities.

This unit is suitable for skilled surveying technicians who use a broad range of cognitive, technical and communication skills to select and apply methods and technologies to analyse information and provide solutions to sometimes complex surveying/spatial information problems.

Surveying and spatial information skills are applied in a range of industry contexts, including town planning, civil construction, mining, engineering, health, agriculture and defence.

All work must be carried out to comply with workplace procedures, in accordance with relevant state/territory regulations that govern surveying work, as well as work health and safety (WHS) legislation and regulations that apply to the workplace.

Cadastral surveying must be undertaken under the supervision of a registered surveyor. Users must check with the relevant regulatory state/territory authority before delivery.

Licensing, legislative or certification requirements apply to this unit in some states and territories. This unit may also require adherence to AS 5488 Classification of subsurface utility information. Relevant state and territory regulatory authorities should be consulted to confirm these and any additional requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit sector(s)

Surveying and spatial information services

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe what needs to be done to demonstrate achievement of the element.	
1	Plan for locating and surveying processes.	1.1	Confirm project objectives, geographical location and timeframes with client.
		1.2	Prepare information to submit a Dial Before You Dig (DBYD) enquiry to obtain utility plans from asset owners.
		1.3	Review asset plans and gather site information to plan work and to identify hazards and assess risks associated with the activity according to WHS legislative and regulatory requirements.
		1.4	Develop a safety plan to control hazards and risks following relevant legislative and regulatory requirements, Australian Standards and workplace policies and procedures.
		1.5	Schedule work to meet asset owner and organisational requirements.
		1.6	Select and check calibration of surveying equipment required for work activity according to manufacturer specifications.
2	Carry out locating and surveying tasks.	2.1	Apply relevant WHS legislation and regulations, and industry codes when locating and working near existing underground utilities.
		2.2	Identify utility access points and use appropriate instruments and equipment to locate underground utilities.
		2.3	Measure and mark required components according to relevant Australian Standards and project specifications.

© Commonwealth of Australia, 2026 BuildSkills Australia

		2.4	Use surveying equipment to survey the identified positions of underground utilities and connect to spatial reference systems.
		2.5	Perform surveying calculations and reduce measured spatial data to project reference system.
		2.6	Validate and record measurements according to relevant Australian Standards, project specifications and organisational requirements.
1	Document results of locating and surveying field work.	3.1	Output and analyse data using surveying/computer-aided design (CAD) software to verify quality and accuracy to meet project and organisational requirements.
		3.2	Prepare report and notify appropriate persons of results according to organisational requirements.
		3.3	Complete documentation and archive spatial data according to organisational requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for CPPSSI5061 Survey subsurface utility information

Modification History

Release	Comments
1	This unit of competency was first released in CPP Property Services Training Package Release 12.0.

Performance Evidence

To demonstrate competency a candidate must meet the elements and performance criteria of this unit by locating and surveying at least two subsurface utilities for each of two different projects. For each project, the candidate must use:

- one of the following pieces of locating equipment:
  - electromagnetic locating equipment
  - ground penetrating radar (GPR)
- one of the following pieces of surveying equipment:
  - global navigation satellite system (GNSS)
  - total station.

Knowledge Evidence

To be competent in this unit a candidate must demonstrate knowledge of:

- types of underground assets/utilities
- the format, layout and content of service plans obtained from Dial Before You Dig (DBYD)
- methods used for locating underground utilities
- purpose and operation of equipment used for locating underground utilities
- relevant sections of AS 5488 Classification of subsurface utility information
- accuracy and precision requirements for locating underground services
- key features of reference systems for surveying data
- industry-accepted standards for the presentation of the surveyed results on plan and in reports.

© Commonwealth of Australia, 2026 BuildSkills Australia

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting where these skills and knowledge would be performed.

Candidates must have access to:

- surveying and locating equipment
- personal protective equipment (PPE)
- survey specifications, including relevant plans and drawings.

CUASTA413 Operate flying systems

Modification History

Release	Comments
2	This version first released with CUA Creative Arts and Culture Training Package version 5.1. Version created to correct unit mapping error.
1	This unit of competency was first released in CUA Creative Arts and Culture Training Package Release 5.0.

Application

This unit describes skills and knowledge required to operate manual and automated flying systems that raise and lower soft hangings and flats, and 'fly' scenery items into and out of performance spaces. It involves completing setup tasks for flying operations, flying elements of the set and completing wrap-up tasks.

The unit applies to those who work autonomously in a team environment as they take responsibility for ensuring the smooth operation of flying systems for productions in the entertainment and events industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

Media and Entertainment Production - Staging

© Commonwealth of Australia, 2026 Service and Creative Skills Australia

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
• 1. Prepare for flying operations	• 1.1 Obtain production documentation and clarify flying requirements in consultation with required personnel • 1.2 Inspect fly tower and stage and identify modifications to be made to existing grid or infrastructure • 1.3 Organise modifications in line with own level of responsibility and refer matters that need attention to required personnel • 1.4 Plan installation work according to safety guidelines and licencing requirements • 1.5 Anticipate problems that may arise during installation, rehearsal and operational phases and plan accordingly • 1.6 Obtain approval for weight loads plan and safe work methods statement • 1.7 Plot and run through fly cues and confirm correct speed and timing of each cue • 1.8 Modify cues as required in consultation with required personnel • 1.9 Complete pre-show checks and confirm individual components of flying systems are ready for operation and comply with safety requirements • 1.10 Execute pre-sets and document modifications as required
• 2. Fly set elements	• 2.1 Load counter-weight cradles for flying set elements in line with production requirements • 2.2 Rig bridles, spreaders and other rigging equipment and create rigging points not covered by existing grids • 2.3 Install and synchronise chain motors and winches as required • 2.4 Install brailing lines as required • 2.5 Install specialist staging elements according to production and safety requirements

© Commonwealth of Australia, 2026 Service and Creative Skills Australia

	• 2.6 Test installed equipment for functionality and adjust installation as required • 2.7 Execute fly cues safely according to performance requirements • 2.8 Where counterweight systems are used, keep flown loads and counterweights in balance or under control • 2.9 Use brake system, handbrake or other stopping devices according to safety requirements • 2.10 Use control systems according to instructions from required personnel • 2.11 Identify problems with flying system operation and rectify or refer to required personnel according to organisational procedures and safety regulations
• 3. Complete post-show tasks	• 3.1 Reset flying elements at completion of performances according to organisational procedures and safety regulations • 3.2 Inform required personnel of aspects of system operation that require attention • 3.3 Contribute to evaluations of productions and implement recommendations • 3.4 Organise maintenance of equipment as required • 3.5 Participate in post-show debriefing sessions and note aspects of staging operations that could be improved in future productions • 3.6 Review own work performance and adjust work practices accordingly

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

S KILL	DESCRIPTION
Reading	• Interprets production documentation in relation to own duties
Writing	• Completes workplace documentation
Oral communication	• Obtains information using listening and questioning techniques • Discusses ideas and solutions when operating flying systems

© Commonwealth of Australia, 2026 Service and Creative Skills Australia

Numeracy	• Calculates timings when plotting and modifying cues
Self-management	• Follows workplace protocols and safety procedures • Undertakes tasks in line with own level of responsibility
Teamwork	• Works collaboratively
Planning and organising	• Adopts a methodical and logical approach to operating flying systems • Applies a knowledge of staging and flying systems to work activities
Initiative and enterprise	• Implements improvements based on outcome of evaluations of flying operations
Problem-solving	• Recognises and takes responsibility for addressing predictable, and some less predictable, problems when operating flying systems
Technology	• Flies production elements using control desks and manual systems

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for CUASTA413 Operate flying systems

Modification History

Release	Comments
2	This version first released with CUA Creative Arts and Culture Training Package version 5.1. Version created to correct unit mapping error.
1	This unit of competency was first released in CUA Creative Arts and Culture Training Package Release 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- operate flying systems for at least two different productions.

In the course of the above, the candidate must:

- follow safety procedures
- use communication systems according to organisational procedures and safety requirements
- use flying systems within their rated capacity
- work collaboratively with others involved in the production.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- issues and challenges that typically arise when operating flying systems that include the issues of dynamic and static forces, and solutions to address them
- link between flying and other aspects of productions and the range of elements that are commonly flown
- safety issues that impact on flying systems, including regulations about the scope of work that can be undertaken by unlicensed personnel and emergency procedures
- sequencing, timing and speed requirements for flying systems in a range of productions
- communication systems and correct signals to use when operating flying systems

© Commonwealth of Australia, 2026 Service and Creative Skills Australia

- organisational procedures for operating flying systems
- industry standard automated flying systems and the key principles of their use
- counterweight systems, including:
    - loading and unloading cradles
    - safe working loads
    - single and double purchase
    - spreading the load
    - swinging bars
    - where to hang lighting bars and masking.

Assessment Conditions

Skills in this unit must be demonstrated in a workplace or simulated environment where the conditions are typical of those in a working environment in this industry.

This includes access to:

- venue in which a theatrical flying system is installed
- production that requires the operation of flying systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

HLTAID011 Provide First Aid

Modification History

Release	Comments
1	This unit of competency was first released in HLT Health Release 3.0.

Application

This unit describes the skills and knowledge required to provide a first aid response to a casualty in line with first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies.

The unit applies to all persons who may be required to provide a first aid response in a range of situations, including community and workplace settings.

Specific licensing/regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Elements and Performance Criteria

Elements	**Performance criteria**
Elements describe the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
• 1. Respond to an emergency situation.	• 1.1. Recognise and assess an emergency situation.

© Commonwealth of Australia, 2026 HumanAbility

	• 1.2. Ensure safety for self, bystanders and casualty. • 1.3. Assess the casualty and recognise the need for first aid response. • 1.4. Seek assistance from emergency services.
• 2. Apply appropriate first aid procedures.	• 2.1. Perform cardiopulmonary resuscitation (CPR) in accordance ARC guidelines. • 2.2. Provide first aid in accordance with established first aid principles. • 2.3. Display respectful behaviour towards casualty. • 2.4. Obtain consent from casualty where possible. • 2.5. Use available resources and equipment to make the casualty as comfortable as possible. • 2.6. Operate first aid equipment according to manufacturers' instructions. • 2.7. Monitor the casualty's condition and respond in accordance with first aid principles.
• 3. Communicate details of the incident.	• 3.1. Accurately convey incident details to emergency services. • 3.2. Report details of incident in line with appropriate workplace or site procedures. • 3.3. Complete applicable workplace or site documentation, including incident report form. • 3.4. Maintain privacy and confidentiality of information in line with statutory or organisational policies.
• 4. Review the incident.	• 4.1. Recognise the possible psychological impacts on self and other rescuers and seek help when required. • 4.2. Contribute to a review of the first aid response as required.

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

© Commonwealth of Australia, 2026 HumanAbility

Modification History

Release	Comments
1	This unit of competency was first released in HLT Health Release 3.0.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the workplace or community setting.

There must be evidence that the candidate has completed the following tasks in line with State/Territory regulations, first aid codes of practice, first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies and workplace or site procedures:

- managed, in line with ARC guidelines, the unconscious, breathing casualty including appropriate positioning to reduce the risk of airway compromise
- managed, in line with ARC guidelines, the unconscious, non-breathing adult, including:
    - performing at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
    - following the prompts of an automated external defibrillator (AED) to deliver at least one shock
    - demonstrating a rotation of single rescuer operators with minimal interruptions to compressions
    - responding appropriately in the event of regurgitation or vomiting
- managed, in line with ARC guidelines, the unconscious, non-breathing infant, including:
    - performing at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
- managed casualties, with the following:
    - anaphylaxis
    - asthma
    - non-life-threatening bleeding
    - choking
    - envenomation, using pressure immobilisation

© Commonwealth of Australia, 2026 HumanAbility

    - fractures, dislocations, sprains and strains, using appropriate immobilisation techniques
    - minor wound cleaning and dressing
    - nosebleed
    - shock
- responded to at least one simulated first aid incident contextualised to the candidate's workplace or community setting, where the candidate has no knowledge of the casualty's condition prior to starting treatment, including:
    - identifying the casualty's illness or injury through history, signs and symptoms
    - using personal protective equipment (PPE) as required
    - providing appropriate first aid treatment
    - conveying incident details to emergency services or advising casualty on any required post incident action
    - providing an accurate verbal and written report of the incident
    - reviewing the incident.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- guidelines and procedures including:
    - ARC guidelines relevant to the provision of first aid
    - first aid guidelines from Australian national peak clinical bodies
    - potential incident hazards and risk minimisation processes when providing first aid
    - infection control procedures, including use of standard precautions and resuscitation barrier devices
    - requirements for currency of skill and knowledge
    - first aid codes of practice
    - appropriate workplace or site procedures relevant to the provision of first aid
    - contents of first aid kits
- legal, workplace and community considerations including:
    - duty of care requirements
    - own skills and limitations
    - consent and how it relates to the conscious and unconscious casualty
    - privacy and confidentiality requirements

    - awareness of potential need for stress management techniques and available support for rescuers
- considerations when providing CPR, including:
    - upper airway and effect of positional change
    - appropriate duration and cessation of CPR
    - appropriate use of an AED
    - safety and maintenance procedures for an AED
    - chain of survival
    - how to access emergency services
- techniques for providing CPR to adults, children and infants including:
    - how to recognise that a casualty is unconscious and not breathing normally
    - rate, ratio and depth of compressions and ventilations
    - correct hand positioning for compressions
    - basic anatomy, physiology and the differences between adults, children and infants relating to CPR
- signs, symptoms and management of the following conditions and injuries:
    - allergic reaction
    - anaphylaxis
    - asthma
    - non-life-threatening and life-threatening bleeding
    - burns
    - cardiac conditions, including chest pain
    - choking
    - diabetes
    - drowning
    - envenomation - all current treatments
    - eye injuries
    - fractures, dislocations, strains and sprains
    - head, neck and spinal injuries
    - hypothermia
    - hyperthermia
    - minor wounds
    - nose-bleed
    - poisoning

- seizures
- shock
- sharps injuries
- stroke.

Assessment Conditions

Each candidate to demonstrate skills in an environment that provides realistic in-depth, scenarios and simulations to assess candidates' skills and knowledge.

Due to the nature of this type of training, it is acceptable for the performance evidence to be collected in a simulated environment.

Compression and ventilation skills must be demonstrated on resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures.

Assessment must ensure access to:

- adult and infant resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures
- adrenaline auto-injector training device
- AED training devices
- workplace first aid kit
- placebo bronchodilator and spacer device
- different types of wound dressings and bandages
- blankets and items to treat for shock
- personal protective equipment (PPE)
- workplace injury, trauma or illness record, or other applicable workplace or site incident report form.

Simulated assessment environments must simulate real-life situations where these skills and knowledge would be performed, with all the relevant equipment and resources of that workplace or community environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors and must hold this unit or demonstrate equivalent skills and knowledge to that contained within this unit.

MEM05049 Perform routine gas tungsten arc welding

Modification History

Release	Comments
2	Unit code updated in Application to reflect status.
1	This unit of competency was first released in MEM Manufacturing and Engineering Release 2.0.

Application

This unit of competency defines the skills and knowledge required to prepare the materials and carry out routine gas tungsten arc welding (GTAW) and applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard.

Where welding is required to meet AS 1554 General Purpose or equivalent codes, work health and safety (WHS) regulations and/or licensing requirements unit MEM05092 Weld using gas tungsten arc welding process should also be selected.

Where the interpretation of technical drawings is required unit MEM09002 Interpret technical drawing should also be selected.

Where the selection and use of engineering measurement is required unit MEM12023 Perform engineering measurements should also be selected.

Where the selection and use of tools is required unit MEM18001 Use hand tools and unit MEM18002 Use power tools/hand held operations, should also be selected as appropriate.

Band: A

Unit Weight: 2

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

MEM11011	Undertake manual handling
MEM13015	Work safely and effectively in manufacturing and engineering

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Determine job requirements	1.1 Follow standard operating procedures (SOPs) 1.2 Comply with work health and safety (WHS) requirements at all times 1.3 Use appropriate personal protective equipment (PPE) in accordance with SOPs 1.4 Identify job requirements from specifications, sketches, job sheets or work instructions
2. Prepare materials and equipment for welding	2.1 Identify location of welds in accordance with procedures and job specifications 2.2 Clean and prepare materials ready for welding 2.3 Set up welding equipment to meet work requirement 2.4 Select settings and consumables to suit application
3. Perform routine welding using GTAW	3.1 Weld materials to job requirements 3.2 Clean welds according to SOPs

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

Welds include the following:	• butt • fillet.
Materials include one (1) or more of the following:	• low carbon/mild steels • aluminium.
Prepared includes one (1) or more of the following:	• pre-heating • setting up jigs • fixtures • clamps • joint preparation.
Welding equipment includes the following:	• hoses • welding leads and gas shrouds • electrodes • gas regulator • liners • contact tips.
Consumables include the following:	• tungsten electrodes, filler wire and shielding gas.
Clean includes the following:	• slag and spatter.

Modification History

Release	Comments
2	Unit code updated in Application to reflect status.
1	This unit of competency was first released in MEM Manufacturing and Engineering Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and interpreting specifications from sketches and verbal or written job instructions for performing routine gas tungsten arc welding (GTAW)
- cleaning and preparing materials for welding to specifications
- setting up welding equipment, including selecting settings and consumables to suit application
- consistently welding materials to specifications
- cleaning welds in accordance with SOPs.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe welding practices and procedures and use of personal protective equipment (PPE)
- preparatory requirements
- equipment and equipment settings
- shielding gas properties and applications
- weld characteristics.

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
    - have vocational competency in performing routine GTAW process at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM11011 Undertake manual handling

Modification History

Release	Comments
1	This unit of competency was first released in MEM Manufacturing and Engineering Release 2.0.

Application

This unit of competency defines the skills and knowledge required to lift and move materials manually and/or using basic manual handling equipment in a wide range of environments.

Maximum manual lifting weight is limited to Safe Work Australia recommendations.

Band: A

Unit Weight: 2

Licensing/Regulatory Information

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

1	**Determine job requirements**	1.1	Follow standard operating procedures (SOPs)
		1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Use appropriate personal protective equipment (PPE) in accordance with SOPs
		1.4	Identify job requirements from specifications, job sheets or work instructions
2	**Lift materials manually**	2.1	Determine material weight correctly utilising most appropriate technique, and assess risks associated with lifting
		2.2	Undertake lifting techniques to Safe Work Australia recommended procedures and having regard to types of movement, methods, storage, height and position
3	**Move/shift materials manually**	3.1	Select appropriate equipment, as required
		3.2	Place material safely and securely on moving equipment
		3.3	Relocate material ensuring safety of personnel and security of material
		3.4	Unload material and place in a safe and secure manner

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

MEM13015 Work safely and effectively in manufacturing and engineering

Modification History

Release	Comments
1	This unit of competency was first released in MEM Manufacturing and Engineering Release 2.0.

Application

This unit of competency defines the skills and knowledge required to work effectively in manufacturing and engineering work situations, including planning routine work and participating in and following work health and safety (WHS) procedures. The unit applies to working either individually or in a team situation and includes contributing to work-related group activities in a manufacturing or engineering workplace.

This unit covers WHS skills associated with carrying out routine operational activities safely and in compliance with legislative and regulatory requirements.

The unit covers the skills associated with participation in quality systems, communication and cooperation with others. The unit applies to workplaces with informal or formal quality management and improvement systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Band: A

Unit Weight: 2

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Determine job requirements**	1.1	Identify goals, objectives and task requirements and clarify with appropriate persons, where required
		1.2	Prioritise task requirements
2	**Review and modify plan**	2.1	Adjust timelines, priorities and other planning components to respond to contingencies, as necessary
		2.2	Re-examine results of work activity against the plan and identify possible improvements to future performance of work tasks
3	**Work effectively with others in the workplace**	3.1	Identify own role and responsibilities and relationship to other employees, including employees performing related/interdependent activities
		3.2	Identify supervisors and other sources of advice and assistance for own work
		3.3	Apply effective interpersonal skills to interact with others and contribute to activities and objectives
		3.4	Review and modify own work progress to complement the work of others
		3.5	Report own work progress to supervisors and where required to fellow employees using standard operating procedures (SOPs)

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

4	**Follow safe work practices**	4.1	Check for and identify hazards in the work area before and during work
		4.2	Follow procedures for avoiding or controlling hazards already identified in instructions, signage or other workplace communication
		4.3	Identify and report risks and hazards not covered by procedures
		4.4	Select, use and maintain relevant personal protective equipment (PPE) by procedures, as required
		4.5	Recognise emergency situations and take appropriate initial emergency action
		4.6	Follow procedures for responding to emergencies
		4.7	Report incidents, injuries and other WHS non-conformances according to procedures
5	**Work within a quality system**	5.1	Follow instructions and procedures and perform duties in accordance with standard operating procedures or quality system requirements
		5.2	Ensure conformance of product and process to specifications
		5.3	Report defects and non-conformance to specifications according to procedures
		5.4	Participate in process improvement procedures, where required

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

6	**Participate in workplace health and safety procedures**	6.1	Identify workplace health and safety policies and procedures relevant to own work and work area
		6.2	Identify relevant WHS managers and representatives for own work area
		6.3	Provide input to minimise hazards in work area in line with organisation WHS procedures and participative arrangements

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Quality systems include one (1) or more of the following	• quality planning • quality assurance • quality control • quality improvement procedures and processes
Task requirements include one (1) or more of the following:	• timeframe • quality requirements • outcome and performance requirements • job history • checks • reporting requirements • tools and equipment

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

	• materials and parts • supporting documents
Specifications include one (1) or more of the following:	• task lists • instructions • manufacturer manuals • diagrams and schematics • sketches • parts lists • SOPs
Planning includes one (1) or more of the following:	• preparing a plan to complete the task • organising task into manageable steps including appropriate order and timing • monitoring the progress of processes related to own responsibilities • applying relevant WHS instructions • collecting, sorting, recording results of work • seeking advice and guidance on setting priorities and timeframes • seeking feedback from supervisor, trainer or mentor

Assessment Requirements for MEM13015 Work safely and effectively in manufacturing and engineering

Modification History

Release	Comments
1	This unit of competency was first released in MEM Manufacturing and Engineering Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- identifying and avoiding or controlling hazards
- reporting hazards, incidents, injuries and other work health and safety (WHS) non-conformances following SOPs
- recognising and responding to emergencies following SOPs
- identifying and obtaining, instructions and information on job requirements, including one or more of the following:
    - verbal or written job instructions
    - specifications
    - SOPs
    - charts
    - lists
- identifying and responding to contingencies, including:
    - equipment breakdowns
    - non-conforming components
    - safety hazards
- recording information into proforma workplace documents, including:
    - production tally forms
    - quality control forms
    - safety incident forms
- performing assigned tasks and checking outcome of own work for conformance to specifications

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

- identifying own responsibilities within the workplace quality system
- giving and receiving feedback on own and group work
- seeking assistance from supervisors and mentors.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures and use and application of personal protective equipment
- basic quality system terminology and concept, including:
    - quality assurance
    - quality control
    - quality improvement
- procedures to be followed in performing own work
- objectives, requirements and specifications to which the individual's work is to comply
- costs and consequences of poor quality
- effective interpersonal skills:
    - effective listening
    - basic speaking skills
    - use of workplace terminology and jargon
    - giving and receiving feedback
    - checking and clarifying task-related information
    - verbal, visual and written instructions
    - appropriate modes and methods of communication
- barriers to effective communication
- sources of technical expertise/assistance
- hazards and control measures associated with workplace activities.

Assessment Conditions

- Assessors must:
    - have vocational competency in working safely and effectively in manufacturing and engineering at least to the level being assessed with relevant industry knowledge and experience

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires

- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

1	**Access information**	1.1	Determine information requirements of tasks and access relevant information from a range of sources
		1.2	Recognise and use workplace terminology correctly
2	**Organise and analyse information**	2.1	Interpret information and organise in accordance with work requirements
		2.2	Determine relevance and implications for immediate work requirements
3	**Communicate organised information using established workplace methods**	3.1	Identify purpose of communication and appropriate communication method
		3.2	Communicate information using established workplace methods

Foundation Skills

This section describes those required skills (reading, writing, oral communication and numeracy) that are essential to workplace performance in this unit of competency.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.	
Range of sources include using one (1) or more of the following:	• job instructions • specifications • standard operating procedures (SOPs)

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

	• charts • lists • documents • computer data • drawings • sketches • tables • technical manuals and/or charts • other applicable reference material
Determining relevance of information includes one (1) or more of the following:	• checking relevance of information to own work • selecting task relevant information from a larger document or from a diagram • preparing an opinion based on analysis of simple facts • expressing an opinion on the cause of faults
Workplace terminology refers to one (1) or more of the following:	• equipment • processes • workplace areas • staff • procedures
Established workplace methods include using one (1) or more of the following:	• proforma reports • data entry • verbal • drawings
Purpose of communication includes one (1) or more of the following:	• simple incident/non-conformance report • maintenance request • production records • material usage records • work records

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

	• other standard workplace records

Assessment Requirements for MEM16006 Organise and communicate information

Modification History

Release	Comments
1	This unit of competency was first released in MEM Manufacturing and Engineering Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two (2) occasions and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- accessing and recording relevant information from a range of sources
- recognising and using workplace appropriate terminology
- reading, interpreting and following information in workplace documentation
- checking and clarifying information
- organising, categorising and sequencing information
- communicating using appropriate methods and procedures for a variety of situations.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- safe work practices and procedures
- types of information relevant to the workplace and required tasks
- terminology used in the workplace relevant to own work
- available sources of information
- information analysis techniques appropriate to tasks and position
- methods of categorising and organising information including correct sequencing of information
- methods of recording and communicating information.

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessors must:
    - have vocational competency in organising and communicating information at least to the level being assessed with relevant industry knowledge and experience
    - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015* or its replacement and comply with the *National Vocational Education and Training Regulator Act 2011,* its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MEM30031 Operate computer-aided design (CAD) system to produce basic drawing elements

Modification History

Release	Comments
1	This unit of competency was first released in MEM Manufacturing and Engineering Release 3.0.

Application

This unit of competency defines the skills and knowledge required to apply functions of computer-aided design (CAD) software programs that are typically used in the production of detail drawings.

This unit is suitable for those working within a CAD or drafting work environment and may be applied across engineering and manufacturing environments. It covers competent use of a CAD program to perform basic drawing tasks used in the development of detail drawings. Drawings may include plans, diagrams, charts, circuits, systems or schematics.

All work is carried out under supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements	**Performance criteria**

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Confirm drawing requirements	1.1 Follow standard operating procedures (SOPs) and comply with work health and safety (WHS) requirements at all times 1.2 Confirm purpose, scope, and information and presentation requirements for drawing 1.3 Review available information relevant to project and work requirements and identify and address further information needs 1.4 Identify computing equipment and software used in the organisation 1.5 Identify workflow and procedures for work supervision
2. Identify key features of CAD software	2.1 Describe types of CAD software used for detail drafting, their key features and suitability for producing specific drawing outcomes 2.2 Identify differences in CAD process to generate 2D drawings and 3D models, and reasons for each presentation 2.3 Identify differences in CAD process to generate single and multiple view drawings, and reasons for each presentation 2.4 Identify CAD software used in the organisation and confirm compatibility with other software programs and peripheral equipment 2.5 Identify software features for linked specifications, catalogues or materials ordering
3. Access software and set up for drawing work	3.1 Open software and navigate organisational filing and library system 3.2 Select organisational and software templates and determine uses 3.3 Select organisational symbols, codes and standards to be applied in drafting work and how these are accessed and applied 3.4 Apply workplace procedures to retrieve and manipulate required information and navigate computing technology 3.5 Set up working environment to meet organisational requirements
4. Produce basic drawing elements	4.1 Use CAD functions to produce basic drawing elements 4.2 Use editing and transfer tools and methods to modify drawing elements

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

	4.3 Apply dimensions, text and symbols to drawing elements 4.4 Import and export files into and out of working space 4.5 Generate different views and perspectives 4.6 Organise presentation of work to meet job requirements
5. Complete CAD operations	5.1 Save and file drawing elements in accordance with organisational procedures 5.2 Print drawing elements and evaluate presentation 5.3 Evaluate work and identify areas for improvement 5.4 Close applications, perform CAD housekeeping and maintain organisational filing system

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.	
CAD software includes one or more of the following:	• AutoCAD • Inventor • Revit • Solidworks • ProSteel • XSteel. • software with the ability to create designs in 2D or 3D to visualise construction, and contains functions of development, modification and optimisation of the design process.
Basic drawing elements include one or more of the following:	• points • line angles • circles

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

	• arcs • planes • figures • solids • squares • rectangles • triangles • bisected lines • dividing lines • polygon • ellipse • spline • dimension • hatch.
Editing and transfer tools and methods include one or more of the following:	• delete • fillet • chamfer • erase • trim/extend • break • undo and redo commands • zooming and panning • moving, copying, rotating and mirroring • polar and rectangular duplication • object snaps • dimensions • selecting entities • dividing • scaling • measuring • grouping.

Assessment Requirements for MEM30031 Operate computer-aided design (CAD) system to produce basic drawing elements

Modification History

Release	Comments
1	This unit of competency was first released in MEM Manufacturing and Engineering Release 3.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- identifying drawing work requirements and selecting appropriate software functions and features
- identifying features and uses of CAD software used in detail drafting
- accessing and using computing equipment and CAD software functions on at least two occasions to produce drawing elements.

Note: Where a volume and/or frequency is not specified, demonstration must be provided at least once.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- different approaches to drawing
- CAD software programs
- basic drawing elements
- awareness of copyright and intellectual property issues in relation to drawing
- environmental and work health and safety (WHS) issues associated with the tools and materials used for drawing
- quality assurance (QA) procedures
- CAD program capabilities and processes
- editing and transfer tools and methods.

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

- have vocational competency in operating computer-aided design (CAD) system to produce basic drawing elements at least to the level being assessed with relevant industry knowledge and experience
- satisfy the assessor requirements in the Standards for Registered Training Organisations 2015 or its replacement and comply with the National Vocational Education and Training Regulator Act 2011, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Where possible, assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

MSFFF2006 Apply surface coatings by spray gun

Modification History

Release	Comments
1	New unit of competency

Application

This unit of competency covers applying surface coatings by a handheld spray gun.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Furniture finishing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Plan and prepare for work	1.1	Characteristics of the surface and the required surface coating are identified from work orders or instructions

© Commonwealth of Australia, 2026 Skills Insight

		1.2	Processing and application techniques, time and safety requirements are identified and used for work planning
		1.3	Work health and safety (WHS) requirements, including ventilation requirements and personal protection needs, are observed throughout the work
		1.4	Tools, equipment and accessories are identified and checked for safe and effective operation for the surface coating task
		1.5	Surface coatings are identified and prepared, as required, for the surface coating tasks
2	Check and prepare for spraying	2.1	Products with surface or other faults are identified and faults reported or repaired as appropriate
		2.2	Other products and equipment in the workplace are protected from overspray
		2.3	Trial applications of surface materials are made to check condition of spray system, spray patterns, equipment operation, materials viscosity and specified surface finish
		2.4	Unserviceable components are cleaned or replaced and spray system re-assembled
		2.5	Spray pattern faults are identified and rectified in accordance with workplace procedures.
		2.6	Material faults are identified and workplace procedures for rectification are followed
3	Apply surface coating	3.1	Surfaces are kept free of contamination
		3.2	Surface coatings are applied according to workplace procedures

© Commonwealth of Australia, 2026 Skills Insight

		3.3	Surface build and coverage is checked against workplace requirements for even spread and thickness
		3.4	Rectification of surface faults are made in accordance with workplace procedures
		3.5	Products are inspected and approved for suitability for further processing
4	Clean work area	4.1	Equipment is cleaned and inspected for serviceable condition and stored appropriately
		4.2	Unserviceable equipment is tagged, faults are identified and appropriate personnel are informed
		4.3	Work area, including spray booth, is cleaned and returned to approved condition
		4.4	Workplace records are completed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.	
Unit context includes:	• WHS requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent

© Commonwealth of Australia, 2026 Skills Insight

	• work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving in the application of surface coatings
Spray guns include:	• conventional air spray guns and airless spray guns • high volume/low pressure (HVLP) air-assisted and airless spray guns
Coatings include:	• pre-catalysed lacquer • acid catalysed lacquer and nitro-cellulose lacquer • one-pot polyurethane and water-based coatings • stains, lacquers, polish, enamels and acrylics
Tools and equipment include:	• pressure feed systems • spray booth • liquid containers • air compressor and hoses • air regulator • positive pressure air-wash masks • canister-type face masks • screwdrivers • shifting spanner and spanners
Personal protective equipment includes:	• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	• workplace procedures relating to the use of tools and equipment • work instructions, including job sheets, cutting lists, plans, drawings and designs • workplace procedures relating to reporting and communication • manufacturer specifications and operational procedures

© Commonwealth of Australia, 2026 Skills Insight

Assessment Requirements for MSFFF2006 Apply surface coatings by spray gun

Modification History

Release	Comments
1	New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
    - minimise the risk of injury to self or others
    - prevent damage to goods, equipment and products
    - maintain required production output and product quality
- Select and apply surface coatings, including the adjustment of spray equipment, to effect required spray pattern for a minimum of three (3) different surface types and shapes
- Maintain spray equipment and work area, including spray booth
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Identification of spray equipment, processes and procedures
- Characteristics of the coatings and base materials in terms of toxicity, reactivity, flammability, required viscosity and recoatability
- Effects of fumes, heat and other radiations on surface coatings

© Commonwealth of Australia, 2026 Skills Insight

- Methods to prevent contamination of surfaces during and after surface coating
- Work flow in relation to spraying operations

Assessment Conditions

- Assessors must:
    - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
    - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
    - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to spray equipment, spray booth, coatings and cleaning products.

Unit sector(s)

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
	Identify object to be drawn	1.1	The purposes and any operational characteristics of object to be drawn are identified
		1.2	Production materials and method are identified

© Commonwealth of Australia, 2026 Skills Insight

2	Establish drawing criteria and limitations	2.1	Type of drawing to be completed is identified
		2.2	Drawing requirements are established and documented identifying dimensions, angles, shapes and finished sizes
		2.3	Drawing conventions and specifications to be noted on the drawing are identified
		2.4	Appropriate medium for drawings is identified and selected
3	Quantify and draft initial drawing	3.1	Dimensions are plotted from criteria and documented specifications
		3.2	Dimensional points are connected to match appropriate drawing views
		3.3	Any production notes or special requirements are noted
		3.4	Drawing conventions and specifications are noted on the documentation
4	Complete drawing	4.1	Angles, shapes and dimensions are checked against specifications and sample
		4.2	Adjustments are made to the drawing within scope of authority
		4.3	Drawing is checked for compliance with workplace documentation requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of

Assessment Requirements for MSFFM3009 Produce manual and computer-aided production drawings

Modification History

Release	Comments
1	New unit of competency

Performance Evidence

- Identify the factors and criteria relevant to the drawings
- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- Prepare production drawings of furniture/furnishings:
  - covering a scope of at least three (3) products
  - applying both manual and computer-aided techniques and processes
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- Furniture design and planning criteria
- Structural geometry
- Measurement techniques and equipment/tools
- Theory and practice of calculations (addition, subtraction, multiplication and division)
- Types, techniques and processes of manual production drawing
- Types of computer-aided drawing equipment, software, techniques and processes
- Conventional signs and markings for drawings

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2026 Skills Insight

    - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
    - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification

MSFFM3011 Measure and draw site layout for manufactured furniture products

Modification History

Release	Comments
1	New unit of competency

Application

This unit of competency covers measuring and recording site layout details to provide an accurate basis for both manufacture and installation of furniture products.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Obtain measurements	1.1	The purpose of obtaining measurements is clarified and confirmed

© Commonwealth of Australia, 2026 Skills Insight

		1.2	The most appropriate method of obtaining the measurement is selected and applied
		1.3	Accurate measurements are obtained, confirmed and recorded
		1.4	Calculations required for the measurement or validation are selected and correctly applied
		1.5	Quality assurance requirements, standards and tolerances associated with enterprise operations are recognised and adhered to
2	Draw site layout	2.1	Intended use of the site is clarified and confirmed
		2.2	A site plan is prepared showing all features and measurements
		2.3	A site elevation is completed showing all features and measurements
		2.4	Unique and non-complying features which may impact on manufacture and/or installation are highlighted and referred to the appropriate party

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2026 Skills Insight

Unit scope includes:	• measurement and drawing of site layout related to the manufacture and installation of furniture, cabinets, glass, soft furnishings, upholstery, picture framing and floor covering products
Drawing include:	• manual or computer-aided
Measurements:	• are to be in metric scale, cover all dimensions of the site and furnishings and involve the use of: o rulers o tape measures o squares o service detectors o laser or equivalent technology
Critical dimensions that may impact on manufacture and installation include:	• the square of the structure • angles of floor to walls • walls to ceiling • vertical walls • horizontal floor and ceiling • service locations and critical structural criteria
Calculations include:	• area • perimeter • volume • mass • scales and ratios (ingredients/elements and triangulation) and require the application of addition • subtraction • multiplication and division processes • calculations are to be performed both manually and with the aid of a calculator
Unit context includes:	• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures • work is carried out in accordance with legislative obligations, environmental legislation, relevant health

© Commonwealth of Australia, 2026 Skills Insight

	regulations, manual handling procedures and organisation insurance requirements
Personal protective equipment includes:	• that prescribed under legislation, regulations and enterprise policies and practices
Information and procedures include:	• workplace procedures relating to the use of tools and equipment • work instructions, including job sheets, cutting lists, plans, drawings and designs • workplace procedures relating to reporting and communication • manufacturer specifications and operational procedures

Assessment Requirements for MSFFM3011 Measure and draw site layout for manufactured furniture products

Modification History

Release	Comments
1	New unit of competency

Performance Evidence

- Identify the factors relevant to the measurements and drawings
- Communicate effectively to enable accurate calculations, measurements and drawings
- Accurately measure and record particulars for required sector sites and materials
- Draw accurate, scaled plans and elevations relevant to the site using manual or computer-aided methods
- Identify and communicate on measurements and dimensions which may impact on manufacture and/or installation
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money

Knowledge Evidence

- Furniture design and planning criteria
- Drawing techniques, technologies and processes
- Furniture installation methods, criteria and techniques
- Measurement techniques and equipment/tools
- Theory and practice of calculations (addition, subtraction, multiplication and division)
- Conventional signs and markings for plans and drawings

Assessment Conditions

- Assessors must:

© Commonwealth of Australia, 2026 Skills Insight

    - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
    - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
    - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to information on the site and products for measurement and calculation, suitable work area appropriate to the activity, suitable site plans/drawings and/or specifications, and measuring, calculating and recording devices.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for work	1.1	Work instructions are used to determine job requirements, including quality, materials, equipment and quantities

© Commonwealth of Australia, 2026 Skills Insight

		1.2	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.3	Material for processing is selected and inspected for quality
		1.4	Machines and cutting tools are identified and checked for safe and effective operation
		1.5	Procedures are determined for minimising waste material
		1.6	Procedures are identified for maximising energy efficiency while completing the job
2	Set up machines	2.1	Machine settings and adjustments are made in accordance with job requirements and machine and tool manufacturer instructions
		2.2	Trial runs are conducted to check machine operation, accuracy and quality of finished work
		2.3	Necessary adjustments are made to machine settings
3	Operate machines	3.1	Machine start-up procedure is carried out in accordance with manufacturer instructions
		3.2	Material is fed into machine in accordance with manufacturer instructions, tooling requirements, safe handling procedures and standard workplace operating procedures
		3.3	Machine is operated in accordance with its designed capacity and purpose, and to manufacturer recommendations
		3.4	Machine operation is monitored to ensure product quality and output

© Commonwealth of Australia, 2026 Skills Insight

		3.5	Waste quantities are checked and minimised
		3.6	Items that do not meet quality requirements are repaired, recycled or discarded according to workplace procedures
		3.7	Problems with the required work and/or the operation of the machine are identified and reported to appropriate persons
4	Finalise operation and maintain equipment	4.1	Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
		4.2	Machinery is cleaned and left in a safe mode
		4.3	Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
		4.4	Unused hardware is collected and stored for re-use or disposal following workplace procedures
		4.5	Waste and scrap materials are dealt with following workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are

© Commonwealth of Australia, 2026 Skills Insight

included. Range is restricted to essential operating conditions and any other variables essential to the work environment.	
Automated edge banding machines include:	• standard automated edger (not fully automatic) • soft forming machine
Unit scope includes:	• applying and processing an edge trim to solid timber or manufactured board
Unit context includes:	• WHS requirements, including legislation, building codes, material safety management systems, hazardous substances and dangerous goods code, and local safe operating procedures • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individuals to demonstrate some discretion, judgement and problem solving in the set up and operation of machines • competency may be demonstrated in workplaces involved in the manufacture of domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components
Materials to be processed include:	• solid timber • manufactured board
Edgings include:	• solid timber • laminates • plastics • non-ferrous materials and foils
Operator maintenance includes:	• the cleaning and refurbishing of the gluing station
Personal protective equipment includes:	• that prescribed under legislation, regulations and enterprise policies and practices
Information and	• workplace procedures relating to the use of tools and equipment • work instructions, including job sheets, cutting lists, plans, drawings and designs

© Commonwealth of Australia, 2026 Skills Insight

procedures include:	• workplace procedures relating to reporting and communication • manufacturer specifications and operational procedures

Assessment Requirements for MSFFM3019 Set up, operate and maintain automated edge banding machines

Modification History

Release	Comments
1	New unit of competency

Performance Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Read and interpret cutting lists and job specifications to prepare for work
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
    - minimise the risk of injury to self or others
    - prevent damage to goods, equipment and products
    - maintain required production output and product quality
- Identify, set up and operate an automated (not fully automatic) edging machine to complete the following:
    - the set up and application of at least three (3) different edge treatment materials
    - the identification and correction of at least two (2) real or simulated machining faults
- Conduct operator maintenance on the machines and equipment
- Use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures
- Minimise wastage of resources, including materials, time and money
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

© Commonwealth of Australia, 2026 Skills Insight

Knowledge Evidence

- Types, characteristics, uses and limitations of machines
- Characteristics, uses and limitations of board products, edging products and adhesives
- Workplace guidelines regarding acceptable tolerance levels
- Workplace safety policies and procedures
- Procedures for reporting machinery faults and material defects

Assessment Conditions

- Assessors must:
    - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
    - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
    - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to an automated edge banding machine, standard operating procedures, and unprocessed materials.

Furniture Making

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	Prepare for work	1.1	Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity

© Commonwealth of Australia, 2026 Skills Insight

		1.2	Fabrication sequence is planned
		1.3	Procedures are determined for checking quality at each stage of the process
		1.4	Work health and safety (WHS) requirements, including personal protection needs, are observed throughout the work
		1.5	Suitable work area is selected for the task
		1.6	Preparatory drawings and set-outs for tasks are completed
		1.7	Cutting list for components is developed
		1.8	Materials are selected following work instructions
		1.9	Tools and equipment suitable for fabrication are identified and checked for safe and effective operation
2	Complete fabrication	2.1	Materials are set out and prepared according to work instructions and components are marked according to industry practices
		2.2	Tools, machines and equipment are used in accordance with safety requirements and manufacturer specifications
		2.3	Components are fabricated and checked against set-outs for accuracy tolerances, fit and distortion
		2.4	Doors, drawers, shelves or decorative treatments are fitted as required

© Commonwealth of Australia, 2026 Skills Insight

		2.5	Product is prepared for final finish, including the removal of bruises, scratches, dents and marks
		2.6	Product is checked against plans at identified checkpoints
1	Finalise operation and maintain equipment	3.1	Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
		3.2	Machinery is cleaned and left in a safe mode
		3.3	Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
		3.4	Unused hardware is collected and stored for re-use or disposal following workplace procedures
		3.5	Waste and scrap materials are dealt with following workplace procedures

MSFGG3036 Install commercial glazing products

Modification History

Release	Comments
1	This unit of competency was first released in MSF Furnishing Training Package Release 4.0.

Application

This unit describes the skills and knowledge required to identify work requirements, prepare tools and materials, and install flat and curved glazing products in commercial environments such as shopfronts, doors and windows.

This unit applies to individuals installing products. They may or may not also fabricate the products.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking glass and glazing work. Access to construction sites requires certification of general induction training specified by the National Code of Practice for Induction for Construction Work (ASCC 2007).

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit sector(s)

Glass and Glazing

Elements and Performance Criteria

Elements	**Performance criteria**
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Skills Insight

1. Identify work requirements	1.1 Read work documentation and identify installation requirements 1.2 Identify and follow work health and safety requirements 1.3 Determine required installation methods and materials, and estimate quantities 1.5 Plan a logical work sequence suited to the job and workplace procedures
2. Prepare for installation	2.1 Select and check tools and equipment for suitability, serviceability and safety prior to use 2.2 Select and confirm type and quantity of components and materials against specifications 2.3 Measure and prepare components and materials using required tools in accordance with specifications
3. Identify site conditions and constraints	3.1 Consult customer and obtain permission prior to site inspection 3.2 Identify site safety hazards and take corrective action to reduce injury to self and others 3.3 Identify other on-site characteristics for their impact on the installation process 3.4 Take accurate measurements and confirm against job specification 3.5 Apply covering material to protect existing fixtures and fittings in accordance with workplace procedures
4. Prepare frame/opening and materials	4.1 Remove glass in accordance with safety and work requirements 4.2 Assess frame and/or opening to ensure suitability for re-glazing in accordance with customer requirements and Australian Standards 4.3 Report defective frames for repair or replacement in accordance with workplace procedures 4.4 Prepare frame and/or opening to receive glass through check of size against specifications, removal of sealant remains and surface preparation 4.5 Prepare fixing and sealing materials by mixing or cutting to length in accordance with job requirements
5. Fit glass	5.1 Fix glass to the frame using the selected method and in accordance with recognised industry procedures and Australian Standards

© Commonwealth of Australia, 2026 Skills Insight

	5.2 Use solvents and sealants in accordance with manufacturer recommendations and Australian Standards 5.3 Remove excess sealing material and clean glass and frame after fixing
6. Complete work	6.1 Check completed installation for compliance with customer requirements, specifications and Australian Standards 6.2 Clean and store tools, equipment and materials in accordance with workplace procedures 6.3 Clean work area, leave in a safe condition and dispose of waste or recycle in accordance with workplace protocols 6.4 Accurately complete required workplace documentation

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for MSFGG3036 Install commercial glazing products

Modification History

Release	Comments
1	This unit of competency was first released in MSF Furnishing Training Package Release 4.0.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- completed 2 commercial project installations in accordance with work, safety and Australian Standards requirements, to include at least 2 of the following:
    - combined window and door project
    - frameless commercial windows
    - shopfront and door
    - shopfront and door using sub-head and sub-sill.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- Australian Standards, their purpose and key provisions:
    - AS/NZS 4667
    - AS 1288
- mathematical procedures for estimation and measurement
- types, characteristics and uses of commercial glazing products
- commercial glazing product installation:
    - workplace safety system requirements
    - work flow requirements
    - qualities and characteristics of glass and framing materials, including curved glass
    - qualities, characteristics, uses and limitations of component hardware:
        - concealed overhead closer
        - guides
        - hinges

© Commonwealth of Australia, 2026 Skills Insight

        - locks
        - pivots
        - weather seals
        - wheels
        - stays
    - site characteristics that may impact installation and how to respond
    - installation techniques, the types of problems that may occur and how to avoid and respond
    - fabrication methods for different products and how this impacts installation
    - basic fabrication techniques for on-site product adjustments
    - quality assurance
- types, characteristics, safe use, maintenance and limitations of installation tools and equipment
- uses and limitations of adhesives and sealants in glazing installations
- documentation requirements for installation work.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - equipment, tools and materials to complete tasks in the Performance Evidence
    - work orders
    - workplace procedures.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSFID4016 Design colour schemes for interior and exterior spaces

Modification History

Release	Comments
1	This unit of competency was first released in MSF Furnishing Training Package Release 4.0.

Application

This unit describes the skills and knowledge required to assess colour requirements, research and experiment with different colour options and create preferred colour schemes for presentation to the client.

This unit applies to interior decorators and designers.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit sector(s)

Interior Decoration and Design

Elements and Performance Criteria

Elements	**Performance criteria**
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Skills Insight

1. Assess colour requirements for the project	1.1 Evaluate project specifications, parameters and constraints, and confirm with client 1.2 Select work resources based on the needs of the project 1.3 Identify and assess the space, its light and continuing colours for impact on potential solutions 1.4 Identify key project stakeholders and establish required communication protocols
2. Research colour schemes for interiors	2.1 Research and analyse colour psychology in accordance with the needs of the project 2.2 Research and analyse cultural and historical influences on colour to inform the needs of the project 2.3 Research and compile information on the impact of specific colours on the interior space
3. Explore colour schemes	3.1 Use colour wheels to mix and match alternative colour schemes to determine suitability of colours to a space 3.2 Explore the use of additive and subtractive colour mixing to inform colour selections 3.3 Explore and test colour systems and colour combinations and/or juxtapositions against the brief 3.4 Assess effect of light against the impact of colours being proposed for use 3.5 Assess visual perception of colours in accordance with the project brief 3.6 Match samples using colour mixing techniques 3.7 Evaluate colour effect perceptions by use of light to mix and throw coloured light onto surfaces 3.8 Ascertain contrast and harmony of colours through selection of colours in accordance with the project brief
4. Finalise and present colour scheme	4.1 Choose final selection of colours based on exploration and key objectives of the project brief 4.2 Prepare a visual representation that communicates the key aspects of the preferred solution using rendering media suited to the project 4.3 Present recommendations in a format and level of detail suited to the client and scope of the project 4.4 Seek client feedback on the proposed solution 4.5 Make adjustments to the final design solution based on feedback

© Commonwealth of Australia, 2026 Skills Insight

	4.6 Accurately document selection specifications

Foundation Skills

The Foundation Skills describe those required skills (such as, language, literacy, numeracy and employment skills) that are essential to performance:

- technology skills to research colour information using digital media.

Other foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for MSFID4016 Design colour schemes for interior and exterior spaces

Modification History

Release	Comments
1	This unit of competency was first released in MSF Furnishing Training Package Release 4.0.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- developed and presented colour schemes in response to 3 different design briefs that individually or cumulatively involve both interiors and exteriors:
    - developed samples to represent colour mixing, matching, combinations and effects
    - visually presented colour schemes using rendering and other techniques to illustrate how ideas meet overall project requirements.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- research sources for information about colour, including current trends
- elements and principles of design
- design process and how ideas progress
- terminology of colour
- colour wheels and how they are used in interior decoration and design
- cultural and historical influences of colour
- colour systems and theories
- colour psychology influences
- use of colour in different types of interior spaces
- processes for additive and subtractive colour mixing
- effects of natural and artificial light on colour and finish types
- types of rendering media and how they are used.

© Commonwealth of Australia, 2026 Skills Insight

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - design briefs
    - information technology for research
    - colour wheels.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSMWHS217 Gas test atmospheres

Modification History

Release	Comments
1	This unit of competency was first released in MSM Manufacturing Training Package Release 2.0.

Application

This unit of competency covers the skills and knowledge required to test the working atmosphere, using electronic test apparatus, to find out if it is safe for the proposed work.

It applies to situations where an individual may be required to carry out gas testing of an atmosphere prior to entering a specific area or workspace. The competency requires the person to interpret readings and take actions based on the interpretation.

Working environment may be hazardous, unpredictable, subject to time pressure, chaotic and expose responders to risk, on land or water, by day or night. Workplace atmospheres may include visible and invisible hazards and hazardous surfaces.

The unit is suitable for use in the following situations:

- confined spaces
- enclosed and partially enclosed spaces
- hot work
- storage tanks, silos, pits, pipes, shafts, ducts, transport vehicles and ships
- testing as part of issuing a work permit
- monitoring as part of working under a work permit
- open areas
- holding the gas tester by hand
- lowering the gas tester into a space, e.g. on a line.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Prepare for gas testing	1.1	Find out type of gas/atmosphere to be tested
		1.2	Select and calibrate equipment in accordance with procedures
		1.3	Find out gas testing regime/sampling pattern required
		1.4	Identify hazards from possible atmosphere contaminants
		1.5	Implement hazard control measures and use of appropriate personal protective equipment (PPE)
2	Test gas	2.1	Use gas testing equipment to test gas as required
		2.2	Interpret and report readings
		2.3	Monitor gas on an ongoing basis as required
		2.4	Take required action if readings are unacceptable
		2.5	Communicate required actions to be taken to appropriate personnel

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

3	Maintain equipment	3.1	Clean and maintain gas testing equipment in accordance with procedures
		3.2	Inspect and fault-find monitoring equipment in accordance with procedures
		3.3	Return gas testing equipment to required location and in required condition
		3.4	Maintain records of tests and results in accordance with procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.	
Regulatory framework	The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following: • legislative requirements, including work health and safety (WHS) • industry codes of practice and guidelines • environmental regulations and guidelines • Australian and other standards • licence and certification requirements • AS 2865-2009 Confined spaces • AS 1674.1-1997 Welding and allied processes - Fire precautions
Procedures	All operations must be performed in accordance with relevant procedures. Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following: • emergency procedures

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

	• work instructions • standard operating procedures (SOPs) • safe work method statements (SWMS) • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant
Tools and equipment	Tools and equipment include one or more of the following: • portable instruments • sampling tubes and pumps • oxygen level meter • combustible gas detectors • other hazardous gas meters • PPE
Routine problems	Routine problems must be resolved by applying known solutions. Routine problems include one or more of the following: • changes in readings • unexpected readings • faults in equipment Known solutions include one or more of the following: • procedures • training • remembered experience Non-routine problems must be reported according to according to relevant procedures.
Hazards	Hazards include one or more of the following: • smoke, darkness and heat • heat, smoke, dust or other atmospheric hazards • electricity • gas • gases and liquids under pressure • structural hazards

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

	• structural collapse • equipment failures • industrial (machinery, equipment and product) • equipment or product mass • noise, rotational equipment or vibration • limited head spaces or overhangs • working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours • fire and explosion • flammability and explosivity • hazardous products and materials • unauthorised personnel • sharp edges, protrusions or obstructions • slippery surfaces, spills or leaks • limited head spaces or overhangs • extreme weather • other hazards that might arise

Assessment Requirements for MSMWHS217 Gas test atmospheres

Modification History

Release	Comments
1	This unit of competency was first released in MSM Manufacturing Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and must include the ability to:

- recognise and assess conditions that require testing
- identify the appropriate action according to procedures and within scope of responsibility, including:
    - selecting, preparing and using gas testing equipment
    - applying testing regime
    - selecting and using personal protective equipment (PPE)
    - identifying hazards and applying control measures
    - cleaning and maintaining equipment
- take readings and interpret, report/record relevant data
- apply known solutions to routine problems
- communicate clearly and unambiguously with a range of personnel on safety conditions and procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including:
    - work permit systems
    - safety, hazards and hazard control
    - incident, fire and accident
    - PPE
    - organisation standard operating procedures (SOPs)
- common atmospheric hazards and contaminants
- explosive range, upper and lower explosive limits

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

- exposure standards (time-weighted average, short-term exposure limits, peak limitation values, and examination of toxic effect at the level of a range of flammable gases)
- conditions under which atmospheres become hazardous
- units of measurement used to express concentration of atmospheric contaminants (mg/cubic m. ppm, % v/v).

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
    - must include the use of the relevant gas testing meters and any other relevant tools, equipment and safety gear, and require demonstration of preparation, operation, completion and responding to problems
    - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
    - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
    - walk-throughs
    - demonstration of skills
    - industry-based case studies/scenarios
    - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2026 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

PUAFER004 Respond to facility emergencies

Modification History

Release	Comments
1	This unit of competency was first released in PUA Public Safety Release 1.0.

Application

This unit of competency involves the skills and knowledge required by occupants to recognise emergencies in a facility, to report emergencies and to take appropriate action during facility emergency situations. It includes preparing for emergency situations, reporting emergencies, responding to emergency warnings and advice, choosing the most appropriate course of action and evacuating from a danger area.

The unit has been developed to cover the facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student, resident but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, organisational policies and procedures and accepted safe practices. It applies to occupants who are required to be ‘emergency aware’ in their facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for emergency situations**	**1.1**	Facility emergency procedures to be used by occupants are identified and followed
		1.2	Emergency resources in a facility are identified and located
		1.3	Emergency response exercises are participated in, in accordance with facility emergency procedures
2	**Report emergencies**	**2.1**	Emergencies are identified and reported, in accordance with facility emergency procedures
		2.2	Occupants in any immediate danger from an emergency or potential emergency are alerted, in accordance with facility emergency procedures
3	**Respond to emergency warnings and advice**	**3.1**	Emergency warnings and advice are responded to, in accordance with facility emergency procedures
		3.2	Instructions from emergency control organisation or attending emergency services are complied with during an emergency
4	**Choose most appropriate course of action**	**4.1**	Emergencies that require evacuation are determined
		4.2	Emergencies that require occupants to shelter-in-place (no evacuation) are determined

© Commonwealth of Australia, 2026 Public Skills Australia

		4.3	Shelter or refuge is assessed to determine suitability and sustainability when a shelter-in-place response is the preferred option
		4.4	Emergencies that require lockdown are determined
		4.5	Appropriate cover is assessed when lockdown is required
5	**Evacuate from danger area**	**5.1**	Need to evacuate from danger area is determined and issued under facility emergency procedures
		5.2	Work area is prepared for evacuation, in accordance with facility emergency procedures
		5.3	Area of danger is evacuated, in accordance with facility emergency procedures
		5.4	Where it is safe to do so, assistance is provided to occupants who may require it
		5.5	Evacuation procedures and instructions from emergency control organisation or emergency response personnel are followed
		5.6	Alternative pathways or methods of evacuation are identified, assessed and chosen, in accordance with facility emergency procedures, if usual means of evacuation are blocked or occupants are endangered
		5.7	Communication system is used to respond to facility emergencies, in accordance with facility procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Modification History

Release	Comments
1	This unit of competency was first released in PUA Public Safety Release 1.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- complying with legislation, industry standards, codes of practice and regulations
- evacuating from work area
- following facility emergency procedures and direction of emergency control organisation members and/or attending emergency services
- identifying and evacuating occupants who may require assistance
- identifying and reporting emergencies
- maintaining own safety and the safety of others in emergency situations
- participating in emergency response exercises including briefings, debriefings, simulations, reviews and desk top drills
- preparing for emergency situations
- responding to emergency warnings and advice
- selecting the most appropriate course of action during an emergency

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- circumstances where evacuation may need to be modified
- emergency response exercises including participation in briefings and debriefings

© Commonwealth of Australia, 2026 Public Skills Australia

- evacuation alarms and facility emergency procedures including action to take when evacuation to a location external to the building might expose evacuated occupants and/or personnel to a greater level of danger
- facility emergency documentation, policies and procedures
- facility emergency reporting systems and procedures facility emergency warning system, signals and instructions
- legislation, industry standards, codes of practice and regulations
- locations of assembly areas and post evacuation actions
- locations of emergency equipment in a facility
- roles, responsibilities and authority of emergency personnel, emergency control organisations and emergency response teams
- types of emergencies, hazards and evacuation actions associated with each one
- types of occupants who may require assistance
- where Personal Emergency Evacuations Plans (PEEPs) for occupants who have a disability are kept
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
    - that reflect emergency situations that may occur in a facility and include shelter in place, partial evacuation and/or full evacuation
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry

PUAFIR518 Conduct and record a Bushfire Attack Level (BAL) assessment

Modification History

Release	Comments
1	This unit of competency was first released in PUA Public Safety Release 1.0.

Application

This unit of competency covers the skills and knowledge to perform Bushfire Attack Level (BAL) assessments.

Individuals undertaking Bushfire Attack Level assessments require a theoretical knowledge of fire, an understanding of regulatory frameworks, an ability to assess a location and consult with clients on the benefits of achieving fire resistance. It includes analysing the cause and effect of bushfire attack and correlating information about site conditions and determining the Bushfire Attack Level for a site.

The unit is applicable to personnel who are responsible for conducting a Bushfire Attack Level assessment as described in industry standards related to the construction of buildings in bushfire prone areas.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Not applicable.

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Analyse cause and effect of bushfire attack on buildings**	**1.1**	Objectives of planning and building legislation and standards covering development in areas exposed to bushfire are reviewed to identify measures to improve performance of buildings when subject to bush fire attack
		1.2	Requirements for Bushfire Attack Level (BAL) assessment are identified and complied with including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS), legislative, organisational and certification requirements
		1.3	Interaction between fuel, topography and weather is assessed for the site and potential bushfire behaviour and its impact on people and property is determined
		1.4	Potential fire impact on buildings including construction durability and immediate environment is determined
		1.5	Sources of combustion are identified to determine how they influence the BAL
2	**Correlate information about site conditions**	**2.1**	The location of the site being assessed is identified
		2.2	Fire Danger Index (FDI) and/or wind speed is determined for the site
		2.3	Vegetation classification, type and height is determined for the site
		2.4	Distance from vegetation to building sites is measured, in accordance with organisational procedures

© Commonwealth of Australia, 2026 Public Skills Australia

		2.5	Slope of land under vegetation is measured, in accordance with organisational procedures
3	**Determine BAL for site**	**3.1**	Relevant FDI, vegetation classification and type, distance to vegetation and slope are used to determine BALs applicable to the site
		3.2	BALs appropriate to the site are verified, in accordance with organisational procedures
		3.3	Details of BAL assessment is documented and reported, in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions may be found in the Companion Volume Implementation Guide.	
legislation and standards must include all the following	• AS 3959 Construction of Buildings in Bushfire Prone Areas (or successor) • NASH Standard - Steel Frame Construction in Bushfire Areas (National Association of Streel Framed Housing) • National Construction Code (Building Code of Australia) • planning requirements and relevant state and territory legislation
buildings must include the following	• alterations and additions to existing buildings • new buildings
Fire Danger Index (FDI) must include one or more of the following	• forest fire and grassland fire danger indexes • organisational and jurisdiction specific requirements for their use

© Commonwealth of Australia, 2026 Public Skills Australia

vegetation type must include one or more of the following	• as defined in AS3959 Construction of Buildings in Bushfire Prone Areas (or successor) • as specified in organisational and jurisdictional guides

Assessment Requirements for PUAFIR518 Conduct and record a Bushfire Attack Level (BAL) assessment

Modification History

Release	Comments
1	This unit of competency was first released in PUA Public Safety Release 1.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and guidelines including safe work practices and procedures
- complying with legislation, regulations, industry standards and codes of practice for undertaking a Bushfire Attack Level (BAL) assessment
- collecting information and determining BAL assessment
- explaining purpose and processes associated with undertaking a BAL assessment to site owners including identifying problems and demonstrating potential responses
- identifying bushfire behaviour and conditions
- maintaining organisational documentation including recording, reporting and maintaining organisational information accurately
- using organisational policies and procedures relevant to undertaking a BAL assessment

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- bushfire behaviour concepts relevant to bushfire attack level assessments including
  - bushfire attack mechanisms including embers, radiant heat and flame contact
  - ember production and transport
  - heat transfer - convection, radiation and conduction

© Commonwealth of Australia, 2026 Public Skills Australia

- bushfire behaviour concepts relevant to how bushfires move across different landscapes and vegetation including
    - fire development, growth and scale
    - flame height, fire intensity and rate of spread
    - junction zones and spotting
- Commonwealth, state or territory statutory requirements including licensing, and certification requirements
- communication methods and techniques
- fire weather conditions and impacts on fire behaviour including atmospheric stability, humidity, temperature, wind speed and direction and fire danger indices
- fuel and its impact on fire behaviour including amount, arrangement and moisture status
- organisational policies and procedures for undertaking a BAL assessment including procedures for recording, reporting and maintaining organisational records and information
- process for slope assessment and determination of effective slope
- site constraints and limitations
- sources of combustion including
    - flammable elements and vulnerable features in and around site
    - structures and other sources adjacent to or at proposed site
- vegetation type and classification including forest, woodland, shrubland, scrub, Mallee and/or Mulga, rainforest, grassland, tussock moorland and exclusions
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including guidelines and practices for undertaking BAL assessments

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

© Commonwealth of Australia, 2026 Public Skills Australia

Students must determine the level of bush fire attack by undertaking a minimum of four calculated Bushfire Attack Level (BAL) assessments in a variety of vegetation types and locations.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
    - AS3959 Construction of buildings in bushfire prone areas (or successor)
    - range of appropriate sites
    - specifications and work instructions
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

RIICCM202E Identify, locate and protect underground services

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Application

This unit describes the skills and knowledge required to identify, locate and protect underground services in civil construction.

It applies to those working in operational roles and overseeing construction work. They generally work under supervision and hold some responsibility for identifying, locating and protecting underground services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Civil construction

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 1. Prepare to identify, locate and protect underground services	• 1.1 Obtain, interpret and confirm work requirements • 1.2 Access, interpret and apply Australian standards and documentation required for identifying, locating and protecting underground services and confirm work activity is compliant • 1.3 Identify hazards and environmental issues, assess the risks and implement control measures in line with workplace policies • 1.4 Identify and adhere to traffic signage requirements • 1.5 Select equipment and tools required for service locating works and check for faults and report or rectify within scope of own role • 1.6 Identify and apply environmental protection requirements for task • 1.7 Obtain and prepare information for search requirements from national referral service prior to making contact with the service provider • 1.8 Contact, obtain service and utility location details from and identify specific requirements of service and utility owners
• 2. Identify and locate underground services	• 2.1 Identify hazards and environmental issues, assess risks, implement control measures and confirm safe working environment • 2.2 Determine location, alignment direction, level and grade of services and utilities from plans and location details • 2.3 Comply with specific requirements of service and utility owners • 2.4 Use visual and physical means to inspect site for services and utilities prior to commencing construction • 2.5 Use required service locating equipment to detect and determine position of underground services and, in consultation with operator undertaking construction work, which assets are affected by planned works • 2.6 Mark out positions of underground services and utilities as required

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	• 2.7 Generate reports of underground service location
• 3. Protect underground services	• 3.1 Advise operators undertaking construction of requirements for asset and utility protection according to service and utility owners requirements • 3.2 Establish clearance distances and isolate work as required according to safety requirements • 3.3 Move, relocate as necessary, protect and support services and utilities from construction process according to safety requirements and in conjunction with service and utility owners as required • 3.4 Advise non-destructive and manual excavation as required • 3.5 Confirm restoration of infrastructure assets and backfilling according to safety, and service and utility owners' requirements, and advise road authority once work is completed as required • 3.6 Record and report to asset owners and supervisory staff any damage to services and utilities during activity
• 4. Conduct housekeeping activities	• 4.1 Clear work area and dispose of and recycle materials as required • 4.2 Clean, check and maintain condition of equipment, and report issues as required or address within scope of own role • 4.3 Manage and report hazards as required • 4.4 Finalise and process written records as required according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	• Adjusts activities given tolerances of plan details and equipment

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Oral communication	• Verbally acquires details from and reports problems and/or hazards to a supervisor or service and/or utility owner
Reading	• Identifies and interprets information from at times complex workplace procedures, documentation, legislation and regulations
Self-management	• Monitors and minimises self-exposure to worksite risks during activities
Writing	• Records simple and routine information relating to work activities

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIICCM202E Identify, locate and protect underground services

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify, locate and protect underground services on at least two occasions, including:
    - use electromagnetic locating equipment on at least one occasion to detect conductive underground services.

During the above, the candidate must:

- locate, apply and retain on site access to documentation, policies and procedures required to identify, locate and protect underground services
- implement the requirements, procedures and techniques for completing the identification, location and protection of underground services, including:
    - selecting and using required tools and equipment
    - communicating to clarify instructions and information
    - completing housekeeping activities
- work with others to identify, locate and protect underground services that meets required outcomes, including:
    - using a range of communication techniques and equipment
    - complying with written and verbal reporting requirements and procedures
- employ required techniques, plant and equipment to search for services and utilities
- identify services and owners of services and utilities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key indicators of work quality and accuracy
- processes for planning and organising work activities
- safety data sheets and materials handling methods

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- electromagnetic locating and radar based technologies
- job safety analyses (JSAs), job safety environmental analyses (JSEAs), and safe work method statements (SWMSs)
- key risks relating to identifying, locating and protecting underground services, including those associated with:
    - traffic
    - live electrical services
    - confined spaces
    - falls
    - locating near other works in progress
    - manual handling
    - gas
- key policies and procedures, legislation and established requirements for identifying, locating and protecting underground services, including those for:
    - workplace health and safety
    - environmental protection
    - operating and maintaining equipment
    - fault checking and calibrating locating equipment
    - marking underground asset locations
    - waste disposal and recycling
    - site isolation and traffic control
    - excavation and finished surfaces reinstatement
    - obtaining emergency numbers and contact details of service and utility owners
    - obtaining and preparing search requirement information from Dial Before You Dig (DBYD)
    - damage to services and utilities
- key factors affecting work activities described in performance evidence above, including:
    - types of services, utilities and providers
    - working in a road reserve
    - equipment types, characteristics, technical capabilities and limitations
    - asset specific clearance distances
    - non-destructive excavation methods for exposing underground services.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Assessment Conditions

- Mandatory conditions for assessment of this unit are stipulated below. The assessment must:
- include access to:
    - underground service locating equipment
    - personal protective equipment
- be conducted in a safe environment; and,
- be assessed in context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf** level**	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIICCM205F Carry out manual excavation

Modification History

Release	Comments
2	--
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 6.0.

Application

This unit describes the skills and knowledge required to carry out manual excavation in civil construction, including confirming the location of underground services, manually excavating, placing barricades and isolating the excavation.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take some responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Users must check requirements with relevant body before applying the unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Civil construction

Elements and Performance Criteria

Element	**Performance criteria**

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
• 1. Plan and prepare for manual excavation	• 1.1 Obtain, interpret and confirm work requirements • 1.2 Access, interpret and apply documentation required to carry out manual excavation • 1.3 Obtain and interpret emergency procedures and identify steps required to respond to emergencies • 1.4 Select and wear personal protective equipment according to site requirements • 1.5 Confirm and identify requirements for complying with environmental protection, safety and traffic management signage requirements • 1.6 Identify, address and report environmental issues, potential hazards and risks • 1.7 Select plant, tools and equipment required to carry out tasks and check for faults • 1.8 Identify, confirm, and locate materials required for work application
• 2. Initiate manual excavation procedures	• 2.1 Confirm location and specifications of intended excavation • 2.2 Identify service markers and taped areas • 2.3 Determine and confirm location of underground services and avoid damage and interference • 2.4 Use hand tools and dig post holes, small pits and trenches to required dimensions • 2.5 Undertake trench collapse prevention procedures where excavation is in unstable ground • 2.6 Place barricades around the excavation according to job requirements
• 3. Complete and isolate the excavation	• 3.1 Clean loose material out of excavation using hand tools • 3.2 Confirm excavation complies with specification and job requirements • 3.3 Clear loose material away from edge of excavation

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 4. Conduct housekeeping activities	• 4.1 Clear work area and dispose of or recycle materials according to site requirements • 4.2 Clean and maintain condition of equipment, confirm suitability for use, and address and report issues as required within scope of own role • 4.3 Manage and report hazards, and maintain a safe working environment • 4.4 Process records according to site requirements

•

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	• Calculates basic measurements including mass and dimensions
Self-management	• Monitors and minimises own exposure to worksite risks and hazards during work activities

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIICCM205F Carry out manual excavation

Modification History

Release	Comments
2	--
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- carry out manual excavation on at least two occasions, including:
    - identifying the location of underground services
    - digging post holes, small pits and trenches to the required dimensions
    - applying trench collapse prevention procedures in unstable ground.

During the above, the candidate must:

- locate and apply relevant documentation, policies and procedures
- identify, report and record hazards and risks
- implement the requirements, procedures and techniques for carrying out manual excavation, including using manual excavation tools
- work with others to carry out manual excavation to meet required outcomes, including:
    - communicating with others to receive and clarify work instructions
    - using communications techniques and equipment to convey information to others, including signage to advise others of work activity and exclusion zones
    - complying with reporting requirements and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation required to carry out manual excavation
- policies, procedures and documentation required to carry out manual excavation, including those relating to:

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

    - hazard and risk management
    - work health and safety
    - emergency response
    - environmental protection
    - waste management
    - communication techniques and equipment
    - workplace recording and reporting
    - site isolation and traffic control responsibilities
    - operational maintenance and basic diagnostic procedures
    - project quality requirements
    - job plans and specifications
    - housekeeping activities, including:
        - cleaning work area
        - cleaning and maintaining condition of equipment
        - waste management
        - processing records
- principles and techniques required to carry out manual excavation, including those relating to:
    - organising work activities
    - soil technology
    - trench collapse prevention techniques, including benching and battering
    - site conditions
    - underground services
    - excavation methods
    - rock types, including:
        - metamorphic
        - igneous
        - sedimentary
- types, characteristics, technical capabilities and limitations of plant and equipment required to carry out manual excavation, including:
    - picks
    - shovels
    - hand augers
    - string lines

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

    - jack hammers
    - scabblers
- materials safety data sheet (SDS) compliance processes
- components of job safety analyses (JSAs), job safety environmental analyses (JSEAs), and safe work method statements (SWMs)
- civil construction terminology related to carrying out manual excavation.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - personal protective equipment
    - equipment required to carry out manual excavation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

- **Assessor requirements**

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	*AQF indicator level****	*Required assessor or industry subject matter expert experience*
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

Assessment Requirements for RIICCM210E Install trench support

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install trench support on at least two occasions, including:
    - in trenches deeper than 1.5 metres requiring the trench support to be installed, moved along or within the trench, and removed from the trench.

During the above, the candidate must:

- locate and apply required legislation, documentation, policies and procedures
- identify, report and record hazards and risks
- implement the requirements, procedures and techniques for trench support installation including:
    - selecting and using required tools and equipment
    - using shoring methods and systems
    - working in confined spaces
- work with others to install trench support that meet required outcomes, including:
    - communicating with others to receive and confirm work requirements
    - using communication techniques and equipment to convey information to others including signage to advise others of work activity and exclusion zones
    - complying with reporting requirements and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation required to install trench support
- policies, procedures and documentation required to install trench support, including those relating to:
    - hazard and risk management

RIICCM303 Conduct vacuum excavations

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Application

This unit describes the skills and knowledge required to conduct vacuum excavations.

It applies to those working in operational roles in civil construction. They generally work under supervision and hold some responsibility for conducting vacuum excavations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Civil construction

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
• 1. Prepare for work	• 1.1 Obtain, interpret and confirm work requirements

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	• 1.2 Access, interpret and apply vacuum excavation documentation and confirm work activity is compliant • 1.3 Identify hazards, environmental issues, assess the risks and implement control measures in line with workplace policies • 1.4 Identify and adhere to traffic management signage requirements • 1.5 Select equipment and tools required for work activities and check for faults and report or rectify within scope of own role • 1.6 Select and wear personal protective equipment required for work activities • 1.7 Complete induction procedures as required by workplace policies and procedures and job role requirements • 1.8 Identify and apply safety and environmental protection requirements
• 2. Complete on-site preparation and set up job	• 2.1 Check job scope, location and requirements with job owner and contact person as required • 2.2 Obtain required permits and approval and check potential for ground contamination and nature of materials with landowner or job contact as required • 2.3 Confirm waste management, disposal and tracking procedures required for material types are in place • 2.4 Define work area, check exclusion zone, confirm trench shoring requirements and prepare worksite to comply with job and safety requirements • 2.5 Implement protective screening or other methods as required of containing excavation debris • 2.6 Inspect, assemble and check vacuum excavation equipment according to organisational requirements • 2.7 Complete pre-operational procedures, pre-start and check emergency stop • 2.8 Establish communication processes between operators and confirm correct positioning of personnel

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 3. Undertake vacuum excavation job	• 3.1 Start-up vacuum excavation system according to operating procedures • 3.2 Operate equipment to meet job requirements and minimise direct contact of high pressure water on assets • 3.3 Monitor hazards and activate emergency stop as required • 3.4 Monitor job, conditions and equipment • 3.5 Recognise and diagnose problems and report or rectify within scope of own role
• 4. Complete job	• 4.1 Shut down equipment according to operating procedures • 4.2 Determine and implement disposal, recycling and waste removal documentation procedures required by material type and clear work area • 4.3 Advise job owner and contact person of job completion and report any issues and incidents as required • 4.4 Clean and maintain condition of equipment, confirm stability for use, and report issues as required or address within scope of own role • 4.5 Check vehicle is clean and fit for transit • 4.6 Refuel vehicle, refill with digging water as required and return to base • 4.7 Complete required paperwork and process written records

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	• Identifies and interprets information from at times complex workplace procedures, documentation, legislation and regulations
Writing	• Records simple and routine information relating to work activities

Assessment Requirements for RIICCM303 Conduct vacuum excavations

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit; including evidence of the ability to:

- conduct vacuum excavations on at least three occasions, including:
    - hydro excavation on at least one occasion
    - air excavation on at least one occasion.

During the above, the candidate must:

- locate, apply and retain on site access to documentation, policies and procedures required for conducting vacuum excavation
- implement the requirements, procedures and techniques for the completion of conducting vacuum excavations, including:
    - preparing work area and tracking equipment
    - conducting preoperational procedures and confirming waste management procedures
    - completing housekeeping activities
- work with others to conduct vacuum excavation that meets required outcomes, including:
    - organising work activities to meet task requirements
    - communicating with others to receive and clarify work instructions
    - using a range of communication techniques and systems
    - using signage to advise others of work activity and exclusion zones
- comply with written and verbal reporting requirements and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- safety data sheets and materials handling methods

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- key risks relating to conducting vacuum excavations, including those associated with:
    - traffic
    - live electrical services
    - operating near other works in progress
    - manual handling
    - gas
    - air excavation
    - ground contamination
    - nature of material to be excavated
- key policies and procedures, legislation and established requirements for conducting vacuum excavation, including those for:
    - workplace health and safety
    - notifying asset owners
    - environmental protection including potential ground contamination, lawful transport and disposal obligations including re-use and recycling opportunities
    - trench and excavation shoring
    - site isolation and traffic control
    - non-destructive exposure of services and utilities
    - asset exclusion zones
    - operating and maintaining equipment
    - housekeeping activities
- key factors affecting work activities described in performance evidence above, including:
    - vacuum excavation techniques
    - working in a road reserve
    - types of material being excavated
    - types of services, utilities and providers
    - equipment types, characteristics, technical capabilities and limitations.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - vacuum excavation equipment
    - personal protective equipment
- be conducted in a safe environment; and,

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- be assessed in context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.
- Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sectors workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Industry sector	Aqf** level	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this unit of competency is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIICTT306E Install cure in-place linings for existing pipeline systems

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Application

This unit develops the skills and knowledge required to install cure in-place linings for existing pipeline systems in civil construction.

It applies to those working in operational roles. They generally work under supervision and hold some responsibility over installing cure in-place linings for existing pipeline systems.

No licensing, legislation or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Civil construction

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 1. Prepare to install cure in-place linings for existing pipeline systems	• 1.1 Obtain, interpret and confirm work requirements • 1.2 Access, interpret and apply documentation required for installing cure in-place linings for existing pipeline systems and confirm work activity is compliant • 1.3 Identify environmental issues and potential hazards, and assess and address risks within scope of own role and according to workplace procedures • 1.4 Select and wear personal protective equipment required for work activities • 1.5 Complete induction procedures as required by workplace policies and procedures and job role requirements • 1.6 Identify, obtain and implement signage requirements from the project traffic management plan • 1.7 Identify and select plant, tools and equipment, check for serviceability and rectify and report any faults as required
• 2. Perform site survey	• 2.1 Notify and obtain approval from property owners and occupiers for entry onto their property • 2.2 Determine site conditions by visual inspection, plans, discussion with land owners and information from service utilities • 2.3 Located underground utilities according to job requirements and workplace procedures • 2.4 Record existing site conditions according to job requirements and workplace procedures
• 3. Initiate rehabilitation work	• 3.1 Prepare entry and exit pits where specified • 3.2 Identify, interpret and apply required confined space entry procedures • 3.3 Monitor process and confirm conformity to design requirements • 3.4 Maintain system serviceability during rehabilitation works

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 4. Complete cure in-place lining	• 4.1 Determine fault with the aid of plans, drawings, CCTV recordings and other mechanisms as required • 4.2 Select resin impregnated liners required for fault • 4.3 Apply pressure cleaning to the designated location • 4.4 Install cure in-place lining material as required • 4.5 Conduct curing process according to work requirements • 4.6 Secure and seal termination at ends of process • 4.7 Open junctions for inspection and operation • 4.8 Monitor installation process and confirm finished product conforms to design requirements
• 5. Clean up	• 5.1 Clear work area and dispose of, reuse and recycle materials as required • 5.2 Clean, check, perform maintenance on and store plant, tools and equipment and report issues as required or address within scope of own role

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	• Identifies and interprets information from at times complex workplace procedures, documentation, legislation and regulations
Writing	• Records simple and routine information relating to work activities

Range of conditions

No conditions apply to this unit of competency at the time of publication.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Assessment Requirements for RIICTT306E Install cure in-place linings for existing pipeline systems

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- install cure in-place linings for existing pipeline systems on at least two occasions including at least two cure in-place linings for existing pipeline systems.

During the above, the candidate must:

- locate, apply and retain on site access to documentation, policies and procedures required for installing cure in-place linings for existing pipeline systems
- implement the requirements, procedures and techniques for installing cure in-place linings for existing pipeline systems, including
    - determining site conditions and locating underground utilities
    - determining pipeline faults and required repair and sealing method
    - complete housekeeping activities
- work with others to install cure in-place linings for existing pipeline systems that meets all of the required outcomes, including:
    - using a range of communication techniques and equipment to convey information to others
    - maintaining written and verbal reporting requirements and procedures
    - organising work activities to meet all task requirements
- identify, obtain, confirm and apply work, safety and signage instructions and requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- civil construction terminology relevant for installing cure in-place linings for existing pipeline systems
- safety data sheets and materials handling methods

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- pipeline systems relevant to trenchless technology
- engineering drawings, plans and specifications required for installing cure in-place linings for existing pipeline systems
- key risks relating to installing cure in-place linings for existing pipeline systems, including those associated with:
    - traffic
    - live electrical services
    - confined spaces
    - falls
    - locating near other works in progress
    - manual handling
    - gas
- key policies and procedures, legislation and established requirements for installing cure in-place pipeline systems, including those for:
    - workplace health and safety
    - confined space entry
    - operating and maintaining equipment
    - project quality management
    - site isolation and traffic control responsibilities
    - site condition assessments
    - locating underground utilities
    - waste disposal and recycling
- key factors affecting work activities described in performance evidence above, including:
    - laser control equipment techniques
    - fault types
    - manual handling techniques
    - equipment and liner types, characteristics, technical capabilities and limitations
    - remote units
    - working in a road reserve
    - cure in-place lining installation methods
    - pressure cleaning methods.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- include access to:
    - equipment required to install cure in-place linings for existing pipelines
    - personal protective equipment
- be conducted in a safe environment; and,
- be assessed in context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.
- Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sectors workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.
- It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf** level**	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this unit of competency is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIICWD503E Prepare traffic management plans and traffic guidance schemes

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Application

This unit describes the skills and knowledge required to perform a preliminary risk assessment of a temporary traffic management site and select, modify and design traffic management plans and traffic guidance schemes in civil construction.

It applies to those working in management roles. They generally work in teams and have some responsibility for the outcomes of others.

No licensing, legislation or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Civil construction

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

1.Establish context for traffic management plan and traffic guidance scheme	1.1 Determine worksite requirements and document context of traffic management plan 1.2 Identify characteristics, constraints and hazards that apply to the worksite 1.3 Complete risk assessment of proposed worksite 1.4 Establish and document the scope and objectives of traffic management plan
2.Prepare traffic management plan	2.1 Monitor and coordinate the progress of personnel involved in the preparation process 2.2 Prepare and implement traffic management plan communications strategy for internal and external audiences 2.3 Prepare a cost estimate for executing traffic management plan 2.4 Document and assemble traffic management plan 2.5 Gain plan approval from required authorities 2.6 Confirm preparation records are filed according to workplace policies and procedures 2.7 Participate in performance review of the preparation process
3. Prepare traffic guidance scheme	3.1 Determine whether to select, modify or design required traffic guidance scheme 3.2 Select, modify and develop traffic guidance scheme as required
4.Support and review traffic management plan implementation	4.1 Provide clarification and advice to personnel implementing the traffic management plan as required 4.2 Review traffic management plan implementation and recommend changes as required 4.3 Contribute to traffic management plan validation process as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Skill	Description
Oral communication	• Presents information and provides assistance using industry specific vocabulary • Uses listening and questioning to clarify and confirm understanding
Reading	• Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Writing	• Produces and completes workplace reports, including risk management matrices, using appropriate vocabulary, grammatical structures and conventions

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIICWD503E Prepare traffic management plans and traffic guidance schemes

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- prepare a work zone traffic management plan and traffic guidance scheme in a manner that is safe and follows workplace policies and procedures on at least two occasions, including:
    - inspecting and identifying hazards and constraints in the work zone in which the traffic management plan will apply
    - carrying out risk assessments
    - interpreting and analysing data
    - calculating flow rates, level of service, capacities and percentages
    - determining traffic management plan capacity requirements
    - documenting scope and authorities to modify the plan during implementation.

During the above, the candidate must:

- locate and apply required legislation, documentation, policies and procedures
- access and interpret required:
    - plans, drawings, specifications and traffic management plan briefs
    - engineering survey information
    - hydrological, meteorological, cultural and heritage data
    - traffic analysis data
- select and apply required traffic management plan implementation techniques
- apply engineering graphical presentation techniques
- work with required personnel to undertake and complete the work zone traffic management plan including:
    - complying with written and verbal reporting requirements and procedures
    - communicating with others to receive and clarify work instructions and coordinate work activities.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislative, workplace and site policies and procedures and required Australian and international standards for:
    - temporary traffic management
    - risk assessment and management
    - statutory compliance
    - work health and safety
    - environmental management
    - cultural and heritage management
    - quality management
    - plan approvals and reviews
    - performance reviews
    - documentation, recording and reporting
- principles of road user behaviour
- principles of traffic management plans and traffic guidance schemes, including:
    - workplace design options
    - techniques for evaluating and selecting preferred options
    - signs, devices and equipment types,
    - characteristics, technical capabilities and limitations
    - geometrics
    - potential traffic hazards, constraints and conditions
- workplace techniques for implementing traffic management plans and traffic guidance schemes, including:
    - operational techniques
    - basic public communications strategies
    - industry and workplace design
    - implementation structures and capabilities
    - team leadership techniques
    - problem solving techniques
    - cost estimation techniques.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - traffic management plan
    - traffic guidance scheme
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIHAN208E Perform dogging

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 5.0.

Application

This unit describes the skills and knowledge required to perform dogging, including planning for dogging, preparing dogging equipment and moving loads.

It applies to those working in site-based roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take some responsibility for the quality of work outcomes.

The work required in this unit relates to the National Standard for High Risk Work but this unit does not provide the licence. Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 1. Plan and prepare for dogging	• 1.1 Obtain, interpret and confirm work requirements and safety information • 1.2 Access, interpret and apply documentation required to perform dogging • 1.3 Select and wear personal protective equipment appropriate for work activities • 1.4 Develop preliminary dogging plan and site sketch according to job and site requirements • 1.5 Check and confirm job feasibility and schedule with load designer and personnel involved in lifting operations. • 1.6 Confirm hazards associated with load moving equipment and identify and review measures to eliminate or control hazards according to site requirements • 1.7 Finalise and confirm dogging plan according to job and site requirements • 1.8 Identify and implement signage and/or barricading according to site requirements
• 2. Prepare dogging equipment	• 2.1 Identify, select, inspect, and verify as serviceable dogging equipment, materials and tools required for lifting plan • 2.2 Label for repair or disposal unserviceable equipment, materials and tools according to site requirements • 2.3 Communicate job sequencing schedule with team within scope of own role • 2.4 Calculate load mass and centre of gravity according to manufacturer specifications and site requirements • 2.5 Calculate load in slings and equipment according to job requirements
• 3. Move loads	• 3.1 Perform load moving according to lifting plan, manufacturer specifications and site requirements • 3.2 Perform work at heights in uncompleted structures and/or in confined and enclosed spaces according to legislative and site requirements and manufacturer specifications • 3.3 Connect lifting gear to load according to manufacturer specifications and site requirements

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	• 3.4 Connect load to movement device using appropriate and certified equipment according to manufacturer specifications and site requirements • 3.5 Confirm stability of load by applying load movement, temporary bracing and/or load support procedures according to manufacturer specifications and site requirements • 3.6 Direct load to landing position using communication compliant with Australian standards and site procedures
• 4. Clean up	• 4.1 Dismantle and inspect load shifting equipment according to manufacturer specifications and site requirements • 4.2 Clear work area according to site requirements • 4.3 Check, clean, maintain and store tools and equipment according to manufacturer specifications and site requirements • 4.4 Apply work completion procedures and notify relevant personnel according to site requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

S KILL	DESCRIPTION
Numeracy	• Calculates basic measurements including mass and dimensions
Reading	• Identifies and interprets information from workplace documentation and legislation
Self-management	• Monitors and minimises own exposure to worksite risks and hazards during activities

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIIHAN208E Perform dogging

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform dogging on at least two occasions, including:
    - developing preliminary dogging plan, detailing the following points:
        - confirmed details of dogging requirements
        - confirmed dimensions and mass
        - site access and egress
        - suitability and availability of materials
        - tools and equipment
        - identification of potential hazards
        - probable control measures
        - identification of site coordination requirements
    - scheduling resources required for planned lift
    - calculating safe working loads and centre of gravity, including using load charts and sling tags/charts
    - selecting and conducting pre- and post-operational inspections on equipment, including:
        - lifting equipment
        - personal protective equipment
        - communication equipment
    - moving loads in conjunction with crane/hoist including demonstrating the following for loads of varying weights, sizes and shapes:
        - slinging load
        - loading
        - using portable lifting equipment, including blocks and lever hoists
        - lateral load movements or drifting load using multiple lifting devices

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

        - directing crane/hoist operator in movement of load when load is out of view of crane/hoist operator
        - directing crane/hoist operator in movement of load when load is in view of crane/hoist operator
        - directing crane/hoist operator in landing load when load is out of the view of crane/hoist operator
        - directing crane/hoist operator in landing load when load is in view of crane/hoist operator.

During the above the candidate must:

- locate and apply relevant documentation, policies and procedures and confirm work activity is compliant
- implement requirements, procedures and techniques for performing dogging through:
    - reading work load limit tags
    - using ropes as tag lines
    - using ropes to connect to loads using each of the following knot types:
        - clove hitch
        - rolling hitch
        - single sheet bend
        - bowline
    - calculating mass, dimensions and centre of gravity of load and assessing for lifting requirements
    - identified and using lifting/slinging points on load
    - clearing work area of materials by disposing, reusing or recycling on completion of work activity
- work effectively with others to perform dogging that meets all of the required outcomes through:
    - communicating hazards and determining elimination or control of hazards
    - communicating lifting sequence with others
    - reporting work completion to relevant personnel.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to conduct lifting operations, including those relating to:
    - working at heights
- key policies, procedures and documentation required to conduct lifting operations, including:

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

    - Australian standards and code of practice relating to dogging
    - National Standard for High Risk Work for dogging
    - national certification standards relating to dogging
    - operational and maintenance procedures
    - site and equipment safety requirements
- principles and techniques for developing preliminary dogging plan, including:
    - confirmed details of dogging requirements
    - confirmed dimensions and mass
    - site access and egress
    - suitability and availability of materials
    - tools and equipment
    - identification of potential hazards
    - probable control measures
    - identification of site coordination requirements
- signalling methods and communications techniques relating to dogging
- types, characteristics, technical capabilities and limitations of equipment required for dogging, including designs and functions of lifting equipment
- principles and techniques for identifying and responding to relevant hazards and emergencies, including those relating to cranes and load moving equipment
- basic techniques for communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - personal protective equipment
    - equipment required to perform dogging
    - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed where infrastructure is available to facilitate lateral load movement using multiple lifting devices; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIHAN209E Perform basic rigging

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 3.0.

Application

This unit describes the skills and knowledge required to perform basic rigging, including planning for rigging, preparing rigging equipment and moving loads.

This unit applies to those working in site-based roles.

The work required in this unit relates to the National Standard for High Risk Work but this unit does not provide the licence. Licensing, legislative, regulatory or certification requirements that may apply to this unit can vary between states, territories and industry sectors, and must be sourced from relevant state jurisdictions prior to applying this unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Coal mining

Drilling

Extractive

Metalliferous mining

Elements and Performance Criteria

Element	**Performance criteria**

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan basic rigging operations	1.1 Access, interpret and apply rigging documentation to ensure the work activity is compliant 1.2 Obtain, interpret, clarify and confirm work requirements 1.3 Write preliminary rigging plan and site sketch considering information essential to perform work activity 1.4 Confirm job feasibility and schedule work activity with the client, the load designer, and other relevant persons to perform the work activity 1.5 Identify hazards associated with the use of load moving equipment and review measures to eliminate or control these hazards with appropriate parties and in line with standard operating procedures 1.6 Calculate and confirm safe working loads and centre gravity using load charts and standard calculation rules prior to load moving 1.7 Finalise and confirm rigging plan, including the scheduling of required resources 1.8 Check safety requirements for rigging operations are in accordance with safety plans and policies 1.9 Select and wear personal protective equipment required for work activities 1.10 Identify and display signage, and erect barricades to isolate the work area in line with workplace procedures
2. Prepare rigging equipment	2.1 Select and inspect resources, materials and rigging equipment to perform work activity in line with job specifications and applicable Australian standards 2.2 Confirm lifting equipment is appropriate and safe to perform work activity according to manufacturer’s guidelines, engineering specifications and organisational policies and procedures 2.3 Label and dispose of lifting equipment identified as inconsistent with manufacturer’s guidelines, engineering specifications and organisational policies and procedures 2.4 Prepare loads and slings, ensuring protection of the load and associated equipment

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	2.5 Secure whole or part loads to prevent uncontrolled movement 2.6 Attach and position slings, or parts of slings, to the load, ensuring safe movement and attach slings, or parts of slings, to hook while the hoist wire is vertical in line with safe work practices 2.7 Attach tag lines to the load where specified within work requirements, and according to workplace procedures 2.8 Confirm lifting gear is attached to load to Australian standards, manufacturer's guidelines, engineering specifications and organisational policies and procedures 2.9 Perform test lifts, ensuring stable and secure movement of loads
3. Move loads using basic rigging techniques and relevant equipment to complete work activity	3.1 Connect lifting gear to load to Australian standards, manufacturer's guidelines, engineering specifications and organisational policies and procedures 3.2 Connect load to movement device using appropriate and certified equipment 3.3 Stabilise loads by application of load movement procedures, temporary bracing and/or by installing or erecting load support appropriate to the work activity 3.4 Coordinate and communicate planned activities, including using load moving signals according to workplace procedures 3.5 Move loads in line with work activity, workplace procedures and working safely at heights as appropriate to the work environment 3.6 Place and secure loads in line with load designer specifications to complete work activity 3.7 Dismantle and remove or restore load shifting equipment in a manner that complies with safe work practices
4. Conduct housekeeping activities	4.1 Clean, check, maintain and store plant, tools and equipment according to workplace procedures 4.2 Clear work area and dispose of or recycle materials according to workplace procedures 4.3 Notify appropriate personnel of work completion 4.4 Complete and file documentation and distribute according to workplace requirements

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description
Reading	• Identifies and interprets relevant information from workplace procedures, documentation, legislation and regulations
Numeracy	• Identifies and comprehends relevant mathematical information in required to determine equipment operating capacities

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Current Code and Title	Previous Code and Title	Comments	Equivalence
RIIHAN209E Perform basic rigging	RIIHAN209D Perform basic rigging	Minor updates to all sections to reflect operator's role.	Equivalent

Assessment Requirements for RIIHAN209E Perform basic rigging

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 3.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of basic rigging operations that safely, effectively and efficiently follow workplace procedures to carry out work activity on at least two occasions. This includes:

- writing a preliminary rigging plan which must include all of the following points in detail:
    - details of rigging requirements
    - dimensions
    - site access and egress
    - suitability and availability of materials
    - tools and equipment
    - identification of potential hazards
    - control measures
    - identification of site coordination requirements
- selecting and conducting pre- and post- operational inspection of equipment including:
    - plant
    - safety harnesses
    - fall arrest systems
    - communication equipment
- installing and maintaining the following:
    - static lines and safety nets
    - perimeter safety screens and shutters
- erecting the following:
    - material hoists

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

    - mast climbing personnel platforms
- performing mathematical calculations for estimation and measurement of loads
- using rope to attach tag lines using knots, bend and hitches including:
    - sheet bend
    - becket hitch
    - running bowline knot
    - double bowline knot
- using ropes for splices and whipping techniques including:
    - back splice
    - eye splice
    - short splice
    - common whipping
    - sailmakers whipping
    - west country whipping
- moving and relocating plant and equipment including:
    - slinging
    - loading
    - directing
    - moving
    - unloading.

In the course of the above work the candidate must also:

- locate and apply required documentation, policies and procedures
- apply safe work practices and identify and report potential hazards and environmental issues, and assess risks
- select and wear personal protective equipment required for work activities
- erect, dismantle, level, or plumb associated plant and structures to ensure stability
- meet written and verbal reporting requirements and procedures associated with performing basic rigging operations
- check and verify work activity with client, load designer and other relevant personnel,
- provide end of work handover to relevant personnel
- dispose or recycle materials.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Knowledge Evidence

The candidate must demonstrate the following knowledge to effectively complete the tasks outlined in the elements and performance criteria of this unit.

Key policies, procedures and relevant standards for vehicle loading cranes, described in the performance evidence above, including those relating to:

- National Standard for high risk work
- site and equipment safety
- Safe Working Load (SWL) and Working Load Limit (WLL)
- role, responsibilities and legislation relating to a dogman
- operation and maintenance of equipment
- materials handling, storage and environmentally friendly waste management.

Key features associated with equipment performance, including:

- equipment and manufacturer guidelines, and engineering specifications
- technical capabilities and limitations.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below.

The assessment must:

- include access to:
    - rigging tools and equipment
    - load to be shifted
    - personal protective equipment
- be conducted in a safe environment
- be assessed in context of this sector's work environment
- be assessed in compliance with relevant legislation and regulations and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- understanding and knowledge of legislation and regulation relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together. and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided, and must work alongside a trainer and/or assessor to conduct the assessment. This means the **industry subject matter expert should hold the unit being assessed (or an equivalent unit) and must also demonstrate skills and knowledge from the minimum years of current work experience** after competency has been obtained as **specified** below, including time spent in roles related to the unit being assessed.

Industry sector	**AQF indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years

RIIHAN301E Operate elevating work platform

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 3.0.

Application

This unit describes the skills and knowledge required to operate an elevating work platform at any height.

This unit applies to those working in operational roles.

The work required in this unit relates to the National Standard for High Risk Work but this unit does not provide the licence. Licensing, legislative, regulatory or certification requirements that may apply to this unit can vary between states, territories and industry sectors, and must be sourced prior to applying this unit.

This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisted by someone who has completed RIIHAN308F Load and Unload Plant or equivalent.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare for operating an elevating work platform	1.1 Access, interpret and apply elevating work platforms documentation for allocated job and ensure work activity is compliant with site policies and procedures to perform the work as planned 1.2 Obtain, interpret, clarify and confirm work requirements 1.3 Confirm hazards, environmental issues, and risks, and implement required control measures according to site risk management plans and processes 1.4 Select and wear personal protective equipment required for work activities 1.5 Obtain and interpret emergency procedures for elevating work platform in preparation for emergencies and incidents 1.6 Coordinate and communicate planned activities with others at the site prior to commencing work activity
2. Operate elevating work platform in line with established requirements to complete work activity	2.1 Carry out pre-start and post-start inspections and checks in line with Australian Standards and workplace procedures 2.2 Identify faults or defects and report within scope of own responsibility and according to workplace procedures 2.3 Apply site specific requirements for relocating the elevating work platform to work site 2.4 Stabilise or position elevating work platform according to work site conditions and requirements 2.5 Ensure work site is clear of personnel and other potential hazards 2.6 Place any tools and equipment required to perform work activity into bucket or platform according to workplace procedures 2.7 Operate elevating work platform within performance capabilities of brand and model of elevating work platform

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	2.8 Use manufacturer approved safety devices fitted to the machine in line with workplace procedures where applicable 2.9 Respond accordingly to monitoring systems and alarms according to workplace procedures 2.10 Monitor hazards and risks and ensure safety of self, other personnel, plant and equipment 2.11 Complete work activity and shut-down equipment in line with work requirements and workplace procedures
3. Conduct housekeeping activities	3.1 Clear work area and dispose, reuse or recycle materials 3.2 Move the elevating work platform to a safe space, applying site specific workplace procedures and requirements 3.3 Check, clean, maintain and store elevating work platform, tools and equipment according to workplace procedures 3.4 Complete and file documentation, and distribute according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description
Reading	• Identifies and interprets relevant information and ideas from workplace procedures, documentation, safety alerts, legislation and regulations
Numeracy	• Identifies and comprehends relevant mathematical information in required to determine equipment operating capacities

Assessment Requirements for RIIHAN301E Operate elevating work platform

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 3.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of operating an elevating work platform that safely, effectively and efficiently follows legislative requirements and workplace procedures to carry out work activity on at least two occasions. This includes:

- planning and preparing for operating elevating work platforms
- selecting and using the required plant, tools and equipment to perform work activity
- identifying site requirements for emergencies at heights
- stabilising or positioning elevating work platform
- using manufacturer approved safety devices fitted to the machine
- moving the elevating work platform to and from work site
- inspecting work platform and identifying faults
- reviewing machine maintenance logbook records
- checking, cleaning, maintaining and storing elevating work platform, tools and equipment

In the course of the above work, the candidate must also:

- locate and apply required documentation, policies and procedures
- select and wear personal protective equipment required for work activities
- monitor and manage equipment performance using indicators and alarms
- use a range of communication techniques and equipment essential to the safe completion of work instructions
- meet written and verbal reporting requirements and procedures associated with operating an elevating work platform

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Knowledge Evidence

The candidate must demonstrate the following knowledge to effectively complete the tasks outlined in the elements and performance criteria of this unit.

Key policies, procedures and relevant standards for operating an elevating work platform as described in the performance evidence above, including those relating to:

- National Standard for high risk work
- safe work practices
- operating manuals for elevating work platform
- site personnel and operational safety requirements
- elevating work platform operational procedures
- hazard, incident and emergency identification and implementation of control measures, including the risk of overhead crushes, and distance from power lines
- disposal of hazardous materials

Key site information, including:

- suitability of ground conditions, terrain and structure surfaces
- environmental requirements and constraints related to elevating work platforms

Key features associated with performance of an elevating work platform, including:

- types of elevating work platforms, their characteristics, technical capabilities and limitations

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below.

The assessment must:

- include access to:
    - elevating work platform
    - personal protective equipment required for the activities described in the performance evidence
- be conducted in a safe environment
- be assessed in the context of this sector’s work environment
- be assessed in compliance with relevant legislation and regulations and using policies, procedures, and processes directly related to the industry sector for which it is being assessed
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided, and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit) and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed.

Industry sector	*AQF indicator level****	*Required assessor or industry subject matter expert experience*
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years

Elements and Performance Criteria

Element	**Performance criteria**

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare for telescopic materials handler operations	1.1 Access, interpret and apply telescopic materials handler documentation 1.2 Obtain, interpret, clarify and confirm work requirements 1.3 Identify hazards and environmental issues, assess the risks and implement control measures in line with workplace policies 1.4 Select and wear personal protective equipment required for work activities 1.5 Identify, obtain and apply signage requirements in line with workplace procedures 1.6 Select required telescopic materials handler equipment or attachments and confirm the suitability of the work activities 1.7 Coordinate and communicate planned activities with other at the site prior to commencement of work activity
2. Operate telescopic materials handler in line with established requirements	2.1 Perform pre-start and start-up check in line with workplace procedures 2.2 Check telescopic materials handler controls, brakes, attachments and other implements for manoeuverability and serviceability and ensure faults are rectified or reported within scope of own responsibility and according to workplace procedures 2.3 Assess site and operating hazards and apply safe operating techniques 2.4 Operate telescopic materials handler using techniques suited to equipment capabilities, site and work conditions, and according to workplace procedures
3. Attach, secure, lift, carry and place materials to complete work activity	3.1 Use load handling communication methods as per standard operating procedures with all parties 3.2 Communicate with dogman to establish the weight of the load 3.3 Communicate with dogman to ensure safe working load requirements have been assessed and appropriate slings and lifting gear has been selected, attached and secured in line with workplace procedures 3.4 Locate machinery to ensure stable and effective shift of materials according to work requirements

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	3.5 Shift the load safely and effectively, using hand, audible and communication signals, in line with workplace procedures 3.6 Park up, shut down, secure and carry out post operational inspection of equipment in line with workplace procedures
4. Select, remove, fit and use attachments for a telescopic materials handler	4.1 Select attachment for the task and move and fit attachment in line with workplace procedures 4.2 Test and confirm correct fitting and operation 4.3 Use attachment within design limits and in accordance with workplace procedures 4.4 Remove, clean and store attachment in line with workplace procedures
5. Relocate the telescopic materials handler	5.1 Prepare machine and equipment for relocation in line with safe work practices 5.2 Transport machine and equipment safely between worksites, observing relevant site codes and traffic management requirements
6. Conduct housekeeping activities	6.1 Clean-up work area and dispose or recycle materials according to workplace procedures. 6.2 Manage and/or report hazards to maintain a safe working environment 6.3 Complete and file or distribute documentation in a manner that complies with workplace practices

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description
Reading	• Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Numeracy	• Uses equipment operating capacity schedule to confirm safe weight load limits

Assessment Requirements for RIIHAN309F Conduct telescopic materials handler operations

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 3.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of telescope materials handler operations that safely, effectively and efficiently follow workplace procedures to carry out work activity on at least two occasions, and include:

- performing pre-start, start-up and shutdown procedures
- checking controls, brakes and attachments for manoeuverability and serviceability and rectifying or reporting faults
- operating the telescopic materials handler
- attaching and securing appropriate lifting gear
- shifting the load
- selecting, fitting, testing, using and removing attachments, which must be certified and approved in line with workplace procedures
- transporting the machine and equipment between work sites
- parking and securing equipment

In the course of the above the candidate must also:

- locate and apply required documentation, policies and procedures
- select and wear personal protective equipment required for work activities
- apply safe work practices, identifying and reporting potential hazards and environmental issues, and assess risks
- access, interpret and apply technical information
- apply fault finding techniques
- monitor and manage equipment performance using indicators and alarms
- identify common equipment faults

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- use a range of communication techniques and equipment essential to the safe completion of work activity, including hand, audible and other signals
- meet written and verbal reporting requirements and procedures associated with telescopic materials handler operations

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

Key policies and procedures, legislation and established requirements for telescopic materials handler operations, including those relating to:

- isolation and traffic control responsibilities and authorities
- safety data sheet and hazardous materials handling methods
- development and compliance with job safety analyses and safe work method statement
- maintenance and basic diagnostic
- recyclable materials
- housekeeping activities
- environmental management plan

Key factors affecting work activities described in performance evidence above, including:

- telescopic materials handler types, characteristics, technical capabilities and limitations
- calculating safe working loads
- methods of changing machine attachments
- safe operating techniques in varying terrain
- telescopic materials handler and attachment operating techniques

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - telescopic materials handler
    - attachments
    - personal protective equipment
- be conducted in a safe environment and,
- be assessed in context of this sector's work environment and,

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed and
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided, and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Industry sector	*AQF indicator level****	*Required assessor or industry subject matter expert experience*
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 Years
Other sectors	Where this unit is being assessed outside of the Resources and Infrastructure Sectors, assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and, where no industry standard is specified, should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a Unit of Competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIMPO320F Conduct civil construction excavator operations

Modification History

Release	Comments
4	Editorial and other amendments made to clarify requirements in Application and Performance Criteria 5.3.
3	Editorial corrections to performance evidence.
2	Editorial corrections.
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 3.0.

Application

This unit describes the skills and knowledge required to operate excavator operations to lift carry and place materials.

This unit applies to those working in site based roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit.

This unit alone does not provide sufficient skill to independently load and unload equipment. To perform this activity safely, personnel must either complete or be assisting someone who has completed RIIHAN308F Load and unload plant or equivalent.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Unit sector(s)

Civil infrastructure

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare for excavator operations	1.1 Access, interpret and apply excavator operations documentation 1.2 Obtain, interpret, clarify and confirm work requirements 1.3 Identify hazards and environmental issues, assess the risks and implement control measures in line with workplace policies 1.4 Select and wear personal protective equipment required for work activities 1.5 Obtain, identify and implement traffic management signage requirements according to standard operating procedures and safe work practices 1.6 Select required excavator equipment and/or attachments and confirm suitability for work activities 1.7 Obtain and interpret emergency procedures for excavators, and be prepared for fires, accidents and emergencies 1.8 Coordinate and communicate planned activities with others at the site prior to commencement of work activity
2. Operate excavator in line with established requirements	2.1 Carry out prestart and start-up checks in line with workplace procedures 2.2 Identify faults or defects and rectify or report within scope of own responsibility and according to workplace procedures 2.3 Drive and operate excavator using techniques suited to equipment capabilities, site and work conditions, and according to workplace procedures 2.4 Monitor hazards and risks during operations, and ensure safety of self, other personnel, plant and equipment 2.5 Monitor and manage equipment performance using indicators and alarms in line with manufacturers' specifications

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

3. Lift, carry and place materials to complete work activity	3.1 Establish weight of load and ensure it is within safe operational limits of the machine 3.2 Use lifting gear within safe working load requirements and in line with workplace requirements 3.3 Position machinery and ensure stable and effective shift of materials according to work requirements 3.4 Shift load safely and effectively, using hand, audible and communication signal, in line with workplace procedures 3.5 Park up, shut down, secure and carry out post operational inspection of equipment in line with workplace procedures
4. Select, remove, fit and use attachments for a excavator	4.1 Select attachment for the task 4.2 Fit attachment in line with workplace procedures 4.3 Test attachment and ensure correct fitting and operation 4.4 Use attachment within design limits and in accordance with workplace procedures 4.5 Remove, clean and store attachments in designated location in line with workplace procedures
5. Prepare to relocate the excavator	5.1 Prepare excavator for relocation 5.2 Move excavator safely within and/or between work areas, observing relevant codes and traffic management requirements 5.3 Assist loading and unloading machine from float/trailer as required by workplace procedures
6. Conduct housekeeping activities	6.1 Clear work area and dispose of or recycle materials according to workplace procedures 6.2 Manage and/or report hazards to maintain a safe working environment 6.3 Complete and file or distribute documentation in a manner that complies with workplace practices

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Reading	• Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Numeracy	• Uses equipment operating capacity schedule to confirm safe weight load limits

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Assessment Requirements for RIIMPO320F Conduct civil construction excavator operations

Modification History

Release	Comments
4	Editorial and other amendments made to clarify requirements in Application and Performance Criteria 5.3.
3	Editorial corrections to performance evidence.
2	Editorial corrections.
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 3.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of excavator operations that safely, effectively and efficiently follows workplace procedures to carry out work activity on at least two occasions, and include:

- conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations
- driving and operating the equipment, and adjusting techniques to site conditions
- completing operations to specification using at least two different material types and activities including:
    - loading, cutting/boxing
    - stripping/spreading
    - lifting and carry materials
    - bulk excavation
    - mixing/backfilling
    - trench excavation
    - stockpiling
    - battering

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

    - benching
    - site clean up
- selecting, fitting, testing, using and removing at least three attachments, the attachment must be certified and approved in line with workplace procedures and could include, but not limited to, the following:
    - tilt bucket
    - buckets
    - lifting device
    - vibrating compaction wheel
    - ripper/tyne
    - compaction plate
    - compaction wheel
    - rock breaker
    - auger
    - ground engaging tools
- assisting with loading and unloading plant type from float/trailer
- parking and securing equipment

In the course of the above work the candidate must also:

- locate and apply relevant documentation, policies and procedures
- select and wear personal protective equipment required for work activities
- carry out vehicle refuelling requirements and procedures where applicable
- apply safe work practices, identifying and reporting all potential hazards, risks and environmental issues
- apply problem solving and troubleshooting techniques when operating equipment
- monitor and manage equipment performance using indicators and alarms
- identify common equipment faults
- apply levelling techniques
- select and use the required tools and equipment
- apply methods of changing machine attachments
- establish weight of load
- manage changes in the loads centre of gravity during transportation
- use a range of communication techniques and equipment essential to the safe completion of work activity, including hand, audible and other signals
- meet written and verbal reporting requirements and procedures associated with equipment operations

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- organise work activities to meet all task requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

Key policies and procedures, legislation and established requirements for excavator operations, including those relating to:

- isolation requirements
- fires, accidents and emergencies
- work health and safety, including signs of operator fatigue and how it should be managed
- site isolation and traffic control responsibilities and authorities
- project quality requirements
- chain of responsibility for loading and unloading of equipment
- operational, maintenance and basic diagnostics
- personal protective equipment
- recyclable materials
- housekeeping activities

Key factors affecting work activities described in performance evidence above, including:

- equipment processes, technical capability and limitations
- drawings and sketches
- ground conditions
- materials characteristics, including density and viscosity

Key features associated with civil construction works, including:

- civil construction terminology
- basic principles of material technology and material compaction for civil works
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - excavator
    - attachments

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

    - personal protective equipment
- be conducted in a safe environment; and,
- be assessed in context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 Years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors, assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and, where no industry standard is specified, should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a Unit of Competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIRIS202E Respond to site based spills

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 5.0.

Application

This unit describes the skills and knowledge required to respond to site based spills in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements may apply to this unit and can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 1. Plan and prepare for responding to site based spills	• 1.1 Obtain, interpret and confirm work requirements • 1.2 Access, interpret and apply documentation required to respond to site based spills • 1.3 Coordinate activities with others and establish communication systems to be used during spills • 1.4 Identify and address potential risks, hazards and environmental issues, and implement control measures according to workplace procedures • 1.5 Select and wear personal protective equipment appropriate for work activities • 1.6 Identify effective handling procedures for general and hazardous waste • 1.7 Identify and communicate team responsibilities when managing a spill with others as required and according to workplace procedures • 1.8 Identify reporting responsibilities when a spill occurs • 1.9 Obtain and interpret emergency procedures, and be prepared for emergency situations
• 2. Assess and identify spill type	• 2.1 Identify chemicals or products involved in the spill according to workplace procedures • 2.2 Locate, read and interpret safety data sheets to identify required action to manage the spill • 2.3 Identify hazardous chemicals and their effects • 2.4 Determine the potential volume and size of spill according to workplace procedures • 2.5 Determine the potential risk to the environment according to workplace procedures
• 3. Conduct the spill response	• 3.1 Determine the appropriate method and resources required to control the spill • 3.2 Select and wear personal protective equipment appropriate to manage the spill

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	• 3.3 Control and contain the spill relative to spill type and size according to workplace procedures • 3.4 Communicate and seek assistance from relevant personnel if unable to handle spill independently • 3.5 Clean up spill according to job requirements and workplace procedures • 3.6 Apply processes for managing and disposing of hazardous waste according to workplace procedures
• 4. Complete written documentation and reporting requirements	• 4.1 Communicate spill response to relevant personnel • 4.2 Complete written records and reports for spill response according to workplace procedures • 4.3 Record and report use of spill response kits for replenishment

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

S KILL	DESCRIPTION
Reading	• Identifies and interprets information from workplace procedures, documentation and regulations
Writing	• Produces and completes written documents required for workplace procedures and regulatory requirements
Self-management	• Monitors and minimises own exposure to worksite risks and hazards during activities

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIIRIS202E Respond to site based spills

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- respond to site based spills on at least two occasions, including:
    - determining the spill type, including minor, medium or major spills
    - locating, interpreting and communicating safety data sheet requirements for spill products
    - implementing spill control measures using spill kits or available resources
    - communicating the spill and likely impact to others
    - coordinating the spill clean-up activity with others
    - controlling and containing the spill
    - implementing clean up and disposal of waste
    - preparing a written report on spill response activity and spill kit resource usage.

During the above, the candidate must:

- locate and apply relevant documentation, policies and procedures and confirm that the work activity is compliant
- implement the requirements, procedures and techniques for responding to site based spills
- work effectively with others to respond to site based spills in a way that meets all required outcomes
- communicate clearly and concisely with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- key legislation required to respond to site based spills
- key policies, procedures and documentation required to respond to site based spills, including:
    - safety data sheet information
    - site procedures for minor, medium and major spills
    - worksite communication, reporting and recording procedures
- principles and techniques for responding to site based spills, including:
    - spill characteristics
    - spill types
    - spill kit usage
    - risks of site based storage
- principles and techniques for identifying relevant hazards and emergencies
- techniques for coordinating and communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - personal protective equipment
    - equipment related to responding to site based spills
    - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in	

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	which it is being assessed and where no industry standard is specified should comply with any relevant regulation.

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIRIS301E Apply risk management processes

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Application

This unit describes the skills and knowledge required to apply risk management processes in the mining, drilling and civil infrastructure industry.

This unit applies to individuals who contribute to applying risk management processes as part of their responsibilities. This could be an employer, line manager, supervisor, safety representative or employee. This unit applies to those who carry out or assist in carrying out risk assessment in the workplace.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

N/A

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 1. Plan and prepare for risk management	• 1.1 Access, interpret and apply compliance documentation relevant to the application of risk management processes • 1.2 Inspect and analyse work area conditions regularly and systematically to identify risks and potential hazards • 1.3 Access, interpret and apply existing procedures and any other documented measures to control identified hazards • 1.4 Identify risks and hazards not addressed by workplace policies, procedures, processes and systems • 1.5 Communicate potential hazards to relevant duty holders in accordance with workplace policies and procedures
• 2. Identify and assess unacceptable risk	• 2.1 Consider and determine the likelihood of an incident in accordance with workplace risk management processes • 2.2 Evaluate and determine the consequences of the incident • 2.3 Consider and determine the risk level associated with the incident • 2.4 Identify or source the criteria for determining the acceptability or unacceptability of the risk • 2.5 Evaluate the risk and identify ‘unacceptable risk’ status
• 3. Identify and recommend risk controls	• 3.1 Identify a range of risk controls which may eliminate or minimise the hazards • 3.2 Conduct analysis of feasible risk controls, including the identification of resource requirements • 3.3 Select the most appropriate risk controls for dealing with the hazard using the Hierarchy of Control
• 4. Contribute to the implementation of risk controls	• 4.1 Document risk management plan for selected risk controls, including resource requirements

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	• 4.2 Obtain authorisation and required resources from relevant individuals and/or parties for selected risk controls • 4.3 Document, verify and review risk controls for the activity • 4.4 Apply workplace procedures and any other applicable measures to control recognised hazards and associated risks • 4.5 Communicate information on the controls and their implementation in accordance with workplace policies and procedures
• 5. Review risk management documentation	• 5.1 Monitor and review risk management documentation • 5.2 Seek authority and approval, in writing, to amend risk management documentation • 5.3 Seek authority and approval to action amendments to risk management documentation

•

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Reading	• Identifies and interprets information from workplace procedures, policies, documentation and systems
Writing	• Produces and completes workplace reports, including risk management matrices, using appropriate vocabulary, grammatical structures and conventions
Oral communication	• Presents information and provides assistance using industry specific vocabulary • Uses listening and questioning to clarify and confirm understanding

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIIRIS301E Apply risk management processes

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of application of risk management processes that safely, effectively and efficiently follows workplace procedures to carry out work activity on at least two occasions, and include:

- applying planning and organising skills to the risk management processes
- identifying or sourcing criteria to determine unacceptable risk
- identifying and recognising type and scope of hazards and their impact
- assessing and determining the consequence, likelihood and level of potential risk
- identifying unacceptable risk using the acceptable/unacceptable criteria
- assessing options for appropriate controls and implementing accordingly
- identifying and obtaining required resources
- preparing and maintaining written records and report requirements
- reviewing risk management documentation
- identifying and recommending controls
- contributing to the implementation of controls.

In the course of the above work the candidate must also:

- locate and apply relevant documentation, policies and procedures
- apply relevant operational information
- apply industry terminology
- demonstrate the ability to engage with workers reporting to you, co-workers, and supervisors in the risk management processes
- communicate clearly and concisely with others to receive and clarify work instructions and to coordinate work activities

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- meet written and verbal reporting requirements and procedures associated with risk management processes.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- commonwealth and state or territory Acts, regulations, codes or practice standards, guidance material and other relevant publications
- internal and external sources of work related health and safety information and data and how to access them
- work related health and safety legislative requirements relating to:
    - communication, consultation and participation
    - recordkeeping
    - specific hazard identification and risk assessment and control methods
- concept of hazards, risks and risk factors
- topics or subject areas which are targets for assessment and treatment
- site risk management systems and their application
- site work related health and safety management systems and their application
- Hierarchy of Control and its application
- conventions and requirements for written communications including report writing
- problem solving techniques.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to risk management policies, procedures and systems
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous	3-6	3 years

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Mining and Civil Infrastructure		
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIRTM203E Work as a safety observer/spotter

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 6.0.

Application

This unit describes the skills and knowledge required to work safely as a safety observer/spotter in civil construction. This includes identifying and managing worksite hazards, establishing exclusion zones and observing work activities to monitor the safety of the work environment.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take some responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Users must check requirements with relevant body before applying the unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

N/A

Unit sector(s)

Civil construction

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 1. Plan and prepare to work as a safety observer/spotter	• 1.1 Obtain, interpret, clarify and confirm work instructions • 1.2 Access, interpret and apply documentation required to work as a safety observer/spotter • 1.3 Select and wear personal protective equipment according to site requirements • 1.4 Identify and address potential risks, hazards and environmental issues, and implement control measures within scope of role • 1.5 Identify, confirm and apply environmental protection requirements • 1.6 Obtain and interpret emergency procedures and identify steps required to respond to emergencies • 1.7 Coordinate work activities with others according to job requirements and within scope of own role
• 2. Identify and manage hazards	• 2.1 Confirm working areas permit vehicle, plant and pedestrian access • 2.2 Check where personnel working on foot are in close proximity to moving plant • 2.3 Conduct site specific risk assessment and confirm hazards have been identified and safety controls in place from traffic management plan
• 3. Support work activities	• 3.1 Operate communication devices to support work activities • 3.2 Maintain exclusion, no-go and pedestrian zones according to job and safety requirements • 3.3 Maintain sight visibility of work being performed • 3.4 Communicate to required personnel any hazards identified during work activities
• 4. Conduct clean-up activities	• 4.1 Confirm tools and equipment are cleaned, checked, maintained and stored according to manufacturer specifications and site requirements • 4.2 Confirm work area is checked, cleaned and tidy according to site requirements

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Self-management	• Monitors and minimises own exposure to worksite risks and hazards during work activities
Oral communication	• Conveys information and instructions to other verbally

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIIRTM203E Work as a safety observer/spotter

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- work as a safety observer/spotter on at least two occasions, including:
    - directing and controlling vehicle traffic
    - directing and controlling pedestrian traffic
    - communicating to drivers and pedestrians using hand signals
    - using communication devices
    - maintaining no-go and exclusion zones.

During the above, the candidate must:

- locate and apply relevant legislation, documentation, policies and procedures
- implement the requirements, procedures and techniques for working as a safety observer/spotter, including:
    - identifying, reporting and recording hazards and risks, and recommending control measures
    - identifying and applying environmental protection requirements
    - conducting pre-start checks and shut down procedures
    - carrying out inspection and fault finding as per manufacturer instructions and organisational requirements
- work with others to complete the operation of working as a safety observer/spotter that meets required outcomes, including:
    - using communication techniques and equipment to convey information to others
    - completing written and verbal reporting requirements
    - organising work activities to meet task requirements
    - communicating with others to receive and clarify work instructions.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation required to work as a safety observer/spotter
- policies, procedures and documentation required to work as a safety observer/spotter, including those relating to:
    - statutory compliance
    - Australian and other relevant standards
    - work, health and safety
    - emergency response
    - work instructions
    - environmental protection
    - verbal and written communication
    - site and equipment safety
    - mobile traffic control
    - vehicle movements
    - risk assessment and management
    - underground and overhead services
    - equipment operation and maintenance
    - manufacturer specifications for required equipment
    - site requirements and regulations
    - project quality requirements
    - workplace recording and reporting
    - traffic management plans
    - traffic regulations
- principles and techniques to work as a safety observer/spotter, including:
    - plant shadows/blind spots
    - interpreting traffic management plans and diagrams
    - operating communication devices, including whistles, pneumatic horns and handheld radios, to transmit messages
- types, characteristics, technical capabilities and limitations of plant and equipment required to work as a safety observer/spotter.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- include access to:
    - personal protective equipment
    - safety observer/spotting equipment
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

***While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 1. Prepare for operating small plant and equipment	• 1.1 Obtain, interpret, and confirm work requirements • 1.2 Access, interpret and apply documentation and procedures • 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures according to workplace procedures • 1.4 Select and wear personal protective equipment required for work activities • 1.5 Select and check for faults in plant, tools and equipment, and confirm they are appropriate for the work activity • 1.6 Obtain and interpret emergency procedures and be prepared for emergency situations
• 2. Conduct pre-operational checks	• 2.1 Select and use fuel and lubricants according to workplace procedures • 2.2 Check and adjust fuel, oil, hydraulic fluid and water levels • 2.3 Inspect, secure and maintain bolts, nuts, guards and attachment couplings • 2.4 Check and adjust the function of controls and gauges • 2.5 Conduct start up and shut down procedures according to workplace procedures
• 3. Use small plant and equipment	• 3.1 Identify hazards during work and establish appropriate risk management controls • 3.2 Identify and apply operating techniques to achieve optimum output while maintaining specified tolerances • 3.3 Operate plant and equipment to produce results within specified workplace tolerances • 3.4 Store plant and equipment safely when not in immediate use
• 4. Carry out operator maintenance	• 4.1 Prepare machine for maintenance • 4.2 Conduct inspection and check plant and equipment for serviceability, identify, and rectify and report any faults

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	• 4.3 Carry out scheduled maintenance tasks
• 5. Conduct housekeeping activities	• 5.1 Clear work area and dispose of materials • 5.2 Clean and maintain condition of equipment, ensure suitability for use, and address and report issues • 5.3 Complete written records and reports

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Writing	• Produces and completes written documents required for workplace procedures
Numeracy	• Calculates resource requirements, including use of basic addition, subtraction, multiplication and division
Self-management	• Monitors and minimises own exposure to worksite risks and hazards during activities

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIISAM204E Operate small plant and equipment

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- operate small plant and equipment on at least two different occasions, including:
    - conducting pre-operational checks
    - identifying and managing site hazards
    - identifying and using correct operating techniques to achieve optimum output while maintaining specified tolerances
    - correctly storing equipment
    - completing operator maintenance
    - clearing the work area.

During the above, the candidate must:

- locate and apply required documentation, policies and procedures and confirm that the work activity is compliant
- implement the requirements, procedures and techniques required to operate small plant and equipment
- work with others to undertake the operation of small plant and equipment
- communicate with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key policies, procedures and documentation required to operate small plant and equipment, including those related to:
    - work health and safety procedures
    - environmental issues

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

    - emergency procedures
    - complying with safety data sheets
    - records and reports
- small plant and equipment types, characteristics, technical capabilities and limitations, including:
    - power sources
    - compaction equipment
    - concrete equipment
    - excavation equipment
    - maintenance equipment
    - water equipment
    - lighting equipment
    - lifting materials
    - key operating techniques
- material types, characteristics, technical capabilities and limitations, including:
    - water
    - bituminous mixes
    - timber
    - fuels and oils
    - power leads
- applications of small plant and equipment working with:
    - clay
    - silts
    - stone
    - gravel
    - mud
    - rock sand
    - topsoil
- key industry and site specific terminology.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - personal protective equipment

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

    - equipment required to operate small plant and equipment
    - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWHS201E Work safely and follow WHS policies and procedures

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 5.0.

Application

This unit describes the skills and knowledge required to work safely and follow work health and safety (WHS) policies and procedures in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take responsibility for the quality of own work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for RIIWHS201E Work safely and follow WHS policies and procedures

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- work safely and follow work health and safety (WHS) policies and procedures on at least two occasions, including:
    - sourcing, interpreting, clarifying and applying site safety information
    - recognising and following health and safety instructions and information
    - clarifying and responding to information and directions
    - carrying out work instructions that comply with WHS policies and procedures
    - selecting, wearing and maintaining personal protective equipment for all activities that require personal protective equipment
    - applying safe lifting and manual handling techniques
    - identifying and reporting on WHS issues to relevant personnel
    - identifying relevant work permits and clearances
    - responding to alarms according to workplace procedures
    - completing workplace reporting procedures.

During the above, the candidate must:

- locate and apply required documentation, policies and procedures and confirm that the work activity is compliant
- implement the requirements, procedures and techniques required to work safely and follow WHS policies and procedures
- work with others to undertake work safely and follow WHS policies and procedures
- communicate with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to work safely and follow WHS policies and procedures
- key policies, procedures and documentation, including those related to:
    - complying with isolation procedures
    - site safety procedures
    - work health and safety procedures, including reporting requirements
    - equipment safety procedures
    - complying with safety data sheets
    - hazardous substance handling and techniques
    - fitness of duty policies, including:
        - smoking restrictions
        - alcohol impairment
        - improper use of drugs
        - illness
    - workplace management procedures, including:
        - consultation
        - safety representatives
        - committees
        - dispute resolution
    - emergency situations, including:
        - incident and injury
        - fire
        - evacuation
        - electrical shock
        - falls
        - explosions
        - fatigue
        - extreme weather
        - key emergency equipment
        - emergency escape routes
        - any situation that poses an immediate risk to health, life, property and environment

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- use of personal protective equipment, including:
    - breathing protection
    - skin protection
    - hearing protection
    - eye protection
    - protective clothing and ensembles
    - any other relevant protective equipment that will protect the wearer from injury
- use of permits and clearance, including:
    - working at height
    - confined spaces
    - vertical openings
    - scaffold set up
    - dig and penetration
- principles and techniques for manual and automated lifting
- biological effects that affect work activities, including:
    - sleep
    - alertness
    - fatigue
    - stress
    - heat stress
    - hypothermia.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - personal protective equipment
    - equipment related to working safely and follow WHS policies and procedures
    - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWHS202 Enter and work in confined spaces

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 11.0.

Application

This unit describes the skills and knowledge required to enter and work in confined spaces in the resources and infrastructure industries.

It applies to those working in operational roles who generally work under supervision to complete a range of functions involving known routines and procedures and take responsibility for the quality of work outcomes.

Note: A 'confined space' is defined in accordance with Safe Work Australia regulations as follows:

***confined space** means an enclosed or partially enclosed space that:*

a. *is not designed or intended primarily to be occupied by a person; and*

b. *is, or is designed or intended to be, at normal atmospheric pressure while any person is in the space; and*

c. *is or is likely to be a risk to health and safety from:*

   i. *an atmosphere that does not have a safe oxygen level; or*

   ii. *contaminants, including airborne gases, vapours and dusts, that may cause injury from fire or explosion; or*

   iii. *harmful concentrations of any airborne contaminants; or*

   iv. *engulfment,*

but does not include a mine shaft or the workings of a mine.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Required knowledge, skills and application should be considered and clearly articulated.*
1. Plan and prepare for working in confined space	1.1 Obtain relevant confined space permit (permit) and/or safe work method statement (SWMS) or their equivalents, as per legislative and worksite requirements 1.2 Confirm task requirements with site personnel in accordance with worksite instructions 1.3 Verify control measures are in place in accordance with those prescribed in the permit and/or SWMS (or their equivalents) 1.4 Identify and address potential risks and hazards not described in the permit and/or SWMS in accordance with WHS requirements 1.5 Wear designated personal protective equipment (PPE) prescribed in site signage, confined space permit and/or SWMS (or their equivalents) after checking its serviceability 1.6 Set up exclusion zone using signage and barriers to prevent unauthorised entry in accordance with the permit/SWMS (or their equivalents) 1.7 Confirm incident/emergency response plan is appropriate to the task and personnel involved in the task are prepared for accidents and emergencies in accordance with WHS requirements 1.8 Verify that instruments, equipment and monitoring devices are calibrated and within service date in accordance with manufacturer and worksite requirements

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	1.9 Place rescue equipment and permit near entry of confined space without inhibiting access/egress in accordance with the permit/SWMS (or their equivalents) 1.10 Establish method of continuous communication with stand-by person in accordance with WHS requirements
2. Work in confined space	2.1 Confirm that the confined space is properly ventilated in accordance with the permit/SWMS (or their equivalents) 2.2 Test the atmosphere for harmful elements before entering in accordance with worksite instructions 2.3 Isolate all energy sources and hazardous services linked to the confined space in accordance with WHS requirements and worksite instructions 2.4 Complete confined space work in accordance with the requirements of the permit/SWMS (or their equivalents) 2.5 Monitor the atmosphere in accordance with the requirements of the permit/SWMS (or their equivalents) 2.6 Respond immediately to any changes in risk or work environment in accordance with WHS and worksite requirements 2.7 Maintain continuous communication with the stand-by person and relevant personnel in accordance with WHS and worksite requirements 2.8 Adhere with entry time limits in accordance with the requirements of the permit/SWMS (or their equivalents)
3. Exit confined space	3.1 Exit confined space in accordance with the requirements of the permit and/or SWMS (or their equivalents) 3.2 Recover clean, service, and store instruments and monitoring devices in accordance with manufacturer and worksite requirements 3.3 Remove tags and locks in accordance with the requirements of the permit and/or SWMS (or their equivalents) and/or site requirements 3.4 Complete exit requirements in accordance with the specified requirements of the permit and/or SWMS (or their equivalents)
4. Safely secure and clean up confined space work area	4.1 Ensure reinstatement and security of site/entry point in accordance with WHS and worksite requirements 4.2 Clear work area on completion of work task in accordance with WHS and worksite requirements 4.3 Remove, clean and store barriers and signs in accordance with WHS and worksite requirements

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	4.4 Complete all sections of the confined space entry permit (or its equivalent) relevant to work role and responsibility in accordance with WHS and worksite requirements

Assessment Requirements for RIIWHS202 Enter and work in confined spaces

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit, on at least **two** occasions, including:

- obtaining the required entry permit and instructions for performing work in confined spaces
- assessing together with other affected workers the effectiveness of the emergency response plan
- undertaking all checks and preparation as per permit and/or safe work method statement (SWMS) (or their equivalent) requirements
- isolating (group or personal), de-energising, lockout and tagout all energy sources
- wearing and caring for designated personal protective equipment (PPE)
- using atmospheric monitoring devices before entering the confined space
- entering the confined space
- working in a confined space
- using atmospheric monitoring devices during confined space activity
- communicating with stand-by person and others while working in a confined space
- exiting the confined space
- removing locks and tags from isolation devices.

In the course of the above work the candidate must also:

- undertake a risk assessment
- apply relevant hazard controls and complete all checks and preparations in accordance with the confined space permit, SWMS (or their equivalents) and/or site procedures
- verify that hazard controls are in place and operational
- confirm the permit conditions reflects risk assessment and confined space is ready for entry
- enter the confined space and carry out actions specified in the permit/SWMS including all safety procedures
- monitor the conditions of work under the permit
- interpret and respond to gas test/monitoring results
- initiate incident/emergency response plan
- work effectively with others to enter and work in confined spaces in a way that meets all required outcomes

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- communicate clearly and concisely with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key regulations and compliance codes or codes of practice relevant to enter and work in confined spaces
- key policies, procedures and documentation required to enter and work in confined spaces, including:
    - entry and exit procedures, risks and regulations
    - safe work method statements (SWMS), permits and confirmation of training per compliance requirements
    - site and equipment safety requirements
    - site isolation and site control responsibilities and authorities
    - safety data sheets (SDS)
    - incidents and emergency response documentation
- principles and techniques for identifying and responding to:
    - areas that constitute confined spaces
    - types of air contaminants and toxic gases
    - limitations of breathing apparatus
    - relevant hazards and appropriate risk controls
- characteristics, technical capabilities and limitations of instruments and monitoring devices
- techniques for coordinating and communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - personal protective equipment (PPE)
    - equipment related to entering and working in confined spaces
    - relevant documentation
- be conducted in a safe environment; and,
- be assessed in context of this sector’s work environment; and,

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant worksite circumstances.

Assessor Requirements

In addition to the requirements in applicable vocational education and training legislation, frameworks and/or standards, assessors and industry experts must also have a minimum of two (2) years industry experience, directly relevant to the training and assessment being provided.

Mandatory Workplace Requirements

Assessment of performance evidence may be in a workplace setting or an environment that accurately represents a real workplace.

Modification History

Release	Comments
2	Minor amendment to Knowledge Evidence to correct typographical error.
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 5.0.

Application

This unit describes the skills and knowledge required to enter and work in confined spaces in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
• 1. Plan and prepare for working in confined space	• 1.1 Obtain, interpret and confirm work requirements • 1.2 Access, interpret and apply documentation required to enter and work in confined spaces • 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures according to workplace procedures • 1.4 Obtain and confirm authorisation of a confined space entry permit that meets regulatory requirements • 1.5 Select and wear appropriate personal protective equipment for planned work activities • 1.6 Obtain and interpret emergency procedures with the stand-by person, and be prepared for emergency situations • 1.7 Identify, obtain and implement signage and barrier requirements according to workplace procedures • 1.8 Select tools and equipment for the tasks, check for serviceability and rectify or report any faults to relevant personnel • 1.9 Position rescue equipment by the entry permit
• 2. Work in confined space	• 2.1 Gain access to confined space • 2.2 Test and monitor the atmosphere for harmful elements according to workplace procedures • 2.3 Correctly apply tagging and lock-out procedures • 2.4 Enter the confined space according to workplace procedures • 2.5 Maintain ongoing communication with the stand-by person • 2.6 Comply with entry permit requirements • 2.7 Monitor and adhere to allocated entry time
• 3. Exit confined space	• 3.1 Exit confined space according to workplace procedures

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	• 3.2 Recover tools, equipment and materials • 3.3 Conduct inspection of the confined spaces according to workplace procedures • 3.4 Remove tagging and lock-out procedures • 3.5 Complete confined space entry permit requirements according to workplace procedures
• 4. Clean up	• 4.1 Clear work area and dispose of materials according to workplace procedures • 4.2 Remove, clean and store barriers and signs • 4.3 Conduct equipment inspections to identify faults according to manufacturer specifications and workplace procedures and report to relevant personnel • 4.4 Conduct routine operational servicing, lubrication and housekeeping activities according to workplace procedures • 4.5 Process written maintenance records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

S KILL	DESCRIPTION
Reading	• Identifies and interprets information from workplace procedures, documentation and regulations
Writing	• Produces and completes written documents required for workplace procedures
Self-management	• Monitors and minimises own exposure to worksite risks and hazards during activities
Oral communication	• Uses a range of communication techniques and systems to communicate with others

Range of conditions

No conditions apply to this unit of competency at the time of publication.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Assessment Requirements for RIIWHS202E Enter and work in confined spaces

Modification History

Release	Comments
2	Minor amendment to Knowledge Evidence to correct typographical error.
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- enter and work in confined spaces on at least two occasions, including:
    - obtaining the required entry permit and instructions for performing work in confined spaces
    - interpreting and applying workplace procedures
    - applying tagging and lock out procedures
    - selecting, wearing and caring for personal protective equipment
    - using atmospheric monitoring devices prior to entering the confined space
    - entering the confined space
    - working in the confined space
    - using atmospheric monitoring devices during confined space activity
    - applying safe materials handling methods
    - exiting the confined space
    - removing tagging and lock out.

During the above, the candidate must:

- locate and apply relevant legislation, documentation, policies and procedures and confirm that the work activity is compliant
- implement the requirements, procedures and techniques for entering and working in confined spaces
- work effectively with others to enter and work in confined spaces in a way that meets all required outcomes

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- communicate clearly and concisely with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation relevant to enter and work in confined spaces
- key policies, procedures and documentation required to enter and work in confined spaces, including:
    - entry and exit procedures, risks and regulations
    - site and equipment safety requirements
    - site isolation and site control responsibilities and authorities
    - safety data sheets
    - incidents and emergency response documentation
- principles and techniques for identifying and responding to:
    - areas that constitute confined spaces
    - types of air contaminants and toxic gases
    - limitations of breathing apparatus
    - relevant hazards and emergencies
- equipment types, characteristics, technical capabilities and limitations
- principles and techniques for using confined space and industry terminology
- techniques for coordinating and communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - personal protective equipment
    - equipment related to entering and working in confined spaces
    - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWHS205E Control traffic with stop-slow bat

Modification History

Release	Comments
2	This unit replaces RIIWHS205D Control traffic with slow-stop bat. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Application

This unit describes the skills and knowledge required to control vehicle and pedestrian traffic using stop-slow bats, hand signals and approved communication devices in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work in teams in live traffic environments under some degree of supervision.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented registered training organisations are advised to contextualise the unit of competency by referring to the existing state/territory OHS legislative requirements

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Element	Performance criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to control traffic	1.1 Select and wear personal protective equipment required for work activities 1.2 Access, interpret and confirm work instructions and plan work 1.3 Access, interpret and apply required workplace policies, procedures, jurisdictional safety and environmental protection requirements 1.4 Obtain and interpret site emergency procedures and prepare for accidents and emergencies 1.5 Select tools and equipment, check for serviceability, and rectify faults and report according to workplace policies and procedures
2. Control traffic and operate communication devices	2.1 Adjust approved communication devices according to site requirements 2.2 Direct traffic using hand held stop-slow bat and visibly clear and unobstructed hand signals as required 2.3 Monitor traffic, make adjustments for changing traffic conditions and position waiting vehicles as required 2.4 Communicate messages to other personnel, confirm recipient understanding and clarify as required 2.5 Check and perform maintenance on approved communication devices according to requirements 2.6 Check communications contact after nominated period of non-contact 2.7 Report traffic offenders according to workplace policies and procedures
3. Conduct housekeeping activities	3.1 Confirm and remove signs and devices in line with job requirements and cover as required 3.2 Clean, check and store tools and equipment 3.3 Report environmental damage and potential for future damage as required

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	• Applies basic mathematical problem solving processes, including simple addition, subtraction, multiplication and division
Oral communication	• Listens to short, explicit instructions for work procedures and asks questions to clarify and confirm
Reading	• Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Technology	• Identifies purposes, specific functions and key features of common digital systems and tools and operates them as required
Writing	• Produces and completes workplace reports using appropriate vocabulary, grammatical structures and conventions

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Current Code and Title	Previous Code and Title	Comments	Equivalence
RIIWHS205E Control traffic with stop-slow bat	RIIWHS205D Control traffic with stop-slow bat	Supersedes and is equivalent to RIIWHS205D.	Equivalent

Assessment Requirements for RIIWHS205E Control traffic with stop-slow bat

Modification History

Release	Comments
2	This unit replaces RIIWHS205D Control traffic with slow-stop bat. Significant endorseable amendments have been made to Elements, Performance Criteria, Foundation Skills, Performance Evidence and Knowledge Evidence to better reflect current industry practices and clarify training outcomes.
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- Control traffic with a stop-slow bat according to traffic guidance schemes in a manner that is safe and follows workplace policies and procedures on at least two occassions, including:
    - directing pedestrian traffic, including at least one of the following:
        - ~ pedestrians with mobility issues
        - ~ pedestrians with prams
        - ~ cyclists
    - using approved communication devices to transmit message and report traffic offenders, including the use of at least one of the following devices:
        - ~ hand held radios
        - ~ telephones.

During the above, the candidate must:

- coordinate operations with pilot vehicle in a shuttle flow work arrangement
- participate in risk assessment and management processes
- identify the type and scope of hazards and their impact and recommend risk control measures
- identify key environmental protection issues and describe required solutions
- locate and complete at least one incident report

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- complete housekeeping requirements.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- risk assessment processes and hierarchy of control
- work instructions and procedures for planning work
- jurisdictional safety requirements relevant to temporary traffic management
- environmental protection requirements
- site emergency procedures
- site and equipment safety requirements
- traffic control requirements and procedures for directing the following predestrian traffic groups:
    - pedestrians with mobility issues
    - pedestrians with prams
    - cyclists
- traffic guidance scheme and traffic management plan compliance
- communication device operations, including:
    - hand held radios
    - telephones
- traffic control equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures for equipment
- site isolation and traffic control responsibilities and authorities
- the effects of travel speed and vehicle mass on stopping distances.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - stop-slow bat
    - personal protective equipment
    - hand held radio or telephone
- be conducted in a safe environment; and
- be assessed in context of this sector's work environment on a real live road setting under supervision; and

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge
- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 year
	2	2 years
Drilling, Coal Mining and Extractive (Quarrying), Metalliferous Mining and Civil Construction	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

RIIWHS301E Conduct safety and health investigations

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.1.

Application

This unit describes the skills and knowledge required to conduct work related health and safety investigations as a result of an incident and to contribute to a safe workplace.

It applies to individuals who participate in work related health and safety investigations as part of their responsibilities.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

Unit sector(s)

N/A

Elements and Performance Criteria

Element	**Performance criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 1. Determine the objectives and develop investigation plan	• 1.1 Identify, access and interpret work related health and safety investigation documentation, policies and procedures • 1.2 Determine the scope of the investigation to create an investigation plan according to workplace policies and procedures • 1.3 Confirm pre- and post-incident timeframe is consistent with all site and legislative requirements • 1.4 Determine the need for eliminating safety hazards and address the needs of those involved in the incident and incorporate into investigation plan • 1.5 Test the proposed objectives to clarify the scope of the investigation • 1.6 Consult individuals and/or parties in accordance with workplace policies and procedures • 1.7 Review investigation plan to check it includes agreed timelines, objectives, responsibilities, roles, documentation, actions and outcomes • 1.8 Communicate investigation plan to relevant individuals and/or parties in accordance with own role and responsibilities
• 2. Gather information	• 2.1 Maintain site security and integrity of evidence in accordance with site and legislative requirements • 2.2 Plan and prepare for the systematic collection of information and data • 2.3 Schedule information and data collection and completion to ensure minimum backtracking or repeat actions • 2.4 Confirm methods used to collect and examine information, including interviewing and recording, meet site and legislative requirements • 2.5 Collect, test and organise all appropriate information according to workplace policies and procedures
• 3. Evaluate information	• 3.1 Assess and evaluate information and data for validity and reliability to aid decision making

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	• 3.2 Undertake further research where information or data is unclear or inadequate, and rectify in accordance with investigation plan • 3.3 Analyse the evidence to determine causes of the incident in accordance with own role and responsibilities • 3.4 Draw investigation conclusions in accordance with investigation plan, workplace policies and procedures • 3.5 Confirm findings and consider objectivity, confidentiality, validity and accuracy
• 4. Identify courses of action	• 4.1 Frame options and articulate findings to investigation team, in accordance with own role, responsibilities and workplace policies and procedures • 4.2 Confirm options are provided in a form which meets the audience requirements, can be easily understood and enables selection of the most appropriate courses of action • 4.3 Collate courses of action to identify actions for future prevention, in accordance with own role, responsibilities and workplace policies and procedures • 4.4 Confirm courses of action are implemented and evaluated in accordance with investigation plan and workplace policies and procedures
• 5. Prepare and present investigation reports	• 5.1 Prepare investigation reports according to own job role, responsibilities and workplace policies and procedures • 5.2 Present written and graphical reports using a clear and concise structure and format appropriate to audience • 5.3 Communicate outcomes to relevant individuals and/or parties according to workplace policies and procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Skill	Description
Writing	• Documents procedures, plans and outcomes using appropriate organisational formats and industry specific terminology • Develops reports using structure, format and language appropriate for purpose and audience
Oral communication	• Uses appropriate language and non-verbal features to provide support, give instructions or request information
Interact with others	• Identifies and uses appropriate conventions and protocols when communicating with parties involved in various investigation stages • Collaborates with others to achieve joint outcomes, playing an active role in facilitating effective group interaction • Takes a role in helping develop team understanding of investigation requirements

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIIWHS301E Conduct safety and health investigations

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.1.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate evidence of completion of participating in work related health and safety investigations that safely, effectively and efficiently follows workplace procedures to carry out work activity on at least two occasions. This includes:

- determining objective and authority of the investigation
- creating an investigation plan
- planning and organising activity to gather evidence and data, including but not limited to:
    - lists of witnesses
    - interviews
    - statements
    - audio recordings
    - photographs
    - scale diagrams of area
- undertaking research to gather evidence and data
- engaging others in the investigation process
- questioning and actively listening to those involved in the investigation
- correctly collecting and maintaining the integrity of evidence and procedural fairness
- identifying and/or confirming the linkages between factors and outcomes, causes and effects and direct/indirect causal relationships
- drawing conclusions and identifying appropriate course of action to resolve issue
- communicating outcomes to relevant individuals and/or parties
- writing clearly, concisely and effectively report investigation outcomes and presenting the outcomes to others.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

In the course of the above work, the candidate must also:

- locate and apply relevant legislation, documentation, policies and procedures.

Knowledge Evidence

The candidate must demonstrate the following knowledge to effective complete the tasks outlined in the elements and performance criteria of this unit. This includes:

- commonwealth and state or territory legislation relevant to conducting safety and health investigations
- internal and external sources of work related health and safety information and data relevant to investigations
- applicable organisational work related health and safety policies, procedures, processes and systems relevant to work role
- topic or subject area which is the target for the investigation
- theory of safety and health investigative research and analysis
- symptoms and possible immediate effects of post-traumatic stress in an investigation situation
- industry context to incidents and investigations
- methods for collecting and analysing safety and health information and data
- site procedures and conventions related to work related health and safety investigations
- site risk management processes and their applications
- conventions and requirements for written communications, including report writing.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - an incident (live, or simulated based on historical incidents)
    - site investigation plans
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWHS302E Implement traffic management plans

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Application

This unit describes the skills and knowledge required to set out, monitor and close down traffic management plans and traffic guidance schemes in civil construction.

It applies to those working in supervisory roles. They generally work in teams in live traffic environments and hold some responsibility for the outcomes of others.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Users must check requirements with relevant body before applying the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented registered training organisations are advised to contextualise the unit of competency by referring to the existing state/territory OHS legislative requirements.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Competency field(s)

Elements and Performance Criteria

Element	**Performance criteria**

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to implement traffic management plan	1.1 Determine worksite requirements and scope of traffic management plan and traffic guidance scheme 1.2 Identify, address and report potential risks, hazards and environmental issues and determine control measures 1.3 Validate suitability of traffic management plan and traffic guidance scheme to site conditions, traffic volumes and work activities and confirm requirements are met 1.4 Resource personnel to implement traffic management plan and traffic guidance scheme according to workplace policies and procedures 1.5 Confirm required liaison and communication activities are carried out according to instructions 1.6 Provide traffic guidance scheme implementation instructions to traffic control personnel and clarify and confirm recipient understanding as required
2. Set out traffic guidance scheme	2.1 Check required signs and devices are positioned and installed according to traffic guidance scheme 2.2 Inspect traffic guidance scheme and authorise roadwork crew to proceed with work activities 2.3 Confirm roadwork crew are protected from work site hazards
3. Monitor traffic guidance scheme	3.1 Confirm traffic flow is being monitored by required personnel according to traffic guidance scheme 3.2 Apply adjustments to traffic guidance scheme as necessary to maintain required traffic flow and according to own job role 3.3 Monitor work activities and apply required measures to mitigate and address roadwork crew and road user non-conformance 3.4 Apply workplace policies and procedures to address offending road users as required
4. Close down work activities	4.1 Direct covering and required removal of equipment, signs and devices according to traffic guidance scheme 4.2 Confirm tools and equipment are cleaned, checked, maintained and stored according to workplace policies and procedures 4.3 Finalise traffic work zone close-down and complete required reporting

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Skill	Description
Numeracy	• Applies basic mathematical problem solving processes, including simple addition, subtraction, multiplication and division
Oral communication	• Presents information and provides assistance using industry specific vocabulary • Uses listening and questioning to clarify and confirm understanding
Reading	• Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Writing	• Produces and completes workplace reports, including risk management matrices, using appropriate vocabulary, grammatical structures and conventions

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Unit Mapping Information

Assessment Requirements for RIIWHS302E Implement traffic management plans

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 4.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- implement traffic management plans in a manner that is safe and follows workplace policies and procedures on at least three separate live traffic projects, including:
    - completing at least two of the following:
        - ~ lane closure
        - ~ lateral shift
        - ~ implementing a traffic management plan at an intersection
    - completing at least one project controlling site construction vehicles.

During the above, the candidate must:

- locate and apply required legislations, documentation, policies and procedures including documentation required for worksite projects and required traffic management
- work with traffic control personnel to implement and complete a traffic management plan and traffic guidance scheme that meets all required outcomes including:
    - confirming all necessary resources are available, including qualified personnel
    - confirming all personnel understand, and are able to implement, their roles, task requirements, safety requirements and reporting requirements
    - communicating with others to resolve resourcing and coordination requirements prior to and during work activities
    - confirming that unattended sites and shut-down procedures are completed according to traffic management plan and traffic guidance scheme
    - complying with written and verbal reporting requirements and procedures, including reporting offending road users.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- required legislation, regulations, codes and procedures including Austroads Codes of Practice and WHS applicable to temporary traffic management
- temporary traffic management principles
- risk management principles and procedures for identifying, analysing and treating potential hazards and risks
- key principles for implementing WHS, including the role of Job Safety Analysis, Job Safety and Environmental Analysis and Safe Work Method statements.
- scope of authority to modify traffic management plan and traffic guidance scheme
- basic signalling procedures for temporary traffic management
- procedures for selecting, using and placing signs and devices, including sequences of installation and removal and provisions for unattended sites
- radio operations procedures and protocols
- equipment types, characteristics, technical capabilities and limitations, including for required specialist and externally-sourced equipment
- site isolation, traffic control and emergency responsibilities and authorities.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - traffic management plan
    - traffic guidance scheme
    - personal protective equipment
    - devices, equipment and signs specified in the performance criteria
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment on a real live road setting under supervision; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all

aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor Requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**Aqf indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years

RIIWMG203E Drain and dewater civil construction sites

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 6.0.

Application

This unit describes the skills and knowledge required to drain and dewater civil construction sites. This includes establishing sedimentation controls, constructing sumps, installing surface or submersible pumps, and draining surface water using surface drains.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take some responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

No prerequisite units.

Unit sector(s)

Civil construction

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

• 1. Plan and prepare to drain and dewater	• 1.1 Obtain, interpret, clarify and confirm work requirements • 1.2 Access, interpret and apply documentation required to drain and dewater civil construction sites • 1.3 Obtain and interpret emergency procedures and identify steps required to respond to emergencies • 1.4 Select and wear personal protective equipment according to site requirements • 1.5 Confirm and identify requirements for complying with environmental protection, safety and traffic management signage requirements • 1.6 Identify potential hazards and environmental issues, implement control measures within scope of own role and escalate where required • 1.7 Select plant, tools and equipment required to carry out tasks and check for faults • 1.8 Identify, confirm and locate materials required for work application
• 2. Implement sedimentation control measures	• 2.1 Position sedimentation controls according to job requirements • 2.2 Construct sedimentation control barriers according to job requirements • 2.3 Position geotextiles according to job requirements
• 3. Remove surface water	• 3.1 Establish temporary drainage systems to drain or divert water to storm water drainage system • 3.2 Remove slab and site surface water and direct to temporary drainage system • 3.3 Fill surface holes and depressions according to job requirements • 3.4 Drain surface water to drainage system
• 4. Construct sump	• 4.1 Determine sump position according to job specifications and sump positioning requirements • 4.2 Construct sumps according to job requirements
• 5. Remove water from sump	• 5.1 Install surface or submersible pumps according to job requirements

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

	• 5.2 Locate surface pump close to sump • 5.3 Pump water to temporary drainage system • 5.4 Disperse discharged water according to job and site requirements
• 6. Conduct clean-up activities	• 6.1 Clear work area and dispose of or recycle materials according to site requirements • 6.2 Clean, check, perform maintenance on and store plant, tools and equipment according to manufacturer specifications and site requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Oral communication	• Identifies and interprets information from verbal instructions • Conveys information and instructions to others verbally
Self-management	• Monitors and minimises own exposure to worksite risks and hazards during work activities

Range of conditions

No conditions apply to this unit of competency at the time of publication.

Assessment Requirements for RIIWMG203E Drain and dewater civil construction sites

Modification History

Release	Comments
1	This unit of competency was first released in RII Resources and Infrastructure Industry Training Package Release 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- drain and dewater civil construction sites on at least two occasions, including:
    - dewatering a trench or pit using a pump
    - selecting and establishing sedimentation controls
    - selecting, installing and using surface or submersible pumps
    - pumping and dispersing surface and sub-surface water
    - draining surface water from a site using surface drains.

During the above, the candidate must:

- locate and apply required legislation, documentation, policies and procedures
- identify, report and record hazards and risks
- work with others to drain and dewater civil construction sites that meet required outcomes, including:
    - using communication techniques and equipment to convey information to others, including signage to advise others of work activity and exclusion zones
    - communicating with others to receive and clarify work instructions
    - completing written and verbal reporting requirements and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation required to drain and dewater civil construction sites
- policies, procedures and documentation required to drain and dewater civil construction sites, including those relating to:
    - hazard and risk management

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

    - work health and safety
    - emergency response
    - site and equipment safety
    - environmental protection
    - waste management
    - communication techniques and equipment
    - site isolation and traffic control responsibilities
    - operational, maintenance and basic diagnostic procedures
    - project quality requirements
    - work instructions
    - job plans and specifications
    - site requirements
    - manufacturer specifications for required plant and equipment
    - workplace recording and reporting
- principles and techniques required to drain and dewater civil construction sites, including those relating to:
    - dewatering
    - areas to be drained
    - drainage systems
    - project sites
    - sedimentation controls
    - sump positioning
    - interpreting engineering drawings
- types, characteristics, technical capabilities and limitations of plant and equipment required to drain and dewater civil construction sites, including:
    - hoses
    - shovels
    - pumps
    - plastic piping
    - silt fences
- materials safety data sheet (SDS) compliance processes
- components of job safety analyses (JSAs), job safety environmental analyses (JSEAs), and safe work method statements (SWMs)
- civil construction terminology relating to draining and dewatering civil construction sites.

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
    - personal protective equipment
    - equipment required to drain and dewater civil construction sites
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with required legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the

© Commonwealth of Australia, 2026 Mining and Automotive Skills Alliance

training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	Aqf indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

TLIB3011 Set up and rig crane for lift

Modification History

Release	Comments
1	This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to set up and rig a mobile crane for a lift. It includes the systematic positioning and stabilisation of the crane and its assembly prior to lift in a variety of operational contexts.

Work must be carried out in compliance with the relevant state/territory authority mobile crane operations licence/permit requirements and regulations.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Not applicable.

Elements and Performance Criteria

Elements	**Performance criteria**

© Commonwealth of Australia, 2026 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Position and stabilise crane**	1.1	Crane is directed to position in accordance with job plan, applicable Australian Standards, codes of practice and manufacturer specifications to ensure safe operation
		1.2	Ground is checked to ensure it is firm enough to bear the load
		1.3	Appropriate plates or packing are correctly used to adequately distribute load
		1.4	Outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturer instructions, appropriate Australian Standard and other relevant statutory regulations
		1.5	Outrigger packing is checked for adequacy prior to and after lift is taken
2	**Assemble crane**	2.1	Block is reeved in accordance with manufacturer instructions
		2.2	Counterweights are installed in accordance with manufacturer specifications
		2.3	Attachments are set up in accordance with manufacturer instructions
		2.4	Qualified rigger is consulted and other personnel are assisted as necessary to ensure efficient and safe assembly and set-up of crane
		2.5	Straight fly jibs and luffing fly jibs are assembled and fitted in accordance with manufacturer instructions

© Commonwealth of Australia, 2026 Industry Skills Australia

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3011 Set up and rig crane for lift

Modification History

Release	Comments
1	This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying procedures for fitting attachments and fly jibs
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers
- fitting fly jibs and attachments
- interpreting and following operational instructions and prioritising work
- monitoring work activities in terms of planned schedule and modifying activities depending on operational contingencies, risk situations and environments
- monitoring condition of equipment
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

- selecting and using appropriate personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- company work procedures for setting up and rigging a mobile crane at a worksite
- hazard management strategies consistent with the principle of hierarchy of control (with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment)
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational procedures for crane crews
- operational work systems and equipment
- procedures for fitting attachments and fly jibs
- procedures for identifying and correctly using equipment, processes and procedures
- relevant agreements, codes of practice or other legislative requirements
- relevant WHS/OHS and environmental procedures and regulations
- relevant road rules, regulations, permit and licence requirements for mobile crane operations and rigging mobile cranes.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment of setting up and rigging a mobile crane for a lift must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions and involve the movement of equipment, goods, materials and vehicular traffic.

© Commonwealth of Australia, 2026 Industry Skills Australia

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals, including relevant:
    - state/territory regulations and licence/permit requirements pertaining to mobile cranes
    - state/territory road rules
    - state/territory WHS/OHS legislation
        - state/territory environmental protection legislation
- relevant materials, tools and equipment
- personal protective clothing and equipment, including:
    - gloves
    - safety headwear and footwear
    - sunscreen, sunglasses and safety glasses
    - two-way radios
    - high visibility clothing.

TLIB3013 Maintain mobile cranes

Modification History

Release	Comments
1	This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to carry out routine maintenance on a mobile crane, in compliance with licence/permit requirements, regulations and work requirements in a variety of operational contexts.

It includes obtaining and confirming job instructions and work specifications, coordinating loading of gear and equipment, assessing job requirements and work areas, designing job plan and setting up work area.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

This unit applies to maintenance activity on equipment used by the operator and is limited to lubrication, fluid, filter and accessory changing and checks for cracks, surface or structural faults or other damage.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan maintenance operations**	1.1	Tags, service records, logbooks and crane manufacturer information are read prior to commencing maintenance, and previously identified and manufacturer recommendations are noted
		1.2	Maintenance schedules are read and maintenance tasks are confirmed to match schedule
		1.3	Step by step procedure is worked out to minimise time delays and to sequence maintenance processes consistent with manufacturer recommendations
2	**Complete pre-maintenance checks**	2.1	Appropriate safe work area is selected for maintenance tasks
		2.2	Required tools, consumables and equipment are identified and assembled
		2.3	Equipment is inspected for visible faults and loose or damaged components
3	**Identify and assess faults found**	3.1	Conditions found are compared with manufacturer information and intended use of crane
		3.2	Conditions noticed that may cause future difficulties are identified and potential effect on the safe and efficient operation of mobile crane is documented
		3.3	Potential fault conditions are reported to appropriate personnel
4	**Conduct maintenance operations and safety checks**	4.1	Fluid replacements and lubrication operations are completed

© Commonwealth of Australia, 2026 Industry Skills Australia

		4.2	Fluid levels are checked and adjusted
		4.3	Mechanical components are checked to ensure attachments and tensions are secure
		4.4	Mechanical adjustments are made
		4.5	Maintenance plan is followed and appropriate adjustments are made to maintenance plan to deal with unexpected events
		4.6	Own work and crane system operations are checked to ensure crane's operational condition is in accordance with required specifications
		4.7	Tools, equipment and unused consumables are returned to appropriate locations and waste is disposed of in accordance with workplace policy and procedures
5	**Complete maintenance records**	5.1	Accurate reporting of safety check results and maintenance conducted, is completed and filed in accordance with procedures, industry guidelines and statutory requirements
		5.2	Clear reference in reports is made to any items that may not yet require maintenance but may affect the future working condition or safety of the mobile crane

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIB3013 Maintain mobile cranes

Modification History

Release	Comments
1	This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids and carrying out lubrication processes
- communicating effectively with others
- completing relevant documentation
- dealing with internal and external customers
- identifying and correctly using relevant equipment
- identifying non-conformities that may compromise operational capability
- implementing contingency plans
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned maintenance schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- planning and prioritising own work, multi-tasking, predicting consequences and identifying improvements
- producing a comprehensive maintenance plan
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

- selecting and using appropriate personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and standard operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self, others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and include knowledge of:

- application of relevant agreements, codes of practice or other legislative requirements
- guidelines for the safe use of machinery and equipment
- hazard management strategies consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational crane systems and equipment
- operational safety and maintenance procedures for crane crews
- relevant WHS/OHS and environmental procedures and regulations
- relevant regulations, permit and licence requirements for mobile crane operational safety and maintenance
- use, characteristics, capabilities and limitations of lubrication and adjustment tools and equipment
- workplace procedures for planning mobile crane jobs and setting up work areas.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

© Commonwealth of Australia, 2026 Industry Skills Australia

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions and involve the movement of equipment, goods, materials and vehicular traffic.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals, including relevant:
    - state/territory regulations pertaining to the maintenance and safety of mobile cranes
    - state/territory WHS/OHS legislation
- personal protective clothing and equipment, including:
    - gloves
    - safety headwear and footwear
    - sunscreen, sunglasses and safety glasses
    - two-way radios
    - high visibility clothing
- relevant materials, tools and equipment currently used in industry
- state/territory environmental protection legislation.

TLIB3015 Undertake site inspection

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package. • Minor changes to unit Application • Minor changes to Performance Criteria • Minor changes to Assessment Conditions.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to undertake site inspection.

It includes arranging a site inspection, clarifying customer requirements, defining job requirements, and completing necessary records in preparation for a lift requiring a mobile crane in accordance with licence and permit requirements and regulations, in a variety of operational contexts.

Work is performed with general supervision, with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Not applicable.

Competency field(s)

B - Equipment Checking and Maintenance

Unit sector(s)

N/A

© Commonwealth of Australia, 2026 Industry Skills Australia

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Arrange site inspection**	**1.1**	Available information about customer requirements is obtained from relevant personnel
		1.2	Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3	Need for site inspection is confirmed through appropriate questioning and discussion
		1.4	Mutually acceptable meeting time is arranged with customer
		1.5	Full customer details are recorded in accordance with workplace procedures
2	**Clarify customer requirements**	**2.1**	Customer needs and perception of job are clearly established through appropriate questioning and discussion
		2.2	Alternative job methods are suggested, as required, and a safe and cost-effective method is negotiated with customer
		2.3	Client ability to provide necessary competent personnel is ascertained
3	**Define job requirements**	**3.1**	Information about load and movement requirements is accessed and necessary measurements are taken to enable accurate estimation of job requirements
		3.2	Specific scheduling needs are ascertained taking into account legislative and customer requirements

© Commonwealth of Australia, 2026 Industry Skills Australia

		3.3	Information from site inspection and customer is used to identify hazards and contingencies
		3.4	Specific site and job requirements are identified
		3.5	Lift study is arranged, as required, to provide additional information to meet customer expectations
		3.6	Necessity to be on site during lift is assessed in accordance with workplace policy, taking into consideration complexity of job, potential hazards and expertise of available personnel
		3.7	Need for permits and authorisations are determined
4	**Complete records**	**4.1**	Required records are updated accurately, legibly and promptly in accordance with workplace procedures
		4.2	All relevant information about job is included in records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the TLI Transport and Logistics Training Package Companion Volume Implementation Guide.

TLID0020 Shift materials safely using manual handling methods

Modification History

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 10.0.

Application

This unit involves the skills and knowledge required to shift materials safely using manual handling methods.

It includes assessing the risks associated with relocating the load, planning the relocation process and carrying out the relocation in accordance with the plan. Work must be carried out in compliance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations concerning the manual handling and movement of loads.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Not applicable.

Competency field(s)

D - Load Handling

Unit sector(s)

N/A

Elements and Performance Criteria

Elements	**Performance criteria**

© Commonwealth of Australia, 2026 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Assess risks associated with relocating load**	**1.1**	Products, goods or materials to be relocated are identified and assessed to determine appropriate relocation method
		1.2	Storage locations are determined and potential routes to be followed are identified
		1.3	Effect of load relocation on original load base is predicted
		1.4	Points of balance are estimated
		1.5	Required clearances are compared to available space and adjustments are made to moving loads to reflect required clearance
		1.6	Worksite hazards are identified, and corrective action is taken prior to commencing shifting products, goods or materials
		1.7	Risks in potential routes are considered
		1.8	Risks to self are identified arising from the required lifting, load carrying, set down or movement of products, goods or materials
		1.9	Manual handling procedures for lifting, lowering and carrying, pushing and pulling are identified
		1.10	Team lifting processes are considered when moving loads
		1.11	Appropriate personal protective equipment (PPE) is identified and used
		1.12	Size to weight ratio of items to be manually handled are identified

© Commonwealth of Australia, 2026 Industry Skills Australia

2	**Plan load relocation**	**2.1**	Relocation of the load is planned consistent with the code of practice for manual handling and in accordance with the risk assessment
		2.2	Process for relocating load is proposed, including predicting and planning for potential difficulties
		2.3	Proposed process is checked for compliance with codes of practice and workplace procedures
3	**Relocate load**	**3.1**	Actions for lifting, lowering and carrying, pulling and pushing a load are in accordance with workplace procedures and WHS/OHS requirements
		3.2	Team lifting tasks are coordinated
		3.3	Planned process and route are followed
		3.4	Relocated products, goods or materials are set down without damage to goods, personnel or equipment and are checked for stability
		3.5	Relocation is checked to ensure it meets work requirements and variances are reported to relevant personnel

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the TLI Transport and Logistics Training Package Companion Volume Implementation Guide.

Assessment Requirements for TLID0020 Shift materials safely using manual handling methods

Modification History

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 10.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying and following relevant work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace procedures
- applying precautions and required action to minimise, control or eliminate risks that may exist when manually lifting and handling products, goods or materials
- communicating effectively with others when manually lifting and handling products, goods or materials
- interpreting manual handling risks
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in loads and products, goods or materials in accordance with workplace procedures
- reading and interpreting instructions, procedures and information relevant to the manual lifting and handling of products, goods or materials
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS/OHS standards
- using correct manual handling practices
- working collaboratively with others when manually lifting and handling products, goods or materials
- working systematically with required attention to detail without injury to self or others, or damage to products, goods, materials, or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2026 Industry Skills Australia

- relevant WHS/OHS workplace procedures, codes of practice and industry guidelines concerning the manual lifting and movement of loads
- risks when manually lifting and handling products, goods or materials and related precautions to control the risk, including:
    - controlled actions on a movement during lifting
    - distance over which load is to be shifted
    - frequency of shifting operations
    - load on the spine during lifting
    - postures and positions during lifting
    - rotation and side movement of the spine during lifting
    - time allowed for shifting the load
    - type, weight and position of the load, including loose, liquid, dangerous or hazardous products, goods or materials
- site layout and obstacles
- work layout.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

A simulator/online assessment is not suitable for the final assessment of this unit of competency.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including legislation, regulations, codes of practice, workplace procedures and operation manuals.

TLID0021 Store and handle dangerous goods and hazardous substances

Modification History

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 10.0.

Application

This unit involves the skills and knowledge required to store and handle dangerous goods and hazardous substances.

It includes identifying requirements for working with dangerous goods and/or hazardous substances, confirming site incident procedures and selecting handling techniques in accordance with relevant work health safety (WHS)/occupational health and safety (OHS) regulations concerning the safe handling of dangerous goods and hazardous substances, within the transport and logistics industry.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Not applicable.

Competency field(s)

Elements and Performance Criteria

Elements	**Performance criteria**

© Commonwealth of Australia, 2026 Industry Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify requirements for working with dangerous goods and/or hazardous substances**	**1.1**	Dangerous goods and/or hazardous substances are identified from information, including class labels, manifests and other documentation
		1.2	Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3	Storage requirements for dangerous goods and/or hazardous substances are identified and applied
		1.4	Legislative requirements for dangerous goods and/or hazardous substances are used to plan work activities
		1.5	Handling procedures for different classes and characteristics of goods are identified
		1.6	Confirmation is sought from relevant personnel where dangerous goods and/or hazardous materials do not appear to be appropriately marked
2	**Confirm site incident procedures**	**2.1**	Incident reporting processes are identified
		2.2	Emergency equipment is identified and checked in accordance with workplace procedures and statutory regulations
		2.3	Emergency procedures are identified and confirmed
3	**Select handling techniques**	**3.1**	Load handling and shifting techniques are identified in accordance with particular goods and workplace procedures
		3.2	Handling equipment is checked for conformity with workplace requirements and manufacturer guidelines

© Commonwealth of Australia, 2026 Industry Skills Australia

		3.3	Suitable signage or placards are checked for compliance with workplace procedures, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the TLI Transport and Logistics Training Package Companion Volume Implementation Guide.

Assessment Requirements for TLID0021 Store and handle dangerous goods and hazardous substances

Modification History

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 10.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- completing relevant documentation
- estimating weights and dimensions of loads and any special requirements
- identifying and assessing handling and storage precautions and requirements for dangerous goods and/or hazardous substances
- identifying and selecting safety requirements for handling dangerous goods and/or hazardous substances
- identifying containers and goods coding, markings and emergency information panels for mode of transport and/or for storage selected, as required
- identifying dangerous goods/hazardous substances using labels, Globally Harmonized System of Classification and Labelling of Chemicals (GHS), International Maritime Dangerous Goods (IMDG) Code markings, HAZCHEM signs and other relevant identification criteria
- identifying job and site hazards, and planning work to minimise risks
- maintaining workplace records and documentation
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, regulations, information and signs
- selecting and using required personal protective equipment (PPE) conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2026 Industry Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of:

- housekeeping standards and workplace procedures
- problems that may arise when handling of dangerous goods and hazardous substances and actions that should be taken to prevent or solve these problems
- recognising hazards and applying precautions and required action to minimise, control or eliminate recognised hazards
- relevant regulations, codes and signage concerning handling dangerous goods and hazardous substances including:
    - Australian Dangerous Goods (ADG) Code
    - Australian Standards
    - GHS
    - HAZCHEM signs
    - IMDG Code
- risks when handling dangerous goods and hazardous substances and related precautions to control risk
- workplace procedures for handling and storing dangerous goods and hazardous substances

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including legislation, regulations, current ADG Code, codes of practice, workplace procedures and operation manuals.

TLIF2006 Apply accident-emergency procedures

Modification History

Release	Comments
2	**Release 2.** This is the second release of this unit of competency in the TLI Transport and Logistics Training Package: • Minor word changes and reordering in Knowledge Evidence • Minor statement changes in Assessment Conditions.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 1.0.

Application

This unit involves the skills and knowledge required to apply accident-emergency procedures in accordance with work health safety (WHS)/occupational health and safety (OHS) codes of practice, regulations and workplace requirements.

It includes responding to an incident, controlling and assisting at an accident or emergency site, finalising accident-emergency processes and completing records.

Work is performed under limited supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for TLIF2006 Apply accident-emergency procedures

Modification History

Release	Comments
2	**Release 2.** This is the second release of this unit of competency in the TLI Transport and Logistics Training Package: • Minor word changes and reordering in Knowledge Evidence • Minor statement changes in Assessment Conditions.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 1.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing work environment to identify hazards, assess safety risks and implement appropriate work health and safety (WHS)/occupational health and safety (OHS) control procedures
- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace emergency response procedures
- communicating effectively with others
- completing relevant documentation
- modifying activities depending on operational contingencies, risk situations and environments
- negotiating and resolving issues when responding to an accident or an emergency
- operating electronic communications equipment to required protocol
- reading and interpreting relevant instructions, procedures and information
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and appropriately applying technology, information systems and policies during a safety incident, accident or emergency

© Commonwealth of Australia, 2026 Industry Skills Australia

- selecting and using required personal protective equipment (PPE) conforming to industry and WHS/OHS standards
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

- focus of operation of work systems, equipment or management, site and organisational operating and emergency procedures
- relevant regulatory and codes of practice requirements applicable in accident/emergency situations
- relevant WHS/OHS and environmental protection policies and procedures
- site layout
- typical problems that can occur during a safety incident, accident or emergency and related actions that can be taken
- workplace emergency, fire and accident procedures
- workplace procedures for accident-emergency response.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIF2010 Apply fatigue management strategies

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package. • Minor changes to unit Application • Minor changes to Assessment Conditions.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 1.0.

Application

This unit involves the skills and knowledge required to apply fatigue management strategies within the transport and logistics industry.

It includes identifying and acting on signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

Work is undertaken in compliance with relevant legislation, regulations, codes and guidelines.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify and act on signs of fatigue**	**1.1**	Potential causes of fatigue are identified and actions taken to minimise their effects in accordance with workplace procedures
		1.2	Personal warning signs of fatigue are recognised, and necessary steps are taken in accordance with workplace procedures, to ensure that effective work capability and alertness are maintained
2	**Implement strategies to minimise fatigue**	**2.1**	Workplace procedures are assessed to minimise fatigue
		2.2	Factors that increase the risk of fatigue-related accidents and incidents are minimised
		2.3	Fatigue management strategies are implemented in accordance with workplace policy and procedures
		2.4	Lifestyle choices are made that promote the effective long-term management of fatigue
		2.5	Effective practices in combating fatigue are adopted and applied
		2.6	Personal fatigue management strategies are communicated to relevant people
		2.7	Appropriate counter measures are planned to combat fatigue

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package. • Minor changes to unit Application • Minor changes to Assessment Conditions.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 1.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:
• adapting to changes in rosters and standard operating procedures (SOPs) as they relate to fatigue management • adjusting lifestyle patterns to ensure effective fatigue management during work activities • applying precautions and required actions to minimise and control the effects of fatigue when carrying out own work functions • applying relevant legislation and workplace procedures • communicating effectively with others when applying fatigue management strategies • identifying and meeting own learning needs about fatigue management related matters • modifying activities and taking appropriate initiatives to manage fatigue in the workplace depending on work contexts, risk situations and environments • reading and interpreting instructions, procedures, regulations and signs related to fatigue management and applying them to work activities • recognising symptoms of fatigue and taking appropriate actions in accordance with fatigue management regulations and workplace procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

- working collaboratively with others to manage and minimise the effects of fatigue during work activities.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of:

- causes and effects of fatigue on workers
- factors that increase fatigue-related accidents
- how fatigue affects workplace performance
- how fatigue contributes to workplace accidents
- lifestyles that promote effective long-term fatigue management
- relevant fatigue management codes, regulations, permit and licence requirements
- relevant work health and safety (WHS)/occupational health and safety (OHS) regulations as they relate to fatigue
- risks and hazards created by workplace fatigue
- sources of information on fatigue
- strategies and ways of managing fatigue
- ways of recognising fatigue
- workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective (PPE) equipment currently used in industry

© Commonwealth of Australia, 2026 Industry Skills Australia

- applicable documentation, including legislation, regulations, codes of practice, workplace procedures and operation manuals.

TLIF3084 Follow mobile crane safety procedures

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package: • Minor word change in Performance Evidence • Minor word change in Knowledge Evidence • Minor statement changes in Assessment Conditions.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to follow and apply mobile crane safety procedures and work health and safety (WHS)/occupational health and safety (OHS) procedures when carrying out mobile crane operations.

It includes identifying and following mobile crane and workplace procedures for hazard identification and risk control, contributing to arrangements for managing WHS/OHS, and completing all relevant safety records.

Mobile crane operations are performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Not applicable.

Mobile Crane

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Follow workplace and mobile crane safety procedures for hazard identification and risk control**	**1.1**	Mobile crane and workplace procedures for dealing with accidents, fire and emergencies are identified and followed
		1.2	Mobile crane and workplace procedures for WHS/OHS and related work instructions for controlling risks in a workplace are accurately followed
		1.3	Mobile crane hazards and site hazards in the workplace are identified and appropriate action is taken to report them and to minimise or eliminate risk to personnel, workplace and the environment
		1.4	Safety regulations and established mobile crane and workplace safety and hazard control practices and procedures are obtained, interpreted and applied to mobile crane operations
		1.5	Procedures and precautions necessary for entry into confined spaces in the workplace are correctly followed, as required
		1.6	Personal protective equipment (PPE) is correctly used in accordance with established safety practices and procedures
		1.7	Established mobile crane and workplace emergency and contingency plans are followed in an emergency
2	**Contribute to arrangements for managing mobile crane safety procedures and WHS/OHS**	**2.1**	Mobile crane safety hazards and WHS/OHS issues are identified and raised with designated personnel in accordance with workplace procedures and relevant WHS/OHS legislation

© Commonwealth of Australia, 2026 Industry Skills Australia

		2.2	Contributions to WHS/OHS management in the workplace are made in accordance with workplace procedures and provisions of relevant legislation
		2.3	Participative arrangements for mobile crane safety procedures and WHS/OHS management in the workplace are contributed to within relevant workplace procedures, scope of responsibilities and own competence
3	**Complete workplace and WHS/OHS records**	**3.1**	Mobile crane and WHS/OHS records are completed in accordance with workplace requirements
		3.2	WHS/OHS records and legal requirements for maintaining records of occupational injury and diseases are followed

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the TLI Transport and Logistics Training Package Companion Volume Implementation Guide.

Assessment Requirements for TLIF3084 Follow mobile crane safety procedures

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package: • Minor word change in Performance Evidence • Minor word change in Knowledge Evidence • Minor statement changes in Assessment Conditions.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:
• applying fatigue management techniques • applying mobile crane and work health and safety WHS/occupational health and safety (OHS) recording procedures in accordance with workplace requirements • applying precautions and required actions to minimise, control or eliminate identified hazards • applying specific crane legislation, mobile crane safety procedures and workplace procedures • communicating effectively and working collaboratively with others • completing relevant documentation • estimating the size, shape and special requirements of loads • following procedures for identifying mobile crane safety hazards and WHS/OHS issues • identifying containers and goods coding in compliance with dangerous goods systems and relevant regulatory requirements • interpreting and following operational instructions and prioritising work

© Commonwealth of Australia, 2026 Industry Skills Australia

- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment (PPE) conforming to industry and WHS/OHS standards
- taking appropriate actions to report identified mobile crane and site hazards in the workplace
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- hazards associated with mobile crane operations on a worksite
- how to handle broken or damaged equipment
- location and use of safety alarms, emergency shut-off systems and emergency communications systems
- manual and mechanically assisted lifting and load shifting procedures
- mobile crane and workplace emergency and evacuation procedures
- relevant dangerous goods systems and dangerous goods regulation requirements including:
    - storage, handling and use of hazardous substances
    - terms used in safety data sheets (SDS)
- relevant mobile crane safety workplace procedures
- relevant WHS/OHS procedures and guidelines
- reporting procedures for unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- risks associated with mobile cranes, and related precautions to control the risk
- risks associated with multiple crane operations
- signs and signals used for warnings.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions and include restricted spaces, exposed conditions and controlled or open environments.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals, including relevant:
    - Australian Standards
    - general duty of care under WHS/OHS legislation
    - mobile crane codes of practice
    - state/territory WHS/OHS legislation and safety codes, including manual handling, noise, confined spaces, smoking and workplace ergonomics
    - workplace relations regulations
    - workers' compensation regulations
- dangerous goods regulations
- personal protective equipment (PPE) including:
    - gloves
    - safety headwear and footwear
    - safety glasses
    - two-way radios
    - high visibility clothing
- relevant materials, tools and equipment currently used in industry.

TLILIC0003 Licence to operate a forklift truck

Modification History

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to operate a forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other attachments that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck High Risk Work Licence (HRWL).

This unit requires a person operating a forklift truck to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance criteria	
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
Plan work/task	**1.1**	Task requirements are identified from work orders or equivalent and confirmed with relevant people and site inspection is conducted in accordance with workplace procedures
	1.2	Work area operating surface is assessed to determine suitability for operational use of forklift truck in accordance with workplace procedures
	1.3	Suitability of forklift truck and attachment working load limit (WLL) is determined for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4	Working area is inspected and appropriate paths for operating the forklift truck and moving and placing load/s in work area are assessed and managed in accordance with workplace procedures
	1.5	Hazard and risk control measures are identified and reported to relevant person/s in accordance with workplace procedures
	1.6	Traffic management plan implementation is confirmed in accordance with workplace procedures
	1.7	Appropriate communication procedures are identified with relevant people in accordance with workplace procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		1.8	All work is confirmed to ensure coverage of work/task requirements for the relevant work area is in accordance with workplace procedures
2	**Prepare for work/task**	**2.1**	Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with safe work procedures
		2.2	Weather and work environmental conditions are assessed to determine any impact on forklift truck operations in accordance with manufacturer requirements and safe work procedures
		2.3	Risk control measures for hazards identified are checked for implementation in accordance with safe work procedures
		2.4	Forklift truck is accessed in a safe manner in accordance with manufacturer requirements and workplace procedures
		2.5	Forklift truck logbook is checked in accordance with manufacturer, regulatory requirements and safe work procedures
		2.6	Pre-start checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer requirements
		2.7	Forklift truck is set up correctly with any relevant attachments as per work plan in accordance with relevant manufacturer requirements including data plate and safe work procedures
		2.8	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
		2.9	Hazard and risk control measures are checked for implementation and communicated to people in the work area in accordance with safe work procedures
3	**Perform work/task**	**3.1**	Weight and positioning of load is assessed to ensure compliance with forklift truck data plate requirements and in accordance with safe work procedures
		3.2	Forklift truck is operated safely in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		3.3	Loads are monitored constantly when lifting, moving, lowering and placing to ensure stability of load and avoidance of hazards in accordance with safe work procedures
		3.4	Unplanned and unsafe situations are responded to in accordance with safe work procedures
		3.5	Loads are picked up, transported and placed using all forklift truck movements in accordance with safe work procedures
		3.6	Forklift truck is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
4	**Pack Up**	**4.1**	Forklift truck shutdown procedures are carried out in accordance with manufacturer requirements and safe work procedures
		4.2	Forklift truck is secured to prevent unauthorised access/use in accordance with safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLILIC0003 Licence to operate a forklift truck

Modification History

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 5.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying safe operating procedures for a forklift truck including:
  - maintaining safe operating speed
  - travelling with load lowered to an appropriate height for the terrain, operating surface and visibility in relation to direction of travel
- applying relevant forklift truck manufacturer requirements and data plate information and approved modifications to attachments fitted are in accordance with manufacturer requirements
- carrying out pre-start checks, including visual inspection which must include:
  - battery charge as required by manufacturer requirements
  - checking and interpreting data plate/s are relevant to the attachment and the forklift truck
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - document evidence of damage
  - engine / mechanical fluid level checks including fuel as required by manufacturer requirements
  - ensuring availability of correct forklift truck logbook and updating records as required
  - ensuring forklift truck tynes or other attachment/s are securely fitted
  - ensuring seat and mirrors are adjusted appropriately and seat belt is functional
  - fluid leaks
  - lights are working effectively

© Commonwealth of Australia, 2026 Industry Skills Australia

  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - wheels and tyres for damage/correct inflation if applicable
- conducting and applying risk and hazard assessment strategies including:
  - insufficient lighting
  - other specific hazards including dangerous goods
  - overhead hazards and fixed structures, roof beams and doorways
  - restricted and poorly ventilated areas
  - surface suitability based on forklift truck and task requirements
  - the risk of collision with people, moving plant and fixed structures
  - weather conditions
- complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation, regulations safe work and workplace procedures
- conducting operational checks, which must ensure:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions operated to maximum extension and ensuring attachment (if fitted) movements and control functions are smooth and comply with operating requirements
  - hazard warning systems (e.g. reversing beepers, lights and horns) are functional
  - recording and maintaining accurate information relating to forklift truck operations
  - safety devices as fitted
  - start-up is in accordance with manufacturer requirements
  - steering, transmission and brake functions comply with operating requirements
  - there are no unusual noises
- confirming and following traffic management plan procedures relevant to their role in the work area
- conducting relevant procedures for refuelling and isolating fuel/power source as per manufacturer requirements using appropriate PPE
- determining relevant lifting attachment to perform work/task
- determining lift requirements including:
  - positioning of unusually balanced/shaped loads
  - centre of gravity

© Commonwealth of Australia, 2026 Industry Skills Australia

    - dynamic nature of load
    - tyne/attachment positioning
    - weight
- ensuring risk control measures within the work area are effective as per workplace procedures
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various environmental conditions
- maintaining communication with other workplace personnel through using worksite procedures including:
    - audible and visual warning devices
    - signage
    - two-way radio
    - verbal instructions
    - written instructions
- maintaining three points of contact whilst accessing and egressing forklift truck and ensuring rungs / steps are free of hazards
- operating and monitoring safe forklift truck operations using minimum 250kg dynamic and non-dynamic loads that include:
    - aligning tynes/attachment to load
    - carrying out a lift to 75% of the maximum height
    - conducting trial lift to ensure forklift truck and load are stable, and load is safe to move
    - correctly using horns and mirrors in workplace
    - correctly positioning and using an observer to assist when operating with a load that may restrict vision or be placed out of vision of the operator
    - driving applicable to conditions and moving loads safely
    - driving a forklift truck safely with load in forward and reverse, while maintaining visibility through an obstacle course including:
        - an 'S' bend with a minimum 90 degrees left and right turn
        - ensuring load/s remains stable through pick up, transport and placement
        - forklift truck speed is appropriate to load and surroundings

© Commonwealth of Australia, 2026 Industry Skills Australia

        - lowering dynamic and non-dynamic loads to appropriate height for travel in forward and reverse
    - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely at various heights within a compliant racking system
    - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely into/onto an elevated, flat, stable area
    - tilting mast (or forks if applicable) to ensure balance of load
    - using gluts/dunnage appropriately and lowering load safely
    - using tilt and side shift (where fitted) safely to manoeuvre dynamic and non-dynamic loads into allocated space
- reporting to relevant person/s on site risk control measures that are not in place or are deficient
- setting up an exclusion zone
- securely parking forklift truck and isolating in appropriate position including:
    - minimising possible access by unauthorised person/s
    - tynes/attachment lowered to required position in accordance with manufacturer requirements
    - park brake applied
    - switching off, isolating fuel/power source and removing key according to workplace procedures
- shutting down a forklift truck in accordance with manufacturer requirements and workplace procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck
- communication procedures including:
    - audible and visual warning devices
    - hand signals
    - questioning techniques
    - signage
    - traffic warning systems
    - two-way radio

© Commonwealth of Australia, 2026 Industry Skills Australia

- written instructions

- forklift truck characteristics and capabilities, manufacturer requirements and instructions for any attachments
- impact of the following on the operation of the forklift truck including:
  - failure/loss of control including brakes and steering
  - failure of equipment during forklift truck operations
  - forklift truck instability causes including:
    - deterioration of ground condition
    - overloading
    - pick up and placement of load
    - irregular loads
  - operating on ramps and uneven surfaces and in restricted spaces
  - use of forklift truck data plate and attachment data plate and appropriate methodology to determine weight of a load is appropriate for forklift truck and any attachment if fitted including the estimation or determination from:
    - labels on the actual load
    - markings on the actual load
    - paperwork such as consignment notes, running sheets and weighbridge dockets
    - weighing a carton and calculating load
- manufacturer requirements, instructions and operator's manual
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions including:
  - wind
  - lightning
  - water/ice impacted surface/ground
  - rain
  - extreme heat
  - Ultra violet (UV) exposure
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including:
  - lock out and tag out procedures
- relevant procedures for refuelling and recharging forklift truck using appropriate PPE including:
  - gas bottle

© Commonwealth of Australia, 2026 Industry Skills Australia

  - connecting battery to charger and disconnecting battery from charger and reconnecting to forklift truck
  - refuelling
- procedures for recording, reporting and maintaining workplace records and information
- risk assessment process including hierarchy of control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- safe use and compliance of different types of attachments including:
  - bale clamps
  - carpet spike for carpet rolls
  - drum carrier
  - jib attachment
  - paper roll clamps
  - personnel work platforms
  - rotators
  - slippers/fork extensions on tynes
- suitability and lifting capability of the attachment to be used
- shut down procedures for a forklift truck in accordance with manufacturer requirements
- traffic management plan procedures and requirements
- typical routine problems encountered operating a forklift truck and associated equipment, and adjustments required for correction
- workplace procedures including work plan which may be verbal, documented/written, or electronically generated
- work area operating surface suitability including issues with:
  - backfilled ground
  - bitumen (damaged, cracked)
  - concrete (damaged, cracked)
  - hard compacted soil
  - potholes

© Commonwealth of Australia, 2026 Industry Skills Australia

  - railway tracks
  - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
  - soft soils
  - trench covers
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) requirements, safe work and workplace procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe/serviceable condition in accordance with manufacturer requirements
- associated equipment for forklift truck operations
- suitable dynamic and non-dynamic loads
- suitable compliant racking system
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
  - approved codes of practice and relevant guidance material
  - relevant Australian technical standards
  - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable)

TLILIC0005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package: • Minor statement changes in unit Application • Minor changes and re-ordering of Performance Evidence • Minor re-ordering of Knowledge Evidence • Minor statement changes in Assessment Conditions.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 5.0.

Application

This unit specifies the skills and knowledge required to safely operate a boom-type Elevating Work Platform (EWP) where the length of the boom is 11 metres or more in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a Risk Work Licence (HRWL) to operate this plant.

Boom-type elevating work platform means a telescoping device, hinged device, or articulated device, or any combination of these, used to support a platform on which personnel, equipment and materials may be elevated.

A person performing this work is required to hold a boom-type elevating work platform HRWL.

This unit requires a person operating an EWP to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up.

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

© Commonwealth of Australia, 2026 Industry Skills Australia

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

		2.3	Safety equipment including Personal Protective Equipment (PPE) are inspected, fitted correctly and used in accordance with manufacturer requirements and safe work procedures
		2.4	EWP is accessed in a safe manner in accordance with manufacturer requirements and safe work procedures
		2.5	Pre-start EWP checks are carried out in accordance with manufacturers requirements and safe work procedures
		2.6	EWP is started and is checked for any abnormal noises in accordance safe work procedures
		2.7	EWP is positioned correctly as per work plan in work area in accordance with relevant manufacturer requirements and safe work procedures
		2.8	EWP is stabilised appropriately in accordance with the workplan, relevant manufacturer requirements and safe work procedures
		2.9	Operational checks from base controls are carried out in accordance with relevant manufacturer requirements and safe work procedures
		2.10	All platform controls are located, identified and tested in accordance with manufacturer requirements and safe work procedures
		2.11	All damage and defects are reported and appropriate action is taken to rectify in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		2.12	EWP logbook is inspected and is correct for the EWP, is completed and signed in accordance with manufacturer requirements and safe work procedures
		2.13	Weather and work environmental conditions are assessed to determine any impact on EWP operation and positioning as per workplan in accordance with manufacturer requirements and safe work procedures
3	**Perform work/task**	**3.1**	Relevant hazard prevention/control measures identified are checked for implementation in accordance with safe work procedures
		3.2	EWP is safely located at point of work in work area in accordance with safe work procedures
		3.3	EWP platform is positioned for work tasks and stability and all operations are monitored constantly in accordance with safe work procedures
		3.4	Work gear and tools are stowed and secured in accordance with safe work procedures
		3.5	EWP is operated using all movements in accordance with safe work procedures and manufacturer requirements
		3.6	Unplanned and unsafe situations are responded to in accordance with safe work procedures
		3.7	All communication signals are correctly interpreted and followed whilst EWP is operated in accordance with safe work procedures
		3.8	EWP platform is accessed and egressed in accordance with safe work procedures and manufacturer requirements
		3.9	EWP is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
4	**Pack up**	**4.1**	Post-operational EWP checks are carried out in accordance with manufacturer requirements and safe work procedures
		4.2	EWP boom is retracted, lowered, stowed and secured in accordance with manufacturer requirements and safe work procedures
		4.3	Safety equipment and PPE is disconnected from platform in accordance with safe work procedures
		4.4	Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		4.5	Outriggers and/or stabilisers, plates or packing if fitted are stowed and secured in accordance and with manufacturer requirements and safe work procedures
		4.6	EWP is shut down in accordance with manufacturer requirements and safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLILIC0005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package: • Minor statement changes in unit Application • Minor changes and re-ordering of Performance Evidence • Minor re-ordering of Knowledge Evidence • Minor statement changes in Assessment Conditions.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 5.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:
• advising relevant person/s on site in relation to any hazards and risk elimination/control strategies • applying safe operating procedures for an Elevating Work Platform (EWP) including all functions within the safe working rated capacity including: o boom/s as low as possible and fully retracted whilst travelling (self propelled EWP only) o boom/s in line with EWP where practical whilst travelling (self propelled EWP only) o EWP stability o gently accelerating and braking to minimise boom/s swing (self propelled EWP only) o maintaining safe operating speed in relation to the work condition o travelling with work platform raised to an appropriate height for the terrain and visibility in relation to direction of travel (self propelled EWP only and in accordance with manufacturers specifications)

© Commonwealth of Australia, 2026 Industry Skills Australia

- applying emergency procedures
- applying traffic management plan procedures relevant to their role in the work area
- carrying out operational checks on EWP including:
    - testing of all EWP safety devices
    - all controls are located, identified and tested for functionality from the base controls and platform controls
    - hazard warning systems including travel beepers and lights are functional
    - start-up is in accordance with manufacturer requirements
    - steering, transmission and brake functions comply with operating requirements (self propelled EWP only)
    - there are no unusual noises
- carrying out pre-start checks, including visual inspection which must include:
    - battery fluid level as required by manufacturer requirements
    - checking compliance plate is relevant to the load/s being used on the EWP
    - engine / mechanical fluid level checks as required by manufacturer requirements
    - ensuring availability of correct logbook and updating records as required
    - ensuring EWP platform and attachment/s fitted in platform are secured
    - evidence of damage
    - fluid leaks
    - lights are working effectively (where fitted)
    - safety equipment checks
    - signage and labels to ensure they are visible and legible
    - structural weaknesses including paint separation or stressed welds
    - wheels and tyres for damage/correct inflation if applicable
- checking compliance plate and load chart for reach requirements and load suitability
- clarifying workplan and checking understanding
- complying with Commonwealth, State and/or Territory work health and safety (WHS)/occupational health and safety (OHS)/occupational safety and health (OSH) legislation and regulations
- controlling and operating a boom type elevating work platform ensuring movements and control functions are safe, smooth and comply with operating requirements including:
    - any combination of the movement of the extending boom used to support a platform on which personnel, equipment and materials are elevated to perform the work task/s

© Commonwealth of Australia, 2026 Industry Skills Australia

- avoidance of ground depressions
- correctly using observer guidance of work platform, main chassis and extending boom
- demonstrating the safe operation of an EWP in forward and reverse, while maintaining visibility (where applicable)
- driving (where applicable) applicable to conditions and moving platform and load/s safely
- ensuring warning devices are functioning correctly
- interpreting directional arrows correctly on platform controls during forward, reverse, left and right
- lowering boom to its resting position
- monitoring platform, main chassis and extending boom movement constantly ensuring safe work procedures are followed
- raising platform and slewing within manufacturer requirements
- raising platform to its full extent or 75% of the maximum height capacity (whichever is greater)
- stability of the EWP and the work platform
- manoeuvring and positioning the platform to perform work task/s safely whilst at its full extent or a minimum height of 75% of the maximum capacity (whichever is greater)

- conducting and applying hazard identification and risk elimination or minimisation strategies including:
  - barricades and controls to prevent the risk of collision with people, moving vehicles and fixed structures
  - environmental conditions including:
    - wind
    - lightning
    - water impacted ground
    - rain
    - extreme heat
    - Ultra Violet (UV) exposure
  - ground conditions (surface and slopes) and assessing work area operating surface suitability based on machine and task requirements
  - overhead hazards including electric lines and service pipes
  - personal protective equipment (PPE)
  - restricted areas and crush points from work platform and external surroundings

© Commonwealth of Australia, 2026 Industry Skills Australia

  - safety related tags on electrical switches/isolators that have an impact on point of work of EWP operator
  - sufficient lighting
  - suitable area for set-up, positioning and safely operating EWP
  - suitable firm and stable operating surface
  - use of safety observer
- entering work platform correctly including:
  - lowering platform safely and stably to appropriate height to access safely
  - clipping on of fall restraint/arrest device
  - accessing platform safely
- exiting work platform correctly including:
  - lowering platform safely and stably to appropriate height to egress safely
  - unclipping of fall restraint/arrest device
  - exiting platform safely
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- inspecting and using relevant safety equipment, including:
  - anchor point/s
  - emergency retrieval system from base controls and platform controls where fitted
  - energy absorber/s
  - lanyard/s
  - safety harness/es
- interpreting and confirming relevant documentation, workplace instructions, safety information and emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various work environmental conditions
- maintaining communication with other workplace personnel using appropriate workplace procedures including procedures to ensure all movements are conveyed clearly and succinctly including:
  - 2-way radio
  - audible and visual warning devices
  - making and interpreting hand signals
  - questioning to confirm understanding
  - signage

© Commonwealth of Australia, 2026 Industry Skills Australia

- written instructions
- recording and maintaining accurate information relating to EWP operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- stabilising procedures for an EWP including:
  - checking levels
  - removing obstacles and obstructions
  - deploying and retracting outriggers (if fitted)
  - establishing correct size plates for packing (if required)
- shutting down a boom type EWP in accordance with manufacturer requirements and workplace procedures
- using and interpreting EWP manufacturer requirements and data, including compliance plate and load chart, to enable correct EWP selection for task including:
  - boom
  - platform
  - weight including outrigger load or wheel load.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and industry standards, codes of practice and guidelines to safely operate an EWP (boom length 11 metres or more) including:
  - nominal reach, measured horizontally from centre point of rotation to outer edge of platform in its most extended position
  - vertical distance from floor of platform to surface supporting elevating work platform with platform at its maximum height
- appropriate mathematical calculations to estimate loads ensuring EWP is not overloaded
- appropriate workplace communication procedures including:
  - 2-way radio
  - audible and visual warning devices
  - questioning techniques
  - signage
  - hand signals
  - traffic warning systems

© Commonwealth of Australia, 2026 Industry Skills Australia

- written instructions
- compliance with permit condition requirements including:
  - from electrical supply authority
  - if operating on roads or footpaths
- EWP characteristics and capabilities, manufacturer requirements and instructions
- hazards including:
  - all ground and /or operating surface hazards
  - traffic including pedestrians, vehicles, other mobile plant and building structures
  - overhead hazards including electric lines, service pipes, doorways, roof beams, and lights
  - obstacles or obstructions
  - insufficient lighting
  - other relevant hazards
- identification and avoidance of person/s potential crush or entrapment points
- identification and avoidance of potential contact with overhead electrical conductor's
- identification and avoidance of potential contact with structures near work platform/boom or chassis
- impact of the following on the operation of the EWP including:
  - failure/loss of control including brakes and steering
  - failure of equipment including hydraulic system
  - EWP and platform instability due to:
    - deterioration of ground/operating surface condition
    - gradient of operating surface
    - overloading
    - poor load placement
    - irregular loads
  - emergency procedures and safety equipment, including the use of:
    - safety harness/es
    - energy absorbers
    - lanyard/s
    - anchor point/s
    - emergency retrieval systems

© Commonwealth of Australia, 2026 Industry Skills Australia

- lock out and tag out procedures
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions
- procedures for recording, reporting and maintaining workplace records and information
- relevant manufacturer requirements and instructions
- relevant procedures for refuelling/recharging EWP using appropriate PPE
- risk assessment process including hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls
    - administrative controls
    - personal protective equipment (PPE)
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations
- procedures for shutting down a boom type EWP in accordance with manufacturer requirements
- relevant documentation requirements
- suitability and lifting capability of the EWP to be used
- traffic management plan procedures and requirements
- typical routine problems encountered operating a EWP and adjustments required for correction
- wind speed factors that affect stability of EWP as per manufacturer requirements
- work area operating surface suitability including issues with:
    - backfilled ground
    - bitumen (damaged, cracked)
    - concrete (damaged, cracked)
    - hard compacted soil
    - potholes
    - railway tracks
    - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
    - soft soils
    - trench covers

© Commonwealth of Australia, 2026 Industry Skills Australia

- work health and safety (WHS)/occupational health and safety (OHS)/occupational safety and health (OSH) and codes of practice requirements for boom type elevating work platforms
- work plan which may be verbal, documented/written, or electronically generated

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency

Resources for assessment must include access to:

- appropriate boom-type elevating work platform (boom length 11 metres or more) in a safe/serviceable condition in accordance with manufacturer requirements
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
    - approved codes of practice and relevant guidance material
    - relevant Australian technical standards
    - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

TLILIC0008 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package: • Minor statement changes in unit Application • Minor statement changes in Assessment Conditions.
1	This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a non-slewing mobile crane with a Maximum Rated Capacity (MRC) exceeding 3 tonnes safely, in accordance with all relevant legislative responsibilities. Competence in this unit, does not in itself result in a High Risk Work Licence (HRWL) to operate this plant.

A person undertaking this unit must hold:

- a current National HRWL to perform dogging or a current certification for a specific VET course for HRWL to perform dogging that has been issued by, or on behalf of a WHS Regulator

Non-slewing mobile crane means a mobile crane incorporating a boom or jib that cannot be slewed, and includes:

- an articulated mobile crane
- a locomotive crane
- but does not include vehicle tow trucks.

A person performing this work is required to hold a non-slewing mobile crane HRWL.

This unit requires a person operating non-slewing mobile crane with an MRC exceeding 3 tonnes to:

- plan the work/task
- prepare for the work/task
- perform work/task
- pack up

© Commonwealth of Australia, 2026 Industry Skills Australia

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency. This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan work/task**	**1.1**	Task requirements are identified from work orders or equivalent and a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
		1.2	Work area operating surface is confirmed to determine the quality of ground suitability for operational use of non-slewing mobile crane in accordance with workplace procedures
		1.3	Non-slewing mobile crane rated capacity (RC) and the lifting gear Working Load Limit (WLL) are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		1.4	Appropriate paths for operating the mobile crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
		1.5	Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace procedures
		1.6	Traffic management plan implementation is confirmed and followed in accordance with workplace procedures
		1.7	Appropriate communication procedures are identified and tested with associated personnel in accordance with workplace procedures
		1.8	All tasks are confirmed to ensure requirements for the relevant work area in accordance with a lift plan and workplace procedures
2	**Prepare for work/task**	**2.1**	Consultation with workplace personnel is established and maintained to ensure lift plan is clear and consistent with site requirements in accordance with a lift plan and workplace procedures
		2.2	Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
		2.3	Non-slewing mobile crane is accessed safely in accordance with manufacturer requirements and safe work procedures
		2.4	Pre-start crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
		2.5	Mobile crane is set up correctly with any lifting gear as per the lift plan in accordance with relevant manufacturer requirements including load chart/s and safe work procedures
		2.6	Fly jib (if fitted) is set up as required in accordance with specific manufacturer requirements and safe work procedures
		2.7	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		2.8	Crane logbook is checked to confirm current compliance, is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures
		2.9	Weather and work environment conditions are assessed to determine any impact on mobile crane operations in accordance with manufacturer requirements and safe work procedures
3	**Perform work/task**	**3.1**	Lifts are determined within the RC of the non slewing mobile crane in accordance with the load chart/s and lift plan
		3.2	Boom/jib and hook block is safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
		3.3	Lifting gear where required is connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
		3.4	Test lift is carried out in accordance with dogging and safe work procedures
		3.5	Loads are transferred using relevant crane movements and tag lines as required, in accordance with lift plan and safe work procedures
		3.6	Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
		3.7	All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures
		3.8	Load is lowered and landed safely in accordance with lift plan and safe work procedures
		3.9	Lifting gear is disconnected from load and crane is positioned safely and efficiently for next task in accordance with lift plan and safe work procedures
4	**Pack Up**	**4.1**	Crane boom/jib, lifting gear and associated equipment is stowed and secured as required in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		4.2	Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures
		4.3	Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures
		4.4	Post-operational crane checks are carried out in accordance with legislative responsibilities, safe work procedures and manufacturer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non -essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

Assessment Requirements for TLILIC0008 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package: • Minor statement changes in unit Application • Minor statement changes in Assessment Conditions.
1	This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

• applying relevant mathematical calculations in conjunction with lift plan and load chart, radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load including:
  o boom
  o fly-jib (where fitted)
  o line pull
  o mobiling
  o type of hook
  o side slope derations
  o articulation derations
• applying relevant crane movements including:
  o boom/jib up and down (luffing)
  o positioning and using main and auxiliary hook and lifting gear to connect to load safely
  o raise and lower hoist
  o telescope in and out

© Commonwealth of Australia, 2026 Industry Skills Australia

  - travel and articulating (as required)
- communicating with other workplace personnel through using appropriate worksite procedures including:
  - 2-way radio
  - listening
  - making and interpreting hand signals
  - questioning to confirm understanding
  - signage
  - verbal language
  - visual aids
  - whistles
  - written instructions
- complying with Commonwealth, state and territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation and safe work procedures
- completing the pre-start check including:
  - battery power level as required by manufacturer requirements
  - engine / mechanical fluid level checks as required by manufacturer requirements
  - presence of correct logbook
  - evidence of damage
  - fluid leaks
  - lights work effectively
  - locating, identifying and confirming all controls
  - mirrors and seat are adjusted appropriately
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - tyres and wheels for damage/wear and correct inflation (Water/Air)
  - updating records as required
  - visual damage or equipment faults
- conducting and applying risk and hazard strategies including:
  - confirming work area operating surface suitability based on crane and task requirements

© Commonwealth of Australia, 2026 Industry Skills Australia

  - articulation of crane
  - dynamic loads
  - ground conditions including surface and slopes
  - impact of tyre inflation/condition
  - load swing
  - overloading
  - pick and placement of load
  - asymmetric loads
  - overhead hazards
  - restricted site/s and poorly ventilated area/s
  - risk of collision with people, moving plant and fixed structures
  - adequate lighting
  - weather conditions
- completing operational checks ensuring:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions are operated
  - lifting gear movements and control functions are smooth and comply with lift plan
  - hazard warning systems, safety, audible and visual warning devices are checked to ensure they are functional including:
    - reversing beepers
    - lights
    - horns
    - crane computer alarm (where fitted)
    - anti-two block alarms (where fitted)
  - start-up is in accordance with manufacturer requirements and workplace procedures
  - there are no unusual noises
  - steering, transmission and brake functions comply with operating requirements
- confirming and following traffic management plan procedures relevant to crane operator role in the work area
- determining any defects or faults with operation of crane and reporting to relevant person/s

© Commonwealth of Australia, 2026 Industry Skills Australia

- ensuring risk control measures within the work area are effective as per workplace procedures
- ensuring stability of load and avoidance of hazards by applying best mobile practice including:
    - allowing for boom deflection
    - boom/jib as low as possible
    - boom/jib in line with crane
    - carrying load near to ground surface
    - crane stability whilst manoeuvring load into position with drive/steering wheels and articulating as required
    - gently accelerating and braking to minimise load swing
    - lowering load safely and stably onto appropriate dunnage taking into consideration swing and restrictions of area
    - minimum boom/jib length
    - minimum speed
    - using handheld taglines/bridling
- following directions of dogger or rigger
- interpreting and confirming relevant documentation for the work task and relevant area
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and acting on communications signals including:
    - hoist down - hand and whistle and radio
    - hoist up - hand and whistle and radio
    - luff boom down - hand and whistle and radio
    - luff boom up - hand and whistle and radio
    - articulate left - hand and whistle and radio
    - articulate right - hand and whistle and radio
    - stop - hand and whistle and radio
    - telescope in - hand and whistle and 2-way radio (where manufacturer requirements allow)
    - telescope out - hand and whistle and 2-way radio (where manufacturer requirements allow)
    - travel - hand and radio
- maintaining three points of contact whilst accessing crane and ensure rungs / steps are free of hazards

© Commonwealth of Australia, 2026 Industry Skills Australia

- monitoring load disconnection from hook is safe and ensuring no movement of controls
- observing relevant communication signals from relevant person
- operating an articulated non-slewing mobile crane with a rated capacity (RC) of 12 tonnes or greater to lift four different loads using the main hook through an obstacle course using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
    - a load of >50% of the Rated Capacity (RC) of the crane with a boom length of >75%, and
    - a round load with a minimum diameter of 300 mm and minimum length of 3 m that requires a dogger to sling, and
    - an asymmetrical load that requires a dogger to sling, and
    - travelling with a load of stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling and a boom length of <75%
- positioning the non-slewing mobile crane for safe operation for:
    - application of the task
    - manoeuvring in the workplace
    - aligning of crane boom to the load
    - stability of the non-slewing mobile crane and the load whilst driving to load set down position
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- setting up of:
    - fly jib (where fitted)
    - manual boom section (where fitted)
- setting up and validating an exclusion zone
- shutting down a non-slewing mobile crane in accordance with manufacturer requirements and workplace procedures
- stabilising a non-slewing mobile crane for operation by ensuring level and articulation (if required) is checked and within deration load chart requirements
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
    - slinging is correct
    - all crane equipment is functioning properly
    - load centre of gravity is correct

© Commonwealth of Australia, 2026 Industry Skills Australia

- loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
  - load measuring equipment can be used to verify calculated weight of load
  - near capacity loads do not overload crane

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate worksite communication procedures including:
  - listening
  - hand signals
  - questioning techniques
  - signage
  - two-way radios
  - written instructions
  - whistles
- crane configuration mathematical calculations to:
  - estimate loads
  - establish counterweight/s requirements (where fitted)
  - radius requirements
  - relevant lifting gear to perform work/task
- characteristics and impact of factors affecting non-slewing mobile crane stability whilst mobiling loads including:
  - side slope derations
  - articulation derations of crane
  - correct tyre pressure (inflation/condition)
  - driving safely on roadways
  - pick up and carry the load
- crane and lifting gear load chart/s and manufacturer requirements
- lift impacting factors including:
  - centre of gravity
  - dynamic nature of load

© Commonwealth of Australia, 2026 Industry Skills Australia

- deflection of boom
- length
- radius of lift
- weight
- side slope derations
- articulation derations of crane
- tyre inflation pressures

- hazards including:
  - pack up and crane stability, crane tipping and demolition sites
  - ground stability including ground condition, recently filled trenches and slopes
  - insufficient lighting
  - obstacles or obstruction
  - catching load swing appropriately
  - other specific hazards and dangerous materials
  - overhead hazards including:
    - electric lines
    - service pipes
    - fixed structures
    - Vegetation (Trees)
  - traffic including pedestrians, vehicles and other plant
  - operations on unusual, uneven or difficult terrains
- impact of factors affecting non-slewing mobile crane stability including:
  - overloading
  - pick up and placement of load
  - unbalanced loads
  - articulation of crane
  - correct tyre pressures (inflation/condition)
  - side slope derations
- manufacturer requirements and instructions on shutting down and packing up crane
- mobile non-slewing crane characteristics and capabilities to allow crane configuration to suit a range of loads
- relevant workplace instructions, safety information, emergency procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies including hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls
    - administrative controls
    - personal protective equipment (PPE)
- roles and responsibilities of duty holders as per legislative obligations of Work Health and Safety (WHS)/Occupational health and Safety (OHS)/Occupational Safety and Health (OSH) requirements and safe work/workplace procedures
- prestart and operational checks required for a non-slewing mobile crane
- starting procedure of crane as per manufacturer requirements
- set up of:
    - jib
    - fly jib (where fitted)
    - manual boom section (where fitted)
- weather bureau forecasts and environmental conditions that could impact operation
- workplace standards, requirements, policies and procedures for conducting operations for the mobile non-slewing crane
- problems and applying appropriate response procedures to unplanned and/or unsafe situations and environmental conditions
- work area suitability based on relevant ground reports including:
    - backfilled ground
    - bitumen
    - concrete
    - hard compacted soil
    - pre-contaminated soils
    - rock
    - rough uneven ground
    - soft soils

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- non-slewing articulated mobile crane with an MRC 12 tonnes or greater in safe/serviceable working order in accordance with manufacturer specifications
- appropriate loads as outlined in the performance evidence requirements
- associated personnel to sling and direct loads including:
    - dogger or rigger
- communications equipment including:
    - two-way radios
    - whistles
- personal protective equipment (PPE)
- relevant documentation for operating a non-slewing mobile crane over 3 tonnes including:
    - approved codes of practice and relevant guidance material
    - relevant Australian technical standards
    - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

Link

Companion volumes, including implementation guides, are found on the national training register - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851.

TLILIC0018 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release	Comments
1	This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a non-slewing mobile crane with a maximum Rated Capacity (MRC) exceeding three tonnes safely, in accordance with all relevant legislative responsibilities. Competence in this unit, does not in itself result in a High-Risk Work Licence (HRWL) to operate this plant.

Non-slewing mobile crane means a mobile crane incorporating a boom or jib that cannot be slewed, and includes:

- an articulated mobile crane
- a locomotive crane
- but does not include vehicle tow trucks.

A person performing this work is required to hold a non-slewing mobile crane HRWL.

This unit requires a person operating non-slewing mobile crane with a MRC exceeding three tonnes to:

- plan the work/task
- prepare for the work/task
- perform work/task
- pack up.

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency. This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, state and territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licensing class as detailed in this unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance criteria	
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
1 Plan work/task	**1.1**	Task requirements are identified from work orders or equivalent, a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
	1.2	Work area operating surface is confirmed to determine the quality of ground suitability for operational use of non-slewing mobile crane in accordance with workplace procedures
	1.3	Non-slewing mobile crane Rated Capacity (RC) and the lifting gear Working Load Limit (WLL) are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4	Appropriate paths for operating the mobile crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
	1.5	Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace procedures
	1.6	Traffic management plan implementation is confirmed and followed in accordance with workplace procedures
	1.7	Appropriate communication procedures are identified and tested with associated personnel in accordance with workplace procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		1.8	All tasks are confirmed to ensure requirements for the relevant work area in accordance with a lift plan and workplace procedures
		1.9	Information required to ensure that lifting equipment and gear inspection, use, maintenance and storage complies with manufacturer requirements is obtained and interpreted
2	**Prepare for work/task**	**2.1**	Consultation with workplace personnel is established and maintained to ensure lift plan is clear and consistent with site requirements in accordance with a lift plan and workplace procedures
		2.2	Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
		2.3	Non-slewing mobile crane is accessed safely in accordance with manufacturer requirements and safe work procedures
		2.4	Pre-start crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
		2.5	Mobile crane is set up correctly with any lifting gear as per the lift plan in accordance with relevant manufacturer requirements, including load chart/s and safe work procedures
		2.6	Fly jib (if fitted) is set up as required in accordance with specific manufacturer requirements and safe work procedures
		2.7	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
		2.8	Crane logbook is checked to confirm current compliance, is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures
		2.9	Weather and work environment conditions are assessed to determine any impact on mobile crane operations in accordance with manufacturer requirements and safe work procedures
		2.10	Weight of load is identified, calculated or estimated

© Commonwealth of Australia, 2026 Industry Skills Australia

		2.11	Derated WLL of lifting equipment resulting from selected slinging techniques is calculated
		2.12	Suitable lifting points and slinging techniques are identified
		2.13	Lifting equipment and gear are prepared for safe use
		2.14	Load destination is confirmed for stability ensuring it is able to bear the load and is prepared for safe access and landing
3	**Perform work/task**	**3.1**	Lifts are determined within the RC of the non-slewing mobile crane in accordance with the load chart/s and lift plan
		3.2	Boom/jib and hook block are safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
		3.3	Lifting equipment and gear, where required, are connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
		3.4	Test lift is carried out in accordance with safe work procedures
		3.5	Loads are transferred using relevant crane movements and tag lines, as required, in accordance with lift plan and safe work procedures
		3.6	Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
		3.7	All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures
		3.8	Load is lowered and landed safely in accordance with lift plan and safe work procedures
		3.9	Lifting gear is disconnected from load and crane is positioned safely and efficiently for next task in accordance with lift plan and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		3.10	Lifting equipment and gear are inspected for defects, and defective items are isolated, tagged and reported
4	**Pack up**	**4.1**	Crane boom/jib, lifting gear and associated equipment are stowed and secured as required in accordance with manufacturer requirements and safe work procedures
		4.2	Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures
		4.3	Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures
		4.4	Post-operational crane checks are carried out in accordance with legislative responsibilities, safe work procedures and manufacturer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the TLI Transport and Logistics Training Package Companion Volume Implementation Guide.

Assessment Requirements for TLILIC0018 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release	Comments
1	This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant mathematical calculations in conjunction with lift plan and load chart, radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load, including:
  - boom
  - fly-jib (where fitted)
  - line pull
  - travelling
  - type of hook
  - side slope derations
  - articulation derations
- applying relevant crane movements, including:
  - boom/jib up and down (luffing)
  - positioning and using main and auxiliary hook and lifting gear to connect to load safely
  - raising and lowering hoist
  - telescope in and out
  - travelling and articulating (as required)
- communicating with other workplace personnel through using appropriate worksite procedures, including:
  - two-way radio
  - listening

© Commonwealth of Australia, 2026 Industry Skills Australia

  - making and interpreting hand signals
  - questioning to confirm understanding
  - signage
  - verbal language
  - visual aids
  - whistles
  - written instructions
- complying with Commonwealth, state and territory work health and safety (WHS)/occupational health and safety (OHS) legislation and safe work procedures
- completing pre-start checks, including:
  - battery power level as required by manufacturer requirements
  - engine/mechanical fluid level checks as required by manufacturer requirements
  - presence of correct logbook
  - evidence of damage
  - fluid leaks
  - lights work effectively
  - locating, identifying and confirming all controls
  - mirrors and seat are adjusted appropriately
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - tyres and wheels for damage/wear and correct inflation (water/air)
  - updating records as required
  - visual damage or equipment faults
- conducting and applying risk and hazard strategies, including:
  - confirming work area operating surface suitability based on crane and task requirements
  - articulation of crane
  - dynamic loads
  - ground conditions, including surface and slopes
  - impact of tyre inflation/condition
  - load swing

© Commonwealth of Australia, 2026 Industry Skills Australia

  - overloading
  - pick and placement of load
  - asymmetric loads
  - overhead hazards
  - restricted site/s and poorly ventilated area/s
  - risk of collision with people, moving plant and fixed structures
  - adequate lighting
  - weather conditions
- completing operational checks ensuring:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions are operational
  - lifting gear movements and control functions are smooth and comply with lift plan
  - hazard warning systems, safety, audible and visual warning devices are checked to ensure they are functional, including:
    - reversing beepers
    - lights
    - horns
    - crane computer alarm (where fitted)
    - anti-two block alarms (where fitted)
  - start-up is in accordance with manufacturer requirements and workplace procedures
  - there are no unusual noises
  - steering, transmission and brake functions comply with operating requirements
- confirming and following traffic management plan procedures relevant to crane operator role in the work area
- identifying hazards and using appropriate risk controls and safety measures and equipment relevant to slinging loads
- confirming appropriate lifting gear and slinging techniques to the type of load, its mass and centre of gravity
- confirming the Working Load Limit (WLL) tags of the lifting equipment and gear and calculating the deration of the WLL resulting from the slinging techniques applied
- determining any defects or faults with operation of crane and reporting to relevant person/s

© Commonwealth of Australia, 2026 Industry Skills Australia

- ensuring risk control measures within the work area are effective in accordance with workplace procedures
- ensuring stability of load and avoidance of hazards, including:
    - allowing for boom deflection
    - boom/jib as low as possible
    - boom/jib in line with crane
    - carrying load near to ground surface
    - crane stability whilst manoeuvring load into position with drive/steering wheels and articulating as required
    - gently accelerating and braking to minimise load swing
    - lowering load safely and stably onto appropriate dunnage taking into consideration swing and restrictions of area
    - minimum boom/jib length
    - minimum speed
    - using handheld tag lines/bridling
- following directions of dogger or rigger
- interpreting and confirming relevant documentation for the work task and relevant area
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and acting on communications signals, including:
    - hoist down - hand and whistle and radio
    - hoist up - hand and whistle and radio
    - luff boom down - hand and whistle and radio
    - luff boom up - hand and whistle and radio
    - articulate left - hand and whistle and radio
    - articulate right - hand and whistle and radio
    - stop - hand and whistle and radio
    - telescope in - hand and whistle and two-way radio (where manufacturer requirements allow)
    - telescope out - hand and whistle and two-way radio (where manufacturer requirements allow)
    - travel - hand and radio
- maintaining three points of contact whilst accessing crane and ensure rungs/steps are free of hazards

© Commonwealth of Australia, 2026 Industry Skills Australia

- monitoring load disconnection from hook is safe and ensuring no movement of controls
- observing relevant communication signals from relevant person
- operating an articulated non-slewing mobile crane with a Rated Capacity (RC) of 12 tonnes or greater to lift four different loads using the main hook through an obstacle course using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
    - a load of >50% of the RC of the crane with a boom length of >75%, and
    - a round load with a minimum diameter of 300 mm and minimum length of three m that requires a dogger to sling, and
    - an asymmetrical load that requires a dogger to sling, and
    - travelling with a load of stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling and a boom length of <75%
- positioning the non-slewing mobile crane for safe operation for:
    - application of the task
    - manoeuvring in the workplace
    - aligning of crane boom to the load
    - stability of the non-slewing mobile crane and the load whilst driving to load set down position
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- setting up of:
    - fly jib (where fitted)
    - manual boom section (where fitted)
- setting up and validating an exclusion zone
- shutting down a non-slewing mobile crane in accordance with manufacturer requirements and workplace procedures
- planning for and managing load stability, including:
    - confirming and inspecting appropriate lifting gear and applying slinging techniques appropriate to the type of load, its mass and centre of gravity
    - confirming the WLL tags of the lifting equipment and gear and calculating the deration of the WLL resulting from the slinging techniques applied
- stabilising a non-slewing mobile crane for operation by ensuring level and articulation (if required) is checked and within deration load chart requirements

© Commonwealth of Australia, 2026 Industry Skills Australia

- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
    - slinging is correct
    - all crane equipment is functioning properly
    - load centre of gravity is correct
    - loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
    - load measuring equipment can be used to verify calculated weight of load
    - near capacity loads do not overload crane.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate worksite communication procedures, including:
    - listening
    - hand signals
    - questioning techniques
    - signage
    - two-way radios
    - written instructions
    - whistles
- crane configuration mathematical calculations to:
    - estimate loads
    - establish counterweight/s requirements (where fitted)
    - establish radius requirements
- relevant lifting gear to perform work/task
- characteristics and impact of factors affecting non-slewing mobile crane stability whilst mobiling loads, including:
    - side slope derations
    - articulation derations of crane
    - correct tyre pressure (inflation/condition)
    - driving safely on roadways
    - pick up and carry the load

© Commonwealth of Australia, 2026 Industry Skills Australia

- crane and lifting gear load chart/s and manufacturer requirements
- lift-impacting factors, including:
    - centre of gravity
    - dynamic nature of load
    - deflection of boom
    - length
    - radius of lift
    - weight
    - side slope derations
    - articulation derations of crane
    - tyre inflation pressures
- hazards, including:
    - pack up and crane stability, crane tipping and demolition sites
    - ground stability, including ground condition, recently filled trenches and slopes
    - insufficient lighting
    - obstacles or obstruction
    - catching load swing appropriately
    - other specific hazards and dangerous materials
    - overhead hazards, including:
        - electric lines
        - service pipes
        - fixed structures
        - vegetation (trees)
    - Traffic, including pedestrians, vehicles and other plant
    - operations on unusual, uneven or difficult terrains
- impact of factors affecting non-slewing mobile crane stability, including:
    - overloading
    - pick up and placement of load
    - unbalanced loads
    - articulation of crane
    - correct tyre pressures (inflation/condition)
    - side slope derations

© Commonwealth of Australia, 2026 Industry Skills Australia

- manufacturer requirements and instructions on shutting down and packing up crane
- mobile non-slewing crane characteristics and capabilities to allow crane configuration to suit a range of loads
- relevant workplace instructions, safety information and emergency procedures
- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies, including hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls
    - administrative controls
    - personal protective equipment (PPE)
- roles and responsibilities of duty holders in accordance with legislative obligations of WHS/OHS requirements and safe work/workplace procedures
- hazards commonly encountered while slinging:
    - instability of landing surfaces
    - overhead and underground hazards
    - insufficient lighting
    - traffic
    - weather
    - pedestrian traffic
    - work at heights
- selection, inspection, care, handling, application, limitations and storage of lifting equipment and gear:
    - flexible steel wire rope (FSWR) sling
    - synthetic sling
    - chain sling (including shortener)
    - spreader bar or lifting beam
    - tag line
    - shackles
    - eyebolts
- methods of making temporary connections to loads using fibre and synthetic ropes:
    - single sheet bend

© Commonwealth of Australia, 2026 Industry Skills Australia

    - clove hitch
    - rolling hitch
    - bowline
- pre-start and operational checks required for a non-slewing mobile crane
- starting procedure of crane in accordance with manufacturer requirements
- set up of:
    - jib
    - fly jib (where fitted)
    - manual boom section (where fitted)
- weather bureau forecasts and environmental conditions that could impact operation
- workplace standards, requirements, policies and procedures for conducting operations for the mobile non-slewing crane
- problems and applying appropriate response procedures to unplanned and/or unsafe situations and environmental conditions
- work area suitability based on relevant ground reports, including:
    - backfilled ground
    - bitumen
    - concrete
    - hard compacted soil
    - pre-contaminated soils
    - rock
    - rough, uneven ground
    - soft soils.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

© Commonwealth of Australia, 2026 Industry Skills Australia

Resources for assessment must include access to:

- non-slewing articulated mobile crane with an MRC 12 tonnes or greater in safe/serviceable working order in accordance with manufacturer specifications
- appropriate loads as outlined in the Performance Evidence requirements
- associated personnel to sling and direct loads, including:
    - licenced dogger or rigger
- communications equipment, including:
    - two-way radios
    - whistles
- personal protective equipment (PPE)
- relevant documentation for operating a non-slewing mobile crane over three tonnes, including:
    - approved codes of practice and relevant guidance material
    - relevant Australian technical standards
    - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

TLILIC0022 Licence to operate a slewing mobile crane (up to 20 tonnes)

Modification History

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 10.0.

Application

This unit specifies the skills and knowledge required to safely operate a slewing mobile crane with a Maximum Rated Capacity (MRC) up to 20 tonnes in accordance with all relevant legislative responsibilities. Competence in this unit, does not in itself result in a High-Risk Work Licence (HRWL) to operate this plant.

Slewing mobile crane means a mobile crane incorporating a boom or jib that can be slewed, but does not include:

- a front-end loader, or
- a backhoe, or
- an excavator, or
- other earth moving equipment, when configured for crane operation.

A person performing this work is required to hold a slewing mobile crane with a MRC up to 20 tonnes HRWL.

This unit requires a person operating a slewing mobile crane with an MRC up to 20 tonnes to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up.

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) regulations and meets Commonwealth, state and territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licensing class as detailed in this unit.

© Commonwealth of Australia, 2026 Industry Skills Australia

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan work/task**	**1.1**	Task requirements are identified from work orders or equivalent, a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
		1.2	Work area operating surface is confirmed to determine ground suitability for operational use of mobile crane in accordance with workplace procedures
		1.3	Mobile crane Rated Capacity (RC) and the lifting gear Working Load Limit (WLL) are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
		1.4	Appropriate paths for operating the mobile crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
		1.5	Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		1.6	Traffic management plan implementation is confirmed in accordance with workplace procedures
		1.7	Appropriate communication procedures are identified with associated personnel in accordance with workplace procedures
		1.8	All crane and lifting operations are confirmed to ensure relevant work area requirements are correct in accordance with a lift plan and workplace procedures
		1.9	Information required to ensure that lifting equipment and gear inspection, use, maintenance and storage complies with manufacturer requirements is obtained and interpreted
2	**Prepare for work/task**	**2.1**	Consultation with workplace personnel is established and maintained to ensure lift plan is clear and consistent with site requirements in accordance with a lift plan and workplace procedures
		2.2	Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
		2.3	Mobile crane is accessed safely in accordance with manufacturer requirements and safe work procedures
		2.4	Pre-start mobile crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
		2.5	Mobile crane is set up correctly with any lifting gear and stabilised as per the lift plan in accordance with relevant manufacturer requirements, including load chart/s and safe work procedures
		2.6	Fly jib is set up as required in accordance with specific manufacturer requirements and safe work procedures
		2.7	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
		2.8	Crane logbook is checked to confirm current compliance, is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures
		2.9	Weather and work environment conditions are assessed to determine any impact on mobile crane operations in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		2.10	Weight of the load is confirmed
		2.11	Derated WLL of lifting equipment resulting from selected slinging techniques is calculated and confirmed as suitable to meet the requirements of the lift plan
		2.12	Suitable lifting points and slinging techniques are identified
		2.13	Lifting equipment and gear are confirmed as ready for safe use
		2.14	Load destination stability is confirmed ensuring it is able to bear the load and is prepared for safe access and landing
3	**Perform work/task**	**3.1**	Lifts are determined within the RC of the mobile crane in accordance with the load chart/s and lift plan
		3.2	Boom/jib and hook block are safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
		3.3	Main hook, including any lifting gear where required, are connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
		3.4	Test lift is carried out in accordance with dogging and safe work procedures
		3.5	Loads are transferred using relevant crane movements and tag lines, as required, in accordance with lift plan and safe work procedures
		3.6	Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
		3.7	All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures
		3.8	Load is lowered and landed safely in accordance with lift plan and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		3.9	Lifting gear is positioned for safe disconnection from the load and crane is positioned for next task in accordance with lift plan and safe work procedures
		3.10	Lifting equipment and gear are inspected for defects, and defective items are isolated, tagged and reported
4	**Pack up**	**4.1**	Crane boom/jib, lifting gear and associated equipment are stowed and secured as required in accordance with manufacturer requirements and safe work procedures
		4.2	Crane fly jib is removed to storage position and secured as required in accordance with manufacturer requirements and safe work procedures
		4.3	Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures
		4.4	Outriggers, plates and/or packing are stowed and secured in accordance with manufacturer requirements and safe work procedures
		4.5	Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures
		4.6	Shutdown crane checks are carried out in accordance with safe work procedures and manufacturer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 10.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant mathematical calculations in conjunction with lift plan and load chart to determine radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load, including:
  - boom
  - counterweight/s
  - fly-jib
  - line pull
  - outrigger positioning
  - type of hook
- applying relevant crane movements, including:
  - boom/jib up and down (luffing)
  - catching load swing appropriately
  - positioning and using main and auxiliary hook and lifting gear to connect to load safely
  - raising and lowering hoist
  - slew boom/jib
  - telescope in and out (where manufacturer requirements allow)
  - travel
- carrying out operational checks ensuring:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions are operational

© Commonwealth of Australia, 2026 Industry Skills Australia

  - lifting gear movements and control functions are smooth and comply with lift plan
  - hazard warning systems, safety, audible and visual warning devices are checked for to ensure they are functional, including:
    - reversing beepers
    - lights
    - horns
    - crane computer alarm (where fitted)
    - anti-two block alarms (where fitted)
  - start-up is in accordance with manufacturer requirements and safe work procedures
  - there are no unusual noises
  - steering, transmission and brake functions comply with operating requirements
- conducting and applying risk and hazard assessment strategies, including:
  - confirming work area operating surface suitability based on crane and task requirements
  - dynamic loads
  - load swing
  - overloading
  - pick and placement of load
  - tyre pressures or track condition
  - asymmetric loads
  - overhead hazards
  - restricted and poorly ventilated areas
  - risk of collision with people, moving plant and fixed structures
  - adequate lighting
  - weather conditions
- complying with Commonwealth, state and territory work health and safety (WHS)/occupational health and safety (OHS) legislation and safe work procedures
- communicating with other associated personnel through using appropriate workplace procedures, including:
  - two-way radio
  - active listening
  - demonstrating and interpreting hand signals

© Commonwealth of Australia, 2026 Industry Skills Australia

  - questioning to confirm understanding
  - signage/visual aids
  - whistles
  - written instructions
- completing pre-start checks, including:
  - boom wiring harness connection
  - engine/mechanical fluid level checks as required by manufacturer requirements
  - ensure rungs/steps are free of hazards
  - fire extinguisher
  - fluid leaks
  - lights work effectively
  - locating, identifying and confirming all controls
  - mirrors and seat are adjusted appropriately for the operator
  - presence of correct logbook
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - tyres and wheels for damage/wear and correct inflation
  - updating records as required
  - visual damage or equipment faults
- confirming and following traffic management plan procedures relevant to their role in the work area
- determining any defects or faults with operation of crane, recording in relevant documentation and reporting to relevant person/s
- ensuring risk control measures within the work area are effective in accordance with safe work procedures
- following directions of dogger or rigger
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and acting on communications signals, including:
  - hoist down - hand and whistle and two-way radio
  - hoist up - hand and whistle and two-way radio
  - luff boom down - hand and whistle and two-way radio

© Commonwealth of Australia, 2026 Industry Skills Australia

  - luff boom up - hand and whistle and two-way radio
  - slew left - hand and whistle and two-way radio
  - slew right - hand and whistle and two-way radio
  - stop - hand and whistle and two-way radio
  - telescope in - hand and whistle and two-way radio (where manufacturer requirements allow)
  - telescope out - hand and whistle and two-way radio (where manufacturer requirements allow)
- interpreting and confirming relevant documentation for the work task and relevant area
- maintaining three points of contact whilst accessing crane
- monitoring load disconnection from hook is safe and ensuring no movement of crane operational controls
- operating a slewing mobile crane configured to a Rated Capacity (RC) of between 7 tonnes and up to 20 tonnes to lift and move four different loads using the main hook through an obstacle course, including a 180-degree minimum slew using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
  - a load of >50% of the RC of the crane with a boom length of >75%, and
  - stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling, and
  - an asymmetric load that requires a dogger to sling, and
  - a round load with a minimum diameter of 300 mm and minimum length of three m that requires a dogger to sling
- positioning the mobile crane for safe operation for:
  - application of the task/s
  - manoeuvring in the workplace
  - the stability of the mobile crane and the load
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on workplace control measures that are not in place or deficient
- setting up and validating an exclusion zone in accordance with the lift plan
- shutting down a slewing mobile crane in accordance with manufacturer requirements and safe work procedures
- stabilising a slewing mobile crane for operation by:
  - correctly positioning plates or packing
  - deploying outriggers

© Commonwealth of Australia, 2026 Industry Skills Australia

- establishing correct size plates or packing in accordance with the lift plan
- checking levels

- planning for and managing load stability, including:
  - confirming and inspecting appropriate lifting gear and applying slinging techniques appropriate to the type of load, its mass and centre of gravity
  - confirming the Working Load Limit (WLL) tags of the lifting equipment and gear and calculating the deration of the WLL resulting from the slinging techniques applied
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
  - slinging is correct
  - all crane equipment is functioning properly
  - load centre of gravity is correct
  - loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
  - load measuring equipment can be used to verify calculated weight of load
  - near capacity loads do not overload crane.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate workplace communication procedures, including:
  - listening
  - hand signals
  - questioning techniques
  - signage
  - two-way radios
  - written instructions
  - whistles
- crane configuration mathematical calculations to:
  - estimate loads
  - establish radius requirements
- relevant lifting gear to perform work/task

© Commonwealth of Australia, 2026 Industry Skills Australia

- characteristics and impact of factors affecting non-slewing articulated mobile crane stability whilst mobiling loads compared to slewing crane, including:
    - articulation of crane
    - correct tyre pressure (inflation/condition)
    - driving safely on public and private roadways
    - unique handling characteristics of a mobile articulated crane and the emergency procedures in the event of loss of control as per manufacturer recommendations
    - pick up and carry the load
    - side slope derations
- characteristics and impact of factors affecting vehicle loading crane stability whilst mobiling loads compared to slewing crane, including:
    - correct tyre pressure (inflation/condition)
    - emergency procedures in the event of incident
    - position of operator
    - use of stabilizers
- characteristics and impact of factors affecting reach stacker stability whilst mobiling loads compared to slewing crane, including:
    - correct tyre pressure (inflation/condition)
    - driving safely on roadways
    - emergency procedures in the event of an incident
    - impact of boom height and steering on stability
    - use of stabilisers
- crane, lifting gear load chart/s and manufacturer requirements
- lift impacting factors, including:
    - centre of gravity
    - dynamic nature of load
    - flex/deflexion of boom
    - length of load
    - radius of boom during lift
    - weight
- set-up of:
    - jib
    - fly jib
- hazards, including:

© Commonwealth of Australia, 2026 Industry Skills Australia

    - erection and pack-up
    - crane stability
    - ground stability and condition including recently filled trenches and slopes
    - insufficient lighting
    - obstacles or obstruction
    - other specific hazards and dangerous materials
    - overhead hazards, including:
        - electric lines
        - service pipes
        - structures
        - vegetation (trees)
    - traffic, including pedestrians, vehicles and other plant
    - operations on unusual, uneven or difficult terrains
- manufacturer requirements on outrigger procedures
- manufacturer requirements and instructions on shutting down and packing up crane
- mobile slewing crane characteristics and capabilities to allow crane configuration to suit a range of loads
- relevant workplace instructions, safety information and emergency procedures
- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies, including hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls
    - administrative controls
    - personal protective equipment (PPE)
- roles and responsibilities of duty holders in accordance with legislative obligations of WHS/OHS requirements, safe work and workplace procedures
- pre-start and operational checks required for a slewing mobile crane
- weather bureau forecasts and environmental conditions that could impact operation, including:
    - lightning
    - wind

© Commonwealth of Australia, 2026 Industry Skills Australia

  - water impacted ground
  - ultraviolet (UV) exposure
- problems and appropriate response procedures to unplanned and/or unsafe situations and environmental conditions
- hazards commonly encountered while preparing load:
  - instability of landing surfaces
  - overhead and underground hazards
  - insufficient lighting
  - traffic
  - weather
  - pedestrian traffic
  - work at heights
- selection, inspection, care, handling, application, limitations and storage of lifting equipment and gear:
  - flexible steel wire rope (FSWR) sling
  - synthetic sling
  - chain sling (including shortener)
  - spreader bar or lifting beam
  - tag line
  - shackles
  - eyebolts
  - plate clamps
- methods of making temporary connections to loads using fibre and synthetic ropes:
  - single sheet bend
  - clove hitch
  - rolling hitch
  - bowline
- stability of load and avoidance of hazards, including:
  - allowing for boom deflection
  - boom/jib as low as possible
  - carrying load near to ground surface
  - crane stability
  - gently accelerating and braking on slew/boom to minimise load swing

© Commonwealth of Australia, 2026 Industry Skills Australia

  - lowering load safely onto appropriate dunnage taking into consideration swing and restrictions of area
  - minimum boom/jib length
  - minimum speed
  - using handheld tag lines as required
  - identification of incorrect sling of load
- starting procedure of crane in accordance with manufacturer requirements
- workplace standards, requirements, policies and procedures for conducting safe work operations for the mobile slewing crane
- work area suitability based on relevant ground reports, including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - pre-contaminated soils
  - rock
  - rough, uneven ground
  - soft soils.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- slewing mobile crane with a Maximum Rated Capacity (MRC) of between 7 tonnes to 20 tonnes in safe/serviceable working order in accordance with manufacturer specifications
- appropriate loads as outlined in the performance evidence requirements

© Commonwealth of Australia, 2026 Industry Skills Australia

- appropriate personnel to sling and direct loads including:
    - licenced dogger or rigger
- communications equipment including:
    - two-way radios
    - whistles
- relevant personal protective equipment (PPE)
- relevant documentation for operating a slewing mobile crane with an MRC up to 20 tonnes, including:
    - approved codes of practice and relevant guidance material
    - relevant Australian technical standards
    - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

Link

Companion volumes, including implementation guides, are found on the national training register - https://training.gov.au/training/details/TLI.

TLILIC0023 Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 10.0.

Application

This unit specifies the skills and knowledge required to safely operate a slewing mobile crane with a Maximum Rated Capacity (MRC) up to 60 tonnes in accordance with all relevant legislative responsibilities. Competence in this unit, does not in itself result in a High-Risk Work Licence (HRWL) to operate this plant.

Slewing mobile crane means a mobile crane incorporating a boom or jib that can be slewed, but does not include:

- A front-end loader, or
- a backhoe, or
- an excavator, or
- other earth moving equipment, when configured for crane operation.

A person performing this work is required to hold a slewing mobile crane with an MRC up to 60 tonnes HRWL.

This unit requires a person operating a slewing mobile crane with an MRC up to 60 tonnes to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) regulations and meets Commonwealth, state and territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licensing class as detailed in this unit.

© Commonwealth of Australia, 2026 Industry Skills Australia

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Not applicable.

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Plan work/task**	**1.1**	Task requirements are identified from work orders or equivalent, a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
		1.2	Work area operating surface is confirmed to determine ground suitability for operational use of mobile crane in accordance with lift plan, safe work and workplace procedures
		1.3	Mobile crane Rated Capacity (RC) and the lifting gear Working Load Limit (WLL) are established and suitable for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
		1.4	Appropriate paths for operating the mobile crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
		1.5	Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		1.6	Traffic management plan implementation is confirmed in accordance with workplace procedures
		1.7	Appropriate communication procedures are identified with associated personnel in accordance with workplace procedures
		1.8	All crane and lifting operations are confirmed to ensure relevant work area requirements are correct in accordance with a lift plan and workplace procedures
		1.9	Information required to ensure that lifting equipment and gear inspection, use, maintenance and storage complies with manufacturer requirements is obtained and interpreted
2	**Prepare for work/task**	**2.1**	Consultation with workplace personnel is established and maintained to ensure all crane and lifting operations are clear and consistent with site requirements in accordance with a lift plan and workplace procedures
		2.2	Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
		2.3	Mobile crane is accessed safely in accordance with manufacturer requirements and safe work procedures
		2.4	Pre-start mobile crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
		2.5	Mobile crane is set up correctly with any lifting gear and stabilised as per the lift plan in accordance with relevant manufacturer requirements, including load chart/s and safe work procedures
		2.6	Counterweight/s are set up as required in accordance with the lift plan, relevant manufacturer requirements and safe work procedures
		2.7	Fly jib and/or luffing fly are set up as required in accordance with specific manufacturer requirements and safe work procedures
		2.8	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
		2.9	Crane logbook is checked to confirm current compliance, is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		2.10	Weather and work environment conditions are assessed to determine any impact on mobile crane operations in accordance with manufacturer requirements and safe work procedures
		2.11	Weight of the load is confirmed
		2.12	Derated Working Load Limit (WLL) of lifting equipment resulting from selected slinging techniques is calculated and confirmed as suitable to meet the requirements of the lift plan
		2.13	Suitable lifting points and slinging techniques are identified
		2.14	Lifting equipment and gear are confirmed as ready for safe use
		2.15	Load destination stability is confirmed ensuring it is able to bear the load and is prepared for safe access and landing
3	**Perform work/task**	**3.1**	Lifts are determined to be within the RC of the mobile crane in accordance with the load chart/s and lift plan
		3.2	Boom/jib and hook block are safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
		3.3	Main and/or auxiliary hook, including any lifting gear where required, are connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
		3.4	Test lift is carried out in accordance with dogging and safe work procedures
		3.5	Loads are transferred using relevant crane movements and tag lines, as required, in accordance with lift plan and safe work procedures
		3.6	Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
		3.7	All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures

© Commonwealth of Australia, 2026 Industry Skills Australia

		3.8	Load is lowered and landed safely in accordance with lift plan and safe work procedures
		3.9	Lifting gear is positioned for safe disconnection from the load and crane is positioned for next task in accordance with lift plan and safe work procedures
		3.10	Lifting equipment and gear are inspected for defects, and defective items are isolated, labelled and reported
4	**Pack up**	**4.1**	Crane boom/jib, lifting gear and associated equipment are stowed and secured as required in accordance with manufacturer requirements and safe work procedures
		4.2	Crane fly jib and/or luffing fly and counterweight/s are removed to storage position and secured as required in accordance with manufacturer requirements and safe work procedures
		4.3	Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures
		4.4	Outriggers, plates and/or packing are stowed and secured in accordance with manufacturer requirements and safe work procedures
		4.5	Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures
		4.6	Shutdown crane checks are carried out in accordance with safe work procedures and manufacturer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the TLI Transport and Logistics Training Package Companion Volume Implementation Guide.

Assessment Requirements for TLILIC0023 Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History

Release	Comments
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 10.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and must include:

- applying relevant mathematical calculations in conjunction with lift plan and load chart to determine radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load, including:
  - boom
  - counterweight/s
  - fly jib
  - line pull
  - outrigger positioning
  - type of hook
- applying relevant crane movements in crane operations, including:
  - boom/jib up and down (luffing)
  - catching load swing appropriately
  - positioning and using main and auxiliary hook and lifting gear to connect to load safely
  - raising and lowering hoist
  - slew boom/jib
  - telescoping in and out (where manufacturer requirements allow)
- conducting and applying hazard and risk assessment strategies, including:
  - adequate lighting
  - asymmetric loads
  - confirming work area operating surface suitability based on crane and task requirements

© Commonwealth of Australia, 2026 Industry Skills Australia

  - dynamic loads
  - lifting and placing load
  - load swing
  - overhead hazards
  - overloading
  - restricted and poorly ventilated areas
  - risk of collision with people, moving plant and fixed structures
  - tyre pressures or track condition
  - weather conditions
- complying with Commonwealth, state and territory work health and safety (WHS)/occupational health and safety (OHS) legislation and safe work procedures
- communicating with other associated personnel through using appropriate workplace procedures, including:
  - two-way radio
  - demonstrating and interpreting hand signals
  - questioning to confirm understanding
  - signage/visual aids
  - whistles
  - written instructions
- conducting the pre-start checks, including:
  - boom wiring harness connection (where fitted)
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - engine/mechanical fluid level checks as required by manufacturer requirements
  - ensure rungs/steps are free of hazards
  - fire extinguisher
  - fluid leaks
  - lights work effectively
  - locating, identifying and confirming all controls
  - mirrors and seat are adjusted appropriately for the operator
  - presence of correct logbook
  - safety equipment checks
  - signage and labels to ensure they are visible and legible

© Commonwealth of Australia, 2026 Industry Skills Australia

  - tyres and wheels for damage/wear and correct inflation
  - updating records as required
  - visual damage or equipment faults
- conducting operational checks ensuring:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions are operational
  - hazard warning systems, safety, audible and visual warning devices are checked for to ensure they are functional, including:
    - reversing beepers
    - lights
    - horns
    - crane computer alarm (where fitted)
    - anti-two block alarms (where fitted)
  - confirming and following traffic management plan procedures relevant to their role in the work area
  - lifting gear movements and control functions are smooth and comply with lift plan
  - start-up is in accordance with manufacturer requirements and safe work procedures
  - steering, transmission and brake functions comply with operating requirements
  - there are no unusual noises
- determining any defects or faults with operation of crane, recording in relevant documentation and reporting to relevant person/s
- ensuring risk control measures within the work area are effective in accordance with safe work procedures
- following directions of dogger or rigger
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and confirming relevant documentation for the work task and relevant area
- interpreting and acting on communications signals, including:
  - hoist down - hand and whistle and two-way radio
  - hoist up - hand and whistle and two-way radio
  - luff boom down - hand and whistle and two-way radio
  - luff boom up - hand and whistle and two-way radio

© Commonwealth of Australia, 2026 Industry Skills Australia

  - slew left - hand and whistle and two-way radio
  - slew right - hand and whistle and two-way radio
  - stop - hand and whistle and two-way radio
  - telescope in - hand and whistle and two-way radio (where manufacturer requirements allow)
  - telescope out - hand and whistle and two-way radio (where manufacturer requirements allow)
- monitoring load disconnection from hook is safe and ensuring no movement of crane operational controls
- maintaining three points of contact whilst accessing crane
- operating a slewing mobile crane configured with at least four parts of line greater than 20 tonnes and up to 60 tonnes to lift and move four different loads using the main hook through an obstacle course, including a 180-degree minimum slew using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
  - a load of >50% of the Rated Capacity (RC) of the crane with a boom length of >75%, and
  - stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling, and
  - an asymmetric load that requires a dogger to sling, and
  - a round load with a minimum diameter of 300 mm and minimum length of three m that requires a dogger to sling
- positioning the mobile crane in accordance with the lift plan for safe operation for:
  - application of the task/s
  - manoeuvring in the workplace
  - the stability of the mobile crane and the load
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on workplace control measures that are not in place or deficient
- setting up and validating an exclusion zone in accordance with the lift plan
- shutting down a slewing mobile crane in accordance with manufacturer requirements and safe work procedures
- stabilising a slewing mobile crane for operation by:
  - correctly positioning plates or packing
  - deploying outriggers
  - establishing correct size plates or packing in accordance with the lift plan
  - levels are checked

© Commonwealth of Australia, 2026 Industry Skills Australia

- planning for and managing load stability, including:
    - confirming and inspecting appropriate lifting gear and applying slinging techniques appropriate to the type of load, its mass and centre of gravity
    - confirming the Working Load Limit (WLL) tags of the lifting equipment and gear and calculating the deration of the WLL resulting from the slinging techniques applied
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
    - slinging is correct
    - all crane equipment is functioning properly
    - load centre of gravity is correct
    - loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
    - load measuring equipment can be used to verify calculated weight of load
    - near capacity loads do not overload crane.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate workplace communication procedures, including:
    - hand signals
    - questioning techniques
    - signage
    - two-way radios
    - written instructions
    - whistles
- characteristics and impact of factors affecting non-slewing articulated mobile crane stability whilst mobiling compared to slewing crane, including:
    - articulation of crane
    - correct tyre pressure (inflation/condition)
    - driving safely on public and private roadways
    - unique handling characteristics of a mobile articulated crane and the emergency procedures in the event of loss of control in accordance with manufacturer recommendations

  - pick up and carry the load
  - side slope derations
- characteristics and impact of factors affecting vehicle loading crane stability whilst mobiling compared to slewing crane, including:
  - correct tyre pressure (inflation/condition)
  - emergency procedures in the event of incident
  - position of operator
  - use of stabilizers
- characteristics and impact of factors affecting reach stacker stability whilst mobiling compared to slewing crane, including:
  - correct tyre pressure (inflation/condition)
  - driving safely on roadways
  - emergency procedures in the event of an incident
  - impact of boom height and steering on stability
  - use of stabilisers
- crane configuration mathematical calculations to:
  - estimate loads
  - establish counterweight/s requirements
  - establish radius requirements
- relevant lifting gear to perform work/task
- crane, lifting gear load chart/s and manufacturer requirements
- factors impacting lift, including:
  - centre of gravity
  - dynamic nature of load
  - flex/deflection of boom
  - length of load
  - radius of boom during lift
  - weight
- hazards, including:
  - erection and pack up
  - crane stability
  - ground stability and condition, including recently filled trenches and slopes
  - insufficient lighting
  - obstacles or obstruction

  - administrative controls
  - personal protective equipment (PPE)
- roles and responsibilities of duty holders as per legislative obligations of WHS/OHS requirements, safe work and workplace procedures
- starting procedure of crane in accordance with manufacturer requirements
- set-up of:
  - jib
  - fly jib/luffing fly
  - counterweight/s
- stability of load and avoidance of hazards, including:
  - allowing for boom deflection
  - boom/jib as low as possible
  - carrying load near to ground surface
  - crane stability
  - gently accelerating and braking on slew/boom to minimise load swing
  - lowering load safely onto appropriate dunnage taking into consideration swing and restrictions of area
  - minimum boom/jib length
  - minimum speed
  - using handheld taglines as required
  - identification of incorrect sling of load

© Commonwealth of Australia, 2026 Industry Skills Australia

- typical routine problems encountered operating a crane and equipment, and adjustments required for correction
- weather bureau forecasts and environmental conditions that could impact operation, including:
    - lightning
    - wind
    - water impacted ground
    - ultraviolet (UV) exposure
- workplace standards, requirements, policies and procedures for conducting safe work operations for the mobile slewing crane
- work area suitability based on relevant ground reports, including:
    - backfilled ground
    - bitumen
    - concrete
    - hard compacted soil
    - pre-contaminated soils
    - rock
    - rough, uneven ground
    - soft soils.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- slewing mobile crane with an MRC greater than 20 tonnes and up to 60 tonnes in safe/serviceable working order in accordance with manufacturer specifications
- appropriate loads as outlined in the Performance Evidence requirements

© Commonwealth of Australia, 2026 Industry Skills Australia

- appropriate personnel to sling and direct loads, including:
    - licenced dogger or rigger
- communication equipment, including:
    - two-way radios
    - whistles
- relevant PPE
- relevant documentation for operating a slewing mobile crane with an MRC greater than 20 tonnes and up to 60 tonnes, including:
    - approved codes of practice and relevant guidance material
    - relevant Australian technical standards
    - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

TLILIC2016 Licence to drive a heavy rigid vehicle

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package. Modification of assessment conditions to remove an implementation barrier. **Release 1.** This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to obtain a licence to drive a heavy rigid vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Heavy rigid vehicle includes:

- a rigid vehicle, not being an unladen prime mover, with a minimum of three axles and a minimum 15 tonnes GVM or
- a modified three axle prime mover with a certified detachable tray (with capacity to carry 75% of its specified GVM) with a GVM of 15 tonnes and holds dual registration (HC & HR) or
- a three axle articulated bus or
- a three axle bus above 15 tonnes GVM.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

This unit applies to driving that is carried out in accordance with relevant state/territory driver licensing authority licence requirements and regulations for heavy rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and to operate a heavy rigid vehicle across a variety of driving contexts.

© Commonwealth of Australia, 2026 Industry Skills Australia

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Heavy Rigid Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Heavy Rigid Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm other eligibility requirements before undertaking training and/or assessment.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Not applicable.

Competency field(s)

LIC - Licensing

Unit sector(s)

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Drive a heavy rigid vehicle**	1.1	Heavy rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturer instructions and relevant vehicle handling procedures
		1.2	Engine power is managed to ensure efficiency and performance, and to minimise engine and gear damage
		1.3	Braking system of heavy rigid vehicle is managed and operated efficiently to ensure effective control of vehicle under all conditions

© Commonwealth of Australia, 2026 Industry Skills Australia

		1.4	Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
		1.5	Heavy rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
		1.6	Heavy rigid vehicle is parked, shutdown and safely secured according to traffic regulations
		1.7	Load is safely and effectively restrained
2	**Monitor traffic and road conditions**	2.1	Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
		2.2	Interaction with other road users is conducted courteously in accordance with road rules to ensure safe and efficient traffic flow
3	**Monitor and maintain vehicle performance**	3.1	Vehicle performance is maintained through pre-operational inspections and vehicle checks
		3.2	Appropriate signage, lights and equipment are checked for operational effectiveness and for conformity to prescribed traffic regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLILIC2016 Licence to drive a heavy rigid vehicle

Modification History

Release	Comments
2	This is the second release of this unit of competency in the TLI Transport and Logistics Training Package. Modification of assessment conditions to remove an implementation barrier. **Release 1.** This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.
1	This unit of competency was first released in TLI Transport and Logistics Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

• anticipating and monitoring traffic hazards and taking appropriate action
• applying precautions and required action to eliminate, minimise or control identified hazards
• applying relevant procedures that reflect legislative requirements
• carrying out pre-operational vehicle checks including:
  ○ checking and topping up fluid levels
  ○ checking:
  ▪ brakes
  ▪ operation of vehicle lights and indicators
  ▪ tyre pressures
  ○ visually checking vehicle
• communicating effectively with others
• handling vehicle including:
  ○ accelerating and braking

© Commonwealth of Australia, 2026 Industry Skills Australia

  - managing engine performance
  - operating vehicle controls, instruments and indicators
  - positioning and stopping a vehicle
  - reversing a vehicle
  - starting a vehicle
  - steering and manoeuvring a vehicle
  - using defensive driving techniques
- negotiating a range of complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings)
- reading and interpreting relevant instructions, procedures, information and signs.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- heavy rigid vehicle controls, instruments and indicators, and their use
- heavy rigid vehicle handling procedures
- pre-operational checks carried out on vehicle and related action
- relevant state/territory driver licensing authority road rules, regulations, permit and licence requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical driving aspects must be assessed in a vehicle typical of the class as approved by the state/territory driver licensing authority. The use of simulators for driver testing is not permitted.

The assessor must use the mandatory assessment tool provided by the state/territory driver licensing authority to conduct the assessment for this unit according to licensing authority requirements.

© Commonwealth of Australia, 2026 Industry Skills Australia

The state/territory driver licensing authority may prescribe approved routes, which must be used for the final assessment.

Assessment must occur in the following traffic and road conditions:

- on open and/or private roads with moderate inclines and declines
- typical weather conditions.

and may also include traffic and road conditions at a depot, base or warehouse.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- appropriate range of relevant on-road operational or workplace situations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Modification History

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to apply work health and safety (WHS)/occupational health and safety (OHS) regulations and codes of practices in the electrotechnology workplace.

It includes applying safe working practices, following workplace procedures for hazard identification and risk control. It also includes electrotechnology worker responsibilities and application for health and safety, risk management and adherence to safety practices as part of electrotechnology work functions when preparing to enter a work area.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

Electrotechnology

Elements and Performance Criteria

Elements	**Performance criteria**

© Commonwealth of Australia, 2026 Powering Skills Organisation

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare to enter an electrotechnology workplace**	**1.1**	Work area access permits are obtained from appropriate person/s in accordance with workplace procedures
		1.2	Relevant workplace WHS/OHS safety regulations and codes of practices are identified and followed when entering the electrotechnology work area
		1.3	Safe work methods for controlling risks are obtained, read and applied prior to undertaking work activity in accordance with WHS/OHS workplace procedures
		1.4	Preparation for electrical and non-electrical isolation is carried out to prevent creation of hazards from loss of machine/system/process control in accordance with WHS/OHS workplace procedures
		1.5	Tools, equipment and chemicals required for the electrotechnology work are checked for safety and correct functionality in accordance with workplace procedures and regulatory requirements
		1.6	Personal protective equipment (PPE) is worn appropriate to the electrotechnology work area and in accordance with workplace procedures
2	**Apply safe electrotechnology working practices**	**2.1**	Risk control work measures are implemented in accordance with WHS/OHS workplace procedures
		2.2	Procedures for dealing with accidents, fires and emergencies are followed in accordance with workplace procedures, scope of responsibility and capabilities
		2.3	Safe work methods are applied when working at heights including safe and effective use of safety equipment
		2.4	Safe work methods are used when undertaking lifting, lowering, pushing, pulling, carrying or otherwise moving, holding or restraining workplace tasks in accordance with relevant code of practice

© Commonwealth of Australia, 2026 Powering Skills Organisation

		2.5	Safe work methods for removing an electric shock victim from a live electrical situation are demonstrated in accordance with workplace emergency management procedures
		2.6	Working area is kept clean, neat and tidy in accordance with workplace housekeeping procedures
3	**Follow electrotechnology workplace procedures for hazard identification and risk control**	**3.1**	Hazards are identified, control measures implemented and reviewed through regular active participation in the consultation process with employer and other employees
		3.2	Hazards in the work area are identified and reported to relevant person/s in accordance with workplace procedures
		3.3	WHS/OHS documentation and incident records are completed in accordance with regulatory requirements and workplace procedures
		3.4	Workplace instructions are followed in accordance with regulatory requirements and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Modification History

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) regulations, legislation, codes of practices and procedures in the workplace, including:
  - identifying typical hazards associated with work environments and assessing risk/s in an electrotechnology workplace
  - applying and reviewing risk control measures to minimise, control or eliminate identified hazards
  - reporting hazards to relevant person/s
  - applying safe working practices/methods
  - contributing to WHS/OHS consultative processes
- following relevant workplace emergency management procedures and instructions relating to WHS/OHS and emergency incidents
- selecting and using appropriate personal protective equipment (PPE)
- applying correct manual handling techniques
- confirming (safe) isolation of an electrical supply and isolation of potential electrical and non-electrical hazards has been completed by an authorised person
- demonstrating safe methods of removing an electric shock victim from a live electrical situation
- selecting an appropriate ladder for a given situation and performing a safety check before use
- completing relevant WHS/OHS documentation.

© Commonwealth of Australia, 2026 Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- effective verbal and written communication techniques
- electrotechnology work environment, including:
  - appropriate fire extinguisher for a given type of fire
  - commonly used workplace safety signs
  - relevant industry standard for safe workplace procedures
  - risk assessment documentation
  - typical hazards associated with a range of work environments
  - use of fire extinguishers
  - housekeeping and potential hazards in relation to improper housekeeping
  - workplace procedures used to control the risks associated with workplace hazards
- legal requirements relevant to WHS/OHS in the workplace, including:
  - appropriate personal protective equipment (PPE)
  - asbestos awareness and reporting hazardous gases, including supervisory requirements and duty of care
  - difference between hazards and risks
  - duty holder responsibilities, as specified in WHS/OHS Acts, regulations and codes of practice
  - employer and employee responsibilities, rights and obligations
  - general aims and objectives of the relevant state or territory legislation relating to WHS/OHS
  - hazards that may be present in the electrotechnology workplace, the harm they can cause and how this harm occurs
  - housekeeping and potential hazards in relation to improper housekeeping
  - major functions of safety committees and representatives
  - powers of health and safety inspectors
  - relevant WHS/OHS regulations, codes and practices
  - underlying principles of WHS
- life support - cardiopulmonary resuscitation (CPR) in the workplace, including:
  - first aid
  - responsibilities of the first aider

© Commonwealth of Australia, 2026 Powering Skills Organisation

- priorities of first aid management for any accident or injury
- procedures required at an accident scene
- legal and ethical issues, which may impact on the management of care
- 'duty of care'
- examination of a casualty for injuries
- effect of cardiopulmonary arrest on the body
- managing simulated conditions of airway obstruction, respiratory arrest and cardiopulmonary arrest
- single and two-person CPR
- signs and symptoms of an altered level of consciousness
- management of simulation of a casualty with an altered level of consciousness
- signs and symptoms of shock
- management of simulation of a casualty in shock

- relevant safe work method statements (SWMS)/job safety analysis (JSA) or risk mitigation processes, including:
  - emergency management plan
  - hierarchy of WHS/OHS hazard risk control measures
  - principles of risk assessment/management and required documentation
- typical hazards associated with electrotechnology work environments and their control, including:
  - asbestos, including:
    - common types of asbestos containing building materials
    - warning signs used to identify the presence of asbestos
    - effects of asbestos on the human body
    - requirements for reporting the presence of asbestos
  - silica, including:
    - types of materials that contain crystalline silica (silica dust)
    - methods of releasing silica dust
    - recommended levels of exposure to crystalline silica
    - effects of crystalline silica on the human body
  - hazardous gases
  - chemicals in the workplace, including:
    - hazardous substances and dangerous goods and their classifications
    - labelling and storage requirements for chemicals

© Commonwealth of Australia, 2026 Powering Skills Organisation

- purpose and interpretation of safety data sheets (SDS)/material safety data sheets (MSDS)
- confined spaces, including:
  - control measures for working in a designated confined space
  - hazards associated with working in a confined space
  - workplace situations that could be classified as a confined space
- physical and psychological hazards, including excessive noise, vibration, thermal stress, radiation, lasers, occupational overuse syndrome, stress, drugs and alcohol
- safe manual handling principles, including:
  - procedures and methods for manual handling
  - situations that may cause manual handling injuries
  - types of manual handling injuries and their effect
- working at heights, including:
  - hazards and precautions associated with working on ladders, elevated work platforms (EWP) and scaffolds
  - identification of work area as a height risk and use appropriate safety equipment to prevent a fall
- working safely with electricity, including:
  - effects of electric shock on the human body
  - protection offered by a residual current device (RCD)
  - need for ensuring the (safe) isolation of an electrical supply
  - appropriate method of removing an electric shock victim from a live electrical situation
  - precautions that can minimise the chance of electric shock (earthing, extra-low voltage (ELV), fuses, circuit breakers and RCDs)
  - common causes of electrical accidents.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

© Commonwealth of Australia, 2026 Powering Skills Organisation

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, emergency management plan, equipment specifications, regulations, codes of practice and operation manuals
- relevant WHS/OHS legislation, regulations and codes of practice related to hazards management in the electrotechnology industry and workplace.

UEERA0049 Install and start up single head split air conditioning and water heating heat pump systems

Modification History

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to position, assemble, install, start up and decommission single head split air conditioning systems and water heating heat pump split systems, up to a maximum of 18 kilowatt (kW) refrigeration capacity.

It includes following standards, codes of practice, regulatory requirements and routine procedures to install equipment, connect pipe work, pressure test, evacuate, perform functional checks and complete required documentation.

To undertake this unit, the learner must have a Trainee Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted.

The skills and knowledge described in this unit require a national Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

The skills and knowledge described in this unit may, in some jurisdictions, also require a licence or permit to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare to assemble, install and start up split air conditioning and water heat pump system**	**1.1**	WHS/OHS hazards, risk control methods, relevant standards, codes and legislation are obtained and applied in accordance with workplace procedures
		1.2	Safety hazards which have not previously been identified are assessed, reported and advice on risk control measures sought from supervisor
		1.3	Work activities are sequenced in accordance with job schedule
		1.4	Relevant person/s is consulted to ensure the work is coordinated effectively with others involved on the worksite
		1.5	Layout of pipe work to be installed is determined from job/task details, including manufacturer specifications and diagrams
		1.6	Materials needed to carry out the work are obtained in accordance with workplace procedures and checked against job/task requirements
		1.7	Tools, equipment and testing devices are obtained in accordance with workplace procedures and checked for operation and safety
		1.8	Appropriately licensed electrician is confirmed to carry out electrical work for the air conditioning and water heat pump system

© Commonwealth of Australia, 2026 Powering Skills Organisation

		1.9	Appropriately licensed plumber is confirmed to carry out mains water piping work for the heat pump hot water system
		1.10	Preparatory work is checked to ensure no damage has occurred and complies with job/task requirements in accordance with workplace procedures
2	**Assemble, install and start up split air conditioning and water heat pump system**	**2.1**	Split air conditioning and water heat pump system components are positioned and assembled in accordance with workplace procedures, manufacturer instructions and industry standards
		2.2	Interconnecting refrigerant piping/tubing is prepared and installed in accordance with workplace procedures, manufacturer instructions and industry standards
		2.3	Components are pressure tested and evacuated in strict accordance with manufacturer instructions, industry standards and codes of practice
		2.4	Condensate drains are prepared and installed to the units in accordance with workplace procedures, manufacturer instructions, industry standards and local regulatory requirements
		2.5	The refrigerant service valves are opened on the pre-charged outdoor unit to enable the refrigerant to enter the evacuated pipe work and the connected unit in strict accordance with manufacturer instructions and industry standards
		2.6	Unplanned situations are discussed with relevant person/supervisor, documented and dealt with safely in accordance with workplace procedures
		2.7	Quality checks of installation and start-up are undertaken in accordance with workplace procedures
		2.8	Notification is given to relevant person/s that the split air conditioning and water heat pump system is ready for electrical and/or mains water connection in accordance with workplace procedures
		2.9	Split air conditioning and water heat pump work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services using relevant workplace sustainable energy principles in accordance with workplace procedures

© Commonwealth of Australia, 2026 Powering Skills Organisation

3	**Test single head split air conditioning and water heat pump system**	**3.1**	Split air conditioning and water heat pump system performance is inspected and tested in accordance with workplace procedures to ensure compliance with industry technical standards, manufacturer specifications and job/task requirements
		3.2	Worksite and equipment are cleaned and made safe in accordance with workplace procedures
		3.3	Work completion is documented and appropriate person/s notified in accordance with workplace procedures
4	**Decommission split air conditioning and water heat pump system**	**4.1**	Refrigerant is pumped down and/or recovered from indoor unit, interconnecting refrigerant piping/tubing is removed, and indoor and outdoor refrigerant circuits are sealed in accordance with workplace procedures, manufacturer instructions and industry standards
		4.2	Licensed electrician is engaged in accordance with workplace procedures to isolate and disconnect electrical supply and cabling from air conditioning and water heat pump system
		4.3	Indoor and outdoor refrigerant pipework, water pipework, condensate drains and electrical conduits/cables are unmounted in accordance with workplace procedures
		4.4	Unplanned situations are discussed with appropriate person/s, documented and dealt with safely in accordance with workplace procedures
		4.5	Split air conditioning and water heat pump work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services using relevant workplace sustainable energy principles
		4.6	Worksite and equipment are cleaned and made safe in accordance with workplace procedures
		4.7	Work completion is documented and appropriate person/s notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2026 Powering Skills Organisation

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.	
Assembling, installing, starting up and decommissioning single head split air conditioning and water heat pump system (hot water or swimming pool) up to a maximum of 18 kW refrigeration capacity must include at least the following:	• condensate drain installation • decommissioning • evacuation • functional performance check • installation/regulatory documentation • pipe work connection • pressure test • refrigerant pipework installation • use of safe working procedures and industry standards and code of practice
Electrical connection must be carried out by:	• unrestricted licensed electrician
Mains water connection must be carried out by:	• appropriately licensed plumber
Making area/worksite safe must include at least the following:	• leak testing and fitting of caps to all refrigerant access ports, which could allow refrigerant to escape into the environment

Assessment Requirements for UEERA0049 Install and start up single head split air conditioning and water heating heat pump systems

Modification History

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- applying safe working practices and relevant legislation, industry standards, codes of practice and regulations
- applying sustainable energy principles and practices
- assembling, installing and starting up split air conditioning and/or water heat pump system
- dealing with unplanned events/situations in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
- decommissioning split air conditioning and/or water heat pump system
- determining job/work task requirements and applying workplace procedures, including making equipment/worksite safe
- documenting work activities
- giving notification to appropriate person/s for electrical connections to be completed
- implementing risk control measures
- inspecting and testing single head split air conditioning and/or water heat pump system and documenting performance to manufacturer specifications, including undertaking functional performance checks
- making equipment and worksites safe through leak testing and fitting of caps to refrigerant access ports to stop refrigerant escaping into the environment
- positioning and assembling system components to specifications
- installing and connecting refrigerant piping

© Commonwealth of Australia, 2026 Powering Skills Organisation

- installing and connecting condensate drain piping
- preparing to assemble, install and start up a single head split air conditioning system and/or water heat pump system with a maximum cooling/heating capacity of less than 18 kilowatt (kW)
- pressure testing and evacuating system using manufacturer instructions.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- condensate drain pipe work installation and connections
- refrigerant pipe work installation and connections
- relevant A1 and A2L class refrigerant, systems, piping, tools and equipment
- relevant codes of practice, industry standards, regulations and WHS/OHS legislated requirements, including:
    - AS/NZS 5141 Residential heating and cooling systems - Minimum applications and requirements for energy efficiency, performance and comfort criteria
    - AS/NZS 5149.3 Refrigerating systems and heat pumps - Safety and environmental requirements - Installation site
    - AS/NZS 5149.4 Refrigerating systems and heat pumps - Safety and environmental requirements - Operation, maintenance, repair and recovery
    - Australia and New Zealand Refrigerant Handling Code of Practice - Part 2 Systems other than self-contained low charge systems
    - Ozone Protection and Synthetic Greenhouse Gas Management Regulations
- relevant manufacturer specifications and instructions relevant risk mitigation processes, including safe working practices and risk control measures
- relevant workplace documentation
- relevant workplace policies and procedures
- role of licensed electrician/plumber
- split air conditioning and water heat pump (maximum plant capacity for each system is 18 kW), including:
    - decommissioning split system requirements and procedures installing split systems, including manufacturer instructions, location, mounting and connecting pipe work
    - single head split air conditioning system (up to 18 kW) types, applications, major components, controls, operation and operating conditions

© Commonwealth of Australia, 2026 Powering Skills Organisation

- split system start-up, including manufacturer instructions, pressure testing, evacuation, checking refrigerant charge, adding refrigerant, leak detection and checking function and performance.
- split water heating heat pump system (up to 18 kW) types, applications, major components, controls, operation and operating conditions

- sustainable energy principles and practices.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEERA0059 Prepare and connect refrigerant tubing and fittings

Modification History

Release	Comments
2	This minor update is the second release of this unit of competency in the UEE Electrotechnology Training Package. Incorrect Performance Criteria numbering in Element 1 fixed.
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to prepare and connect refrigeration and air conditioning piping/tubing and fittings.

It includes cutting, bending and connecting copper tubes to copper tubes and to brass and steel fittings by flaring and swaging using compression fittings and silver brazing.

The skills and knowledge in this unit will be applied by refrigeration and air conditioning technicians during the installation, service and repair of refrigeration and air conditioning systems.

To undertake this unit, the learner must have a Trainee Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted.

The skills and knowledge described in this unit require a national Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

The skills and knowledge described in this unit may, in some jurisdictions, also require a licence or permit to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work.

Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance criteria	
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
Prepare to fabricate tubing and attach fittings for refrigeration and/or air conditioning system	**1.1**	WHS/OHS hazards, risk control methods, relevant standards, codes and legislation are obtained and applied
	1.2	Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from supervisor
	1.3	Nature of work is obtained from documentation or supervisor to determine scope of work to be undertaken
	1.4	Advice is sought from supervisor to ensure work is coordinated effectively with others
	1.5	Materials required for the work are accessed in accordance with workplace procedures
	1.6	Tools, equipment and testing devices to carry out work are obtained and checked for correct operation and safety

© Commonwealth of Australia, 2026 Powering Skills Organisation

2	**Fabricate tubing and attach fittings for refrigeration and/or air conditioning system**	**2.1**	Tasks are completed in accordance with workplace safety procedures
		2.2	Relevant safe work methods are used to cut, flare, swage, bend and silver braze tubing and fittings as they apply to refrigeration and/or air conditioning systems
		2.3	Refrigerant tubing and fittings are silver brazed with the use of dry nitrogen to prevent contamination
		2.4	Fabricated tubing and fittings are prepared without waste of materials or damage/contamination to apparatus, the surrounding environment or services using relevant workplace sustainable energy practices in accordance with workplace procedures
		2.5	Quality checks are carried out regularly in accordance with workplace procedures, instructions/or specifications, including dimensions and pressure testing
3	**Complete work and report**	**3.1**	Worksite is cleaned and made safe in accordance with workplace procedures
		3.2	Supervisor is notified of task completion in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

• applying relevant industry standards, codes of practice, regulations and work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
• applying sustainable energy principles and practices
• completing documentation and reporting requirements
• identifying and monitoring hazards and using applicable safety data sheets (SDS)/material safety data sheets (MSDS)
• preparing, fabricating and attaching refrigerant tubing and fittings, including:
  ○ attaching fittings correctly
  ○ conducting component quality checks
  ○ cutting, bending and joining refrigerant piping and tubing using appropriate tools and equipment, including compression fittings and high-pressure refrigerants
  ○ silver brazing copper tubes and fittings using dry nitrogen
• setting up equipment safely.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- copper tube grades, including types, properties, applications and handling
- dissimilar metals, including:
  - aluminium
  - brass
  - steel
  - stainless steel
- potential hazards with refrigerant tubing and fittings
- refrigerant tubing and fittings techniques, including:
  - annealing
  - bending
  - cutting
  - flaring
  - tube expanding
  - joining
  - silver brazing
  - use of dry nitrogen
- refrigeration copper tube fittings and access valves
- relevant legislation, industry standards, codes of practice and regulations
- relevant manufacturer specifications
- relevant risk mitigation processes, including safe working practices
- relevant WHS/OHS legislated requirements
- relevant workplace documentation
- relevant workplace policies and procedures
- SDS/MSDS
- sustainable energy principles and practices
- tools and equipment, including care and maintenance.

UEERA0064 Recover, pressure test, evacuate, charge and leak test refrigerants - split systems

Modification History

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to undertake the recovery of refrigerants, perform pressure and leak testing, evacuations and refrigerant charging in split air conditioning and heat pump systems.

It includes working safely; applying relevant regulations, industry standards and codes of practice in recovering refrigerants; performing pressure and leak tests; evacuating and charging with refrigerant split systems; and completing all required documentation.

To undertake this unit, the learner must have a Trainee Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted.

The skills and knowledge described in this unit require a national Refrigerant Handling Licence as it includes work on refrigeration and air conditioning equipment that carries the risk of a fluorocarbon refrigerant being emitted while decanting the refrigerant or manufacturing, installing, commissioning, servicing, maintaining or decommissioning refrigeration and air conditioning equipment.

The skills and knowledge described in this unit may, in some jurisdictions, also require a licence or permit to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in the workplace and during training is also subject to work health and safety (WHS)/occupational health and safety (OHS) regulations.

Licensing/Regulatory Information

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare to recover refrigerant, pressure and leak test, evacuate and charge split system**s	**1.1**	WHS/OHS hazards, risk control methods, relevant standards, codes and legislation are obtained and applied in accordance with workplace procedures
		1.2	Safety hazards not previously identified are assessed, reported and advice on risk control measures sought from supervisor
		1.3	Nature of the work is obtained from documentation or supervisor to determine the scope of work to be undertaken
		1.4	Work activity is appropriately sequenced in accordance with job schedule
		1.5	Relevant person/s is consulted to ensure work is coordinated effectively with others involved on the worksite
		1.6	Refrigerant, lubricants and cleaning materials for work are obtained in accordance with workplace procedures and checked against job/task requirements
		1.7	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
		1.8	Preparatory work is inspected and checked to ensure no damage has occurred and complies with workplace procedures and job/task requirements
2	**Recover refrigerant, pressure and leak test evacuate and charge split systems**	**2.1**	Checks are carried out to ensure the system and/or component parts are isolated in accordance with workplace procedures

© Commonwealth of Australia, 2026 Powering Skills Organisation

		2.2	Machines, plant and circuits are isolated in accordance with workplace procedures
		2.3	Refrigerants are safely removed from split system and placed into labelled containers in accordance with regulatory requirements, industry standards and codes of practice, and any electrical work is referred to a licensed electrician in accordance with workplace procedures.
		2.4	Precautions are taken to prevent damage to components while pressure testing the system
		2.5	Pressure testing is conducted using dry nitrogen at a pressure relative to the refrigerant to be used
		2.6	Leaks are located and rectified using testing methods appropriate to system under test in accordance with industry standards
		2.7	Split system is evacuated to required level and system is cleaned of all moisture and other containments in accordance with industry standards and codes of practice
		2.8	A drop test is performed to test evacuation using an electronic vacuum gauge in accordance with industry standards and codes of practice
		2.9	Component lubricants are checked and maintained in accordance with manufacturer specifications
		2.10	Split systems are charged with refrigerant in accordance with manufacturer specifications, industry standards and codes of practice
		2.11	Problematic situations are resolved in accordance with workplace procedures and reported to supervisor
		2.12	Split systems are pressure and leak tested, evacuated and charged without waste of materials or damage to apparatus, the surrounding environment or services in accordance with relevant workplace sustainable energy practices
3	**Report on refrigerant recovery, pressure and leak test,**	**3.1**	Worksite is cleaned and made safe in accordance with workplace procedures

© Commonwealth of Australia, 2026 Powering Skills Organisation

	evacuation and charge work		
		3.2	Contaminated refrigerant is dealt with in accordance with workplace procedures and legislative/regulatory requirements
		3.3	Completion of work is documented and appropriate person/supervisor notified in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.	
testing and charging split air conditioning systems must include at least the following:	• determining, using measurement and basic calculations methods, the operating conditions of vapour compression split system, including suction and discharge pressures • ambient, evaporator and condensing temperatures • evaporator and condenser temperature differences recovering Class A1 and A2L refrigerant from an existing split system, including split single head air conditioning and/or hot water heat pump systems pressure and leak testing a newly installed system • evacuating newly installed systems in preparation for charging with refrigerant • charging newly installed systems with Class A1 and A2L refrigerant

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - identifying hazards
  - risk control measures
  - using personal protective equipment (PPE)
- applying safe working practices and relevant legislation, industry standards, codes of practice and regulations
- completing required documentation, including reporting refrigerant recovery, pressure and leak tests, evacuations, charging refrigerant work and system operating conditions determining basic operating conditions, including:
  - ambient, evaporation and condensing temperatures
  - evaporator and condenser temperature differences
  - suction and discharge pressures
- recovering, pressure testing, evacuating, charging and leak testing refrigerant in newly installed split systems to requirements using appropriate equipment, tools and measurement devices
- starting up system and performing function checks
- selecting, obtaining and checking relevant equipment, materials, tools and testing devices required to carry out the work, including:
  - A1, A2 and A2L class refrigerants, lubricants and charging equipment
  - oxygen-free dry nitrogen cylinder and regulator
  - pressure and temperature measurement devices
  - pressure testing and refrigerant leak testing equipment and tools

© Commonwealth of Australia, 2026 Powering Skills Organisation

  - refrigeration evacuation equipment and measuring equipment suitable for A1, A2 and A2L class refrigerants
  - refrigerant recovery/reclaim equipment suitable for A1, A2 and A2L class refrigerants
  - refrigeration hand and power tools
  - refrigeration service tools
  - single head split air conditioning systems
- using lubricants and cleaning materials safely in accordance with safety data sheets (SDS)/material safety data sheets (MSDS).

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- equipment and procedures for working with refrigerants, including:
  - charging refrigerant into a newly installed split system detecting refrigerant leaks (electronic, bubbles and halide for R22)
  - contaminant detection and removal
  - evacuating newly installed split systems
  - pressure testing systems newly installed split systems using dry nitrogen
  - reclaiming/recovering refrigerants using recovery units and recovery cylinders
- heat and heat transfer
- leak detectors types, applications, operation and procedures
- manifold gauges types, applications, operation and procedures
- pressure temperature relationships and charts
- pressure, units and measurement
- refrigerant conditions, including saturation, superheat and sub-cooling
- relative humidity, unit and measurement
- relevant industry standards, codes of practice and regulations, including WHS/OHS legislated requirements
- relevant manufacturer specifications
- relevant risk mitigation processes, including risk control measures
- safe working practices, safe handling and SDS/MSDS
- sensible and latent heat

© Commonwealth of Australia, 2026 Powering Skills Organisation

- split heat pump Class A1, A2 and A2L refrigerant types, properties and applications
- split heat pump refrigerant oil types, properties and applications
- sustainable energy principles and practices, including:
    - environment protection requirements
    - sustainable energy practices
    - sustainable resources
- system access fittings types, applications, operation and procedures
- temperature, units and measurement
- vapour compression cycle, basic operation and major system components.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation, including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UEERL0003 Conduct in-service safety testing of electrical cord connected equipment and cord assemblies

Modification History

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to conduct in-service safety testing of electrical cord connected equipment and cord assemblies.

It includes working safely, using portable appliance tester (PAT), identifying faults, applying tagging, arranging for repair of faulty equipment and complete testing documentation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

Competency field(s)

Restricted Licensing

Unit sector(s)

Electrotechnology

Elements and Performance Criteria

Elements	**Performance criteria**
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2026 Powering Skills Organisation

1	**Prepare to test cord connected apparatus and cord assemblies**	**1.1**	Work health and safety (WHS)/occupational health and safety (OHS) procedures for a given work area are identified, obtained and applied
		1.2	WHS/OHS risk control work preparation measures and procedures are followed
		1.3	Advice is sought from relevant person/s to ensure work is effectively coordinated with others
		1.4	Cord connected apparatus and cord assemblies to be tested are obtained in accordance with workplace procedures
		1.5	PAT device is checked for correct operation and safety in accordance with relevant industry standards and workplace procedures
2	**Test cord connected apparatus and cord assemblies**	**2.1**	WHS/OHS risk control work measures and procedures are followed
		2.2	Measures are followed to ensure that cord connected apparatus and cord assemblies to be tested are not connected to the electrical supply in accordance with relevant industry standards
		2.3	Electrical safety requirements and parameters are applied to ensure correct test results are in accordance with relevant industry standards
		2.4	Visual inspection and checks of the cord connected apparatus and cord assemblies are carried out in accordance with workplace procedures to detect any abnormal damage or fault
		2.5	Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
		2.6	PAT routines are followed to test cord connected apparatus and cord assemblies in accordance with workplace procedures

© Commonwealth of Australia, 2026 Powering Skills Organisation

		2.7	Unsafe cord connected apparatus and cord assemblies are identified from test results in accordance with workplace procedures
		2.8	Testing is undertaken effectively to minimise waste of energy and damage to apparatus
3	**Tag cord connected apparatus and cord assemblies and document testing activities**	**3.1**	WHS/OHS work completion risk control measures and procedures are followed
		3.2	Worksite is cleaned and made safe in accordance with workplace procedures
		3.3	Cord connected apparatus and cord assemblies are tagged in accordance with workplace procedures for their safety status
		3.4	Arrangements are made for unsafe cord connected apparatus and cord assemblies to be repaired by relevant person/s
		3.5	Safety testing activities are documented in accordance with relevant industry standards and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.	
In-service safety testing must include the following:	• at least two different electrical cords and three different items of cord connected equipment with safety faults, including: o a device containing an element o a device containing a motor

© Commonwealth of Australia, 2026 Powering Skills Organisation

	○ a device containing metal oxide varistors (MOV)

Modification History

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying appropriate tagging
- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including using risk control measures
- connecting cords and apparatus to the testing device
- dealing with unplanned events in accordance with problem-solving techniques and workplace procedures
- documenting testing activities, including workplace register
- identifying safe and unsafe cords and apparatus
- preparing to test cord connected apparatus and cord assemblies
- preparing and using the portable appliance tester (PAT)
- safety testing of electrical cord connected equipment and cord assemblies
- tagging tested cord connected apparatus and cord assemblies and document testing activities
- using test results to determine the safety status.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- Australian Standards and Commonwealth/state/territory legislation and regulations including:

© Commonwealth of Australia, 2026
Powering Skills Organisation

  - Australian Standard AS/NZS 3760 In-service safety inspection and testing of electrical equipment
  - Commonwealth/state/territory WHS/OHS Acts and regulations
  - limitations of work that can be undertaken
  - codes of practice and associated guidance material
  - risk management principles
- basic electrical testing concepts, including:
  - basic electrical circuits
  - functions of electrical circuit
  - conductors and insulators
  - basic electrical supply system
  - relationship of electrical quantities
  - effects of electrical currents
  - methods/devices used to negate or minimise electrical shock
  - PAT
  - PAT maintenance and calibration
- electrical equipment and cord assemblies testing, including:
  - classification of electrical equipment
  - inspection of electrical equipment (visual inspections)
  - using PAT:
    - earth continuity testing
    - insulation resistance testing
    - polarity testing (extension cords and IEC cords)
- testing and tagging documentation requirements, including:
  - risk assessment documentation
  - frequency of inspection and testing
  - tagging of equipment
  - records maintenance
- electrical cord testing and tagging documentation requirements
- electrical equipment and cord assemblies testing
- electrical testing concepts
- problem-solving techniques
- relevant job safety assessments or risk mitigation processes

UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Modification History

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Application

This unit involves the skills and knowledge required to disconnect and reconnect electrical equipment connected to low voltage (LV) installation wiring.

It includes preparing electrical equipment for disconnecting and then reconnecting equipment connected to LV installation wiring. It also includes inspecting and testing the reconnected electrical equipment for safe operation, identifying and reporting electrical faults and providing status reports. This must be incidental to a primary or regular function of the workplace.

The unit excludes disconnecting or reconnecting circuits at a switchboard or to general electrical accessories (including switches, socket outlets and circuit protective devices), or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installation work).

The skills and knowledge described in this unit require a licence or permit to practice in the workplace where work is carried out on electrical installations which are designed to operate at voltages greater than 50 volt (V) alternating current (a.c.) or 120 V direct current (d.c.).

The skills and knowledge described in this unit may require a license to practice in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Additional and/or other conditions may also apply under State and Territory legislation and regulations related to licencing, electrical work and work health and safety (WHS)/occupational health and safety (OHS) regulations, which must be confirmed prior to commencing this unit.

In some jurisdictions additional information related to licencing may be required on certification documentation. Further guidance can be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare to disconnect electrical equipment**	**1.1**	Electrical equipment disconnection is planned to ensure WHS/OHS policies and procedures are followed
		1.2	Relevant person/s is consulted to ensure work is coordinated effectively with others involved at the worksite
		1.3	Safety hazards which have not previously been identified are documented, risks assessed, and control measures determined and implemented in consultation with relevant person/s and in accordance with workplace procedures
		1.4	Point of isolation of electrical equipment to be disconnected is determined
		1.5	Tools, equipment and testing devices needed to carry out electrical work are obtained in accordance with workplace procedures and checked for correct operation and safety
2	**Disconnect electrical equipment**	**2.1**	WHS/OHS policies and workplace procedures are followed

© Commonwealth of Australia, 2026 Powering Skills Organisation

		2.2	Electrical equipment is isolated in accordance with relevant electrical installation industry standards and workplace procedures
		2.3	Isolated equipment is confirmed as de-energised
		2.4	Conductor connection sequence is recorded and labelled in accordance with workplace procedures
		2.5	Visual inspection and checks of the electrical equipment and associated wiring are carried out in accordance with workplace procedures to detect any abnormal or obvious damage or fault
		2.6	Electrical equipment is disconnected from fixed wiring without damage to other components
		2.7	Disconnected conductors/cables are terminated in accordance with relevant industry standards to ensure they are safe and present no potential hazard
		2.8	Approval is obtained in accordance with workplace procedures from relevant person/s before any contingencies are implemented
3	**Prepare to reconnect electrical equipment**	**3.1**	Reconnection is planned to ensure WHS/OHS policies and workplace procedures are followed
		3.2	Relevant person/s is consulted to ensure work is coordinated effectively with others involved in the work site
		3.3	Point of isolation of the circuit to which the electrical equipment to be connected is determined
		3.4	Replacement electrical equipment is selected on the basis of rating and specifications being the same as that of the original electrical equipment
		3.5	Appropriate person/s is consulted in the event that replacement electrical equipment is not available

© Commonwealth of Australia, 2026 Powering Skills Organisation

		3.6	Original and/or replacement electrical equipment is inspected and tested to ensure it is safe to connect to the electrical supply and use
		3.7	Tools, equipment and testing devices needed to carry out electrical work, are obtained in accordance with workplace procedures and checked for correct operation and safety
4	**Reconnect electrical equipment**	**4.1**	WHS/OHS policies and procedures are followed
		4.2	Measures are taken to ensure circuit to which electrical equipment is to be connected remains isolated and de-energised in accordance with relevant electrical installation industry standards and workplace procedures
		4.3	Earth continuity of the equipment is tested to determine whether it is in accordance with relevant industry standards
		4.4	Insulation resistance of the equipment is tested to confirm that it is in accordance with relevant industry standards
		4.5	Appropriate person/s is consulted regarding any non-compliant conditions identified during testing
		4.6	Electrical equipment is connected in accordance with previously recorded conductor connection sequence and relevant industry standards
		4.7	Connections to the equipment are checked to confirm they are correct
		4.8	Continuity between exposed conductive parts of the equipment and the main earth or metal switchboard enclosure is confirmed
5	**Test the reconnected electrical equipment for safe operation**	**5.1**	WHS/OHS policies and workplace procedures for the reinstatement of isolated circuits and electrical equipment is followed

© Commonwealth of Australia, 2026 Powering Skills Organisation

		5.2	Supply is reinstated to equipment and checked in accordance with established procedures and industry requirements
		5.3	Arrangements are made with relevant person/s to test the operation of the electrical equipment in accordance with workplace procedures
		5.4	Operational non-conformances are identified and reported in accordance with workplace procedures
	Complete compliance documentation	**6.1**	Equipment status report/s are completed and relevant person/s notified in accordance with task requirements and workplace procedures
		6.2	Complete compliance documentation in accordance with industry standards and regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment. Non-essential conditions may be found in the UEE Electrotechnology Training Package Companion Volume Implementation Guide.	
Disconnection and reconnection of electrical equipment must include at least one of the following, and must be selected to align with the candidates' primary trade or work function:	• air conditioning/refrigeration equipment • instrumentation equipment • electronic equipment • electrical equipment • neon signs • composite equipment • control devices • water heaters • motors

© Commonwealth of Australia, 2026 Powering Skills Organisation

	• gas appliances
MUST NOT INCLUDE: disconnect/reconnect electrical equipment connected to supplies up to 1,000 volts (V) alternating current (a.c.) or 1,500 V direct current (d.c.) must not include the following:	• electrical work associated with fixed wiring, circuits at a switchboard or to general electrical equipment, including switches, socket outlets, circuit protective devices etc • in hazardous areas or on electrical equipment that is part of an explosion-protection technique • where high fault currents are possible • which are luminaires

Assessment Requirements for UEERL0004 Disconnect - reconnect electrical equipment connected to low voltage (LV) installation wiring

Modification History

Release	Comments
1	This unit of competency was first released in UEE Electrotechnology Training Package Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- applying relevant work health and safety (WHS)/occupational health and safety (OHS) requirements, including:
  - selecting and using and appropriate range of personal protective equipment (PPE)
  - hazard identification
  - using risk control measures
  - using safe working practices when carrying out electrical disconnect/reconnect work
  - working safely with low voltage (LV) electrical installations
- determining electrical characteristics of electrical equipment
- selecting tools, equipment and testing devices
- identifying the point of isolation
- preparing to disconnect and reconnect electrical equipment
- disconnecting and reconnecting electrical equipment
- connecting circuits from the schematic diagrams
- connecting and using voltmeters and ammeters, including selecting the correct range in terms of magnitude and whether the supply is alternating current (a.c.) or direct current (d.c.)
- isolating, testing and tagging accessories
- connecting a simple electrical circuit, including supply, control switch and load
- measuring voltage and current within a simple circuit

© Commonwealth of Australia, 2026
Powering Skills Organisation

- producing a wiring diagram of the connections used in following the schematic diagram
- connecting a simple circuit following a wiring diagram
- producing a schematic diagram from the wiring diagram
- using an analogue multimeter for voltage measurement ensuring the following: setting zero, correct scale, a.c. or d.c., polarity and magnitude, avoiding parallax error and estimating between division readings
- using a digital multimeter for voltage measurement ensuring the following: correct range and no active conductors are connected to any meter earth
- measuring resistance using a digital multimeter
- conducting insulation resistance tests using a handheld insulation tester after checking for zero and meter calibration
- checking the polarity of a three-core extension cord using a continuity tester
- measuring current using a clip-on (tong tester) taking each circuit conductor in turn
- terminating cables using stud, screw, tunnel and lug terminal types employing the correct preparation and the relevant terminating tools
- identifying the type and arrangement of circuits supplying equipment that is to be disconnected
- testing the availability of supply for electrical equipment about to be disconnected
- locating isolation device/s, including lockable adjacent switching device, and/or identification of fuse/circuit breaker at switchboard, and use of equipment schedules where provided
- determining the method of isolation to be used; which available device
- isolating a supply at a fuse, ensuring the fuse wedge is removed only after the electrical equipment is turned off and demonstrating why the empty wedge is replaced once the fusible link has been removed
- isolating a supply at a circuit breaker, ensuring the circuit breaker is locked and secured in the open position
- undertaking tests to determine if the electrical equipment is turned off when isolating at a fuse/circuit breaker
- using danger tags at the point of isolation
- identifying the type and arrangement of circuits supplying equipment that is to be disconnected from a single phase and/or multiphase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
- applying procedures that ensure the safe isolation of the supply to equipment which is to be disconnected

© Commonwealth of Australia, 2026 Powering Skills Organisation

- disconnecting isolated equipment from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of conductor connection sequence
- applying termination practices in regard to disconnected wiring
- checking the new electrical equipment nameplate details against those of the electrical equipment being replaced
- visually inspecting and testing equipment's electrical characteristics using suitable test equipment to ensure equipment is safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate ingress protection (IP) rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
- testing compliance of the electrical equipment, i.e. insulation resistance and continuity
- testing the disconnected electrical equipment for faults (open circuits, partial open circuits, short circuits, partial short circuits and earth faults), and recognise any unsatisfactory test results obtainedidentifying the type and arrangement of circuits supplying equipment that is to be reconnected to a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
- reconnecting electrical equipment to fixed wiring with minimal damage to wiring system
- ensuring continuity between exposed conductive parts of the equipment and the main earth or metal switchboard enclosure
- restoring supply after ensuring correct connections, and all safety requirements have been met
- testing the supply at the electrical equipment
- restoring all mechanical protection, e.g. terminal covers
- checking operation of reconnected equipment
- dealing with unplanned events/situations in accordance with workplace procedures and in a manner that minimises risk to personnel and equipment
- producing reports and documents to describe a suitable procedure to safely disconnect a component from a single-phase supply and/or multi-phase supply in accordance with workplace, industry and regulatory requirements
- producing reports and compliance documentation for the safe reconnection/commissioning of a component to the supply in accordance with workplace, industry and regulatory requirements
- completing required regulatory compliance documentation.

Powering Skills Organisation

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- the basic electrical circuit, including:
  - elements of a simple electric circuit (supply, control switch, protection device and load)
  - definition, the symbol and the abbreviation of the unit for electromotive force, potential difference, current and resistance
  - types of electrical load
  - need for devices to afford electrical protection and the mechanisms used in protection devices, including resetting
  - a.c supply (both single and multi-phase) and d.c. supply
  - need for isolating, testing and tagging electrical circuits
- relationships in an electrical circuit, including:
  - relationship between voltage, current and resistance
  - definition of power in electrical terms (for d.c. or resistive a.c. circuits)
  - electrical diagrams, including:
    - symbols used for fuse, circuit breaker, isolator, normally open contacts, normally closed contacts, coil, energy meter, a.c. motor and transformer
    - using a block diagram as means of developing concepts and understanding
    - function of single line diagrams, including their application in three phase systems
    - definition of a circuit or schematic diagrams
    - wiring diagrams
- test equipment selection and care, including:
  - fault currents and the implications of incorrectly connecting a meter to a high fault current source
  - category ratings of multimeters in terms of their breaking capacity (fault current interruption) and identification of the appropriate category of instrument for typical domestic work and for typical commercial work
  - regulatory requirements in regard to the maintenance and testing of test instrumentation
  - steps and procedures for the safe use, care and storage of electrical instruments

© Commonwealth of Australia, 2026
Powering Skills Organisation

- selecting test equipment for given situations
- test equipment - voltage measurement, including:
  - voltage measurement - meters connected in parallel
- test equipment - resistance measurement, including:
  - insulation resistance, and the required minimum values for insulation resistance LV equipment (including the insulation resistance values for electrical equipment incorporating heating elements)
  - insulation resistance needs to be measured at higher than supply voltage and the voltages to be used
  - continuity and what a continuity tester does
- test equipment - current measurement, including advantage/s of the clip-on method of current measurement
- cable connections, including:
  - construction of typical power cables
  - principle of operation of the following types of terminals stud, screw, tunnel and lugs
  - cable preparation and terminating methods appropriate to each type of terminal, including any special requirements which apply
- protection for safety, including:
  - dangers associated with earth-faults
  - protection of persons against electric shock from earth-faults
  - maintaining a low earth-fault current path resistance
  - components in an earth-fault current path
  - regulatory issues/requirements/limitations in regard to working live
- safety testing preparation and procedures, including:
  - faulty earth-fault current paths
  - using safe working practices when carrying out fault-finding work
  - identification of earthing system components
  - unsatisfactory resistance of a fault current path
  - actions to rectify unsatisfactory resistance of an earth-fault current path or insulation
- isolating supplies, including:
  - regulatory requirements in regard to working de-energised, and ensuring and maintaining isolation
  - reasons for advising all personnel likely to be affected
  - preventing others wanting to remake supply

© Commonwealth of Australia, 2026 Powering Skills Organisation

  - reason for isolation and approximate time of outage to allow planning of alternate activities
  - identification of the type and arrangement of circuits supplying equipment that is to be disconnected
  - use of and reason for danger tags at the point of isolation
  - reason for the following steps: testing on a known live supply, testing for isolation, retesting on a known live supply after confirming isolation
- disconnecting electrical equipment - LV, including:
  - identification of the type and arrangement of circuits supplying equipment that is to be disconnected from a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
  - procedures that ensure the safe isolation of the supply to equipment which is to be disconnected
  - disconnection of isolated equipment from fixed wiring with minimal damage to wiring system after ensuring no visible faults or damage, and the recording of conductor connection sequence
- reconnecting electrical equipment - LV, including:
  - importance of checking the new electrical equipment nameplate details against those of the electrical equipment being replaced
  - need to visually inspect and test the equipment's electrical characteristics using suitable test equipment to ensure equipment is safe to connect in regard to sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating, and arrangements for protection against dangers of mechanical movement are undamaged and in place
  - procedures for equipment with unsatisfactory results - unsuitability for reconnection
  - identification of the type and arrangement of circuits supplying equipment that is to be reconnected to a single phase and/or multi-phase supply of voltages up to 1,000 V a.c. or 1,500 V d.c.
  - procedures ensuring isolation of supply
  - engaging appropriately qualified person to rectify any non-compliance
- produce documentation and reports in accordance with workplace, industry and regulatory requirements, including:
  - need to produce status reports and documents to locate and identify isolation mechanisms for a wide range of circuits and associated loads
  - production of reports and documents to use a suitable procedure to safely disconnect a component from a single-phase supply and/or multi-phase supply

© Commonwealth of Australia, 2026 Powering Skills Organisation

- content required in reports and documents used to safely determine the suitability of a component for reconnection to supply
- production of reports and documents for the safe reconnection/commissioning of a component to the supply.
- need to comply with regulatory compliance documentation requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in suitable workplace operational situations where it is appropriate to do so; where this is not appropriate, including where not permissible under regulatory and licencing requirements, assessment must occur in suitable simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, facilities, equipment and personal protective equipment (PPE) currently used in industry
- resources used should reflect current industry practices in relation to disconnecting and reconnecting electrical equipment connected to a LV supply
- applicable documentation, including workplace procedures, equipment specifications, regulations, standards, codes of practice and operation manuals.

UETDRDU017 Locate faults in underground power cables

Modification History

Release	Comments
1	This unit of competency was first released in UET Transmission, Distribution and Rail Sector Release 2.0.

Application

This unit involves the skills and knowledge required to locate faults in underground power cables in the electricity supply industry (ESI).

It includes setting up test equipment and using the equipment to pre locate and pinpoint the cable fault. It also includes interpreting test results, documenting the fault location and likely cause and listing recommendations for correcting the cable fault.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite unit(s)

UEECD0007 Apply work health and safety regulations, codes and practices in the workplace

UEECD0044 Solve problems in multiple path circuits

UEECD0046 Solve problems in single path circuits

UEECD0051 Use drawings, diagrams, schedules, standards, codes and specifications

UEEEL0020 Solve problems in low voltage a.c. circuits

UEEEL0021 Solve problems in magnetic and electromagnetic devices

UETDREL005 Work safely in the vicinity of live electrical apparatus

Competency field(s)

Distribution Underground

Elements and Performance Criteria

Elements		Performance criteria	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare to locate underground power cable faults**	**1.1**	Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are referred to and confirmed
		1.2	Work instruction is obtained and confirmed in accordance with workplace requirements
		1.3	Tools, equipmentand personal protective equipment (PPE) required for work are determined, obtained and confirmed in working order
		1.4	Hazards are identified, risks assessed and control measures identified and applied
		1.5	Work is prioritised and sequenced for completion in accordance with work instruction and workplace requirements
		1.6	Work permits are organised in accordance with workplace requirements
		1.7	Worksite is prepared in accordance with the work instruction and workplace requirements
2	**Carry out the locating of underground power cable faults**	**2.1**	Legislation, regulations, standards, codes of practice and organisational workplace requirements for the work to be performed are applied and monitored
		2.2	Lifting, working in a confined space, and the use of tools, equipment and PPE are carried out in accordance with workplace requirements
		2.3	Hazard control measures are monitored in accordance with workplace requirements
		2.4	Test equipment is positioned, set up for testing and confirmed to be operating correctly

© Commonwealth of Australia, 2026 Powering Skills Organisation

		2.5	Cable is tested and confirmed de-energised in accordance with workplace requirements
		2.6	Work permits are received and signed in accordance with workplace requirements
		2.7	Cable is prepared for testing and test equipment connected to the cable in accordance with workplace requirements
		2.8	Cable is tested to pre-locate the cable fault in accordance with workplace requirements
		2.9	Cable is tested to pinpoint the location of the cable fault in accordance with workplace requirements
		2.10	Cable faults are identified and analysed in accordance with workplace requirements
		2.11	Incidents or unplanned events are responded to in accordance with workplace requirements
3	**Complete work and documentation**	**3.1**	Recommendations for rectification are made in accordance with workplace requirements
		3.2	Incidents or unplanned events are reported in accordance with workplace requirements
		3.3	Worksite is rehabilitated, cleaned and made safe in accordance with workplace requirements
		3.4	Tools and equipment are cleaned, checked and returned to storage in accordance with workplace requirements
		3.5	Work permits are signed off in accordance with workplace requirements
		3.6	Work records, reports and documentation are completed in accordance with workplace requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for UETDRDU017 Locate faults in underground power cables

Modification History

Release	Comments
1	This unit of competency was first released in UET Transmission, Distribution and Rail Sector Release 2.0.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - work health and safety (WHS)/occupational health and safety (OHS)
  - safe approach distances
- identifying hazards, assessing risks, identifying, applying and monitoring control measures
- obtaining, inspecting and using relevant personal protective equipment (PPE)
- obtaining and signing on and off relevant work permits in accordance with workplace requirements
- interpreting and using drawings, diagrams and instructions
- using at least one (1) of the following cable fault pre location methods for low resistance faults:
  - time-domain reflectometry (TDR)
  - bridge method (e.g. Murray Loop)
- using at least one (1) of the following cable fault prelocation methods for high resistance faults:
  - arc reflection
  - voltage decay
  - impulse current
  - bridge (Murray loop)
- using at least one (1) of the following cable fault pinpointing methods:
  - acoustic detection using surge generator (thumper)

© Commonwealth of Australia, 2026 Powering Skills Organisation

- audio frequency pinpointing using twist method
- fault sniffing
- step voltage (pool of potential test or earth gradient method)

- locating at least three (3) of the following cable faults:
  - short circuit
  - open circuits
  - high resistance
  - earth and sheath
  - humid and wet
  - flashing
- analysing the testing results to determine the type and location of fault
- dealing with an unplanned event on at least one (1) occasion
- completing relevant work records, reports and documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- legislation, regulations, standards, codes of practice and organisational workplace requirements, including:
  - WHS/OHS
  - safe approach distances
  - working in confined spaces
  - trench safety
  - manual handling
- hazard, risk assessment and risk control requirements, including potential hazards
- types and application of PPE
- safe use of tools and equipment
- application, purpose and types of work permits
- events that constitute an incident or unplanned event
- procedures for responding to an unplanned event or incident
- work instruction requirements, including:
  - types of and layout of drawings
  - cable routes

© Commonwealth of Australia, 2026 Powering Skills Organisation

    - manufacturer's instructions
    - workplace documentation procedures
- high voltage (HV) and low voltage (LV) paper insulated and polymeric cables, including:
    - types and sizes
    - construction, characteristics and properties
    - minimum bending radius
- cable fault location, including:
    - types of and causes of cable defects
    - types of and causes of cable faults
    - low resistance cable fault pre-location methods
    - high resistance cable fault pre-location methods
    - cable fault pinpointing methods
    - advantages and disadvantages of different testing methods
    - types of cable fault locating equipment
    - use of cable fault locating equipment
    - cable fault locating procedures.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations, where it is appropriate to do so.

Where this is not appropriate, assessment must occur in simulated conditions involving realistic and authentic activities that replicate operational workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, facilities, equipment and PPE currently used in industry for locating faults in underground power cables
- applicable documentation, including workplace requirements, relevant industry standards, equipment specifications, regulations, codes of practice and operation manuals.

UETDREL006 Work safely in the vicinity of live electrical apparatus as a non-electrical worker

Modification History

Release	Comments
2	Amended Competency Field.
1	This unit of competency was first released in UET Transmission, Distribution and Rail Sector Release 2.0.

Application

This unit involves the skills and knowledge required to work safely in the vicinity of live electrical apparatus as a non-electrical worker.

It includes compliance with safe approach distances for the worker, plant, tools and equipment.

The application of the skills and knowledge described in this unit may require a licence/registration to practice in the workplace.

Other conditions may also apply under state and territory legislative and regulatory licensing requirements which must be confirmed prior to commencing this unit.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this unit at the time of publication.
