Assessment Requirements for CPPSEC3037 Test installed security equipment and systems

Release: 1

Assessment Requirements for CPPSEC3037 Test installed security equipment and systems

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 9.0.

Supersedes and is equivalent to CPPSEC3037A Test installed security equipment and system. Updated to meet the Standards for Training Packages.

Performance Evidence

To demonstrate competency, a candidate must meet the performance criteria of this unit by testing security equipment and systems, including one internet protocol (IP) networked system, installed at three different locations.

Knowledge Evidence

To be competent in this unit, a candidate must demonstrate knowledge of:

- workplace policies and procedures that ensure compliance with legislative and regulatory requirements when testing installed security equipment and systems:
 - licensing requirements and limits of own authority
 - privacy requirements
 - reporting and documentation
 - requirements for complying with Australian Communications and Media Authority cabling rules
 - work health and safety
- application of AS/NZS 2201.1:2007 *Intruder alarm systems – Client’s premises – Design, installation, commissioning and maintenance* (AS/NZS 2201) when testing security equipment and systems installed at client premises
- cable identification methods and techniques
- documentation to be completed when testing security equipment and systems
- keypad and control panel types and functions for a range of security equipment and systems
- materials, tools and equipment including personal protective equipment (PPE) used when testing security equipment and systems
- methods for ensuring IP networked systems and equipment are properly secured
- testing parameters and procedures for a range of security equipment and systems:
 - access control systems
 - audible and visual warning devices

- cameras and monitors
- commercial and residential alarm systems
- detection devices
- electronic and mechanical fire safety and fire locking systems
- electronic locks and locking systems
- electronic readers
- electronic screen equipment
- intercoms and control panels
- security doors and door controls
- types of earthing systems used in electrical installations
- types of electrical connections and circuits that may be encountered when testing installed security equipment and systems, and circuit protection requirements
- typical hazards encountered when testing security equipment and systems and the control measures for each:
 - confined spaces
 - electrical
 - hazardous materials and chemicals
 - people in the work area
 - power tools
 - vermin
 - work at heights.

Assessment Conditions

Assessors must meet the requirements for assessors contained in the Standards for Registered Training Organisations.

All individuals engaged by a licensed RTO for security licensing purposes must hold both a security trainers licence (where such a licence exists within the relevant jurisdiction) and the licence for performing the security activities for which the individual is providing training or assessment. Regulators may impose other assessor conditions to meet jurisdictional assessment requirements.

Assessment must be conducted in the workplace or in a simulated workplace environment. Candidates must have access to:

- workplace policies and procedures, work instructions, documentation, security equipment and systems, PPE, tools and materials required to achieve the performance evidence
- security equipment and system information to support testing activities
- AS/NZS 2201.
