FBPFSY5003 Design a traceability system for food products

Release: 1

FBPFSY5003 Design a traceability system for food products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Application

This unit of competency describes the skills and knowledge required to design a traceability system to track any food through all stages of production, processing and distribution. This system allows for the efficient withdrawal or recall of products that have been identified as unsafe and is a requirement under Food Standards Australia and New Zealand (FSANZ).

This unit applies to individuals who are responsible for food product development and who undertake roles in product design, quality assurance or production management.

All work must be carried out to comply with workplace procedures, in accordance with state/territory health and safety and food safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Food Safety (FSY)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Research traceability requirements and systems	1.1 Identify food and/or beverage product to be tracked 1.2 Identify regulatory and industry requirements for tracking processed food or beverages 1.3 Investigate traceability systems available on the free market, and

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	assess their suitability for food product 1.4 Investigate the development of a customised system to track product
2. Develop and test system	2.1 Devise system to track details of food item, including supply of product ingredients and/or raw materials, processing details, packaging and distribution 2.2 Test system by conducting a traceability exercise to ensure product and ingredients can be identified through recall 2.3 Adjust system details to ensure efficient recall of product 2.4 Ensure system meets the requirements of the Food Standards Code for specified product

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	Problem-solve issues that arise with traceability
Reading	Interpret regulatory and industry traceability requirements
Writing	Determine product and ingredient details for labels and/or product specifications

Assessment Requirements for FBPFSY5003 Design a traceability system for food products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has designed a traceability system for at least one manufactured food or beverage product, that includes identification of records for:

- production
- supplied ingredients and/or materials
- volume or quantity of products manufactured or supplied
- batch or lot identification (or other markings)
- where products are distributed
- any other relevant production records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- traceability requirements for food businesses identified in the Food Standards Code, particularly Standard 3.2.2 and any standards relevant to the items produced at the organisation
- the requirement for food businesses to be able to recall unsafe food through readily accessible records that include:
 - production records
 - what products are manufactured or supplied
 - volume or quantity of products manufactured or supplied
 - batch or lot identification (or other markings)
 - where products are distributed
- specific traceability requirements of food or beverage produced at the organisation
- different types of traceability systems used in the food processing environment, including bar codes, radio frequency identification, paper-based systems

- industry and government initiatives for improving traceability systems
- consumers' requirement to know more about the products they buy, including information about:
 - food safety
 - animal and plant pest and disease status
 - provenance
 - authenticity
 - social matters such as sustainability and animal/worker welfare practices.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a food or beverage processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - food or beverage products
- specifications:
 - food and ingredient labels or specifications
 - food/ingredient packaging
 - workplace production records
 - guidelines for traceability.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
