Assessment Requirements for FBPHVB3002 Operate and monitor a laminated pastry production process

Release: 1

Assessment Requirements for FBPHVB3002 Operate and monitor a laminated pastry production process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated and monitored pastry production equipment to produce at least one batch of rolled, laminated pastry to meet specifications, including:

- applying safe work procedures
- following food safety procedures
- monitoring and adjusting pastry production process equipment to achieve production outcomes, including setting up and starting up mixers, rollers and laminating processes
- monitoring supply and flow of materials to and from the dough preparation process and equipment operation to confirm process remains within specification, including:
 - flour temperature and type
 - water temperature
 - fat type, distribution and percentage required for pastry types
 - rework pastry addition
 - dough characteristics
 - mixing time
- rolling and laminating dough to specification, including:
 - ensuring in-line hoppers are filled with flour to prevent pastry sticking to rollers
 - ensuring roller settings are within specification
 - checking pastry thickness, fat percentage and number of pastry layers
- taking corrective action in response to typical faults and inconsistencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the laminated pastry production process
- procedures for selecting ingredients and materials for laminated pastry production, including:
 - recipe and production specifications
 - supply, condition and quality of ingredients
- laminated pastry ingredients and their purpose
- types of processing equipment, including:
 - weighing equipment
 - mixing equipment
 - laminating and rolling equipment
 - cutting and stacking equipment
 - testing equipment
 - spike rollers and cutters
 - conveyors
 - rework bins
- basic operating principles of laminated pastry production equipment, including:
 - main equipment components
 - status and purpose of guards
 - equipment operating capacities and applications
 - purpose and location of sensors and related feedback instrumentation
- basic operating principles of process control, including the relationship between control panels and systems and laminated pastry production equipment
- key features of the flow of the laminated pastry production process, and the effect of outputs on customer satisfaction and downstream processes, including filling, forming and baking
- quality requirements, including:
 - materials and ingredients, and effect of variation on laminated pastry production process performance
 - finished laminated pastry
- laminated pastry production process specifications, procedures and operating parameters
- methods used to monitor the laminated pastry production process, including:
 - inspecting, measuring and testing processes
 - inspection or test points (control points) in the process
 - related procedures and recording requirements
- common causes of variation, and corrective action required, including the relationships between time and temperature and humidity in the laminated pastry production process
- contamination/cross-contamination and food safety risks associated with the process, and related control measures
- good manufacturing practices (GMP) relevant to work task

- fundamentals of common microbiological, physical, chemical and allergen hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences, and control methods to prevent occurrence
- health and safety procedures to ensure safe work
- environmental issues and controls relevant to the pastry production process, including waste/rework collection and handling procedures related to the process
- emerging technologies related to high volume production baking
- procedures and responsibility for reporting production and performance information
- cleaning and sanitation procedures required for production equipment and work area
- recording procedures to track traceability of product.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - a high volume production bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - personal protective equipment
 - laminated pastry production equipment
 - ingredients to produce laminated pastry products
 - cleaning materials and equipment
- specifications:
 - work instructions, including control points and laminated pastry production parameters
 - production schedule, and recipe and batch specifications for laminated pastry products
 - information on equipment capacity and operating parameters
 - recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
