Assessment Requirements for FBPOPR2033 Operate a depositing process

Release: 1

Assessment Requirements for FBPOPR2033 Operate a depositing process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has operated a depositing process on at least one occasion, including:

- accessing workplace information to identify depositing processing requirements
- selecting, fitting and using personal protective clothing and/or equipment
- confirming supply of necessary materials and services for production, including confirming condition of materials, including temperature, texture, appearance and holding times, prior to use
- conducting pre-start checks, including:
 - inspecting equipment condition to identify any signs of wear
 - selecting appropriate settings and/or related parameters
 - setting up depositor manifold and controls to meet production requirements and cancelling isolation or lock-outs
 - confirming that related equipment is clean and correctly configured for processing requirements
 - sensors and controls are correctly positioned
 - any scheduled maintenance has been carried out
 - all safety guards are in place and operational
- starting, operating, monitoring and adjusting depositing process equipment to achieve required outcomes, including monitoring control points and conducting inspections to confirm the process remains within specification, including:
 - maintaining supply of materials to hopper
 - controlling weights
 - checking dimensions and positioning of deposited material
 - visual inspections to identify faults, including unacceptable placement
 - checking pump stroke settings
 - checking line speed

- monitoring supply and flow of materials to and from the depositing process to confirm process remains within specification
- taking corrective action in response to out-of-specification results
- responding to and/or reporting equipment failure within level of responsibility
- locating emergency stop functions on equipment
- following isolation and lock-out/tag-out procedures to take depositing process and related equipment off-line in preparation for cleaning and/or maintenance within level of responsibility
- completing workplace records
- maintaining work area to meet housekeeping standards
- using process control systems according to workplace procedures
- cleaning and sanitising equipment according to workplace procedures
- following relevant work health and safety procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the depositing process, including product preparation and conditioning requirements and product depositing
- basic operating principles of equipment used in the depositing process, including:
 - main equipment components
 - status and purpose of guards
 - equipment operating capacities and applications
 - the purpose and location of sensors and related feedback instrumentation
 - services required and action to take if services are not available
- the flow of the depositing process and the effect of outputs on downstream processes
- quality requirements of materials for depositing and the effect of variation on depositing process performance and outputs
- quality characteristics required of outputs from the depositing process
- operating requirements and parameters of the depositing process, and corrective action required where operation is outside specified operating parameters
- scope to adjust for weight variation within workplace quality parameters
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- methods used to monitor the depositing process, including inspecting, measuring and testing by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements
- contamination/food safety risks associated with the depositing process and related control measures
- common causes of variation in the operation of the depositing process and corrective action required

- work health and safety hazards and controls relevant to the operation of the depositing process
- requirements of different shutdowns as appropriate to the depositing process and workplace production requirements, including emergency and routine shutdowns, and procedures to follow in the event of a power outage
- isolation, lock-out and tag-out procedures and responsibilities required for the operation of the depositing process
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the depositing process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitising procedures required for the depositing process.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
 - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - personal protective clothing and equipment
 - depositing and related equipment
 - ingredients/mix to be deposited
 - recipe/batch instructions
- specifications:
 - work procedures, including advice on safe work practices, food safety, quality and environmental requirements
 - information on equipment capacity and operating parameters
 - specifications, control points and processing parameters
 - sampling schedules and test procedures and equipment
 - documentation and recording requirements and procedures
 - cleaning procedures, materials and equipment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
