Assessment Requirements for FWPCOT3223 Grade and mark logs

Release: 1

Assessment Requirements for FWPCOT3223 Grade and mark logs

Modification History

Release	Comment
1	Replaces equivalent unit FPICOT3223B Grade and mark logs, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- assess for the purpose of determining the best end use for logs.
- use calipers and measuring tools to estimate and measure logs and log defects.
- assess defects including allowable length defects involving limbs, multiple length defects, burn scars, bumps, swellings, kinks and bends, straight splits, spiral grain, and associated splits
- follow site policies and procedures and industry standards for grading and marking logs
- safely and efficiently evaluate, grade and mark logs for segregation
- identify log grade.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- organisational and site standards, policies and procedures for grading and marking logs
- mathematical procedures for estimation and measurement of logs
- industry standards for log species, size and characteristics, and defects and length dimensions
- types of timber products including debarked logs, poles, piles, girders, veneer, graded sawlog, fencing products, non-graded sawlog, pulp
- wood characteristics including species, pipe, open pipe, discontinuous and irregular shaped pipes, loose gum veins, gum pockets and rings, termites and grubs, hearts out of centre, brown stain, rot, punk, cork or pith, black borer, black heart, straight shakes, shakes in spiral grain, overgrowth and doze pockets, small log pipe allowance, length, non-allowable length defects
- criteria for recycling and re-using timber with defects
- procedures to grade and mark logs for segregation, which must include segregation codes
- procedures for recording and reporting workplace information.

Assessment Conditions

The following resources must be made available:

- logs for grading and marking
- logs with different defects
- industry standards for log species
- tools for the measurement of logs
- personal protective equipment required for grading and marking logs.

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
