FWPSAW2213 De-stack timber drying racks

Release: 1

FWPSAW2213 De-stack timber drying racks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Application

This unit of competency describes the skills and knowledge required to assess dried timber boards, separate them from seasoning racks, monitor transfer and maintain timber board supply for dressing process.

The unit applies to individuals who de-stack timber drying racks in a dry mill or sawmill work environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sawmilling and Processing (SAW)

Elements and Performance Criteria

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
1. Prepare for de-stacking timber drying racks	1.1 Determine job requirements from work order or instructions and, where required, check with appropriate personnel 1.2 Confirm workplace health and safety and environmental protection practices and/or procedures for task, including use of personal protective equipment

Elements	Performance Criteria
<i>Elements describe the essential outcomes.</i>	<i>Performance criteria describe the performance needed to demonstrate achievement of the element.</i>
	1.3 Identify and assess hazards and take actions to mitigate risks related to de-stacking timber drying racks 1.4 Identify type and quantity of boards for de-stacking operation 1.5 Check equipment used in de-stacking timber drying racks for operational effectiveness
2. De-stack timber drying racks	2.1 Assess timber boards visually for type, size and quality 2.2 Measure moisture content of timber boards and approve for de-stacking 2.3 Load racks onto separation equipment according to workplace procedures 2.4 Separate and load timber boards onto conveyor systems 2.5 Remove bearers, spacing stick and other protective items from timber boards and store for return to stacking area 2.6 Reject and dispose of sub-standard materials according to workplace environmental protection practices and/or procedures 2.7 Keep de-stacking area clear of timber scraps and dispose of waste according to workplace environmental protection practices and/or procedures
3. Monitor transfer and maintain supply of timber board to subsequent operation	3.1 Monitor conveyor transfer procedures and keep free from blockages 3.2 Supply racks to timber board separation equipment by maintaining consistent size and species for dressing operation according to work order 3.3 Change timber board supply in response to changes to size for dressing process 3.4 Monitor changeover points according to workplace procedures 3.5 Identify routine process supply and equipment faults, and resolve or report to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	Interpret routine workplace documents related to de-stacking timber drying racks
Writing	Complete routine records for processing and equipment faults
Oral communication	Ask open and closed questions and actively listen to clarify contents of work orders

Assessment Requirements for FWPSAW2213 De-stack timber drying racks

Modification History

Release	Comments
Release 1	This version released with FWP Forest and Wood Products Training Package Version 8.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has de-stacked timber drying racks and maintained the supply of timber boards for dressing process for one production period according to workplace operating procedures.

In performing this task, the individual has:

- followed workplace health and safety and environmental protection practices and/or procedures
- completed pre-operational check and operated equipment involved in de-stacking timber drying racks
- measured moisture content and visually assessed quality of timber boards
- separated timber boards from the rack bearers and spacing sticks
- maintained the required supply of de-stacked timber for dressing process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and operation of equipment used for drying timber
- types and components of timber drying racks, including:
 - air seasoning or kiln seasoning racks
 - timber, steel or mobile racks with bearers and spacing sticks
- mechanical timber board separation machine and conveyor system
- methods used to measure moisture content of timber
- techniques for de-stacking timber drying racks
- markings used on timber boards to identify grade
- workflow processes used to de-stack timber drying racks
- flow of timber board supply in and out of de-stacking area

- timber storage systems and labelling
- characteristics used to visually assess timber boards, including:
 - type
 - finish quality
 - timber defects
 - length
 - width
 - thickness
- typical timber defects and how they affect ability to produce a quality finished product, including:
 - incorrect moisture content
 - warp
 - wane
 - cupping
 - shakes
 - insect defects
 - knots
 - resin pockets
- range of industry standard lengths, cross-sections, appearance grades and applicable terminology
- workplace procedures specific to de-stacking timber drying racks, including:
 - health and safety, with particular emphasis on use of personal protective and other equipment
 - communication reporting lines
 - recording and reporting processing and equipment faults
- workplace environmental protection requirements and practices for timber processing operations, including:
 - cleaning of plant, tools and equipment
 - reducing water and energy use
 - disposing of, recycling and reusing timber
 - disposal of waste material.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a timber processing plant, a timber product manufacturing plant or an environment that accurately represents workplace conditions
- resources, equipment and materials:

- timber drying racks to de-stack
- mechanical board separation machine with conveyor system
- moisture probes
- personal protective equipment suitable for de-stacking seasoning racks
- specifications:
 - workplace procedures for de-stacking seasoning racks
 - workplace health and safety and environmental protection policies and/or procedures applicable to de-stacking seasoning racks.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
