Assessment Requirements for FWPWPP3207 Clip veneer

Release: 1

Assessment Requirements for FWPWPP3207 Clip veneer

Modification History

Release	Comment
1	Replaces equivalent unit FPIWPP3207B Clip veneer, which was first released with FPI11 Forest and Forest Products Training Package Version 2.2. This is the first release of this unit in the new standards format. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit. If a specific volume or frequency is not stated below, then evidence must be provided that the following requirements have been performed on at least one occasion:

- clip veneer to form a straight edge and remove these types of defects in line with individual work orders that prescribe different dimensions and quantities:
 - uneven edges
 - split edges
 - excessive knots
- for each of the above jobs, visually inspect veneer to re-classify its quality and use after clipping.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- environmental protection practices for forest products factory settings:
 - reducing water and energy use
 - cleaning plant, tools and equipment
 - disposing of, recycling and reusing veneer
- typical flow of material supply in and out of the veneer clipping area
- typical work flow processes and veneer clipping techniques for optimising use of veneer panels
- methods used to visually assess condition of veneer for dimension, typical production and other defects:

- warp
- wane
- knots
- splits
- uneven edges
- key features of industry standard grades for re-classifying quality of clipped veneer and applicable terminology
- purpose, features and operation of equipment used to clip veneer:
- measuring tapes
- dial gauges
- clipping machines
- guillotines
- conveyor belt systems
- different types of lifting equipment:
 - fork lifts
 - slings
 - trolley jacks
 - gantry cranes
 - loaders
- organisational procedures specific to clipping veneer:
- workplace health and safety with particular emphasis on equipment lock out and use of personal protective equipment
- communication reporting lines
- recording and reporting production outcomes and equipment faults.

Assessment Conditions

The following resources must be made available:

- measuring tapes
- clipping machines
- guillotines
- lifting equipment
- personal protective equipment suitable for clipping veneer
- a diverse range of commercial veneer
- manufacturers' instructions for use of equipment
- work order with specific instructions for clipping veneer
- template documents for recording production outcomes and equipment faults
- relevant personnel for the purposes of communicating information
- organisational procedures for clipping veneer

Competency is to be assessed in the workplace or a simulated environment that accurately reflects performance in a real workplace setting.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
