Assessment Requirements for HLTAMAT005 Provide health care for children

Release: 1

Assessment Requirements for HLTAMAT005 Provide health care for children

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- contribute to the planning of treatment and care for five different Aboriginal and/or Torres Strait Islander children including:
 - children aged between 0 to 5 years
 - children aged between 6 to 14 years
- for each of the five children, and according to their individual needs and care plan:
 - explain all aspects of the health care plan to the child and family or carer
 - administer clinical treatments within scope of practice, and collectively cover at least five different treatments across the five children
 - provide information about children's health and development screening services
 - source information about children's health support services, explain their key features and advise clients how to access services
 - monitor the child's ongoing health care and evaluate, in consultation with the health care team, outcomes against their health care plan
 - document, in child's records, accurate details of each client contact, referrals provided, treatments administered and the evaluation of health outcomes.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for recording health care plans in client records
- organisational responsibilities and role boundaries of those involved in developing and implementing health care plans for children:
 - Aboriginal and/or Torres Strait Islander health practitioners
 - medical practitioners, registered nurses and other members of the multidisciplinary care team
- how multidisciplinary health teams work together to coordinate treatments and care, and how to facilitate referrals
- the role of standard treatment protocols in developing and implementing health care plans for children:

- types that are used by primary health care organisations including Standard Treatment Manuals (STM) and how to access
- purpose, format and inclusions
- how to use to identify children's treatment options and administer treatments
- the concept of holistic health care management, and the broad meaning of a 'treatment' within a health care plan
- common types of treatments included in children's health care plans and when the following would be indicated:
 - use of medications
 - clinical treatments
 - child and family self-care strategies
 - promotion of good nutrition and physical activity
 - therapies for children who do not meet expected development milestones for age
- formats and typical inclusions of written health care plans:
 - details of planned treatments and referrals
 - treatment and child, family or carer goals
 - schedules for follow-up care, monitoring and reassessment
 - roles and responsibilities of health care team members
- the importance of developing care plans that involve the child, their family or carer and the multidisciplinary care team
- different types of infection control precautions and when these would be used for different types of clinical treatments
- equipment, standard treatment protocols and pharmacology for common health conditions for children:
 - anaemia
 - asthma
 - diabetes
 - malnutrition
 - obesity
 - dehydration
 - respiratory tract infections
 - urinary tract infections
 - digestive and gastrointestinal conditions including gastroenteritis
 - eye and ear infections including cleaning and administering drops and ointment
 - oral infections
 - bacterial, viral, fungal and parasitic skin infections including cleaning and dressing infected skin, treating parasites including head lice and scabies
 - sprains and fractures including bandaging and splinting
 - wound management including cleaning and dressing
- for childhood immunisations:
 - requirements for practitioner accreditation to administer

- requirements and schedules
- equipment and standard protocols for administering
- importance of general health assessments and screening tests in the early detection and treatment of childhood conditions
- children's screening programs available in the local community, state or territory, how to access these and any associated costs and benefits paid
- children and family support services available in the community, state or territory:
 - for children's health and wellbeing in general and for particular childhood conditions and developmental needs
 - specialist services available to children of different genders and ages, and to Aboriginal and/or Torres Strait Islander children
 - how to access information about the types of services and resources they provide
 - how clients can access services and the role of health practitioners in facilitating access
- how to use client information systems and recall functions to follow-up clients for ongoing care, monitoring and evaluation.

Assessment Conditions

Skills must be demonstrated in a health service workplace within a multidisciplinary primary health care team.

Evidence of performance must be gathered:

- during on-the-job assessments in the workplace under live conditions while interacting with Aboriginal and/or Torres Strait Islander children, and families or carers, or
- during off-the-job assessments in the workplace, not under live conditions, using simulated activities while interacting with Aboriginal and/or Torres Strait Islander children, and families or carers.

Evidence of workplace performance can be gathered and reported through third party report processes. (Refer to the Companion Volume Implementation Guide for information on third party reporting.)

Evidence can be supplemented by assessments in a simulated workplace environment using simulated activities, scenarios or case studies only when:

- the full range of situations covered by the unit cannot be provided in the individual's workplace, or
- situations covered by the unit occur only rarely in the individual's workplace.

Assessment must ensure the use of:

- personal protective equipment (PPE) for infection control
- medical equipment and consumables suited to the treatment of common childhood conditions
- clinical waste and sharps disposal bins
- client records including results of health assessments
- template health care plans

- children's health standard treatment protocols used by the organisation which can include Standard Treatment Manuals
- organisational policies and procedures for recording health care plans in client records
- manufacturer specifications

Assessors must satisfy the Standards for Registered Training Organisations requirements for assessors, and:

- be an Aboriginal and/or Torres Strait Islander person who has applied the skills and knowledge covered in this unit of competency through experience working as an Aboriginal and/or Torres Strait Islander health practitioner, or
- be a registered health practitioner with experience relevant to this unit of competency and be accompanied by, or have assessments validated by, an Aboriginal and/or Torres Strait Islander person.
