LMTTX2003B Perform spinning operations

Revision Number: 1

LMTTX2003B Perform spinning operations

Modification History

Not applicable.

Unit Descriptor

Unit descriptor This unit covers the skills and knowledge to undertake and monitor machines used in spinning operations.

Application of the Unit

Application of the Unit

The unit applies to the preparation, operation, monitoring and adjusting of a spinning machine used to convert slivers to yarn.

Work is conducted according to defined procedures.

Work may be conducted in small to large scale enterprises and may involve individual and team related activities.

The application of this unit is in accordance with OHS practices of the enterprise and workplace practices, which may include:

- requirements prescribed by legislation, awards, agreements and conditions of employment
- standard operating procedures
- work instructions
- oral, written and visual communication
- quality practices, including responsibility for maintenance of own work quality and contribution to quality improvement of team or section output
- housekeeping
- tasks related to environmental protection, waste disposal, pollution control, and recycling

This unit requires the application of skills associated with planning and organising for the safe and efficient use of machines and technology. This unit also requires the ability to check the quality of products, identify and communicate inconsistencies or other problems and complete workplace documentation. Self management skills are applied to ensure workplace and quality standards are achieved.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

Employability Skills Information

Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1 Set up and load <i>machine</i>	1.1 Specifications are checked to identify requirements for production. 1.2 Machine settings are adjusted to meet <i>product requirements</i>. 1.3 Product is loaded for processing according to manufacturer specifications. 1.4 Product is unloaded ready for next process. 1.5 Non-conforming materials are reported. 1.6 Area around machine is kept clean during setting and loading.
2 Operate and monitor machine	2.1 Machine is started and stopped in accordance with manufacturer requirements. 2.2 <i>Machine operations</i> are monitored to ensure correct operation. 2.3 Waste is sorted. 2.4 Machine is cleaned when required. 2.5 Minor product process and machine faults are identified and corrected where necessary to meet specified requirements and are reported. 2.6 Major machine faults are reported.
3 Check yarn quality	3.1 Product is checked against quality standards. 3.2 Product is assessed for <i>faults</i> and non-conformances. 3.3 Product faults are rectified or reported.
4 Complete operations	4.1 Product is doffed and replaced according to manufacturer specifications. 4.2 Product is dispatched to next process. 4.3 Cleaning of area is completed to ensure work environment is maintained in a safe and productive manner. 4.4 Production records and other documentation are accurately completed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level

Demonstrates knowledge of:

- procedures and guidelines for safe operation of spinning machine
- typical fault conditions and related fault finding procedures
- types and styles of slubbing
- machine maintenance and repair techniques
- technical specifications manuals
- quality standards and practices
- OHS practices, including hazard identification and control measures
- workplace practices
- recording and reporting practices

Demonstrates skills to:

- check machine safety equipment and report any faults
- prepare slubbing for spinning
- load and unload materials according to machine and workplace practices
- start and stop machines according to specifications
- monitor machine operations including machine production readings
- recognise, rectify and report machine faults or problems as required
- clean machines as required
- check machine maintenance records
- recognise fault conditions
- check and confirm compliance to operational specifications
- read, interpret and follow information on work specifications, standard operating procedures and work instructions, and other reference material
- maintain accurate records
- communicate within the workplace
- sequence operations
- meet specifications
- clarify and check task-related information
- carry out work according to OHS practices

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects of evidence to be considered	Demonstrates skills and knowledge to: • interpret production orders and schedules • check machine settings to meet production requirements • monitor spinning operations according to defined procedures and methods • make minor adjustments • check product against quality standards • load and unload products according to workplace practices • complete records accurately and completely • apply OHS practices in work operations
Consistency in performance	Consistently applies skills and knowledge when: • organising work • completing tasks according to instructions • working systematically with attention to detail • identifying improvements and avoiding damage • using workplace practices • using OHS practices • recording and reporting accidents and incidents • assessing operational readiness of equipment • recognising and adapting to cultural differences in the workplace, including modes of behaviour and interactions
Resource implications	Access is required to real or appropriately simulated situations, including work areas, materials and equipment, and to information on workplace practices and OHS practices.
Context for assessment	Assessment may occur on the job or in an appropriately simulated environment.
Interdependent Assessment	This unit may be assessed independently or in combination with other relevant units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Legislative/regulatory requirements	All work must comply with relevant Federal and State or Territory legislative or regulatory requirements.
Machines may include	• drawing machines • roving machines • spinning machines • twisting machines • winding machines
Product requirements may include	• count • twist • ply • tension • weight • lubrication • twist direction • strength • extension
Machine operations may include	• drafting • twisting • splicing • piecing up, joining • fault identification • steaming • vacuuming • oiling
Faults may include	• double ends • high thin places • wrong count • contamination • piecing up
OHS practices	OHS practices include hazard identification and control, risk assessment and implementation of risk reduction measures specific to the tasks described by this unit, and may relate to: • manual handling techniques

- standard operating procedures
- personal protective equipment
- safe materials handling
- taking of rest breaks
- ergonomic arrangement of workplaces
- following marked walkways
- safe storage of equipment
- housekeeping
- reporting accidents and incidents
- environmental practices
