Assessment Requirements for MEA605

Inspect, test and troubleshoot aircraft stores suspension systems and components

Release: 1

Assessment Requirements for MEA605 Inspect, test and troubleshoot aircraft stores suspension systems and components

Modification History

Release 1 - New unit of competency

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment, and must include:

- applying all safety procedures relating to aircraft SSS
- applying hand skills in removal and installation of SSS components
- using ground support equipment and test equipment
- applying system and component knowledge and logical fault-finding procedures and applicable maintenance data in the troubleshooting of SSS and component faults
- performing system functional tests and checks to isolate system faults and assess post-maintenance serviceability
- explosive ordnance safety and handling procedures
- manual handling of SMS components.

The underlying skills inherent in this unit should be transferable across a range of aircraft SSS and system component inspection, testing and troubleshooting activities. It is essential that assessment confirms the ability to comply with organisational safety requirements and appropriate legislative and regulatory requirements while maintaining SSS. The ability to work safely within an explosive ordnance environment, conduct applicable tests and maintain relevant documentation is critical, including checking specifically for:

- failure to check aircraft safety devices are installed
- failure to ensure firing devices checked and removed if fitted
- commencing task prior to initiating documentation
- failure to comply with relevant WHS procedures and policies.
-

Knowledge Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- the aircraft operating and maintenance environment
- aircraft SSS and component operation and interfaces with other aircraft systems
- hardware and component attachment methods
- WHS procedures and policies
- explosive ordnance safety and handling procedures
- technical publications and manuals

- technical documentation procedures.

Assessment Conditions

- Competency should be assessed on aircraft and/or simulator using materials, tools and equipment specified in the maintenance manuals and applicable procedures. It is also expected that general and special-purpose tools and ground support equipment would be used where appropriate.
- The unit may be assessed independently or in conjunction with unit MEA604 Inspect, test and troubleshoot aircraft stores management systems and components.
- Evidence of transferability of skills and knowledge related to SSS and component inspection, testing and troubleshooting is essential. This is to be established through demonstration of the ability to:
 - render the system safe
 - perform relevant inspections and tests
 - troubleshoot faults and perform appropriate rectification action.
- The work plan should take account of applicable safety and quality requirements in accordance with the industry and regulatory standards.
- The following conditions of assessment represent the requirements of the ADF and must be rigorously observed.
- A person cannot be assessed as competent until it can be demonstrated to the satisfaction of the workplace assessor that the relevant elements and performance criteria of the unit of competency are being achieved under routine supervision on a range of inspection, testing and troubleshooting tasks involving the following SSS components:
 - bomb release unit
 - pylon
 - missile launcher.
- This shall be established via the records in the Log of Industrial Experience and Achievement or, where appropriate, an equivalent Industry Evidence Guide (for details refer to the Companion Volume Assessment Guidelines).
- In addition to evidence provided in the Log of Industrial Experience assessment methods may include questioning and observation in operational or simulated environments.
- Assessors must satisfy the requirements of the National Vocational Education and Training Regulator (Australian Skills Quality Authority, or its successors).
