**Assessment Requirements for
MEACOM0023 Perform aviation
maintenance-related integrated logistic
support management activities**

Assessment Requirements for MEACOM0023 Perform aviation maintenance-related integrated logistic support management activities

Modification History

Release 1. Application changed. Elements and Performance Criteria changed. Foundation Skills made explicit. Assessment Requirements clarified. Supersedes and is equivalent to MEA139 Perform aviation maintenance-related integrated logistic support management activities.

Performance Evidence

There must be evidence the candidate has completed all the tasks outlined in the elements and performance criteria of this unit, and demonstrated the ability to apply integrated logistic support (ILS) principles and related data management and analysis tools in the maintenance-related management and support of the following systems and products throughout their life of type and in line with contractual and regulatory requirements:

- one aircraft or item of aeronautical product
- one aircraft system or avionics system.

In the course of the above work, the candidate must:

- analyse the life cycle cost of factors that relate to the above system and product, including:
 - its operation
 - engineering support
 - maintenance support
 - supply support
 - facilities' costs
 - personnel costs
- analyse and review data using databases and analysis tools
- populate the logistic support analysis (LSA) record of the following types of analyses:
 - in-service failure mode effects and criticality analysis
 - corrective maintenance analysis
 - reliability centred maintenance analysis
 - maintenance task analysis
 - repair level analysis
- extract data from the database as required
- develop a data management system capable of:
 - maintaining required technical data
 - retaining original and back-up data in separate locations

- storing data in a manner that minimises risk of loss, theft or destruction
- monitor relevance of technical data by:
 - monitoring engineering, maintenance, and supply support activities
 - using user feedback.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- ILS management and support philosophy and practice
- LSA concepts and methods, including:
 - preparation of LSA plans
 - management and conduct of LSA programs
 - supportability analysis
 - task analysis
 - LSA record population
- reliability, availability and maintainability (RAM) determination and application, including:
 - baseline determination and application
 - RAM modelling
 - reliability and maintainability apportionment
- key features of databases and tools used to analyse data
- data management concepts and methods.

Assessment Conditions

The following conditions of assessment represent the requirements of the regulators (DASA and CASA) and maintenance stakeholders and must be rigorously observed.

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies encountered in performing aviation maintenance-related integrated logistic support management activities, or a combination of on- and off-the-job assessment. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
 - workplace procedures, product and manufacturing specifications, codes, standards, manuals, and reference materials relevant to performing aviation maintenance-related integrated logistic support management activities
 - all ILS management tools, equipment, materials, and documentation required to demonstrate the performance evidence above.

Evidence of tasks demonstrating competency must be recorded in a log of industrial experience and achievement. Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.
