Assessment Requirements for MEM234009 Design computer-integrated manufacturing systems

Release: 1

Assessment Requirements for MEM234009 Design computer-integrated manufacturing systems

Modification History

Release 1. Supersedes and is equivalent to MEM234009A Design computer-integrated manufacturing systems.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- interpreting features of plant and equipment and parameters of the brief or contract
- advising client based on discipline knowledge and work health and safety (WHS) and regulatory standards
- researching design parameters
- determining WHS, regulatory and risk management requirements
- investigating and measuring to confirm the parameters for required design
- investigating faults in existing designs propose solutions
- modelling and calculating using appropriate software and validation techniques
- generating and evaluating solutions for feasibility against design criteria
- designing computer-integrated manufacturing (CIM) system solution on at least two occasions
- communicating, negotiating and reviewing with stakeholders and client throughout the process to obtain agreement on proposal and sign-off on design
- documenting design with drawings, specifications and instructions.

Note: Where a volume and/or frequency is not specified, demonstration must be provided at least once.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- current CIM design skills and techniques including:
 - mechanical, electrical, fluid, electronic and information technologies
 - sensor and transducers
 - controllers
 - interfacing and signal conditioning
 - networking, software
 - data sharing and control functions
- brief or contract parameters

- techniques for:
 - continuous improvement
 - problem-solving and decision-making
 - root cause analysis (RCA) or failure mode and effects analysis (FMEA) or design review based on failure mode (DRBFM), and Pareto analysis
- features and capability of plant, equipment, controllers, software, network and communication systems
- automation safety considerations
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements
- engineering design software options
- contemporary engineering design methods
- software options for control and data sharing
- hardware options and capabilities to suit processes and products
- CIM communication protocols
- programming and use of CIM software
- documentation, drawings, specifications, instructions, process information and programming required for design.

Assessment Conditions

- Assessors must:
 - have vocational competency in designing computer-integrated manufacturing systems at least to the level being assessed with relevant industry knowledge and experience
 - satisfy the assessor requirements in the Standards for Registered Training Organisations 2015 or its replacement and comply with the National Vocational Education and Training Regulator Act 2011, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Where possible assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
