Assessment Requirements for MEM30010 Set up basic hydraulic circuits

Release: 1

Assessment Requirements for MEM30010 Set up basic hydraulic circuits

Modification History

Release 1. Supersedes and is equivalent to MEM30010A Set up basic hydraulic circuits.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include:

- determining system requirements
- selecting hydraulic circuit components
- setting up basic hydraulic circuits on at least two occasions
- verifying component selection.

Note: Where a volume and/or frequency is not specified, demonstration must be provided at least once.

Knowledge Evidence

Evidence required to demonstrate the required knowledge for this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include knowledge of:

- fluid power principles including:
 - definition of the term fluid power
 - differences between pneumatic and hydraulic systems
 - advantages and disadvantages of fluid power compared with mechanical and electric power systems
 - safety procedures when working with fluid power equipment
 - basic properties of fluids
 - selection and suitability for different applications
 - basic properties and units including mass, volume, density, specific volume, relative density, force and weight, pressure (absolute, atmospheric and gauge), temperature (Celsius and Kelvin), viscosity and surface tension
 - introduction to temperature and pressure effects on the basic properties and applications
 - precautions to be taken when changing type of fluid in a system
- hydraulic system components including:
 - pipes including rigid and flexible
 - valves including types and functions
 - filters and strainers for liquids

- gauges and instruments including pressure gauges, temperature gauges, liquid level gauges, thermometers, thermocouples, manometers and piezometers
- pipe fittings including elbows/bends, enlargement/contractions, coupler/unions and tees
- tanks and vessels including storage tanks, pressure vessels, header and surge tanks and weirs/dams/reservoirs
- flow measurement instruments including venturi and orifice meters
- pumps, motors and turbines
- linear actuators including:
 - types, selection and functions
 - methods of supporting linear actuators
 - introduction to calculations related to linear actuators
 - recognition and drawing of standard symbols
 - observation and analysis of performance of linear actuators in laboratory circuits
- hydraulic control valves including:
 - directional controls and functions
 - check valves and functions
 - pressure controls and functions
 - flow controls and functions
 - drawing and analysis of typical circuits containing control valves
 - observation and analysis of performance of valves in basic circuits
- circuit design and analysis (single linear actuator) including:
 - recognition and drawing of standard symbols for hydraulic components
 - drawing and analysis of circuit diagrams containing basic components
- setting up and operating circuits on hydraulic benches in a fluid power laboratory.
-

Assessment Conditions

- Assessors must:
 - have vocational competency in setting up basic hydraulic circuits at least to the level being assessed with relevant industry knowledge and experience
 - satisfy the assessor requirements in the *Standards for Registered Training Organisations 2015 or its replacement* and comply with the *National Vocational Education and Training Regulator Act 2011*, its replacement or equivalent legislation covering VET regulation in a non-referring state/territory as the case requires.
- Where possible, assessment must occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
