**Assessment Requirements for MSFID5014
Use CAD applications to complete models
and documentation for interior design
projects**

Assessment Requirements for MSFID5014 Use CAD applications to complete models and documentation for interior design projects

Modification History

Release 1 - New unit of competency

Performance Evidence

- Interpret work orders and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Design and produce at least two (2) 2-D CAD drawings and two (2) 3-D CAD drawings that document the requirements of the design brief applying drafting and drawing protocols in accordance with Australian Standards and the Building Code of Australia (BCA)
- Apply design elements and principles to designing with CAD applications
- Use mathematical ideas and techniques to correctly complete measurements, calculate area/volume and estimate material requirements
- Communicate ideas and information to enable confirmation of work requirements and specifications, presentation of design/colour concepts, the reporting of work outcomes and problems
- Apply design concepts to drawings
- Initiate new ideas and work techniques
- Avoid backtracking, work flow interruptions or wastage
- Work with others and in a team by recognising dependencies and using cooperative approaches to optimise work flow and productivity

Knowledge Evidence

- State or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of processes for using CAD applications
- Organisational and site standards, requirements, policies and procedures for using CAD applications
- Elements and principles of design, including liveability and accessibility
- Types of CAD equipment and procedures for their safe use, operation and maintenance
- Relevant computer programs and CAD applications

- Drafting and drawing codes and practices relevant to interior design
- 2-D and 3-D drawing techniques
- Appropriate mathematical procedures for estimation and measurement
- Documentation control procedures
- Relevant problem identification and resolution techniques

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors
 - have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
 - be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, multimedia evidence, supervisor's reports, projects and work samples.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to materials, equipment and specifications relevant to designing with CAD applications.
