MSFKB4008 Determine layout for laundry components

Release: 1

MSFKB4008 Determine layout for laundry components

Modification History

Release 1 - New unit of competency

Application

This unit of competency covers designing and documenting the layout for a laundry, including placement of components, such as cabinets, appliances and required laundry facilities applying design principles to spatial considerations for a laundry. It does not include designing any changes to plumbing, electrical or waterproofing, other than the location of required service.

Licensing, legislative or certification requirements may apply to this unit and relevant state/territory and local government agencies should be consulted to determine any necessary certification or licensing for undertaking kitchen and bathroom work. Access to construction sites requires certification of general induction training specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007).

Pre-requisite Unit

Competency Field

Unit Sector

Kitchens and Bathrooms

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|--|
| 1 | Confirm and analyse the laundry design requirements | 1.1 | Communication is established with the client and information regarding the client needs and expectations is obtained |
| | | 1.2 | Key requirements for laundry are assessed and confirmed and constraints determined |
| | | 1.3 | Project parameters are confirmed |
| | | 1.4 | Site analysis is conducted to assess laundry design requirements and limitations |
| | | 1.5 | Spatial considerations are determined specific to the site |

- and client requirements
- | | | | |
|---|-----------------------------------|-----|--|
| 2 | Examine layout options | 2.1 | Location of current services are identified |
| | | 2.2 | Components for inclusion in laundry are identified |
| | | 2.3 | Range of layout options and traffic flow implications are examined |
| | | 2.4 | Suitability of layout options for space is analysed and limitations and benefits determined |
| | | 2.5 | Environmental implications of the layout are assessed and options reviewed to ensure maximum energy efficiency is achieved |
| | | 2.6 | Access issues relating the laundry are identified and addressed in layout options |
| 3 | Select and specify laundry layout | 3.1 | Layout options are discussed with client and preferences selected |
| | | 3.2 | Required changes to service outlets and waterproofing are identified |
| | | 3.3 | Regulatory requirements relating to laundries are assessed to determine compliance |
| | | 3.4 | Laundry layout and components are documented with specifications detailed |
| | | 3.5 | Cost estimate is calculated and provided for client |
| | | 3.6 | Proposal is communicated effectively to the client and alterations negotiated and confirmed |

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency. Detail on appropriate performance levels for each furnishing unit of competency in reading, writing, oral communication and numeracy utilising the Australian Core Skills Framework (ACSF) are provided in the Furnishing Training Package Implementation Guide.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit context includes:	• work health and safety (WHS) requirements, including legislation, building codes, material safety management systems, hazardous and dangerous goods codes, and local safe operating procedures or equivalent • work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements • work requires individual to demonstrate some discretion, judgement and problem solving to residential laundry design and may include the positioning of services and appliances and desired locations for plumbing and electrical outlets
Key requirements include:	• functional requirements • colour, style and form preferences • inclusions • budget • timelines • desired effects • materials, component and finishes • quality • specific conditions
Project parameters include:	• upper and lower budget limits • range of options • specific conditions • scope of brief • approval to make changes • design effect required by client • functionality (short and long term) • established timelines
Site analysis includes:	• identifying current laundry features and services • measuring laundry dimensions and features • identifying structural conditions and features of current laundry layout or which require building or engineering advice in a new laundry design • observing general house style • observing current inclusions and appliances

Spatial considerations include:	• location and capacity of services • requirements of laundry appliances • usage and traffic flows typical to a laundry • laundry storage requirements • specific ergonomic or access requirements
Components include:	• washing machine, dryer, ironing facilities, laundry sink and hanging facilities • storage areas, cabinets and shelving • tiling, fixtures and fittings • shower, shower screen, toilet and basin
Access issues include:	• access for wheelchair and walking support devices • railing and supports • ergonomics required for specific disability, aging, and/or health issues
Documentation includes:	• product information • client information • sketches and drawings (elevations, sections, plans and perspectives) • photos • brochures • computer-aided design (CAD) presentations
Specifications include:	• measurements and dimensions • fixtures and fittings • product codes • materials • components • appliances

Unit Mapping Information

Supersedes and is equivalent to LMFKB4008A Determine layout for laundry components.

Assessment Requirements for MSFKB4008 Determine layout for laundry components

Modification History

Release 1 - New unit of competency

Performance Evidence

- Follow work instructions, operating procedures and inspection processes to:
 - minimise the risk of injury to self or others
 - prevent damage to goods, equipment and products
 - maintain required production output and product quality
- Liaise with client to determine required laundry features and requirements and access and interpret laundry design and component information to determine limitations and benefits of different spatial planning options and layout
- Identify and apply ergonomic and regulatory considerations for laundry designs, including appliance use and location, storage options use patterns and installation requirements to determine suitable layout
- Identify the range of services needed for a laundry design and relevant regulations and construction that impact on the design process and apply spatial considerations to develop a laundry layout to meet client brief
- Use mathematical ideas and techniques to correctly complete measurements, estimate material requirements and cost a laundry design, including drawings and specifications for client consideration and approval
- Communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems, interpret basic plans and follow safety procedures

Knowledge Evidence

- Features of laundry designs and components
- State or territory WHS legislation, regulations, standards and codes of practice relevant to laundry designs
- Characteristics of storage, appliance and service options
- Spatial planning considerations for laundry designs
- Relevant information resources
- Drawing protocols and symbols

Assessment Conditions

- Assessors must:
 - hold training and assessment competencies as determined by the National Skills Standards Council (NSSC) or its successors

- have vocational competency in the furnishing industry at least to the level being assessed with broad industry knowledge and experience, usually combined with a relevant industry qualification
- be familiar with the current skills and knowledge used and have relevant, current experience in the furnishing industry.
- Assessment methods must confirm consistency of performance over time rather than a single assessment event and in a range of workplace relevant contexts.
- Assessment must be by observation of relevant tasks with questioning on underpinning knowledge and, where applicable, supervisor's reports and completed laundry layout design projects.
- Assessment is to be conducted on single units of competency or in conjunction with other related units of competency. Foundation skills are integral to competent performance in the unit and should not be assessed separately.
- Assessment must occur on the job or in a workplace simulated facility with relevant process, equipment, materials, work instructions and deadlines.
- Access is required to work tools and equipment and work-related information resources.
