MSS015015 Evaluate sustainability impact of a process

Release: 1

MSS015015 Evaluate sustainability impact of a process

Modification History

Release 1. Supersedes and is equivalent to MSS015015A Evaluate sustainability impact of a process.

Application

This unit of competency covers evaluating the impact on sustainability of an entire process (manufacturing, logistics, office or other process) or the product from such a process. It does not specifically address the regulatory requirements for an environmental impact statement.

This unit applies to establishing the overall or broad sustainability impact of a process and making recommendations for mitigating negative sustainability impacts. It may apply to value chains beyond the boundary of an organisation, or the entire value chain within an organisation. The unit scope includes products made, services offered, and use of sites by an organisation or part or all of its value chain. This unit covers the application to substantial portions of value chains and may be beyond the boundaries of the organisation.

Environmental sensitivities referred to in this unit are at the issue level. The technical measurement of operational performance or measurement of emissions or other environmental impact is not covered by this unit.

A manager or technical specialist who has a major responsibility for sustainability as part of a broader work role would typically undertake this, or sustainability may be their primary work responsibility. The manager or technical specialist may undertake this alone or as part of a team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--|-----|--|
| 1 | Evaluate the value chain for the selected process | 1.1 | Select portion of the value chain for analysis. |
| | | 1.2 | Identify process steps along the chain. |
| | | 1.3 | Identify the change which occurs at each step. |
| | | 1.4 | Define the interactions with the environment at each step. |
| 2 | Determine sustainability issues for the process | 2.1 | Identify environmental sensitivities at each step in the value chain. |
| | | 2.2 | Identify other sustainability issues at each step in the value chain. |
| | | 2.3 | Short-list sustainability issues which will require action to mitigate or eliminate negative sustainability impacts. |
| 3 | Analyse sustainability issues for the process | 3.1 | Determine root cause of each short-listed issue. |
| | | 3.2 | Develop possible solutions to root causes. |
| | | 3.3 | Develop alternative mitigation strategies where needed. |
| | | 3.4 | Estimate resources required for solutions and alternative mitigation strategies. |
| | | 3.5 | Rank possible solutions strategies by desirability. |
| | | 3.6 | Produce and present report to stakeholders. |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Interactions with the environment include one or more of

- drawing physical resources from the environment
- releasing materials to the environment (e.g. emissions)
- drawing energy from/releasing energy to the environment.

Environmental sensitivities include one or more of

- fragile areas and rare or threatened species
- heritage or religious issues
- hazardous emissions
- regulated emissions or other regulatory issues
- community perceptions or other issues.

Sustainability issues include one or more of

- resource footprint (e.g. carbon and water) of product and process
- current and future availability of raw materials
- current and future availability of energy
- waste generation and disposal
- efficiency of process
- the extent to which the production process and product affects the environment
- relationship with the local and broader community (e.g. effect of operations on aesthetic appearance, preservation of heritage, and proximity to schools and religious facilities)
- extent of regulatory oversight and cost of compliance.

Desirability ranking includes one or more of

- direct dollar benefit/cost
- customer benefit
- stakeholder perception
- life cycle improvements.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS015015A Evaluate sustainability impact of a process.
