MSS015016 Implement and monitor reengineering for sustainability

Release: 1

MSS015016 Implement and monitor reengineering for sustainability

Modification History

Release 1. Supersedes and is equivalent to MSS015016A Implement and monitor reengineering for sustainability.

Application

This unit of competency covers identifying, implementing and monitoring a reengineering process to achieve a sustainability improvement.

This unit applies to production operations that have identified reengineering as a potential strategy for improving sustainability.

This unit includes the identification of the process for reengineering, the development of the sustainability objectives of the reengineering project, establishment of project objectives, implementation and evaluation. The reengineering project may involve consultations and participation by customers and suppliers in the value chain.

A manager or technical specialist who has a major responsibility for sustainability as part of a broader work role would typically undertake this, or sustainability may be their primary work responsibility. The manager or technical specialist may undertake this alone or as part of a team.

The technical measurement of operational performance or measurement of emissions or other environmental impact is not covered by this unit.

This unit does not supply the technical skills for undertaking the engineering alterations, such as installation, commissioning and operation of equipment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Determine the need for reengineering | 1.1 | Choose a process for improvement. |
| | | 1.2 | Analyse process performance. |
| | | 1.3 | Compare reengineering approach with other process improvement methodologies. |
| | | 1.4 | Confirm the need for reengineering. |
| | | | |
| 2 | Determine process objectives | 2.1 | Identify stakeholders in the process. |
| | | 2.2 | Research and define perceived stakeholder benefit from process. |
| | | 2.3 | Translate perceived benefits into product and process specifications. |
| | | 2.4 | Collect current available metrics on process performance. |
| | | 2.5 | Determine metrics for monitoring future sustainability related and other process performance. |
| | | | |
| 3 | Facilitate reengineering study | 3.1 | Organise appointment of reengineering team. |
| | | 3.2 | Determine impact on suppliers and customers during and after reengineering. |
| | | 3.3 | Acquire required resources and authorities to proceed. |
| | | 3.4 | Develop descriptions of alternative processes which will deliver required specifications. |
| | | 3.5 | Short-list most likely alternatives. |
| | | 3.6 | Evaluate short-listed alternatives. |

- | | | | |
|---|---------------------------------------|-----|---|
| | | 3.7 | Rank evaluated short-listed alternatives by desirability. |
| 4 | Implement preferred option | 4.1 | Select preferred option. |
| | | 4.2 | Develop implementation plan for preferred option. |
| | | 4.3 | Negotiate required resources with relevant stakeholders. |
| | | 4.4 | Negotiate timelines and measures/indicators of success with change stakeholders. |
| | | 4.5 | Acquire and deploy resources required to achieve agreed responses. |
| | | 4.6 | Monitor implementation and take action as required to achieve required responses. |
| | | 4.7 | Renegotiate with relevant stakeholders as necessary. |
| 5 | Recommend further improvements | 5.1 | Measure improvements actually obtained. |
| | | 5.2 | Identify non-compliances with planned improvements. |
| | | 5.3 | Determine additional improvements desirable. |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

- | | |
|---|---|
| Process performance analysis includes one or more of | <ul style="list-style-type: none"> • benchmarking comparisons • comparison with theoretical performance • comparisons with regulatory requirements • examination of operational and maintenance records • consultation with operational and maintenance staff to identify informal history (e.g. excessive effort in ‘work arounds’, and making it work in spite of the system) • conflicts in the organisation • an extremely high frequency of meetings • excessive use of non-structured communication (memos and emails). |
| Process improvement methodologies include one or more of | <ul style="list-style-type: none"> • kaizen • kaizen blitz • technical optimisation approaches • reengineering, including new plant and equipment, modification of existing plant and equipment and changes to specification of product or process. |
| Product includes | <ul style="list-style-type: none"> • goods • services. |
| Desirability ranking includes one or more of | <ul style="list-style-type: none"> • direct dollar benefit/cost • customer benefits • stakeholder perception • life cycle improvements • flexibility to adapt to future needs. |

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS015016A Implement and monitor reengineering for sustainability.
