Assessment Requirements for MSTFD4018

Use and apply sizing systems appropriate for fashion design

Release: 1

Assessment Requirements for MSTFD4018 Use and apply sizing systems appropriate for fashion design

Modification History

Release 1. Supersedes and is equivalent to LMTFD4018B Use and apply sizing systems appropriate for fashion design

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and include:

- following work instructions, standard operating procedures (SOPs) and safe work practices
- reading and interpreting design specifications and Australian and international sizing systems
- analysing body measurements and body characteristics and their effect on sizing
- taking necessary body measurements and recording distinctive body characteristics
- analysing sizing requirements of at least two (2) garments, determining sizing system, and identifying appropriate sizes from sizing system for the design
- taking necessary body measurements and recording distinctive body characteristics
- identifying effects of inappropriate sizing for the design
- developing and storing size charts based on at least two (2) sizing systems.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- quality standards and garment handling procedures
- sequence of operations
- Australian Standards for sizing
- body measurements and body characteristics and their effect on sizing
- body science:
 - structural anatomy
 - morphology
 - anthropometry
- sizing systems
- recording and reporting practices.

Assessment Conditions

- Assessors must:

- satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
- have vocational competency in fashion sizing systems, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
