Assessment Requirements for MSTML2002 Make flat patterns for millinery

Release: 1

Assessment Requirements for MSTML2002 Make flat patterns for millinery

Modification History

Release 1. Supersedes and is equivalent to LMTML2002A Make flat patterns for millinery

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria on at least two occasions and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- identifying pattern pieces and measurements required for a millinery design
- taking measurements and calculating measurements using set formulae
- selecting model to suit design specifications
- using flat patternmaking and pattern construction methods to develop at least two (2) patterns for millinery
- making toile to test patterns
- producing accurate final flat patterns that meet design and size requirements
- completing pattern specification sheet
- maintaining accurate records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- requirements of the design and production of millinery
- models:
 - client
 - house model
 - millinery block
 - mannequin
- tools and equipment:
 - computer-aided design (CAD) system
 - square ruler
 - compass, protractor
 - tape measure
 - French curve
 - mitre ruler
 - triangles

- hole punch
- scissors
- simple mathematical calculations using set formulae
- simple geometric principles for constructing circles, squares, rectangles and angles
- millinery flat pattern construction principles:
 - circular principles
 - angular principles
 - constructing and modifying arcs
 - square blocking
 - pivoting
 - contour sectioning
 - cut and spread
- design and size requirements
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in making flat patterns for millinery, at least to the level being assessed, with relevant industry knowledge and experience.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
