Assessment Requirements for MSTML2007 Block and shape millinery by hand

Release: 1

Assessment Requirements for MSTML2007 Block and shape millinery by hand

Modification History

Release 1. Supersedes and is equivalent to LMTML2007A Block and shape millinery by hand

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include:

- reading and following work instructions, standard operating procedures (SOPs), safe work practices
- confirming blocking and shaping requirements to ensure correct design application
- assembling and preparing selected materials ready for preparation process
- selecting appropriate block and adapting, if required, to meet requirements
- preparing fibre or material and processing over steam vent and ensuring safe processes are followed, on at least two (2) occasions
- operating machines or equipment, including steam equipment, used within the enterprise, on at least two (2) occasions
- pre-blocking hood to pre-stretching the fibres, if required
- performing final blocking to shape the secondary components, including brim, collar line or to obtain particular indentation on at least two (2) occasions
- allowing hood to dry on the block, either naturally or by artificial means
- adding stiffening to the hat, where required.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- industry and product processes and equipment
- manual use of blocks
- workplace procedures
- recording and reporting practices.

Assessment Conditions

- Assessors must:
 - satisfy the assessor competency requirements that are in place at the time of the assessment, as set by the VET regulator
 - have vocational competency in blocking and shaping millinery by hand, at least to the level being assessed, with relevant industry knowledge and experience.

- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
