PMBPROD393 Produce composites using vacuum bagging

Release: 1

PMBPROD393 Produce composites using vacuum bagging

Modification History

Release 1. Supersedes and is equivalent to PMBPROD393B Produce composites using vacuum bagging

Application

This unit of competency covers the skills and knowledge required to operate and adjust vacuum bagging processes to produce composite product.

This unit of competency applies to experienced operators who are required to start up and shut down vacuum bagging equipment, monitor equipment operation, establish a stable process, make adjustments to remedy faults and non-conformity and solve problems within area of responsibility.

This unit of competency applies to an experienced operator demonstrating theoretical and technical knowledge and well developed skills in situations that require some discretion and judgement. The operator may work alone or as a member of a team or group and will work in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

PMBPROD293 Operate vacuum bagging equipment

Competency Field

Production

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|---|-----|---|
| 1 | Plan own work requirements | 1.1 | Identify equipment and processes used for production process and upstream and downstream operations from production plan or request |
| | | 1.2 | Identify materials required, including additives |
| | | 1.3 | Implement measure to control identified hazards in line with duty of care |
| | | 1.4 | Identify and check emergency stops, guards and controls |
| | | 1.5 | Identify requirements for materials, quality, and production and equipment checks |
| | | 1.6 | Identify materials, waste management and housekeeping needs |
| | | | |
| 2 | Start up composites forming process to procedures | 2.1 | Identify process setting required for product |
| | | 2.2 | Adjust control panel to required settings |
| | | 2.3 | Check equipment, raw material and mould all match job requirements |
| | | 2.4 | Check materials, resins and fibres are correct |
| | | 2.5 | Take appropriate action for non-conforming materials |
| | | 2.6 | Set up date, batch and materials markings to specifications, as required |
| | | 2.7 | Complete other pre-start checks |
| | | 2.8 | Start up process |
| | | | |
| 3 | Operate and make adjustments as required to the vacuum bagging | 3.1 | Operate composites forming equipment, noting key variables |
| | | 3.2 | Monitor controls/displays/terminals for production and process data |

	process to procedures	3.3	Take samples as required and identify product out-of-specification
		3.4	Monitor product/process quality
		3.5	Make adjustments to remedy faults and non-conformity as required
		3.6	Establish a stable vacuum bagging process
		3.7	Adjust process to minimise scrap and trim
		3.8	Clean, adjust and lubricate equipment as required
4	Shut down machine to procedures	4.1	Determine type of shutdown
		4.2	Select appropriate cleaning method
		4.3	Clean efficiently and adequately as required
		4.4	Leave equipment in appropriate condition and with appropriate locks, tags or notices.
		4.5	Complete relevant documentation
		4.6	Ensure area is clean and clear after the shutdown, in readiness for the next start-up
5	Anticipate and solve problems	5.1	Recognise a problem or a potential problem
		5.2	Determine problems needing priority action
		5.3	Refer problems outside area of responsibility to appropriate person, with possible causes
		5.4	Seek information and assistance as required to solve problems
		5.5	Solve problems within area of responsibility
		5.6	Follow through items initiated until final resolution has occurred

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, manual handling and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and equipment Tools and equipment include:

- moulds
- vacuum bags

- vacuum pumps and fittings eg hoses and couplings
- programmable logic controllers (PLC) if fitted
- hand tools used in the this process.

Additional tools and equipment will be selected as required from:

- hoists/lifting equipment not requiring any special permits or licences
- manual handling aids, such as hand carts and trolleys
- relevant personal protective equipment (PPE).

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- fibres, airborne and handled
- hazardous products and materials
- sharp edges, swarf and scrap
- protrusions or obstructions
- slippery surfaces, spills or leaks
- rotational equipment or vibration
- smoke, dust, vapours or other atmospheric hazards
- high temperatures
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person.

Non-routine problems are unexpected problems or variations of previous problems and include one or more of:

- loss of vacuum

- variations in quality
- emergency situations
- release problems
- warping or cracking after moulding
- intermittent faults.

Operational knowledge includes one or more of:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people.

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMBPROD393B Produce composites using vacuum bagging
