PMC552024 Hand mould products

Release: 1

PMC552024 Hand mould products

Modification History

Release 1. Supersedes and is equivalent to PMC552024C Hand mould products.

Application

This unit of competency covers the skills and knowledge required to hand mould products using clay, ceramic, plaster and other materials.

This unit of competency applies to operators who are required to select and prepare moulds, mould and remove the product, finish and store the product and rectify routine problems.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Operations

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

1	Assemble and prepare the mould or former	1.1	Establish a safe working environment to procedures
		1.2	Identify and prepare the appropriate mould or former
		1.3	Level and secure the mould or former to procedures
		1.4	Check that the base is stabilised and correctly mounted as required to facilitate rolling or turning out
		1.5	Position inserts or loose pieces as required

- | | | | |
|---|-------------------------------------|-----|---|
| | | 1.6 | Apply the correct stripping agent |
| 2 | Mould materials | 2.1 | Prepare the material mix or obtain the material from the batch preparation unit |
| | | 2.2 | Provide an adequate supply of material to meet production requirements |
| | | 2.3 | Introduce material to the work piece cavity and compact to procedures |
| | | 2.4 | Check inserts or loose pieces and secure to avoid movement during moulding |
| | | 2.5 | Employ safe working practices consistent with procedures |
| | | 2.6 | Roll and strip/turn out the component for finishing |
| 3 | Finish the component/product | 3.1 | Repair defects occurring during the moulding process |
| | | 3.2 | Remove inserts or loose pieces and replace in mould or former |
| | | 3.3 | Prepare the surface of the component for the application of any surface finishes |
| | | 3.4 | Cure or dry the components to specification |
| | | 3.5 | Return mould and/or segments for re-use or storage in accordance with requirements |
| 4 | Rectify routine problems | 4.1 | Identify the range of faults that can occur during the operation |
| | | 4.2 | Determine and rectify fault causes according to procedures |
| | | 4.3 | Identify and rectify equipment failure causes according to procedures |
| | | 4.4 | Make sure appropriate records and log books of equipment operations are maintained to meet procedures |

		4.5	Identify non-routine problems and report to designated person
5	Inspect and store components	5.1	Inspect component for defects
		5.2	Store the component to specifications and procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- job cards
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Problems Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- variations in materials
- product faults
- mould problems.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Hazards Hazards must be identified and controlled. Identifying hazards requires consideration of:

- heat, smoke, dust, vapours or other atmospheric hazards
- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- electricity
- gas
- gases and liquids under pressure
- noise

- rotational equipment or vibration
- plant services (steam, condensate, cooling water, etc)
- structural hazards
- equipment failures
- machinery, equipment and product mass
- limited head spaces or overhangs
- working at heights
- working in restricted or confined spaces
- other hazards that might arise.

Records and reports Records include one or more of:

- log books/sheets
- electronic records
- job/work sheets
- other records used for the smooth running of the plant.

Reports include one or more of:

- paper or electronic-based logs and reports
- verbal/radio reports
- reporting items found which require action.

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMC552024C Hand mould products.

Assessment Requirements for PMC552024 Hand mould products

Modification History

Release 1. Supersedes and is equivalent to PMC552024C Hand mould products.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- assemble and prepare mould/former to meet specifications
- introduce materials into the mould and apply compacting
- remove product from mould
- distinguish between defects for repair and defects unable to be rectified
- apply finishing and repair techniques
- dry and cure the product to specifications
- monitor key variables, including:
 - supply of materials
 - distribution and compaction of materials
 - stability of mould/former and inserts
 - sectional profile of product
 - specification of materials
 - product integrity and general conformance to specification
- make adjustments to meet product quality and production output specifications
- handle/store products
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- recognise out-of-specification products, process problems and materials faults
- recognise routine and non-routine problems
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- take action to resolve problems or report them to appropriate personnel
- distinguish between possible causes of routine problems, including:
 - raw material variations
 - equipment malfunctions
 - process abnormalities
- communicate effectively with team/work group and supervisors
- read and interpret product specifications, job sheets, procedures, material labels and safety information
- complete workplace records

- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- content and handling characteristics of the materials being moulded and:
 - typical curing and drying requirements
 - methods of repairing products
 - types of faults that can be repaired
 - types of faults that can't be repaired
- functions and principles of operation of moulds and formers
- mould or former maintenance and inspection requirements
- the potential effects of variations in raw materials and process conditions in relation to quality of product/output
- factors which may affect product quality or production output and appropriate remedies
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
 - their possible causes
 - potential consequences
 - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
 - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
 - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
 - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.

- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
 - walk-throughs
 - pilot plant operation
 - industry-based case studies/scenarios
 - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
 - relevant VET or other qualification/Statement of Attainment
 - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
 - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
 - being currently employed undertaking the type of work being assessed
 - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
 - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment

- conducting on the job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.
