PMC552058 Demould concrete products

Release: 1

PMC552058 Demould concrete products

Modification History

Release 1. Supersedes and is equivalent to PMC552058B Demould concrete products

Application

This unit of competency covers the skills and knowledge required to demould concrete products and maintain moulds. It applies to timber, glass fibre, metal casing, latex rubber, plaster and other moulds.

This unit of competency applies to operators who are required to dismantle moulds, inspect moulds and products for faults, clean and reassemble moulds, maintain mould part stocks and rectify routine problems.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Operational/technical

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--------------------------|-----|--|
| 1 | Dismantle mould | 1.1 | Remove nuts and bolts as required |
| | | 1.2 | Remove mould |
| | | | |
| 2 | Clean and inspect | 2.1 | Identify product faults from visual inspection |

	mould	2.2	Identify mould faults from visual inspection
		2.3	Dismantle mould according to work instructions
		2.4	Check condition of all mould parts
		2.5	Clean mould parts
3	Reassemble mould	3.1	Identify product to be made
		3.2	Interpret mould drawings/plans
		3.3	Select and check required mould parts
		3.4	Use correct mould setup jig
		3.5	Assemble mould according to work instructions
		3.6	Place and fix reinforcement cage as required
		3.7	Check cover is adequate and fix or report as required
		3.8	Check mould dimensions and tolerance
		3.9	Check mould for joint leakage and correct if required
4	Lubricate mould	4.1	Lubricate mould to standard
		4.2	Store mould in correct location
5	Maintain mould part stock control	5.1	Check stocks of spare parts
		5.2	Advise supervisor of stock required, parts used and date of completed mould
6	Rectify routine problems	6.1	Identify the range of faults that can occur during the operation
		6.2	Determine and rectify fault causes in accordance with procedures/work instructions
		6.3	Identify and rectify equipment failure causes in

			accordance with procedures/work instructions
	6.4		Ensure appropriate records and log books of equipment operations are maintained to meet procedures/work instructions
	6.5		Identify non-routine problems and report to designated person
7	Control hazards	7.1	Identify hazards from the job to be done
		7.2	Identify other hazards in the work area
		7.3	Assess the risks arising from those hazards
		7.4	Implement measures to control those risks in line with procedures

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- job cards
- drawings
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Problems Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- worn/damaged/missing parts requiring replacement
- selection of appropriate mould parts to replace worn parts
- matching reinforcement and moulds to drawing specifications.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Hazards Hazards must be identified and controlled. Identifying hazards requires consideration of:

- heat, smoke, dust, vapours or other atmospheric hazards
- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- electricity
- gas
- gases and liquids under pressure
- noise
- rotational equipment or vibration
- plant services (steam, condensate, cooling water, etc)
- structural hazards
- equipment failures
- machinery, equipment and product mass
- limited head spaces or overhangs
- working at heights
- working in restricted or confined spaces
- other hazards that might arise.

Records and reports Records include one or more of:

- log books/sheets
- electronic records
- job/work sheets
- other records used for the smooth running of the plant.

Reports include one or more of:

- paper or electronic-based logs and reports
- verbal/radio reports
- reporting items found which require action.

Unit Mapping Information

Release 1. Supersedes and is equivalent to PMC552058B Demould concrete products

Assessment Requirements for PMC552058 Demould concrete products

Modification History

Release 1. Supersedes and is equivalent to PMC552058B Demould concrete products

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret drawings/plans, job sheets, procedures, material labels and safety information
- dismantle mould
- assemble mould parts, fittings, reinforcement according to specifications
- monitor key variables, including:
 - condition of mould parts
 - mould part stock levels
 - placement of reinforcing and accessories
 - product integrity and conformance to specification
- make adjustments to meet product quality and production output specifications
- identify mould parts that require replacing
- apply stock control procedures
- identify hazards and apply relevant hazard controls
- apply safety procedures
- apply housekeeping procedures
- recognise out-of-specification products, process problems and materials faults
- recognise routine and non-routine problems
- identify when the operator is able to rectify problems, when assistance is required and who is the appropriate source for assistance
- take action to resolve problems or report them to appropriate personnel
- distinguish between possible causes of routine problems, including:
 - raw material/mix variations
 - mould anomalies
 - casting/operating conditions
 - process errors
- communicate effectively with team/work group and supervisors
- complete workplace records
- do basic arithmetical manipulations, including additions, subtractions, divisions, fractions and percentages.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to operate under routine only supervision and to solve routine problems, including knowledge of:

- common types of moulds, mould parts and their role
- causes and impact of mould wear
- indicators of common product faults
- indicators of common mould faults
- function of mould lubricants
- hazards from pre-stressed reinforcement
- basic physics and chemistry relevant to the equipment/process/materials
- role of reinforcement, types of reinforcement and significance of concrete cover
- the potential effects of variations in raw materials and equipment operation/processes in relation to quality of product
- factors which may affect product quality or production output and appropriate remedies
- routine problems, their probable causes and relevant corrective actions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
 - their possible causes
 - potential consequences
 - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
 - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant
 - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
 - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
 - walk-throughs
 - pilot plant operation
 - industry-based case studies/scenarios
 - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
 - relevant VET or other qualification/Statement of Attainment
 - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
 - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
 - being currently employed undertaking the type of work being assessed
 - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation’s policies and procedures
 - having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
 - conducting on the job training/assessments of the type of work being assessed
 - being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.
