Assessment Requirements for PPMDEO301 Perform dry end operations

Release: 1

Assessment Requirements for PPMDEO301 Perform dry end operations

Modification History

Release	Comments
Release 1	This version released with PPM Pulp and Paper Manufacturing Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must evidence that the individual has planned for, coordinated, and safely started up and shut down dry end operations for at least two operational intervals, including for each operational interval:

- determined and monitored process control points
- monitored, assessed causes and adjusted systems to rectify variations from specifications and unplanned shutdown
- used and interpreted electronic control systems during operations
- applied safe use and handling of chemicals and materials
- recorded and reported accurate operational data
- communicated effectively and worked safely with others when undertaking dry end operations.
-

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace and legislative health and safety requirements relevant to performing dry end operations, including emergency procedures, handling chemicals and hazardous substances, high risk load shifting, licensing requirements, plant clearance and permit systems
- relevant workplace and legislative environmental sustainability requirements and practices for dry end operations, including workplace biotechnological applications and processes and biomass-derived products
- methods used to identify and manage hazards and risks that apply to dry end operations
- dry end systems and processes, plant layout and associated services relevant to carrying out start-up, stabilising and shutdown activities

- standard operating procedures specific to dry end operations
- types, uses and characteristics of raw materials to produce dry end product, and how they influence paper properties
- quality requirements for different types of dry end products
- grade types for dry end product
- purpose, and process for, sampling and testing product quality, plant and system operations
- methods used to monitor dry end system operations against specified system parameters
- effect of process adjustments on product quality and productivity during operation
- application of electronic and other control systems used to operate, control and make appropriate adjustments to dry end operations
- responses used for unplanned shutdowns, including those caused by power outage, mechanical breakdown, blockages, jamming, air supply and control system failure
- procedures for communicating, recording and reporting for system operation, production outcomes and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a paper manufacturing facility or an environment that accurately represents workplace conditions
- resources, equipment and materials:
 - dry end system and plant
 - maintenance tools and equipment and consumables for dry end plant
 - electronic control systems that include digital control system, touch screens or robotics used in dry end systems
 - materials and services used in dry end processes, including chemicals, compressed air, water, electricity, gas, steam, additives, machine clothing and ropes and belts
 - personal protective equipment required for operating dry end systems
 - proforma or recording system for recording system and production data and information
- specifications:
 - workplace and standard operating procedures relating to dry end operations, including health and safety, risks and hazards identification, plant isolation, quality, housekeeping and environmental requirements
- relationships:
 - relevant personnel for the purposes of communicating information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
