Assessment Requirements for PPMHRF202 Receive recovered fibre

Release: 1

Assessment Requirements for PPMHRF202 Receive recovered fibre

Modification History

Release	Comments
Release 1	This version released with PPM Pulp and Paper Manufacturing Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has received at least two different recovered fibre stock orders, including for each order:

- maintained a safe and clean working environment
- checked weight and quality of load, and responded to non-conforming loads
- sorted and graded recovered fibre to specifications
- operated control system and shifting equipment safely and efficiently
- completed accurate records on load detail communicated effectively with others, verbally and using hand signals, throughout receiving process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types and characteristics of recovered fibre stock used for pulp production
- workplace procedures relevant to receiving loads of recovered fibre, including workplace health and safety, high risk load shifting licensing requirements, environmental requirements and risks and hazard identification
- workplace environmental sustainability requirements and practices for receiving recovered fibre stock, including workplace biotechnological applications and processes and biomass-derived products
- situational awareness when unloading trucks, including awareness of personnel, hazards, moving trucks and equipment
- recovered fibre receiving processes, layout and associated services relevant to receiving recovered fibre
- recovered fibre grading criteria and processes for sorting and grading to specifications
- overview of recovered fibre operations
- loading areas and logistics controls to monitor unloading operations

- fibre types, specifications, characteristics and grade specifications
- electronic and other control systems, operation and application to make appropriate adjustments that control recovered fibre receiving operations.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a pulp and/or paper manufacturing facility or an environment that accurately reflects performance in a workplace
- resources, equipment and materials:
 - recovered fibre stock
 - equipment for receiving recovered fibre loads
 - electronic control systems, including digital control system, touch screens or robotics for receiving recovered fibre
 - personal protective equipment for receiving recovered fibre
 - records system for recording details of recovered fibre receipt
- specifications:
 - workplace and standard operating procedures relating to receiving recovered fibre loads, including health and safety, risks and hazards identification, quality, housekeeping and environmental requirements
- relationships:
 - relevant personnel for the purposes of communicating information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
