Assessment Requirements for PPMRES202

Unload materials

Release: 1

Assessment Requirements for PPMRES202 Unload materials

Modification History

Release	Comments
Release 1	This version released with PPM Pulp and Paper Manufacturing Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has unloaded at least two different raw material orders, including for each order:

- maintained a safe and clean working environment
- received and checked materials against order specifications
- operated control system and shifting equipment safely and efficiently during checking and loading operations
- sorted and stored materials to specifications
- minimised handling to meet loading, processing, and stock rotation requirements
- completed accurate stock records
- communicated effectively with others, verbally and using hand signals, throughout unloading, sorting and storing operations
- reported safety concerns, damaged materials and faulty equipment.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace procedures relevant to unloading and storing raw materials, including workplace health and safety, high risk load shifting licensing requirements, environmental requirements, and risks and hazard identification
- workplace environmental sustainability requirements and practices for unloading raw materials, including workplace biotechnological applications and processes and biomass-derived products
- materials unloading processes, area layout and associated services
- material load types, specifications and characteristics
- dangerous goods handling and storing requirements
- situational awareness when unloading trucks, including awareness of personnel, hazards, moving trucks and equipment

- stacking procedures and their implications for different storage areas
- electronic and other control systems, operation and application to make appropriate adjustments that control material unloading.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a pulp and/or paper manufacturing facility or an environment that accurately reflects performance in a workplace
- resources, equipment and materials:
 - raw material stock
 - equipment for unloading material stock
 - electronic control systems, including digital control system, touch screens or robotics for receiving, unloading and storing material stock
 - personal protective equipment for unloading and storing material stock
 - records system for recording details of stock inventory
- specifications:
 - workplace and standard operating procedures relating to unloading and storing material stock, including health and safety, risks and hazards identification, quality, housekeeping and environmental requirements
- relationships:
 - relevant personnel for the purposes of communicating information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
