Assessment Requirements for PPMRFO201 Monitor and control recovered fibre operations

Release: 1

Assessment Requirements for PPMRFO201 Monitor and control recovered fibre operations

Modification History

Release	Comments
Release 1	This version released with PPM Pulp and Paper Manufacturing Training Package Version 3.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has undertaken routine monitoring and controlled recovered fibre operations for at least two operational intervals, including for each interval:

- completed checks throughout the process and responded appropriately to variations from process and stock quality
- completed routine maintenance on equipment
- completed accurate records for system operation, production outcomes and equipment faults

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements and procedures for recovered fibre operations
- workplace environmental sustainability requirements and practices for recovered fibre operations, including workplace biotechnological applications and processes and biomass-derived products
- purpose, features and operation of each component of the recovered fibre operations system, operating parameters and allowable variations, including reject and water systems
- purpose of process controls, and how changes affect production variables
- operation and application of electronic and other control systems to control recovered fibre operations
- purpose of each of the steps in the preparation of the recovered fibre operations system for production
- purpose of, and processes for, sampling and testing product quality, plant and system operations
- quality requirements for different types of stock

- methods used to monitor recovered fibre system operations against specified system parameters
- standard operating procedures specific to recovered fibre operations
- procedures for communicating, recording and reporting system operation, production outcomes and equipment faults.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
 - skills must be demonstrated in a pulp and/or paper manufacturing facility or an environment that accurately reflects performance in a workplace
- resources, equipment and materials:
 - recovered fibre system
 - maintenance tools and equipment and consumables for recovered fibre system
 - testing and diagnostic equipment
 - electronic control systems, including digital control system, touch screens or robotics required for recovered fibres operations
 - personal protective equipment for operating recovered fibre system
 - proforma or recording system for recording system operation and production outcomes
- specifications:
 - workplace and standard operating procedures relating to recovered fibre operations, including health and safety, risks and hazards identification, plant isolation, quality, housekeeping and environmental requirements
 - maintenance schedules for recovered fibre system
- relationships:
 - relevant personnel for the purposes of communicating information.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
