Assessment Requirements for PPMWAR250 Store product

Release: 1

Assessment Requirements for PPMWAR250 Store product

Modification History

Release	Comment
1	Replaces equivalent unit FPPWAR250A Store product, which was first released with FPP10 Pulp and Paper Manufacturing Industry Training Package Version 1.0. Assessment requirements now specify the performance and knowledge evidence, as well as assessment conditions for this unit of competency. These sections simplify and replace components used in the previous unit format, including Required Skills and Knowledge, Evidence Guide and Range Statement.

Performance Evidence

A person demonstrating competency in this unit must satisfy all of the elements, performance criteria and foundation skills of this unit, and must be able to provide evidence that they can:

- undertake preparations and follow safe working practices when storing product, at least twice in line with required enterprise intervals
- use mechanical handling and load shifting equipment to lift, carry and set down loads
- use electronic and other control systems to control equipment and processes during product storage
- communicate effectively, by written and verbal means, in the work area, when undertaking product storage.

Knowledge Evidence

A person competent in this unit must be able to demonstrate knowledge of:

- workplace documentation and procedures relevant to storage, in the pulp and paper industry including:
 - work health and safety (WHS) including activity or load shifting licensing requirements, plant clearance, job safety analysis, permit systems
 - risks and hazards identification
 - Standard Operating Procedures (SOP) and housekeeping requirements for storage, production and packaging schedules
 - freight transport regulation including load limits and restraint, driver fatigue and train of responsibility productivity requirements
 - quality procedures and quality assurance documentation including ISO 9002
 - environmental sustainability requirements and practices
 - plant manufacturing operating manuals

- oil or chemical spills and disposal guidelines
- plant isolation documentation
- work and customer orders
- Material Safety Data Sheets (MSDS)
- causes and effects of equipment or system faults and required corrective action
- operating parameters, variation and associated adjustments for product storage processes, layout and associated services, within level of responsibility
- key features of maintenance systems, including operator level maintenance as per site agreements, operator maintenance schedules, maintenance suppliers and pro-active maintenance strategies
- key features of warehouse organization, workflow procedures and inventory systems
- purposes of stock rotation of stored products
- how to operate load shifting equipment
- use of electronic and other control systems, operation and application to make appropriate adjustments that control storage of product.

Assessment Conditions

The following resources must be made available:

- access to the full range of equipment, product, materials and documentation involved in product storage operations, in a pulp or paper manufacturing facility
- templates for inventory and storage records
- products to be stored
- personal protective equipment required for storing product
- relevant personnel for the purposes of communicating information
- mechanical handling equipment.

Competency is to be assessed in the workplace or in a productive environment that accurately reflects performance in a workplace.

Assessor requirements

Assessors must:

- hold the appropriate assessor competency standards as outlined in regulations; and
- be able to demonstrate vocational competencies at least to the level being assessed; and
- be able to demonstrate how they are continuing to develop their VET knowledge and skills as well as maintaining their industry currency and assessor competence.
