Assessment Requirements for RIICAM401

Conduct a condition assessment of road pavements

Release: 1

Assessment Requirements for RIICAM401 Conduct a condition assessment of road pavements

Modification History

Release	Comments
Release 1	This version first released with the RII Resources and Infrastructure Industry Training Package Version 8.0. Newly created unit.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct road pavement condition assessment of at least 10km in length on at least two occasions, each at different locations
- identify at least four different defect types in the road pavement asset over at least two different occasions.

In the course of the above, the candidate must:

- locate and apply required documentation, policies and procedures and confirm that the work activity is compliant
- organise work tasks, determine requirements and undertake appropriate measures to mitigate risks
- communicate clearly and concisely with others to receive and clarify work instructions.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key requirements of legislation, codes, regulations, standards and security arrangements relating to collecting and analysing data for road pavements
- organisational policies and procedures applicable to collecting and analysing data for road pavements, including:
 - levels of service
 - budget and resources
 - work orders
 - work schedules

- records and documentation formats
- types of road pavement asset defects, including:
 - bleeding
 - cracking
 - defamations
 - delamination
 - excess loose material
 - roughness
 - rutting
 - shoving
 - stripping
- key types of road pavement, including:
 - asphalt
 - bituminous seal
 - concrete
 - geotextiles
 - granular base
- key data collection methods, and their benefits and limitations, including:
 - complaints systems
 - desktop surveys
 - formal visual inspections
 - global positioning system (GPS)
 - materials testing
 - mechanical testing
 - physical inspections
 - remote sensing
 - roughness testing
 - safety audits
 - surveyed
 - taped
 - visual and selection loading testing
- organisational information management strategies
- process for determining asset condition rating and risk score
- process for evaluating community expectations of assets, including:
 - environmental standards
 - legislative requirements
 - safety standards
- key data collection platforms, and procedures for their use, including:
 - asset inventory
 - asset management systems

- asset register
- geographic information systems
- spreadsheets
- types of remedial works, including:
 - maintenance works
 - refurbishments
 - renewals
- rating system for road pavement condition assessment
- key risks and hazard considerations for managing road pavement assets, including:
 - environmental
 - financial
 - litigious
 - personal injury / death
 - reputation.
 -

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - road pavements
 - personal protective equipment
 - equipment required for collecting data for road pavements
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed

- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

***While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.
