Assessment Requirements for RIIERR601D Establish and maintain mine emergency preparedness and response systems

Release: 2

Assessment Requirements for RIERR601D Establish and maintain mine emergency preparedness and response systems

Modification History

Release	Comment
1	This unit replaces RIERR601A Establish and maintain mine emergency preparedness and response systems
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locate and apply relevant legislation, documentation, policies and procedures
- implements procedures and techniques for the safe, effective and efficient establishment and maintenance of the mine emergency preparedness and response systems including:
 - assesses and prioritises implementation processes
 - analyses hazards and risks to consider in the establishment and maintenance of the mine emergency preparedness and response systems
 - maintains standards for establishment and maintenance of the mine emergency preparedness and response systems
 - provides clear and timely instruction and supervision to those involved in the mine emergency preparedness and response systems
 - identifies training needs of individuals involved in the mine emergency preparedness and response systems, and prepares training plans
- works with and leads others to undertake and complete the establishment and maintenance of the mine emergency preparedness and response systems including:
 - facilitating groups to work together
 - establishing and maintaining a range of communication techniques and aids to advise others of work activity
 - using written and verbal communication systems to convey all activities and outcomes for coal mine emergency preparedness and response to others in a clear and concise manner

- demonstrates completion of establishing and maintaining mine emergency preparedness and response systems that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
 - establishing processes to investigate nature and cause of emergency/incident clearly and concisely communicating and explaining, plans and supporting information, in a form readily accessible to others
 - identifying, clarifying and communicating roles and responsibilities, to all personnel
 - implementing the allocation and installation of resources
 - implementing the emergency preparedness and response training program
 - developing review mechanisms from both internal and external sources
 - establishing plans to manage post-incident actions

Knowledge Evidence

The candidate must demonstrate knowledge of the following in applying the establish and maintain mine emergency preparedness and response systems through:

- legislative, regulatory and certification requirements
- communicating verbally and in writing the roles and responsibilities requirements of stakeholders
- the hazard identification, risk assessment and risk treatment processes
- incidents and risk analysis data
- document control requirements
- consultative, coaching and leadership techniques
- plant and equipment capabilities and limitations
- work planning techniques
- establishing auditing, monitoring, recording and reporting systems, in consultation with stakeholders
- training systems, identification of training needs for individuals and work groups, and implementation of training plans
- consultation, mine emergency response and evacuation planning processes and techniques
- exploration techniques, ground support methods and systems
- mine planning and design
- analysis and use of mine surveying data
- mining and general engineering principles
- operational techniques in execution of the systems
- structure of emergency procedures guidelines
- legal requirements of incident management teams
- self-escape, aided rescue and respond to incident philosophies, systems and equipment
- structure, roles, capabilities and limitations of external services and agencies relevant to emergency preparedness and response

- intervention and control techniques for heating, fires, explosions, outburst, extrication or inrushes
- effects of heat and humidity on emergency rescue and response
- effects of impaired visibility on emergency rescue and response
- escape strategies and technology
- equipment requirements for different types of emergency
- ventilation and its influence on incidents
- call-out procedures
- emotional effects of emergencies on rescuers and mine personnel
- titles and roles of members of incident management team
- use of de-briefing processes
- experience with deployment of staff, and re-deployment after emergency/evacuation
- awareness of number of personnel needed to run the site at planned operational levels
- knowledge of the requirements and structure for fresh air base
- decision-making processes
- use of the legislation regarding resumption of normal operations
- experience with the mobilisation, deployment and utilisation of equipment
- consideration of insurance policies and requirements
- mine closure procedures and the legislative implications
- sealing procedures and the legislative implications
- requirements for site security and access control
- economic considerations and impacts on decisions

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,

- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level
