Assessment Requirements for RIISTD201E

Read and interpret maps

Release: 1

Assessment Requirements for RIISTD201E Read and interpret maps

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 6.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- read and interpret maps on at least two occasions, including:
 - reviewing the map route and plan by identifying and using:
 - symbols
 - navigation data
 - landmarks
 - geographical features
 - scale
 - identifying obstacles and navigating alternative routes
 - undertaking a minimum 2km navigation following established route
 - traversing a 2km route to specified destination
 - documenting the navigation route and details on the navigational data sheet.

During the above, the candidate must:

- locate and apply relevant legislation, documentation, policies and procedures
- identify, report and record hazards and risks
- implement requirements, procedures and techniques for reading and interpreting maps, including:
 - applying problem solving skills to resolve navigation route issues
 - applying mathematical skills, including basic angles and geometry for compass bearings, estimation and measurement
- work with others to read and interpret maps to meet required outcomes, including:
 - using communication techniques and equipment to convey information to others, including communicating the planned navigation route
 - completing written records and reporting systems.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislation required to read and interpret maps
- policies, procedures and documentation required to read and interpret maps, including those relating to:
 - hazard and risk management
 - work health and safety
 - emergency response
 - site and equipment safety
 - environmental protection
 - requirements of a communications plan
 - communication techniques and equipment
 - operational, maintenance and basic diagnostic procedures
 - project quality requirements
 - job plans and specifications
 - workplace recording and reporting
- principles and techniques required to read and interpret maps, including those relating to:
 - symbols and information
 - fatigue management
 - map reading and road navigation
 - common charts and scales
 - types and characteristics of maps, including:
 - cadastral and topographic maps
 - charts
 - guidebooks
 - aerial photographs
 - sketches and cave maps
 - diagrams
 - topographic features
 - sources of map and chart error
 - distance travelled
 - navigation aids
 - navigation data
 - surroundings and obstacles
- types, characteristics, technical capabilities and limitations of plant and equipment required to read and interpret maps, including:
 - compasses
 - track and survey markers
 - beacons

- personal protective equipment and clothing
- GPS units
- materials safety data sheet (SDS) compliance processes
- components of job safety analyses (JSAs), job safety environmental analyses (JSEAs), and safe work method statements (SWMs)
- civil construction terminology related to reading and interpreting maps.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment required to read and interpret maps
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with required legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

***While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.
