Assessment Requirements for RIIWBP201E Treat and dispose of rejects and tailings

Release: 1

Assessment Requirements for RIIWBP201E Treat and dispose of rejects and tailings

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 7.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- treat and dispose of rejects and tailings on at least two occasions, including:
 - completing pre-start, start-up and shutdown operations
 - interpreting mineralogical data
 - inspecting and preparing the work area, including:
 - identifying hazards
 - selecting and implementing hazard control measures
 - monitoring and adjusting the following:
 - displacement and addition of water
 - additives to materials
 - addition of settling and clarity agents
 - inspecting, identifying, recording and reporting faults
 - completing operator maintenance of tools and equipment.

During the above, the candidate must:

- locate and apply legislation, documentation, policies and procedures required to treat and dispose of rejects and tailings
- implement the requirements, procedures and techniques to treat and dispose of rejects and tailings, including:
 - interpreting and applying work instructions
 - selecting and using required tools and equipment
 - wearing appropriate personal protective equipment
 - accessing, interpreting and applying technical information
 - identifying and applying diagnostic techniques
 - identifying and applying chemical and fuel safety measures

- disposing of environmentally sensitive fluids and materials
- work with others to treat and disposal of rejects and tailings in a way that meets required outcomes, including:
 - using communication techniques required to convey information to others
 - maintaining written and verbal reporting requirements and procedures.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- legislative requirements relating to treating and disposing of rejects and tailings
- policies, procedures and documentation required to treat and dispose of rejects and tailings, including those relating to:
 - environmental protection
 - disposal and recycling of material
 - hazard, incident and emergency response
 - metallurgical, geotechnical and basic technical data
 - personal protective equipment
 - security, site and spillage procedures
 - site operational, quality and communication requirements
 - site product characteristics
 - work health and safety
 - work instructions
 - workplace recording and reporting requirements
- techniques for interpreting and applying site geological and survey data, including mineralogical data
- types and characteristics of plant and equipment required to treat and dispose of rejects and tailings, including:
 - emergency procedures
 - isolation and shutdown procedures
 - operational procedures
 - manufacturer specifications
 - monitoring systems
 - pre-start, start-up and operating procedures
 - repair and maintenance procedures
 - technical capabilities and limitations
- principles and techniques for treating rejects and tailings, including monitoring and adjusting the following:
 - displacement and addition of water
 - additives to materials
 - addition of settling and clarity agents

- principles and techniques for identifying, preventing and responding to relevant hazards and emergencies, relating to:
 - plant and equipment
 - environmental issues.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment required to treat and dispose of rejects and tailings
 - simulated or actual documentation of work requirements and reports
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

***While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.
