Assessment Requirements for RIIWSV302E Trip production string for well servicing operations

Release: 1

Assessment Requirements for RIIWSV302E Trip production string for well servicing operations

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- trip production string for well servicing operations on at least two occasions, including:
 - removing thread protectors, drifting, cleaning and lubricating threads
 - checking joints for damage to threads, sealing surfaces and flapper valves where fitted
 - assembling and checking operating condition of running equipment, including slips, tongs, elevators, rubber clamp and protectors
 - lining up pumps to fill during running operations
 - working derrick correctly during tripping
 - steadying the rod during stabbing
 - releasing pick-up elevators when directed
 - aligning rod for make-up
 - latching side door or slip type elevators
 - checking grades of rod
 - measuring and recording rod in the numerical order in which it will be run into the hole
 - recognising and reporting equipment malfunction and failure.

During the above, the candidate must:

- locate and apply legislation, documentation, policies and procedures required to trip production string for well servicing operations
- work with others to trip production string for well servicing operations, including:
 - supervising subordinates to provided standards
 - working as directed in a timely and efficient manner.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to trip production string for well servicing operations
- key policies, procedures and established requirements to trip production string for well servicing operations, including those for:
 - carrying out rig maintenance
 - carrying out inspection, fault finding and reporting
 - carrying out non-routine operations
 - determining and responding to roles and responsibilities
 - personnel management
 - environmental issues
- procedures for identifying thread identifications, rod size and grade
- procedures for identifying rod torque parameters
- types and characteristics of discharges including liquids, gases and solids
- types and characteristics of hazardous materials.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment required to trip production string for well servicing operations
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed

- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.
