Assessment Requirements for TLIU2008 Apply environmental procedures to rail infrastructure

Release: 2

Assessment Requirements for TLIU2008 Apply environmental procedures to rail infrastructure

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in equipment and operating environment in accordance with operating procedures
- applying relevant workplace procedures
- disposing of waste and effluent in accordance with regulations and workplace procedures
- following relevant workplace procedures, safety data sheets (SDS)/material safety data sheets (MSDS) and regulatory requirements for handling and moving pollutants
- following routine service and maintenance procedures for equipment and vehicles
- identifying and correctly using equipment and vehicles in accordance with environmental protection regulations and guidelines
- identifying culturally sensitive sites
- identifying job hazards and taking required actions to minimise, control or eliminate identified hazards
- identifying the pollution likely to affect the workplace and the effect on the job role
- implementing contingency plans
- interpreting and following operational instructions and performing work tasks in required sequence
- minimising the effects of a number of different pollutants during work in a variety of situations
- modifying activities depending on operational contingencies, risk situations and environments
- reading and interpreting relevant instructions, procedures and information
- recognising potential pollution risks and ways of minimising them
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- undertaking precautions to prevent polluting the environment within the workplace.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- application of relevant environmental protection regulations and requirements including site-specific licence and trade waste requirements
- emission control checking requirements for vehicles and relevant equipment
- environmental hazards and toxicity of materials typically carried in loads
- environmental protection standards required when undertaking rail infrastructure maintenance and construction activities
- environmental risks when undertaking rail infrastructure maintenance and construction activities and related precautions to control the risk
- physical environment in which rail safety work is to be carried out, including climatic conditions, noise, vibration and fumes
- procedures and processes for waste and effluent regulation
- relevant rail safety, work health and safety (WHS)/occupational health and safety (OHS) and environmental protection regulations
- SDS/MSDS
- service and maintenance procedures
- site layout including location of rubbish disposal bins and run-off protection measures
- typical problems that can occur when caring for the environment, and appropriate actions that can be taken to prevent or solve these problems
- workplace procedures and guidelines for caring for the environment during rail infrastructure maintenance and construction.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail corridor workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation including workplace procedures, regulations, rail network standards, SDS/MSDS, codes of practice and operation manuals.
