Assessment Requirements for TLIX0026 Work in compliance with fuel storage and dispensing site requirements

Release: 1

Assessment Requirements for TLIX0026 Work in compliance with fuel storage and dispensing site requirements

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions on at least two separate occasions and include:

- communicating with relevant person/s to obtain and confirm work requirements
- identifying, locating, interpreting and applying relevant information to ensure work is completed in accordance with compliance requirements, including:
 - regulation/legislation
 - workplace policies and procedures
 - workplace emergency procedures
 - safety Act/s
 - industry standards
 - local Development Approval (DA) conditions
 - environmental protection requirements
 - codes of practice
- undertaking a site-specific risk assessment and producing a job safety analysis (JSA), safe work procedures (SWP) or safe work method statement (SWMS)
- identifying human resource requirements and checking competency against requirements
- identifying and obtaining required authorisations and/or permits
- identifying and arranging tools, equipment and personal protective equipment (PPE) required for work plan
- coordinating work activities with other site personnel
- monitoring work and adapting as required
- completing workplace documentation and reporting
- completing site handover to relevant person/s in accordance with workplace procedures
- advising relevant authorities of work completion in accordance with regulatory requirements.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements, performance criteria and range of conditions and include knowledge of:

- organisational communication protocols
- relevant industry regulation
- local DA and demolition approval process
- relevant authorisations and permit types
- classification of hazardous zones
- hazardous area electrical regulations
- environmental protection requirements
- safety requirements and emergency procedures
- relevant industry standards
- Australian Dangerous Goods (ADG) Code of Practice
- techniques to identify and apply relevant industry standards
- safety data sheets (SDS)/material safety data sheets (MSDS) and hazardous goods and hazards registers
- changes to site conditions and work activity, including:
 - during fuel delivery
 - weather
 - site operational status
 - progress of the work
 - impact of simultaneous work on site and presence of other workers
 - environmental factors
- work health and safety (WHS)/occupational health and safety (OHS) Acts and regulation
- spill management
- selection, implementation and development of JSAs, SWP and SWMS
- different types of fuels and their associated hazards
- solid and liquid waste certificates
- Environment Protection Authority (EPA) reporting requirements
- local DA reporting
- jurisdictional Service Station Licensing requirements.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation including legislation, regulations, codes of practice, workplace procedures, sample work permits and operation manuals.
