# **TLIX0050 Apply knowledge of technical regulatory framework**

**Release: 1**

# TLIX0050 Apply knowledge of technical regulatory framework

## Modification History

**Release 1.** This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Application

This unit involves the skills and knowledge required to apply knowledge of the technical regulatory framework.

It includes accessing and interpreting and using knowledge of the technical regulatory framework in accordance with relevant organisational policy and procedures.

The application of this knowledge is required by people who are not specialists of the technical regulatory framework but need the knowledge to inform their decision making. The application of technical regulatory framework knowledge is specific to a variety of component processes in materiel logistics activities.

This unit was developed for logistics specialists working within materiel logistics but may be applicable to individuals in broader logistics roles.

Individuals work independently or as part of a team under direct or indirect supervision, use discretion and judgement, and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

X – Logistics

## Unit Sector

Not applicable.

## Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

|----------|---------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1</b> | <b>Access and interpret relevant technical regulatory framework information</b> | <b>1.1</b> | Relevant technical regulatory framework requirements are identified and obtained and checked for compliance                                                                                                  |
|          |                                                                                 | <b>1.2</b> | Technical regulatory information obtained is analysed to determine relevance and application to the organisation                                                                                             |
|          |                                                                                 | <b>1.3</b> | Outcomes of the analysis are documented and recommendations relevant to technical regulatory requirements are determined                                                                                     |
|          |                                                                                 | <b>1.4</b> | Stakeholders are identified and consulted in accordance with regulatory requirements                                                                                                                         |
| <b>2</b> | <b>Use knowledge of technical regulatory framework</b>                          | <b>2.1</b> | Technical regulatory requirements and recommendations relevant to materiel and materiel logistics are applied in accordance with organisational policy and procedures and presented to relevant stakeholders |
|          |                                                                                 | <b>2.2</b> | Effectiveness of recommendations is assessed, reviewed and recorded in accordance with organisational policy and procedures                                                                                  |
|          |                                                                                 | <b>2.3</b> | Recommendations are adjusted as required and documented for future application in accordance with organisational policy and procedures                                                                       |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to TLIX4032 Apply knowledge of technical regulatory framework.

# Assessment Requirements for TLIX0050 Apply knowledge of technical regulatory framework

## Modification History

**Release 1.** This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes:

- adhering to relevant compliance requirements
- applying technical regulatory framework knowledge to work being performed and to guide problem solving
- focusing on clear communication of technical regulatory information to a range of stakeholders
- identifying, interpreting and analysing technical regulatory requirements relevant to work being performed
- incorporating feedback and analysis of information to overcome challenges or setbacks
- presenting relevant technical regulatory information accurately and selecting appropriate medium for communication
- using appropriate information management systems.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria includes knowledge of:

- configuration management
- materiel life cycle
- own role in relation to wider organisational or project context
- relevant organisational policy and procedures
- safety, legislative and statutory requirements, including relevant environmental and sustainability issues
- technical regulatory framework knowledge relevant to work performed
- technical regulatory framework relevant to materiel and materiel systems.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including legislation, regulations, codes of practice, workplace procedures and operation manuals.
